¹ All depths as shown are on guard sills and controlling depth.

² Dates shown for locks and dams number 2 to 8 inclusive represent reconstruction.

³ 2 chamber.

⁴ Includes \$3,322,057 for raising crest of dam (1958-9), \$2,086,438 for original reconstruction (1923-6), \$618,758 AE&D costs for replacement of lock, and \$112,667,403 for replacement of lock (\$56,215,160 CG funds; \$56,452,243 from Inland Waterways Trust Fund).

⁵ Actual cost may include estimated costs which have been footnoted as necessary.

⁶ Includes \$2,173,767 for original reconstruction (1931-2) and \$15,080,304 for reconstruction of dam (1963-7).

⁷ Includes \$16,967,114 for reconstruction of locks.

⁸ Includes \$15,857,000 for major rehabilitation.

⁹ Includes AE&D costs for proposed lock (\$803,000) as well as \$172,692,644 expended in CG and IWTF.

¹⁰ Includes \$213,776 original project and \$2,639,804 for reconstruction (1925).

OHIO RIVER

For actual construction of locks and dams, and operation and care of completed structures, the Ohio River is divided into three sections under immediate supervision and direction of District Engineers at Pittsburgh, Huntington, and Louisville. Pittsburgh section extends 127 miles from head of river at Pittsburgh, PA, to a point immediately upstream from New Martinsville, WV, and includes Emsworth, Dashields, Montgomery, New Cumberland, Pike Island, and Hannibal Locks and Dams. Huntington section

extends 311 miles from mile 127 to 438 immediately upstream from Foster, KY, and includes Willow Island, Belleville, Racine, Robert C. Byrd, Greenup, and Captain Anthony Meldahl Locks and Dams. Louisville section extends 543 miles from mile 438 to mouth of river, and includes Markland and McAlpine Locks and Dams (with Louisville and Portland Canal), Cannelton, Newburgh, John T. Myers, and Smithland Locks and Dams, and Locks and Dams 52 and 53.

Statistics.....19-8

Navigation

1. CONSTRUCTION OF LOCKS AND DAMS ON OHIO RIVER

Location. The Ohio River is formed by junction of Allegheny and Monongahela Rivers at Pittsburgh, PA, and flows generally southwesterly for 981 miles to join Mississippi River near Cairo, IL. For description of river see page 1227, 1932 Annual Report.

Previous Projects. For details see page 1907 of 1915 Annual Report.

Existing project. Provides for improvement of entire river by construction of locks and dams to provide channel depth of 9 feet and for widening Louisville and Portland Canal at Louisville, KY. Project provides for two locks (110 feet by 600 feet and 56 feet by 360 feet) at Emsworth, Dashields and Montgomery. The dams at Emsworth and Montgomery are movable crests while at Dashields it is a fixed crest. Below Montgomery Locks and Dam, the existing project consists of fixed dams with

movable crests with two locks (110 by 1,200 feet and 110 by 600 feet) at New Cumberland, Pike Island, Hannibal, Willow Island, Belleville, Racine, Greenup, Captain Anthony Meldahl, Markland, Cannelton, Newburgh, and John T. Myers; two locks 110 by 1,200 feet at Robert C Byrd and Smithland; 110- by 1,200-foot temporary locks in addition to the existing locks at Locks and Dams 52 and 53, and reconstruction to provide a 110- by 1,200-foot lock in addition to existing locks and a fixed dam with two sections of movable crest at McAlpine Locks and Dam; widening Louisville and Portland Canal to 500 feet. Auxiliary lock 56 by 360 feet at McAlpine Locks and Dam has been inoperative since failure of downstream lock gates in December 1972. Rehabilitation of existing Locks and Dams 52 and 53 was started in September 1979 under the purview of Section 6, March 1909 Act. Mound City was also considered authorized under purview of 1909 Act, and preconstruction planning was performed in the period 1965 to 1972. The ruling of the U.S. District Court, District of Columbia, on September 6, 1974, with reference to Lock and Dam 26, Mississippi River, would

also apply to this project. Consequently, it is no longer considered authorized. Operation and care of locks and dams were included in project July 1, 1935, under provisions of Permanent Appropriations Repeal Act of June 26, 1934. Estimated Federal cost of new work, is \$3,600,490,636. Foregoing estimate does not include expenditures on previous projects. Various items previously included in this project are considered inactive or unnecessary and are excluded from foregoing cost estimate. See page 693, Annual Report, 1968, for items and estimated cost. Under authority of 1910 River and Harbor Act, Louisville and Portland Canal was widened to 200 feet; Locks and Dams 40 and 42 eliminated; Locks and Dams 1 and 2 replaced by Emsworth Locks and Dam; Lock and Dam 3 replaced by Dashields Locks and Dam; and Locks and Dams 4, 5, and 6 replaced by Montgomery Locks and Dam. Locks and Dams 24, 25, and 26 were replaced by Robert C. Byrd Locks and Dam authorized by August 30, 1935, Act, and constructed under project for improving lower Kanawha River. Locks and Dams 7, 8, and 9 were replaced by New Cumberland Locks and Dam; Locks and Dams 10 and 11 were replaced by Pike Island Locks and Dam; Locks and Dams 12, 13, and 14 were replaced by Hannibal Locks and Dam; Locks and Dams 15, 16, and 17 were replaced by Willow Island Locks and Dam; Locks and Dams 18, 19, and 20 were replaced by Belleville Locks and Dam; Locks and Dams 21, 22, and 23 were replaced by Racine Locks and Dam; Locks and Dams 27, 28, 29, and 30 were replaced by Greenup Locks and Dam; Locks and Dams 31, 32, 33, and 34 were replaced by Captain Anthony Meldahl Locks and Dam; Locks and Dams 35, 36, 37, 38, and 39 were replaced by Markland Locks and Dam; the Louisville and Portland Canal at McAlpine Locks and Dam was widened to 500 feet. Locks and Dams 43, 44, and 45 were replaced by Cannelton Locks and Dam; Locks and Dams 46 and 47 were replaced by Newburgh Locks and Dam; Locks and Dams 48 and 49 were replaced by John T. Myers Locks and Dam, and Locks and Dams 50 and 51 were replaced by Smithland Locks and Dam, as modifications to existing project under purview of Section 6, March 3, 1909 Act, reducing total number of structures to 20. The Water Resources Development Act of 1974 combined the Newburgh Bank Protection Works project with the Newburgh Locks and Dam project. A December 1981 Act established the Falls of the Ohio National Wildlife Conservation Area near McAlpine Locks and Dam to protect and preserve existing fossilized coral and a diversity of wildlife. A November 17, 1988 Act authorized a replacement structure for Locks & Dams 52 & 53 at Olmsted, IL. A November 28, 1990 Act authorized an interpretive center at the Falls of the Ohio National Wildlife Conservation Area near McAlpine Locks & Dam and a replacement of the existing 110 foot x 600 foot lock at McAlpine Locks &

Dam, IN & KY. Table 19-J contains data relative to various features of locks and dams included in existing project. For list of principal towns and cities along Ohio River with their mileage below Pittsburgh, PA, see page 1060, 1962 Annual Report. See Table 19-I for licenses.

Navigation system of 20 locks and dams is in operation and 9-foot navigation throughout length of river is generally available at all times. At certain unstable bars project depth is maintained by dredging, supplemented by contraction works. (See "Open Channel Work, Ohio River.") Table 19-J shows cost and year completion of locks and dams now in operation. New Cumberland, Pike Island, Hannibal, Willow Island, Belleville, Racine, Greenup, Captain Anthony Meldahl, Markland, McAlpine, Cannelton, Newburgh, John T. Myers, and Smithland replacement locks and dams are in operation, replacing 39 old low-lift locks and dams. For total cost of existing project, see Table 19-H.

Terminal facilities. Modern public terminals, with warehouses, equipped with operating machinery for transferring materials, have been constructed by private interests at some of the larger cities and towns. A list of terminals on Ohio River is revised annually and can be obtained from Division Engineer, U.S. Army Engineer Division, Great Lakes & Ohio River, Cincinnati, Ohio.

Operations during fiscal year. New work by contract and hired labor:

Emsworth Locks and Dam: The major rehabilitation is ongoing and consists of providing two sets of emergency bulkheads, providing permanent erosion protection downstream of the dams, replacing 13 lift gates and associated electrical and mechanical systems, and rehabilitation of the two service bridges. \$14.9M was appropriated and \$13.1M was expended in FY 2006. A \$18.9M contract to replace the Back Channel Dam Gates was awarded in Sep 2005 and is ongoing, plans and specifications and a hydraulic model study of the erosion protection are ongoing, the emergency bulkheads have been fabricated and were delivered in July 2006.

Greenup Locks and Dam: WRDA 2000 authorized improvements to Greenup L&D, KY and OH. Preconstruction Engineering and Design is underway consisting of geotechnical investigations, design report for the lock extension, mitigation model studies, and archaeological, historical, cultural, and biological work. PED is scheduled for completion in 2009. In FY 2004 the following security measures were completed under contract for \$2,668,000. Physical security improvements included fencing, window and door hardening, and the hardening of other access points into buildings and electronic security improvements included the installation of intrusion detection systems, CCTV

surveillance, and a system for electronic access control to critical areas of the projects. In FY 2007 a contract was awarded in September to rebuild the crane at the project at an estimated cost of \$2,483,000. The work should be completed in FY 2008 pending availability of funds.

Robert C. Byrd Locks and Dam: The existing project, constructed under project for improving lower Kanawha River, was placed in operation in August 1937. The dimensions of the original lock chambers and poor approach conditions, particularly to downstream traffic, had created a higher than normal accident rate to the structure with corresponding hazards and delays to traffic. The Water Resources Development Act of 1976 authorized Phase I studies for 1,200-foot locks in a bypass canal. These studies are complete.

Initial Construction. General funds for the continuation of engineering activities were received in September 1985. Real estate acquisition is complete. The contract for the Locks was awarded in October 1987 and the new locks were put into operation in 1993. The contract for the Dam Rehabilitation was awarded in June 1993 and is 99 percent complete. Remaining work on the Dam Rehabilitation Contract consists of repair to gear five and resolution of litigation. The total estimated cost of the project is \$383,200,000, which is 50 percent federal cost and 50 percent Inland Waterways Trust Fund cost.

In FY 2005, the following security measures were completed under contract for \$2,822,000. Physical security improvements included fencing, window and door hardening, and the hardening of other access points into buildings and electronic security improvements including the installation of intrusion detection systems, CCTV surveillance, and a system for electronic access control to critical areas of the projects.

Falls of the Ohio National Wildlife Conservation Area Was authorized by 97-137 on December 29, 1981 and modified by Public Law 101-640 on November 28, 1990 to design and construct an interpretive center. The Conservation Area protects 1,000 acres, which consists of birdlife and other wildlife. Planning consisted of efforts to define facilities to be cost shared with local interests. All Real Estate tracts have been acquired and one tract remains in a condemnation trial. A construction contract to construct the cost-shared recreation facilities was awarded on 30 September 1993, and completed in February 1995. The Indiana Department of Natural Resources manages the area under a Public Park and Recreation Lease granted on 1 January 1992. A portion of the Ohio River Shoreline within the Conservation Area abutting the location of Emery Crossing Road in the vicinity of the historic town of Clarksville, Indiana, collapsed into the river in the spring of 2004, exposing remnants of a prehistoric village and one human burial site. Consequently, an

extensive investigation and limited recovery preceded bank stabilization construction, which was closely coordinated with the Indiana State Historic Preservation Office. Construction to restore the bank and provide a base for Town of Clarksville to rebuild the road was completed in July 2005, including a modification to increase toe protection by placing rock berm between road collapse repair and Mill Creek Bridge.

John T. Myers Locks and Dam: Construction was initiated in June 1965. All work is complete. An extension of the existing 600-foot x 110-foot auxiliary lock chamber to a 1,200-foot x 110-foot chamber was authorized by the WRDA of 2000 in Public Law 106-541 on 11 December 2000. This effort will give the J.T. Myers project twin 1,200-foot locks for inland navigation tow traffic. Preconstruction and Design efforts are underway consisting of the preparation of geotechnical investigations, design reports for the lock extension and aquatic mitigation, hydraulic model studies, and economic and archeological, historical, cultural and biological work were completed in September 2004. A construction contract for the first site preparation was awarded in September 2004 for \$392,000. Ongoing Preconstruction and Design efforts consisting of the preparation of design reports and plans and specifications for the lock extension, aquatic mitigation, and miter gate storage pier continue.

McAlpine Locks and Dam: A replacement of the existing 110 foot x 600 foot lock with a new 100 foot x 1,200 foot lock was authorized by WRDA of 1990 in Public Law 101-640. Construction has been initiated. A contract to construct a cofferdam and demolish the 360 foot and 600 foot locks was awarded in May 2000 and was completed March 2003. A contract to construct a boat mooring facility was awarded 4 April 2002 for \$2,680,000 and was completed in April 2004. A contract to construct the new 1,200 foot lock and an access bridge to Shipping port Island was awarded on 24 September 2002 for \$221,441,468. The lock contract is approximately 65% complete at the end of FY 06. \$308,730,000 has been allocated for the lock replacement and ancillary efforts.

Olmsted Locks & Dam: A replacement structure for Locks and Dams 52 & 53 was authorized by the WRDA of 1988 in Public Law 100-676 on 17 November 1988. Engineering during construction continued to support the dam construction contract. ERDC continued to perform hydraulic model studies of the shell placement for the dam construction. The Dam construction contract was awarded on 28 January 2004. Notice to proceed was issued on 18 February 2004, mobilization efforts continued and placement of scour stone began. Construction of the precast yard continued.

Progress was approximately 20%. New contracts were awarded for the construction of the Storage Building, overlaying the county road and adding drain holes to the maintenance bulkheads. In FY 07, \$88,190,400 was expended on the Olmsted project and \$110,032,500 was obligated.

Emsworth Locks and Dam: In FY 2006, emergency bulkheads were purchased for \$797,000, completed security improvements for \$56,000, repaired dam gate trucks for \$101,000, and repaired miter gates for \$373,000. Total maintenance cost for FY06 was \$1,389,000

Dashields Locks and Dam: In FY 2006: completed repairs to the access road for \$254,000, completed security improvements at \$254,000, and repaired miter gates for \$488,000. Total maintenance cost for FY06 was \$997,000.

Montgomery Locks and Dam: FY 2006: security improvements for \$1,044,000, repaired the land wall filling valve & operating machinery for \$427,000, and completed a structural assessment of the dam gates for \$171,000. Total maintenance cost for FY06 was \$1,688,000.

New Cumberland Locks and Dam: In FY 2006: security improvements were completed for \$595,000. Total maintenance cost for FY06 was \$711,000.

Pike Island Locks and Dam: In FY 2006, security improvements were completed for \$178,000, renovation of the land wall filling valve for \$932,000, and initiated design of new miter gates for \$208,000. Total maintenance cost for FY06 was \$1,354,000.

Hannibal Locks and Dam: In FY 2006: dredging was completed for \$338,000, security improvements for \$161,000, renovation of the land wall emptying valve for \$842,000, and emergency repairs to miter gate quoin seals for \$412,000. Total maintenance cost for FY06 was \$1,805,000.

Captain Meldahl Locks and Dam: A contract was awarded in September 2005 to fabricate the first of two sets of replacement miter gates at an estimated cost of \$6,138,000. Fabrication should be completed in FY 2009 pending availability of funds. In FY 2006 the following security measures were completed under contract for \$1,819,000: Physical security improvements included fencing, window and door hardening, and the hardening of other access points into buildings and electronic security improvements included the installation of intrusion detection systems, CCTV surveillance, and a system for electronic access control to critical areas of the projects. In FY 2007 the emergency

gate at the project was rehabilitated, the first in a Division-wide initiative.

Racine Locks and Dam: In FY 2006 the following security measures were completed under contract for \$2,034,000: Physical security improvements included fencing, window and door hardening, and the hardening of other access points into buildings and electronic security improvements included the installation of intrusion detection systems, CCTV surveillance, and a system for electronic access control to critical areas of the projects.

Belleville Locks and Dam: In FY 2006 the following security measures were completed under contract for \$907,000: Physical security improvements included fencing, window and door hardening, and the hardening of other access points into buildings and electronic security improvements included the installation of intrusion detection systems, CCTV surveillance, and a system for electronic access control to critical areas of the projects.

Willow Island Locks and Dam: In FY 2006 the following security measures were completed under contract for \$2,335,000: Physical security improvements included fencing, window and door hardening, and the hardening of other access points into buildings and electronic security improvements included the installation of intrusion detection systems, CCTV surveillance, and a system for electronic access control to critical areas of the projects.

Operation and maintenance, general. Locks and dams operated as required and necessary repairs and improvements made thereto and to operator's quarters, grounds and esplanades. Costs were \$19,011,303 for Huntington District, \$33,493,849 for Louisville District and \$17,885,603 for Pittsburgh District.

2. OPEN CHANNEL WORK, OHIO RIVER

Location. Under jurisdiction of District Engineer in whose district work is located. Portion of river included in project extends 981.0 miles from head of river at Pittsburgh, PA, to mouth of Cache River (Mound City, IL). Open channel improvement from mouth of Cache River to mouth of Ohio River is under jurisdiction of Mississippi River Commission.

Existing Projects. Before completion of canalization project, no project depth had been fixed by Congress under project for open channel work; but, in order to properly aid packet and barge navigation, it was necessary to secure a low-water channel with a minimum

depth of 4 to 6 feet, and a width, depending upon difficulty of running channel, of 400-600 feet; also, to permit movement of large coal tows, which movement occurred at stages of water exceeding 10 feet, it was necessary to remove points of projecting bars which formed at various locations along river. Accomplishment of this purpose involved concentration of current by closing back channels at islands with low dams, contraction and straightening wide open channels by low dikes, dredging bars and shoals, and removal of snags and wrecks. Incidental to direct improvement of Ohio River is construction and maintenance of ice piers as required for protection of river craft. Stage of extreme high water on Ohio River varies from 46 feet at Pittsburgh, PA, to 80 feet at Cincinnati, OH, with 57.2 feet at Louisville, KY (head of falls, 53.8 feet at Evansville, IN, and 59.5 feet at Cairo, IL (mouth of river). Estimated cost of new work is \$16.16 million, exclusive of following items which are considered inactive: Ice piers authorized by 1927 River and Harbor Act; reforestation of sloughs of Kentucky Peninsula near Evansville, IN, authorized by 1930 River and Harbor Act; dredging to widen channel at certain points; and placing revetment at various points. Estimated cost of these items is \$6,565,000. Operation of snag boats on Ohio River below Pennsylvania State line was included in project July 1, 1935, under provisions of Permanent Appropriations Repeal Act of June 26, 1934. See Table 19-B for authorizing legislation.

New work under this project is substantially complete, since it is not anticipated that work on inactive portion of project will be accomplished. In addition to dredging, local stabilization of channel has been effected at various points by construction of dikes and revetment. Work, which remains, consists of dredging to widen channels at certain points to project depth.

Local cooperation. River and Harbor Act of January 21, 1927, authorizing construction of ice piers for general open channel work, imposes condition that before work is begun on any pier, local interests convey to the United States free of cost such riparian rights as may be deemed necessary in connection with the improvements at locality (H. Doc. 187, 67th Congr., 2nd Sess.). Existing ice piers are adequate for present purposes and local cooperation is not needed since no additional construction is under consideration. River and Harbor Act of July 3, 1930, provides for reforestation of sloughs of Kentucky Peninsula and bank protection and that no expense shall be incurred by the United States for acquiring lands required for purpose of this improvement (H. Doc. 409, 69th Congr., 1st Sess.). Erosion occurs on a periodic basis depending on winter high water conditions. As erosion occurs, local cooperation may be required.

Operations during fiscal year. Operation and maintenance, general: Dredging was done where required to provide an adequate and dependable channel of project depth at minimum pool conditions. Dikes and revetments were maintained and routine work of maintaining navigation aids, removing snags, making channel studies, hydrographic surveys and mapping was performed as required. Channel soundings, hydrographic surveys, stream gauging operations, channel inspections and aids to navigation, and miscellaneous inspections and reports cost \$2,667,190. In FY 2007 dredging by contract in the Huntington District was 263,144 cubic yards at \$1,436,597 Louisville District 575,733 cubic yards at \$2,398,611, and Pittsburgh District 0 cubic yards at \$0.

General Investigations:

1. UPPER OHIO NAVIGATIONAL STUDY

Emsworth, Dashields and Montgomery (EDM) are the uppermost Lock and Dam structures on the Ohio River and are located at river miles 6.2, 13.3 and 33.7 respectively, below the "Point" in Pittsburgh, Pennsylvania. All three have dual lock chambers, 110' x 600' (main) and 56' x 360' (auxiliary). These lock chambers are smaller than the typical 110' x 1200' Ohio River locks and are considered undersized compared to the other downstream Ohio River navigation facilities, are 60 to 70 years old, have already been rehabilitated to extend their useful lives and have a critical need for structural reconstruction or additional rehabilitation. Study of EDM will include investigation lock navigation modernization strategies.

The site-specific EDM feasibility report was Congressionally added in the Fiscal Year 2003 Omnibus Act. The District has prepared a Project Management Plan (PMP) for the feasibility study. The PMP was approved by the Great Lakes and Ohio River Division Office in Cincinnati, Ohio, on August 17, 2004. The Study is proceeding with activities associated with the "without project condition" and preparation for a Feasibility Scoping Meeting to be scheduled during June 2007.

In FY 2006, the Project Video was completed; Project Management Plan revised, NEPA Scoping Meeting organized, the Reliability Analysis continued and the Economic Studies were initiated for a cost of \$944,200.00.

REPORT OF THE SECRETARY OF THE ARMY ON CIVIL WORKS ACTIVITIES FOR FY 2007

- 1 Includes \$17,003,761 for previous 6-foot canalization project.
- 2 Includes \$36,943,217 expended from 1885 to 1937 on operation and care of work of improvement under provisions of permanent indefinite appropriations for such purposes.
- 3 Includes \$215,812 public works acceleration, executive 1963.
- 4 Includes \$38,766 public works acceleration, executive 1963.
- 5 Excludes \$251,769 contributed funds for new work.
- 6 Excludes \$250,102 contributed funds for new work.
- 7 Excludes \$1,621,349 expended in operation of snag boats under provisions of permanent indefinite appropriation for such purposes, and \$267 transferred to project without reimbursement.
- 8 Includes \$1,040,236 Public Works funds.
- 9 Includes \$1,000 for removal of obstructions in Licking River under authority of Section 3, R&H Act of 1930.
- 10 Includes \$100,000 placed in FY 1971 Budget Reserve.
- 11 Excludes \$3,899 transferred from project without reimbursement.
- 12 Surplus property valued at \$3,553 transferred to project without reimbursement.

- 13 Excludes \$2,140 transferred to project without reimbursement.
- 14 Excludes surplus property valued at \$73,832 transferred to Project without reimbursement.
- 15 Includes \$87,724,158 prior construction cost.
- 16 Excludes surplus property valued at \$297,385 transferred to Project without reimbursement.
- 17 Includes \$549,392 Code 710 Funds, \$572,162 Code 711 Funds, \$532,677 Code 712 Funds and \$1,759,812 Code 713 Funds.
- 18 Includes \$549,392 Code 710 Funds, \$342,162 Code 711 Funds, \$532,677 Code 712 Funds and \$1,989,812 Code 713 Funds.
- 19 Includes \$2,158,073 Funds provided from The Productive Employment Appropriations Act of 1983 (PL 98-8).
- 20 Includes \$920,945 cost for operations & care of previous projects.
- 21 Includes \$1,194,084,250 Inland Waterways Trust Funds.
- 22 Includes \$1,191,720,604 Inland Waterways Trust Funds.
- 23 Excludes \$9,525,437 settlement from the U S Treasury Dept. Judgment Fund.

OHIO RIVER

Table 19-B **Authorizing Legislation**

See Section in Text	Date of Authorizing Act	Project and Work Authorized	Documents
2.		Open Channel Work, Ohio River	
	March 3, 1827	Project adopted by this act originally covered entire length of Ohio River from its mouth near Cairo to Pittsburgh, a distance of 981 miles. It provided for removal of all obstructions, which tend to endanger steamboat navigation.	
	January 21, 1927	Construct ice piers as a part of allotted from appropriations for general open channel work.	H. Doc. 187, 67th Cong., 2 nd Sess.
	July 3, 1930	Reforestation of sloughs on Kentucky Peninsula near Evansville, IN, and a 200-foot strip along bank and for bank protection at an estimated cost of \$200,000.	H. Doc. 409, 69th Cong., 1 st Sess.
	July 3, 1958	Act of March 3, 1827, modified to include maintenance of existing Licking River Channel within lower 3-mile limit of river slack water, at an estimated increase of \$1,000 in cost of average annual maintenance.	H. Doc. 434, 84th Cong., 2 nd Sess.
		Locks and Dams, Ohio River	
	December 29, 1981	Act of December 29, 1981, established the 1,000-acre Falls of the Ohio National Wildlife Conservation Area, at a cost not to exceed \$300,000.	H.R. 2241, PL97-137, Title II, 95 Stat. 1710
	October 17, 1986	Act of October 17, 1986 authorized lock replacement, improvement, and rehabilitation at Gallipolis Lock and Dam, Ohio River, Ohio and West Virginia for 1200 –foot locks to provide a uniform lockage system thought the central reach of the Ohio River at a total cost of \$285,000,000.	PL 99-622, 99 th Cong
	November 17, 1988	Act of November 17, 1988 authorized a replacement structure for Locks and Dams 52 and 53 at Olmsted, Illinois.	PL 100-676, 100th Cong., 2nd Sess.
	November 17 1988	Act of November 17, 1988 prohibited conveyance to the state of West Virginia the land known as Lesage/Greenbottom Swamp that was acquired by he United States for mitigation purposes in connection with the Gallipolis Locks and Dam replacement project.	PL 100-676, 100 th Cong..
	November 28, 1990	Act of November 28, 1990, modified PL 97-137 by authorizing an interpretive center at Falls of the Ohio National Wildlife Conservation Area, at an estimated total cost of \$3,200,000.	PL 101-640, 101st Cong., 2nd Sess.
	November 28, 1990	Act of November 28, 1990 authorized a modernization of the existing 110 foot x 600 foot lock at McAlpine Locks and Dam, Indiana and Kentucky at a total cost of \$219,600,000 with one-half appropriated from the Treasury and one-half from the Inland Waterways Trust Fund.	PL 101-640, 101st Cong., 2nd Sess.
	October 31, 1992	Act of October 31, 1992 renamed the Gallipolis Locks and Dam to the Robert C. Byrd Locks and Dam.	PL 102-580, 102nd Cong., 2nd Sess.
	October 1, 1996	Act of October 1, 1996 renamed the Uniontown Locks and Dam to the John T. Myers Locks and Dam.	PL 104-303, 104 th Cong.
	October 31, 2000	Act of October 31, 2000 authorized a modernization of the existing 110' x 600' lock at John T. Myers Locks and Dam, Indiana and Kentucky at a total cost of \$181,700,000 with one-half appropriated	PL 106-541, 106 th Cong.

REPORT OF THE SECRETARY OF THE ARMY ON CIVIL WORKS ACTIVITIES FOR FY 2007

from the Treasury and one-half from the Inland Waterways Trust Fund.

October 31, 2000	Act of October 31, 2000 authorized a modernization of the existing 110' x 600' lock at Greenup Locks and Dam, Kentucky and Ohio, at a total cost of \$175,500,000 with one-half appropriated from the Treasury and one-half from the Inland Waterway Trust Fund.	PL 106-541, 106 th Cong.
October 31, 2000	Act of October 31, 2000 authorized projects for ecosystem restoration on Ohio River Mainstem, Kentucky, Illinois, Indiana, Ohio, West Virginia and Pennsylvania at a total cost of \$307,700,000 with an estimated Federal cost of \$200,000,000 and an estimated non-Federal cost of \$107,700,000.	PL 106-541, 106 th Cong.

**Table 19-H Construction of Locks and Dams on Ohio River
Total Cost of Existing Project to September 30, 2007
(See Section 1 of Text)**

Funds	Operations and Maintenance			Total
	New Work	General	Rehabilitation	
Regular	5,553,491,515	1,480,632,011	1,540,707,299	8,574,830,825

OHIO RIVER

**Table 19-J Ohio River Locks and Dams
(Continued)**

Footnotes

- 1 Depths are on emergency dam foundation and re-controlling depths.
- 2 Change from fixed dam to lift-gate dam completed in 1938.
- 3 Depths are on poiree dam foundation and are controlling depths.
- 4 Land chamber.
- 5 River chamber.
- 6 Lock and Dam 41 completed with 110- by 600-foot lock in 1921. Completed with new dam and raised canal and lock wall in 1928. Auxiliary 56- by 360-foot lock constructed in 1929-30. Reconstruction and modernization began 1956, renamed McAlpine Locks and Dam in 1960. Operation of auxiliary lock suspended in 1971.
- 7 Existing structures are complete except for deferred alteration of railroad bridge. Construction of the new 110 foot x 1,200 foot lock began in September 2002.
- 8 Dam below not yet constructed. Depth on lower miter sill at lower water.
- 9 Excludes \$2,219,975 payment for settlement of damage to dam caused by barge accident in April 1978.
- 10 Major rehabilitation (\$8,876,000) initiated in FY 79 is complete.
- 11 Major rehabilitation (\$4,593,572) initiated in FY 79 is complete.

- 12 For preconstruction planning 1965 to 1972. No longer considered authorized. (See Section 1 of Text.)
- 13 Includes \$37,485,870 for major rehabilitation completed in FY 84
- 14 Includes \$33,914,252 for major rehabilitation completed in FY 90 (O&M funds).
- 15 Includes \$33,016,696 for major rehabilitation completed in FY 89.
- 16 Includes \$207,026,141 Inland Waterways Trust Funds.
- 17 Includes \$478,015,864 Inland Waterways Trust Funds.
- 18 Includes \$221,779,486 Inland Waterways Trust Funds.
- 19 Exclusive of \$7,013,405 details below.
- 20 Includes \$102,190,120 original construction cost, \$5,205,058 PED costs and \$1,730,619 Inland Waterways Trust Funds for Lock Improvement.

Additional Features Entering into Cost of Project	
Louisville and Portland Canal and Indiana chute (under previous project).	\$5,359,203
Examinations, survey contingencies, plants, and miscellaneous	966,232
Waterfront Development at Huntington, WV (Greenup Pool)	19,170
Recreation facilities, pool area, Gallipolis Locks and Dam.	668,800
Total	7,013,405
Grand Total	\$2,584,629,297

BUFFALO, NY DISTRICT

The District comprises northern OH, northwestern PA and western and northern NY, embracing U.S. waters of Lake Erie exclusive of a small portion of the western end, Lake Ontario, and St. Lawrence River, with their tributary drainage basins from boundaries between the states of OH and MI to international boundary line east of Frontier, NY.

NAVIGATION

1. ASHTABULA HARBOR, OH

Location. On the south shore of Lake Erie, at mouth of Ashtabula River, 59 miles easterly from Cleveland, OH. (See NOAA Nautical Chart 14836.)

Previous projects. For details see pg. 1963 of Annual Report for 1915, and pg. 1593 of Annual Report for 1938.

Existing project. For description see pgs. 1297-1299 of the 1966 Annual Report. Federal cost of completed project is \$12,240,147. Non-Federal costs of \$5,743,000, including contribution of \$47,000, were for construction of access roads, docks, storage and handling facilities and dockside dredging. (See Table 20-B for authorizing legislation.)

Local cooperation. Fully complied with. Local interests contributed \$47,000 for work authorized by 1936 and 1970 Acts.

Terminal facilities. There are sixteen piers and wharves. Coast Guard owns one facility. Ten facilities are along banks of Ashtabula River and six are on south side of outer harbor. Eleven terminals have railroad connections and six have mechanical handling facilities. Facilities are considered adequate for existing commerce. (See Port Series No. 42, revised 1972, Corps of Engineers.)

Operations and results during fiscal year.

Operations: Federal funds for Project Condition Surveys cost \$152,768. Maintenance: A total of \$2,102,359 was expended by the Buffalo & Detroit Districts' government floating plants. Completed the rebuild of 273 linear feet (one side) of laid-up breakwater construction on the East Breakwater utilizing government plant and hired labor. This work included 2082 tons of armor stone and 900 tons of core stone used to complete the breakwall construction. Costs associated with the Ashtabula River Partnership Project for removal of contaminated sediments from the Ashtabula River totaled \$467,051. Executed a Project Cooperation Agreement (PCA) for the O&M/312a dredging to formalize the cost sharing agreement with the non-Federal sponsor, developed and finalized the plans and specifications, developed the project acquisition strategy and received approval from the PARC and attempted to secure the USEPA RAC Contractor to perform the dredging. \$123,541 was spent conducting sediment sampling from Station 120 down through the entire outer harbor. Sediment samples included core samples within and along the sides of the Federal navigation channels to investigate the potential of PCB contamination

migration from the upstream environmental dredging project. A total of 82 sampling sites were sampled and 134 analyses conducted. The results of these analyses were used in part to determine the extent to which the USACE portion of the environmental dredging project needed to be expanded, and to make open-lake placement suitability determinations.

2. BLACK ROCK CHANNEL AND TONAWANDA HARBOR, NY

Location. Improvement is essentially that of upper 13.5 miles of Niagara River from its head at Lake Erie, Buffalo, NY, to and including Tonawanda Harbor, NY. It comprises improvements formerly designated by three titles; Lake Erie entrance to Black Rock Harbor and Erie Basin, NY, Black Rock Harbor and Channel, NY and Tonawanda Harbor and Niagara River, NY. (See NOAA Nautical Chart 14832.)

Previous projects. For details, see items 5 and 7, pg. 1970 of Annual Report for 1915, and pg. 1612 of Annual Report for 1938.

Existing project. For description of existing project and Federally owned Black Rock ship lock, see pg. 1548 of Annual Report for 1962. Improvement of guide pier at Black Rock Lock, as authorized by 1935 Act was de-authorized by Congress in Aug 1977. Cost for completed portion of new work is \$10,457,093. Enlarging of existing 21-foot turning basin and deepening lower 1,500 feet of Tonawanda Inner Harbor from 16 to 21 feet, authorized by the 1954 Act, was de-authorized by Congress in May 1981, and is excluded from foregoing cost. Non-Federal costs are estimated at \$1,540,000 for costs incurred by NY State for construction of Erie Basin and protecting breakwater, and construction and extension of Bird Island Pier, and by other local interest for relocation of utilities. (See Table 20-B for authorizing legislation.)

Local cooperation. Fully complied with for existing project. Contract for cost-shared recreation development at completed projects (Code 713 program) was executed by the NY State Department of Environmental Conservation, Albany, NY on Apr 16, 1985, and was approved by the Assistant Secretary of the Army and Chief of Engineers on May 3, 1985.

Terminal facilities. Two facilities are along the upstream end of the channel. Below Black Rock Lock and at Tonawanda Harbor there are 13 privately owned terminals. There are two state-owned barge canal terminals at Tonawanda, NY, and several marine service and supply docks for recreational and other small craft. The Corps owns a wharf adjacent to Black Rock Lock that is private. Ten terminals

BUFFALO, NY DISTRICT

have railroad connections and six mechanical-handling facilities. Facilities considered adequate for existing commerce. (Port Series No. 41, revised 1971, Corps of Engineers.)

Operations and results during fiscal year

Operations: Project Condition Surveys cost \$26,000, Public Visitation Tracking at Bird Island Pier cost \$2,203, National Historic Preservation Act Compliance cost \$4,078 and Operation and Care of Lock cost \$654,037. Maintenance: Facility security was improved through the addition of an upgraded monitoring system that also extended the amount of the project that is covered by the system at a cost of \$29,956. The lock was cleared of submerged debris that had periodically interfered with operation of the lock gates. This clearing was accomplished by in-house divers in order to return the lock to service without delay to vessel traffic. The dive team also installed a temporary water line to replace a broken line and returned the lock to operation by recovering debris that threatened to interfere with operating gates as a result of a minor vessel accident. Initial studies and planning were accomplished for improvements to signage at the project and necessary repairs to the sewage and water systems that service the lock. These projects will continue into FY 2008 and activities will include additional engineering design and construction by contract. At a cost of \$263,155, all ordinary maintenance required during FY 2007 was accomplished with minimal impact on commercial and recreational navigation interests.

3. BUFFALO HARBOR, NY

Location. At eastern end of Lake Erie, at head of Niagara River, 176 miles easterly from Cleveland, OH. (See NOAA Nautical Charts 14820 and 14833.)

Previous projects. For details see pg. 1967 of Annual Report for 1915 and pg. 1606 of Annual Report for 1938.

Existing project. For description see pg. 1368 of Annual Report for 1963. In addition, on Dec 15, 1980, OCE authorized the removal of bridge abutments of South Michigan Avenue Bridge. New work for completed project cost \$18,837,601. Estimated non-Federal costs were \$9,188,000 for deepening, widening, and improving Buffalo River and ship canal, constructing piers, retaining walls, and dikes and performing dockside dredging. (See Table 20-B for authorizing legislation.)

Local cooperation. Fully complied with.

Terminal facilities. There are 27 piers, wharves, and docks of which five are on the outer harbor, nine are on the Lackawanna, Union, and Buffalo Ship Canals, and thirteen are located along the deep-draft section of the Buffalo River. Gateway Metroport,

Division of Gateway Trade Center, Inc., owns and operates, for the former Bethlehem Steel Corp., wharves at Lackawanna for the receipt and shipment of general cargo and bulk commodities. Buildings of the former steel plant are utilized for transit and long-term storage of cargo as required. The Niagara Frontier Transportation Authority owns Terminals A and B in the outer harbor used for handling general cargo. Twenty terminals have railroad connections. The city of Buffalo owns a slip on the right bank of Buffalo River just north of Michigan Avenue Bridge for mooring the city fireboat. Coast Guard facilities are at the mouth of Buffalo River along the left bank. (See Port Series No. 41, revised 1991, U.S. Army Corps of Engineers.)

Operations and results during fiscal year.

Operations: Project Condition Surveys cost \$44,137, Water Control Management and Data Collection cost \$37,992, and Sediment Sampling, Analysis and Evaluation cost \$15,893. Maintenance: Environmental Compliance Activities cost \$38,016. The funds were used to collect soil and sediment samples from the Buffalo Harbor Dike #4 confined disposal facility (CDF), and reference samples from Lake Erie and Buckhorn State Park. These samples were subjected to aquatic and terrestrial bioaccumulation tests for polynuclear aromatic hydrocarbons (PAHs) and metals. Testing was conducted by the USACE Engineering Research Design Center (ERDC). Initial labor for Structure Repair CDF#4 cost \$4,889 before the project was cancelled and Annual Snagging and Clearing of harbor debris cost \$27,757.

4. CLEVELAND HARBOR, OH

Location. On south shore of Lake Erie, at mouth of Cuyahoga River, 176 miles westerly from Buffalo, NY. (See NOAA Nautical Chart 14839.)

Previous projects. For details see pg. 1962, Annual Report for 1915, and pg. 1585, Annual Report for 1938.

Existing project. For description of existing project, as authorized through the 1966 modification, see pg. 1269 of Annual Report for 1967. Further improvements in the interest of commercial navigation and recreational navigation were authorized in the 1985 Supplemental Appropriations Act (PL 99-88). For details of the commercial navigation portion of the project, see pg. 20-4 of the Annual Report for 1995. For details of the recreational navigation portion of the project, see pg. 20-3 of Annual Report for 1994. The Water Resources Development Act of 1986 (PL 99-662) and the FY 88 Energy and Water Appropriations Act (PL 100-202) authorized the recreational navigation

project. These acts authorized additional undefined improvements to Cleveland Harbor. A portion of the project was de-authorized by the Inter-model Surface Transportation Efficiency Act of 1991. Estimated total Federal cost of the existing project is \$33,852,100 (Oct 1991) exclusive of undefined, inactive and deferred portions of the project. The amount of \$29,315,100 is for completed work and the balance of \$4,537,000 is for new work. Estimated non-Federal cost is \$13,740,000 (Oct 1991) of which \$9,203,000 is actual cost for completed work and the balance of \$4,537,000 is required for work authorized by PL 99-88, PL 99-662, and PL 100-202. Remaining work authorized by 1946 River and Harbor Act, consisting of widening and deepening the right bank of Cuyahoga River at the downstream end of Cut 4, is considered inactive and excluded from foregoing cost estimate. Estimated Federal cost (1966) of this portion is \$85,600 and non-Federal cost (1966) \$5,000,000. Remaining work authorized by 1958 R&H Act, consisting of planning and replacement of bridges number 19 (E.L.R.R.) and 32 (B. & O.R.R.) and widening Cuyahoga and Old River channels, and remaining work authorized by the 1960 R&H Act, consisting of deepening the remainder of the Cuyahoga River from bridge number 1 to and including the Old River to a depth of 27 feet, has been classified as deferred and is also excluded from foregoing estimate. Estimated Federal cost (Oct 1976) of this portion is \$18,033,300 and estimated non-Federal cost (Oct 1976) is \$21,251,000. The 1989 Energy and Water Development Appropriations Act (PL 101-101) authorized the Corps to begin a Reconnaissance study of the Cuyahoga River, to address the concerns of boat traffic congestion and related risks, accidents and safety of the public. Preliminary plans were studied to alleviate the commercial navigation problem and inadequate width and depth, in the Old and Cuyahoga Rivers. The cost of this Reconnaissance study was \$250,000. The Reconnaissance Report recommended a feasibility study for one plan, which has three structural features, and the potential for yielding commercial (priority) outputs. The non-Federal sponsor did not commit to provide its total share of the cost of the feasibility phase of the study. Therefore, the study was reclassified as "inactive". (See Table 32-B for authorizing legislation.) A confined disposal facility (CDF) (Dike 10B) was constructed adjacent to the Burke Lakefront Airport for containment of dredged material from Cleveland Harbor. The rubble mound structure was designed to hold material unsuitable for open-lake disposal. The sixty-eight (68) acre site should provide sufficient CDF capacity for approximately twenty years. The project was

constructed with Federal O&M funds at a cost of \$17,500,000 and was completed in 1998.

Terminal facilities. Fifty-one piers, wharves, and docks are situated in the Port of Cleveland. Eleven are located in the east and west basins of the outer harbor; 7 along the banks of the Old River and 17 and 16 along the right and left banks of the Cuyahoga River, respectively. Twenty-two terminals have both railroad connections and mechanical-handling facilities. The Corps owns a wharf at the foot of East 9th Street. The city of Cleveland owns and operates a wharf for mooring the city fireboat. U.S. Coast Guard vessels are moored east of the foot of 9th Street in the east basin. (See Port Series No. 43, revised 1989, U.S. Army Corps of Engineers.)

Operations and results during fiscal year.

Operations: Federal funds for Project Condition Surveys cost \$44,000. Phase II of the Dredged Material Management Plan (DMMP), a feasibility-level management plan study was continued and a draft DMMP and Environmental Impact Statement was substantively completed at a cost of \$394,718. Policy compliance and independent technical reviews were completed. Two public meetings were held in Cleveland to keep the public and key stakeholders informed of the DMMP's progress. Coordination with the Cleveland area Federal and non-Federal municipal and regulatory agencies and the non-Federal cost-sharing sponsor continued in FY07.

Maintenance: Maintenance Dredging cost \$1,864,849 to remove approximately 183,687 cubic yards of shoaled material from the Cuyahoga River. Fall Dredging included: Station 799+67 - 790+00, 120' wide, and Station 790+00 - 783+00, 60' wide. Spring Dredging included: Station 799+67 - 790+00, 120' wide, Station 790+00 - 753+00, 100' - 120' wide, Station 326+00 - 341+75, 60' wide (Old River), and Station 300+00 - 304+10, 50' wide (Old River). CDF 12 Fill Management Plan, cost \$1,917,565: Continued work on the development of the Fill Management Plan (FMP) including the bidding and award of a contract for perimeter berm raising and weir construction. CDF 10B Fill Management Plan, cost \$250,428: Completed second and final phase of planned FMP work. Activities included design and construction of the phase 2 south-side berm raising and surveys of the CDF site. Engineering & Design for the West Pierhead construction totaled \$63,272 and is 75% complete. Proposed construction includes encasing the pierhead by installing of approximately 250 LF of steel sheet pile wall, fog signal building removal, and concrete cap replacement. Coordination with SHPO continued to mitigate adverse effects on the two historic structures on the pierhead. E&D on the Ohio Area Office Finger Pier Repair continued with total expenditures

BUFFALO, NY DISTRICT

of \$4,811 for final payment of geotechnical investigation contract. A total of \$467,969 was expended to complete the rebuild of 40 linear feet (two sides) of breakwater construction on the West and East Arrowhead Breakwaters utilizing government plant and hired labor. This work included 190 tons of armor stone and 240 tons of core stone used to complete the breakwall construction. A total of \$40,560 was expended to complete the removal of debris that has accumulated in the Cleveland Harbor and Cuyahoga River utilizing government plant and hired labor. The work is required to allow the safe passage of commercial and recreational harbor traffic. There were 4 calls regarding hazards to navigation within the Federal channel reported by the USCG last year after rainfall events caused a large amount of debris to become submerged in the Cuyahoga River and Cleveland Harbor.

5. CONNEAUT HARBOR, OH

Location. On the south shore of Lake Erie, at mouth of Conneaut River, 73 miles easterly from Cleveland, OH. (See NOAA Nautical Chart 14824.)

Previous projects. For details see pg. 1964, Annual Report for 1915.

Existing project. For description see pg. 1274 of Annual Report for 1967. Actual costs for new work for completed portion of the project were \$7,541,369. For completed work, non-Federal costs were \$200,000 for dockside dredging and removal of existing dolphins. The most southerly 300 feet of the 1,670-foot long shore arm, authorized by the R&H Act of 1910, was de-authorized Oct. 96. (See Table 20-B for authorizing legislation.)

Local cooperation. Fully complied with for completed portion of project.

Terminal facilities. There are seven piers and wharves. Six are privately owned and operated and located in inner harbor. Remaining facility is city owned on the south side of outer harbor. Six terminals have railroad connections and four mechanical-handling facilities. (See Port Series No. 42, revised 1972, Corps of Engineers.)

Operations and results during fiscal year. Operations: Federal funds for Project Condition Surveys cost \$33,221 and Sediment Sampling, Analysis and Evaluation cost \$7,679. Maintenance: West Pier construction was initiated in May 2006 and was completed and closed-out in FY07. Construction in place is valued at \$634,583 including S&A and E&D during construction costs. The construction contract was awarded for \$1,749,156 in September 2005 and final contract cost was \$1,582,548. Work includes installation of 420 LF of steel sheet pile

wall, steel h-piles, rock anchors, 300 LF of stone pier repair, installation of a new concrete cap and miscellaneous fendering/cleat fixtures.

6. DUNKIRK HARBOR, NY

Location. On south shore of Lake Erie, 37 miles southwesterly from Buffalo, NY. (See NOAA Nautical Chart 14823.)

Previous projects. For details see pg. 1966 of Annual Report for 1915, and pg. 1604 of Annual Report for 1938.

Existing project. For description of completed portion of existing project see pg. 32-8 of Annual Report for 1976. For description of small boat harbor project as authorized under Section 201 of Flood Control Act of 1965, see pg. 32-8 of Annual Report for 1978. Actual costs for completed work are \$3,010,024. Actual non-Federal costs are \$1,961,000. (See Table 20-B for authorizing legislation.)

Local cooperation. Fully complied with.

Terminal facilities. Facilities consist of private docks for recreational craft and privately owned servicing and storage handling facilities for recreational and other small craft.

Operations and results during fiscal year.

Operations: Federal funds for Project Condition Surveys cost \$3,000.

7. ERIE HARBOR, PA

Location. On southerly side of bay formed by Presque Isle Peninsula, on south shore of Lake Erie, 78 miles westerly from Buffalo, NY. (See NOAA Nautical Chart 14835.)

Previous projects. For details see pg. 1965 of Annual Report for 1915 and pg. 1600 of Annual Report for 1938.

Existing projects. For description see pgs. 1363-64 of the Annual Report for 1963. The FY 93 Appropriations Act (PL102-377) authorized the planning, design and dredging of an access channel and berthing area. Entire project modification authorized by 1945 River and Harbor Act, providing for deepening channel and basin, both 23 feet deep, to Penn Central Company coal docks at westerly end of harbor, was de-authorized by Congress in Aug 1977. Actual costs for new work for completed portion of project were \$2,860,906. Extension of north pier portion, authorized by 1899 Act was de-authorized in Nov 1981. A portion of work authorized by 1960 Act, deepening strips adjacent to north and south piers, was de-authorized in Aug 1982. Non-Federal costs for completed work were \$51,000 for providing ore dock and dredging slip adjacent thereto. (See Table 20-B for authorizing legislation.)

Local cooperation. Fully complied with.

Terminal facilities. Sixteen piers and wharves, of which twelve are privately owned and operated. Erie International Marine Terminal No. 1 owned by Port Commission, city of Erie, is along main waterfront on south side of Presque Isle Bay and Coast Guard facilities are on north side. Two offshore oil docks are on Lake Erie. Eight terminals have railroad connections and six mechanical-handling facilities. Facilities are considered adequate for existing commerce. (See port Series No. 42, revised 1972, Corps of Engineers.)

Operations and results during fiscal year.

Operations: Federal funds for Project Condition Surveys cost \$3,112.

8. FAIRPORT HARBOR, OH

Location. On south shore of Lake Erie at mouth of Grand River, 33 miles easterly from Cleveland, OH. (See NOAA Nautical Chart 14837.)

Previous projects. For details see pg. 1963 of Annual Report for 1915, and pg. 1590 of Annual Report for 1938.

Existing project. For description of existing project, see pg. 1526 of Annual Report for 1962. Total Federal cost of \$2,591,000 is actual cost for completed portion of project. Total non-Federal cost is \$101,000 for bulkheads and dockside dredging for completed portion of project. (See Table 20-B for authorizing legislation.)

Local cooperation. See pg. 32-11 of 1976 Annual Report regarding assurances of local cooperation for work authorized by R&H Act of 1927.

Terminal facilities. Sixteen piers and wharves, all along banks of Grand River. Coast Guard owns one facility. Nine terminals have railroad connections and ten mechanical-handling facilities. Facilities considered adequate for existing commerce. (See Port Series No. 42, revised 1972, Corps of Engineers.)

Operations and results during fiscal year.

Maintenance: \$7,194 was expended to develop a Scope of Work and initiate design for fabrication and installation of safety ladders at the East Pier by in-house floating plant. Initial labor for Structure Repair cost \$8,308. \$50,591 was spent on environmental permit work, application for 401 certification, development of plan and specifications, development of bid documents, and stakeholder coordination before the cancellation of Maintenance Dredging.

9. GREAT SODUS BAY HARBOR, NY

Location. On Sodus Bay, which is a nearly land-locked indentation on south shore of Lake Ontario, 29 miles westerly from Oswego, NY. (See NOAA Nautical Chart 14814.)

Previous project. For details, see pg. 1972 of Annual Report for 1915, and pg. 1526 of Annual Report for 1938.

Existing project. For description, see pg. 1380 of Annual Report for 1963. Improvements authorized by 1962 Act, consisting of deepening lake approach channel, entrance channel and inner approach channel were deauthorized by Congress in Aug 1977. Actual costs of new work for completed portion of project were \$249,187. Costs incurred by local interests are not available. (See Table 20-B for authorization legislation.)

Local cooperation. Fully complied with.

Terminal facilities. Facilities consist of private docks for recreational craft and privately owned servicing and storage handling facilities for recreational and other small craft.

Operations and results during fiscal year. There were no Operations or Maintenance activities conducted in the harbor this FY.

10. HURON HARBOR, OH

Location. On south shore of Lake Erie at mouth of Huron River, 47 miles westerly from Cleveland, OH. (See NOAA Nautical Chart 14843.)

Previous project. For details, see pg. 1961 of Annual Report for 1915, and pg. 1576 of Annual Report for 1938.

Existing project. For description, see pg. 1347 of Annual Report for 1963 and pg. 32-12 of Annual Report for 1978. Cost of completed portion of existing project was \$4,834,006. Construction of detached breakwater as authorized by 1962 R&H Act was de-authorized Jan 1, 1990. Non-Federal costs of \$163,000 were incurred by local interests in 1963 for dockside dredging of areas between Federal improvement and terminal facilities. (See Table 20-B for authorizing legislation.)

Local cooperation. Fully complied with.

Terminal facilities. Six privately owned wharves and docks, one along left bank of Huron River and remainder along right bank. Four terminals have railroad connections and four mechanical-handling facilities. Facilities are regarded as adequate for existing commerce. (See Port Series No. 42, revised 1972, Corps of Engineers.)

Operations and results during fiscal year.

Operations: Federal funds for Project Condition Surveys cost \$18,811. Maintenance: \$87,846 was

BUFFALO, NY DISTRICT

spent on environmental permit work, application for 401 certification, development of plan and specifications, development of bid documents, and stakeholder coordination before the cancellation of Maintenance Dredging.

11. IRONDEQUOIT BAY, NY

Location. On south shore of Lake Ontario, 4 miles east of Rochester, NY at mouth of Irondequoit Creek, Monroe County, NY. (See NOAA Nautical Charts 14804 and 14815).

Existing project. For details of existing project, see pg. 32-7 of Annual Report for FY 87. Total estimated project cost is \$15,363,000 (Oct 1994) including \$3,582,000 Federal (which includes the COE \$3,536,000 and the USCG \$46,000) and \$11,781,000 non-Federal, including a cash contribution of \$2,661,000, lands and damages \$290,000 and the cost of a movable highway bridge \$8,830,000. Existing project was authorized by 1958 River and Harbor Act (H. Doc. 332, 84th Cong., 2nd sess.).

Local cooperation. The Buffalo District has a Local Cooperation Agreement with New York State, executed April 20, 1983.

Terminal facilities. Facilities consist of private docks for recreational craft and privately owned servicing and storage handling facilities for recreational and other small craft.

Operations and results during fiscal year. There were no Operations or Maintenance activities conducted in the harbor this FY.

12. LITTLE SODUS BAY HARBOR, NY

Location. Little Sodus Bay, on south shore of Lake Ontario, 15 miles west of Oswego, NY. (See NOAA Nautical Chart 14803.)

Previous projects. For details see page 1973 of Annual Report for 1915, and page 1628 of Annual Report for 1938.

Existing project. For description see page 1378 of Annual Report for 1958. New work for completed project cost \$69,066. Non-Federal costs of \$6,000 were incurred for channel dredging. (See Table 20-B for authorizing legislation.)

Local cooperation. Not required.

Terminal facilities. Facilities consist of private docks for recreational craft and privately owned servicing and storage handling facilities for recreational and other small craft.

Operations and results during fiscal year. There were no Operations or Maintenance activities conducted in the harbor this FY.

13. LORAIN HARBOR, OH

Location. On south shore of Lake Erie at mouth of Black River, 25 miles westerly from Cleveland, OH. (See NOAA Nautical Chart 14841.)

Previous projects. For details, see pg. 1961 of Annual Report for 1915, and pg. 1580 of Annual Report for 1938.

Existing project. For description see pgs. 1319-22 of the Annual Report for 1966. Federal cost of new work is \$20,475,000. Deepening and widening remainder of Black River Channel at Cut 1 and construction of bank stabilization, authorized by 1960 Act and modified by 1965 Act was de-authorized Jan 1, 1990. A portion of work authorized by 1960 Act, dredging of 15-to-25 foot wide strips adjacent to the U.S. East and West Piers were also de-authorized Jan 1, 1990. Total non-Federal cost is \$3,000 contributed by local interests towards construction of west shore arm. (See Table 20-B for authorizing legislation.) The Water Resources Development Act (WRDA) of 1986 (PL 99-662) authorized construction of commercial navigation improvements consisting of two bend cuts on the Black River to widen and straighten the channel between the Norfolk and Western Railroad Bridge and the 21st Street Bridge. These cuts are to be excavated to the existing channel depth of 27 feet. The authorized plan also includes widening the Upper Turning Basin at the existing depth of 21 feet. Estimated costs for this work are \$2,290,000 Federal and \$1,510,000 non-Federal (Oct 1989). This portion of the project has been classified deferred. On Mar 12, 1986, the Chief of Engineers under authority of Section 107 of the 1960 River and Harbors Act, as amended, authorized construction of a small boat harbor that was completed in Jul 1987. The project consists of a 225-foot detached rubble mound breakwater and an 800-foot long rubble mound breakwater attached to the east breakwater shorearm in the east basin of the outer harbor. Construction costs for this project, including supervision and administration, were \$775,025 Federal and \$775,025 non-Federal.

Local cooperation. For completed work, local interests contributed \$3,000. Work authorized by 1960 Act (and modified by 1965 Act) is de-authorized. All other conditions fully complied with. On Mar 25, 1986, the city of Lorain, OH signed the Local Cooperation Agreement (LCA), for the Section 107 project. For details see pg. 32-7 of Annual Report for 1986. For details of LCA for deferred project authorized by the 1986 WRDA, see pgs. 32-9 of the Annual Report for FY 87.

Terminal facilities. There are 23 piers and wharves, of which three are on the outer harbor and

the remainder is along banks of Black River. Two are owned by the city. Eight terminals have railroad connections and 15 mechanical-handling facilities. Facilities are considered adequate for existing commerce. (See Port Series No. 42, revised 1972, Corps of Engineers.)

Operations and results during fiscal year. Operations: Federal funds for Project Condition Surveys cost \$52,904. Costs for continuing Phase II of the DMMP were \$206,459 and included preparation of the draft DMMP and Environmental Impact Statement, survey of the Lorain Contained Disposal Facility, preparation of the Fish and Wildlife Coordination Act report by the U.S. Fish and Wildlife Service, and independent technical review (ITR) of the preliminary draft report. Extensive coordination with the Lorain area Federal and non-Federal municipal and regulatory agencies continued in 2007. Maintenance: Environmental Compliance Activities cost \$9,924. Funds were used for labor to update and complete the Lorain Harbor CDF Evaluation Report. A total of \$546,663 was expended on completing the rebuild of 190 linear feet (one side) of breakwater construction on the East Breakwater utilizing government plant and hired labor. This work included 708 tons of armor stone and 300 tons of core stone used to complete the breakwall construction. Dredging cost \$25,910 to develop bid documents and negotiate contract award with 8A contractor. Physical dredging will occur in FY08. At the conclusion of the 2006 dredging season, the CDF was considered to be essentially filled to capacity. \$ 320,579 was spent to construct an engineered 4-6 foot earthen berm around the perimeter of the CDF to extend the life of the structure by increasing its capacity. An 8(a) contract was awarded to construct the perimeter berm and construction was completed in September 2007.

14. OAK ORCHARD, NY

Location. On south shore of Lake Ontario, at mouth of Oak Orchard Creek, 33 miles westerly of Rochester, NY. (See NOAA Nautical Chart 14805.)

Previous project. For details see pg. 628 of Annual Report for 1905.

Existing project. For description of completed existing project see pg. 32-14 of 1975 Annual Report. Actual Federal cost for completed project was \$1,613,500. Estimated non-Federal cost is \$270,000 (Jul 1971) including cash contribution of \$170,700 and \$54,002 for recreational facilities and remainder for lands and construction of wharf. Existing project was authorized by the 1945 River and Harbor Act (H. Doc. 446, 78th Cong., 2nd sess.).

Local cooperation. Fully complied with. Local interests contributed \$224,702.

Terminal facilities. There is no commercial navigation at Oak Orchard Harbor. Terminal facilities consist of private docks for recreational craft.

Operations and results during fiscal year. There were no Operations or Maintenance activities conducted in the harbor this FY.

15. OLCOTT HARBOR, NY

Location. On south shore of Lake Ontario at mouth of Eighteen Mile Creek about 18 miles east of mouth of Niagara River and 63 miles by water west of Rochester, N.Y. (See NOAA Nautical Chart 14806.)

Previous project. For details see page 1971 of Annual Report for 1915 and page 1621 of Annual Report for 1938.

Existing project. For description see page 1555 of Annual Report for 1962. Cost of new work for completed project was \$1,500 exclusive of amount expended on previous projects, all of which was contributed by local interests. (See Table 20-B for authorizing legislation.) The authorized modification to the existing project consists of breakwaters to provide optimum harbor protection a stone jetty and recreational fishing facilities including a footbridge, walkways and guardrails, access facilities, sanitary facilities and parking areas. The estimated cost of the authorized modification is \$17,000,000 (Oct. 1990) of which \$8,500,000 is Federal and \$8,500,000 is non-Federal. Modification of the existing project was authorized by the 1986 Water Resources Development Act (WRDA) (PL 99-662).

Local cooperation. Fully complied with for completed project. Local interests contributed \$1,500. Modifications authorized by the 1986 WRDA will require local interests to pay 50% of project cost including lands easements, right-of-way and dredge disposal areas. They are also responsible for construction of necessary docks and berthing spaces, construction of launching ramp, parking areas, sanitary facilities, and necessary access roads. After construction, non-Federal responsibilities would include fishing facility maintenance, except for the aids to navigation.

Terminal facilities. Facilities consist of private docks for recreational craft and privately owned servicing and storage handling facilities for recreational and other small craft.

Operations and results during fiscal year. There were no Operations or Maintenance activities conducted in the harbor this FY.

16. OSWEGO HARBOR, NY

Locations. On South shore of Lake Ontario, at mouth of Oswego River, 59 miles easterly from Rochester, NY. (See NOAA Nautical Chart 14813.)

Previous projects. For details see pg. 1973 of Annual Report for 1915, and pg. 1630 of Annual Report for 1938.

Existing project. For description see pgs. 1383-84 of the Annual Report for 1963. Completed portion of project cost \$7,242,039 and non-Federal costs for completed work were \$4,440,000 for lands, dockside dredging, construction of terminal wharves, and cargo handling facilities. Deepening a 200-foot wide strip along harbor line east of mouth of Oswego River, remaining feature of work authorized by the 1930 Act, was de-authorized Jan 1, 1990. Deepening to 22 feet a 150-foot wide strip along harbor line in west outer harbor, remaining feature of work authorized by 1940 Act, was de-authorized in May 1981. The portion of the Federal Channel from the southernmost alignment of the Route 68 Bridge upstream to the northernmost alignment of Lake Street Bridge authorized by the 1910 R&H Act as amended by the 1935 R&H Act was de-authorized Oct 96. (See Table 20-B for authorizing legislation.)

Local cooperation. Fully complied with.

Terminal facilities. There are seven piers and wharves in the harbor and along the river channel. The Port of Oswego owns and operates a general cargo terminal at the mouth of the Oswego River. The Port Authority also operates a grain elevator west of the mouth of the river. The U.S. Coast Guard moors patrol and environmental research vessels west of the mouth of the river.

Operations and results during fiscal year.

Maintenance: Conducted detailed site investigation and survey and began development of evaluation and rating system for ashlar (laid-up) structures in Oswego and across the Great Lakes at a cost of \$89,412. \$41,009 was spent on environmental permit work, application for 401 certification, development of plan and specifications, development of bid documents, and stakeholder coordination before the cancellation of Maintenance Dredging.

17. OTTAWA RIVER, MI & OH

Location. At westerly end of Lake Erie, at Toledo, OH 99 miles westerly from Cleveland, OH (See NOAA Nautical Chart 14847).

Existing project. The project was found to have benefits which are 100% recreational in nature. Therefore, it has a low national priority for budgetary purposes and was not funded in FY06. A public hearing was held on 12 April 2005 by Ohio

Environmental Protection Agency on the Corps' application for a Section 401 Water Quality Certification and there was tremendous local support. Since more than one year elapsed without a response from the State of Ohio, the Corps considered the request for certification to be waived. The Michigan Department of Environmental Quality expressed their opposition to the project for environmental reasons. Ongoing work included coordination with the Ottawa River Remediation Team and interested members of Congress. The project, originally authorized under provisions of Section 201 of the Rivers & Harbors Act, (PL 89-298) by the House and Senate Committees on Public Works Resolutions, dated December 15 and 17, 1970, respectively, was continued by the 1990 Water Resources Development Act (PL 101-640).

Local cooperation. The potential local sponsor is the city of Toledo, OH. The local sponsor must provide 50% of the total project cost that includes lands, easements, rights-of-way, and relocations.

Operations and results during fiscal year. No funds were appropriated or spent during FY07.

18. PORT CLINTON HARBOR, OH

Location. Comprises lower half-mile of Portage River. River empties into Lake Erie 72 miles westerly from Cleveland, OH. (See NOAA Nautical Chart 14820.)

Existing project. Provides for parallel jetties at river mouth and a channel in Lake Erie and Portage River with a project depth of 10 feet. For additional details, see pg. 1899 of Annual Report for 1951. (See Table 20-B for authorizing legislation.)

Terminal facilities. A total of 11 docks exist; one public fish dock, one private sand dock, one private fuel dock, one lumber dock, one coal dock and five private docks. The village of Port Clinton owns a dock at the foot of Madison Avenue that is open to the public. A shipyard builds small boats. Terminal facilities are adequate for existing commerce.

Operations and results during fiscal year.

Maintenance: Expended \$146 to finalize the FY06 environmental work and permitting required for future Maintenance Dredging.

19. ROCHESTER HARBOR, NY

Location. On south shore of Lake Ontario, at mouth of Genesee River, 59 miles westerly from Oswego, NY. (See NOAA Nautical Chart 14815.)

Previous project. For details see pg. 1471 of Annual Report for 1915, and pg. 1623 of Annual Report for 1938.

Existing project. For description see pg. 1556 of Annual Report for 1962. Actual cost for new work for completed project is \$2,191,514. Non-Federal costs are estimated at \$2,260,000, all for 1960 Act, for lands, relocation of submarine cable crossing, relocations of small docks and boathouses, dockside dredging, structure modifications, and replacement of Baltimore & OH coal loader. (See Table 20-B for authorizing legislation.)

Local cooperation. Complied with except provision for replacement of coal loading facility as required by River and Harbor Act of Jul 14, 1960.

Terminal facilities. There are 3 docks at Rochester Harbor. The city of Rochester owns an 830-foot long wharf at the entrance to the Genesee River. Three storage buildings at the terminal, formerly used as transit sheds, have approximately 100,000 square feet of storage space. Approximately 3 acres of open storage area is located at the upper end of the facility. The facility has not been used for handling cargo for over 10 years. The U.S. Coast Guard moors search and rescue vessels at the mouth of the Genesee River. Another private facility is located 1.6 miles above the Stutson Street Bridge.

Operations and results during fiscal year.

Maintenance: \$63,685 was spent on environmental permit work, application for 401 certification, development of plan and specifications, development of bid documents, and stakeholder coordination before the cancellation of Maintenance Dredging.

20. ROCKY RIVER, OH

Location. At mouth the of the Rocky River which empties into Lake Erie seven miles westerly from Cleveland, OH. (See NOAA Nautical Chart 14826.)

Existing project. For description see pg. 1329 of Annual Report for 1966. Federal cost for completed project was \$343,494 and non-Federal cost was a cash contribution of \$249,346. (See Table 20-B for authorizing legislation.)

Local cooperation. Fully complied with. Local interests contributed \$249,346 for new work.

Terminal facilities. Facilities consist of private docks for recreational craft and privately owned servicing and storage handling facilities for recreational and other small craft.

Operations and results during fiscal year.

There were no Operations or Maintenance activities conducted in the harbor this FY.

21. SANDUSKY HARBOR, OH

Location. On south shore of Lake Erie, in southeastern portion of Sandusky Bay, 50 miles

westerly from Cleveland, OH. (See NOAA Nautical Chart 14845.)

Previous project. For description see pgs. 1511-12 of Annual Report for 1962. Actual costs for new work for completed project were \$6,250,121, excluding \$325,000 contributed by local interests. Non-Federal costs for completed project are estimated at \$675,000, including \$325,000 cash contribution and the remaining \$350,000 is for dockside dredging adjacent to deepening channels authorized by 1960 Act. (See Table 20-B for authorizing legislation.)

Local cooperation. Fully complied with. Local interests contributed \$325,000 for new work.

Terminal facilities. Fourteen piers and wharves, three at west end of harbor and remainder along dock channel. One is a base for state-owned fish research and patrol boats. One publicly owned and six privately owned used for mooring fishing boats and recreational craft and for ferry service. Five terminals have railroad connections and five mechanical-handling facilities. Facilities are considered adequate for existing commerce. (See Port Series No. 42, revised 1972, Corps of Engineers.)

Operations and results during fiscal year.

Operations: Federal funds for Project Condition Surveys cost \$37,696. Maintenance: Finalization of FY06 Maintenance Dredging contract cost -\$14,431.

22. STURGEON POINT, NY

Location. On south shore of Lake Erie, 17 miles southwest of Buffalo, NY and 22 miles northeast of Dunkirk, NY. (See Geological Survey map of Angola, NY.)

Existing project. For description of existing project, see pg. 20-11 of Annual Report for 1991. Federal project cost is \$ 1,460,000. Non-Federal project cost is \$1,475,000. In addition, the local sponsor provided associated costs for upland development of \$1,000,000.

Local cooperation. The Buffalo District has a properly executed Local Cooperation Agreement with the Town of Evans, NY, signed Oct 26, 1987.

Operations and results during fiscal year.

There were no Operations or Maintenance activities conducted in the harbor this FY.

23. TOLEDO HARBOR, OH

Location. Comprises lower seven miles of Maumee River and channel through Maumee Bay to Lake Erie. Maumee River has its source in northern Indiana and empties into Lake Erie. Harbor is at the

BUFFALO, NY DISTRICT

westerly end of Lake Erie, 99 miles westerly from Cleveland, OH. (See NOAA Nautical Chart 14847.)

Previous projects. For details see pg. 1959 of Annual Report for 1915, and pg. 1565 of Annual Report for 1938.

Existing project. For description of existing project see pgs. 32-18 and 32-19 of the Annual Report for 1978. Cost of completed existing project was \$15,567,147. (See Table 20-B for authorizing legislation.)

Local cooperation. Fully complied with.

Terminal facilities. Thirty-five piers, wharves and docks are located in the Port of Toledo. Seven are located on Maumee River; and 28 are equally divided along the right and left banks of the lower seven miles of the Maumee River. The Toledo-Lucas County Port Authority Facility No. 1 Wharf handles conventional and containerized general cargo as well as an increasing amount of miscellaneous bulk materials. Fifteen of the terminals have railroad connections and mechanical handling facilities. (See Port Series No. 44, revised 1989, U.S. Army Corps of Engineers.)

Operations and results during fiscal year.
Operations: Federal funds for Project Condition Surveys cost \$85,000, and \$5,966 was spent for completion of final coordination, review, and approval of the DMMP. Maintenance: Closeout of FY06 Environmental Compliance Activities cost - \$609. Initiation of temporary emergency repairs to the Island 18 Weir cost \$67,732. Work included hydrographic and land surveys of impacted areas, installation of temporary siltation controls, design of remedial measures, development of bid documents, contractor negotiations and contract award. Maintenance Dredging cost \$1,950,828 to remove 600,000 cubic yards of shoaled material from the Maumee Bay [Station 550+00 - 735+00, 300' wide, and Station 800+00 - 860+00, 300' wide]. \$956,664 was expended to remove 115,000 cubic yards of shoaled material from the Maumee River [Station 120+00 - 153+00, 200' wide].

24. TOUSSAINT RIVER, OH

Location. At westerly end of Lake Erie, 8 miles west of Port Clinton and 22 miles east of Toledo, Ohio. (See NOAA Nautical Chart 14847.)

Existing project. For description of existing project, pg 20-12 of Annual Report for 1991. (See Table 20-B for authorizing legislation.) Project is deferred due to discovery of unexploded ordnance in the dredging area.

Local cooperation. The Buffalo District has a properly executed Local Cooperation Agreement with Carroll Township, OH, signed Apr 3, 1991.

Operations and results during fiscal year. There were no Operations or Maintenance activities conducted in the harbor this FY.

25. VERMILION HARBOR, OH

Location. On south shore of Lake Erie at mouth of Vermilion River, 37 miles westerly from Cleveland, OH. (See NOAA Nautical Chart 14826.)

Existing project. For description of existing project see pgs. 32-17 and 32-18 of the Annual Report for 1975. Actual Federal cost for the completed existing project was \$1,156,118. Estimated non-Federal cost for new work is \$754,679 including cash contribution of \$740,679 and remainder for relocation of submarine cable and construction of public wharf. (See Table 20-B for authorizing legislation.)

Local cooperation. Fully complied with. Local interests contributed \$740,679.

Terminal facilities. Facilities consist of private docks for recreational craft and privately owned servicing and storage handling facilities for recreational and other small craft. A reconnaissance study to alleviate the ice-jam and free-flow flooding of the river was completed in 1986 at a cost of \$180,000. The proposed project was an ice-retention structure. The non-Federal sponsor did not commit to provide its total share of the cost of the feasibility study; the project was therefore reclassified as "inactive".

Operations and results during fiscal year. There were no Operations or Maintenance activities conducted in the harbor this FY.

26. WEST HARBOR, OH

Location. On the southwest shore of Lake Erie, 13 miles northeast of Port Clinton, OH. (See NOAA Nautical Chart 14847.)

Existing project. For description of existing project, see pg. 32-10 of Annual Report for 1983. Total Federal cost for new work was \$3,303,898. Total non-Federal cost for new work was \$3,922,000 including cash contribution of \$3,795,000. Existing project was authorized by 1965 River and Harbor Act (H. Doc. 245, 88th Cong., 2nd sess.).

Local cooperation. See pg. 32-20 of 1978 Annual Report for requirements of local cooperation. By letter dated Jan 31, 1978, state of OH stated its intent to furnish assurances of local cooperation, and executed LCA was received on Mar 9, 1981.

Terminal facilities. Commerce at the harbor presently consists of recreational boating and affiliated activities.

Operations and results during fiscal year.

There were no Operations or Maintenance activities conducted in the harbor this FY.

27. WILSON HARBOR, NY

Location. At mouth of east branch of Twelve-Mile Creek, which enters Lake Ontario 12 miles easterly of mouth of Niagara River, and 67 miles westerly of Rochester Harbor, NY. (See NOAA Nautical Chart 14806.)

Previous projects. For details see pg. 2395 of Annual Report for 1889, and pg. 628 of Annual Report for 1905.

Existing project. For description of existing project see pg. 32-18 of Annual Report for 1975. Actual Federal cost for completed existing project was \$477,904. Estimated non-Federal costs are \$774,000 that includes cost of \$16,000 for previously completed work. Remainder of non-Federal costs is for work required for 1968 R&H Act including cash contribution of \$166,988. (See Table 20-B for authorizing legislation.)

Local cooperation. Fully complied with.

Terminal facilities. Facilities consist of private docks for recreational craft and privately owned servicing and storage handling facilities for recreational and other small craft. Facilities are considered adequate for existing commerce.

Operations and results during fiscal year. There were no Operations or Maintenance activities conducted in the harbor this FY.

28. PROJECT CONDITION SURVEYS: NY, OH & PA

Condition surveys performed in FY07 by the Buffalo District crew cost \$507,189.

<u>Project</u>	<u>Date of Survey</u>
Cattaraugus Creek	July 2007
Niagara River	June 2007
Toussaint River, NY	August 2007
Barcelona, NY	July 2007

Ogdensburg	October 2006

29. GREAT LAKES SEDIMENT TRANSPORT MODEL PROGRAM

The ultimate goal of the Great Lakes Tributary Modeling program is to support state and local

measures that will reduce the loading of sediments and pollutants to navigation channels and Area of Concerns, and thereby reduce costs for navigation maintenance and promote the restoration of beneficial uses.

Black River.....	\$24,920
Cattaraugus Creek.....	57,537

NAVIGATION WORK UNDER SPECIAL AUTHORIZATION

30. NEW YORK STATE CANAL SYSTEM

Location. The New York State Canal System runs primarily east-west through New York State. It consists of four components: Erie Canal, Oswego Canal, Cayuga/Seneca Canal, and Champlain Canal.

Existing Project. Reimburse the state of New York 50% of non-Federal operation, maintenance and rehabilitation costs as well as make capital improvements. Sec. 1105, WRDA 1986 and Sec. 553, WRDA 1996 and Sec 341, WRDA 1999 authorized the existing project.

Local Cooperation. Fully complied with.

Terminal Facilities. Numerous piers, wharves and locks used for recreational craft.

Operations and Results during fiscal year. No funds were appropriated or spent during FY07.

SHORE PROTECTION

31. PRESQUE ISLE PENINSULA, ERIE, PA

Location. At Erie, PA, on south shore of Lake Erie, 78 miles southwest of Buffalo, NY and 102 miles east-northeast of Cleveland, OH. (See NOAA Nautical Charts 14824 and 14835.)

Existing Project. For description of completed portion of existing project see pg. 1393 of Annual Report for 1963. For details of project authorized by the 1974 Water Resources Development Act (WRDA), 1976 WRDA and 1986 WRDA, see pg. 32-14 of Annual Report for FY 87. Actual Federal cost for the authorized beach nourishment project modifications through FY 92 is \$16,879,000 which

BUFFALO, NY DISTRICT

includes \$5,646,000 for completed work authorized by the 1954 and 1960 R&H Acts and 1974 WRDA Act and \$11,233,000 for completed work authorized by the 1976 WRDA Act. Actual non-Federal cost for the authorized project and modifications through FY 92 is \$8,798,000 which includes \$3,983,000 for completed work authorized by 1954 and 1960 R&H Acts and 1974 WRDA Act and \$4,815,000 for completed work authorized by the 1976 WRDA Act. Beach nourishment as authorized by the 1976 WRDA was completed in FY 91. The estimated Federal cost (June 2003) for the 55 breakwaters project is \$56,310,000. This estimate includes \$13,435,000 for the initial construction and \$42,875,000 for 50 years of post-construction beach nourishment. The estimated non-Federal cost for the breakwater project is also \$56,310,000. (See Table 20-B for authorizing legislation.)

Local Cooperation. Fully complied with for completed project as authorized by 1954 and 1960 R&H Acts and 1974 WRDA Act. An agreement between the United States of America and the Commonwealth of Pennsylvania, acting through the Department of Environmental Resources was entered into on Feb 21, 1979 for the annual nourishment which was extended by the 1976 WRDA Act.

Operations and Results during fiscal year. New Work: Project activities included general engineering support and project supervision. The Federal cost-share for the annual beach nourishment contract was not provided due to limited project funding. The annual nourishment activities were started in 1993 and were scheduled to continue for 50 years. Completed work in FY07 included site inspections, contract administration for aerial photography monitoring, development of plans and specifications for beach nourishment (used by the local cost-share project sponsor), and coordination with regulatory agencies, at a cost of \$91,839.

FLOOD CONTROL

32. MORRIS LAKE, GENESEE RIVER, NY

Location. Dam is on Genesee River 66.9 miles above river mouth and about 32 miles southwesterly of Rochester, NY. Reservoir is in Livingston and Wyoming Counties, NY. (See Ecological Survey maps of Nunda and Portage, NY).

Existing Project. For description of existing project, as authorized by 1944 Flood Control Act, see pg. 1575 of Annual Report for 1962. New work for completed project cost \$23,365,559. In addition, \$5,000 contributed funds were expended for new work.

Local Cooperation. None required. Local interests contributed \$5,000 for new work.

Operations and results during fiscal year. Operations: Federal funds for the Operation of the Dam, Reservoir, and Service Facilities, Facility Security Operations and Real Estate Management Activities were accomplished by hired labor resulting in a cost of \$534,816. Cost for Environmental Management System Maintenance and Improvement was \$4,517. Cost for Cooperative Stream Gauging Program was \$156,000 with an additional cost of \$238,680 for Water Control Management. Seismic Instrumentation Support cost \$8,731. Cost for Flood Emergency Planning totaled \$14,999. Cost for Operation of the Visitor Center and Recreation Facilities totaled \$209,066. Cost for Environmental Stewardship totaled \$27,206. The Dam Safety Program cost \$59,894. Maintenance: Cost for Environmental Compliance Activities totaled \$120,024. Cost for Debris Removal totaled \$249,626 at the face of the Mt. Morris Dam to insure that debris would not block the culverts in the dam and/or prevent culvert gate closing to continue to provide flood damage reduction. Debris boom sections along the valley floor were replaced due to deterioration of existing wooden sections at a cost of \$148,192. Sections along gorge walls are to be replaced in out-years. The North Training Wall Revetment project started in FY06 was completed at an additional cost of \$683,944. Data Collection Platforms cost \$31,991. Maintenance and Repair of the Dam, Recreation Features and Facility Security Maintenance cost \$326,223. A Hydraulic Replacement Study, started in FY 2006, issued a final report and initiated prototype testing at a cost of \$64,694. The northern enclosure roof at the dam had numerous leaks and was replaced at a cost of \$45,072. Project boundaries monuments were placed at a cost of \$49,239 in order to properly delimit the project. Repairs were made to the operating gate hydraulic cylinder packing glands at a cost of \$101,466. This work included design and installation of replacement packing glands that prevent the infiltration of water into the dam during high pool conditions.

33. SURVEILLANCE OF NORTHERN BOUNDARY WATERS: NY, OH & PA

Cost for providing consulting engineering services to the following International Joint Commission Boards and Committees: the International St. Lawrence River Board of Control, it's Working Committee and its Operations Advisory Group; the International St.

Lawrence River Committee on River Gaging; the International Niagara River Board of Control and its Working Committee; and the International Niagara Committee totaled \$670,033 for FY07. Buffalo District also supports the Coordinating Committee on Great Lakes Basic Hydraulic and Hydrologic Data, and the International Lake Ontario-St. Lawrence Study.

ENVIRONMENTAL RESTORATION

34. OHIO ENVIRONMENTAL INFRASTRUCTURE

Location. The program is applicable to the entire state of Ohio and falls within the Buffalo District boundary and includes at present, a total of 16 project sites. These sites are Chardon (04), Fremont (04), Lafayette (04), Concord (05), Jenera (05), Perry Village (05), Benton Ridge (06), Cuyahoga River (06), Elyria (06), Fulton County (06), Lake County (06), Norwalk (06), Ottawa (06), Parma (06), Summit County (06) and Toledo (06). During 2007, three projects were completed. Fremont (04), Perry Village (05), and Fulton County (06).

Existing Project. The Ohio Environmental Infrastructure Program was authorized under Section 594 of Water Resources Development Act of 1999 (PL 106-53) for the purpose of providing Federal assistance for design and/or construction of water related environmental infrastructure, resource protection and development projects. Projects implemented as parts of this program typically address combined sewer overflows, sewer treatment plants and sewer line extensions. In FY07, the Federal cost was approximately \$3,071,800 (75%) and the non-Federal share was approximately \$767,950 (25%).

Local Cooperation. The projects are cost-shared 75% Federal and 25% non-Federal. The current authorized Federal appropriation limit is \$240 million.

Operations and results during fiscal year. Ongoing: Project management for four design (Cuyahoga River, Norwalk, Parma, and Toledo 4) and 12 design/construction projects (Benton Ridge, Chardon, Concord, Elyria, Fremont, Fulton County, Jenera, Lafayette, Lake County, Ottawa, Perry Village and Summit County) cost \$3,071,405.

35. ONONDAGA LAKE, NY

Location. The project area is located in the Onondaga Lake watershed in Onondaga County, NY and includes the city of Syracuse. Onondaga Lake is part of the Oswego River basin, which is tributary to

Lake Ontario. It is also part of the New York State Canal System.

Existing Project. The Onondaga Lake Partnership project (OLP) involves two major efforts: a) USACE leadership of the OLP and watershed-scale planning through General Investigation (GI) appropriations and b) USACE implementation of cost-shared planning, design and construction projects and grants in the Onondaga Lake watershed through Construction General (CG) appropriations. Projects implemented as part of this program typically address combined sewer overflows (CSOs), hydrogeology, habitat restoration, non-point source pollution, and related water resource impairments. The total project cost for USACE leadership of the OLP and completion of a comprehensive watershed study through General Investigation appropriations is estimated to be \$8.5 million, which is 100 percent Federal expense. The total project cost for planning, design and construction of cost-shared OLP projects and grants through Construction General appropriations is estimated to be \$42.86 million, with the Federal costs anticipated to be \$30 million (70%) and the non-Federal share of \$12.86 million (30%).

Local Cooperation. The Construction General projects are cost-shared 70% Federal and 30% non-Federal. The current authorized Federal appropriation limit is \$30 million.

Operations and results during fiscal year. Ongoing: Project management of USACE leadership of the OLP and watershed-scale planning totaling \$535,000 (Federal). Project management for 2 individual planning and design projects totaling \$1,042,600 (Federal) and \$446,800 (non-Federal) and 6 grants cost-shared with Onondaga County totaling \$10,684,000 (Federal) and \$4,578,400 (non-Federal). Completed work: Project management for 1 grant cost-shared with Onondaga County totaling \$682,500 (Federal) and \$292,500 (non-Federal). New work: Project management for 1 grant cost-shared with City of Syracuse totaling \$388,500 (Federal) and \$166,500 (non-Federal). One new grant agreement was executed in FY 2007. Total Federal obligations were \$3,125,889. Total Federal expenditures were \$2,516,344.

36. GREAT LAKES FISHERY & ECOSYSTEM RESTORATION

Location. The program is applicable to the Great Lakes basin; specifically Lake Superior, Lake Michigan, Lake Huron (including Lake St. Clair), Lake Erie, Lake Ontario (including the St. Lawrence River to the 45th parallel of latitude), connecting channels, and historically connected tributaries. Lakes Erie, Ontario and the Niagara and St.

BUFFALO, NY DISTRICT

Lawrence rivers are generally within the Buffalo District boundary. Projects within the Buffalo District include Cattaraugus Creek, NY; Chautauqua Creek, NY; and Ballville Dam, OH.

Existing Project. The Great Lakes Fisheries and Ecosystem Restoration program is authorized under Section 506 of Water Resources Development Act of 2000 (PL 106-541, 114 STAT. 2645) for the purpose of a variety of ecosystem restoration projects including riparian habitat and wetland restoration, dam removal to reestablish free flowing tributaries, construction of fish passage over existing structures, improving spawning and nursery habitat, erosion and sedimentation control, and construction of facilities to preserve historic fish stocks.

Local Cooperation. The projects are cost-shared 65% Federal and 35% non-Federal. The current authorized Federal appropriation limit is \$100 million.

Operations and results during fiscal year. Completion of Preliminary Restoration Plans and initiated feasibility studies for Cattaraugus Creek, NY, Chautauqua Creek, NY, and Ballville Dam, OH, at a cost of \$162,805.

38. REGULATORY FUNCTIONS PROGRAM

Permit Evaluation.....	\$3,293,414
Enforcement.....	476,906
Administrative Appeals.....	7,895
Compliance.....	388,575
Total Regulatory.....	\$4,166,790

39. FORMERLY UTILIZED SITES REMEDIAL ACTION PROGRAM (FUSRAP)

Buffalo District began work in FUSRAP in October 1997 when Congress transferred this Program from the Department of Energy (DOE) to the Corps. Total FUSRAP expenditures for the fiscal year were \$31,271,277. The accomplishments for these sites are briefly stated in the following paragraphs.

Niagara Falls Storage Site, Lewiston, NY – Accomplishments include completion of the Remedial Investigation (RI) data evaluation, completion of the draft RI report, completion of the draft US Department of Homeland Security Site Assistance Visit Security Report, completion of the annual environmental surveillance technical memorandum, continuation of the Feasibility Study, continuation of the site maintenance and security program, and continuation of environmental outreach and public participation activities with local stakeholders. Total expenditures were \$3,018,540.

Rattlesnake Creek (Ashland 1), Tonawanda, NY The Rattlesnake Creek Project Construction Report and Site Closeout Report for the Ashland Sites were finalized. Additionally, litigation against Ashland Chemical to recover remediation costs from Ashland 2 resulted in a consent decree that has been signed by the parties and is now in the final approval process with the court. The final settlement amount was \$2.75M. A completion ceremony was held in September 2006 and the Administrative Record was transferred to the U.S. Department of Energy (USDOE). Responsibility for the Ashland sites will be assumed by the USDOE on October 31, 2008. Total expenditures were \$259,527.

Linde Site, Tonawanda, NY – Funds were used to continue soils remedial action, issue the Record of Decision for the Groundwater Operable Unit, and complete the Proposed Plan for the Tonawanda Landfill/Mudflats Vicinity Property. Total expenditures were \$16,077,238.

Seaway Industrial Park, Tonawanda, NY – Funds were used to continue work on the Feasibility Study Addendum (FSA), and conduct internal review of the draft Proposed Plan (PP). Total expenditures were \$308,091.

Luckey Site, Luckey, OH – Funds were used to prepare and conduct internal review of a draft Record of Decision (ROD) for the Groundwater Operable Unit, and conduct annual groundwater sampling and testing. Total expenditures were \$395,376.

Painesville Site, Painesville, OH – Funds were used to complete the remediation work plans, mobilize to the site, and begin site remediation. Total FY expenditures were \$7,696,958.

Former Harshaw Chemical Co., Cleveland, OH – Funds were used to complete the Remedial Investigation Report, complete the Historic Photographic Analysis, complete the Potentially

Responsible Parties / Site Ownership & Operational History, award the contract for supplemental remedial investigation field sampling and analysis required for the RIR Addendum, and initiate technical project planning for the Feasibility Phase. Total expenditures were \$1,922,910.

Scioto Laboratory Complex, Marion, OH – Funds totaling \$13,455 were used to complete the investigations and submit the Preliminary Assessment to Corps Headquarters.

Guterl Specialty Steel Corp., Lockport, NY – Funds were used to initiate on-site sampling of soils, sediments, buildings, and groundwater and begin laboratory analysis required to continue the Remedial Investigation. Total expenditures were \$1,305,710.

Superior Steel, Carnegie, PA – Funds were used to finalize a Preliminary Assessment report and perform a preliminary legal liability analysis. Total expenditures were \$138,396.

Joslyn Manufacturing and Supply Site, Fort Wayne, IN – Funds were used to complete and submit the Site Investigation report to Corps Headquarters. Total expenditures were \$121,207.

Project Closeouts – The following costs were used for project financial closeout: Dayton Unit I - \$746; Old Warehouse, Dayton, OH - \$2,765; Dayton Unit III - \$1,025; Dayton Unit IV - \$1,445; and Bliss and Laughlin Steel, Buffalo, NY - \$7,888.

1		ASHTABULA HARBOR, OH	
	Jun 3, 1896	Construction of breakwater.	Annual Report, 1895, p. 2132
	Mar 3, 1905 Jun 25, 1910	Enlarge outer harbor by extending west breakwater and constructing new east breakwater pier heads on lakeward ends of breakwaters; remove part of old east breakwater.	H. Doc. 654, 61 st Cong., 2 nd sess.
	Mar 2, 1919	Extend west breakwater to shore; dredge outer harbor to a depth of 20 feet.	H. Doc. 997, 64 th Cong., 1 st sess.
	Aug 30, 1935	Remove portion of east breakwater to extend breakwaters to present dimensions and dredging restrictions in portion of west basin.	H. Doc. 43, 73 rd Cong., 1 st sess.
	Aug 26, 1937	Dredge channel through outer harbor, channel of approach to Penn Central Co. slip, channel Ashtabula River, to and in turning basin all to present project dimensions; remove portion of old east inner breakwater and Maintenance to 24-foot depth of portion of outer harbor.	Rivers and Harbors Committee Doc. 78, 74 th Cong., 2 nd sess.
	Mar 2, 1945	Extend river channel to present project limit.	H. Doc. 321, 77 th Cong., 1 st sess. River & Harbor Act of 1945, PL 79-14
	Sep 3, 1954	Dredging approach channel and turning basin in east outer harbor to 25-foot depth.	H. Doc. 486, 83 rd Cong., 2 nd sess. River & Harbor Act of 1954, PL 83-780
	Jul 14, 1960	A depth of 29 feet in soft and 30 feet in hard material in entrance channel to just inside outer ends of Breakwaters, thence 28 feet in soft and 29 feet in hard material in a channel to inner breakwater, thence 27 feet in soft and 28 feet in hard materials in a channel extending to Penn Central Co. slip and extending 2000 feet up Ashtabula River, 22 feet in hard material in turning area; and 28 feet in soft and 29 feet in hard material in areas adjacent to 250-foot section of inner breakwater when that section is removed as now authorized.	H. Doc. 148, 86 th Cong., 1 st sess. River & Harbor Act of 1960, PL 86-645
	Oct 27, 1965	Dredging approach channel and turning basin in east outer harbor to 28 feet in soft material and 29 feet in hard material.	H. Doc. 269, 89 th Cong., 1 st sess. ¹ River & Harbor Act of 1965, PL 87-874
		ASHTABULA RIVER, OH ENVIRONMENTAL DREDGING	
	Nov 28, 1990 as amended, Aug 17, 1999, Dec 11, 2000	The Secretary may remove and remediate, as part of operation and maintenance of a navigation project, contaminated sediments outside the boundaries of and adjacent to the navigation channel. The Secretary may remove and remediate contaminated sediments from the waters of the United States, in general, for the purpose of environmental enhancement and water quality improvement if such removal is requested by a non-Federal sponsor and the sponsor agrees to pay 65% of the cost of the removal and remediation.	PL 101-640; PL 106-53; PL 106-541

Aug 11, 1888		Extension of east breakwater.	H. Ex. Doc. 189, 50 th Cong., 2 nd sess., and Annual Report, 1888, p. 2005
Jun 3, 1896		Reconstruction of piers. ¹	H. Doc. 326, 54 th Cong., 1 st sess., and Annual Report, 1896, p. 2949
Mar 3, 1899		Dredging channel between piers and outer harbor to depth of 19 feet; dredging to depth of 23 feet in any portion of harbor is discretion of Secretary of War.	H. Doc. 156, 55 th Cong., 2 nd sess., and Annual Report, 1899, pp. 3075 and 3078
Jun 13, 1902		Arrowhead breakwater and extension of east breakwater.	H. Doc 118, 56 th Cong., 2 nd sess.
Mar 2, 1907 Jun 25, 1910		Removal of deflecting arm of old east breakwater and closure of gap between old and new east breakwaters.	No printed report.
Jul 27, 1916		Pierhead at easterly end of east breakwater.	H. Doc 891, 63 rd Cong., 2 nd sess.
Aug 8, 1917 Aug 29, 1937		Maintenance and improvement of channels in Cuyahoga and Old Rivers to a depth of 21 feet to a point 2,000 feet upstream from Clark Ave. viaduct and 18-foot turning basin.	H. Doc. 707, 63 rd Cong., 2 nd sess., & Rivers and Harbors Committee Doc. 84, 74 th Cong., 2 nd sess.
Aug 30, 1935 ²		Deepening outer harbor and channel between piers to present project dimensions, construction of 400-foot spur breakwater at gap in shore arm of west breakwater, removal of easterly 150 feet of west breakwater, elimination from project of a 298-foot southerly extension on west pier, and abandonment of inner 932 feet of shore arm of west breakwater.	H. Doc. 477, 72 nd Cong., 2 nd sess.
Aug 30, 1935 ³		Maintenance dredging in Cuyahoga and Old Rivers for one year as an emergency measure.	Rivers and Harbors Committee Doc. 39, 74 th Cong., 1 st sess.
Mar 2, 1945 ⁴		Maintenance extension of Cuyahoga River channel. Extension, maintenance, and improvement to a depth of 21 feet of Cuyahoga River channel to present project limit. ^{5 6}	Specified in act. H. Doc. 95, 79 th Cong., 1 st sess. River & Harbor Act of 1945, PL 79-14
Jul 24, 1946		Improvement of Cuyahoga and Old Rivers to a depth of 23 feet and replacement or pier construction of 7 railroad bridges. ⁷	H. Doc. 629, 79 th Cong., 2 nd sess. River & Harbor Act of 1946, PL 79-525

¹ Completed under previous projects.

² Authorized by Public Works Administration, Sep 6, 1933.

³ Authorized in part by Public Works Administration, Sep 6, 1933.

⁴ First Deficiency Appropriations Act approved Apr 1, 1944.

⁵ Deepening left half of channel extension was eliminated from project by 1962 R&H Act.

⁶ Authorized by Defense Plant Corp. May 19, 1942.

⁷ Widening Cuyahoga River downstream at end of Cut 4 classified inactive.

BUFFALO, NY DISTRICT

Table 20-B AUTHORIZING LEGISLATION

<u>See Section</u>	<u>Acts</u>	<u>Work Authorized</u>	<u>Documents</u>
Jul 3, 1958		Deepening channel 25 feet through east basin of outer harbor; replacement of Erie-Lackawanna Railroad bridge over Cuyahoga River at mile 4.1 and widening of channel at that point, with elimination of reconstruction of east pier of bridge as previously authorized; and replacement of Baltimore and Ohio Railroad Bridge over Old River near its mouth and Willow Avenue Highway Bridge about 800 feet above mouth and widening channel at four locations along lower, 2,000 feet of river. ¹	H. Doc. 107, 85 th Cong., 1 st sess. River & Harbor Act of 1958, PL 85-500
Jul 14, 1960		Depth of 29 feet in lake approach to main entrance; 28 feet in entrance channel to lakeward ends of piers at mouth of Cuyahoga River; 27 feet in river to a point just above its junction with Old River, and in Old River to upstream limit of present 23-foot project; 28 feet in west basin within existing project limits as modified to eliminate a triangular area at west end and to extend limits to a line parallel to and 75 feet from harbor line; and 28 feet in westerly 800 feet of east basin. ²	H. Doc. 152, 86 th Cong., 1 st sess. ³ River & Harbor Act of 1960, PL 86-645
Oct 23, 1962		An area in east basin 27 feet deep extending 3,800 feet easterly of 28-foot area with project limits 380 feet from east breakwater and on landward side generally by a line 75 feet lakeward of and parallel to harbor line. A dock channel to Nicholson Cleveland easterly end of east basin, from 25-foot contour to a limit Terminal Co. pier, at 75 feet north of pierhead line, 400 feet wide at shoreward end and flared toward the lake.	H. Doc. 527, 87 th Cong., 2 nd sess. River & Harbor Act of 1962, PL 87-874
Jul 14, 1960 as amended		Deepening upper end of Old River channel from 21 to 27 feet.	Sec. 107 of the River & Harbor Act of 1960, PL 86-645. Authorized by Chief of Engineers Dec 6, 1966
Oct 22, 1976		Preparation of Phase I design memorandum for improvements consisting of removal of portions of entrance breakwater; construction of breakwater; construction of breakwater extension of east entrance; deepening approach and entrance channels; construction of diked disposal area; and installation of recreational fishing facilities on west breakwater.	Sec. 175 of the Water Resources Development Act of 1976, PL 94-587
Aug 15, 1985		Deepening and widening east entrance and approach channels, deepening the east basin channel and disposing of dredge material in an existing disposal site, as described in the Report to the Board of Engineers for Rivers and Harbors Jan 22, 1985, including bulk heading and other necessary repairs at Pier 34 and approach channels and necessary protective structures for mooring basins for transient vessels in the area south of Pier 34 and including such modifications as may be recommended by the Chief of Engineers at a cost not to exceed \$36,000,000.	PL 99-88
Nov 17, 1986		Bulk heading and other necessary repairs at Pier 34 and approach channels and necessary protective structures for mooring basins for transient wells in the area south of Pier 34.	Sec. 202 of Water Resources Development Act of 1986, PL 99-662; and PL 100-202

¹ Replacement of bridges 19 and 32, widening Cuyahoga and Old River Channels, classified deferred.

² Deepening remainder of Cuyahoga River from Bridge 1 to and including Old River, classified deferred.

³ Contains latest published map.

	Nov 28, 1990	The Assistant Secretary of the Army for Civil Works, the administrator of the Environmental Protection Agency, and the Governor of the State of New York, acting jointly, shall convene a management conference for the restoration and management of Onondaga Lake and develop a management plan. This is a Reaffirmation of PL 101-596. Repealed by Section 573 of Water Resources Development Act of 1999, PL 106-53.	Sec. 411 of the Water Resources Development Act of 1990, PL 101-640
	Oct 31, 1992	The Secretary is authorized to design and construct projects to address water quality problems associated with storm water discharges from large storm events for the watershed areas of Onondaga County and Syracuse, New York, from which waters discharge into Onondaga Lake, New York. The design of projects shall ensure the development of effective Federal and non-Federal actions, which will contribute toward compliance with the Federal Water Pollution Control Act. Total project cost shall be shared at 75% Federal and 25% non-Federal. Operation and maintenance cost shall be 100% non-Federal. Project physically complete in FY03, financially complete in FY04.	Water Resources Development Act of 1992, PL 102-580
	Aug 17, 1999	Secretary of the Army to lead Partnership for the development and implementation of Onondaga Lake improvement projects. Repeals Title IV of the Great Lakes Critical Programs Act of 1990 and section 411 of the Water Resources Development Act of 1990.	Section 573 of Water Resources Development Act of 1999, PL 106-53
16		OSWEGO HARBOR, NY	
	Jul 11, 1870	Construction of outer west breakwater. ¹	Annual Report, 1870, pp. 54, 220 and 221
	Mar 2, 1907	Repair of outer west breakwater under Plan (A). ²	H. Doc. 55, 58 th Cong., 2 nd sess.

¹ Completed under previous projects.

² Replacement of bridges 19 and 32, widening Cuyahoga and Old River Channels, classified deferred.

BUFFALO, NY DISTRICT

Table 20-B AUTHORIZING LEGISLATION

<u>See Section</u>	<u>Acts</u>	<u>Work Authorized</u>	<u>Documents</u>
	Jul 3, 1930	Construction of arrowhead breakwaters; deepening outer harbor between arrowhead breakwaters; west outer harbor east of Erie-Lackawanna coal dock, and Oswego River north of Seneca St., to 21 feet; and deepening west outer harbor, west of Erie-Lackawanna coal dock, to 16 feet. ¹	Rivers and Harbors Committee Doc. 24, 71 st Cong., 2 nd sess.
	Aug 30, 1935	Widening channel to harbor line in Oswego River north of Seneca Street.	Rivers and Harbors Committee Doc. 7, 74 th Cong., 1 st sess.
	Oct 17, 1940	Closing gap in west breakwater; deepening west outer harbor, west of east line of Erie-Lackawanna coal dock, to project depth. ²	H. Doc. 96, 76 th Cong., 1 st sess.
	Jun 30, 1948	Construction of east outer breakwater; removal of the inner end of east arrowhead breakwater; and dredging channel and basin in east outer harbor. ³	H. Doc. 722, 80 th Cong., 2 nd sess. River & Harbor Act of 1948, PL 80-858
	Sep 3, 1954	Construction of detached breakwater at harbor entrance and removal of shoals in approach to harbor entrance to 25 feet deep.	H. Doc. 487, 81 st Cong., 2 nd sess. River & Harbor Act of 1948, PL 83-780
	Oct 23, 1962	Depth of 27 feet in lake approach channel; 25 feet deep in outer harbor channel 800 feet wide from entrance gap to a turning basin 25 feet deep about 750 by 1,100 feet, at mouth of Oswego River; depth of 24 feet in earth and 25 feet in hard material in river channel from turning basin to upstream end of Port of Oswego Authority's east side terminal, a distance of about 1,600 feet; relocation of Federal project limits in Oswego River upstream of 24-foot channel to Federal project limit at north line of West Seneca St., on lines parallel to 50 feet channel ward of established harbor lines; elimination of maintenance of inner west breakwater and elimination of modification authorized by River and Harbor Act of 1948.	H. Doc. 471, 87 th Cong., 2 nd sess. River & Harbor Act of 1962, PL 87-874
	Oct 12, 1996	De-authorized the portion of the Federal Channel authorized by the R&H Act of 1910 as amended by the R&H Act of 1935, from the southernmost alignment of the Route 68 Bridge upstream to the northernmost alignment of the Lake St. Bridge.	Water Resources Development Act of 1996, PL 104-303
17	OTTAWA RIVER HARBOR, MI, OH		
	Dec 17, 1970	6-foot deep, 16,500 foot long channel in Ottawa River and 8-foot deep, 15,000-foot channel in Maumee Bay.	H. Doc. 396, 91 st Cong., 2d sess. House and Senate Committees on Public Works Resolutions
	Nov. 28, 1990	Continuation of authorization	Sec. 107 of Water Resources Development Act of 1990, PL 101-640.
18	PORT CLINTON HARBOR, OH		
	Jun 10, 1872	Parallel stone and pile jetties at mouth of river, east jetty 2,200 feet long and west jetty 1,980 feet long extending to 10-foot contour in lake channel 10 feet deep and 100 feet wide for outer 4,200 foot length and 200 feet wide for inner 800 foot length to Highway	Annual Report, 1875, p. 295

¹ Deepening a 200-foot strip along harbor line east of mouth of Oswego River is de-authorized.

² Deepening to 22 feet a 150-foot wide strip in west outer harbor de-authorized in May 1981.

³ Modification eliminated by River and Harbor Act of Oct 26, 1962.

Work performed in FY07 during the period 1 October 2006 through 30 September 2007 includes the inspection of 58 Inspection of Completed Works (ICW) Program projects for conformance with Operations and Maintenance manuals, implementation of new project inspection guidelines from HQUSACE, review of project modifications, project engineering evaluations, coordination with FEMA on the status of levee ratings and certifications, and updates of the hydraulics and hydrology of various local flood control projects. The cost for the FY07 work is \$292,955. The total cumulative cost for the program through 30 September 2007 is \$5,531,160. There are currently a total of 110 projects in the Buffalo District ICW Program.

DETROIT, MI, DISTRICT

The District is composed of the upper and lower peninsulas of Michigan and portions of Indiana, Wisconsin and Minnesota, which border the lakes. It includes U.S. waters of Lakes Superior, Michigan, Huron, St. Clair and western Lake Erie. Unless otherwise indicated, all depths stated in this report are referred to low water datum as follows: Lake Superior, 601.1 feet; Lake Michigan-Huron, 577.5 feet; Lake Erie, 569.2 feet; and Lake St. Clair, 572.3 feet. These elevations are in feet above the mean water level at Rimouski, Quebec -- International Great Lakes Datum, 1985 (IGLD 1985).

The IGLD 1985 is a datum or reference system used to define water levels within the Great Lakes - St. Lawrence River system. This datum was implemented in January 1992, officially replacing IGLD 1955. At the time IGLD 1955 was established, it was recognized that this datum would have to be periodically revised due to isostatic rebound. Isostatic rebound is the gradual rising or bouncing back of the earth's crust from the weight of the glaciers that covered the Great Lakes region during the last ice age.

NAVIGATION

1. ALPENA HARBOR, MI

Location. At mouth of Thunder Bay River which empties into Thunder Bay, Lake Huron. Harbor is 100 miles southeast of Cheboygan Harbor, MI. River has its source in Montmorency and Alpena Counties, MI. (See NOAA Nautical Chart 14864.)

Previous Project. For details see page 1957 of Annual Report for 1915 and page 1548 of Annual Report for 1938.

Existing Project. Provides for a bay channel 200 feet wide and 25 feet deep from deep water in Thunder Bay to a point 300 feet lakeward of the Alpena Light; thence an entrance channel 24 feet deep, narrowing to a width of 100 feet at a point 700 feet upstream from the light; a river channel 100 feet wide, 23 feet deep to Second Avenue Bridge; thence 18.5 feet deep and 75 feet wide for 1,600 feet to upper limit of Federal project; a turning basin at upstream end of project, basin at river mouth 19 feet deep, trapezoidal in shape, with a maximum width of 700 feet including the channel width and a maximum length of 900 feet along the channel line, including removal of existing rubble breakwater; and a breakwater about 550 feet long paralleling lakeward side of new turning basin. Work authorized by the 1965 River and Harbor Act, which consists of the proposed turning basin and breakwater reconfiguration, was deauthorized by the Water Resources Development Act (WRDA) OF 1986; Public

Law (PL) 99-662, November 17, 1986, 99th Congress, Title X.

Local Cooperation. Fully complied with.

Terminal Facilities. Several commercial docks along Thunder Bay River used primarily for receipt of coal and petroleum products. Also a municipal marina basin about 0.25 mile southwest of river mouth. Facilities are considered adequate for existing commerce.

Operations During Fiscal Year. Maintenance: Condition surveys performed by Government forces cost \$19,693. A contract for maintenance dredging was awarded this FY in the amount of \$564,457. The contract was 29% complete at the end of the FY removing approximately 25,141 cubic yards of shoal material at a cost of \$162,000.

Existing project was completed in 1939. The modification of existing project at Alpena Harbor, as authorized by the 1965 River and Harbor Act, was reclassified into an inactive status May 22, 1969 based on an unfavorable benefit-cost ratio. In 1975 the modification was recommended and reviewed for deauthorization, which was withdrawn by Congressional Resolution the same year. Subsequently, the work authorized by the 1965 Act was deauthorized by the WRDA of 1986. Project features are in excellent condition. Total cost of the existing project to end of FY was \$2,654,423, of which \$337,394 was for new work and \$2,317,029 for maintenance.

2. ARCADIA HARBOR, MI

Location. On east shore of Lake Michigan, 193 miles northeasterly from Chicago, IL, and 15 miles northerly from Manistee, MI. (See NOAA Nautical Chart 14907.)

Existing Project. Provided for maintenance dredging of the existing harbor built by private interests, for a period of five years. The five years covered by this project were the calendar years 1905 to 1909, inclusive. Funds were also appropriated and maintenance was performed in calendar years 1911, 1912, 1913 and 1915, inclusive. There is at present no approved project for the improvement of this harbor. (See Table 21-B for authorizing legislation.)

Local Cooperation. None required.

Terminal Facilities. Dock facilities are considered adequate for existing recreational traffic.

Operations During Fiscal Year. Maintenance: Condition surveys performed by Government forces cost \$6,020.

Existing project was completed in 1909. Varying depths of 5-12 feet exist in the channel at present. Maintenance of the harbor is based on providing a 9-foot depth. Piers and revetments are in good condition. Total cost of the existing project to end of FY was \$5,882,792.

3. ASHLAND HARBOR, WI

Location. At head of Chequamegon Bay, on south shore of Lake Superior, about 65 miles east of Duluth, MN. (See NOAA Nautical Chart 14974.)

Existing Project. A west channel 20 and 21 feet deep and an east basin 25 and 27 feet deep, both all protected by an 8,000-foot breakwater. For additional details see page 1008 of Annual Report for 1965. (See Table 21-B for authorizing legislation.)

Local Cooperation. Fully complied with.

Terminal Facilities. City of Ashland owns 4,150 feet of waterfront for future public needs. Wharves for handling coal, ore, limestone, logs and pulpwood are served by railroads. Detail on actual port and harbor facilities is in Port Series No. 49 (revised 1999) prepared and published by the Water Resources Support Center. Facilities are considered adequate for

existing commerce. Handling of ore and logs has been discontinued for the present.

Operations During Fiscal Year. Maintenance: Condition surveys were performed by Government forces at a cost of \$7,196.

Work authorized prior to 1960 Act was completed in 1950. Work authorized by 1960 Act was completed in November 1962. Navigation structures are in fair condition. Total cost of the existing project to end of FY was \$6,785,120 of which \$1,695,645 was for new work and \$5,089,475 was for maintenance.

4. CEDAR RIVER HARBOR, MI

Location. At mouth of Cedar River on west shore of Green Bay, an arm of Northern Lake Michigan, about 68 miles north of City of Green Bay. Nearest harbors are Menominee, MI, 27 miles southwest and at Escanaba, MI, 20 miles northeast. (See NOAA Nautical Chart 14909.)

Existing Project. Two parallel entrance piers, a west pier 230 feet long and a rubblemound east pier 875 feet long with a sport fishing walkway; an entrance channel 100 feet wide and 10 feet deep from that depth in Green Bay to mouth of Cedar River about 900 feet long; and inner channel in Cedar River 1,400 feet long, 80 feet wide, and 8 feet deep upstream to about 150 below State Route 35 bridge; and a turning basin 150 feet wide near upstream end of inner bridge channel. (See Table 21-B for authorizing legislation.)

Local Cooperation. No local sponsor has been identified.

Terminal Facilities. There are no permanent docking, mooring or handling facilities.

Operations During Fiscal Year. Maintenance: Condition surveys, and miscellaneous inspections and reports performed by Government forces cost \$41,306.

Project features are in excellent condition. Total cost to end of FY was \$4,491,279 of which \$408,000 was for new work and \$4,083,279 for maintenance.

5. CHARLEVOIX HARBOR, MI

Location. On east shore of Lake Michigan, 276 miles northeasterly from Chicago, IL, and 75 miles northerly

from Frankfort, MI. (See NOAA Nautical Chart 14942.)

Existing Project. A channel 24 feet deep in Lake Michigan and a river channel 23 feet deep in the lower and upper channels connecting Lake Michigan with Lake Charlevoix via Round Lake. The channels are protected where needed by piers and revetments. For additional details see page 1476 of Annual Report for 1962. (See Table 21-B for authorizing legislation.) Section 25 of the WRDA of 1988 provides authorization pertaining to the South Pier to Charlevoix Harbor. It states, "The Secretary shall take such action as may be necessary to restore recreational uses established prior to May 1, 1988, or provide comparable recreation uses at the South Pier to Charlevoix Harbor project, Charlevoix, Michigan in order to mitigate any adverse impact on recreational uses resulting from reconstruction of the South Pier..."

Local Cooperation. None required except the latest project modification is subject to the following: Provide without cost to the United States, all lands, easements, and rights-of-ways required for construction and subsequent maintenance of the modified project upon the request of the Chief of Engineers, including suitable areas determined by the Chief of Engineers to be required in the general public interest for initial and subsequent disposal of excavated materials and any necessary retaining dikes, bulkheads, and embankments, therefore, or the cost of such retaining works; hold and save the United States free from damages due to the constructing and maintenance of the modified project, except for damages due to the fault or negligence of the United States or its contractors; provide and maintain without cost to the United States depths in berthing areas and local access channels serving the terminal commensurate with the depths provided in the related project areas; accomplish, without cost to the United States, such alterations of submarine utility crossing as are required by the modified project; establish regulations prohibiting discharge of pollutants into the waters of the harbor by users thereof which regulations shall be in accordance with applicable laws or regulations of Federal, State and local authorities responsible for pollution prevention and control; if acquiring lands, easements and rights-of-ways for construction of the project, local interests will comply with the applicable provisions of the Uniform Relocation Assistance and Real Property Acquisition Policies Act of 1971; PL 91-646, approved January 2, 1971; contribute all costs in excess of \$1,000,000 should the total cost of construction of the general navigation facilities exceed that amount, in accordance with provisions of Section 107 of the 1960 River and Harbor Act, as amended.

The total first cost of construction (1975) is estimated at \$625,000.

Terminal Facilities. Several small landing places in Round Lake at Charlevoix for handling fish and miscellaneous commodities, a wharf for petroleum products at west end of Lake Charlevoix, and coal wharves at Advance and Boyne City. Charlevoix, Boyne City, and East Jordan provide public docks for small craft. Facilities considered adequate for existing commerce.

Operations During Fiscal Year. Maintenance: Condition surveys performed by Government forces cost \$20,822. Location and removal of obstructions was performed using the Cranebarge MANITOWOC at a cost of \$91,117.

Existing project was completed in 1939 except for the latest modification. Navigation structures are in good to fair condition with miscellaneous repairs scheduled in future years. Total cost of the existing project to end of FY was \$12,669,736, of which \$180,623 was for new work, \$11,359,717 for maintenance (Bank Stabilization \$46,352), and \$1,129,396 for rehabilitation.

6. CLINTON RIVER, MI

Location. Has its sources in Oakland County, MI, flows easterly about 60 miles and empties into Anchor Bay in northwestern part of Lake St. Clair. (See NOAA Nautical Chart 14850).

Previous Project. For details see page 1958 of Annual Report for 1915, and page 1556 of Annual Report for 1938.

Existing Project. An entrance channel in Anchor Bay 8 feet deep, 300 feet wide at 8-foot depth contour in the bay, gradually decreasing to 50 feet wide at about 1,000 feet upstream from mouth of Clinton River, a length of about 4,600 feet; a channel 8 feet deep and 50 feet wide in the river about 38,700 feet long from entrance channel upstream to Mt. Clemens at Cass Avenue; closing old channel and making a cutoff at Shoemakers Bend; closing Catfish Channel; construction of revetments as needed in the river; and a harbor basin, 5 feet deep and 11 acres in area at entrance along bay channel, protected by breakwaters on north and south sides. (See Table 21-B for authorizing legislation).

Local Cooperation. Fully complied with.

Terminal Facilities. River is used exclusively by recreational craft. There are numerous public and private wharves along the river below the city. They are considered adequate.

Operations During Fiscal Year. Maintenance: Condition surveys performed by Government forces cost \$10,121.

Existing project was completed in 1966. Total cost of the existing project to end of FY was \$9,396,807, of which \$549,798 was for new work (includes \$289,752 contributed funds), \$5,050,829 for maintenance and \$3,796,180 for diked disposal.

7. CORNUCOPIA HARBOR, WI

Location. At mouth of Siskiwit River on south shore of Lake Superior, 49 miles east from Duluth, MN. (See NOAA Nautical Chart 14973).

Existing Project. Provides for an entrance channel between piers; an irregular-shaped turning basin; two inner channels, and reconstruction and Federal maintenance of deflection dike and entrance piers constructed by local interests. Project depths are 10 feet between piers and 8 feet in turning basin and inner channels. For additional details see page 1010 of Annual Report for 1965. (See Table 21-B for authorizing legislation).

Location cooperation. Fully complied with.

Terminal Facilities. About 1,000 linear feet of privately owned docking space is available.

Operations During Fiscal Year. Maintenance: Condition surveys performed by Government forces cost \$5,747.

Work authorized by earlier Act was completed in 1939. Work authorized in 1954 was completed in 1963. Navigation structures are in fair to good condition; repairs will be scheduled in future years. Total cost of the existing project to end of FY was \$2,042,167, of which \$462,653 was for new work and \$1,579,514 for maintenance.

8. DETROIT RIVER, MI

Location. One of the Great Lakes connecting channels, 31 miles long, flows south from Lake St. Clair to Lake Erie. (See NOAA Nautical Chart 14848.)

Previous Project. For details see page 1958 of Annual Report for 1915, and page 1541 of Annual Report for 1938.

Existing Project. Improving Detroit River main channels to provide 25.5-foot draft navigation; improving certain auxiliary and side channels; and construction of various water level and crosscurrent control structures. Details are in accompanying Table 21-H. Project depths are referred to local low water datum planes which correspond to low water datums for Lakes St. Clair and Erie, 572.3 and 569.2 feet above mean water level at Rimouski, Quebec, IGLD 1985. (See Table 21-B for authorizing legislation.)

Local Cooperation. Fully complied with. No local cooperation is required for modifications authorized by Acts of July 1946 and March 1956. The uncompleted portion of the project authorized by the 1946 and the 1956 R & H Acts, construction of the Compensating Works, with the uncompleted portion of the Trenton Channel modification approved Aug. 13, 1968, were deauthorized Dec. 31, 1989, in accordance with Section 1001 of the WRDA of 1986 (PL 99-662).

Terminal Facilities. Numerous commercial installations used for handling coal, iron ore, limestone, steel products, petroleum products, and other items such as overseas general cargo. Detail on actual port and harbor facilities is in Port Series No. 45 (revised 1996) prepared and published by the Water Resources Support Center. Facilities are considered adequate for existing commerce.

Operations During Fiscal Year. Maintenance: Condition surveys, environmental studies, confined disposal facility monitoring, support of water control center, and miscellaneous inspections and reports performed by Government forces cost \$1,517,586. Safety maintenance performed by hired labor cost \$5,792. Location and removal of obstructions was performed using the U.S. Cranebarge VELER at a cost of \$1,259,848. A contract for maintenance dredging was awarded and completed this FY, removing approximately 159,416 cubic yards of shoal material at a cost of \$996,826. Real estate activities, engineering and design and supervision and administration cost \$464,569.

Latest modification of connecting channels project in the Detroit River is complete except for compensating works. Pertinent data concerning channels covered by project at end of FY are set forth in Table 21-H. Total cost of the existing project to end of FY was \$274,081,890, of which \$76,877,357 was for new work (\$75,346,669 regular funds and \$1,530,688 Public

Works Funds), \$154,733,948 (includes \$361,235 Section 150 contributed funds) for maintenance and \$42,470,585 for diked disposal.

9. DULUTH-SUPERIOR HARBOR, MN AND WI

Location. At extreme western end of Lake Superior. Cities of Duluth, MN, and Superior, WI, are on north and south sides, respectively. (See NOAA Nautical Chart 14975.)

Previous Projects. See page 1246 of Annual Report for 1962.

Existing Project. Provides for rebuilding canal piers at Duluth entry, replacement or construction of piers and breakwater at Superior entry and dredging approaches and channels within harbor, St. Louis Bay, and St. Louis River. Channels vary in depth from 32 to 28 feet in entrances, are 27 feet deep in iron-ore route channels, and are from 20 to 23 feet deep in inner channels. (See Table 21-B for authorizing legislation.)

For details of authorized channel dimensions and dimensions of structures, see pages 1246 and 1247 of Annual Report for 1962 and page 1011 of Annual Report for 1965. Portion of project for deepening Twenty-first Avenue West channel was deauthorized Dec. 31, 1989, in accordance with Section 1001 of the WRDA of 1986 (PL 99-662).

The WRDA of 1986 authorized modifications to the project to deepen the western portions of North and South Channels, the entire Upper Channel and the Minnesota Channel to 27 feet LWD; widen the Cross Channel to provide a minimum turning basin of 1,500 feet; widen the bend at the Arrowhead Bascule Bridge to 600 feet; and construct an upland confined disposal facility. The current recommended plan involves only the mechanical dredging of the Cross Channel Turning Basin with disposal at the Erie Pier CDF. The remainder of the project is now unscheduled.

Local Cooperation. Fully complied with for completed portion of project. Local cooperation items for the newly authorized project in the WRDA of 1986 (PL 99-662), are as described in House Document 150, 86th Congress, 1st Session and also includes, as a result of PL 99-662, construction cost sharing.

Terminal Facilities. There are 113 docks or terminals including some 54 major ones; all but one privately owned. Detail on actual port and harbor

facilities is in Port Series No. 49 (revised 1999) prepared and published by the Water Resources Support Center. Facilities for handling iron ore, coal, limestone, petroleum, steel and scrap iron, cement, general cargo, and grain are believed adequate for most existing commerce.

Operations During Fiscal Year. Maintenance: Operation and maintenance of the museum performed by Government forces and contract cost \$268,622. Operation and maintenance of service facilities and park pier performed by hired labor cost \$211,978. Condition surveys, environmental studies, confined disposal facility monitoring, support of water control center, and miscellaneous inspections and reports performed by Government forces and contract cost \$798,474. Safety maintenance performed by hired labor cost \$3,081. Duluth and Superior Entry Breakwater repairs were performed using the U.S. Derrickbarge SCHWARTZ at a cost of \$668,032. The contract for Superior Entry Repairs to the South Revetment awarded in FY 05 continued at a cost of \$140,088. Supervision and administration cost \$343,638. A maintenance dredging contract awarded in FY 05 was closed out at a cost of \$150,022. A maintenance dredging contract was awarded this FY in the amount of \$1,464,770. The contract was 19% complete at the end of the FY removing approximately 15,085 cubic yards of shoal material at a cost of \$278,233. Engineering and design cost \$364,173.

Work authorized prior to 1960 Act was completed in June 1956. Under the 1960 Act, work on the outer harbor, included in House Document 150, was completed in June 1965. Work in the inner harbor, included in House Document 196, started in May 1963, was completed in November 1968 except for 21st Avenue West channel portion which was deauthorized December 31, 1989. Of the work authorized in WRDA 1986, only the Cross Channel dredging has been completed (September 1994). All other authorized improvements are unscheduled.

The United States owns 34.90 acres of land in fee in Minnesota and Wisconsin of which 2.15 acres are used for a vessel yard. Navigation structures are in poor to excellent condition; repairs are scheduled in the near future. Total cost of the existing project to end of FY was \$131,182,021, of which \$17,226,343 was for new work (includes \$331,685 contributed funds), \$100,844,019 for maintenance, \$1,556,249 for diked disposal and \$11,555,410 for rehabilitation.

10. FOX RIVER, WI

Location. Rises in Columbia County, WI, and flows about 176 miles northerly into Green Bay. Wolf River, physically a main river but by designation a tributary of Fox River, rises in central part of Fort County, WI and flows southerly. (See NOAA Nautical Chart 14916 for Lake Winnebago and lower Fox River.)

Previous Projects. See page 1368 of Annual Report for 1962.

Existing Project. Deepening and widening channel of Fox River from DePere 7 miles above mouth to confluence of Wolf River, a total length of 59 miles, to 6 feet, with 9.6 feet in rock cut below DePere lock and 7 feet in other rock cuts on lower river below Menasha lock; construction and reconstruction of 19 locks and 9 dams; a concrete retaining wall at Kaukauna; construction and maintenance of harbors having depths of 6 feet on Lake Winnebago; widening Neenah Channel to 100 feet, with a 6-foot depth for about 1 mile; and dredging, snagging, and otherwise improving Wolf River 47 miles from its mouth to New London, depth to be 4 feet.

Cost of completed portion of project is \$513, 424 for the lower river exclusive of previous projects. The uncompleted portion of the project authorized by the River and Harbor Act of 1925, was deauthorized Dec. 31, 1989, in accordance with Section 1001 of the WRDA of 1986 (PL 99-662). Section 332 of the WRDA of 1992 authorized the transfer of the navigation system to the State of WI subject to agreement; however, water regulation and dam operation will be continued by the Federal government. (See Table 21-B for authorizing legislation.)

Local Cooperation. None required.

Terminal Facilities. Wharf and landing facilities are, in general, adequate for existing needs. (See Table 21-I on locks and dams, Fox River, WI.)

Operations During Fiscal Year. Maintenance: Condition surveys, environmental activities, archeological management and investigations, and miscellaneous inspections and reports were performed by Government forces and contract at a cost of \$345,826. Cooperative stream gaging was performed at a cost of \$61,000. Real Estate activities cost \$2,483. The operation and maintenance of nine (9) dams and ten (10) overflow weirs totaled \$732,164. A contract for repairs to the Kaukauna Dike was awarded this FY in the amount of \$135,115. Geophysical surveys, software and administration activities to the Kaukauna Dike began at a cost of \$117,586.

Existing project is complete except for the inactive portion. Nineteen original locks and nine original dams were rebuilt. (See Table 21-I for year of completion of each). Structures and dredging in pools have increased original depths generally about 2 feet. Work remaining to complete project consists of dredging in upper portion of Wolf River, and rock removal and deepening of Neenah Channel on lower Fox River, which are no longer considered necessary. The dams tainter gates are receiving new hoist mechanisms. Existing dams repairs are underway or programmed in the near future; but many of the locks are in extremely poor condition. Total cost of the existing project to end of FY was \$101,423,946, of which \$3,753,334 was for new work and \$97,670,612 for operation and maintenance. Between July 5, 1884 and June 30, 1935, funds in the amount of \$3,706,187 were expended on operation and care of works of improvement under provisions of permanent indefinite appropriation for such purposes.

11. GRAND HAVEN HARBOR AND GRAND RIVER, MI

Location. Harbor is on east shore of Lake Michigan, 108 miles northeasterly from Chicago, IL, and 23 miles northerly from Holland, MI. River rises in Jackson County, MI, and flows 260 miles westerly into Lake Michigan. (See NOAA Nautical Chart 14933, and Geological Survey Grand Rapids quadrangle.)

Previous Project. For details see page 1949 of Annual Report for 1915, and page 1481 of Annual Report for 1938.

Existing Project. An entrance channel protected by parallel piers and revetments at mouth of Grand River, a deep draft channel in river extending to Spring Lake, a turning basin, and a shallow draft channel in river extending 14.5 miles upstream to Bass River. Project depths are 23 feet in entrance channel, 21 feet in river to turning basin, 18 feet in turning basin and channel to Spring Lake, and 8 feet in upper Grand River channel. For additional details see page 1461 of Annual Report for 1962. Dredging on northerly side of inner channel is considered inactive. Estimated cost of this portion (1954) is \$38,600. The WRDA of 1986 authorized modifications to deepen the harbor entrance and river channels to 29 and 27 feet, respectively; and provides for a new and larger turning basin. Estimated cost (Oct 90) is \$20,400,000, which includes \$11,754,000 Federal and \$8,646,000 non-Federal. (See Table 21-B for authorizing legislation.)

Local Cooperation. Fully complied with for

completed portions of project. Local cooperation items for the newly authorized project in the WRDA of 1986 (PL 99-662), are as described in House Document 661, 76th Congress, 3d Session, and also includes, as a result of PL 99-662, construction cost sharing requirements as follows:

a. Contribute in cash 25 percent of the total cost of construction of general navigation facilities, exclusive of aids to navigation, a contribution presently estimated at \$4,246,000. The estimated cash contribution of \$4,246,000 to be paid in lump sum, prior to initiation of construction, or in annual installments during the construction period at a rate proportionate to the proposed or scheduled expenditure of Federal funds as required by the Chief of Engineers, or under another arrangement satisfactory to the Secretary of the Army, the final apportionment of cost to be made after actual costs have been determined; and

b. Repay, with interest, over a period of up to 30 years following project completion, 10 percent of the total cost of construction of general navigation facilities, an amount presently estimated at \$2,040,000. The Secretary of the Army may count against all or part of the 10 percent repayment, the amount of the local contribution of lands, easements, rights-of-ways, dredged/demolition material disposal sites and relocations. In no case are these costs to count against the cash payment during construction, and in no case would the amount waived exceed 10 percent of project cost.

Terminal Facilities. Several wharves exist for handling coal, limestone, sand and gravel, petroleum products, fish, and miscellaneous commodities. There is also a car-ferry slip, which is inactive. The State and local agencies provide recreational boating facilities, which are open to all on equal terms. Facilities are considered adequate for existing commerce.

Operations During Fiscal Year. Maintenance: Condition and structure surveys performed by Government forces cost \$6,980. A contract for maintenance dredging the Outer harbor was awarded and completed this FY, removing approximately 42,849 cubic yards of shoal material at a cost of \$251,514. Supervision and administration cost \$132,555.

Existing project was substantially completed in 1949. For additional details on completion of existing project see page 1463 of Annual Report for 1982. Condition of navigation structures range from good to poor with portions in a general state of deterioration and are scheduled for repairs. Total cost of the existing project

to end of FY was \$44,370,115 of which \$1,458,469 was for new work, \$41,317,633 for maintenance (includes \$15,585 contributed funds), \$780,400 diked disposal and \$813,613 for rehabilitation.

12. GRAND MARAIS HARBOR, MI

Location. On south shore of Lake Superior, 93 miles west of Sault Ste. Marie, MI (See NOAA Nautical Chart 14962.)

Existing Project. Provides for a channel protected by parallel piers and for closing natural entrance channel with a pile dike. Project depths are 18 feet between piers and 20 feet in lake approach. For additional details see page 1449 of Annual Report for 1962. (See Table 21-B for authorizing legislation.)

Local Cooperation. None required.

Terminal Facilities. Several small piers, a Coast Guard Station, and a small boat pier and launching ramp built by the State of Michigan provide facilities adequate for present traffic.

Operations During Fiscal Year. Maintenance: Condition surveys performed by Government forces cost \$2,941. Value engineering studies and structural design repairs performed by Government forces and contract cost \$38,813.

Existing project is complete except for widening a portion of channel from 250 to 300 feet. Project now being maintained to 19 and 15 feet below I.G.L.D., in lieu of 20 and 18 feet, which is adequate for current usage. The Pile Dike Breakwater is severely deteriorated and no longer maintained; major repair is required to make the Breakwater functional. Total cost of the existing project to end of FY was \$4,505,897, of which \$1,055,871 was for new work and \$3,450,026 for maintenance.

13. GREEN BAY HARBOR, WI

Location. At mouth of Fox River, at head of Green Bay, about 180 miles from Milwaukee, WI, via Sturgeon Bay Canal, and about 49 miles southwest of Menominee Harbor, MI and WI. (See NOAA Nautical Chart 14918.)

Previous Projects. See page 1366 of Annual Report for 1962.

Existing Project. See Chicago District 1979 Annual Report, Table 30-C, page 30-30.

For more detailed description of project see page 1216 of Annual Report for 1963.

Cost of completed portion of project is \$9,335,000 Federal, and non-Federal cost is \$490,000 including \$100,000 contributed funds. Local interests requested that the inactive portion of the 1962 River and Harbor Act, consisting of dredging the reach from 150 feet downstream of the Chicago & Northwestern Railway Bridge to 1,700 feet upstream of this bridge, be reactivated and the authorization modified to include deepening the adjacent turning basin and modifying the Chicago & Northwestern Railway Bridge to provide increased horizontal clearance. Estimated cost of this portion (1990) is \$6,130,000; \$4,030,000 Federal and \$2,100,000 non-Federal which includes \$1,970,000 local contribution. Section 601c of the WRDA of 1986 authorized deepening the Fox River Channel, Green Bay, WI, to 27 feet. (See Table 21-B for authorizing legislation.)

Local Cooperation. Fully complied with for existing project.

Terminal Facilities. There are 16 wharves for handling coal, petroleum products, cement, limestone, general overseas cargo and miscellaneous commodities. Facilities are considered adequate for existing commerce.

Operations During Fiscal Year. Maintenance: Condition and structure surveys, and miscellaneous inspections and reports performed by Government forces cost \$232,268. Maintenance of the confined disposal facility cost \$2,000. Safety maintenance performed by hired labor cost \$3,734. A contract was awarded and completed this FY for maintenance dredging, removing approximately 124,000 cubic yards of shoal material at a cost of \$2,266,999. Supervision and administration cost \$152,542.

Existing project is complete. The 1962 modification was started in November 1966 and completed in September 1973, except for dredging the reach from 150 feet downstream of the Chicago & Northwestern Railway Bridge to 1,700 feet upstream of this bridge. Dredging of the turning basin above C & N.W. Railway Bridge was commenced in August 1938. The turning basin was enlarged under authority of Section 5 of the Rivers and Harbors Act of March 4, 1915, in order to provide sufficient area for the large ships that use it. The work was performed as part of a maintenance dredging contract in September and October 1973. East revetment at Grassy Island was

entirely removed in July 1935. Dredging Fox River and entrance channel to Tail Point Light was completed in September 1967. Total cost of the existing project to end of FY was \$79,617,582 (\$78,676,781 regular funds and \$940,800 Public Works Funds), \$9,946,395 for new work, \$61,766,876 for maintenance and \$7,904,311 for diked disposal. The new work cost does not include \$100,000 contributed funds.

14. HARBOR BEACH HARBOR, MI

Location. On west shore of Lake Huron about 60 miles north of Port Huron, MI. (See NOAA Nautical Chart 14862).

Existing Project. Harbor of refuge protected by three breakwaters; a main entrance 23 feet deep; and an anchorage area 21 feet deep. For additional details see page 1485 of Annual Report for 1962. (See Table 21-B for authorizing legislation.)

Local Cooperation. None required.

Terminal Facilities. Coal and limestone are received at a private wharf. In addition, there is a public recreational craft pier, a Coast Guard pier, and several small installations engaged in docking and servicing light-draft commercial and recreational vessels. These facilities satisfy current commerce and traffic requirements.

Operations During Fiscal Year. Maintenance: A contract was awarded and completed this FY for maintenance dredging, removing approximately 16,097 cubic yards of material at a cost of \$381,201. Supervision and administration cost \$17,194.

Existing project was completed in 1928. For additional details on completion of existing project see page 1485 of Annual Report for 1962. Navigation structures are in good condition. Total cost of the existing project to end of FY was \$17,532,802, of which \$1,200,598 was for new work, \$15,894,600 for maintenance, \$243,100 for diked disposal and \$194,504 for rehabilitation.

15. HOLLAND HARBOR, MI

Location. On east shore of Lake Michigan 95 miles northeasterly from Chicago, IL, and 23 miles southerly from Grand Haven, MI. (See NOAA Nautical Chart 14932.)

Previous Project. For details see page 1948 of Annual Report for 1915, and page 1478 of Annual Report for 1938.

Existing Project. An outer breakwater protected approach channel in Lake Michigan, an entrance

channel to Lake Macatawa protected by piers and revetments, a channel through Lake Macatawa into Black River, and a turning basin. Project depths are 23 feet in outer portion of approach channel decreasing to 21 feet at outer end of inner piers, 21 feet to upper end of project, and 18 feet in turning basin. For additional details see page 1458 of Annual Report for 1962.

The uncompleted portion of the project, widening bend of entrance channel into Lake Macatawa, was deauthorized Dec, 31, 1989, in accordance with Section 1001 of the WRDA of 1986 (PL 99-662). (See Table 21-B for authorizing legislation.)

Local Cooperation. Fully complied with for completed portions of project.

Terminal Facilities. Wharves are at inner end of Lake Macatawa and used for handling coal, building materials, petroleum products, and miscellaneous commodities. Two shipbuilding yards are on south shore of the lake. Holland provides a public wharf for small craft. Facilities are considered adequate for existing commerce.

Operations During Fiscal Year. Maintenance: Condition and structure surveys performed by Government forces cost \$162,367. Repairs to the breakwater were performed using the Cranebarge MANITOWOC at a cost of \$68,375. A contract for maintenance dredging the Outer harbor was awarded and completed this FY, removing approximately 38,728 cubic yards of shoal material at a cost of \$178,900. Supervision and administration cost \$91,325.

Existing project, with exception of widening bend in revetted entrance channel authorized by Act of September 3, 1954, was completed in 1957. For additional details on completion of existing project, see page 1460 of Annual Report for 1962. Navigation structures are in good to fair condition with repairs anticipated within the next 5 years. Total cost of the existing project to end of FY was \$38,738,253, of which \$1,392,827 was for new work (\$1,180,502 regular funds, \$176,620 for previous project and \$35,705 contributed funds), \$35,179,674 for maintenance, \$1,663,300 for diked disposal and \$502,452 for rehabilitation.

16. KEWAUNEE HARBOR, WI

Location. On west shore of Lake Michigan, about 105 miles north of Milwaukee, WI, and about 78 miles from Green Bay, via Sturgeon Bay Canal. Harbor is at mouth of Kewaunee River. (See NOAA Nautical Chart 14908.)

Previous Projects. See page 1375 of Annual Report for 1962.

Existing Project. See Chicago District 1979 Annual Report, Table 30-C, page 30-31.

Costs of completed project are \$603,021 Federal, and \$9,000 non-Federal, exclusive of amount expended on previous projects. Uncompleted portion (estimated \$200,000, July 1965) of 1935 River and Harbor Act is considered inactive, and excluded from present cost estimate. The portion authorized by the 1960 River and Harbor Act was deauthorized in 1977. (See Table 21-B for authorizing legislation.)

Local Cooperation. Fully complied with.

Terminal Facilities. Two car-ferry slips, a petroleum tank farm, a Corps of Engineers project office, and several fish wharves. Facilities are considered adequate for existing commerce.

Operations During Fiscal Year. Maintenance: Condition surveys performed by Government forces cost \$197.

Active portion of existing project is complete. The north pier was completed in 1897 and the remaining portion is in generally good condition. Rehabilitation of the south pier was completed in June 1967. Construction of north breakwater and shore connection, except for a gap of 150 feet about 830 feet from shoreward end, and removal of outer 706.5 linear feet of north pier was commenced in September 1935 and completed in June 1937. Removed 500 linear feet of north pier in April/May 1963 and widened and deepened the adjacent channel in 1965. Outer end of the north pier was struck and severely damaged by car ferry vessel in October 1973 and a 24-foot section at outlet end was subsequently removed, thus reducing the structure to a length of 626 feet. Dredging entrance channel in interior basin to the existing project depth was commenced in April and completed in October 1938. Kewaunee River is navigable to about 6.5 miles above mouth for craft drawing not more than 4 feet. Navigation structures range from fair to good condition. Total cost of the existing project to end of

DETROIT, MI, DISTRICT

FY was \$13,540,841, of which \$758,333 was for new work (\$338,333 regular and \$420,000 Emergency Relief Funds) \$9,203,747 for maintenance, \$2,961,461 for diked disposal and \$617,300 for rehabilitation.

17. KEWEENAW WATERWAY, MI

Location. In Lake Superior across Keweenaw Peninsula in upper peninsula of Michigan. The west entrance is 169 miles east of Duluth, MN. (See NOAA Nautical Chart 14972.)

Existing Project. A navigable channel, minimum width 300 feet, 25 miles long, partially natural and partially artificial, across Keweenaw Peninsula via Portage Lake. For details see page 1121 of Annual Report for 1963. (See Table 21-B for authorizing legislation.)

The uncompleted portion of the project for navigation at Keweenaw Waterway, Houghton County, MI, authorized by the River and Harbor Act of Aug. 30, 1935, PL 409, 73rd Congress, which consists of extending the lower entrance breakwater by 2,000 feet, including the necessary alteration or replacement of structures due to channel deepening, was deauthorized by the WRDA of 1986; PL 99-662, Nov. 17, 1986, 99th Congress, Title X.

Local Cooperation. None required.

Terminal Facilities. Six coal docks, a petroleum dock, and several general merchandise and miscellaneous wharves, all privately owned. Facilities are considered adequate for existing commerce. Also present is a government constructed recreational area with facilities to include a picnic area and small boat landing range.

Operations During Fiscal Year. Condition surveys performed by Government forces cost \$6,883.

Active portion of the project is complete. Lower entry piers are in fair condition. It is anticipated repairs will be required within the next ten years. Upper entry breakwaters are in good condition, but require annual stone maintenance due to severity of the wave climate. Total cost of the existing project to end of FY was \$37,427,347, of which \$5,974,141 was for new work, \$29,929,706 for maintenance and \$1,523,500 for diked disposal.

18. LAKE ST. CLAIR, MI, CHANNELS MI

Location. Lake St. Clair, a section of Great Lakes connecting channels, is an expansive shallow basin having a vessel track length of about 15 miles from mouth of St. Clair River to head of Detroit River. (See NOAA Nautical Chart 14850.)

Previous Project. For details see page 2882, Annual Report for 1896; pages 1957-58, Annual Report for 1915; and page 1539, Annual Report for 1938.

Existing Project. An improved channel through Lake St. Clair 800 feet wide, 27.5 feet deep, and about 14.5 miles long; extending from mouth of Southeast Bend cutoff channel at lower end of St. Clair River to head of Detroit River Channel. (See Table 21-B for authorizing legislation.)

Local Cooperation. None required.

Terminal Facilities. None.

Operations During Fiscal Year. Maintenance: Condition surveys performed by Government forces cost \$78,097.

Total cost of the existing project to end of FY was \$22,420,596, of which \$7,675,357 was for new work (\$6,666,762 regular funds and \$1,008,595 Public Works Funds), \$9,625,439 for maintenance, and \$5,119,800 for diked disposal.

19. LEXINGTON HARBOR, MI

Location. On southwest shore of Lake Huron, 20 miles north of Port Huron, MI. (See NOAA Nautical Chart 14862.)

Existing Project. Provides for two offshore breakwaters opening to the southeast and totaling about 2,400 feet long with provisions for recreational fishing on the main breakwater; an anchorage and maneuver area of about 5 acres, 8 feet deep; and a flared approach channel 10 feet deep, decreasing to 160 feet in width through the breakwaters. Project also provides for recreational fishing facilities. Estimated (1979) Federal cost of new work is \$1,647,306 excluding \$1,088,888 to be contributed by local interests. (See Table 21-B for authorizing legislation.)

Local Cooperation. Assurances of local cooperation were furnished by the Michigan Department of Natural Resources to the Secretary of the Army. The cash contribution was \$1,088,888.

Terminal Facilities. An existing public fishing pier of open pile construction is not adequate for existing and prospective commerce. Complete boating facilities are planned by State and local agencies in connection with the harbor construction.

Operations During Fiscal Year. Maintenance: Miscellaneous report cost \$28.

The existing project was completed during FY 1977. Navigation structures are in fair condition. Total cost of the existing project to end of FY was \$6,615,603 of which \$3,107,192 (includes \$1,088,888 contributed funds) was for new work and \$3,508,411 for maintenance.

20. LITTLE LAKE HARBOR, MI

Location. On south shore of Lake Superior 21 miles west of Whitefish Point and 30 miles east of Grand Marais, MI. (See NOAA Nautical Chart 14962.)

Existing Project. Provides for a small-craft harbor of refuge by dredging an entrance channel 12 feet deep from Lake Superior into Little Lake, suitably protected by breakwaters and revetments. (See Table 21-B for authorizing legislation.)

Local Cooperation. Fully complied with.

Terminal Facilities. Only terminal facility at project consists of a public dock built by the State of Michigan for light-draft craft.

Operations During Fiscal Year. Maintenance: Condition surveys performed by Government forces cost \$7,352.

This project is considered complete; however, because of shifting sand, the harbor entrance shoals rapidly with the result that full project depth is not usually available. Navigation structures are in good condition. Total cost of the existing project to end of FY was \$6,242,915, of which \$600,478 was for new work (includes \$57,670 contributed funds) and \$5,642,437 for maintenance.

21. LUDINGTON HARBOR, MI

Location. On east shore of Lake Michigan, 156 miles northeasterly from Chicago, IL, and 67 miles northerly from Grand Haven, MI. (See NOAA Nautical Chart 14937.)

Previous Project. For details see page 1951 of Annual Report for 1915, page 1491 of Annual Report for 1938, and page 1307 of Annual Report for 1963.

Existing Project. Provides for an exterior basin in Lake Michigan protected by north and south breakwaters, north breakwater is 1,800 feet long and south breakwater 1,700 feet long, 550 feet apart at outer ends, diverging at an angle of 90 degrees, with shore connections, 1,103 and 2,004 feet long, respectively; for dredging exterior basin to 18 feet deep with a maximum width of 1,500 feet; for a channel with a depth of 29 feet from deep water in Lake Michigan decreasing to 27 feet at the west end of the north pier, over a maximum width of 600 feet; thence a channel with a depth of 27 feet, over a minimum width of 230 feet with necessary widening at Pere Marquette Lake; and for inner piers and revetments, 1,649 feet long on north and sufficiently long on the south for turn at Pere Marquette Lake. The estimated (1977) Federal cost for new work is \$8,250,000. Estimated total cost for local interests is \$147,000. (See Table 21-B for authorizing legislation.)

Local Cooperation. Fully complied with.

Terminal Facilities. In addition to main terminal of Chesapeake & Ohio Railway Company consisting of three car ferry slips, a wharf, and warehouses, there are several wharves which handle coal, limestone, and miscellaneous commodities. Facilities are adequate for existing commerce.

Operations During Fiscal Year. Maintenance: Condition surveys performed by Government forces cost \$79,107. Repairs to the breakwater were performed using the Cranebarge MANITOWOC at a cost of \$67,956. A contract that was awarded last FY for maintenance dredging was completed this FY, removing 48,484 cubic yards of material at a cost of \$348,617.

Existing project was completed in 1918. For additional details on completion of existing project see page 1469 of Annual Report for 1962. Structures are in good condition except for the south breakwater head that needs repair. Total cost of the existing project to end of FY was \$32,794,078, of which \$8,532,202 was for new work, \$23,903,963 for maintenance, and \$357,913 for rehabilitation. The maintenance cost does not include \$136,286 contributed funds.

22. MANISTEE HARBOR, MI

Location. On east shore of Lake Michigan, 179

DETROIT, MI, DISTRICT

miles northeasterly from Chicago, IL, and 26 miles northerly from Ludington, MI. (See NOAA Nautical Chart 14938.)

Previous Project. For details see page 1952 of Annual Report for 1915, and page 1493 of Annual Report for 1938.

Existing Project. An entrance channel in Lake Michigan protected by a breakwater, piers, and revetment; a channel in Manistee River to Manistee Lake; and Federal participation in cost of replacing Maple Street Bridge. Project depths are 25 feet in entrance channel and 23 feet in river channel. For additional details see page 1470 of Annual Report for

1962. (See Table 21-B for authorizing legislation.)

Local Cooperation. Fully complied with.

Terminal Facilities. Installations are on both sides of river and on Manistee Lake. Commerce handled includes coal, sand, salt, and general cargo. In addition, there is a Government wharf and a State and City owned recreational craft pier which is open to the public. These facilities satisfy current commerce requirements.

Operations During Fiscal Year. Maintenance: Condition surveys performed by Government forces cost \$6,243. A contract was awarded and completed this FY for maintenance dredging, removing approximately 86,484 cubic yards of material at a cost of \$363,772.

Existing project was completed in August 1967. For additional details on completion of existing project see page 1470 of Annual Report for 1962. Navigation structures range from generally fair to good condition. Total cost for existing project to end of FY was \$18,158,486, of which \$2,696,522 was for new work, \$14,087,800 for maintenance, and \$1,374,164 for rehabilitation.

23. MANITOWOC HARBOR, WI

Location. On west shore of Lake Michigan about 79 miles north of Milwaukee, WI, and about 106 miles from Green Bay Canal. (See NOAA Nautical Chart 14922.)

Previous Projects. See page 1379 of Annual Report for 1962.

Existing Project. The total estimated (Oct. 1981) project cost is \$3,080,000; the Federal cost is \$1,085,000 and non-Federal cost is \$1,995,000, which is a cash contribution. See Chicago District Annual Report for 1979, Table 30-C.

For detailed description see page 1228 of Annual Report for 1963. Estimated costs (1970) of new work for 1968 modification are \$81,000 Federal and \$30,000 non-Federal which includes a cash contribution of \$18,000. Work on the 1968 modification was postponed until 1982. The portion authorized by the 1962 River and Harbor Act was deauthorized Dec. 31, 1989, in accordance with Section 1001 of the WRDA of 1986 (PL 99-662). (See Table 21-B for authorizing legislation.)

Construction of a small boat harbor within the existing harbor was authorized by the Chief of Engineers, June 26, 1979, and 720-foot channel extension affirmed in July 1982, under authority of Section 107, 1960 River and Harbor Act, as amended.

Local Cooperation. Fully complied with for completed modifications. For 1968 modification local interests must make an annual cash contribution equivalent to 50% of the annual costs associated with construction and maintenance of the channel extension until such time that a second user utilizes the channel extension. Such a contribution is presently estimated at \$9,206; additional assurances require that the sponsor provide without cost to the United States all lands, easements, and rights-of-way required for construction and subsequent maintenance, including suitable areas determined by the Chief of Engineers to be required in the general public interest for initial and subsequent disposal of dredged materials, and the necessary retaining dikes, bulkheads and embankments therefor or the costs of such retaining works; hold and save the United States free from damages due to the construction works and subsequent use, operation, and maintenance of the project, not including damages due to the fault or negligence of the United States or its contractors; provide and maintain without cost to the United States adequate berthing areas at the docks adjacent to the improvement; accomplish at no cost to the United States all relocations and alterations of utilities necessary for the project; assume full responsibility for all project first costs in excess of the Federal cost limitation of \$2,000,000; and comply with the Uniform Relocation Assistance and Real Property Acquisition Policies Act of 1970.

Terminal Facilities. Three car-ferry slips, a grain elevator, one shipbuilding yard, and three other wharves used for handling coal, building materials, cement, and miscellaneous commodities. While these facilities are considered adequate for existing commerce, it is believed the city should provide a suitable wharf with warehouse and railway connection open to the general public.

Operations During fiscal year. Maintenance: Condition and structure surveys and environmental studies performed by Government forces cost \$54,693. Repairs to the breakwater were performed using the Cranebarge MANITOWOC at a cost of \$125,280. An adjustment was made to the FY 05 maintenance dredging contract in the amount of -\$8,120. A contract was awarded and completed this FY for maintenance dredging, removing approximately 32,565 cubic yards of material at a cost of \$467,655. Engineering and design cost \$16,998.

Existing project is complete except for the 1962 and 1968 modifications. The 1962 modification was deauthorized December 31, 1990. Work on the 1968 modification was essentially completed in FY 83. The Federal modification, adopted July 15, 1985, included the expansion of the new entrance channel to the Section 107 project and extension of the rubblemound breakwater. Dredging a channel through the outer basin to existing project depth and removal of a portion of old north stub pier at the river entrance were completed in December 1937. Dredging river channel was completed in July 1942. South Breakwater, Section E, is in fair condition and is programmed for repair. Total cost of the existing project to end of FY was \$18,270,941 of which \$3,960,044 was for new work (includes \$1,911,130 contributed funds), \$11,229,141 for maintenance (includes \$66,735 contributed funds), and \$3,081,756 for diked disposal.

24. MILWAUKEE HARBOR, WI

Location. On west shore of Lake Michigan about 85 miles north of Chicago, IL, and about 83 miles west of Grand Haven, MI. (See NOAA Nautical Chart 14924.)

Previous Projects. See page 1385 of Annual Report for 1962.

Existing Project. See Chicago District Annual Report for 1979, Table 30-C, page 30-26. For detailed description see page 1232 of Annual Report for 1963.

Completed new work costs are \$6,934,804 Federal and \$478,000 non-Federal, exclusive of amount expended on previous projects. The uncompleted portion authorized by the 1935 River and Harbor Act was deauthorized Dec. 31, 1989, in accordance with Section 1001 of the WRDA of 1986 (PL 99-662). Uncompleted portion of 1945 River and Harbor Act was deauthorized in 1977. (See Table 21-B for authorizing legislation.)

Local Cooperation. Complied with for Acts of March 2, 1945, October 23, 1962, and July 14, 1960, except deauthorized portion of 1945 Act. Act of Aug. 30, 1935, provided that original dredging of outer harbor area be done by city of Milwaukee and city of Milwaukee be reimbursed at actual cost but not to exceed 10 cents per cubic yard, place measurement, for original dredging done subsequent to authorization of work by Congress. Agreement covering dredging was executed by Secretary of War, Feb. 23, 1934, after this work was originally authorized as part of public works program. City was reimbursed for 10 percent of dredging.

Terminal Facilities. There are 4 car-ferry slips, and 57 other wharves, private and municipal, used for handling coal, grain, building materials, cement, petroleum products, and miscellaneous commodities. As facilities in inner harbor were inadequate for existing commerce, Milwaukee Harbor Commission has constructed nine docks in the outer harbor for handling general cargo. Detail on actual port and harbor facilities is in Port Series No. 48 (revised 1994) prepared and published by the Water Resources Support Center.

Operations During Fiscal Year. Maintenance: Condition and structure surveys, soil borings, and miscellaneous inspections and reports performed by Government forces and contract cost \$81,961. Repairs to the breakwater were performed using the Cranebarge MANITOWOC at a cost of \$306,341. A Dredged Material Management Plan (DMMP) was initiated this FY at a cost of \$162,693. A contract was awarded and completed this FY for maintenance dredging, removing approximately 72,000 cubic yards of material at a cost of \$765,600.

Existing project is complete except for inactive portions. The 1962 modification was completed in July 1967. North breakwater and shore connection, 9,954 feet long, was completed in August 1925. North pier was completed in 1905 and construction of south pier was completed in November 1910. Construction of south breakwater and shore connection was completed in October 1929. Before modification of

August 30, 1935, City of Milwaukee also dredged most of the area in the outer harbor south of inner entrance piers and lakeward of pierhead line to more than 21 feet below datum without cost to the United States. City of Milwaukee also dredged a portion of the area of the outer harbor north of inner entrance piers to provide an approach channel to the passenger and auto pier opposite East Claybourn Street. Work on the 1945 modification was completed in August 1957, except for the uncompleted portion, which consists of dredging the Milwaukee River from Buffalo Street to upper limit of the project at Humboldt Avenue. The uncompleted portion of the project authorized by the 1945 Rivers and Harbors Act was deauthorized in 1977. Navigation structures range from fair to excellent condition. Total cost of the existing project to end of FY was \$79,430,801, of which \$8,231,024 was for new work, \$52,103,292 for maintenance (includes \$322,471 contributed funds), \$6,380,925 for diked disposal and \$12,715,560 for rehabilitation.

25. MONROE HARBOR, MI

Location. On lower reach of River Raisin, which empties into Lake Erie and is 36 miles south of Detroit, MI. (See NOAA Nautical Chart 14830.)

Existing Project. Provides for a channel in Lake Erie and River Raisin to city of Monroe, for a turning basin, and for riprapping protecting dikes at river mouth. Project depths are 21 feet to turning basin, 18 feet in turning basin, and 9 feet to upstream end of project. For additional details see page 1490 of Annual Report for 1962. Project feature for riprapping protecting dikes is considered inactive. Estimated cost of this feature (1954) is \$90,000. (See Table 21-B for authorizing legislation.)

The WRDA of 1986 authorized modifications to deepen the River Raisin portion of the existing 200-foot navigation channel from 21 to 27 feet between existing turning basin and the river's mouth; deepen the lake channel from 21 to 28 feet, and widen the channel from 200 to 500 feet, for a distance of approximately 47,000 feet from the river's mouth to the Maumee Bay Entrance Channel; dredge a new turning basin 24 feet deep, with a diameter of at least 1,600 feet, at the river's mouth; and construct a 190 acre confined disposal area in Plum Creek Bay behind which would enable the creation of a 700 acre marsh. Estimated total cost (Oct. 88) is \$150,200,000; \$59,000,000 Federal and \$91,200,000 non-Federal, which includes a cash contribution of \$19,650,000.

Local Cooperation. Fully complied with for completed portion of project. Local cooperation items for the newly authorized project in the WRDA of 1986 (PL 99-662), are as described in the Rivers and Harbors Committee Document 22, 71st Congress, 1st Session; R & H Comm. Doc. 12, 72d Congress, 1st Session, and 45, 75th Congress, 1st Session, and also includes, as a result of PL 99-662, construction cost sharing as follows:

a. Contribute in cash 25 percent of the total cost of construction of general navigation facilities, exclusive of aids to navigation, a contribution presently estimated at \$19,650,000. The estimated cash contribution of \$19,650,000 to be paid in lump sum prior to initiation of construction, or in annual installments during the construction period at a rate proportionate to the proposed or scheduled expenditure of Federal funds as required by the Chief of Engineers, or under another arrangement satisfactory to the Secretary of the Army, the final apportionment of cost to be made after actual costs have been determined;

b. Repay, with interest, over a period of up to 30 years following project completion, 10 percent of the total cost of construction of general navigation facilities, an amount presently estimated at \$7,860,000. The Secretary of the Army may count against all or part of the 10 percent repayment, the amount of the local contribution for lands, easements, rights-of-way, dredged/demolition material disposal sites and relocations. In no case are these costs to count against the cash payment during construction, and in no case would the amount waived exceed 10 percent of project cost; and

c. The confined dike area construction is a non-Federal responsibility and is estimated to cost \$70,156,000.

Terminal Facilities. Several privately owned docks and a municipal terminal. Port of Monroe Authority built a steel and concrete wharf on southeast side of turning basin for commercial use. Detail on actual port and harbor facilities is in Port Series No. 45 (revised 1996) prepared and published by the Water Resources Support Center. Facilities are considered adequate for existing commerce.

Operations During Fiscal Year. Maintenance: Condition surveys performed by Government forces cost \$30,651. A contract for maintenance dredging was awarded and completed this FY, removing 49,000 cubic yards of material at a cost of \$214,220. A contract for maintenance dredging was awarded in the amount of \$446,300.

Total cost of the existing project to end of FY was \$63,434,007, of which \$987,340 was for new work (includes \$300,000 contributed by the Port Commission of Monroe) \$23,757,085 for maintenance (includes \$166,667 contributed funds: \$125,000 by Consolidated Paper Company and \$41,667 by River Raisin Company) and \$38,689,582 for diked disposal (includes \$83,182 contributed funds).

26. MUSKEGON HARBOR, MI

Location. On east shore of Lake Michigan, 114 miles northeasterly from Chicago, IL, and 80 miles easterly from Milwaukee, WI. (See NOAA Nautical chart 19434.)

Previous Project. For details see page 1950 of Annual Report for 1915; page 1399, Annual Report for 1924; and page 1484, Annual Report for 1938.

Existing Project. A breakwater protected outer basin in Lake Michigan and an entrance channel from Lake Michigan to Muskegon Lake protected by piers and revetments. Project depths vary from 29 feet in the lakeward portion of the outer basin to 27 feet in the channel between the inner piers to Muskegon Lake. For additional details see page 1303 of Annual Report for 1963. (See Table 21-B for authorizing legislation.)

Local Cooperation. Fully complied with.

Terminal Facilities. Several privately owned wharves primarily for commercial use. Details on actual port and harbor facilities are in Port Series, No. 48 (revised 1981) prepared and published by the Water Resources Support Center. Facilities are considered adequate for existing commerce.

Operations During Fiscal Year. Maintenance: Condition surveys performed by Government forces cost \$6,456. Repairs to the breakwater were performed using the Cranebarge MANITOWOC at a cost of \$113,141.

Existing project, including latest project modification, was completed in 1965. For additional details on completion of existing project see page 1465 of Annual Report for 1962. Navigation structures are in good condition. Total cost of the existing project to end of FY was \$32,649,106, of which \$3,017,110 was for new work, \$15,807,696 for maintenance, and \$13,824,300 for rehabilitation.

27. NEW BUFFALO HARBOR, MI

Location. At mouth of Galien River on southeast shore of Lake Michigan in Berrien County, about 45 miles easterly from Chicago, IL. (See NOAA Nautical Chart 14905).

Existing Projects. Provides for an entrance channel 10 feet deep by 80 feet wide and 850 feet long, to mouth of Galien River; new north and south breakwaters 1,305 and 740 feet long, respectively, and deepening inner channel to Galien River to 8 feet and 80 feet wide and 1,250 feet long. (See Table 21-B for authorizing legislation).

Local Cooperation. Fully complied with.

Terminal Facilities. One village owned boat ramp and three privately operated marinas, and a private boat club facility.

Operations During Fiscal Year. Maintenance: Condition surveys performed by Government forces cost \$8,055.

Existing project is complete. The North and South Breakwaters are in fair condition. It is anticipated repairs will be required within the next five years. Total cost of the existing project to end of FY was \$8,435,194, of which \$2,472,183 was for new work (includes \$1,186,467 contributed funds), \$5,781,511 for maintenance, and \$181,500 for diked disposal.

28. ONTONAGON HARBOR, MI

Location. About 140 miles east of Duluth, MN, on south shore of Lake Superior, at mouth of Ontonagon River; provides the only refuge for small craft between the Keweenaw Waterway upper entrance and Black River Harbor. (See NOAA Nautical Chart 14965.)

Previous Project. For details see page 1931 of Annual Report for 1915, and page 1406 of Annual Report for 1938.

Existing Project. Provides for approach channel 16 feet deep, a channel between piers with 17- and 15-foot depths, an inner basin 12 feet deep, and maintenance of channels, basin, and entrance piers. Completed project cost \$19,619. See page 1100 of Annual Report for 1966 for details. A modification authorized by 1962 River and Harbor Act provides for increasing depths of channels, construction of an inner basin and a

DETROIT, MI, DISTRICT

sedimentation basin. (See Table 21-B for authorized legislation.)

The turning basin feature of the project for navigation at Ontonagon Harbor, Ontonagon County, MI, authorized by the River and Harbor Act of 1962, was deauthorized by the WRDA of 1986; PL 99-662 (Section 1002) Nov. 17, 1986, 99th Congress, Title X. The channel modification project authorized by the 1962 River and Harbor Act was deauthorized Dec. 31, 1989, in accordance with Section 1001 of the WRDA of 1986 (PL 99-662).

Local Cooperation. None required.

Terminal Facilities. There are no publicly owned wharves. There are three coal wharves, an oil receiving facility, and a few small fish wharves. Facilities are considered adequate for existing commerce.

Operations During Fiscal Year. Maintenance: Condition surveys performed by Government forces cost \$978. The contract for maintenance dredging awarded last FY was completed this FY at a cost of \$3,121. A contract for maintenance dredging was awarded and completed this FY, removing approximately 36,128 cubic yards of shoal material at a cost of \$341,490. Engineering and design, and supervision and administration cost \$307,823.

All work authorized under previous Acts was completed in 1938. Navigation structures range from fair to excellent condition. Several areas along the piers have had tie rod failures and repairs are underway. Total cost of the existing project to end of FY was \$29,795,416, of which \$953,903 was for new work, \$28,820,513 for maintenance and \$21,000 for diked disposal.

29. PETOSKEY HARBOR, MI

Location. This harbor is on the east shore of Lake Michigan about 50 miles south of the Straits of Mackinac. (See NOAA Nautical Chart 14913.)

Previous Project. For details see page 1954 of Annual Report for 1915, page 1547 of Annual Report for 1931, and page 2024 of Annual Report for 1949.

Existing Project. Provides for a breakwater extending from shore 1,345 feet long of stone-filled timber crib, concrete capped, and rubblestone construction that protects the municipal pier. (See Table 21-B for authorizing legislation.)

Local Cooperation. None required.

Terminal Facilities. There is a municipal pier about 635 feet long plus several recreational craft piers. These installations satisfy current commerce and traffic requirements.

Operations During Fiscal Year. Maintenance: Condition surveys performed by Government forces cost \$6,017. Breakwater repairs were performed using the Cranebarge MANITOWOC at a cost of \$126,572.

The existing project was complete in 1938. Breakwater is in fair overall condition. Total cost of the existing project to the end of FY was \$1,526,631 of which \$123,839 was for new work and \$1,402,792 for maintenance.

30. ROUGE RIVER, MI

Location. Rises in Oakland and Washtenaw Counties, MI, 30 miles long, flows southeasterly through Wayne County, and joins Detroit River at westerly limit of city of Detroit. (See NOAA Nautical Chart 14854.)

Previous Project. For details see page 1530 of Annual Report for 1932, and page 1558 of Annual Report for 1938.

Existing Project. Provides for: (a) Main channel from Detroit River through Short Cut Canal extending to upstream limit of the project, a distance of 3.5 miles. Project depths are 25 and 21 feet in navigation channel, 21 feet in turning basin, and 13 feet in upper reach of project. (b) Old Channel from Detroit River extending to junction of Old Channel with Short Cut Canal. Project depths are 25, 18, 17, and 21 feet. For additional details see page 1324 of Annual Report for 1963. In 1973, work authorized by the 1962 River and Harbor Act was reclassified from the active to inactive category. Estimated cost (1972) of this work is \$880,000. Except for dredging 25-foot channel 1,150 feet upstream from mouth of Old Channel, work authorized in Act of Aug. 30, 1935, is considered inactive. Estimated cost (1958) of inactive portion is \$255,000. Work authorized by Act of July 3, 1958, is considered inactive. Estimated cost (1960) of this work is \$210,000. (See Table 21-B for authorizing legislation.)

Local Cooperation. Act of Oct. 23, 1962, requires local interests to provide lands and rights-of-way for construction upon request of the Chief of Engineers; hold the United States free from damages; provide

terminal facilities to accommodate prospective commerce considered in report of District Engineer; dredge and maintain areas between the Federal improvement and terminal facilities to depths commensurate with improved Federal channel; make alterations in docks, bulkheads and other structures, and take such other measures as may be necessary to assure stability of banks adjacent to channel; and provide bridge protection. The assurances of local cooperation for the River and Harbor Act of 1962 were furnished by the Michigan State Waterways Commission and accepted on Jan. 7, 1965. Fulfillment of all items of local cooperation has not been accomplished.

Terminal Facilities. Numerous large commercial docks for handling various type cargo. Details on actual port and harbor facilities are contained in the Port Series No. 45 (revised 1984) prepared and published by the Water Resources Support Center. Facilities are considered adequate for existing commerce.

Operations During Fiscal Year. Maintenance: Condition surveys performed by Government forces cost \$60,483. The contract for maintenance dredging awarded last FY was completed this FY, removing approximately 64,000 cubic yards of material at a cost of \$309,424.

Work authorized before 1962 modification is complete or deauthorized. For additional details on completion of existing project see Annual Report for 1962. Total cost of the existing project to end of FY was \$41,317,641, of which \$675,251 was for new work (\$29,563 was expended from Emergency Relief Act Funds), \$25,735,072 for maintenance and \$14,907,318 for diked disposal.

31. SAGINAW RIVER, MI

Location. Formed by union of Tittabawassee and Shiawassee Rivers, 22 miles long, and flows northerly into extreme inner end of Saginaw Bay, Lake Huron. Cities of Saginaw and Bay City are on the river. (See NOAA Nautical Chart 14867.)

Previous Project. For details, see page 1957 of Annual Report for 1915; and page 1550 of Annual Report for 1938.

Existing Project. Provides for an entrance channel 27 feet deep and 350 feet wide from 27-foot contour in Saginaw Bay to river mouth; thence a channel 26 feet deep and 200 feet wide to New York Central

Railroad Bridge at Bay City; thence 22 feet deep and 200 feet wide to C&O Railroad Bridge in Saginaw; thence 16.5 feet deep and 200 feet wide to upstream limit at Green Point. Project also provides for five turning basins; one 25 feet deep at Essexville, 600 feet wide with a maximum length of 1,850 feet; one 22 feet deep on east side of channel about 1 mile upstream from Cass Avenue in Bay City, 650 feet wide and 1,000 feet long; one 20 feet deep at Carrollton, 100 to 300 feet wide and 900 feet long; one 20 feet deep downstream from C&O Bridge in Saginaw, 650 feet wide and 1,000 feet long; and one 15 feet deep between Bristol Street Bridge and New York Central Railroad Bridge in Saginaw. (See Table 21-B for authorizing legislation.)

Local Cooperation. Fully complied with.

Terminal Facilities. Numerous large commercial docks for handling a great variety of cargo. Details on actual port and harbor facilities are in Port Series No. 45 (revised 1996) prepared and published by the Water Resources Support Center. Facilities are considered adequate for existing commerce.

Operations During Fiscal Year. Maintenance: Condition surveys, environmental studies, support of water control center and miscellaneous inspections and reports performed by Government forces and contract cost \$599,228. The contract awarded in FY 05 for the construction of the confined disposal facility for placement of dredged disposal material for upper Saginaw River using Construction General funds continued at a cost of \$404,779. Engineering, design, and supervision and administration cost \$32,196. The contract for maintenance dredging awarded last FY was completed this FY, removing approximately 26,928 cubic yards of material at a cost of \$348,928. A contract was awarded this FY for maintenance dredging in the amount of \$1,296,663. Mobilization cost \$144,000. Real estate activities, engineering and design, and supervision and administration cost \$463,006.

Existing project is complete except for small part of the work authorized by the Act of October 23, 1962. Section D (Sixth Street Turning Basin) of the 1962 Act is complete except for the channel portion, which is pending modification. Total cost of the existing project to end of FY was \$110,884,278, of which \$17,053,310 was for new work (includes \$321,809 for contributed funds), \$72,879,080 for maintenance, and \$20,951,888 for diked disposal.

32. ST. CLAIR RIVER, MI

Location. A 40 mile long section of Great Lakes connecting channels which flows southerly from Lake Huron and discharges into Lake St. Clair. (See NOAA Nautical Chart 14852.)

Existing Project. Provides for channels through St. Clair River, which, at low water datum, are suitable for vessels drawing 25.5 feet. Project also provides for improvement of North Channel outlet, 100 feet wide and 10 feet deep, for recreational craft. Project depths are referred to low water datums for Lakes Huron and St. Clair; 577.5 and 572.3 feet above mean water level at Rimouski, Quebec, IGLD 1985. (See Tables 21-B and 21-H for authorizing legislation and features of existing project.) Act of July 24, 1946, provides for widening and deepening of southeast bend and improvement of outlet of north channel at an estimated cost (1986) of \$870,000; \$435,000 Federal and \$435,000 non-Federal. On June 16, 1969, the Director of Civil Works approved substitution of the middle channel of the St. Clair River for the authorized north channel. Subsequently, however, the work authorized by the River and Harbor Act of July 24, 1946, was deauthorized by the WRDA of 1986; PL 99-662, Nov. 17, 1986, 99th Congress, Title X.

Local Cooperation. None required.

Terminal Facilities. This improvement serves through commerce, between the upper and lower Great Lakes, and has not materially influenced terminal facilities along its route. A number of privately owned piers and wharves are at Port Huron, Marysville, St. Clair, and Marine City, MI, which handle coal, limestone, petroleum products, wood-pulp, salt and general cargo. These installations satisfy present commerce requirements.

Operations During Fiscal Year. Maintenance: Condition surveys, miscellaneous inspections and reports performed by Government forces cost \$369,218. Maintenance activities at the confined disposal facility cost \$44,669. Obstruction removal were performed using the U.S. Cranebarge VELER at a cost of \$9,087. Real estate activities cost \$30,260.

Existing project is complete. Total cost of the existing project to end of FY was \$54,078,839 of which \$19,213,246 was for new work and \$34,865,593 for maintenance

33. ST. JOSEPH HARBOR, MI

Location. On east shore of Lake Michigan, 60 miles easterly from Chicago, IL, and 24 miles southerly from South Haven, MI. (See NOAA Nautical Chart 14930.)

Previous Project. For details see page 1945 of Annual Report for 1915, and page 1470 of Annual Report for 1938.

Existing Project. Provides for protecting mouth of St. Joseph River by two piers, 250 to 325 feet apart at their inner and outer ends, respectively, having lengths of 2,758 feet on north side and 2,603 feet on south side; for a channel 21 feet deep from Lake Michigan to mouth of Benton Harbor Canal, a length of about 6,900 feet with widths of 265 feet at outer end of piers, 190 feet at inner end of piers and revetments, thence generally 215 feet to lower end of turning basin, increasing to 250 feet above the turning basin to mouth of Paw Paw River, thence generally 110 feet in Paw Paw River to mouth of Benton Harbor Canal; for dredging channel in Benton Harbor Canal up to west line of Riverview Drive extended northerly, to 18 feet deep and 80 feet wide; and a turning basin 18 feet deep on north side of channel above mouth of Morrison Channel and a turning basin 18 feet deep near mouth of Paw Paw River. Public Law 88-88 declared a portion of Benton Harbor Canal a non-navigable stream. (See Table 21-B for authorizing legislation.)

Local Cooperation. Fully complied with.

Terminal Facilities. Several commercial wharves for handling coal, building materials, petroleum products, and miscellaneous commodities. A package freight terminal and a public docking facility is also available. Facilities considered adequate for existing commerce.

Operations During Fiscal Year. Maintenance: Condition surveys performed by Government forces cost \$5,421. A contract for maintenance dredging the outer channel was awarded and completed this FY, removing approximately 35,565 cubic yards of material at a cost of \$257,850. Engineering, design, and supervision and administration cost \$106,614.

Existing project was completed in 1956. For additional details on completion of existing project see page 1454 of Annual Report for 1962. Navigation structures are in generally good condition. Total cost of the existing project to end of FY was \$38,106,880, of which \$1,804,485 was for new work, \$34,702,103 for maintenance, \$638,076 for diked disposal and \$962,216 for rehabilitation.

34. SHEBOYGAN HARBOR, WI

Location. On west shore of Lake Michigan about 26 miles south of Manitowoc and about 55 miles north of Milwaukee, WI. (See NOAA Nautical Chart 14922.)

Previous Project. See page 1381 of Annual Report for 1962.

Existing Project. See Chicago District Annual Report for 1979, Table 30-C, page 30-27.

For detailed description see page 1230 of Annual Report for 1963. New work for project as completed cost \$648,271, exclusive of amounts expended on previous projects. (See Table 21-B for authorizing legislation.)

Local Cooperation. Fully complied with.

Terminal Facilities. Three wharves for handling coal, petroleum products and miscellaneous commodities. City provided a public wharf. Facilities considered adequate for existing commerce.

Operations During Fiscal Year. Maintenance: Condition surveys performed by Government forces cost \$7,047.

Existing project was completed in 1904. Construction of north breakwater was commenced in October 1913 and completed in October 1915. Dredging entrance channel to existing project depth was commenced in June and completed in July 1938. Work on 1954 modification was completed in December 1956. Inner 260 feet of south pier was replaced with a revetment by private interests under permit granted July 16, 1931, by the Secretary of War. Piers, therefore, are maintained only for a length of about 2,490 feet. Sheboygan River is navigable about 2.4 miles above its mouth for craft drawing not more than 2 feet. Navigation structures range from fair to good condition. It is anticipated repairs will be required in the next 5 to 7 years. Total cost of the existing project to end of FY was \$13,849,767, of which \$1,136,088 was for new work, \$11,196,859 for maintenance, \$907,792 for diked disposal and \$609,028 for rehabilitation.

35. STURGEON BAY AND LAKE MICHIGAN SHIP CANAL, WI

Location. On west shore of Lake Michigan about 52 miles northeast of Green Bay and about 128 miles

north of Milwaukee, WI. (See NOAA Nautical Chart 14919.)

Previous Project. See page 1373 of Annual Report for 1962.

Existing Project. See Chicago District Annual Report for 1979, Table 31-C, page 30-27. For detailed description, see page 1223, Annual Report for 1963. (See Table 21-B for authorizing legislation.)

Local Cooperation. Fully complied with.

Terminal Facilities. As the canal and connecting channel is a through waterway, only terminal facilities are in city of Sturgeon Bay, 4 miles from west end of revetted portion of canal. These facilities consist of two wharves for handling coal, petroleum products and miscellaneous commodities, and four shipbuilding yards. City of Sturgeon Bay provided a public wharf about 5 miles northwesterly from city of Sturgeon Bay. Two major shipyards are located in Sturgeon Bay where repair facilities are available including dry docks, marine railways and hoists. Facilities are considered adequate for existing commerce.

Operations During Fiscal Year. Maintenance: Condition surveys performed by Government forces cost \$7,733.

Navigation structures are in good to fair condition, the South Revetment, Section N, is in poor condition and is programmed for major repair. Total cost of the existing project to end of FY was \$15,128,137 of which \$1,059,722 was for new work, \$12,872,397 for maintenance, \$311,119 for diked disposal and \$884,899 for rehabilitation. In addition, between April 25, 1893, and June 30, 1917, \$235,940 was expended for operating and care of works of improvements under provision of permanent indefinite appropriations for such purposes.

36. TWO RIVERS HARBOR, WI

Location. On west shore of Lake Michigan about 82 miles north of Milwaukee and about 101 miles from Green Bay, WI, via Sturgeon Bay Canal. (See NOAA Nautical Chart 14903.)

Previous Project. See page 1377, Annual Report for 1962.

Existing Project. See Chicago District Annual Report for 1979, Table 30-C, page 30-28.

For detailed description see page 1226 of Annual Report for 1963. Completed project cost \$147,463, exclusive of the amount expended on previous projects. The 1935 River and Harbor Act portion of project is essentially complete, except for dredging a 10-foot width along each side of the entrance channel between the piers. The uncompleted portion of the project authorized by the 1935 R & H Act was deauthorized Dec. 31, 1989, in accordance with Section 1001 of the WRDA of 1986 (PL 99-662). (See Table 21-B for authorizing legislation.)

Local Cooperation. Fully complied with.

Terminal Facilities. A coal wharf and several fishing wharves. City provided a wharf for receipt of petroleum products and public use. Facilities considered adequate for existing commerce.

Operations During Fiscal Year. Maintenance: Condition surveys performed by Government forces cost \$6,998. Value engineering studies and structural design repairs performed by Government forces and contract cost \$104,647.

Existing project is complete except for portion deauthorized in December 1989. Present width of channel is considered adequate for present and reasonably prospective commerce. North Pier was completed in 1908. North Revetment, completed in 1917, was rebuilt in May to August 1962. Dredging entrance channel and inner basin to existing project depth was commenced in March and substantially completed in May 1937. Navigation structures range from fair to good condition and are under repair. Total cost of the existing project to end of FY was \$13,569,962, of which \$360,320 was for new work, \$11,964,113 for maintenance, \$1,187,472 for diked disposal and \$58,057 for minor rehabilitation

Estral Beach, MI.....	Aug 2007

Operations During Fiscal Year. Maintenance: Miscellaneous inspections and reports performed by Government forces and contract cost \$216,754.

Total cost to the end of FY was \$4,537,017.

46. OTHER AUTHORIZED FLOOD CONTROL PROJECTS

See Table 21-E.

47. FLOOD CONTROL WORK UNDER SPECIAL AUTHORIZATION

Emergency Flood Control Activities, Flood Fighting (Public Law 84-99 and PL 93-288 and Antecedent Legislation).

<u>Project and Location</u>	<u>FY Cost for Sep 30, 2007</u>
Disaster Preparedness	\$378,163
Emergency Operations	\$4,919
Rehabilitation	\$36,507

Flood control activities pursuant to Section 205 of the 1948 Flood Control Act, as amended.

See Table 21-P.

Flood control activities pursuant to Section 208 of the 1954 Flood Control Act. Snagging and clearing activities pursuant to Section 208 of the Flood Control Act of 1954, as amended. None.

48. SURVEILLANCE OF NORTHERN BOUNDARY WATERS AND INTERNATIONAL WATER STUDIES

International Activities. The Detroit District has successfully supported the International Joint Commission (IJC) for many years. This has included numerous engineering and scientific assignments supporting the Commission's boards of control, working committees, and study boards.

The Detroit District conducted the following activities, specifically for the IJC Boards and Committees:

a. Semi-Annual Meetings. Members of the Detroit District staff attended the semi-annual meetings

of the three Great Lakes Boards of Control. They also attended the spring and fall appearances of the Boards before the IJC, in Windsor, Ontario, in May 2007, and the fall appearances, in Ottawa, Ontario in October 2007.

b. International Lake Superior Board of Control. The Detroit District Engineer is the United States Regulation Representative of this Board. In support of the U.S. Section of the Board, the District provided monthly Lake Superior outflow recommendations based upon a review of the hydrologic factors that influence the monthly regulation decisions for Lake Superior. These recommendations were based upon the use of probability forecasts of water supplies routed through the lakes using the approved operating regulation plan, Plan 1977-A. Plan 1977-A has been in operational use since June 1990. The District's program to evaluate the hydraulic rating of the Compensating Works in the St. Marys River was continued in 2006 with measurements at various ½ gate equivalent settings. This led to a decision in FY 2007 to change the ½ gate equivalent setting to 8 inches open to more closely approximate the actual flow.

Water supplies in the Lake Superior basin continued to be below average during FY 2007, resulting in very low water levels. Lake Superior levels were below average since April 1998, which is the longest period of below average monthly levels in the 1918-2006 period of record. New record low water levels were recorded for Lake Superior in September and October 2007. Due to the record low water levels, the IJC asked the Board to determine if deviations from the regulation plan were advisable to help alleviate low water conditions. District staff conducted a thorough analysis for the Board, which resulted in a recommendation to continue following the regulation plan flows and not deviate. The deviations would have resulted in only small increases to Lake Superior levels, while causing additional impacts elsewhere in the system. Precipitation in the basin was very heavy in late September and October 2007 and that raised the lake above record lows more than any regulation plan deviations could have done.

The Board is required by the IJC to hold at least one public meeting each year to inform them of the Board's activities and to solicit feedback regarding activities and current issues. As such, the District participated in the Board's FY 2007 annual meeting held in September 2007 in Sault Ste Marie, Michigan. A presentation was made, discussing the current water levels conditions, future trends and the Board's role in water level management. After the presentation, questions and general discussion was held between all interested

DETROIT, MI, DISTRICT

parties. The IJC's International Upper Great Lakes Study Board was also in attendance and addressed questions related to the study which had just begun. The District also disseminates extensive Board information to the public, the media and user interests via news releases, letters and the Board's web page.

Hydropower peaking and ponding causes flow and water level variations in the St. Marys River downstream of the power plants. With water levels and Lake Superior outflows below average, these fluctuations have become a concern to commercial navigation. The District continues to provide significant technical support to the Board to evaluate this issue and make a recommendation on peaking and ponding operations. In March 2006, the IJC approved continuation of peaking and ponding indefinitely, subject to prior approval by the Board at the beginning and middle of each month. This approval is basically for five years, or until completion of the International Upper Great Lakes Study is completed. District staff provide ongoing technical support to the Board for these peaking and ponding recommendations. To help answer questions about environmental impacts of peaking and ponding, the Board contracted with Dr. Mark Bain to review available literature and help make a recommendation about lowering the threshold at which peaking and ponding is restricted. Based on the outcome of this work, the Board recommended that the IJC lower the threshold by one foot. This was accepted by the IJC and implemented in late 2007.

In October 2005, the IJC revised its plan for an Upper Great Lakes Study. District staff contributed heavily to this Plan of Study revision. Its directive focused on reviewing IJC Orders of Approval for Lake Superior outflow regulation and water level impacts on affected interests in the upper Great Lakes system from Lake Superior downstream through Lake Erie. The revised plan assumes no changes to the Treaties and other bilateral agreements between Canada and the United States will be made. Two issues were added for consideration in the study. The first, looking at possible physical changes in the upper St. Clair River which could impact water level changes on the upstream (Michigan-Huron) and downstream lakes (St. Clair and Erie). The second issue involves incorporating lessons learned from the nearly complete Lake Ontario – St. Lawrence River Study, which may help streamline the study. The study began in FY 2007 and several District staff are actively involved.

c. International Niagara Board of Control, International Niagara Working Committee, and International Niagara Committee. The District provides direct technical support and consulting

engineering services to this Board and its Committees. The Chief of the Great Lakes Hydraulics and Hydrology Office is a member of the Niagara Working Committee. Under the auspices of the Committee, the Detroit District, with Canada, computes, coordinates, and publishes the monthly flows in the Niagara River.

The Detroit District and the Water Survey of Canada routinely conduct discharge measurements in the lower Niagara River at the Cableway Section. This is part of a continuing effort to verify the Ashland Avenue stage-discharge equations. The Ashland Avenue equations are used to compute the flow out of the Maid-of-the-Mist Pool, which encompasses the total flow over the American and Canadian Falls, to ensure that the hydropower plants operate within the terms of the Niagara Treaty. Information, including flow measurements taken at the Cableway section in the spring and fall of 2007, has been evaluated to determine if the existing equations are adequate to represent the present hydraulic regime over the Niagara Falls. Upon recommendation of this evaluation, work has begun on re-deriving the Ashland Avenue equation. Discharge measurements at the Cableway Section, to verify the Ashland Avenue rating curve, are scheduled every three years with the next measurements set for 2010.

Discharge measurements are also made routinely in the Welland Canal. These are part of the continuing effort to verify the ratings for the Welland Canal supply weir. Data collected to date indicates that the present equations may be underestimating the flow. Revision of the ratings is being evaluated. The last sets of measurements were made in 2007 and the next measurements at this section are scheduled for 2010, in accordance with the three-year schedule.

Due to the dynamic nature of the Niagara River at the Niagara Falls, the District is also involved with periodic verification of the rating curves for the flow in the American Falls Channel and for the Niagara River flow out of Lake Erie. Discharge measurements are made in the American Falls Channel on a five-year schedule. Due to an alteration of the bridge used for measurements, alternate sites and different technologies needed to be investigated for the measurement series that was originally scheduled for 2005. In the Spring of 2007, a set of measurements were taken, upstream of the original bridge location, at the American Falls NOAA water level gauge. This section allowed for use of a tethered boat with a bottom mounted ADCP. The next set of measurements is scheduled for 2012.

Discharge measurements are made at the International Railway Bridge Section to verify the rating equations for the flow out of Lake Erie. The rating equation based on the Buffalo gage was recently revised based on measurements collected at this section since 1974. Measurements are made at the International Railway Bridge Section on a three-year schedule. The last set of measurements was made in 2006, and the next is scheduled for 2009.

d. Great Lakes Basin Studies. During the past year, the District has been compiling data to be used in the International Upper Great Lakes Study to evaluate the hydraulics of the St. Clair River. Bathymetric data was collected for the main stem of the river, from Fort Gratiot down to Algonac. Discharge data from 1962 to present was summarized to look for changes in the flows over time. Dredging records were researched and summarized to look for changing sedimentation patterns.

Coordinating Committee on Great Lakes Basic Hydraulic and Hydrologic Data. The Chief of the Great Lakes Hydraulics and Hydrology Office is the U.S. Secretary to this Committee. Other Office personnel also hold membership on the three subcommittees: the Vertical Control-Water Levels, Hydraulics, and Hydrology.

The District continued its support of Committee operations pertaining to the coordination of basic hydraulic and hydrologic data with Canada. District efforts have also continued to closely coordinate the formats of the U.S. and Canadian water level bulletins in order to avoid confusion and to better inform the public.

Efforts continued in 2007 on refinement of a coordinated Great Lakes regulation and routing model (CGLRRM). The Corps uses this model to evaluate levels and flows in the Great Lakes system from Lake Superior to Lake Ontario. A user-friendly graphical user interface (GUI) is also being finalized. This GUI will allow the user to change input parameters easily to evaluate the effects of different scenarios on water levels. The CGLRRM has been developed under the guidance of the Coordinating Committee with support from Environment Canada, Buffalo District, and the Hydrologic Engineering Center (HEC).

During FY 2007, the District continued development and/or supported development of 1- and 2-dimensional hydrodynamic models of all the Great Lakes connecting channels. These models can be used to analyze effects of dredging, channel encroachments, and any other changes to river cross-sections. These

models will also serve as valuable tools in answering the many “what if” questions that are asked about the rivers.

Field Operations. In addition to field operations conducted in support of the IJC, and as a continuing and ongoing mission, the Detroit District conducts hydraulic flow measurements throughout the Great Lakes Connecting Channels and St. Lawrence River system. This capability is unique among the Corps Districts (and other federal agencies) on the Great Lakes. During FY 2007, the Detroit District continued gathering hydraulic data using the ADCP (Acoustic Doppler Current Profiler) instrumentation at several sections on the lower St. Marys River, the upper and lower Detroit River, the St. Clair River, and the Niagara River. These hydraulic data sets are currently being used to develop two-dimensional flow models of the river systems, and to help refine the flow retardation estimates for weed conditions through the growing season.

As an ongoing mission, during the winter months the District monitors the extent of ice in the St. Marys, St. Clair, and Detroit Rivers. Water levels are monitored continuously at key water level gages in these rivers to detect possible ice jams and potential flooding. The Corps and other governmental agencies, including the National Weather Service and the Coast Guard, can use this information to provide advance warning to area residents and to trigger emergency actions. Currently, data are obtained through phone access of these gages or from a satellite data relay to the District’s water management data system and remote laptop personal computers. These systems provide water level information to the District office within minutes of data collection.

Water Management Data System. In FY 2007, the Detroit District continued to provide an extensive variety of water management products for the entire Great Lakes system, based on the water level gage network, on its Internet web pages. Weather information and meteorological data are also received and processed within the District and available on the Internet. The Detroit District has 21 active data collection platforms (DCPs). In FY 2007, the Detroit District continued implementation of the Corps of Engineers Water Management Software (CWMS) suite with its initial prototype development being placed on modernizing the Lake Winnebago watershed outflow management.

Great Lakes Hydrology. The Great Lakes Hydraulics and Hydrology Office uses water supply forecasts routinely in forecasting water levels on all the Great

Lakes and regulating the outflows from Lake Superior. Studies to improve the existing Great Lakes water level forecasting system, including investigations into the factors affecting the Great Lakes water balance relationship (i.e., runoff, over-lake precipitation, evaporation, ice retardation, etc.) and use of real-time hydrologic data such as the new National Weather Service Doppler radar networks were continued during FY 2007. Work continued with the Cold Regions Research and Engineering Laboratory (CRREL) to improve snow water equivalent estimates used for supply forecasting.

Great Lakes Water Levels. The Great Lakes Hydraulics and Hydrology Office continued to make routine short-term (30 day) and long-term (six month) Great Lakes still water level forecasts. These forecasts are distributed in the form of weekly, semi-monthly and monthly news releases and bulletins. The Monthly Bulletin of Lake Levels for the Great Lakes, containing a six-month projection of Great Lakes water levels, has a circulation of about 5,000 copies per month by mail and 1,000 by email. Included with the monthly bulletin on a quarterly basis is an informational enclosure entitled Great Lakes Update, which covers various topics of interest pertaining to the water resource management of the Great Lakes.

Water levels on the Great Lakes started FY 2007 below average on Lakes Superior, Michigan-Huron and St. Clair. Lake Erie was right on average, while Lake Ontario was above average. A very dry summer caused the upper lakes to stay well below average later in FY 2007, finishing the year lower than they started. The lower lakes had a better summer, staying generally above average, but finishing the year slightly below average. Media and public attention has increased as the upper lakes continue to stay low, especially in the fall when Lake Superior set new record lows. Office personnel provided essential expertise regarding water level forecasts, recorded lake levels, and the potential impacts of these water levels on interested parties. These parties include members of Congress, state and local officials, news media, navigation and power interests, property owners, and recreational boaters. Water level information is supplied to the public via the District's web pages, telephonic and written responses to inquiries, presentations to various interest groups, and interviews with the news media.

The total cost for FY 2007 under the Surveillance of Northern Boundary Waters was \$2,864,736.

MULTIPLE-PURPOSE PROJECTS INCLUDING POWER

49. ST. MARYS RIVER, MI

Location. A Great Lakes connecting channel about 63 miles long, flows southeasterly between State of Michigan and Providence of Ontario, Canada, from eastern end of Lake Superior into northern end of Lake Huron. (See NOAA Nautical Charts 14882, 14883, and 14884.) At Sault Ste. Marie, MI, about 14 miles downstream from Lake Superior, there are four parallel locks and a hydroelectric power plant.

Previous Project. For details see page 1955, Annual Report for 1915; and page 1529, Annual Report for 1938.

Existing Project. Channels permitting 25.5-foot draft navigation in St. Marys River and Lake Superior and Lake Huron approaches thereto; constructing and operating four locks and two canals; constructing an electric plant of 14,000 kilowatt capacity (45,000 kilowatt ultimate capacity) constructing anchorage areas in river above and below locks; and constructing various other works in conjunction with project. Subsequently, in 1932, the Unit 10 powerhouse was installed raising the capacity to 18,400 kilowatts (45,000 ultimate capacity). Original State Locks were operated and maintained under permanent indefinite appropriation from Jun. 9, 1881, to Nov. 2, 1886, after which they were destroyed by excavation for the Poe Lock in 1896.

Weitzel Lock, destroyed in 1942 by excavation for the MacArthur Lock, was operated and maintained under the same appropriation from Sep. 1, 1881, to Jun. 30, 1935. Poe Lock was operated and maintained under the same appropriation from Aug. 3, 1896, Davis Lock from Oct. 21, 1914, and Sabin Lock from Sep. 18, 1919, to end of FY 1935. The 1,200-foot by 110-foot new Poe Lock was authorized in 1962 and put into operation in 1968. Details of existing project are set forth in Table 21-F.

Project depths are referred to low water datum corresponding to sloping surface of river as follows: Above locks: When water surface of Lake Superior is at elevation 601.1 feet and at upstream side of locks is 600.6 feet above mean water level at Rimouski, Quebec, IGLD 1985. Below locks: When water surface at downstream side of locks is at elevation 578.4 feet and Lake Huron is 577.5 feet above mean water level at Rimouski, Quebec, IGLD

REPORT OF THE SECRETARY OF THE ARMY ON CIVIL WORKS ACTIVITIES FOR FY 2007

1985. Estimated (1974) cost for new work is \$163,087,000. (See Table 21-B for authorizing legislation.)

The WRDA of 1986 authorized construction of a second lock 1,294 feet in length, 115 feet in width, and 32 feet in depth, adjacent to the existing lock. The replacement lock is to be located in the North Canal of the St. Marys Falls Canal at Sault Ste. Marie, MI, on the site of the existing Davis and Sabin Locks. Material removed during construction of the replacement lock will be placed on the Northwest Pier to serve as a windbreak for downbound vessels approaching the lock. Estimated cost (Oct. 90) is \$174,200,000 Federal and \$93,800,000 non-Federal.

Local Cooperation. Fully complied with for completed portion of project. Local cooperation items for the newly authorized project in the WRDA of 1986 (PL 99-662), are as follows:

(a) Provide without cost to the United States all lands, easements, and rights-of-way necessary for implementation and later maintenance of the proposed project, and for aids to navigation upon the request of the Chief of Engineers, including suitable areas determined by the Chief of Engineers to be required in the general public interest for initial and later disposal of dredged/demolition material and including necessary retaining dikes, bulkheads, and embankments therefore, or the costs of such retaining works;

(b) Hold and save the United States free from damages due to the implementation and maintenance of the project, not including damages due to the fault or negligence of the United States or its contractors;

(c) Accomplish without cost to the United States such alterations and relocations of pipelines, powerlines, cables, sewer, water supply, drainage, and other utilities, structures, and improvements made necessary by the project. (Any such costs of the items on Federal property at the locks, would be part of the total construction cost and not separable local sponsor cost.);

(d) Contribute in cash 25 percent of the total cost of construction of general navigation facilities, exclusive of aids to navigation, a contribution presently estimated at \$67,000,000. The estimated cash contribution of \$67,000,000 to be paid in lump sum prior to initiation of construction, or in annual installments during the construction period at a rate proportionate to the proposed or scheduled expenditure of Federal funds as required by the Chief of Engineers, or under another arrangement satisfactory to the Secretary of the Army,

the final apportionment of cost to be made after actual costs have been determined;

(e) Repay, with interest, over a period of up to 30 years following project completion, 10 percent of the total cost of construction of general navigation facilities, an amount presently estimated at \$26,800,000. The Secretary of the Army may count against all or part of the 10 percent repayment, the amount of the local contribution for lands, easements, rights-of-way, dredged/demolition material disposal sites and relocations. In no case are these costs to count against the cash payment during construction, and in no case would the amount waived exceed 10 percent of project cost; and

(f) Any construction needed to prevent/mitigate for erosion or shoaling attributed to the lock would be cost shared in the same proportion as the project.

Terminal Facilities. This improvement serves through commerce between Lake Superior and lower lakes and has not materially influenced terminal facilities at localities along its route. Three piers at Sault Ste. Marie receive coal and petroleum products. Limestone is shipped from a pier at Drummond Island. Vessel refueling stations are at Lime Island and village of DeTour; they receive coal and petroleum products. Present terminals satisfy current traffic requirements.

Operations During Fiscal Year. New Work: Construction of a replacement lock. The St. Marys River project includes four navigation locks: MacArthur, Poe, Davis and Sabin. Currently, the MacArthur and Poe service loaded commercial vessel traffic. The Davis Lock is rarely used and the Sabin Lock is in disrepair and has been closed for several years. The new lock will replace the Davis and Sabin Locks in the North Canal of the St. Marys Falls Canal. As a minimum, the new lock would have the same dimensions as the 1200-foot by 110-foot Poe Lock. FY07 funds in the amount of \$608,304 were expended to continue limited work on the design documentation reports (DDR) for the guide walls, channel excavation and lock chamber. The detailed structure survey of the proposed construction area was completed. Additionally, a preliminary report assessing the capacity of Class 1 railroads as related to Soo navigation traffic was initiated.

Operations, maintenance, and care of locks: Two canals and three locks were operated (the fourth lock, Sabin, was in caretaker status) as required. Necessary repairs and improvements were made thereto and to appurtenant structures and equipment. Canals were open to navigation 297 days during the

period 1 October 2006 through 30 September 2007. A total of 8,446 vessels, aggregating 82,171,192 short tons of freight and 90,722 passengers passed through the MacArthur, Davis and Poe Locks. Total cost for operation, maintenance, and care of the locks during the FY was \$13,338,011.

Powerhouse and equipment: A total of 156,725,400 kilowatt-hours of power was generated this FY. Income from the sale of power, sent to the U.S. Treasury, amounted to \$1,316,525. Total cost of operation and maintenance for two hydroelectric powerhouses during the FY was \$920,616.

Other operation and care items: Buildings and grounds were operated and maintained, condition surveys, operations studies, environmental activities, safety compliance, archeological and cultural management, real estate, and miscellaneous inspections and reports were performed by Government forces and contract at a cost of \$1,319,430. The contract for repairs to the West Center Pier, Soo Locks, awarded last FY was completed this FY at a cost of \$400,739.

Channels and canals: St. Marys River channels and canal approach depths were surveyed by sweeping. Location and removal of obstructions were performed by hired labor using the U.S. Derrickbarge NICOLET and the U.S. Cranebarge HARVEY at a cost \$1,838,421.

Recreational facilities: Information center, Visitors center, comfort stations, park fountain, and observation and overlook platforms were operated and maintained at a cost of \$445,029. Visitors entering the Soo Locks Visitors Center numbered 367,111. Visitors to the observation platforms overlooking the locks numbered 292,862. Total visitors to the Soo Locks Park numbered 394,367. A grand total of 485,089 people (includes tour boat visitors of 90,722) visited the Soo Locks.

Total project costs in FY07 amounted to \$18,262,246.

Project in effect prior to modification of March 21, 1956, is complete and work authorized by 1956 modification to provide a safe draft of 25.5 feet for both upbound and downbound traffic is also complete. Public Works Acceleration Funds used for maintenance were \$118,000. Total cost of the existing project to end of FY was \$702,682,391, of which \$170,800,152 was for new work and \$531,882,239 for maintenance (includes \$340,400 contributed funds).

REPORT OF THE SECRETARY OF THE ARMY ON CIVIL WORKS ACTIVITIES FOR FY 2007

TABLE 21-B

AUTHORIZING LEGISLATION

See Sec .	Date of Authorizing Act	Project and Work Authorized	Documents
1.	Sep. 19, 1890	ALPENA HARBOR, MI Channel depth of 16 ½ feet.	Annual Report, 1889, p. 2288.
	Mar. 2, 1919		H. Doc. 830, 65th Cong., 2d Sess., and Rivers & Harbors Comm. Doc. 1, 67th Cong., 1st Sess.
	Sep. 22, 1922	Rubblemound breakwater for protecting channel on south side and widening entrance channel.	Rivers and Harbors Comm. Doc. 42, 72d Cong., 1st Sess.
	Aug. 30, 1935	21 and 18½ foot channel depths and turning basin.	H. Doc. 151, 88th Cong., 1st Sess. ¹
	Oct. 27, 1965	Present project dimensions. New turning basin. Removal of old breakwater and construction of new breakwater.	H. R. 6 (formerly S. 1567), 99 th Cong., 2d Sess. (WRDA of 1986).
Nov. 17, 1986	Deauthorization of the feature authorized by the 1965 River and Harbor Act.		
2.	Mar. 3, 1905	ARCADIA HARBOR, MI Maintenance of existing 12-foot channel.	H. Doc. 194, 58th Cong., 2d Sess.
3.	Aug. 5, 1886	ASHLAND HARBOR, MI Breakwater 7,900 feet long and dredging to remove a shoal.	H. Ex. Doc. 89, 48th Cong., 2d Sess. Annual Reports, 1886, p. 1674; and 1887, p. 1966.
	Aug. 11, 1888	Appropriation of \$60,000 for 'Continuing improvements on enlarged project' (On completion of Poe Lock in 1896, with available depth of 20 feet, dredging at Ashland Harbor was carried to a similar depth.)	H. Ex. Doc. 89, 48th Cong., 2d Sess. Annual Reports, 1886, p. 1674; and 1887, p. 1966.
	Mar. 3, 1899	Detached breakwater extending 4,700 feet out from shore at a point 2,600 feet east of main breakwater (prolonged) and parallel thereto.	
	Jun. 6, 1990		
	Aug. 8, 1917	Project modified by omitting detached breakwater and defining depth and extend of channel to be dredged.	H. Doc. 1698, 64th Cong., 2d Sess.
	Jul. 3, 1930	Widening part of present channel for entrance channel and for basin in eastern part of harbor.	S. Doc. 133, 71st Cong., 2d Sess
	Aug. 30, 1935	Deepening east basin to 25 feet and west channel, as far as 8th Ave. West, extended to 21 feet.	Rivers and Harbors Committee Doc. 46, 82d Cong., 1st Sess.
	Mar. 2, 1945	Widening west channel to 750 feet at its westerly end	H. Doc. 337, 77th Cong., 1st Sess.
Jul. 14, 1960	Deepening portions of east basin and west channel to 27 and 21 feet, respectively.	H. Doc. 165, 86th Cong., 1st Sess. ¹	
4.	Aug. 2, 1882	CEDAR RIVER HARBOR, MI Dredge an entrance channel (datum at 580.69 feet above mean tide at New York) and construct two parallel piers extending lakeward from mouth of Cedar River.	S. Ex. Doc. 12 th , 47 th Cong., 1 st Sess.
	Oct. 28, 1965	Modification of project to provide for two parallel entrance piers including a new rubblemound east pier with a sport fishing walkway; an entrance channel from Green Bay to mouth of Cedar River, and a turning basin.	H. Doc. 248, 89 th Cong., 1 st Sess.
5.	Aug. 14, 1876	CHARLEVOIX HARBOR, MI Channel from Lake Michigan to Round Lake protected where needed by piers and revetments.	S. Ex. Doc. 16, 44th Cong., 1st Sess. and Annual Report 1876, p. 523.
	Aug. 2, 1882	Channel from Round Lake to Lake Charlevoix.	No Prior Survey of Estimates.
	Jun 13, 1902	Project depth increased to 15 feet.	No Prior Survey of Estimates.
	Jun. 20, 1938	Project depth increased to 18 feet.	S. Doc. 163, 75th Cong., 3rd Sess. ¹
	Nov. 17, 1988	Restore recreational uses or provide comparable	H. Doc. 1098, 100th Cong., 2d Sess.

DETROIT, MI, DISTRICT

AUTHORIZING LEGISLATION

See Sec .	Date of Authorizing Act	Project and Work Authorized	Documents
	Mar. 29, 1977	recreational uses at the South Pier. Project depth increased to 24 and 23 feet, and construction of revetment upstream of Highway Bridge.	Sec. 25 of the WRDA of 1988. Section 107, 1960 Rivers and Harbors Act.
6.	Aug. 5, 1886	CLINTON RIVER, MI Channel in River and Lake St. Clair, Pile Dike, Closing channels and making Cutoff, and revetments as needed.	S. Doc. 199, 46 th Cong., 2d Sess. Annual Report, 1880, p. 2062, and H. Doc. 210, 44 th Cong., 2d Sess.
7.	Aug. 26, 1936	CORNUCOPIA HARBOR, WI Entrance channel 50 feet wide and 10 feet deep between existing piers from bay to a turning basin 200 feet long, 8 feet deep, with maximum width of 180 feet, with 150- and 300-foot inner channels each 50 feet wide and 8 feet deep.	S. Committee, 75 th Cong., 1 st Sess.
	Sep. 3, 1954	Reconstruction and Federal maintenance of ease and west entrance piers, a 25-foot extension of west pier and a 300-foot extension of existing westerly inner channel at a depth of 8 feet and a width of 50 feet.	H. Doc. 434, 83 rd Cong., 2d Sess. ¹
8.	Jun. 13, 1902 Mar. 3, 1905 Jun. 25, 1910 Mar. 4, 1913 Mar. 2, 1907 Jun. 25, 1910 Mar. 2, 1919 Jul. 3, 1930 Aug. 30, 1935 ³	DETROIT RIVER, MI Amherstburg Channel and removal of Grosse Ile Shoal. Fighting Island Channel. Livingstone Channel. Channel Depths of 26 and 25 feet. Channel to Wyandotte 21 feet deep and 300 feet wide through Middle Ground opposite Head of Fighting Island.	H. Doc. 712, 56th Cong., 1st. Sess. and 40, 58th Cong., 3rd Sess. H. Doc. 17, 62d Cong., 1st Sess. H. Doc. 266, 59th Cong., 1st Sess.; 676, 61st Cong., 2d Sess.; and 322, 65th Cong., 1st Sess. H. AUTHORIZING LEGISLATION

See Sec .	Date of Authorizing Act	Project and Work Authorized	Documents
	Oct. 27, 1965	Construct 2 new Turning Basins. ³ Deepen River Channel to 25 feet, from Detroit & Mackinac Bridge to New York Central Railroad Bridge.	H. Doc. 240, 89th Cong., 1st Sess. ¹
32.	Jul. 13, 1892 Jul. 8, 1930	ST. CLAIR RIVER, MI 20-foot Channel in the River. Deepen Channel to 25 and 26 feet, and Compensating Works.	H. Doc. 207, 51st Cong., 2d Sess. H. Doc. 253, 70th Cong., 1st Sess.
	Mar. 2, 1945 Jul. 24, 1946 ²²	Widening Channel at Southeast Bend to 700 feet. Widen and deepen Southeast Bend and improve Outlet of North Channel, St. Clair River.	H. Doc. 309, 77th Cong., 1st Sess. H. Doc. 335, 80th Cong., 1st Sess.
	Mar. 21, 1956 ²²	Deepen and further improve Channels in St. Clair River between limits of 27.1 to 30 feet to provide safe navigation by vessels with drafts of 25.5 feet. A cutoff Channel in Canada at Southeast Bend and abandon old Southeast Bend Channels.	S. Doc. 71, 84th Cong., 1st Sess.
	Nov. 17, 1986	Deauthorization of the work authorized by the Rivers and Harbors Act of Jul. 24, 1946.	H. R. 6 (formerly S. 1567), 99th Cong., 2d Sess. (WRDA of 1986).
33.	Mar. 3, 1875	ST. JOSEPH HARBOR, MI Interior Revetments. ²⁶	H. Ex. Doc. 160, 43rd Cong., 2d Sess., and Annual Report, 1875, pt. 1, p. 162.
	Jun. 14, 1880	Benton Harbor Canal. ²⁶	Annual Report, 1880, pp. 2030, 2031, 2049, and 2055.
	Mar. 3, 1899	Present project dimensions of piers and a turning basin.	H. Doc. 307, 55th Cong., 2d Sess., and Annual Report, 1898, p. 2496.
	Aug. 30, 1935	Present project dimensions of the channel and turning basin near mouth of Paw Paw River.	Rivers and Harbors Committee Doc. 52, 74th Cong., 1st Sess.
	Jun. 2, 1937	Abandon easterly 1,000 feet of canal above west line of 9 th street.	
	Mar. 2, 1945	Turning basin above mouth of Morrison Channel and eliminate turning basin near mouth of Paw Paw River.	H. Doc. 129, 76 th Cong., 1 st Sess.
	Jul. 3, 1958	Maintenance of turning basin near mouth of Paw Paw River	S. Doc. 95, 84 th Cong., 2d Sess. ¹
34.	Mar. 2, 1907	SHEBOYGAN HARBOR, WI North breakwater.	H. Doc. 62, 59th Cong., 1st Sess.
	Jan. 21, 1927	Preserving south pier as part of project, providing turning basin, and elimination of proposed south breakwaters.	H. Doc. 475, 68th Cong., 2d Sess.
	Aug. 30, 1935	Present project dimensions of channel.	Rivers and Harbors Committee Doc. 47, 74th Cong., 1st Sess.
	Sep. 3, 1954	Widen and deepen outer harbor entrance channel to 450 feet, widen and deepen river channel from present project limit to north side of Jefferson Avenue.	H. Doc. 554, 82d Cong., 2d Sess. ¹
35.	Mar. 3, 1873	STURGEON BAY AND LAKE MICHIGAN SHIP CANAL, WI Breakwaters. ¹²	H. Ex. Doc. 34, 42d Cong., 2d Sess.; Annual Report, 1872, p. 171.
	Jul. 13, 1892	Acquisition of the canal.	H. Ex. Doc. 106, 49th Cong., 2d Sess.
	Jun. 13, 1902	Canal revetments and consolidation of canal and harbor works.	H. Doc. 117, 56th Cong., 2d Sess.
	Aug. 30, 1935	Present project dimensions of channels and elimination of	Rivers and Harbors Committee

DETROIT, MI, DISTRICT

AUTHORIZING LEGISLATION

See Sec .	Date of Authorizing Act	Project and Work Authorized	Documents
	Mar. 2, 1945	turning basin immediately west of revetted canal. Turning basin between city and Bushman wharves.	Doc. 9, 74th Cong., 1st Sess. H. Doc. 421, 78th Cong., 2d Sess.
36.		TWO RIVERS HARBOR, WI	
	Mar. 3, 1871	South pier, 750 feet of north pier, and about 44 feet of north revetment. ¹²	Annual Report, 1871, p. 123 (as modified by Chief of Engineers, Feb. 27, 1897).
	Mar. 2, 1907	Remainder of north pier and stilling basin.	H. Doc. 730, 59th Cong., 1st Sess., Modification of Plan A.
	Aug. 30, 1935 ²²	Deepening entrance channel and inner basin to 18 feet.	Rivers and Harbors Committee Doc. 25, 73rd Cong., 2d Sess.
	Jul. 3, 1958	Extend existing project in West Twin River to 18 feet deep and in East Twin River to 10 feet deep to 22 nd Street Bridge.	H. Doc. 362, 84th Cong., 2d Sess. ¹
49.		ST. MARYS RIVER, MI	
	Jul. 11, 1870	Weitzel Lock (Replaced in 1943 by MacArthur Lock), widen and deepen existing State Channel. ²⁶	Report by Maj. O.M. Poe, Corps of Engineers, not published.
	Aug. 5, 1886	Poe Lock. ¹	H. Ex. Doc. 72, 49th Cong., 2d Sess.
	Jul. 13, 1892	Dredging through shoals above falls and shoals below falls between lower end of Canal and upper entrance Channel into Lake Nicolet (formerly Hay Lake).	H. Ex. Doc. 207, 51st Cong., 2d Sess., and Annual Report, 1891, p. 2810.
	Jun. 13, 1902	Enlarging the Old Channel.	H. Doc. 138, 56th Cong., 2d Sess., and 215, 58th Cong., 3rd Sess.
	Jun. 13, 1902	Lake Nicolet and Neebish Channels work in that section of River below Locks.	H. Doc. 128, 56th Cong., 2d Sess.
	Mar. 2, 1905		H. Doc. 215, 56th Cong., 3rd Sess.
	Mar. 3, 1907	Davis Lock Second Canal, and Emergency Dam.	H. Doc. 333, 59th Cong., 2d Sess. (Plan 3).
	Mar. 3, 1909	Lease of Waterpower at Falls, Lease entered into with Michigan Northern Power Company provided for construction of remedial and compensating works.	
	Jul. 25, 1912	Fourth Lock (Renamed 'Sabin' Lock in 1943).	H. Doc. 65, 62d Cong., 1st Sess.
	Mar. 4, 1915	Deepen Tailrace of Power Plant.	
	Sep. 22, 1922	Widen upper approach to Canals through Vidal Shoals, extend anchorage and maneuver area below locks.	District Engineer Report, Oct. 29, 1920.
	Jan. 21, 1927	Remove Round Island, middle ground extension of Northwest Canal Pier, and widen Channels Middle Neebish Route.	H. Doc. 270, 69th Cong., 1st Sess.
	Jul. 3, 1930	Deepen Channels throughout downbound Route.	H. Doc. 253, 70th Cong., 1st Sess.
	Jun. 26, 1934 ⁹	Operation and Care of Canal and Locks provided from War Department Appropriations for Rivers and Harbors.	
	Aug. 30, 1935	Widen Brush Point Turn and Channel from Brush Point to Point Louise.	Rivers and Harbors Committee Doc. 53, 74th Cong., 1st Sess.
	Mar. 7, 1942	Construct new (MacArthur) Lock on site of former Weitzel Lock, deepen approach Channels to 27 feet, and reconstruct approach Piers.	H. Doc. 218, 77th Cong., 1st Sess.
	Jun. 15, 1943	Name 'MacArthur' Lock and changed name of 'Fourth' Lock to 'Sabin' Lock.	
	Mar. 2, 1945	Remove Bridge Island and construct new Hydroelectric Power Plant.	H. Doc. 679, 78th Cong., 2d Sess., and 339, 77th Cong., 1st Sess.
	Jul. 24, 1946	Replace Poe Lock at St. Marys Falls Canal with a new structure 800 feet long, 100 feet wide and 32 feet deep with necessary construction of Nose and Center Piers,	H. Doc. 335, 80th Cong., 1st Sess.

REPORT OF THE SECRETARY OF THE ARMY ON CIVIL WORKS ACTIVITIES FOR FY 2007

TABLE 21-B

AUTHORIZING LEGISLATION

See Sec .	Date of Authorizing Act	Project and Work Authorized	Documents
	Mar. 21, 1956	and widen and deepen Channel across Point Iroquois Shoals and in Lake Nicolet to provide wider anchorage and maneuver areas in St. Marys River. Deepen to provide a Project Safe Draft of 25.5 feet over full width to downbound and 2-way Channels (including anchorage areas) and over Westerly 300-foot width of upbound Middle Neebish Channel, when levels of Lakes Superior and Huron are at their respective LWD's.	S. Doc. 71, 84th Cong., 1st Sess. ¹
	Jul. 9, 1956	Repeal Authorization of Bridge as a part of Project, authorize alteration with cost to be apportioned by Sec. 6, Truman Hobbs Act, Jun. 21, 1940.	None.
	Nov. 17, 1986	Construct a second large lock 1,294 feet in length, 115 feet in width, and 32 feet in depth, adjacent to the existing lock. The replacement lock is to be located in the North Canal of the St. Marys Falls Canal at Sault Ste. Marie, MI, on the site of the existing Davis and Sabin Locks.	H. R. 6 (formerly S. 1567), 99th Cong., 2d Sess. (WRDA of 1986).

¹Contains latest published map.

²Including Emergency Relief Administration Work authorized May 28, 1935.

³Included in Public Works Administration Program September 6, 1933.

⁴This modification deauthorized August 5, 1977, under Section 12, Public Law 93-251.

⁵Administrative Act, Section 4.

⁶Public Law 568, 82d Congress.

⁷Public Law 388, 87th Congress.

⁸This portion inactive.

⁹Permanent Appropriations Repeal Act.

¹⁰Transfer completed June 1962.

¹¹Amended 1868, 1879, 1892.

¹²Completed under previous project.

¹³Included in Public Works Administration Program January 3, 1934.

¹⁴Inactive portion; removal of 200 linear feet of north pier, widening inner 200 feet of channel through outer basin, and closing gap in north shore connection of breakwater.

¹⁵Latest published map is in Annual Report, 1914, p. 2974.

¹⁶Latest published map in Annual Report, 1914, p. 2914.

¹⁷Superseded by Act of October 23, 1962.

¹⁸Uncompleted portion was deauthorized in 1977 (dredging Milwaukee River from Buffalo Street Bridge to North Humboldt Avenue Bridge).

¹⁹Modified by Act of June 10, 1872.

²⁰Riprapping of protecting dikes portion of project is inactive.

²¹War Department Appropriations Act.

²²Uncompleted portion deauthorized December 31, 1989, under Section 1001, P.L. 99-662.

²³Contains latest published maps. See also map with Rivers and Harbors Committee Doc. 19, 72d Cong., 1st Sess.

²⁴Except for dredging 25-foot channel to 1,150 feet upstream of mouth of old channel, work authorized in this Act is considered inactive.

²⁵This modification deauthorized August 5, 1977, under Section 12, Public Law 93-251.

²⁶Completed under previous projects. Public Law 130, 75th Cong., 1st Sess.

²⁷Work recommended in H. Doc. 588, 64th Cong., 1st Sess.

²⁸Deauthorized in 1977.

²⁹This modification deauthorized December 31, 1989, under Section 1001, P.L. 99-662.

³⁰Latest published map is in H. Doc. 588, 64th Cong., 1st Sess.

³¹Latest published map is in H. Doc. 2053, 64th Cong., 2d Sess.

				100			

¹This is a side channel.

²Extends from deep water near Windmill Point to a point opposite Fairview Slip, about 3,000 feet.

³Project depth 29.5 feet over Rock Shoals and 28.5 feet over other than Rock Shoals.

⁴Project depth 21 feet in easterly 300-foot width of channel and 27.5 feet in westerly 300-foot width.

⁵Project depth 21 feet in easterly 300-foot width of channel and 28.5 feet in westerly 300-foot width.

⁶Project complete except for work authorized by Rivers and Harbors Act of 1950.

CHICAGO, ILLINOIS, DISTRICT

Navigation

1. BURNS WATERWAY HARBOR, IN

Location. Northwestern Indiana on the southern shore of Lake Michigan in Porter County, 28 miles southeast of Chicago Harbor. (See NOAA Nautical Chart Numbers 14905 and 14926.)

Previous Projects. None.

Existing Project. Provides for (a) a rubblemound north breakwater 4,630 feet long and a rubblemound breakwater west arm 1,200 feet long, for a total breakwater length of 5,830 feet; (b) an approach channel 30 feet deep and 400 feet wide; (c) an outer harbor 28 feet deep; (d) an east harbor arm 27 feet deep and 620 feet wide; and (e) a west harbor arm 27 feet deep and 620 feet wide. The project was authorized by the River and Harbor Act of October 27, 1965 (Public Law 89-298; House Document Number 160, 88th Congress, 1st Session). The authorizing act also provided the Secretary of the Army with the authority to reimburse the State of Indiana for expenditure of funds used to construct such portions of the project as approved by the Chief of Engineers and constructed under the supervision of the Chief of Engineers (See tables 22-B,C).

Local Cooperation. Fully complied with.

Terminal Facilities. Eleven berths are available at the facilities owned and administered by the Indiana Port Commission. One berth, committed to grain, is located on the outer harbor. Four berths on the East Harbor Arm are dedicated to handling dry and liquid bulk commodities. The East Harbor Arm also includes a small-boat harbor designed to accommodate working tugs for vessel assistance and barge movement. On the West Arm there are six berths. Although one berth is available for dry bulk cargoes, these berths are primarily used for the shipment and receipt of general cargo. Additionally, the Indiana Port Commission, through a lease, administers the west side of the West Harbor Arm for barge fleetings. The remaining available harbor berthing on the east side of the East Harbor Arm is privately owned.

Operations and Results During Period. Dredging was performed near the Bailey (NIPSCO) Intake Structure at a cost of \$368,816 for hired labor, \$14,617 for work by other Corps of Engineers, \$2,100 for contracted engineering services and \$2,242,155 for construction contracts. Structural

maintenance costs were \$401,800 for stone, and \$9,230 for hired labor and other services. Economic data analysis of \$19,500 for work by other Corps of Engineers. Total costs for the fiscal year 2007 were \$3,936,538 federal. Dredging was performed at Burns Harbor Channel at a cost of \$234,382 for hired labor, \$36,479 for work by other Corps of Engineers, \$607,459 for construction contracts.

Condition at End of Fiscal Year. Total costs to September 30, 2007 were \$47,958,538 of which \$13,599,900 was for new work (\$13,584,000 federal and \$15,900 non-federal) and \$34,358,638 (\$34,250,276 federal and \$108,362 non-federal) for was maintenance.

2. BURNS WATERWAY SBH, IN

Location. Northwestern Indiana on the southeast shore of Lake Michigan in Porter County, at the mouth of the Burns Waterway, approximately 27 miles southeast of Chicago Harbor. (See NOAA Nautical Chart Numbers 14905 and 14926.)

Previous Projects. None

Existing Project. Provides for (a) a rubblemound west breakwater 1,043 feet long; (b) a rubblemound north breakwater 678 feet long; and (c) channel improvements of 5,200 linear feet with 145,000 cubic yards of dredged material used for beach nourishment (See table 22-C).

Local Cooperation. Fully complied with.

Terminal Facilities. There are several marinas located along Burns Waterway and Burns Ditch. The principal marina, which is owned and operated jointly by the City of Portage and the Little Calumet River Basin Commission, was built in 1996 to comply with the local cooperation agreement. The commodities handled at this harbor are fresh fish caught as a result of charter boat fishing.

Operations and Results During Period. Sediment sampling and testing costs were \$897 for hired labor.

Condition at End of Fiscal Year. Total costs of the existing project to September 30, 2007 were \$7,834,493 of which \$3,770,558 was for new work (\$2,000,000 federal and \$1,770,558 non-federal), and \$4,063,935 for maintenance (federal).

3. BURNS WATERWAY HARBOR (MAJOR REHAB), IN

Location. The project is located in northwestern Indiana on the southern shore of Lake Michigan in Porter County.

Existing Project. The rehabilitation project consists of constructing a segmented reef breakwater system, 75 feet lakeward of the northern section of the existing rubblemound breakwater. The project provides for seven reef segments, one 1,575 feet long and six 375 feet long with 25 feet spacing between segments

Local Cooperation. None required.

Operations and Results During the Period. New Work: Following construction completion in 1998, project closeout was completed in 1999.

Condition at the End of Fiscal Year. The construction contract was financially completed. The total cost of the existing project to September 30, 2007 was \$13,384,200.

4. CALUMET HARBOR AND RIVER, IL and IN

Location. Northeastern Illinois, on the southwest shore of Lake Michigan in Cook County, 15 miles south of Chicago Harbor, within the corporate limits of the City of Chicago, except for breakwaters, and approach channel and an anchorage area which are in Indiana. (See NOAA Nautical Chart Numbers 14926 and 14929.)

Previous Projects. For details see page 1400 of Annual Report for 1962.

Existing Project. Provides for (a) a stone-filled timber crib breakwater 6,714 feet long; (b) a stone-filled double-row steel sheet pile detached breakwater 5,007 feet long; (c) an approach channel 29 feet deep and 3,200 feet wide; (d) an outer harbor anchorage area 28 feet deep and 3,000 feet wide; (e) an entrance channel 27 feet deep and 230 to 290 feet wide; (f) a channel in the Calumet River 27 feet deep and at least 200 feet wide to the north side of 130th Street; (g) three turning basins designated as numbers, 1, 3, and 5; and (h) a channel extending into Lake Calumet at a width of about 1,000 feet. The project was authorized by the River and Harbor Acts of March 3, 1899, June 13, 1902, August 30, 1935, July 14, 1960, October 23, 1962, and October 27, 1965 (See tables 22-B,C).

Local Cooperation. Fully complied with.

Terminal Facilities. Thirty six docks, wharves, and terminals are available. The Illinois International Port District owns four wharves, two grain elevators, one dock, and one terminal. The United States Government owns one stone dock. The most important cargoes handled are general cargo, grain, iron ore and concentrates, coal, and cement. Some docks are vacant and some docks are dedicated to handling barge traffic from the Illinois Waterway Project.

Operations and Results During Period.

Completed removal of concrete block navigation channel obstruction near the 106th Street Bridge left descending bank off the Cronimet Dock at a cost of \$34,500 for construction contracts. Dredging was performed at a cost of \$254,720 for hired labor, \$28,854 for work by other corps of Engineers and \$1,622,085 for construction contracts. Detached Breakwater repairs were completed by the Detroit floating plant at a cost of \$349,187 for material, \$262,812 for hired labor, \$812,602 for work by the other Corps of Engineers and \$85,967 for work by the Federal Agency. Total costs for the fiscal year FY07 were \$3,450,727 federal.

Condition at End of Fiscal Year. The existing project is complete. Total costs of the existing project to September 30, 2007 were \$86,082,219 of which \$22,578,567 was for new work (\$19,541,964 federal funds and \$3,036,603 public works funds), \$58,087,651 for maintenance (\$57,238,984 federal and \$836,667 non-federal funds) and \$5,428,001 federal funds for rehabilitation.

5. CHICAGO HARBOR, IL

Location. Northeastern Illinois on the southwest shore of Lake Michigan in Cook County, within the corporate limits of the City of Chicago. (See NOAA Nautical Chart Numbers 14926, 14927, and 14928.)

Previous Projects. See page 1396 of Annual Report for 1962.

Existing Project. Provides for (a) a stone-filled timber crib shore and extension breakwater 2,250 feet long; (b) a stone-filled timber crib exterior breakwater 5,421 feet long; (c) a rubblemound and stone-filled concrete caisson southerly extension to the exterior breakwater 4,944 feet long, exclusive of a 582-foot entrance gap enclosing an outer basin of about 970 acres; (d) a stone-filled timber crib north

CHICAGO, ILLINOIS, DISTRICT

pier 960 feet long; (e) a stone-filled timber crib north inner breakwater 4,034 feet long with a 304-foot shore return and a 754-foot gap; (f) a stone-filled timber crib south inner breakwater 2,544 feet long, enclosing an inner basin of approximately 224 acres; (g) a lake approach channel 29 feet deep and 800 feet wide; (h) a channel and maneuver area inside the exterior breakwater and southerly extension breakwater 28 feet deep with a maximum width of 1,300 feet; (i) an entrance channel 21 feet deep and (j) the Chicago Harbor Lock. The Chicago Lock was constructed in 1938 by the Metropolitan Water Reclamation District of Greater Chicago. The deep-draft lock is 600 feet long, 80 feet wide, and 23 feet deep over the sill and is of steel cellular design.

The project was authorized by the River and Harbor Acts of July 11, 1870, June 14, 1880, March 3, 1899, July 25, 1912, March 2, 1919 and October 23, 1962 (See table 22-B).

Lock operation and maintenance responsibilities, in the interest of navigation, were transferred to the Federal Government pursuant to Public Law 98-63 approved July 30, 1983; Section 107 of the Public 97-88; and the Memorandum of Agreement between the Department of Army and the Metropolitan Water Reclamation District of Greater Chicago.

Local Cooperation. Fully complied with.

Terminal Facilities. There are five docks with 18 berths for passenger excursion boats and 10 berths for visiting large vessels. The most important cargoes handled through the lock are petroleum products, in addition to sugar and non-metallic minerals.

Operations and Results During Period. The Chicago Harbor Lock was operated by contract at a cost of \$1,049,136. Bulkhead storage lease was \$18,964. The Lock Control House modification was completed by AE contract at a cost of \$6,116 and \$45,455 for design review work by other Corps of Engineers. Construction of the new control house was completed at a cost of \$1,060,447. In-house hired labor costs required to operate and maintain the project during the period were as follows: \$105,960 for Lock Contract S&A, and for Lock Maintenance, \$292,856 for Control House contract S&A and \$20,613 for work by other Corps of Engineers. Miscellaneous equipment and services required for the support of the lock and control house were procured at a cost of \$23,165. Total costs for FY07 were \$2,622,712 federal.

Condition at End of Fiscal Year. The existing project is complete. Total costs to September 30, 2007 were \$76,335,665 of which \$6,193,701 was for new work, \$68,655,364 was for maintenance, \$1,326,600 for rehabilitation and \$160,000 Harbor and Dams funds. The approved Major Rehabilitation of the Lock (Gates, Control House and Concrete Repair) has not been completed.

6. CHICAGO RIVER, IL

Location. Northeastern Illinois, in Cook County within the corporate limits of the City of Chicago. (See NOAA Nautical Chart Numbers 14926, 14927 and 14928.)

Previous Projects. See page 1394 of Annual Report for 1962.

Existing Project. Provides for (a) a channel 21 feet deep in the main river from its mouth at Rush Street to the junction of the North and South Branches (0.7 miles); (b) a channel 21 feet deep in the North Branch from the junction to North Avenue (2.22 miles); (c) a channel 21 feet deep on the North Branch Canal (1.04 miles); (d) a 21-foot deep North Branch Turning Basin just south of North Avenue; and (e) a channel 9 feet deep in the North Branch from North Avenue to Addison Street (authorized but not constructed). The project was authorized by the River and Harbor Acts of March 3, 1899, June 13, 1902, March 2, 1907, and July 24, 1946 (See tables 22-B, C). The portion of the project authorized by the River and Harbor Act of 1946 is presently being restudied to confirm economic feasibility.

Local Cooperation. Fully complied with for completed modifications. The River and Harbor Act of July 24, 1946, which provided for the improvement of the channel, is subject to the condition that local interests furnish assurances that they will hold the United States government free from damages that may result from construction and maintenance of the improvement. Requirement has not been complied with.

Terminal Facilities. Six docks are available. The most important cargoes handled are sand, gravel and crushed rock, non-metallic minerals and scrap iron.

Operations and Results During Period. Water control activities were performed by hired labor at a cost of \$88,779, by other Corps of Engineers at a cost of \$12,282 and by other federal agencies at a cost of \$196,211. Routine operations were conducted at a

REPORT OF THE SECRETARY OF THE ARMY ON CIVIL WORKS ACTIVITIES FOR FY 2007

cost of \$16,410 for hired labor. Total costs for FY07 were \$313,682 federal.

Condition at End of Fiscal Year. The project is complete except for dredging the channel between North Avenue and Addison Street as authorized by the 1946 River Harbor Act. Channel maintenance for the reach from Clark Street to head of navigation has been deferred pending location and approval of suitable dredged material disposal site. Head of navigation for deep-draft vessels is North Avenue, 5.97 miles from the Michigan Avenue bridge. Total costs of the existing project to September 30, 2007 were \$20,242,500 of which \$1,500,565 was for new work and \$18,741,935 was for maintenance.

7. INDIANA HARBOR, IN

Location. Northwestern Indiana, on the southwest shore of Lake Michigan in Lake County, 19 miles southeast of Chicago Harbor. (See NOAA Nautical Chart Numbers 14926 and 14929.)

Previous Projects. For details see page 1943 of Annual Report for 1915, and page 1520 of Annual Report for 1938.

Existing Project. Provides for (a) a northerly rubblemound breakwater 1,120 feet long; (b) an easterly concrete capped caisson breakwater 201 feet long with a rubblemound extension 2,324 feet long; (c) a lake approach channel 29 feet deep and 800 feet wide; (d) an anchorage and maneuver basin 28 feet deep; (e) a main canal entrance channel 27 feet deep and 280 feet wide; (f) a main canal 22 feet deep; (g) a turning basin 22 feet deep; (h) the Forks Turning Basin 22 feet deep; (i) the Lake George Branch 22 feet deep; and (j) the Calumet River Branch 22 feet deep. The project was authorized by the River and Harbor Acts of March 4, 1913, March 2, 1919, March 20, 1922, July 3, 1930, August 30, 1935, August 28, 1937, and July 14, 1960 (See tables 22-B, C).

Local Cooperation. Substantially complied with. See FY 1986 Annual Report for full requirements.

Terminal Facilities. Fifteen docks and wharves are available. Six docks handle iron ore and limestone. Six docks are for handling petroleum products and three docks for handling gypsum, scrap metal and steel, and bulk products. However, not all docks are presently being used for the shipment or receipt of waterborne commodities.

Operations and Results During Period. Routine operations for budget preparation were conducted at a cost of \$2,211 for work by other Corps of Engineers.

The preparation of dredging plans and specifications were continued at a cost of \$38,801 for hired labor. A/E services to produce plans for offloading the standard hydraulic barge into CDF were hired at a cost of \$105,201. The preparation of an operations plan for the Confined Disposal Facility was continued at a cost of \$367,197 for hired labor. Total costs for FY07 were \$513,410 federal.

Condition at End of Fiscal year. The existing project is complete. Total costs of the existing project to September 30, 2007 were \$21,829,665 of which \$4,909,648 (\$4,897,148 federal and \$12,500 non-federal contributed funds) was for new work and \$16,920,017 (federal) for maintenance. Channel maintenance has been deferred pending construction of suitable Confined Disposal Facility.

8. INDIANA HARBOR AND CANAL CONFINED DISPOSAL FACILITY (CDF), IN

Location. The navigation project is located on the southwestern shore of Lake Michigan within the City of East Chicago, Lake County, Indiana, 4-1/2 miles east of the Indiana-Illinois state line and 17 miles from downtown Chicago, Illinois. A CDF will be constructed at the Energy Cooperative Incorporate (ECI) site in East Chicago, Illinois.

Existing Project. IHC is an authorized Federal navigation project with an entrance channel and outer harbor protected by breakwaters, and an inner harbor which includes the Indiana Harbor Canal and its two branches, the Lake George Branch, which extends west for a distance of 6,800 feet, and the Calumet River Branch which extends to the south for about 2 miles where it joins the Grand Calumet River. The harbor has not been dredged since 1972, when the United States Environmental Protection Agency determined that disposal in Lake Michigan was no longer acceptable due to the polluted character of the harbor sediments.

A 4.8 million cubic yards capacity CDF will be constructed on the 164 acres of land adjacent to the Lake George Branch of the IHC, formerly occupied by an oil refinery owned by the Atlantic Richfield Company and subsequently acquired by ECI. The ECI property currently has open Resource Conservation and Recovery Act (RCRA) status due to the contaminated soil and groundwater that exists on the site. Use of this site for the CDF is contingent

CHICAGO, ILLINOIS, DISTRICT

upon the construction of specific RCRA closure and corrective action features that will be integral aspects of the CDF construction. The elements of the CDF include construction of an impervious cutoff wall built around the 11,000 linear feet perimeter of the site to approximately 30-35 feet depths, tied into the clay layer below; groundwater monitoring and extraction wells and pumps to maintain an inward gradient and prevent any contaminated groundwater from leaving the site; an air monitoring system; an on-site water treatment facility to treat water from drying dredged materials, precipitation falling on the site and groundwater; dikes built in two 15 foot stages, with an impervious clay layer on the interior of the dikes; a re-handling area; and a cap constructed using 3 feet of clay, 6 inches of sand, 2 feet of clean fill and 6 inches top soil with grass cover. This cap configuration, used for both the CDF and the buffer areas, will satisfy the RCRA closure requirement for the ECI site.

Local Cooperation. The local sponsor is the East Chicago Waterway Management District (ECWMD). The local sponsor is required to provide all lands, easements and rights-of-way; provide all required relocations; and hold and save the United States government free from any damages due to construction or operation of the project. In addition, the ECWMD is required to pay a cash contribution to bring the total non-federal share to twenty-five percent of the costs allocated to general navigation facilities during construction and pay 100 percent of the costs of maintenance of CDF allocated to additional capacity provided for material from berthing areas and non-channel dredging. The local sponsor is also required to reimburse an additional 10 percent of the costs of the general navigation facilities allocated to commercial navigation within a period of 30 years following completion of construction, as partially reduced by a credit allowed for the value of lands, easements, rights of way, relocations, and dredged or excavated material disposal provided for commercial navigation. In addition, the ECWMD is required to pay 100 percent of the costs allocated to general navigation facilities during construction for the local service facilities (non-federal berthing areas) and 100 percent of costs for the local service facilities. The Project Cooperation Agreement for the project was executed 7 August 2000. Congressional language was enacted effective May 12, 2005, which provides for the project costs to be 100% Federal from that date. A PCA amendment is under development to reflect the changes that occur on both the Federal and Non-Federal parties on roles and responsibilities, project

costs, and any other impacts, as a result of this language. A financial audit is to be performed to define the Federal and Non-Federal cost sharing responsibilities through May 12, 2005.

Operations and Results During the Period.

Engineering and design work continued to include data collection for Ambient Air Monitoring and Interim Ground Water Treatment. The Slurry Wall Gaps construction and Dikes – Phase 2 construction were both completed. The South cut-off Wall and Ground Water Gradient Control contracts were both awarded. The costs of the project in FY07 were \$4,886,754 for construction services, \$928,411 for work by other federal agencies, \$942,518 for contracted engineering services, \$2,314 for work by other Corps of Engineers, \$2,574,748 for hired labor and \$9,909 for other contracted services. Total costs for FY07 were \$9,344,654 of which \$7,955,309 was federal and \$1,389,345 was non-federal.

Condition at the End of Fiscal Year. Total cost of the existing project to September 30, 2007 was \$51,569,116 (\$39,947,486 federal and \$11,621,630 non-federal.)

9. LAKE MICHIGAN DIVERSION

Location. Northeastern Illinois on the southwest shore of Lake Michigan in Cook County, within the corporate limits of the City of Chicago. (See NOAA Nautical Chart Numbers 14926, 14927, and 14928.)

Previous Projects. See page 22-3 of Annual Report for 1988.

Operations and Results During Period.

Operations: Water accounting data collection and analysis was performed at a cost of \$311,788 for hired labor, \$153,088 for contracted engineering services and \$31,829 for work by other federal agencies. Total costs for FY07 was \$496,705 federal.

Condition at End of Fiscal Year. Total cost of the existing project to September 30, 2007 was \$10,338,005.

10. MICHIGAN CITY HARBOR, IN

Location. Northwestern Indiana, on the southeast shore of Lake Michigan in La Porte County, 38 miles southeast of Chicago Harbor. (See NOAA Nautical Chart Numbers 14905 and 14926.)

REPORT OF THE SECRETARY OF THE ARMY ON CIVIL WORKS ACTIVITIES FOR FY 2007

Previous Projects. See page 1407 of Annual Report for 1992.

Existing Project. Provides for (a) a stone-filled timber crib detached breakwater 1,304 feet long; (b) a pile and steel sheeting west pier 835 feet long; (c) a stone-filled timber crib, pile and steel sheeting east pier 2,276 feet long; (d) a stone-filled timber crib east breakwater 1,000 feet long; (e) an entrance channel 18 feet deep and 425 feet wide; (f) a turning basin No. 1, 18 feet deep; (g) a channel in Trail Creek 18 feet deep; (h) an outer basin 12 feet deep in the northerly portion and 8 feet deep in the southerly portion; and (i) a channel in Trail Creek 6 feet deep and 50 feet wide from turning basin No. 2 to the E Street bridge. The project was authorized by the River and Harbor Acts of March 3, 1899, March 3, 1905, January 21, 1927, August 30, 1935, and Section 107 of July 14, 1960, River and Harbor Acts, September 30, 1966 (See tables 22-B, C).

Local Cooperation. Fully complied with.

Terminal Facilities. There are several marinas in the lower mile of Trail Creek. The commodity handled at this harbor is fresh fish.

Operations and Results During Period.

Routine operations were conducted at cost of \$18,086 for hired labor. The development of future dredging plans budgets and facts sheets were conducted at a cost of \$55,327 for hired labor. Total costs for FY07 were \$55,327 federal.

Condition at End of Fiscal Year. Total costs of existing project to September 30, 2007 were \$24,763,336 of which \$1,574,158 was for new work (\$1,543,646 federal and \$30,512 non-federal funds), \$21,570,508 for maintenance (\$21,515,508 federal and \$55,000 non-federal) and \$1,618,670 for rehabilitation (federal funds).

11. WAUKEGAN HARBOR, IL

Location. Northeastern Illinois on the west shore of Lake Michigan in Lake County, 38 miles north of Chicago Harbor. (See NOAA Nautical Chart Numbers 14904 and 14905.)

Previous Projects. See page 1392 of Annual Report for 1962.

Existing Project. Provides for (a) a northerly stone-filled timber crib breakwater 588 feet long; (b)

a stone-filled reinforced concrete caisson shore connection 270 feet long; (c) a stone-filled double-row steel sheeting shore connection 640 feet long; (d) a single-row steel sheeting shore connection 398 feet long; (e) a stone-filled timber crib north pier 998 feet long; (f) a single-row steel sheet piling north pier 444 feet long; (g) a steel piling revetment 632 feet long; (h) a stone-filled timber crib pier 1,399 feet long; (i) a stone-filled double-row pile and sheeting south pier 1,712 feet long; (j) an entrance channel 22 feet deep and 390 feet wide; (k) a channel between the piers 18 feet deep and 200 feet wide; (l) an inner basin 18 feet deep; and (m) an anchorage area in the southwest corner of the inner basin 8 feet deep. An authorized, but as yet constructed project modification provides for (a) an entrance channel 27 feet deep, (b) a channel between the piers 23 feet deep and (c) an inner basin and channel extension 23 feet deep. The project was authorized by the River and Harbor Acts of June 3, 1902, July 13, 1930, and March 2, 1945, and on December 17, 1970 by delegated authority under Section 201 of the Rivers and Harbor Act of October 27, 1965. (See tables 22-B, C). The portion of the project authorized by the 1970 modification is being restudied to confirm economic feasibility.

Local Cooperation. Fully complied with for completed portions. The Dec. 17, 1970 modification, which provides for modifications to the channel, is subject to the conditions that local interests furnish assurances that they will hold the United States government free from damages from construction and maintenance of the improvement and that certain lands, easements and rights-of-way be provided.

Terminal Facilities. Four docks are available. The commodities handled at this harbor are gypsum and building cement.

Operations and Results During Period.

Dredging was performed on the approach channel at a cost of \$99,658 for the hired labor and \$721,589 for the construction contracts. The preparation of the outer harbor dredging plans and specifications were continued at a cost of \$186,474 for hired labor. Coordination meetings and planning with the EPA to dredge the inner harbor were continued at a cost of \$18,288 for hired labor and \$58,983 for contracted engineering services. Total costs for FY07 were \$1,084,992 federal.

Condition at End of Fiscal Year. The existing project is complete except for the 1970 modification, which is being restudied. Maintenance of the channel between the pier to the head of navigation has been

CHICAGO, ILLINOIS, DISTRICT

deferred pending location, approval and probable construction of a suitable dredged material disposal site. Total costs of existing project to September 30, 2007 were \$24,487,497 of which \$823,026 was for new work and \$23,664,471 was for maintenance.

12. RECONNAISSANCE AND CONDITION SURVEYS

In Fiscal Year 2007 Project Condition Surveys were performed at a cost of \$135,842.

13. NATIONAL EMERGENCY PREPAREDNESS

Fiscal Year 2007 costs for management and mobilization planning were \$0.

Alteration of Bridges

14. OTHER AUTHORIZED BRIDGE ALTERATIONS

See table 22-D.

Beach Erosion Control

15. CALUMET REGION, IN

Location. This project is located in Northwestern Indiana in the counties of Benton, Jasper, Lake, Newton and Porter.

Existing Project. The project was authorized by Water Resources Development Act 1992, Section 219, as amended by WRDA 1996, Section 504 and WRDA 1999, Section 502, FY04 Appropriation Bill, Section 145. This project consists of providing technical planning, design and construction to non-federal interests who have environmental infrastructure needs. These needs include the development of wastewater treatment and related facilities and water supply, treatment and distribution facilities.

Local Cooperation. The local sponsors are Gary Sanitary District, Hammond Sanitary District, Chesterton, Portage, Cedar Lake, New Chicago, Valparaiso, Lake Station and Whiting.

Operations and Results During Period. Executed a letter report for Lake Station and Cedar Lake. Costs for Cedar Lake in FY07 were \$192,918 federal and \$42,141 non-federal. Costs for Lake Station in FY07 were \$85,987 federal. Executed a

PCA for the city of Portage at a cost of \$227,751 federal and \$35,386 non-federal. Three construction contracts were awarded for the City of Cedar Lake, the City of Hammond, the City of Hammond, and the Town of Valparaiso. The costs for Hammond in FY07 were \$2,407,369 federal and \$897,800 non-federal. The costs for the Town of Valparaiso were \$744,170 non-federal and \$744,170 non-federal. The costs for the City of New Chicago were \$10,252 federal and \$2,028 non-federal. Costs for the City of Gary were \$2,877 federal. Costs for other hired labor and miscellaneous services were \$21,726 federal and \$37,625 non-federal. Total costs for the fiscal year FY07 were \$5,077,415 of which \$3,318,265 was federal and \$1,759,150 was non-federal.

Condition at End of Fiscal Year. The total cost of the existing project to September 30, 2007 was \$7,083,113 of which \$5,204,965 was federal and \$1,878,148 was non-federal.

16. CASINO BEACH, IL

Location. Casino Beach is located along the Lake Michigan shoreline at Jackson Park in Chicago, Illinois.

Existing Project. The Casino Beach project was authorized by Section 501 (a) of the 1986 Water Resources Development Act. The project consists of rehabilitating 1,800 feet of the Casino jetty by encasing the existing timber pile and stone structure in steel sheet piling and a concrete cap.

Local Cooperation. The local project sponsor is the Chicago Park District. The local sponsor is required to provide all lands, easements and rights-of-way; complete all necessary relocations; hold and save the United States free from damages due to construction or operation of the project; operate and maintain the completed project; and make cash contribution toward the cost of construction.

Operations and Results During Period. No work was performed in FY2007.

Condition at End of Fiscal Year. Construction is complete. The total cost of the existing project to September 30, 2007 was \$2,465,517 federal and \$2,499,481 non-federal.

17. CHICAGO SHORELINE, IL

Location. The project area includes 9.2 miles of revetment reconstruction within 24 miles of publicly owned shoreline along Lake Michigan in Chicago,

REPORT OF THE SECRETARY OF THE ARMY ON CIVIL WORKS ACTIVITIES FOR FY 2007

Illinois.

Existing Project. The Chicago Shoreline project was authorized by the 1996 and 1999 Water Resources Development Act (WRDA). The Federally supportable plan consists of constructing rubblemound revetments along 16,750 and 25,400 feet of the shoreline in the Lincoln Park and Burnham Park areas, respectively. Other project features include: revetments near the Adler Planetarium and at Meigs Field; a breakwater to protect the South Filtration Plant near 78th Street; and nourishment of a short reach of shoreline near Fullerton Avenue and 31st Street. The local sponsor prefers to substitute steel sheet pile step stone revetments (the locally preferred plan, or LPP) for the rubblemound revetments in the Lincoln and Burnham Park areas. They have agreed to pay the increased cost above the federally supportable plan. The LPP is the authorized plan.

Local Cooperation. This project has three separate Project Cooperation Agreements (PCA's). The first PCA, for the Reach 5 breakwater reconstruction, was executed on 28 April 1997. The second PCA, for Section 215 work, was executed on 7 August 1998, and covers construction of three portions of the project: 1,000 feet of revetment at Belmont Harbor in Reach 2, an 800 foot stretch of shoreline at 31st Street beach in Reach 4 (both of these are being constructed by the non-federal sponsor), and revetment reconstruction from 31st to 33rd streets in Reach 4 (Corps work). The project Cooperation Agreement for the balance of the project work was executed on 17 May 1999, implementing section 206 of WRDA 92 which allows the non-federal sponsor to perform a significant portion of the work. Design and construction of the project is well underway. Project construction is estimated to be completed in the year 2007.

The local sponsor is required to provide all lands, easements, and rights-of-way; complete all necessary relocations; hold and save the United States free from damages due to construction or operation of the project; operate and maintain the completed project; perform work for credit towards their cash contribution; and make cash contribution toward the cost of any outstanding balance.

Operations and Results During Period.

Construction continued for Belmont to Diversey South and at 40th to 41st Street Beach. Engineering and design work was continued on 43rd to 45th Street and Fullerton-Theatre on the Lake. Design work was

initiated for Diversey Revetment. The costs for FY07 were \$13,421,465 for construction services, \$125,525 for work by other Corps of Engineers, \$6,880 for contracted engineering services and \$2,119,341 for hired labor. Total costs for the fiscal year FY07 were \$15,673,211 of which \$12,989,883 was federal and \$2,683,328 was non-federal.

Condition at End of Fiscal Year. The total cost of the existing project to September 30, 2007, was \$234,481,414 of which \$165,041,324 is federal and \$69,440,090 is non-federal cash and \$31,984,136 is non-federal in-kind services.

18. CHICAGO SANITARY & SHIP CANAL DISPERSAL BARRIER I, IL

Location. The Chicago Sanitary & Ship Canal (CSSC) is a man-made waterway in Northeastern Illinois that connects the Chicago River and the Des Plaines River.

Existing Project. The CSSC was authorized by Nonindigenous Aquatic Nuisance Prevention and Control Act of 1990 (P.L. 101-636, 11/29/90, as amended through 10/26/96); Section 2309 of P.L. 109-234, Emergency Supplemental Appropriations Act. The project consists of an array of DC electrodes which were installed on the channel bottom of the CSSC. When power is provided, an electric field is created within the water that repels fish in order to prevent or reduce the dispersal of nonindigenous aquatic species between the Great Lakes and the Mississippi River drainage basins.

Local Cooperation. None required.

Operations and Results During Period.

Continued operation and maintenance of barrier. The costs for FY07 were \$12,234 for contracted engineering services, \$149,335 for hired labor, \$144 for work by other Corps of Engineers and \$44,187 for other contracted services. Total costs for FY07 were \$205,756 federal.

Condition at End of Fiscal Year. The total cost of the existing project to September 30, 2007, was \$3,878,471 of which all is federal.

19. CHICAGO SANITARY & SHIP CANAL DISPERSAL BARRIER II, IL

Location. The Chicago Sanitary & Ship Canal (CSSC) is a man-made waterway in Northeastern Illinois that connects the Chicago River and the Des

CHICAGO, ILLINOIS, DISTRICT

Plaines River.

Existing Project. The CSSC was authorized by Section 1135, Water Resources Development Act 1986 (Continuing Authority Program), Section 345 of PL. 108-335, District of Columbia Appropriations Act, 2005. A second permanent dispersal barrier is needed to provide continued protection against nuisance species. Barrier II will also be an electric field barrier, but will include design improvements identified during monitoring and testing of the demonstration barrier. Barrier II is being constructed in two phases, IIA and IIB. The first phase consists of construction of two underwater electrode arrays and one control house. This control house will be able to operate one of the two arrays. The second phase consists of construction of a second control house that will allow both arrays to be operated at the same time.

Local Cooperation. The local sponsor is the Illinois Department of Natural Resources – Office of Water Resources (IDNR-OWR).

Operations and Results During Period. The costs of FY07 were \$120,271 for contracted services, \$186,592 for hired labor, \$101,482 for work by other corps of Engineers and \$30,759 for work by federal agencies. Total project costs for FY07 were \$439,104 of which \$317,842 was federal and \$121,262 was non-federal.

Condition at End of Fiscal Year. The total cost of the existing project to September 30, 2007, was \$8,504,057 of which \$6,476,179 was federal and \$2,027,878 was non-federal.

20. COOK COUNTY ENVIRONMENTAL INFRASTRUCTURE, IL

Location. Northeastern Illinois.

Existing Project. The Cook County Environmental Infrastructure project was authorized by WRDA 1992 (PL 102-580), Section 219(f)(54), as amended in the Consolidated Appropriations Act of 2001, (PL 106-554), see HR 4577, Chapter 14, Division B, Section 108; Section 142 of the FY 2004 Energy and Water Resources Appropriation (PL 108-137). This project provides technical planning, design and construction assistance to non-federal interests who have environmental infrastructure needs in Cook County, IL. These needs may be related, but not limited, to the development and protection of

water supply and waste water systems; combined sewer overflows; and remediation of adverse water quality impacts and storm water impacts to waste water systems. Currently the projects identified applicable to this authorization are Calumet Park, Flossmoor, Brookfield Zoo, Chicago Heights, Berwyn and Olympia Fields.

Local Cooperation. Varies by community.

Operations and Results During Period.

Continued planning for the PCA execution and the construction of sewer improvements at two schools in Calumet Park. Coordinated with Brookfield Zoo on the proposed water, sanitary and storm line replacement, repairs and extensions. Coordinated with Flossmoor, Berwyn and Olympia Fields on possible future stormwater drainage and water system improvement projects. Total costs for FY07 were \$782,755 federal and \$164,360 non-federal.

Condition at End of Fiscal Year. The total costs of the existing project to September 30, 2007 were \$1,621,016 of which \$1,362,906 was federal and \$258,110 was non-federal.

21. ILLINOIS BEACH STATE PARK, IL

Location. Northeastern Illinois on the west shore of Lake Michigan along the 9-mile reach of shoreline immediately south of the Illinois-Wisconsin State line. (See NOAA Nautical Chart Numbers 14901 and 14904.)

Previous Projects. None.

Existing Project. Provides for annual beach nourishment and construction of a sediment trap at the south end of the State Park. The project would entail placement of coarse-graded sediment at six stockpile sites at the rate of 124,000 cubic yards in the first year, 104,000 cubic yards in the second year, and 60,000 cubic yards in the third year. Thereafter, 60,000 cubic yards would be placed at the northernmost stockpile annually. The sediment trap would consist of a rubble-mound groin, with a total length of 600 feet from the base of the dunes (400 feet lakeward from the shoreline), with a crest height of about +8 feet above Low Water Datum (LWD). The project was conditionally authorized in Section 501 (b) of the 1986 Water Resources Development Act subject to a report by the Corps of Engineers and approval by the Secretary of the Army. A Feasibility Review Conference was held in April 1991. As a result, the District Engineer was directed to terminate

REPORT OF THE SECRETARY OF THE ARMY ON CIVIL WORKS ACTIVITIES FOR FY 2007

work on this project and to submit a letter report to the Congress summarizing the feasibility study and the results of the Washington level review. Work on the feasibility report was resumed in FY 1994 as directed by the Assistant Secretary of the Army for Civil Works in response to a letter from Congressman John Porter, 10th Congressional District of Illinois.

Local Cooperation. The local project sponsor would be required to provide all lands, easements and rights-of-way; accomplish all required relocations; hold and save the United State free from damages; and provide a cash contribution.

Operations and Results During Period. No work was performed in FY07.

Condition at End of Fiscal Year. Total cost of the existing Feasibility study to September 30, 2007 was \$344,291.

22. INDIANA DUNES NATIONAL LAKESHORE BANK PROTECTION, BEVERLY SHORES, IN

Location. Northwestern Indiana, on the southeast shore of Lake Michigan in Porter County, about 35 miles southeast of Chicago Harbor. (See NOAA Nautical Chart Numbers 14095 and 14926.)

Existing Project. Provides for placement of 13,000 feet of stone revetment and periodic repair of riprap to maintain the full length of Lake Front Drive in Beverly Shores, Indiana. The current project was authorized by Public Laws 97-88 and 98-63.

Local Cooperation. Fully complied with. Project lands are held by the National Park Service.

Operations and Results During Period. No work was performed during this reporting period.

Condition at End of Fiscal Year. Total costs of existing project to September 30, 2007 were \$2,956,000 of which \$660,000 was for new work and \$2,296,000 was for maintenance.

23. INDIANA SHORELINE EROSION, IN

Location. On the south end of Lake Michigan along a two-mile reach of shore west of Michigan City Harbor, Indiana. (See NOAA Nautical Chart Numbers 14095 and 14926.)

Existing Project. The project consists of beach

nourishment along approximately two miles of beach between Michigan City Harbor and Beverly Shores, Indiana, requiring an initial placement of 264,500 cubic yards of sand. Periodic replenishment of about 264,500 cubic yards of sand at five year intervals would be required throughout the life of the project. The project was authorized for construction by Section 501 of the Water Resources Development Act of 1986. Estimated federal cost (1997) for new work is \$184,000,000, including future beach nourishment.

Local Cooperation. None required.

Operations and Results During Period. Continued monitoring of project and development of the Costal Monitoring Report. Total Federal costs for FY07 were \$173,159 for hired labor, \$53,220 for work by other federal agencies and \$1,075 for work by other Corps of Engineers.

Condition at End of Fiscal Year. Initial construction was completed. The total cost of the existing project to September 30, 2007 is \$11,822,072 (Federal).

24. OTHER AUTHORIZED BEACH EROSION CONTROL PROJECTS

See table 22-E.

25. BEACH EROSION CONTROL UNDER SPECIAL AUTHORIZATION

Beach erosion control activities pursuant to Section 103 of the Rivers and Harbors Act of 1962, as amended. None.

Flood Control

26. CHICAGO RIVER, IL (NORTH BRANCH)

Location. Northern Illinois, in Cook and Lake Counties.

Existing Project. Provides for clearing the channel of the North Branch of the Chicago River of fallen trees, roots, and other debris and objects which contribute to the flooding, unsightliness, and pollution of the river. The project extends from Wolf Point in Chicago, Illinois, to its source just south of Rockland Road east of Libertyville, Illinois. The project was authorized by the River and Harbor Act of December 31, 1970 (Section 116) and amended by the River and Harbor Act of March 7, 1974 and the

CHICAGO, ILLINOIS, DISTRICT

Water Resources Development Act of 1986.

Local Cooperation. The 1970 Act provided that local interests furnish without cost to the United States all lands, easements, rights-of-way, and disposal areas necessary for construction of the project; hold and save the United States free from damages due to construction; maintain and operate all works after completion without cost to the United States; and agree to bear all costs in excess of \$200,000 for completing construction. The 1974 Act provided that the United States will maintain the channel free of trees, roots, debris and objects at a cost not to exceed \$150,000 per year with non-federal interests paying 25 percent of the cost of maintenance. The 1986 Water Resources Development Act changed the cost sharing to require that non-federal interests pay 50 percent of the cost of maintenance plus the cost of disposal. The requirements are fully complied with.

Operations and Results During Period. No work was performed during this reporting period.

Condition at End of Fiscal Year. Total cost of existing project to September 30, 2007 was \$4,775,908 of which \$231,884 was for new work (\$191,884 federal funds and \$40,000 contributed funds), and \$4,543,807 was for maintenance (\$2,768,632 federal funds and \$1,775,175 non-federal contributed funds).

27. DES PLAINES RIVER, ILLINOIS

Location. The Upper Des Plaines River is located in the northeastern Illinois counties of Lake and Cook. Its 67 miles flow through 33 communities, which are part of the Chicago metropolitan area.

Existing Project. The Des Plaines flood control project was authorized by Section 101(b) (10) of the 1999 Water Resources Development Act. The optimized project provides a maximum 0.12 foot reduction in stage for the 100-year flood, and the levee features meet the FEMA criteria for 100-year protection. The project consists of six features to construct (three in Lake County and three in Cook County), environmental mitigation, and a flood warning plan. The project adds 1,975 acre-feet of storage by constructing 6 features: a lateral storage area in Van Patton Woods (412 acre-feet); enlarging the existing North Fork Mill Creek Dam by elevating the crest of spillway (500 acre-feet); and excavating the existing reservoirs at Buffalo Creek (476 acre-feet) and at Big Bend Lake (587 acre-feet). The

remaining 2 project features are levees with appurtenant interior drainage features. Levee 37 raises portions of Des Plaines River Road and Milwaukee Avenue between Palatine Road and Euclid Avenue from 0.5 to 5 feet over a total length of 8,500 feet. Levee 50 is a combination levee/flood wall in the City of Des Plaines between Dempster Road and the Chicago and Northwestern railroad. The length of this levee would be about 2,600 feet and the length of the floodwall would be 2,115 feet.

Local Cooperation. The nonfederal sponsor is the Illinois Department of Natural Resources (IDNR). IDNR is required to provide all lands, easements and rights-of-way; complete all required utility relocations; hold and save the United States free from damages due to construction or operation of the project; provide the required interior drainage improvements; operate and maintain the completed project; and make a cash contribution toward the cost of construction.

Operations and Results During the Period. Completed LLR. Continued engineering and design work for Levee 37 in FY07 at a federal cost of \$669,568 for hired labor (GI), \$185,587 for contracted engineering services (CG) and \$511,184 for hired labor (CG).

Condition at End of Fiscal Year. Total cost of the existing project to September 30, 2007 is \$5,959,658 of which (\$2,092,687 (GI), \$3,452,529 (CG) and non-Federal cost \$414,442).

28. LAKE GEORGE, HOBART, IN

Location. Lake George in Hobart, Indiana and Deep River watershed upstream of the lake through Lake Station, Indiana.

Existing Project. The project consists of the removal of silt, aquatic growth and other material and the construction of silt traps or other devices to prevent and abate the deposition of sediment. Project was authorized by Section 602 of the Water Resources Development Act (WRDA) of 1986.

Local Cooperation. Section 602(b), Water Resources Development Act of 1986 applies. By letter dated March 9, 1987 the City of Hobart, Indiana indicated that it was a potential local project sponsor and applied for credit for previous work applicable to the project under the provisions of Section 104 (d) of the 1986 WRDA. By letter dated March 19, 1999, the City of Hobart, Indiana withdrew interest in the

project.

Operations and Results During Period. Project was terminated in FY99.

Condition at End of Fiscal Year. Pre-construction engineering and design was terminated. Total cost of the existing project to September 30, 2007 is \$1,314,167.

29. LITTLE CALUMET RIVER, IN

Location. The Little Calumet River project is located in northwest Indiana between the Illinois-Indiana State line and the Conrail Railroad in east Gary, Indiana.

Existing Project. The project consists of replacing 9.5 miles of existing spoil bank levees with 12.2 miles of new levees, floodwalls, closure and appurtenant structures between the Illinois-Indiana State line and Cline Avenue; construction of 9.7 miles of set-back levees in Gary; a diversion structure at Hart Ditch; permanent evacuation of 29 structures in the Black Oak area of Gary; flood proofing 38 residential structures in Gary; modifying 7 miles of channel and 3 accompanying bridge culvert modifications; modifying one highway bridge; construction of 16.8 miles of hiking trails and accompanying recreation support facilities; and preservation of 788 acres of wetlands with wildlife mitigation measures. The project was authorized by Section 401 of the Water Resources Development Act of 1986. The construction contract for Stages II-3A, III and V-1 levee segment and the Stage I-4 demolition contract were completed. Completed construction on East Remediation, and Stage IV-2B.

Local Cooperation. The local sponsor is the Little Calumet River Basin Development Commission. The local cooperation agreement was signed on August 16, 1990. The local sponsor is required to provide all lands, easements and rights-of-ways; provide all required relocations; and hold and save the United States from any damages due to construction or operation of the project. In addition, the local sponsor is required to pay a five percent cash contribution for structural flood control measures, fifty percent for recreation features and twenty-five percent for fish and wildlife enhancements. A memorandum of agreement with the local sponsor to design non-federal improvements was signed on May 20, 1992.

Operations and Results During Period.

Continued construction on Stage VI-1North, Stage VI-1 South, Stage VI-2 and Landscaping Contract 2. Initiated construction of Burr Street Betterment Levee Phase II. Completed Wetland Mitigation construction. Initiated engineering and design for Stage V-2 in the west reach. Project costs for FY 2007 were \$7,244,209 for construction services, \$2,161,403 for hired labor, \$56,378 for work by other federal agencies, \$740,629 for work by other Corps of Engineers, \$244,639 for contracted engineering services and \$54,682 for other contracted services.

Condition at End of Fiscal Year. Continue with construction contracts. Total cost of existing project to September 30, 2007 were \$127,820,571 of which \$116,267,161 was federal, \$9,356,733 was non-federal and \$2,196,677 was non-federal betterment.

30. LITTLE CALUMET RIVER BASIN, CADY MARSH DITCH, IN

Location. Cady Marsh is located in Lake County, Indiana. The Ditch is a tributary of the Little Calumet River system in northwest Indiana and flows through the Towns of Griffith and Highland, Indiana.

Existing Project. The Cady Marsh Ditch flood control project was authorized by Section 401 (a) of the 1986 Water Resources Development Act. The project provides for diverting flood flows from Cady Marsh Ditch to the Little Calumet River through a diversion system under Arbogast Avenue in Griffith. Specifically, the project consists of improving 1,290 feet of Cady Marsh Ditch between Colfax and Arbogast Avenues in Griffith, constructing approximately 5,000 feet of large conduit pipes under Arbogast Avenue, excavating an open channel approximately 2,850 feet long from the north end of Arbogast Avenue to the Little Calumet River, and constructing interior drainage improvements.

Local Cooperation. The local project sponsor is the Town of Griffith, IN. The local sponsor is required to provide all lands, easements and rights-of-way; complete all required utility relocations; hold and save the United States free from damages due to construction or operation of the project; provide the required interior drainage improvements; operate and maintain the completed project; and make a cash contribution toward the cost of construction.

Operations and Results During the Period.

Initiated engineering and design for the Cady Marsh Ditch Channel and interior drainage improvements.

CHICAGO, ILLINOIS, DISTRICT

Continued construction on the Genis Pump Station. Completed work on the 10 foot Diversion Tunnel under Arbogast Road construction contract. Project costs for FY 2007 were \$341,824 for construction services, \$249,411 for hired labor, \$146,374 for contracted engineering services and \$183,392 for work by other Corps of Engineers.

Condition at End of Fiscal Year. Construction is in progress. Total costs of the existing project to September 30, 2007 were \$24,824,742 of which \$19,949,354 was federal and \$4,875,388 was non-federal.

31. McCOOK AND THORNTON RESERVOIRS, IL

Location. The McCook Reservoir will be located near the communities of McCook, Justin and Bedford Park, Illinois at the existing Metropolitan Water Reclamation Solids Management Area. The Thornton Reservoir will be located in the community of Thornton, Illinois at the existing Thornton Quarry.

Existing Project. The project consists of converting two quarries into flood storage reservoirs. The McCook Reservoir will have a storage volume of 21,400 acre-feet (7 billion gallons); the Thornton Reservoir will have a volume of 24,200 acre-feet (7.9 billion gallons). The reservoirs will store floodwater from tunnels constructed or under construction by the U.S. Environmental Protection Agency and the Metropolitan Water Reclamation District of Greater Chicago as part of the Tunnel and Reservoir Project (TARP). The project was authorized by Section 3 of the Water Resources Development Act of 1988.

Local Cooperation. The Metropolitan Water Reclamation District of Greater Chicago will be the local sponsor and provide the required local cooperation. The local sponsor is required to provide all lands, easements and rights-of-way; provide all required relocations; and hold and save the United States government free from any damages due to construction or operation of the project. In addition, local sponsors are required to pay a cash contribution to bring the total non-federal share of the flood control improvements to twenty-five percent of the total project cost. The Project Cooperation Agreement for the McCook Reservoir was executed on May 10, 1999. The project Cooperation Agreement for the Thornton Reservoir was executed on September 18, 2003.

Operations and Results During the Period.

Continued construction on the Pumps & Motors contract and on the Distribution Tunnels, Gates & Valves contract. Continued Stage 2 Cutoff Wall construction. Continued engineering and design work for the Main Tunnel. Gates & Valves P&S. Project costs for FY07 were \$20,347,862 for construction services, \$2,397,728 for hired labor, \$273,967 for contracted engineering services and \$72,504 for work by other Corps of Engineers.

Condition at End of Fiscal Year. Construction and engineering and design work are in progress. Total costs of the existing project to September 30, 2007 were \$170,851,630 of which \$141,634,958 was federal and \$29,216,672 was non-federal.

32. NORTH BRANCH, CHICAGO RIVER, IL

Location. The North Branch Chicago River Basin is located north of the City of Chicago in suburban Cook and Lake Counties.

Existing Project. The project was authorized by the Water Resources Development Act of 1986 and consists of constructing two excavated floodwater storage reservoirs on the West Fork and one excavated reservoir on the Middle Fork. Section 401 of the 1986 Act also included authorization to reimburse non-federal interests 50 percent of the costs of planning and construction for three existing reservoirs on the West Fork, known as Techny Reservoirs, and the existing Mid Fork Reservoir on the Middle Fork. In July 1990, the federal government reimbursed the non-federal interests \$4,467,298 for the Techny and Mid Fork Reservoirs. The total federal cost was \$4,537,435 for these reservoirs. Reservoir 27 in the Village of Bannockburn, is located on the West Fork, 12.7 miles above its confluence with the North Branch Chicago River. It has a floodwater storage capacity of 525 acre-feet. The reservoir construction was completed in June 1990. Reservoir 29A is located 9.6 miles above the mouth of the West Fork and 3.1 miles south of Reservoir 27. The floodwater storage capacity is 575 acre-feet. Two project features, channel relocation and construction of two bridges, are a non-federal responsibility. Reservoir 29A was substantially completed in September 1994. Reservoir 15 is located near the City of Green Oaks on the Middle Fork, 22.1 miles above its confluence with the North Branch Chicago River. The floodwater storage capacity is 500 acre-feet. The reservoir is approximately 42 feet deep except in the sedimentation pool area which is about 15 feet deeper. Construction of Reservoir 15 was completed

REPORT OF THE SECRETARY OF THE ARMY ON CIVIL WORKS ACTIVITIES FOR FY 2007

in May 1992. The local sponsor has contributed \$550,100 for the non-federal improvements for Reservoir 29A.

Local Cooperation. The local sponsor is required to provide all lands, easements and rights-of-way; provide all required relocations; and hold and save the United States government free from any damages due to construction or operation of the project. In addition, local sponsors are required to pay a cash contribution to bring the total non-federal share of the flood control improvements to twenty-five percent of the total project cost.

Operations and Results During Period. Total cost in FY07 was \$0 federal.

Condition at End of Fiscal Year. The existing project is 100% complete. Total costs of the existing project to September 30, 2006 were \$31,758,971 of which \$25,006,588 is federal and \$2,259,085 is non-federal required contributions. This total also includes the \$4,493,298 non-federal cost for the Techny and Mid Fork Reservoirs. Non-federal betterment funds of \$550,101 have been expended on bridge and channel betterments at Reservoir 29A. A total of \$7,576,668 in non-federal funds has been expended on investigations in connection with the clean-up of soils contaminated with lead shot pellets at Reservoirs 29A. Non-federal betterment funds in the amount of \$38,500 were expended for work on an impact assessment. A total of \$11,166 (non-federal betterment) was spent at Reservoir 27 for the Illinois Tollway project.

33. O'HARE RESERVOIR, IL

Location. The reservoir is located in an unincorporated portion of Elk Grove Township in Northwestern Cook County, Illinois about 1 mile northwest of Chicago O'Hare International Airport.

Existing Project. The project consists of a 1,050 acre-foot capacity reservoir, excavated to a depth of 80 feet. The reservoir has been constructed at the terminus of the existing system of 6.6 miles of deep tunnels, constructed under the U.S. Environmental Protection Agency and the Metropolitan Water Reclamation District of Greater Chicago Tunnel and Reservoir Project (TARP). The project was authorized by Section 401 of the Water Resources Development Act of 1986.

Local Cooperation. The local sponsor is the Metropolitan Water Reclamation District of Greater

Chicago. The local cooperation agreement for the first construction contract, creek relocation, was signed on July 31, 1990. The local sponsor is required to provide all lands, easements and rights-of-way; provide all required relocations; and hold and save the United States government free from any damages due to construction or operation of the project. In addition, the local sponsor is required to pay a cash contribution of five percent of the total project costs. The local cooperation agreement for the remainder of the project, reservoir excavation and lining, was signed July 29, 1991.

Operations and Results During Period. No work was preformed in FY07.

Condition at End of Fiscal Year. The total costs of the existing project to 30 September 2007 were \$39,273,198 of which (\$30,614,201 federal and \$6,033,516 non-federal and non-federal improvement costs were \$2,652,481)

34. OTHER AUTHORIZED FLOOD CONTROL PROJECTS

See table 22-F.

35. FLOOD CONTROL WORK UNDER SPECIAL AUTHORIZATION

Emergency flood control activities, repair, flood fighting and rescue work (Public Law 99, 84th Congressional antecedent legislation).

Program	Fiscal Year Costs to September 30, 2007
Disaster Preparedness	\$0

Flood control activities pursuant to Section 205 of Flood Control Act of 1965, as amended:

Fiscal Year 2007 costs were \$342,931 federal and \$139,772 non-federal for flood control activities. A total of \$22,874 was spent on the Section 205 Coordination Account. Fox River, McHenry Co., IL, construction phase was completed at the cost of \$825 federal and \$1,034 non-federal. Libertyville Estates, IL, construction phase continued at the cost of \$2,408 federal. Monticello Avenue, Chicago, P & S were continued at the cost of \$2,541 federal. South Suburban Area of Chicago continued at \$45,793 federal. Deer Creek construction continued at a cost of \$284,356 federal and \$123,267 non-federal.

Section 14, Emergency Streambank and Shoreline

CHICAGO, ILLINOIS, DISTRICT

Protection:

Fiscal Year 2007 costs were \$136,658 federal and \$0 non-federal. A total of \$20,271 was spent on Section 14 Coordination Account. North Park University PDA was continued at a cost of \$116,388 federal and \$0 non-federal. Village of Riverside construction costs were \$0 federal and \$0 non-federal.

Section 1135, Project modification to improve Environment:

Fiscal Year 2007 Federal costs were \$24,745 and non-Federal costs were \$0. Indian Ridge Marsh P&S were continued at a cost of \$24,745 federal.

Section 206, Aquatic Ecosystem Restoration:
 Fiscal Year 2007 costs were \$2,344,330 federal and \$1,425,771 non-federal. Sqaw Creek, Lake County, IL DPR continued at a cost of \$8,132 federal. Northside PREP/Von Steuben Chicago construction continued at \$341 federal and \$7,708 non-federal. Butler Lake, IL, P&S continued at a cost of \$108,894 federal and \$157,877 non-federal. Hoffman Dam, IL, DPR continued at a cost of \$78,642 federal. Wolf Lake, IN, P&S continued at a cost of \$1,650,346 federal and \$1,260,186 non-federal. Grass Lake, Fox River, IL, PDA was continued at a cost of \$25,075 federal. Lockport Prairie Nature Preserve, IL, DPR was continued at \$136,276 federal. Cedar Lake, IN, DPR was continued at a cost of \$240,563 federal. Orland Park DPR continued at \$78,325 federal. Eugene Field, IL continued at a cost of \$10,255 federal. Long Lake DPR continued at \$2,838 federal. Morton Arboretum continued at \$962 federal. Fort Sheridan Forest Preserve Coastal Habitat continued at \$3,680.

Section 107, Navigation Harbor:
 Fiscal Year 2007 costs were \$7,955,309 federal and \$1,389,345 non-federal.

General Investigations

36. SURVEYS

Fiscal Year 2007 costs were \$1,497,355 federal and (-\$57,636) non-federal. Itemized as follows:

<u>Federal</u>	<u>Non-federal</u>
Flood Damage Prevention Studies	
\$669,568	(-\$232,202)
Shoreline Protection	
\$24,698	\$0
Special Studies	
\$890,993	\$0

Review Authorized Projects	
\$ 0	\$0
Miscellaneous Activities	
\$42,866	\$0
Coordination Studies	
(-\$130,770)	\$174,566

37. COLLECTION AND STUDY OF BASIC DATA

Fiscal Year 2007 costs were \$96,296 federal and \$0 non-federal itemized as follows:

<u>Federal</u>	<u>Non-federal</u>
International Water Studies	
\$1,000	\$ 0
Flood Plain Management Services	
\$95,000	\$ 0
Hydrologic Studies	
\$296	\$ 0

TABLE 22-B AUTHORIZING LEGISLATION

Acts	Work Authorized	Documents
BURNS WATERWAY HARBOR, IN		
(See Section 1 and 3 of Text)		
Oct. 27, 1965	Provides for breakwater and channel to present dimensions and depths, a north breakwater, west bulkhead, approach channel and outer harbor, east and west harbor arms.	Public Law, 89-298, H. Doc. 160. 88 th Cong., 1 st Sess.
Nov. 20, 2004	Provides for the dredging of sediments accumulating at the water intake structure of the Bailey Generating Plant (NIPSCO) at 100% federal cost or \$100,000.	Sec. 121 of Conf Rpt HR 4818 Report 108-792
Nov. 8, 2007	Provides a study to determine if damage prevention or mitigation project is feasible.	Sec. 1009, WRDA 2007
BURNS WATERWAY SBH, IN		
(See Section 2 of Text)		
Jul. 14, 1960 Sec. 107	Provides for a 700-foot north breakwater, a 950-foot west breakwater an entrance channel 11-feet deep, a harbor-of-refuge area 10 feet deep and a channel in Burns Waterway 6 feet deep.	Detailed Project Report detailed February 1983.
CALUMET HARBOR AND RIVER, IL AND IN		
(See Section 4 of Text)		
Mar. 3, 1899	Outer harbor protected by breakwaters.	Annual Report, 1896, pp. 2584 et Seq. and H. Doc. 277, 54 th Cong., 1 st Sess.
Jun. 13, 1902		H. Doc. 172, 54 th Cong., 2 nd Sess.
Mar. 3, 1905	Five turning basins.	H. Doc. 346, 60 th Cong., 1 st Sess.
Jun. 25, 1910	Provided for shape and dimensions of turning basins.	H. Doc. 494, 72 nd Cong., 2 nd Sess.
Sep. 22, 1922 Aug. 30, 1935 ^{1,2}	Consolidated the two projects for Calumet Harbor and Calumet River. Detached breakwater, dredging outer harbor to existing project depth and dimensions; deepen river entrance channel and river to existing project depths; widen and straighten river channel; five turning basins to same depth as adjacent channel.	H. Doc. 180, 73 rd Cong., 2 nd Sess.
Aug. 30, 1935	Dredging area A and B in south end of Lake Calumet and an entrance channel 300 feet wide and 21 feet deep.	H. Doc. 233, 76 th Cong., 1 st Sess.
Mar. 2, 1945 ³	An approach channel to harbor 3,200 feet wide and 28 feet deep through shoals outside breakwater and closing existing gap between breakwaters.	H. Doc. 149, 86 th Cong., 1 st Sess. ⁸
Jul. 14, 1960 ¹³	Depth of 29 feet in lake approach to 28 feet in outer harbor, and 27 feet in river entrance up to E.J. & E. Ry. Bridge.	H. Doc. 87 th Cong., 2 nd Sess. ⁵
Oct. 23, 1962 ¹³	Deepen, widen and straighten channel in Calumet River from E.J. and E. Ry. Bridge, to and including turning basins 1, 3 and 5 to 27 feet; enlarge turning basins 3 and 5; channel into Lake Calumet to 27 feet deep for 3,000 feet and a width of 1,000 feet; and eliminate turning basins 2 and 4 from project.	H.R. 973, 89 th Cong., 1 st Sess.
Oct 27, 1965 ¹³	Modification of Act of Oct 23, 1962. Protection for Elgin, Joliet and Eastern Railway Bridge over the Calumet River, to permit dredging to full width of the south draw to depth of 27 feet, and temporary protection for center pier and south abutment of the New York, Chicago and St. Louis Railroad Bridge (Nickel Plate) to permit dredging of full width of south bridge draw to depth of 27 feet prior to its replacement.	

TABLE 22-B AUTHORIZING LEGISLATION

Acts	Work Authorized	Documents
CHICAGO HARBOR, IL		
(See Section 5 of Text)		
Jul. 11, 1870	Inner breakwaters and inner basin.	H. Ex. Doc. 114, 41 st Cong. 2 nd Sess. and Annual Report 1870, pp. 1562-1567
Jun. 14, 1880	Exterior breakwater.	Annual Report 1870, pp. 1562-1567
Mar. 3, 1899	Present project depth in basin and entrance to Chicago River.	Annual Report 1897, pp. 2790-2791
Jul. 25, 1912	Shore-arm and southerly extension of exterior breakwater	H.Doc 710, Cong, 2 ^d Sess
Mar. 2, 1919	Modification of area to be dredged in inner basin.	H.Doc 1303, 64 th Cong, 1 st Sess.
Mar 3, 1931	Shore-arm extension of exterior breakwater transferred to Lincoln Park Commissioners.	Public Law 797, 71 st Cong
Mar. 2, 1945	Resumption of jurisdiction over shore-arm extension breakwater and over certain navigable waters in Lake Michigan which lie in northwestern part of outer harbor.	Public Law 14, 79 th Cong.
Oct. 23, 1962	Deepen a lake approach channel to 29 by 800 feet wide for 6,600 feet; deepen channel and maneuver area inside harbor entrance to 28 by 1,300 feet wide.	H.Doc. 485, 87 th Cong., 2 nd Sess. ⁴
Dec. 4, 1981	Provides for lock operations and maintenance responsibilities in the interests of navigation.	Sec. 107 of P.L. 97-88
Jul. 30, 1983		P.L. 98-63
CHICAGO SHIP AND SANITARY CANAL DISPERSAL BARRIER I		
(See Section 18 of Text)		
Nov. 29, 1990	Provide a Barrier Demonstration Project to prevent non-indigenous aquatic species from traveling between the Mississippi River and Great Lakes drainage basins	Sec 1202(i)(3) of P.L. 101-636
Oct. 26, 1996	Funding increased to complete project.	P.L. 101-636, Amended
Nov. 8, 2007	The 2 barriers are considered a single project; 100% federal project; upgrade and & make permanent existing barrier; finish construction of barrier II; operate & maintain Barrier I & II to optimize effectiveness; conduct a study of options and technologies to improve efficacy of barriers; credit states; and a feasibility study to prevent spread of invasive species between Great Lakes and Mississippi River Basin and other aquatic pathways.	Sec. 3061, WRDA 2007
CHICAGO SHIP AND SANITARY CANAL DISPERSAL BARRIER II		
(See section 19 of Text)		
Oct. 18, 2004	Provide a Permanent Barrier to prevent non-indigenous aquatic species from traveling between the Mississippi River and Great Lakes drainage basins	Sec. 345 of P.L. 108-335
Nov. 8, 2007	The 2 barriers are considered a single project; 100% federal project; upgrade and & make permanent existing barrier; finish construction of barrier II; operate & maintain Barrier I & II to optimize effectiveness; conduct a study of options and technologies to improve efficacy of barriers; credit states; and a feasibility study to prevent spread of invasive species between Great Lakes and Mississippi River Basin and other aquatic pathways.	Sec. 3061, WRDA 2007

CHICAGO, ILLINOIS, DISTRICT

TABLE 22-B AUTHORIZING LEGISLATION

Acts	Work Authorized	Documents
CHICAGO RIVER, IL		
(See Section 6 of Text)		
Mar. 3, 1899	For project depth of 21 feet in lieu of that fixed by act of Jun 3, 1896.	Specified in act.
Jun. 13, 1902	Turning basins	Specified in act.
Mar. 2, 1907	Interpreted by Chief of Engineers, April 11, 1908, as adopting new work of the then existing project for 21-foot depth.	H. Doc. 95, 56 th Cong. 1 st Sess. (Annual Report, 1900, p. 3863 and Annual Report 1909, p. 709)
Mar. 2, 1919	Eliminated all work except maintenance of main river.	H. Doc. 1294, 64 th Cong. 1 st Sess.
Jul. 24, 1946	Dredging channel 9 feet deep to within 30 feet of existing bulkheads and river banks from North Ave. to Belmont Ave., thence 9 feet deep and 50 feet wide to Addison St.	H. Doc 767, 78 th Cong., 2 nd Sess. ^{6,7}
INDIANA HARBOR, IN		
(See Section 7 of Text)		
Jun 25, 1910	Maintenance of outer harbor. Maintenance of inner harbor channel when deeded free of cost to and accepted by the United States.	H. Doc. 1113, 60 th Cong., 2 nd Sess.
Mar. 4, 1913	Breakwaters.	H. Doc. 690, 62 nd Cong., 2 nd Sess.
Mar 2, 1919	Lighthouse crib, present length and alignment easterly and northerly breakwaters.	Rivers and Harbors Committee Doc. 6, 65 th Cong., 2 nd Sess.
Mar. 20, 1922	Reduce channel length to be maintained in extension to Lake George	Public Law 176, 67 th Cong
Mar. 3, 1925	Authorized Secretary of War to modify project so far as relates to length and alignment of breakwaters and to sell Youngstown Steel and Tube Co. about 1,180 linear feet of shoreward end of existing north breakwater.	
Mar. 2, 1929	Accept 2.3 acres of land for construction of the Forks Turning Basin.	Rivers and Harbors Committee Doc. 21, 71 st Cong., 2 nd Sess.
July 3, 1930 ¹⁰	Existing project channel width and depth in Lake George Branch and turning basin at the Forks	Public Law 219, 72 nd Cong.
Jul. 30, 1932	Authorized Secretary of War to sell to Inland Steel Co., about 1,903 linear feet of southerly end of existing east breakwater.	Rivers and Harbors Committee Doc. 29, 72 nd Cong., 1 st Sess.
Aug. 30, 1935 ¹¹	Extended easterly breakwater, dredge entrance channel and outer harbor, deepen channel between bulkhead fills, widen main stem of canal and portion of Calumet River Branch to 141 st St.	Rivers and Harbors Committee Doc. 13, 75 th Cong., 1 st Sess.
Aug. 28, 1937	Modified conditions of local cooperation required before enlargement of Indiana Harbor Canal is undertaken by United States.	H. Doc. 195, 86 th Cong. 1 st Sess.
Jul. 14, 1960	Increase authorized depths of 29 feet in outer harbor entrance channel, 28 feet in outer harbor and 27 feet in canal entrance channel to first E. J. and E. Ry. Bridge.	H. Doc. 227, 89 th Cong. 1 st Sess.
Oct. 27, 1965 ¹²	Deepen main canal from landward end of canal entrance channel to a point lakeward of Dickey Place Bridge over a modified channel width of 190 feet, except through bridge openings.	

TABLE 22-B AUTHORIZING LEGISLATION

Acts	Work Authorized	Documents
INDIANA HARBOR CDF, IN (See Section 8 of Text)		
LAKE MICHIGAN DIVERSION (See Section 9 of Text)		
Nov. 17, 1986	Responsible for monitoring of Lake Michigan Diversion.	Section 1142, WRDA of 1986
MICHIGAN CITY HARBOR, IN (See Section 10 of Text)		
East breakwater and old east pier enclosing the outer basin.		
Extension of east pier.		
Mar. 3, 1889	Extend east pier and construct detached breakwater.	Recommendations of a Board of Engineers, Annual Report 1870, p. 123. Reports of Boards of Engineers, Annual Rpt 1851, pp. 2187-2189; Annual Report 1882, p. 2264-2266. Annual Report 1897, pp. 2903-2904.
Mar 3, 1905	Lower turning basin. Rebuild west pier as at present location. Present project dimensions of entrance channel.	Joint Resolution of Cong. approved May 13, 1908. Public Law 23.
Jun. 21, 1927	Existing project depth in channel, and in lower and middle turning basins, eliminated improvement of Trail Creek above middle turning basin and uncompleted portion of detached breakwater, abandonment of old east breakwater and old east pier enclosing outer basin.	H. Doc. 279, 69 th Cong., 1 st Sess.
Aug. 30, 1935	Restore and repair westerly 1,000 feet of east breakwater, dredging outer basin and enlarging entrance to basin through east pier.	River and Harbors Committee Doc 34, 74 th Cong., 1 st Sess.
Jul. 14, 1960 Sec. 107	Dredge river channel 50 feet wide and 6 feet deep from upper turning basin to E. Street Bridge.	Detailed Project Report dated June 1965 ⁸ .
WAUKEGAN HARBOR, IL (See Section 11 of Text)		
Jun. 14, 1880	Parallel piers and basins.	Annual Rpt 1880, p. 142
Aug. 3, 1882	Modified location of harbor entrance.	Annual Report 1882, pp. 277, 2162.
Jun. 13, 1902	Detached breakwater, extend piers, increase width of harbor at inner end of north pier and dredge channel and basin to depth of 20 feet.	H. Doc. 343, 56 th Cong., 1 st Sess.
Jul. 3, 1930	Extension of breakwater to shore, dredging near outer end of north piers and enlarging inner basin.	Rivers and Harbors Committee Doc 27, 71 st Cong., 2 nd Sess.
Mar. 2, 1945	Dredge an entrance channel to existing project dimensions from outer end of north pier to project depth in lake and dredge an anchorage area in southwest corner of inner basin to existing project depth. Abandonment of dredging triangular area in southwest corner of inner basin to 18 feet deep.	H. Doc. 116, 77 th Cong., 1 st Sess.

TABLE 22-B AUTHORIZING LEGISLATION

CHICAGO, ILLINOIS, DISTRICT

Acts	Work Authorized	Documents
Dec. 17, 1970 Sec. 201 Oct. 27, 1965	Provides for deepening the existing entrance channel in the outer harbor to 25 feet and extending to the depth in Lake Michigan, at widths varying from 380 feet to 500 feet; deepening the channel between piers to a depth of 23 feet at a width of 180 feet and deepening the inner basin to 23 feet and extending its limits approximately 275 feet northward.	H. Doc. 368, 90 th Cong., 2 nd Sess.
CALUMET REGION, IN		
(See Section 15 of Text)		
Nov. 8, 2007	Amends program limits to \$100,000,000 and allows non-federal credit for work prior to the date of the partnership agreement.	Sec. 5075, WRDA 2007
CASINO BEACH, IL		
(See Section 16 of Text)		
Nov. 17, 1986	Provides for encasing approximately 1,800 feet of the existing Casino Beach jetty in steel sheet piling and a concrete cap and replacing beach fill.	Feasibility Report dated Feb. 1983.
CEDAR LAKE, IN		
Nov. 8, 2007	Specific authority of \$11,050,000 for former Section 206 project.	Sec. 3065, WRDA 2007
CHICAGO SHORELINE, IL		
(See Section 17 of Text)		
Nov. 8, 2007	The Buffalo & Seattle Districts of the Corps of Engineers shall jointly conduct a third-party review of Promontory Point for compliance of design with historic requirements.	Sec. 5072, WRDA 2007
ILLINOIS BEACH STATE PARK, IL		
(See Section 17 of Text)		
Nov. 17, 1986	Provides for 46 offshore breakwaters approximately 150 feet long, initial beach nourishment of 100,000 cubic yards and periodic nourishment of 100,000 cubic yards at 5-year intervals.	Feasibility Report dated June 1982.
INDIANA DUNES NATIONAL LAKESHORE, BEVERLY SHORES, IN		
(See Section 18 of Text)		
Dec. 4, 1981	Provides for emergency shore protection repairs to stone revetment initially constructed in 1973.	Public Law 97-88
Jul. 30, 1983	Provides for operations and maintenance of shore protection measures.	Public Law 98-63
INDIANA SHORELINE EROSION, IN		
(See Section 19 of Text)		
Nov. 17, 1986	Beach nourishment of 2-mile reach of shore west of Michigan City Harbor, Indiana	Sec. 501, WRDA 1986
DES PLAINES, IL		
(See Sections 23 of Text)		
Aug. 17, 1999	Project has six structural features: Prospect Heights (Levee 37), Des Plaines (Levee 50), Big Bend Lake expansion, North Fork Mill	Sec. 101, WRDA 1999

TABLE 22-B

AUTHORIZING LEGISLATION

REPORT OF THE SECRETARY OF THE ARMY ON CIVIL WORKS ACTIVITIES FOR FY 2007

Acts	Work Authorized	Documents
	Creek dam raise, Buffalo Creek expansion, Van Patten Woods lateral storage area.	
	LAKE GEORGE, HOBART, IN (See Section 24 of Text)	
Nov. 17, 1986	Removal of silt, aquatic growth and construction of silt traps.	Sec. 602, WRDA 1986.
	LITTLE CALUMET RIVER, IN (See Section 25 of Text)	
Nov 17, 1986	Provides for levee construction, a diversion control structure at the mouth of Hart Ditch. Permanent evacuation of a portion of the Black Oak area of Gary and non-structural flood proofing measures in Gary.	Sec. 401, WRDA 1986
Nov. 19, 2005	Authorizes project to exceed original Section 902 (b) cost limits. New total cost of \$198,000,000; fed share is \$148,500,000; non-fed share is \$49,500,000.	Sec. 127 of P.L. 109-103
	LITTLE CALUMET RIVER BASIN, CADY MARSH DITCH, IN (See Section 26 of Text)	
Nov. 17, 1986	Widening and deepening 1,250 feet of Cady Marsh Ditch, installing 4,880 feet of pipe and excavating 2,850 feet of open channel.	Feasibility Report dated April 1984
	McCOOK AND THORNTON RESERVOIRS, IL (See Section 27 of Text)	
Nov. 17, 1988	Provides for construction of two floodwater storage reservoirs in the quarries of the same name.	Sec. 3, WRDA 1988
	NORTH BRANCH CHICAGO RIVER, IL (See Sections 22 and 28 of Text)	
Nov. 17, 1986	Construction of three reservoirs and reimbursement to locals for 50% of the costs of Techny and Mid-Fork Reservoirs	H. Doc. 100-72, 100 th Cong., 1 st Sess., Sec. 401, WRDA 1986.
Dec. 31, 1970	Clearing fallen trees, roots and other debris and objects which contribute to flooding.	River and Harbor Act (Sec. 116)
	O'HARE RESERVOIR, IL (See Section 29 of Text)	
Nov. 17, 1986	Provides for a 1,050 acre-foot excavated reservoir.	Sec. 401, WRDA 1986
	THORNTON RESERVOIR, IL (See Section 31 of Text)	
Nov. 8, 2007	Allows the construction of the flood control project by non-federal interests.	Sec. 5157, WRDA 2007
	LAKE MICHIGAN WATERFRONT (See Section 125 of Text)	
Nov. 19, 2005	Provides ecosystem restoration and the management of Contaminates along Lake Michigan and related areas in Lake Porter Counties, Indiana.	Sec. 125 of P.L. 109-103

NASHVILLE, TN, DISTRICT

This district comprises portions of southern Kentucky, southwestern Virginia, western North Carolina, northern Georgia and Alabama, northeastern Mississippi and practically

all of Tennessee except western portion, and embraces drainage basins of Tennessee and Cumberland Rivers and their tributaries.

NAVIGATION

1. CHICKAMAUGA LOCK AND DAM, TN

Location. Chickamauga Lock is seven miles northeast of Chattanooga at Tennessee River Mile 471 in Hamilton County, TN.

Existing Project. The 60 feet x 360 feet lock has been in operation since 1940 and passes over 1.1 million tons of traffic each year. Soon after construction, TVA recognized that an alkali aggregate reaction problem (commonly called concrete growth) existed throughout the project. This expansion of the concrete leads to stability concerns throughout the structure and misalignment of mechanical components. The problem will continue to affect lock operations and eventually result in closure of the lock. TVA and the Corps have determined the lock could remain open until at least 2010 with annual aggressive maintenance but costs to maintain the lock will begin to exceed replacement costs. Lock closure would be a significant impact to the region and result in lost access to over 300 miles of the upper Tennessee River. This reach includes the city of Knoxville, TN, 2 TVA nuclear power plants, numerous industries and recreation facilities, and the DOE facilities at Oak Ridge, TN.

Project Description. The existing lock will be replaced through construction of a 110 ft x 600 ft lock riverward of the existing structure and downstream of the dam. The project was authorized for construction by PL 108-7 and includes at least three major construction contracts; road, bridge and utilities relocations; cofferdam construction; and construction of the new lock and decommissioning of the existing lock. Based on an estimated construction cost of \$364.6 M, the new lock project has a benefit/cost ratio of 1.1 @ 7%.

Activities during fiscal year. FY 2007 funds were used to complete road and bridge relocations and continue cofferdam construction. Lock design also continued for a planned FY 2010 lock construction award.

2. CUMBERLAND RIVER, TN AND KY

Location. Formed by junction of Poor and Clover Forks in Harlan County, KY, about 694.2 miles above its mouth, and flows west to Burnside, KY, from whence it makes a loop southwestward into Tennessee, passes Nashville, and returns northwestward to Kentucky, emptying into Ohio River near Smithland, KY (See Geological Survey base maps of Tennessee and Kentucky.)

Previous projects. For details see pages 1898 and 1901 of Annual Report for 1915, and page 1208 of Annual Report for 1938, and pages 1069 and 1070 of Annual Report for 1962.

Existing project. For details, see Annual Report for FY02.

Local cooperation. Under modified project for 9-foot navigation and multiple-purpose development, recreation features of reservoir components are subject to certain conditions of non-Federal cost-sharing under Federal Water Project Recreation Act of 1965.

Terminal facilities. There are 42 terminals on the Cumberland River (5 Municipally owned and open for public

use; 5 government owned facilities and 32 privately owned facilities). A total of 18 terminals have railroad connections. Principal commodities handled are petroleum products, stone, sands, gravel, coal, coke, iron, steel, chemicals and grain. Facilities considered adequate for existing commerce. For further information see page 695 of Annual Report for 1969.

Operations during fiscal year. New work: None. Maintenance: Operations and Maintenance work included continued spillway gate repairs at Old Hickory Dam. Utility improvements were made at Harpeth River Campground on Cheatham Lake and the electric service was upgraded at Cedar Creek Campground on Old Hickory Lake. The roofs were replaced at Cheatham Power Plant and Lake Barkley Shop Building. An estimated 25.3 million tons of commodities were locked through the Cumberland River Locks. Commercial lockages were approximately 6,100 and 4,100 recreational craft were also locked through. Total sales energy generated at Barkley Dam (572,892,562 kw-hr) was made available through Southeastern Power Association to the Tennessee Valley Authority, Southern Illinois Power Cooperative, Big Rivers Rural Electric Cooperative Corporation, and Indiana Statewide Rural Electric Cooperative, Inc., Hoosier Energy Division. Total sales energy generated at Cheatham Dam (137,797,505 kw-hr), Cordell Hull (273,633,885 kw-hr), and Old Hickory (337,336,420 kw-hr) was made available for distribution. Activities under reservoir management program comprising malaria control, shoreline sanitation, land management and disposal, and maintenance of public-use facilities continued.

3. KENTUCKY LOCK ADDITION, KY

Location. Kentucky Lock and Dam is located in western Kentucky at Mile 22.4 of the Tennessee River between Livingston and Marshall Counties.

Existing Project. Kentucky L&D was completed in 1945 by the Tennessee Valley Authority. TVA continues to operate the dam and powerhouse while operation of the 110'x600' navigation lock is the responsibility of the Nashville District. Products from 20 states pass through the system of Kentucky and Barkley Locks, the lower-most locks on the Tennessee and Cumberland Rivers, respectively. Over 80% of the commercial tows hauling these products pass through KY Lock instead of Barkley Lock because of difficult and costly navigation on the Cumberland River below Barkley. Since most of the tows are greater than 600' in length, they must perform a time-consuming double lockage to transit through the existing 600' long KY Lock. This results in average delays of between four to six hours per tow under existing traffic levels. Since the traffic levels are expected to grow in the near future, these delays will also increase. The last traffic forecast developed in 1995 estimated that 43 M tons of products would be transported through the Kentucky-Barkley system in the year 2000. Actual tonnage for the system in 1997 was 43.5 M tons and decreased slightly in the following few years. The system has seen increased tonnage in the last few years with 2006 tonnage at 42.5 M tons. It typically costs

a tow over \$400/hour to wait in line at the lock. Construction of a new 1200' lock would eliminate the delay time in the near term and drastically shorten it for forecasted traffic levels past the year 2020.

Project Description. The 1992 Kentucky Lock Feasibility report recommended a new 110' X 1200' lock adjacent and landward of the existing 110' X 600' lock. The project was authorized for construction in WRDA 96. Average annual benefits attributed to a new lock are \$71M (Oct. '03). Most of these benefits are associated with improving the performance of the lock by reducing traffic delays and disruptive lock outages for maintenance and major rehabilitation work. Based on an estimated construction cost of \$663.5M (Oct. '07), the new lock project has a Benefit/Cost ratio of 2.5 (@7%). Other project features in addition to the new lock itself are three major relocation efforts: 1) four large TVA transmission towers, 2) about 2 miles of the Paducah and Louisville Railway, including a major river bridge, and 3) about 2 miles of U.S. Highway 62, also on a new major river bridge.

Activities during fiscal year. FY 2007 funding of \$20.1 M was used mainly to continue construction on the \$98M Bridge Superstructure contract. By the end of FY 2007, this contract was 28% complete. Limited advances in the design of the lock were also funded in FY 2007.

4. TENNESSEE RIVER, TN, AL AND KY

Location. Formed by junction of French Broad and Holston Rivers in eastern Tennessee, 4.4 miles above Gay Street Bridge at Knoxville, flows southwest into northern Alabama, thence in a generally westerly course across north Alabama, to northeast boundary of Mississippi, thence nearly due north across Tennessee and Kentucky, entering Ohio River at Paducah, 652.1 miles from junction of French Broad and Holston Rivers. (See Geological survey base map of Tennessee River Basin.)

Previous projects. For details see pages 1902-1906, Annual Report for 1915; pages 1190-1194, 1196-1216, and 1220-1222, Annual Report for 1929; and page 1216, Annual Report for 1938.

Existing project. Originally provided for permanent improvement of river for a navigable depth of 9 feet at low water from mouth about 650 miles to Knoxville, TN. Only work performed by the Corps was construction of locks at General Joe Wheeler Dam and Wilson Dam. Tennessee Valley Authority program provided for obtaining authorized 9-foot project by construction of high dams and locks and utilization of certain locks and dams previously constructed under jurisdiction of the Corps. (See Table 23-B for Authorizing Legislation.) Subsequent construction by the TVA of Melton Hill Dam extends navigable channel of Tennessee River system up the Clinch River about 38 miles above damsite (mile 23.1) to vicinity of Clinton, TN. (See table 23-I on Tennessee River.) In accordance with general navigation laws placing control and supervision over navigable waters under direction of Secretary of the Army, the Corps of Engineers operates and maintains all locks, and

maintains navigation channels and safety harbors by performing all necessary maintenance dredging and snagging operations. For information concerning other functions of the Corps under division of responsibilities for Tennessee River since adoption of Tennessee Valley Authority Act of 1933, see page 1084 of Annual Report for 1962.

Local cooperation. Authorization requires no local cooperation in construction of alternate system of low dams. It does, however, provide that if high dams are built before the United States builds projected locks and low dams which are to be replaced, the United States shall contribute to cost of substituted structures an amount equal to estimated cost of works of navigation for which substitution is made.

Terminal facilities. There are 150 terminals on the Tennessee River (13 municipally owned, 15 government owned facilities and 122 privately owned facilities). A total of 79 terminals have railroad connections. Principal commodities handled are petroleum products, stone, sand, gravel, coal, coke, grain, chemicals, iron, and steel. Facilities considered adequate for existing commerce. A list of terminals is revised annually and can be obtained from Division Engineer, Ohio River Division, Corps of Engineers, Cincinnati, Ohio. For further information see page 698 of Annual Report for 1969.

Operations during fiscal year. Maintenance: Major maintenance included reinstallation of the upper lift gate and new gate chains at Wilson Main Lock which was damaged severely when struck by a barge and was subsequently removed for repairs. The Auxiliary Lock was also struck and was repaired. Installation was begun on the replacement tow haulage unit at Pickwick Auxiliary Lock. Replacement gear boxes were purchased. Channel dredging was performed on the Hiwassee River mile 12.0 – 12.7. Approximately 18,400 cubic yards of silt and sand were removed. Two mooring cells were constructed at mile 299. An estimated 53.9 million tons of commodities were locked through the Tennessee River Locks. Commercial lockages were approximately 16,700 and 17,500 recreational craft were also locked through. The long-term aggressive maintenance program continues to keep the Chickamauga Lock operational. Major maintenance to keep the lock operational included a dewatering and revisions to the upstream approach wall shear keys for structural support and to allow for continued Alkali-Aggregate Reaction (AAR) concrete growth. The downstream riverwall anchor bars and strut arm were repaired and the design for the lower miter gate anchorage replacement was completed. We created our first yearly instrumentation report, repaired instruments and installed new crack meters.

5. TENNESSEE-TOMBIGBEE WATERWAY, AL AND MS

Location. West Central Alabama and Northeastern Mississippi; in Marengo, Sumter, Greene and Pickens Counties, Alabama, and Noxubee, Lowndes, Clay, Monroe, Itawamba, Prentiss and Tishomingo Counties, Mississippi.

Existing project. For details, see Annual Report for FY02.

Local cooperation. Authorization requires local interests to construct, maintain and operate all highway bridges, construct and maintain all highway relocations or alterations, make and maintain alterations as required to sewer, water supply and drainage facilities, assume cost of operation and maintenance of utility crossings, provide and maintain as required suitable and adequate river and canal terminals in accordance with plans approved by the Secretary of the Army and the Chief of Engineers.

Operations during fiscal year. The Mobile District is responsible for operation and maintenance of the entire Tennessee-Tombigbee Waterway. The project is 100% complete.

6. NAVIGATION WORK UNDER SPECIAL AUTHORIZATION

Navigation activities pursuant to Sec. 107, Public Law 86-645, as amended (preauthorization).

During FY07 no funds were expended for Section 107 projects.

ALTERATION OF BRIDGES

7. AUTHORIZED ALTERATION OF BRIDGES

Work on Woodland Street Bridge, under Truman-Hobbs Act, was initiated in 1965 and completed in 1966. Costs were \$987,632. For details see page 922 of Annual Report for 1967.

FLOOD CONTROL

8. BIG SOUTH FORK NATIONAL RIVER AND RECREATIONAL AREA, KY AND TN

Location. The project is located in Northeastern Tennessee and Southeastern Kentucky along the Big South Fork River and its tributaries in Pickett, Scott, Fentress, and Morgan Counties, Tennessee, and McCreary County, Kentucky.

Existing project. A National River and Recreation Area was established in accordance with the concept included in the interagency report prepared pursuant to section 208 of Flood Control Act of 1968. Total acreage was not to exceed 125,000 acres. The act specifically established the National Area for the purpose of preserving and interpreting the scenic, biological, archeological and historical resources of the river gorge area and developing the natural recreational potential of the area. The project was authorized by the Water Resource Development Acts of 1974, 1976, and 1986. (See table 23B for authorizing legislation). The authorized cost (ceiling) for the project was \$156,122,000. \$112,588,920 was appropriated to the Corps of Engineers for design and construction of park facilities. The first construction contract was awarded in June 1981. By Memorandum of Agreement dated 1 October 1990 jurisdiction of the area was transferred to The Department of Interior.

Local cooperation. None required.

Operation during fiscal year. The Memorandum of Agreement between the Department of Army and the Department of Interior, transferring jurisdiction of the Big South Fork National River and Recreation Area, itemized activities to be completed by the Army. No construction items were completed this fiscal year.

9. BLACK FOX, MURFREE, AND OAKLAND SPRINGS, TN

Location. Black Fox, Murfree, and Oaklands Springs, wetlands lie in Murfreesboro, Tennessee.

Existing project. Project features include trails, boardwalks, observation platforms, parking, removing exotic invasive vegetation, and planting native species. At Oaklands, the existing ante-bellum mansion will be enhanced by planting tree species native to Tennessee. Ecosystem restoration features include the creation of additional wetlands and in-stream structures. Murfree Springs plans include demolishing several existing buildings to provide space for an environmental education center and creating additional wetland habitat. Only ecosystem restoration measures will be constructed at Black Fox. Funding was provided from FY95 thru FY02 for Master Plan, Design, and Construction on Murfree, Oaklands and Black Fox. The Oaklands Phase I and Murfree Springs Phase II contracts were awarded in Sep 01 and construction continued through FY02 and FY03. Construction at Black Fox was initiated in Oct 01 and completed in Dec 02. A supplement to the decision document was completed in May 02 and approved by the Assistant Secretary of the Army for Civil Works in Dec 02. FY03 appropriations were used to bring the Phase I Oaklands and Phase II Murfree contracts to 99% completion. Design of Oaklands Phase II and Murfree Phase III and the interpretive features was also initiated. FY04 appropriations were used to complete design of Oaklands Phase II and Murfree Phase III, initiate fabrication and installation of the signs and initiate a design contract. In FY05, carryover funds were used to initiate construction of Oaklands Phase II and Murfree Phase III. Sign installation and the final design contract were also completed. FY06 funds were used to bring Oaklands Phase II to 85% completion and Murfree Phase III to 95% completion. Additional trees and native vegetation were also added to both sites.

Local cooperation. The project authorization by WRDA 96 and the City of Murfreesboro, TN is the local sponsor. Cost sharing is 75% Federal and 25% non-Federal. Real estate costs over 25% will be borne by the Federal Government.

Operations during fiscal year. FY07 carryover funds were used to complete Oaklands Phase II and Murfree Phase III. Design of Oaklands Phase III was begun.

10. HAMILTON COUNTY STREAMBANK STABILIZATION, TN

Location. The project is on the Tennessee River, in central Chattanooga, TN from approximate river mile 464 to 468.

The bank stabilization consists of stone protection at 5 sites along this reach of the river.

Existing project: High floodwaters have caused slope failures and erosion along both previously protected and unprotected areas of the riverbank. Endangered facilities include a large interceptor sewer line (which serves a major portion of North Chattanooga), riverwalk trails, observation decks, fishing piers, drain pipes, ramps, power poles, roads, bridge abutments and parks/recreation facilities. Streambank protection is stone armament using graded limestone (referred to as "riprap").

Local cooperation: WRDA of 1996 authorized \$7.5 M (Federal) for Streambank Stabilization. Hamilton County was the project's sponsor; the City of Chattanooga also sponsored the project through a separate agreement with Hamilton County. Chattanooga and Hamilton County provided funding to initiate a feasibility study in FY97 under our Work for Others Program. This information was the basis for development of the Detailed Project Report (DPR). The project was completed and fiscally closed-out during FY05.

Operations during fiscal year: None.

11. MARTINS FORK LAKE, KY

Location. Dam located at mile 15.6 on Martins Fork of Clover Fork, Cumberland River, about 10 miles southeast of city of Harlan, with reservoir extending about 6 miles upstream within Harlan County, southeastern Kentucky.

Existing project. Multiple-purpose improvement Combining flood control with water quality control and recreation development adopted by 1965 Flood Control Act (H.Doc. 244, 89th Cong.), in general accordance with recommendations. Dam is concrete type, 504 feet long and rising 97 feet above streambed. Outlet works provide for release of water from reservoir at varying levels. Drainage area above damsite is 55.7 square miles. At full pool level, spillway crest at elevation 1341 above mean sea level, reservoir will cover 578 acres and contain 21,120 acre-feet of storage capacity. Provision is made for 17,450 acre-feet of reservoir capacity between elevations 1341 and 1300 for control of floods in winter and spring season, and 14,360 acre-feet (El. 1341-1310) during summer and fall, in conjunction with which storage of 3,090 acre-feet would be available on a seasonal basis to meet streamflow requirements for water quality control and fish life below the dam. A minimum permanent pool of 3,670 acre-feet, 274 acres in extent, is available during the potential flood seasons; and during late spring and summer when flood storage can be reduced, the lake is operated generally at a higher level (El. 1310) to maintain a larger surface area of 340 acres for recreation and provide the required seasonal storage for releases of water during critical low-flow periods. Project prevents a major portion of average annual flood losses at Harlan and results in significant stage reductions with related benefits along rural reaches and to other urban areas downstream. Actual cost of project including \$95,000 code 710 funds is \$20,479,911. First

construction contract awarded in December 1972. Project completed for beneficial use in September 1978.

Local cooperation. Federal Water Project Recreation Act of 1965 (P.L. 89-72) applies in regard to non-Federal participation in recreation development, in addition to which local interests are to provide certain safeguards to ensure functioning of reservoir as intended. In May 1981 a final recreation cost-sharing contract with Harlan County was approved and certain recreation facilities have been jointly developed by the Corps and the County. These facilities, consisting of a swimming beach and a picnic area are now operated and maintained by Harlan County. Recreation investment to date (Corps and Local) is about \$100,000.

Operations during fiscal year. New work: None. Maintenance: Operations and Maintenance work included replacement of the project backup generator.

12. MIDDLESBORO, CUMBERLAND RIVER BASIN, KY

Location. At Middlesboro, Ky., on Yellow Creek, a tributary entering Cumberland River about 660 miles above its mouth.

Existing project. A system of canals and levees around one side of town, arranged so as to divert most headwaters of Yellow Creek away from present channel through heart of city. Protection is thus afforded in large measure to life and property within business district and a large part of residential section. For project details, see page 1088 of Annual Report for 1962.

Local cooperation. None required.

Operations during fiscal year. New work: None. Maintenance: Only routine maintenance.

13. TUG AND LEVISA FORKS OF THE BIG SANDY RIVER AND UPPER CUMBERLAND, WV, VA AND KY

Location. The project is located in the State of West Virginia and the Commonwealths of Kentucky and Virginia. The Cumberland portion consists of the Upper Cumberland River Basin, above Cumberland Falls, KY. The basin is approximately 100 miles in length, averaging 30 miles in width at the lower portion and 10 miles in width upstream at Harlan KY. The Big Sandy Basin is within the Huntington District and the Cumberland within the Nashville District.

Existing project. Provides for flood control measures for communities in the Tug and Levisa Forks and Upper Cumberland River Basins. The Cumberland portion has been assigned to the Nashville District. Only activities of the Nashville District are reported herein. Estimated Federal cost of new work under jurisdiction of the Nashville District is \$464,087,000. The project was authorized by the Energy and Water Development Appropriation Act of 1981, Section 202 of PL 96-367.

Local cooperation. Flood protection costs for City of Cumberland, Middlesborough, Harlan County, and Clover Fork Projects are shared with their sponsors in accordance with provisions defined by WRDA 86. The sponsors have

responsibility to operate and maintain such works upon completion of construction.

Operations during fiscal year. Nonstructural evacuations and floodproofings continued in the Clover Fork, Poor Fork, and Cumberland River basins. Plans and specifications and real estate work continued for structural elements at the City of Cumberland.

14. OHIO RIVER BASIN (NASHVILLE DISTRICT)

Location. A series of levees, floodwalls, channel improvements, and reservoirs in Ohio River Basin within Nashville District.

Existing project. The general comprehensive plans approved for flood control and other purposes in Ohio River Basin is set forth in legislation listed in Table 23-B. Individual projects, local protection projects and lakes, considered in comprehensive plan within Nashville District are listed in Table 23-K.

15. INSPECTION OF COMPLETED FLOOD CONTROL PROJECTS

Flood Control Act of June 22, 1936, and subsequent acts, requires local interests furnish assurances they will maintain and operate certain local protection projects after completion in accordance with regulations prescribed by Secretary of the Army. District Engineers are responsible for administration of these regulations within their respective districts. Maintenance inspections were made during fiscal year of completed protective works in localities transferred to local interests for maintenance and operation. Local interests were advised, as necessary, of measures required to maintain projects in accordance with standards prescribed by regulations. Fiscal year cost was \$36,381. Total cost to September 30, 2007 was \$769,082. For project inspection data see table 23-M.

16. FLOOD CONTROL WORK UNDER SPECIAL AUTHORIZATION

Flood control and coastal emergencies (Public Law 99, 84th Cong., and antecedent legislation). Actual Federal cost for the fiscal year was \$314,592 for disaster preparedness.

MULTIPLE-PURPOSE PROJECTS, INCLUDING POWER

17. CENTER HILL LAKE, OHIO RIVER BASIN, TN

Location. Dam is on Caney Fork River, 26.6 miles above its confluence with Cumberland River (mile 309.2) at Carthage, TN. It is in DeKalb County, TN., about 55 miles east of Nashville, and 14 miles southeast of Carthage, TN. Reservoir extends about 64 miles up main stream and about 10 miles up Falling Water River and lies within DeKalb, Putnam, White, and Warren Counties, TN.

Existing project. A combination earth and concrete gravity-type dam, hydroelectric powerplant, and reservoir for primary purposes of flood control and power production, with

a permanent pool for public use and conservation purposes. In addition to main dam structure, provision was made for a rolled-earth dike to close a saddle in reservoir rim near damsite. For further details, see page 1099 of 1962 Annual Report.

Local cooperation. None required on completed project. Recreation development subject to certain conditions of non-Federal cost-sharing under Federal Water Project Recreation Act of 1965.

Operations during fiscal year. New work: None. Maintenance: Dam was operated and structure and its appurtenance maintained as required. Operation of powerplant was continuous except for normal interruptions and necessary shutdowns for inspection and maintenance purposes. Total sales energy generated (126,822,200 kw-hr) was made available through the Southeastern Power Association to Tennessee Valley Authority for distribution. Activities under reservoir management involved land management, public relations, and maintenance of public use facilities Operations and Maintenance work included replacement of the power plant roof. Four launching ramps were extended due to lowering of the lake level.

Dam Safety: A Major Rehabilitation Evaluation report was approved in August 2006. The NED plan, and optimum plan, is to install permanent cutoff walls and supplemental grouting into the main embankment and saddle dam foundations. Grouting is also proposed to arrest seepage along both abutments, rims, and the concrete dam. For environmental mitigation, the recommended plan also includes manufacture and installation of an orifice gate (bulkhead with openings) on the upstream side of a sluice to provide the optimum amount of minimum flow of 200 cfs. The plan also includes rehabilitation of the powerhouse station service generator so it can be safely run, if needed, to augment flow for water quality downstream of the dam. The recommendation yields net NED annual benefits of over \$36M and has a Benefit-to-Cost ratio of 3.4. The total cost of the plan is \$263M (fully funded costs). The remediation project is estimated to be completed by the end of 2014. Funds expended during FY 2007 totaled \$3.06M for preparation of construction contract documents, exploratory drilling, haul road construction, and intensive public education.

18. DALE HOLLOW LAKE, OHIO RIVER BASIN, TN AND KY

Location. Dam is on Obey River, 7.3 miles above its confluence with Cumberland River (mile 380.9) at Celina, TN. It is in Clay County, TN, and about 80 miles northeast of Nashville, TN 28 miles north of Cookeville, TN, and 3 miles east of Celina, TN. Reservoir extends about 51 miles up main stream, 10 miles up East Fork, and 6 miles up West Fork of Obey River, and lies within Cumberland and Clinton Counties, KY, and Clay, Pickett, Overton, and Fentress Counties, TN.

Existing project. A concrete gravity-type dam, hydroelectric powerplant, and reservoir for primary purposes of

flood control and power production with a permanent pool for public use and conservation purposes. See page 1096 of 1962 Annual Report for project details. Cost of project including \$2,195,600 code 710 funds and \$150,000 non-Federal funds recreation facilities under the completed projects program is \$28,317,746.

Local cooperation. None required on completed project; future recreation development subject to certain conditions of non-Federal cost-sharing under Federal Water Project Recreation Act of 1965.

Operations during fiscal year. New work: None. Maintenance: Dam was operated and structures and appurtenances maintained as required. Operation of powerplant was continuous except for normal interruptions and necessary shutdowns for inspection and maintenance purposes. Total sales energy generated (65,078,000 kw-hr) was made available through the Southeastern Power Association to Tennessee Valley Authority for distribution. Activities under reservoir management program involved public relations, and management and maintenance of public-use facilities. Work continued to convert the power plant to remote control operation.

19. J. PERCY PRIEST DAM AND RESERVOIR, OHIO, RIVER BASIN, TN

Location. Damsite is on Stones River, 6.8 miles above its confluence with Cumberland River (mile 205.9); in Davidson County, TN.; and about 7 miles east of Nashville, TN. Reservoir extends southeasterly from dam about 32 miles along main stream, 10 miles up East Fork, 6.5 miles up West Fork, and for shorter distances up other tributaries of Stones River; and lies within Davidson, Rutherford, and Wilson Counties, TN.

Existing project. A combination earth and concrete gravity-type dam, hydroelectric powerplant, and reservoir for primary purposes of flood control, power production and recreation. For further details see page 703 of 1969 Annual Report. Cost of project including \$3,260,400 under code 710 funds and \$46,000 non-Federal funds for recreation facilities under the completed projects program is \$56,914,039. **Local cooperation.** Recreation development subject to certain conditions of non-Federal cost-sharing under Federal Water Project Recreation Act of 1965.

Operations during fiscal year. New work: None. Maintenance: Dam was operated and structures and appurtenances maintained as required. Total sales energy generated (28,957,300 kw-hr) was made available through Southeastern Power Association to Tennessee Valley Authority for distribution. Activities under reservoir management program involved public relations, fish and wildlife management, and maintenance of public-use facilities. Work was completed on replacement of the Anderson Rd Day Use Area Restroom.

20. LAUREL RIVER LAKE, OHIO RIVER BASIN, KY

Location. Damsite is at mile 2.3 on Laurel River, a tributary of Cumberland River, in south-central Kentucky. The two streams meet about 9 miles below Cumberland Falls, a prominent physiographic feature at head of Lake Cumberland, which is formed by Wolf Creek Dam. Reservoir extends 19.2 miles upstream to site of Corbin, KY water-supply dam and lies within Laurel and Whitley Counties.

Existing project. Project approved in general accordance with recommendations of House Document 413, 86th Congress, by 1960 Flood Control Act, as amended by Public Law 88-253, was designed for purposes of flood control, power, and recreation as an integral unit of a coordinated plan for development of water resources of Cumberland River Basin. With the view of net gain in power potential on a system basis, the plan of improvement incorporated appropriate flood control storage in the proposed project and corresponding adjustment in operations of Wolf Creek Dam - Lake Cumberland for flood control and power, which in effect constituted a transfer of reservoir capacity without entailing a change in flood control benefits. Further detailed study giving full consideration to power capabilities and marketing arrangements indicated the advantage of maintaining present storage allocation at Wolf Creek and use of all available storage capacity of Laurel River Lake for power. The power plant is complete. Recreation was completed in FY86.

Local cooperation. None required.

Operations during fiscal year. New work: None. Maintenance: Dam was operated and structures and Appurtenances maintained as required. Total sales energy generated (38,293,000 kw-hr) was made available through Southeastern Power Association for distribution. Replacement SCADA equipment was purchased for the power plant.

21. WOLF CREEK DAM - LAKE CUMBERLAND, OHIO RIVER BASIN, KY

Location. Wolf Creek Dam is on Cumberland River at mile 460.0 (above mouth) in Russell County, KY, about 10 miles southwest of Jamestown and 12 miles north of Albany, KY. Lake Cumberland extends 101 miles up main stream, 48 miles up South Fork of Cumberland River, in Russell, Clinton, Wayne, Pulaski, McCreary, Laurel, and Whitley Counties, KY.

Existing project. A combination earth and concrete gravity-type dam, hydroelectric powerplant, and reservoir for primary purposes of flood control and power production, with a permanent pool for public-use and conservation purposes. See page 1094 of 1962 Annual Report for project details. Cost of project is \$188,267,195. This cost includes \$3,259,372 code 710 funds, \$880,000 non-Federal funds for recreation facilities under the completed pro-gram, and \$104,999,237 for major rehabilitation. WRDA 96 authorized an Uprate Project of the hydroelectric power-plant. Activity involving the integrity of the structure began in 1968 when a leak or seepage developed in the embankment. The major rehab embankment contract was physically completed in September 1982.

Local cooperation. None required on completed project; future recreation development subject to certain conditions of non-Federal cost-sharing under Federal Water Project Recreation Act of 1965.

Operations during fiscal year. New work: None. Maintenance: Dam was operated and structures and appurtenances maintained as required. Operation of powerplant was continuous except for normal interruptions and necessary shutdowns for inspection and maintenance purposes. Total sales energy generated (537,779,200 kw-hr) was made available through Southeastern Power Association to Tennessee Valley Authority for distribution. Activities under reservoir management program involved land management activities, public relations, and maintenance of public-use facilities. Operations and Maintenance work included installing an alternate water supply to the Fish Hatchery, extending launching ramps, and awarding a contract for orifice gates due to lowering of the lake level. The power plant roof was replaced. Recreation Area Modernization continued, the road was paved and a contract was awarded to construct a showerhouse at Kendall Recreation.

Dam Safety: Construction to repair foundation seepage problems began in January 2007. The three major components are: relocation of the Halcomb's Landing Boat Launching Facility; foundation grouting including a dual line grout curtain along the entire length of the earthen embankment; and installation of a concrete barrier wall to a depth of 275 feet. The work on Halcomb's Landing was completed in November 2007. The foundation grouting is approximately 60% complete. A request for proposals to install the concrete barrier wall was issued in December 2007 with anticipated award in July 2008. The fully funded construction costs are estimated at \$317M. Funds expended during FY 2007 totaled \$43.6M.

GENERAL INVESTIGATIONS

22. SURVEYS

Costs for this period were \$407,572 for which \$159,370 was for Flood Damage Prevention Studies, \$31,635 for Special Studies, \$61,920 for Miscellaneous Activities and \$154,647 for Coordination With Other Agencies and Non-Federal Interests.

23. COLLECTION AND STUDY OF BASIC DATA

Costs for this period were \$178,170 for which \$152,395 was for Floodplain Management Services and \$25,775 for Hydrologic Studies.

24. PRECONSTRUCTION ENGINEERING AND DESIGN

There were no funds expended for this activity during this fiscal year.

NASHVILLE, TN, DISTRICT

TABLE 23-A COST AND FINANCIAL STATEMENT

TABLE 23-A
(continued)

COST AND FINANCIAL STATEMENT

1. Includes \$9,707,354 for abandoned and/or replaced works under the old Cumberland River system. (Amount includes \$826,253 for new work and \$3,266,706 for maintenance on previous project.)
2. Includes \$61,733 public works acceleration funds, and \$102,966 contributed by the State of Kentucky and \$6,750 contributed by metropolitan Nashville, TN.
3. Includes \$298,000 funds provided from the Productive Employment Appropriation Act (PL 98-8) of 1983.
4. Includes \$955,889 for special recreation use fees, and \$2,628,257 for maintenance and operation of dams and other improvements of navigable waters, and \$1,892,000 funds provided from the Productive Employment Appropriation Act (PL 98-8) of 1983.
5. Includes \$955,889 for special recreation use fees, and \$2,628,257 for maintenance and operation of dams and other improvements of navigable waters, and \$1,892,000 funds provided
6. Includes \$14,007,193 for new work and excludes \$4,005,175 for maintenance on previous projects.
7. Includes \$495,763 for maintenance and operation of dams and other improvements of navigable waters, and \$764,000 funds provided from the Productive Employment Appropriation Act (PL 98-8) of 1983.
8. Includes \$495,763 for maintenance and operation of dams and other improvements of navigable waters, and \$764,000 funds provided from the Productive Employment Appropriation Act (PL 98-8) of 1983.
9. Includes \$300,000 funds provided from the Productive Employment Appropriation Act (PL 98-8) of 1983.
10. Includes \$300,000 funds provided from the Productive Employment Appropriation Act (PL 98-8) of 1983.
11. Includes \$1,156,963 contributed by Hamilton County, TN
12. Includes \$1,156,963 contributed by Hamilton County, TN
13. Includes \$33,876 Emergency Relief Funds.
14. Includes \$24,355,829 contributed by the State of Kentucky.
15. Includes \$23,380,255 contributed by the State of Kentucky.
16. Includes \$35,896 public works acceleration funds, and \$148,000 funds provided from the Productive Employment Appropriation Act (PL 98-8) of 1983.
17. Includes \$35,896 public works acceleration funds, and \$148,000 funds provided from the Productive Employment Appropriation Act (PL 98-8) of 1983.
18. Includes \$292,280 funds for special recreation use fees, and \$1,083,678 for maintenance and operation of dams and other improvements of navigable waters, and \$91,000 funds provided from the Productive Employment Appropriation Act (PL 98-8) of 1983.
19. Includes \$292,280 funds for special recreation use fees, and \$1,083,678 for maintenance and operation of dams and other improvements of navigable waters, and \$91,000 funds provided from the Productive Employment Appropriation Act (PL 98-8) of 1983.
20. Includes \$51,789 public works funds and \$150,000 contributed by the State of Tennessee, and \$341,000 funds provided from the Productive Employment Appropriation Act (PL 98-8) of 1983.
21. Includes \$51,789 public works funds and \$150,000 contributed by the State of Tennessee, and \$341,000 funds provided from the Productive Employment Appropriation Act (PL 98-8) of 1983.
22. Includes \$339,480 funds for special recreation use fees, and \$1,083,678 for maintenance and operation of dams and other improvements of navigable waters, and \$482,000 funds provided from the Productive Employment Appropriation Act (PL 98-8) of 1983.
23. Includes \$1,083,678 funds for special recreation use fees, and \$884,178 for maintenance and operation of dams and other improvements of navigable waters, and \$482,000 funds provided from the Productive Employment Appropriation Act (PL 98-8) of 1983.
24. Includes \$46,000 contributed by the Metropolitan Government, Nashville, TN.
25. Includes \$46,000 contributed by the Metropolitan Government, Nashville, TN.
26. Includes \$260,680 for special recreation use fees, and \$1,226,978 for maintenance and operations of dams and other improvements of navigable waters, and \$40,000 funds provided from the Productive Employment Appropriation Act (PL 98-8) of 1983.
27. Includes \$260,680 for special recreation use fees, and \$1,226,978 for maintenance and operations of dams and other improvements of navigable waters, and \$40,000 funds provided from the Productive Employment Appropriation Act (PL 98-8) of 1983.
28. Includes \$66,678 for maintenance and operations of dams and other improvements of navigable waters.
29. Includes \$96,920 public works acceleration funds, and \$880,000 contributed by the State of Kentucky.
30. Includes \$82,048 public works acceleration funds, and \$198,578 for maintenance and operation of dams and other improvements of navigable waters, and \$278,780 funds for special recreation use fees, and \$293,000 fund provided from the Productive Employment Appropriation Act (PL 98-8) of 1983.
31. Includes \$82,048 public works acceleration funds, and \$198,578 for maintenance and operation of dams and other improvements of navigable waters, and \$278,780 funds for special recreation use fees, and \$293,000 funds provided from the Productive Employment Appropriation Act (PL 98-8) of 1983.
32. Includes \$104,999,237 for initial rehab project. This total also includes \$203,757 for claim paid on the initial construction of the switchyard.

TABLE 23-B**AUTHORIZING LEGISLATION**

See Section In Text	Date of Authorizing Act	Project and Work Authorized	Documents
1.	Feb 20, 2003	CHICKAMAUGA LOCK AND DAM, TN Authorize the construction of a replacement lock	P. L. 108-7
2.	Jul 13, 1892	CUMBERLAND RIVER BELOW NASHVILLE Provision made for lock A	Annual Report, 1890, p. 2151
	Jun 25, 1910	Provision made for locks B to F, and for dredging below lock F.	H. Docs. 758, 60th Cong., 1st sess.; and 1481, 60th Cong., 2d sess. 1
	Aug 30, 1935	Repairing dams A to F, inclusive, and surmounting same with movable crests	H. Doc. 38, 73d Cong., 1st sess.
	Jul 24, 1946	Provision of 9-foot channel by the construction of 3 moderate height dams below Nashville, via,	H. Doc. 761, 79th Cong., 2d sess.
	Jun 19, 1952	Kuttawa (Eureka), Dover, and Cheatham. Provision for hydroelectric power production as a function of Cheatham Dam.	
	Sep. 3, 1954	Construction of Barkley (Lower Cumberland) dam and reservoir project for navigation, flood control, hydroelectric power, and related purposes in lieu of Kuttawa and Dover navigation-only structures.	S. Doc 81, 83d Cong., 2d sess.
	Jul 14, 1960	Authorized change in alignment of Illinois Central	H. Doc. 56, 86th Cong., Railroad. 2d sess.
	Oct 12, 1996	Authorized construction of Kentucky Lock for navigation only.	WRDA 96
2.	Aug. 5, 1886	CUMBERLAND RIVER ABOVE NASHVILLE Provision made for locks and dams; the Secretary of War to determine the final plan of improvement. Dimensions of the locks fixed in accordance with reports of Mar. 30, 1887, and Nov. 25, 1890.	Annual Report 1884, p. 1663 Annual Report 1888, p. 1622, and Annual Report 1892, p. 1933.
	Mar 2, 1907	Adoption of the report of the Board of Engineers, dated Feb. 26, 1906, limiting the lock and dam construction to locks and dams 1 to 7, and 21.	H. Doc. 699, 59th Cong., 1st sess.
	Mar 2, 1919	Provision made for locks and dams 8 to 17.	Rivers and Harbors Committee Doc. 10, 63d Cong., 2d sess.
	Jun 5, 1920	Authorizes work to proceed in Tennessee without waiting for action of local interests in Kentucky.	
	Jul 3, 1930	Raising dam 1, 3 feet.	Rivers and Harbors Committee Doc. 26, 70th Cong., 2d sess.
	Jun 26, 1934 ²	Operation and care of locks and dams provided for with funds from War Department appropriations for rivers and harbors.	
	Jul 24, 1946	Construction of Old Hickory, Cordell Hull (Carthage), and Celina Dams above Nashville for navigation and the development of power resources.	H. Doc. 761, 79th Cong., 2d sess.

NASHVILLE, TN, DISTRICT

TABLE 23-B
(continued)

AUTHORIZING LEGISLATION

See Section In Text	Date of Authorizing Act	Project and Work Authorized	Documents
	Oct 1, 1980	Design and construct flood control measures for communities in the Upper Cumberland River basins.	Sec. 202, PL 96-367
	Oct 12, 1996	Authorized ecosystem restoration at three wetlands and historic sites in Murfreesboro, TN.	WRDA 96
	Oct 12, 1996	Authorized hydropower update at Wolf Creek Dam	WRDA 96
4.		TENNESSEE RIVER	
	Jul 3, 1930	Authorized navigable depth of 9 feet from mouth about 650 miles to Knoxville, Tennessee to be obtained by construction of low dams.	H. Doc. 328, 71st Cong., 2d sess.
	May 18, 1933	Authorized TVA to construct such dams in the Tennessee River as will provide a 9 foot channel.	
	Oct 12, 1996	Authorized flood damage reduction by nonstructural methods in Hamilton County, TN.	WRDA 96
	Oct 12, 1996	Authorized a study for a bank stabilization project on the Tennessee River in Hamilton County, TN.	WRDA 96
	Oct 12, 1996	Authorized assistance to non-Federal interests for environmental activities in Jackson County, AL.	WRDA 96
14.		OHIO RIVER BASIN, NASHVILLE DISTRICT	
	Aug 28, 1937	Construct levees, floodwalls, and drainage structures for protection of cities and towns in Ohio River Basin. Project to be selected by Chief of Engineers with approval of Secretary of War at a cost not to exceed \$24,877,000 for construction.	Flood Control Committee Doc. 1, 5th Cong., 1st sess.
	Jun 28, 1938	Approved general comprehensive plan for flood control and other purposes in Ohio River Basin as may be advisable at discretion of Secretary of War and Chief of Engineers and for initiation and partial accomplishment of plan, authorized \$75million for reservoirs and \$50,300,000 for local flood protection works.	Flood Control Committee Doc. 761, 75th Cong., 3d sess.
	Aug 18, 1941	Additional \$45 million for prosecution of comprehensive plan for Ohio River Basin.	
	Dec 22, 1944	Additional \$70 million for further prosecution of comprehensive plan for Ohio River Basin.	H. Doc. 762, 77th Cong., 2d sess.
	Jul 24, 1946	Additional \$125 million for further prosecution of comprehensive plan.	H. Doc. 506, 78th Cong., 1st sess.
	May 17, 1950	Additional \$100 million for prosecution of comprehensive plan for Ohio River Basin.	
	Dec 30, 1963	Additional \$150 million for further prosecution of comprehensive plan for flood control and other purpose in Ohio River Basin.	

TABLE 23-B **AUTHORIZING LEGISLATION**
(continued)

See Section In Text	Date of Authorizing Act	Project and Work Authorized	Documents
	Jun 18, 1965	Additional \$89 million for further prosecution of comprehensive plan for Ohio River Basin.	H. Doc. 6755, 89th Cong., 1st sess.
	Aug 13, 1968	Additional \$35 million for further prosecution of comprehensive plan for Ohio River Basin.	S. 3710, 90th Cong., 2d sess.
	Jun 19, 1970	Additional \$69 million for further prosecution of comprehensive plan for Ohio River Basin.	H. R. 15166 91st Cong., 2d sess.
	Mar 7, 1974	Authorized Big South Fork National River and Recreation Area, KY and TN. Total area not to exceed 125,000 acres.	H. R. 10203 93rd Cong. Water Resources Develop. Act of 1974 Amended by PL 94-587, 94th Cong.
	Mar 7, 1974	Additional \$120 million for further prosecution of comprehensive plan for Ohio River Basin.	H. R. 10203 93rd Cong. River Basin Monetary Authorization Act of 1974.
5.		TENNESSEE-TOMBIGBEE WATERWAY	
	Jul 24, 1946	Construction of waterway to connect above rivers and provide a 9 foot channel and minimum bottom width of 170 feet in river and canal sections and 150 feet in the divide cut, with locks 110 by 600 feet clear inside dimensions.	H. Doc. 486, 79th Cong. 2d sess.
		Subsequent studies determined most practical plan consists of channel with bottom width of 300 feet (280 feet in divide cut), fewer locks with higher lifts resulted in reducing number of lifts from 18 to 10 and reduced length from 260 to 253 miles.	Page 1343, Part I, FY68 House Hearings

1. Contains latest published maps. Included in Public Works Administration Program Sept. 6, 1993.
 2. Permanent Appropriation Repeal Act.

TENNESSEE RIVER
(SEE SECTION 4 OF TEXT)

1. H. Doc 328, 71 Cong., 2d sess, contains table, pp. 98 and 99, giving pertinent information concerning low dams contemplated under 1930 project. Annual Report for 1938, pp. 1218 and 1219, contains similar information pertaining to low dams in addition to existing locks and dams, including those constructed or under construction by Tennessee Valley Authority.
2. Lock and dam constructed by Tennessee Valley Authority.
3. Lock and dam constructed by Tennessee Valley Authority.
Design for lock prepared with Corps forces and funds.
4. Tailwater in canal; flight of 2 locks.
5. Constructed by the Corps under authority of sec. 124, National Defense Act of June 3, 1916, (H. Doc. 1262, 64th Cong., 1st sess.).
Actual cost of lock and dam.
6. Actual cost of lock only as constructed by the Corps; dams constructed by Tennessee Valley Authority.
7. Constructed by Tennessee Valley Authority.

TABLE 23-J **TENNESSEE RIVER, TN, AL, AND KY**
TOTAL COST OF EXISTING PROJECTS TO SEPT 30, 2007
 (See Section 3 of Text)

Funds	New Work	Channel Maintenance	Operation & Maintenance	Total
Regular	\$2,244,236 ^{1,2}	\$15,045,835	\$405,468,461	\$422,758,532
Maintenance	-	-	11,665	11,665
Increase of compensation rivers and harbors, 1919 (certified claims)	-	5	-	5
Total	\$2,244,236 ^{1,2}	\$15,119,458	\$405,480,126	\$422,770,202

1. In addition, surplus property valued at \$54,336 was transferred from the project without reimbursement. Excludes \$4,005,175 expended between 18900 and June 30,1935, on operation and care of works of improvement under provisions of appropriation for such purposes.
2. Excludes \$14,007,192 previous construction cost.

LOUISVILLE, KY DISTRICT

This district encompasses southwestern Ohio, all of Central Kentucky and portions of western and eastern Kentucky, the southern 3/4 of Indiana, and southeastern Illinois, all included in the drainage basin of the Ohio River and its tributaries (exclusive of Tennessee and Cumberland Rivers) from mile 438 (below Pittsburgh)

immediately upstream from Foster, KY., to the mouth of the Ohio.

All cost and financial statements for projects are listed at the end of this chapter. All other tables are referenced in text and also appear at the end of this chapter.

Navigation - Channels and Harbors**1. OPEN CHANNEL WORK, LICKING RIVER, KY**

Location. The Licking River originates in southeastern Kentucky and flows generally northwesterly to its confluence with the Ohio River at Covington, KY, mile 470.2 below Pittsburgh, PA. The Licking River Basin includes the drainage area of the Licking River, and all other left bank tributaries of the Ohio River from Markland Locks and Dam (Ohio River Mile 531.5) upstream to Meldahl Locks and Dam (Ohio River Mile 436.2).

Existing project. There are no locks and dams on the Licking River. However, a navigable depth of 9 feet is maintained up to mile 7.0 on the Licking River.

Local Cooperation. None.

Terminal facilities. Facilities for bulk commodities, oil products, and coal are considered adequate for existing traffic.

Operations during fiscal year. New Work: None. Maintenance: None.

Navigation - Locks and Dams**2. CONSTRUCTION OF LOCKS AND DAMS, OHIO RIVER**

For report on this improvement, see the heading under Ohio River.

3. GREEN AND BARREN RIVERS, KY

Location. Green River rises in Casey County, KY, flows northwesterly 370 miles, and empties into the Ohio River about 8 miles above Evansville, IN. Barren River rises in Monroe County, KY, flows northwesterly 130 miles, and empties into Green River 1/2 mile above Lock 4 and 149.5 miles above the mouth of Green River.

Existing project. Six locks and dams on Green River and one on Barren River were constructed in pools of dams to provide a navigable depth of 9 feet and width of 200 feet from the Ohio River to mile 103 Green River, 3.2 miles upstream from Paradise, KY and a navigable depth of 5.5 feet from mile 103 Green River to Mammoth Cave, KY, mile 197.8 Green River, and from mouth of Barren River mile 149.5 Green River to Bowling Green, KY, mile 30.1, Barren River. Of these facilities, only Green River L&D 1 and 2 are still operational. Green River L&D 3, 4, 5, 6 and Barren River L&D 1 are maintained by the Corps in a caretaker status.

Fluctuations in stage vary considerably at different locks. At Lock 3, Green River, ordinary high stages are from 12 to 15 feet above pool level, and at Lock 1, Barren River, from 7 to 10 feet above pool. Maximum stages of record are 34 feet above normal pool stage at Lock 3, Green River, and 29 feet at Lock 1, Barren River, obtained during floods of 1937 and 1913, respectively. (See Table 24-B for authorizing legislation and Table 24-H for principal features of the locks and dams.)

The Louisville District has released a final report

regarding the disposal of Locks and Dams 3 through 6 on the Green River and Lock and Dam 1 on the Barren River in August 2005. The report recommends filling the lock chambers at all of the sites and removal of the dam at Green River L&D 6.

Local Cooperation. Fully complied with.

Terminal facilities. Coal handling facilities located on the Green River between miles 81.5 and 108.1 near South Carrollton, Rockport, Paradise and Rochester, Kentucky, are considered adequate for existing commerce.

Operations during fiscal year. New Work: None. Maintenance: Routine maintenance was performed.

Condition at end of fiscal year. Locks and Dams 1 and 2, Green River, are in good condition. Dam 3 on the Green and Dam 1 on the Barren are in fair condition and the locks at those locations are in poor condition. Lock 4, Green River, is in poor condition. Dam 4, Green River, failed May 24, 1965, when 120 feet washed out. Breach later widened, and repairs have been permanently deferred. Pool of Dam 1, Barren River, is maintained for local small boat use, but navigation through lock is suspended because of loss of lower pool. Operation activity was discontinued at Lock 4 Green River and Lock and Dam 1 Barren River in January 1974 and at Lock 3, Green River in September 1981. The residences and associated buildings and certain real estate at Lock 4 Green River and Lock and Dam 1 Barren River were disposed of in January 1975. Operation of Locks 5 and 6, Green River, was discontinued August 1951, as they were no longer used by river traffic. Controlling project depth in lower 103 miles of Green River is 9 feet; controlling depth from mile 103 to Bowling Green, KY, is 5.5 feet. Channel of Green River above Lock 3 is no longer maintained.

4. KENTUCKY RIVER, KY

Location. Formed by confluence of its North and Middle Forks about 4 miles east of Beattyville in east central Kentucky, (South Fork joins the main stream at that location), flows northwesterly and empties into Ohio River at Carrollton, KY, mile 545.8 below Pittsburgh, PA.

Existing project. Provides for 14 locks and fixed dams to give, in connection with improvement of Ohio River, slack water navigation of 6 feet minimum depth from Ohio River to places on the three forks that are short distances above Beattyville, KY. Length of 6-foot-depth project on main stem of Kentucky River is 258.6 miles to confluence of Middle and North Forks. Cost of completed new work is \$7,328,263. River frequently rises to 35 feet or higher. Extreme height at Lock 1 due to flood backwater from Ohio River is 60.3 feet, while extreme floods reach height of 47.6 feet at Lock 4, and 35.5 feet at Lock 14. At some intermediate locks extreme height of floods exceeds 40 feet. All flood heights refer to upper pool gages. Existing project was adopted by 1879 River and Harbor Act (H. Ex. Doc. 47, 45th Cong., 3d Sess., and Annual Report, 1879, p. 1398). Operation and care of locks and dams were included in project July 1, 1935, under provision of Permanent Appropriations

Repeal Act of June 26, 1934. (See Table 24-H for principal features of the locks and dams.)

On December 19, 1976, the lock operation schedules for commercial traffic and recreational craft on the Kentucky River System were reduced from continuous 24-hour year-round operation to two-shift year-round operation of Locks 1 through 4, intermittent daily operation of Locks 5 through 10, and intermittent operation five days weekly of Locks 11 through 14. Since that time the hours for operation of Locks 5 through 14 have been reduced in several increments. On October 1, 1981, Locks 5 through 14 were closed to traffic and placed in caretaker status. On May 21, 1985 Locks 5 through 14 were leased to the Commonwealth of Kentucky and were operated on weekends during the summer boating seasons through October 15, 1989 when the lease expired. The Commonwealth of Kentucky continued operation again under a lease agreement signed in 1990 with several extensions that allow the Commonwealth to operate the Locks until 2019. In 2001 the last commercial operator in pool 4 ceased operations ending federal interest in operating Locks and Dams 1 through 4. The Commonwealth of Kentucky now operates and manages Locks and Dams 1 through 4 under Department of the Army Lease for Public Park and Recreation, which was granted March 1, 2002.

The FY 1993, 1994, 1996, 2000 and 2001 Energy and Water Development Appropriation Acts provided a total of \$14.75 million to the Corps to repair the Kentucky River Locks and Dams 5 through 14 to ensure water supply prior to and in preparation for a direct transfer of ownership to the Commonwealth of Kentucky. This construction work was all completed by December 2001. During fiscal year 2002 construction of a visitors pavilion and restrooms were also initiated at Lock and Dam 14 and the work was completed in September 2003. In December 1996 the Assistant Secretary of the Army (CW) signed the first quitclaim transfer deed for Lock and Dam 10 for direct transfer from the Corps to the Commonwealth. Lock and Dam 6 were transferred in March 2005. The Kentucky River Authority (KRA) currently manages both facilities. The Corps continues efforts to transfer the remaining Locks and Dams 5, 7 through 9 and 11 through 14 to the Commonwealth. Locks 1-14 are now operated or maintained by the Kentucky River Authority.

Although Lock and Dam 10 was transferred to the Commonwealth of Kentucky, FY 2001 authorization language directed the Corps to take all measures to further stabilize and renovate Lock and Dam 10 for the purpose of extending the design life of the structure. The Corps is performing a detailed evaluation of the existing facility that will ultimately recommend a long-term method to "stabilize and renovate" including possibly raising Lock and Dam 10. The results of this evaluation will be presented in a report. Work on this evaluation is currently on hold due to the lack of Federal funding in FY 2007. Since construction of the plan that will be recommended is several years away, the Corps and KRA investigated what could be done to assure near-term safety and stability. Design was completed and a

construction contract was awarded in July 2005. Construction of this near-term work continued throughout FY 2006. The scope of the work involves stabilizing the existing dam.

Licenses. Federal Regulatory Commission License No. 539, to Kentucky Utilities Co., at Dam 7, Kentucky River, Annual charge, \$4,400; total collections through September 30, 2007, \$368,005.

Terminal facilities. Facilities for bulk commodities are considered adequate for existing traffic.

Operations during fiscal year. New Work: None. Maintenance: None.

Condition at end of fiscal year. Existing project was completed in 1917. Work accomplished was rehabilitation of the five old State locks and dams and construction of new Locks and Dams 6 to 14 inclusive. Repairs have been made to deteriorated locks and dams as required to keep locks in operation and maintain pool levels above dams except in extreme dry weather, when some pools fall below normal levels, details in Annual Reports for 1963, 1964, and 1965. Channel work was performed as required to provide for existing river traffic. Controlling navigable depth in length of river covered by existing project was 6 feet at end of fiscal year.

5. OPEN CHANNEL WORK, OHIO RIVER

For report on this improvement, see this heading under Ohio River.

6. OTHER AUTHORIZED NAVIGATION PROJECTS

See Table 24-C.

7. NAVIGATION WORK UNDER SPECIAL AUTHORIZATION

None.

Flood Control - Local Protection

8. BEARGRASS CREEK, KENTUCKY

Location. The project is located in eastern Jefferson County in the suburbs of Louisville, Kentucky, along the South Fork of Beargrass Creek and Buechel Branch.

Existing Project. The project consists of construction of eight detention basins, about 2,000 linear feet of channel improvement, and 1,400 linear feet of floodwall/levee on the South Fork of Beargrass Creek and Buechel Branch. The project will provide protection to 830 structures (combination of residential and commercial). Of those structures, an estimated 314 will be removed from the 100-year flood plain. The 100-year flood plain will be reduced an average of 1.5 feet, as a result of project implementation. The project was authorized by the Water Resource Development Act of 1999. Estimated cost of the new work is \$15,183,300 of which \$9,867,375 is federal cost and \$5,315,925 is non-federal cost.

Local Cooperation. The non-Federal cost sharing partner is the Louisville and Jefferson County Metropolitan Sewer District (MSD). A Preconstruction, Engineering and Design (PED) Phase cost sharing agreement with MSD was executed in January 1998. The

Chief of Engineers report approved the project in May 1998. A Project Cooperation Agreement (PCA) with MSD was executed in September 2001.

Operations during fiscal year. Work this year included continuation of Phase II(B) construction. All work for Phase II(B) was substantially completed in 2007.

Conditions at end of fiscal year. The project is about 98% complete. Design is complete for all three construction contracts. The first contract was awarded 4th quarter FY2002, the second contract was awarded 4th quarter FY2003, and the third contract was awarded 1st quarter FY 2006. Work on all three contracts is complete.

9. COMBINED SEWER OVERFLOWS, INDIANAPOLIS, IN

Location. Indianapolis, IN.

Existing Project. The existing project consists of providing the City of Indianapolis technical, planning and design assistance for implementation of their Long Term Control Plan. The Long Term Control Plan is designed to improve water quality in Marion County and modernize the City's 19th century sewer system that discharges raw sewage to local streams at 135 overflow points during wet weather events. Work was authorized under Section 219 of the Water Resources Development Act of 1992, as amended. Authorization for construction is contained in FY04 Energy & Water Development Act by amending Water Resources Development Act of 1992.

Local Cooperation. The non-federal cost sharing partner is the City of Indianapolis, Indiana. The Corps and the City of Indianapolis signed the Design Agreement in March 2003.

Operation during fiscal year. Continued technical planning and design assistance. Completed work on the Groundwater Management Plan for the deep tunnel alternative

Condition at end of fiscal year. Design work is about 35% complete for the Fall Creek/White River reach. Scopes of Work will be developed to continue technical design assistance. Construction of a CSO outfall relocation project will be performed pursuant to the completion of SHPO coordination, the execution of a PCA, and the acquisition of real estate.

10. DUCK CREEK, OH

Location. The project area is located in the City of Cincinnati and the Village of Fairfax in Hamilton County, Ohio. The project encompasses 3.2 miles of the stream and begins approximately 2 miles upstream of the confluence of Duck Creek with the Little Miami River.

Existing project. The project consists of approximately 7,100 feet of concrete flood wall, 3,300 feet of earth levee, 8,500 feet of riprapped stream bank, 1,200 feet of channel relocation, 1,150 feet of culvert, demolition of an abandoned highway bridge, widening of a railroad bridge, a pump station, and automatic road closure, and an emergency access road. Estimated cost of new work is \$56,000,000 of which \$51,800,000 is Federal

and \$4,200,000 is non-Federal. The project was originally authorized by the Water Resources Development Act of 1996 and reauthorized by the Water Resources Development Act of 2000.

Local Cooperation. The non-Federal sponsors are the City of Cincinnati and the Village of Fairfax. The Project Cooperation Agreement (PCA) was executed in December 1997.

Operations during fiscal year. Work this year included design of the reach along IlSCO Corporation Property (Phase 4B – Part 2) and award of a contract (Phase 4B – Part 1) for construction of features from Madison Road southward to a railroad embankment at the end of Steele Place. The contract work consists of construction of floodwalls, levees, channel improvements, emergency access road, and an automated closures gate along Madison Road.

Condition at end of fiscal year. The project is about 62 percent complete overall with design approximately 85 percent complete.

11. HOLES CREEK, OH

Location. Project area is located on Holes Creek in West Carrollton, Montgomery County, Ohio. West Carrollton is situated in the southwestern portion of Ohio and is a suburb of Dayton. Holes Creek drains 28.2 square miles and empties into the Great Miami River at river mile 72.6.

Existing project. Project construction completed to date consists of approximately 4,300 feet of channel widening (80-foot bottom width) with associated bank protection. The box culvert type railroad bridge was replaced with a 70-foot clear span structure. Completed project provides protection to 420 structures in West Carrollton and Moraine. Remaining project includes construction of 2400-foot long by up to 6 feet high earthen levee/floodwall to protect nine commercial/industrial structures and purchase and demolition of three structures. Estimated total cost (including additional work) is \$12,750,000 Federal and \$1,306,000 non-Federal.

Local Cooperation. The non-Federal cost-sharing partner is the Miami Conservancy District (MCD). MCD formed the Holes Creek/Owl Creek Conservancy Subdistrict to act as formal sponsor for this project. The Subdistrict entered into the Project Cooperation Agreement (PCA) with the Government in September 1996. Funds were provided to the Subdistrict by Montgomery County, the City of West Carrollton, the City of Moraine, and Miami Township. The PCA was amended subsequent to enactment of Section 594(a) of the Water Resources Development Act of 1999 to cap the non-Federal cost share amount to \$1,305,650.

Operations during fiscal year. No work was performed this FY due to a lack of funding.

Conditions at end of fiscal year. Once federal funding is received, the plan for FY08 is to acquire the required real estate and initiate the construction contract.

12. LOUISVILLE WATERFRONT PARK,

LOUISVILLE, KY

Location. Louisville, Jefferson County, Kentucky, on the left bank of the Ohio River at river mile 603.

Existing Project. The existing project is for design of Phases II and III of the Louisville Waterfront Park public access and recreation project. The design is focused on restoration of the Big 4 Bridge for pedestrian use, and includes a spiral bridge to facilitate a bicycle path and potential emergency vehicle access. The design was authorized by the Conference Report for the Omnibus Consolidated and Emergency Supplemental Appropriations. The design agreement is limited to the spiral to the Big Four Bridge and renovating the bridge for pedestrian access to the Indiana side of the river. Construction authority was in the FY06 Energy and Water Development Act including use of unexpended design funds for construction.

Local Cooperation. The Pre-Construction Engineering and Design (PED) agreement was executed with the non-Federal cost sharing partner, the Louisville Waterfront Development Corporation (LWDC) in September 2004. \$250,000 in non-Federal funds was received in September 2004 to begin design.

Operations during fiscal year. Work this year consisted of completing the plans and specs for the Renovations to the Big 4 Bridge contract.

Conditions at end of fiscal year. The only ongoing work for the Corps consists of completing the SHPO coordination and a Coast Guard permit.

13. MILL CREEK, OH

Location. Project is located along the 18-mile length of Mill Creek and three-fourths mile length of East Fork.

Existing project. 17.5 miles of channel improvement, 2 miles of levees, three pumping plants, modification of 29 bridges, and the addition of two pumping units at the present Mill Creek Barrier Dam, located near the Ohio River, are included in the project. Acquisition and development with appropriate landscaping of 620 acres along the creek will be provided for high-density urban oriented recreational use.

Local Cooperation. Section 3, Flood Control Act of 1936 as amended, applies. An assurance agreement covering local cooperation requirements for the project consistent with Section 221 of the 1970 Flood Control Act and the Uniform Relocation Assistance and Real Property Acquisition Policies Act of 1970 was executed by the Millcreek Valley Conservancy District February 6, 1975, and for the Secretary of the Army March 28, 1975. A recreation cost-sharing contract was executed by the Conservancy District February 25, 1975, and approved by the Secretary of the Army May 28, 1975. A Contributed Funds Agreement for the General Reevaluation Report was executed in August 1998. An Operations and Maintenance Agreement for the completed portions of the project was also executed in August 1998.

Operations during fiscal year. The Sponsor and communities are evaluating financial capability and community support to resume project construction of the

channel modification plan as recommended in the March 2005 General Reevaluation Report. Design work was initiated for the remedial repairs at previously completed sections 1, 2, and 4A.

Condition at end of fiscal year. Construction of channel Sections 1, 2 ,3, 4A, and 7A (Phase 1) are complete. Original channel modification project is about 45 percent complete overall. The final GRR and EIS were completed by March 2005. If federal funding is received the plan for FY08 will be to complete the design and construction of remedial repairs at previously completed sections 1, 2, and 4A. These sections still need to have remedial repairs performed in order to turn over to the Sponsor for Operations and Maintenance.

14. OHIO ENVIRONMENTAL INFRASTRUCTURE SECTION 594 PROGRAM

Location. The project location includes the entire state of Ohio, which includes portions of the Louisville, Huntington, Buffalo, and Pittsburgh Districts. The program is for the design and construction assistance of environmental infrastructure projects.

Existing Projects: Under the Section 594 Authority, we have projects in varying states of progress in Clark, Clinton, Greene, and Montgomery Counties in Ohio.

Clark County – Springfield Applied Research and technology Park: PCA being developed for design and construction of a water storage tank and surface water protection facilities. PCA was executed in March 2006. Design and construction are underway.

Montgomery County – Tech Town Infrastructure Project: Design and construction of sewer infrastructure for High Tech Industrial site in Dayton, OH. PCA executed in FY04 and amended in 2007. Design is underway.

Montgomery County – University of Dayton Brown and Stewart Streets Redevelopment Project: PCA for design was being developed. Execution expected in FY 08.

Montgomery County – City of Dayton Northeast Quadrant Redevelopment Project: PCA for design was being developed. Execution expected in FY 08.

Clark County – Southwest Regional Wastewater Treatment Plant: PCA for design and construction was executed in June 2006. Construction was completed in 2007

Clinton County – Clinton-Massie School District: PCA for design and construction was executed in August 2006. Design is underway

Clark County – Springfield Hospital Project: PCA for design and construction was executed in 2007. Design is underway..

Clark County – Springfield AirPark Water Project: PCA for design and construction was executed in 2007. Design is underway.

Montgomery County – Trotwood Stream Restoration: PCA for design and construction executed October 2006.

Design is underway.

Greene County – Yellow Springs Center for Business and Education: PCA for design and construction was executed in 2007. Design is underway.

Local Cooperation. Five Project Cooperation Agreements were executed in 2007.

Operations during fiscal year. Work continued to develop PCAs for two projects. NEPA compliance activities were underway or completed for four projects.

Conditions at end of fiscal year. One project was completed. Design and construction work continued on five projects. PCAs for two projects were under development.

15. OHIO RIVER FLOOD PROTECTION (INDIANA SHORELINE), IN

Location. The six existing local flood protection projects are located along the Indiana shore from Ohio River mile 492 in Lawrenceburg downstream to mile 792 in Evansville. They are in the communities of Evansville, Tell City, Cannelton, New Albany, Jeffersonville-Clarksville, and Lawrenceburg.

Existing project. Each of the six local flood projects was constructed by the Corps and have been locally operated and maintained. All six projects were constructed to protect against the 1937 flood plus three feet of freeboard. Rehabilitation measures are necessary at each of the six sites in order to maintain their integrity and to insure that they continue to provide the benefits for which they were designed. Rehabilitation would consist of slip lining (or where necessary replacement) of all pipes and culverts which are part of the flood protection facilities, replacing aging pump station equipment, restoring expansion joints and closures, and repairing, as needed, floodwalls and other structures. Estimated cost of new work is \$7,390,000 of which \$5,542,500 is Federal and \$1,847,500 is non-Federal.

Local Cooperation. The following Project Cooperation Agreements (PCA) have been executed with the communities: Lawrenceburg PCA - September 1998, Evansville - November 1998, Tell City PCA - June 1998, Cannelton PCA - September 1999, New Albany – November 1999 and Jeffersonville-Clarksville – November 1999.

Operations during fiscal year. The Louisville District completed a construction contract to repair cracks and replace expansion joints in the Jeffersonville-Clarksville floodwall.

Conditions at the end of fiscal year. Project is about 75 percent overall with design 90 percent complete. The remaining project work consists of repairs to deteriorated corrugated metal drainage pipes in Jeffersonville-Clarksville and New Albany, Indiana. Most of the pipes will be repaired in FY 2008. However, some additional funds may be required to complete the project.

16. OHIO RIVER GREENWAY PUBLIC ACCESS, IN

Location. The Ohio River Greenway is a seven-mile linear corridor that extends from the City of Jeffersonville through the Town of Clarksville to the City of New Albany, Indiana, along the Ohio River Shoreline. The project extends from the Ohio River Mile 602 to Ohio River Mile 609. The corridor adjoins the McAlpine Locks and Dam project and the Falls of the Ohio National Wildlife Conservation Area on the Indiana side of the river.

Existing project. The project features consist of a vehicular parkway, pedestrian and multi-use paths, a bridge, and two levee cuts for additional access to the river. The project was authorized by the Water Resources Development Act of 1996. Estimated cost for the project is \$41,700,000 of which \$20,850,000 is federal cost and \$20,850,000 is non-federal cost.

Local Cooperation. There are four non-federal sponsors: The Ohio River Greenway Development Commission, the City of New Albany, the Town of Clarksville, and the City of Jeffersonville. The Project Cooperation Agreement was executed 2 June 2003.

Operation during fiscal year. Work this year included substantial completion of construction on the first segment in Jeffersonville, IN. Work also included substantial completion of construction on the first segment in New Albany. A major modification for additional new work in New Albany was also issued in September 2007.

Condition at end of fiscal year. The project was approved for construction by the ASA(CW) in April 2000. Construction of the first segment in Clarksville was completed in 2004 and in New Albany and Jeffersonville in 2007. The project is approximately 20% complete overall.

17. POND CREEK, LOUISVILLE, KY

Location. The project is located in the central and eastern portions of the 126 square mile Pond Creek watershed in southern Jefferson County, Kentucky.

Existing project. The project consists of constructing a 1500 acre-feet detention basin storage facility along Northern Ditch. An existing abandoned rock quarry adjacent to Fishpool Creek will be converted to a detention basin. Approximately 2.4 miles of the Pond Creek channel will be enlarged as well as 1.5 miles of Northern Ditch. A multi-purpose maintenance road/recreation trail will be constructed along the length of the Pond Creek channel improvement. In addition, three inactive settling basins owned by the local sponsor will be converted into an environmental restoration site. Estimated cost for the project is \$23,729,000 of which \$18,047,000 is Federal and \$5,682,000 is non-Federal. The project was authorized by the Water Resources Development Act of 1996.

Local Cooperation. The non-Federal cost-sharing partner is the Louisville and Jefferson County Metropolitan Sewer District (MSD). MSD has included all funds necessary for their cost share of the project in their capital budget plan. The Project Cooperation Agreement (PCA) was executed in March 1998.

Operations during fiscal year. Work this year included award of two construction contracts for Phase IV, the final phase of the project. The Northern Ditch channel improvement contract was awarded in January 2007. Real estate acquisition was completed and the base contract and option for the Pond Creek channel improvement contract was awarded in September 2007.

Conditions at end of fiscal year. The project is about 88 percent complete. Design is complete. The first three phases of the construction have been completed. Both contracts for the final phase of the project have been awarded and are underway.

18. SALYERSVILLE, KY

Location. Project is located along the banks of the Licking River from approximately mile 266 and 271 in Magoffin County, Kentucky along the Mountain Parkway about 75 miles southeast of Lexington, Kentucky.

Existing Project. The most cost-effective and feasible plan to provide the authorized level of protection (1978 flood protection) is called the "Cut-Thru Plan" and includes two channel cut-thrus, a barrier dam at the upstream cut-thru, and an 0.8-mile reach of channel improvement connecting the two cut-thrus. Estimated total cost of new work is \$8,541,000 of which \$7,730,000 is Federal and \$811,000 is non-Federal.

Local Cooperation. The local sponsor qualifies for an "ability to pay" reduction pursuant to Section 103(m) of the 1986 Water Resource Development Act. Based on current costs and economics, the local sponsor share would be 9.5 percent of the total project cost. The Project Cooperation Agreement (PCA) was executed in August 1995. The construction contract was awarded in September 1996 and completed in July 1998.

Operations during fiscal year. Construction was completed in FY 99.

Conditions at the end of fiscal year. Project is complete, the two remaining tracts of land were acquired during the fiscal year. The only remaining action is to financially close out the project.

19. SOUTHERN AND EASTERN KENTUCKY ENVIRONMENTAL INFRASTRUCTURE SECTION 531 PROGRAM

Location. The project location comprises a 27 county region in southern and eastern Kentucky, which includes portions of Louisville, Huntington, and Nashville Districts. The program is for the design and construction assistance of environmental infrastructure projects.

Existing Projects. Under the Section 531 Authority, to date we have six projects complete. PCAs are being developed for two projects and two projects were underway.

Jackson County – McKee High School Extension: PCA was executed in March 2007.

Perry County – Vicco Wastewater Treatment and Collection Project: PCA executed November 2001. Design 95% complete in FY 2006.

Perry County – Regional Wastewater Treatment Plant

and Collection System. PCA was executed in June 2007.

Work is authorized under Section 531 of the Water Resources Development Act of 1996 (P.L. 104-303).

Local Cooperation. Two Project Cooperation Agreements were executed in FY 2007 for the Section 531 Program.

Operations during fiscal year. Work this year included initiation or continuation of design and construction on all projects and development of PCA's for new projects.

Condition at end of fiscal year. Design continued on one project. Design was completed on one project. PCAs were executed for two projects.

20. WHITE RIVER, INDIANAPOLIS CENTRAL WATERFRONT, IN

Location. Project is located along the White River in the City of Indianapolis, IN.

Existing project. Project consists of infrastructure improvements such as public access parking, walkways, pedestrian bridges, landscaping, lighting, and water features. The project also includes continuous public access along both sides of the White River waterfront through the construction of walkways, bike paths, landscaped promenades, and the rebuilding and reconfiguring of the existing concrete slopewalls. Estimated cost of new work is \$113,804,500 of which \$52,475,000 is Federal and \$61,329,500 is non-Federal.

Local Cooperation. The non-Federal sponsors are the White River State Park (State of Indiana) and the City of Indianapolis. All lands for the project have been acquired by the sponsors. The Project Cooperation Agreement (PCA) was executed in December 1997. Amendments to the PCA were executed in June 1999 to add the Upper Canal feature to the Project and in February 2001 to add the Beveridge Paper feature.

Operations during fiscal year. Work this year included fiscal completion of the final construction contract (Beveridge Paper).

Condition at end of fiscal year. Construction of the project is complete. The only remaining item is project closeout.

21. WHITE RIVER INDIANAPOLIS (NORTH), IN

Location. The project is located in metropolitan Indianapolis, Indiana, along the northern reaches of the White River within Marion County.

Existing project. The project is located along 3 miles of the White River in the City of Indianapolis, IN, and consists of a combination of levees and floodwalls, rehabilitation of an existing pump station, two mitigation sites, and a flood warning system. Estimated cost of the project is \$30,064,000 of which \$22,548,000 is Federal and \$7,516,000 is non-Federal.

Local Cooperation. The non-Federal cost-sharing partner is the City of Indianapolis, Department of Public Works.

Operations during fiscal year. The Corps continued construction of the Phase 3C section of the floodwall and levee within the Broad Ripple community of Indianapolis, Indiana.

Conditions at the end of fiscal year. The project is 40 percent complete. Construction is authorized and funding provided. The rehabilitation of the existing pump station and flood warning system are complete. Construction is proceeding on the Phase 3C Broad Ripple section and design continues on the Phase 3B South Warfleigh section.

Flood Control - Reservoirs

22. BARREN RIVER LAKE, KY

Location. Dam is on Barren River, 79.5 miles above its confluence with Green River and 10 miles northeast of Scottsville, KY. A flood control pool reservoir extends upstream about 40 miles in Barren and Allen Counties, KY. (See U.S. Geological Survey map of Lucas, KY.)

Existing project. A reservoir for flood control and allied purposes. Dam is rolled earth and rockfill, 146 feet high and 3,970 feet long, with gate-controlled outlet works and uncontrolled open-cut spillway. Total storage capacity is 815,200 acre-feet (768,000 for flood control and 46,600 for water supply storage). For further details, see page 1125 of Annual Report for 1962. Cost of the completed project is \$27,479,717 including \$2,335,055 Federal funds and \$108,418 non-Federal funds for construction of recreation facilities under the completed projects program. Project was authorized by Flood Control Act of 1938.

Local Cooperation. None required by authorizing act. Under provision of Water Supply Act of 1958, contract with City of Glasgow for water supply storage was approved by Secretary of Army on October 4, 1965. Terms require City to pay \$23,433, which is project cost allocated to water storage plus capitalized prepayment of proportionate share of operation, maintenance, and major replacement costs. A contract, with the Commonwealth of Kentucky for development of additional campsites, shoreline protection and breakwater extension at Barren River Lake State Park under the cost-sharing category of the completed projects program was approved by the Secretary of the Army November 4, 1977.

Operations during fiscal year. New work: Completed work on roadway, parking lot and boat ramp and dedicated the Port Oliver Recreation Area in Allen County. Maintenance: Routine maintenance was performed. During the 2007 flood season estimated damages of \$147,000 were prevented. Visitor expenditures were \$36,381,398.

Condition at end of fiscal year. Construction started in March 1960 and all major construction and relocation items were completed in October 1964. Project was placed in operation in March 1964. Land acquisition is complete.

23. BROOKVILLE LAKE, IN

Location. Dam site is on East Fork of Whitewater River, 2.4 miles above confluence with West Fork, and

about 1-1/2 miles north of Brookville, Indiana. The reservoir lies in Franklin and Union Counties, Indiana. (See U.S. Geological Survey map of Brookville, IN.)

Existing project. A reservoir for flood control and allied purposes. Dam is earthfill, 182 feet high and 3,004 feet long, with gate-controlled outlet works, and uncontrolled open spillway. Total storage capacity is 359,600 acre-feet (214,700 for flood control, 89,300 for water supply, and 35,500 for conservation). A minimum pool of 20,100 acre-feet is maintained. Cost of completed new work is \$45,402,565 of which \$37,905,073 is Federal cost and \$7,497,492 is non-Federal contribution for water supply storage. Project was authorized by 1938 Flood Control Act.

Local Cooperation. None required by authorizing act. Contract with State of Indiana for water supply storage under provisions of Water Supply Act of 1958 was approved by Secretary of Army, August 5, 1965. Under terms of contract, State paid initial costs allocated to water supply feature of project plus capitalized prepayment of proportionate share of operation and maintenance costs.

Operation during fiscal year. New work: None. Maintenance: Routine maintenance was performed. During 2007 flood season flood damages of \$521,000 were prevented. Visitor expenditures were \$19,815,437.

Condition at end of fiscal year. Construction was started in November 1965 and project was placed in operation January 1974. Construction and land acquisition are complete.

24. BUCKHORN LAKE, KY

Location. Dam is on Middle Fork of Kentucky River, 43.4 miles above mouth, and 0.5 mile upstream from Buckhorn, Perry County, KY. Reservoir extends upstream about 34 miles and lies in Leslie and Perry Counties, Kentucky. (See U.S. Geological Survey map of Buckhorn, KY.)

Existing project. A reservoir for flood control and allied purposes. Dam is earth and rockfill type, with gate controlled outlet works. Total storage capacity is 168,000 acre-feet, of which 157,600 are for flood control. For further details, see page 1120 of Annual Report for 1962. Cost of completed new work is \$12,466,206 including \$386,707 for construction of recreation facilities under the completed projects program. Existing project was authorized by general authorization for Ohio River Basin in 1938 Flood Control Act.

Local Cooperation. Department of Parks of the Commonwealth of Kentucky has undertaken management of certain lands and recreational facilities in accordance with license granted by Secretary of the Army on June 29, 1962.

Operations during fiscal year. New work: None. Maintenance: Routine maintenance was performed. Operation for flood control during 2007 flood season prevented damages of \$202,000. Visitor expenditures were \$12,150,483.

Condition at end of fiscal year. Construction started

in September 1956 and project was placed in operation in August 1960. All construction and land acquisition is complete for original project. A contractor began construction of a shower house and Class A campground facilities at the Trace Branch recreation area in late FY2003. These facilities, funded with the FY2002 Construction General appropriations, were physically complete in the 4th quarter of FY 2004.

25. CAESAR CREEK LAKE, OH

Location. Dam site is on Caesar Creek, about 3.0 miles above its confluence with Little Miami River, in Warren County, OH, about 3.5 miles southeast of Waynesville, OH, and 10.5 miles northeast of Lebanon, OH. Reservoir lies in Warren, Clinton, and Green Counties, OH. (See U.S. Geological Survey map of Oregonia, OH.)

Existing project. Provides for construction of a reservoir for flood control and allied purposes. It includes an earth and rockfill dam, four saddle dams, outlet works and an uncontrolled saddle spillway. Total storage capacity of reservoir is 242,200 acre-feet, of which 148,500 acre-feet are reserved for flood control storage. Cost of new work is \$62,881,010 Federal and \$5,037,000 non-Federal reimbursement for water supply storage. Existing project was authorized by general authorization for Ohio River Basin in 1983 Flood Control Act.

Local Cooperation. None required. However, the State of Ohio requested inclusion in the project of storage for future municipal and industrial water supply uses. Contract with State of Ohio for water supply storage under provisions of Water Supply Act of 1958, as amended, was approved by Secretary of the Army, May 20, 1970. Under terms of contract, State will reimburse the Federal Government for costs allocated to water supply storage over a period not to exceed 50 years after use of this storage is initiated plus estimated annual amount for cost of operation, maintenance and major capital replacements required for the water supply facilities.

Operations during fiscal year. New work: None. Maintenance: Routine maintenance was performed. During the 2007 flood season estimated damages of \$7,955,000 were prevented. Visitor expenditures were \$38,995,294.

Condition at end of fiscal year. Construction was started in January 1968 and the project was placed in operation January 1978. Land acquisition is complete. All relocation and construction features are complete.

26. CAGLES MILL LAKE, IN

Location. Dam is on Mill Creek, 2.8 miles above its confluence with Eel River, in Putnam County, IN, and about 25 miles east of Terre Haute, IN. Reservoir extends upstream about 11 miles and is in Putnam and Owen Counties, IN. (See U.S. Geological Survey map of Poland, IN.)

Existing project. A reservoir for flood control and allied purposes. Dam is earth and rockfill embankment. Total storage capacity is 228,100 acre-feet, of which 201,000 acre-feet are for flood control. For details, see

Annual Report for 1962, page 1136. Cost of new work is \$4,369,997, which includes \$4,256,903 Federal funds, and \$113,094 contributed funds for construction of recreation facilities under the completed projects program. Existing project was selected for construction under general authorization for Ohio River Basin in 1938 Flood Control Act.

Local Cooperation. None required. State of Indiana has undertaken development and management of recreation facilities for use of the public in reservoir area in accordance with license granted by Secretary of the Army on January 17, 1952. A contract with the Indiana Department of Natural Resources for expanding the boat ramp and parking area at Site 3, Lieber State Park, under the cost sharing category of the completed projects program was signed by the State of Indiana on August 26, 1981 and approved by the Deputy Chief of Engineers on March 26, 1982.

Operations during fiscal year. New Work: None. Maintenance: Routine maintenance was performed. During the 2007 flood season estimated damages of \$15,865,000 were prevented. Visitor expenditures were \$11,642,680.

Condition at end of fiscal year. Construction started in July 1948 and completed in June 1953. Recreation facilities constructed under the cost-sharing category of the completed projects program are complete.

27. CARR CREEK LAKE, KY

Location. Dam site is 8.8 miles above mouth of Carr Fork, a tributary of North Fork of Kentucky River, 16 miles upstream from Hazard, KY. The reservoir lies entirely within Knott County. (See U.S. Geological Survey maps of Carrie and Vicco, KY.)

Existing project. Provides for construction of a reservoir for flood control and allied purposes. Dam is rock and earth fill with impervious core, 720 feet long and 130 feet high, with uncontrolled open cut spillway through left abutment. Outlet works has two control gates and 8-foot diameter conduit to stilling basin. Total storage capacity is 47,700 acre-feet (31,600 for flood control and 4,300 for water quality control). A higher-level seasonal pool for recreation is provided. Cost of completed work is \$51,854,826 including \$76,724 for recreation facilities under the completed projects program. Project was authorized by the 1962 Flood Control Act.

Local Cooperation. None required for reservoir project. Division of Flood Control and Water Usage of Commonwealth of Kentucky gave assurance that encroachments on downstream channel capacity will be prevented. Under the terms of a new lease, the State of Kentucky assumed operation of the Irishman Creek Beach and Campground in 1996. This establishes a State Park at the lake and also provides the impetus for additional resort development. Project name was changed from Carr Fork Lake, KY to Carr Creek Lake, KY effective February 16, 1997 by Public law 104-303, October 12, 1996. An agreement was executed with the Carr Creek Lake Water Commission in September 2006

to provide up to 2 million gallons of water per day from the lake for water supply purposes.

Operations during fiscal year. New work: The Louisville District awarded a Construction funded construction contract for installation of shoreline protection and modifications to recreational facilities. The work is necessary to permit an increase in the summer pool elevation for water supply storage. Maintenance: Routine maintenance was performed. During the 2007 flood season estimated damages of \$1,054,000 were prevented. Visitor expenditures were \$15,885,891.

Condition at end of fiscal year. Project was placed in operation January 1976. Construction started in January 1966 is complete.

28. CAVE RUN LAKE, KY

Location. Dam site is on Licking River, about 4 miles upstream from U.S. Highway 60 near Farmers, KY, and 7 miles southwest of Morehead, KY. Reservoir will be in Rowan, Bath, Morgan, and Menifee Counties, KY. (See U.S. Geological Survey maps of Salt Lick and Morehead, KY.)

Existing project. Plan provides for construction of a reservoir for flood control and allied purposes. Dam is rolled earthfill, with gate controlled outlet works and uncontrolled open spillway. Total storage capacity is 614,700 acre-feet (438,500 for flood control and 28,300 for water quality control). Cost of new work is \$81,159,541 of which \$6,900,000 is U.S. Forest Service cost. Project was authorized by Flood Control Acts of June 22, 1936 and June 28, 1938.

Local Cooperation. None required.

Operations during fiscal year. New work: Motor control center was replaced and new controls, travel wiring, hoist cables and call buttons were installed in the elevator in the tower. Maintenance: Routine maintenance was performed. During the 2007 flood season estimated damages of \$2,488,000 were prevented. Visitor expenditures were \$9,819,791.

Condition at end of fiscal year. Project has been in operation since February 1974. Construction was started in June 1965 and is complete. Land acquisition is complete. All relocation and construction features are complete.

29. CECIL M. HARDEN LAKE, IN

Location. Dam is on Raccoon Creek, 32.4 miles above its confluence with Wabash River, and 25 miles northeast of Terre Haute, IN. At flood control pool, reservoir extends upstream about 15 miles in Parke and Putnam Counties, Indiana. (See U.S. Geological Survey Map of Mansfield, IN.)

Existing project. A rolled earth dam and reservoir, for flood control and allied purposes. Total storage capacity is 132,800 acre-feet of which 116,600 acre-feet area for flood control. For details, see Annual Report for 1962, page 1132. Cost of completed new work is \$6,987,807 made up of \$6,260,134 for the initial project and \$373,678 Federal cost and \$353,995 non-Federal

contribution in kind for recreation facilities under the completed projects program. Project was selected for construction under general authorization for Ohio River Basin in 1938 Flood Control Act. Project name was changed from Mansfield Lake to Cecil M. Harden Lake by Public Law 93-521, December 14, 1974.

Local Cooperation. State of Indiana has undertaken management of lands and recreational facilities in accordance with license granted by Secretary of the Army on April 19, 1961. A contract with the Indiana Department of Natural Resources, approved by the Secretary of the Army in May 1974, provided for that agency to design and construct certain additional recreation facilities at Cecil M. Harden, Huntington, Mississinewa, Monroe and Salamonie Lakes under the cost-sharing category of the completed projects program.

Operation during fiscal year. New work: None. Maintenance: Routine maintenance was performed. During the 2007 flood season estimated damages of \$3,405,000 were prevented. Visitor expenditures were \$29,211,014.

Condition at end of fiscal year. Construction started in October 1956 and all major items of work were completed December 1961. Land acquisition is complete. Project has been in operation since August 1960. Cost shared recreation facilities constructed by the State of Indiana under the completed projects program are completed.

30. CLARENCE J. BROWN DAM & RESERVOIR, OH

Location. Dam site is just east of Springfield, Clark County, OH, at mile 7.3 of Buck Creek, a tributary of Mad River. (See U. S. Geological Survey maps of New Moorefield and Springfield, OH.)

Existing project. A reservoir for flood control and allied purposes. It includes an earthfill dam, 6,620 feet long and 72 feet high, with gated outlet works and open cut spillway with concrete chute through right abutment. Total storage capacity of reservoir is 63,700 acre-feet (32,900 for flood control and 20,800 for water quality control). Federal cost of completed project is \$22,083,660. Project was authorized by 1962 Flood Control Act. Project name was changed from Buck Creek Dam and Reservoir to Clarence J. Brown Dam and Reservoir by Public Law 90-46, July 4, 1967.

Local Cooperation. Assurances from City of Springfield, Springfield Conservancy District, and Clark County, Ohio, covering protection against detrimental channel encroachment below dam to mouth of Buck Creek, were accepted March 5, 1964.

Operations during fiscal year. New work: None. Maintenance: Routine maintenance was performed. During the 2007 flood season \$499,000 in damages were prevented. Visitor expenditures were \$23,131,189.

Condition at end of fiscal year. Construction started in September 1966. Land acquisition and all major project features were completed in November 1973. The project was placed in operation in January 1974.

31. GREEN RIVER LAKE, KY

Location. Dam site is 305.7 miles above mouth of Green River in Taylor County, KY, about 8 miles south of Campbellsville. Reservoir lies in Taylor and Adair Counties. (See U.S. Geological Survey map of Cane Valley, KY.)

Existing project. A reservoir for flood control and allied purposes. Dam is earth and rockfill, 141 feet high and 2,350 feet long. Outlet works is slide gate-controlled and spillway open and uncontrolled. Total storage capacity is 723,200 acre-feet (560,600 for flood control and 64,500 for low-flow augmentation). Cost of completed new work is \$33,462,330, consisting of \$33,105,184 initial project funds, \$40,001 for water supply, and \$317,145 Federal funds for construction of recreation facilities under the completed projects program. Existing project was authorized under general authorization for Ohio River Basin in 1938 Flood Control Act.

Local Cooperation. None required by authorizing act. Taylor County, by lease approved by Secretary of Army February 15, 1968, undertook operation and maintenance of Smith Ridge public access area. In May 1980, the lease was amended to turn back responsibility for maintenance and operation of the site to the Corps. Under provision of Water Supply Act of 1958, contract with City of Campbellsville for water supply storage was approved by Secretary of Army April 23, 1969. Terms require city to repay, with interest and annual charges for operation, maintenance and major replacement, the investment cost of \$85,765 allocated to its water supply storage space. The Department of Parks of the Commonwealth of Kentucky, by lease approved by Secretary of Army, October 4, 1971, has undertaken the management of the Lone Valley public access area.

Operations during fiscal year. New work: None
Maintenance: Routine maintenance was performed. During the 2007 flood season estimated damages of \$386,000 were prevented. Visitor expenditures were \$37,404,797.

Condition at end of fiscal year. Construction began in August 1965 and all major construction and relocation items were completed in 1972. Project has been in operation since February 1969. Project including all land acquisition was completed in 1973. Construction of sanitary dump station for boats at Dam Site in conformance with EPA and State standards and rehabilitation of sewage treatment facilities, washhouses and restrooms at Smith Ridge site is complete.

32. J. EDWARD ROUSH LAKE, IN

Location. Dam site is on Wabash River, about 2 miles from Huntington, IN, and 411.4 miles above mouth. Reservoir is in Huntington and Wells Counties, IN. (See U.S. Geological Survey maps of Majenica and Mt. Etna, IN.)

Existing project. A reservoir for flood control and allied purposes. Dam consists of a rolled earth embankment 4,700 feet long and 89 feet high, a concrete spillway and outlet section 155 feet long, and a concrete

gravity section 310 feet long. Spillway is controlled by three gates, and outlet works by six sluices. Project also provides local flood protection for Markle, IN. Total storage capacity of reservoir is 153,100 acre-feet, of which 149,000 acre-feet is reserved for flood control storage. Cost for new work is \$19,621,777 made up of \$19,428,355 Federal cost for the initial project and \$193,422 non-Federal contributed funds for low flow augmentation storage, and \$155,354 non-Federal contribution in kind for recreation facilities under the completed projects program. Project was authorized by Flood Control Act of 1958. Project name was changed from Huntington Lake, IN to J. Edward Roush Lake, IN effective 16 February 1997 by Public law 104-303, 12 October 1996.

Local Cooperation. Local interests must contribute in cash an amount equal to one percent of project first cost. State of Indiana has met this obligation. Contract with the Indiana Department of Natural Resources, approved by the Secretary of the Army May 17, 1974, provided for that agency to design and construct certain additional recreational facilities at Cecil M. Harden, Huntington, Mississinewa, Monroe and Salamonie Lakes under the cost shared category of the completed projects program.

Operations during fiscal year. New work: None
Maintenance: Routine maintenance was performed. During the 2007 flood season estimated damages of \$9,488,000 were prevented. Visitor expenditures were \$3,942,000.

Condition at end of fiscal year. Land acquisition and all major construction complete. Project was placed in operation January 9, 1969. Cost shared recreation facilities constructed by the State of Indiana under the completed projects program are complete.

33. MISSISSINEWA LAKE, IN

Location. Dam site is 7.1 miles above mouth of Mississinewa River, which flows into Wabash River about 2 miles upstream from Peru, IN. At flood control pool level, reservoir extends upstream about 28 miles, in Wabash, Grant, and Miami Counties, IN. (See U.S. Geological Survey map of Peoria, IN.)

Existing project. Provides for construction of a reservoir for flood control and allied purposes. It includes an earthfill dam 137 feet high and 8,100 feet long, gate-controlled outlet works, and an uncontrolled open spillway through right abutment. Total storage capacity of reservoir is 368,400 acre-feet, of which 345,100 acre-feet are reserved for flood control storage. Cost for completed new work is \$77,468,775 made up of \$23,791,816 Federal cost for the initial project, \$239,200 non-Federal contributed funds for low flow augmentation storage, \$174,392 Federal cost and \$174,392 non-Federal contribution in kind for recreation facilities under the completed projects program, and \$53,088,975 for major rehabilitation. Project was authorized by the Flood Control Act of 1958.

Local Cooperation. Local interests must contribute in cash an amount equal to 1 percent of project first cost. State of Indiana assumed this obligation. A contract with

the Indiana Department of Natural Resources, approved by the Secretary of the Army in May 1974, provided for that agency to design and construct certain additional recreation facilities at Cecil M. Harden, Huntington, Mississinewa, Monroe and Salamonie Lakes under the cost-sharing category of the completed projects program.

Operations during fiscal year. New work: None. Maintenance: Routine maintenance was performed. During the 2007 flood season estimated damages of \$22,692,000 were prevented. Visitor expenditures were \$13,207,026.

Condition at end of fiscal year. Project was placed in operation in May 1968. Cost shared recreation facilities constructed by the State of Indiana under the completed projects program are complete. Construction was completed on cut-off wall contract .

34. MONROE LAKE, IN

Location. Dam is on Salt Creek, a tributary of White River, 25.9 miles above mouth, and 2 miles east of Harrodsburg, Monroe County, IN. At flood control pool level, reservoir will extend upstream 44 miles in Monroe, Brown, and Jackson Counties. (See U.S. Geological Survey map of Clear Creek, IN.)

Existing project. A reservoir for flood control and allied purposes. Dam is earth core and rock shell, with gate-controlled outlet works and uncontrolled open spillway. Total storage capacity is 441,000 acre-feet (258,800 for flood control and 159,900 for low flow augmentation.) Cost of completed new work is \$16,570,774 consisting of \$7,032,484 Federal funds, \$7,797,604 non-Federal contributed funds for low-flow regulation storage and \$870,343 Federal cost and \$870,343 non-Federal contribution in kind for recreation facilities under the completed projects program. Project was authorized by 1958 Flood Control Act, modifying comprehensive plan for Ohio River Basin.

Local Cooperation. Section 3, 1944 Flood Control Act applies. Local interests must contribute 54.1 percent of project cost, this being the proportion allocated to low-flow regulation feature, plus a capitalized amount representing that part of average annual maintenance and operation cost allocated to low-flow regulation. State of Indiana assumed this cost-sharing obligation. A contract with the Indiana Department of Natural Resources, approved by the Secretary of the Army in May 1974, provided for that agency to design and construct certain additional recreation facilities at Cecil M. Harden, Huntington, Mississinewa, Monroe and Salamonie Lakes under the cost-sharing category of the completed projects program.

Operations during fiscal year. New work. None. Maintenance: Routine maintenance was performed. During the 2007 flood season estimated damages of \$1,569,000 were prevented. Visitor expenditures were \$31,126,292.

Condition at end of fiscal year. Project is complete and was placed in operation in February 1965. Cost shared recreation facilities constructed by the State of Indiana under the completed projects program are

complete.

35. NOLIN LAKE, KY

Location. Dam is on Nolin River 7.8 miles above its confluence with Green River, about 70 air miles southwest of Louisville, KY. Reservoir extends upstream about 57 miles and is in Edmonson, Grayson, Hart, and Hardin Counties, KY. (See U.S. Geological Survey maps of Nolin Reservoir and Dickey's Mill, KY.)

Existing project. A reservoir for flood control and allied purposes. Dam is rockfill-earth core type with gate-controlled outlet works, and uncontrolled open spillway. Total storage capacity is 609,400 acre-feet, of which 545,600 acre-feet is for flood control. For further details of project, see Annual Report for 1962, page 1124. Cost of new work is \$17,193,278 including \$2,594,274 for construction of recreation facilities. Project was selected for construction under general authorization for Ohio River Basin in 1938 Flood Control Act.

Local Cooperation. None required for authorized project. State of Kentucky contributed \$18,195 for increased width of dam for public road. Kentucky assumed responsibility of the Brier Creek site to establish a State Park in 1996. Improvements are planned by Kentucky.

Operations during fiscal year. New work: None. Maintenance: Routine maintenance was performed. During the 2007 flood season estimated damages of \$109,000 were prevented. Visitor expenditures were \$46,433,541.

Condition at end of fiscal year. Construction started in January 1959. Project was completed and placed in operation in March 1963.

36. OHIO RIVER BASIN (Louisville District)

Location. Works covered by this project are a series of levees, floodwalls, channel improvements, and reservoirs in Ohio River Basin within Louisville District.

Existing project. Individual projects considered in comprehensive plan within the Louisville District. (See Table 24-B for authorizing legislation and Table 24-I for cost and listing of projects in the basin plan.)

Operations during fiscal year. No costs were incurred except for the projects for which individual reports are given.

37. PATOKA LAKE, IN

Location. Dam site is in Dubois County, IN, 118.3 miles above mouth of Patoka River, and 50 miles west-northwest of New Albany, IN. Reservoir extends into Dubois, Orange, and Crawford Counties. (See Geological Survey map of Cuzco, IN.)

Existing project. Reservoir for flood control and allied purposes. Dam is earth and rock fill, 1,550 feet long and 85 feet high, with gate-controlled outlet works and uncontrolled open spillway. Total storage capacity is 301,600 acre-feet (121,000 for flood control and 167,500 for water supply and water quality control). Cost of new work is \$76,243,083 of which \$56,060,638 is Federal cost for other construction, and \$20,182,445 is non-Federal

contribution for water supply storage and recreation facilities. Project was authorized by 1965 Flood Control Act, and emergency measures and snagging and clearing the Patoka River downstream of Patoka Lake to ensure effective operation of the project for flood control was directed by 1981 Appropriation Act for Energy and Water Development.

Local Cooperation. Local interests are required to reimburse the Federal Government for costs allocated to water supply storage presently estimated at 29.316 percent of the joint-use facilities cost, exclusive of interests, plus \$287,000 for the cost of operating and maintaining water supply storage for a period of 50 years, plus \$42,000 for the cost of major capital replacements required for water supply storage space for a period of 50 years. Local interests are also required to pay, contribute in kind, or repay (which may be through user fees) with interest, one-half of the separable first cost of the project allocated to recreation. Present laws of the State of Indiana require that agency to make cash contributions during construction of the project. Local interests must also agree to prevent encroachments on channel of Patoka River from dam to mouth, and to pay allocated initial and annual maintenance and operation costs for water supply storage. Formal assurances of local cooperation, executed by the Indiana Natural Resources Commission, were accepted August 27, 1970. Contracts with State of Indiana for water supply and recreation were approved by the Secretary of the Army November 2, 1970.

Operations during fiscal year. New work: None. Maintenance: Routine maintenance was performed. During the 2007 flood season estimated damages of \$4,329,000 were prevented. Visitor expenditures were \$19,164,934.

Condition at end of fiscal year. Construction was started in July 1972. Engineering studies are complete. Real Estate relocation work is complete. All major features are complete. Permanent impoundment was started in February 1978 and the project was placed in operation about August 1980.

38. ROUGH RIVER LAKE AND CHANNEL IMPROVEMENT, KY

Location. Dam is on Rough River, 89.3 miles above its confluence with Green River, 160.3 miles above Ohio River, and about 60 miles southwest of Louisville, KY. Reservoir extends upstream about 30 miles and is in Breckinridge, Hardin, and Grayson Counties, KY. Channel improvement work is on Rough River, Barnett Creek, and West Fork of Barnett Creek. (See U.S. Geological Survey maps of McDaniels and Falls of Rough, KY.)

Existing project. Reservoir is for flood control and allied purposes. Dam is rolled earthfill type, with gate-controlled outlet works. Storage capacity is 334,380 acre-feet, of which 314,210 acre-feet is for flood control. Project also includes channel clearing of lower Rough River, and channel improvement on Barnett Creek, a tributary of Rough River. For further details, see page 1126 of Annual Report for 1962. Cost of completed new work is \$11,064,087 including \$890,008 Federal funds

and \$22,612 non-Federal funds for construction of recreation facilities under the completed projects program. Existing project was selected for construction under general authorization for Ohio River Basin in 1938 Flood Control Act. Modification of previously approved plan to include channel improvement items was authorized by the 1944 Flood Control Act.

Local Cooperation. None required for construction of reservoir unit. Provisions of Section 3, Flood Control Act of 1936, are applicable to channel improvements. Assurances were obtained from Ohio County for channel improvement. Department of Parks, Commonwealth of Kentucky, has undertaken management of certain lands and recreation facilities in accordance with license granted by Secretary of the Army on August 18, 1961. A contract with the Commonwealth of Kentucky to improve and pave road at the Below Dam Area - State Park under the cost-sharing category of the completed projects program was approved by the Secretary of the Army November 4, 1977.

Operations during fiscal year. New work: None. Maintenance: Routine maintenance was performed. Deficiencies in the dam at Rough River have been identified through Dam Safety Assurance Program activities. Deficiencies existing at the dam are as follows: Embankment – a sinkhole formed on the downstream face of the dam in fall 2002. Indications are it resulted from the lack of a filter between the interior of the dam and a buried downstream rock toe. Stilling Basin –The stilling basin is inadequate resulting in expensive periodic repairs using Operation and Maintenance funds. Basin needs to be extended to approximately double its present length. Spillway –The spillway is inadequate. Instead of widening the spillway, the road across the dam will be raised 1.5 feet and a 3.5 foot tall highway barrier will be added to the upstream side of the road. That provides additional storage capacity to protect against probable maximum flood event. A Dam Safety Assurance Evaluation Report (DSAER) defining scope of corrective actions needed for the deficiencies was prepared and approved 1 July 2004. A \$2.62 million construction contract for repairs to the rock toe of the embankment and raising the road across the dam was awarded in May 2006. Work on that contract was completed in 7 June 2007. Construction contract for extending the stilling basin was awarded 31 July 2007. Total cost of repairs is estimated at \$7.2 million. During the 2007 flood season estimated damages of \$4,782,000 were prevented. Visitor expenditures were \$45,458,822.

Condition at end of fiscal year. Construction started in November 1955 and reservoir was placed in operation in June 1959. Land acquisition and all major items of construction and relocation are complete. The DSAER was approved 1 July 2004.

39. SALAMONIE LAKE, IN

Location. Dam site is 3.1 miles above mouth of Salamonie River, which enters Wabash River about 6 miles upstream from Wabash, IN. Reservoir extends upstream about 27 miles at flood control pool and lies in Wabash and Huntington Counties, IN. (See U.S.

Geological Survey maps of Lagro and Majenica, IN.)

Existing project. Provides for construction of a reservoir for flood control and allied purposes. It includes an earthfill dam with a maximum height of 133 feet and length of 6,100 feet, gate-controlled outlet works with a 16-foot-diameter conduit and an uncontrolled open spillway through right abutment. Total storage capacity of reservoir is 263,600 acre-feet, of which 250,500 acre-feet is for flood control storage. Cost for new work is \$17,039,321 made up of \$16,244,356 Federal cost for the initial project and \$163,867 non-Federal contributed funds for low-flow augmentation storage and \$315,549 Federal cost and \$315,549 non-Federal contribution in kind for recreation facilities under the completed projects program. Project was authorized by Flood Control Act of 1958.

Local Cooperation. Local interests must contribute in cash an amount equal to one percent of project first cost. State of Indiana assumed this obligation. A contract with the Indiana Department of Natural Resources, approved by the Secretary of the Army in May 1974, provided for that agency to design and construct certain additional recreation facilities at Cecil M. Harden, Huntington, Mississinewa, Monroe, and Salamonie Lakes under the cost-sharing category of the completed projects program.

Operations during fiscal year. New work: None. Maintenance: Routine maintenance was performed. During the 2007 flood season estimated damages of \$14,731,000 were prevented. Visitor expenditures were \$11,476,562.

Condition at end of fiscal year. Land acquisition and all major construction and relocation contracts are complete. Reservoir was placed in operation in spring 1967. Cost shared recreation facilities constructed by the State of Indiana under the completed projects program are complete.

40. TAYLORSVILLE LAKE, KY

Location. Dam site is in Spencer County, KY, 60.0 miles above the confluence of Salt River and Ohio River, 4 river miles above Taylorsville and 36.9 river miles above Shepherdsville, KY. (See U.S. Geological Survey map of Taylorsville, KY.)

Existing project. A reservoir for flood control and allied purposes. Dam is an earth and rock fill structure, 164 feet high and 1,280 feet long. Outlet works are slide gate controlled and spillway is uncontrolled open cut. Total storage capacity is 291,670 acre-feet (211,230 for flood control, winter months), and 52,245 for water quality and fish and wildlife. Cost of completed new work is \$87,004,456, including \$82,991,363 federal funds and \$4,013,093 non-federal funds. Project was authorized by 1966 Flood Control Act.

Local Cooperation. Local interests must agree to administer project land and water areas for recreation; pay, contribute in kind, or repay (which may be through user fees) with interest one-half of the separable first costs of the project allocated to recreation; bear all costs of operation, maintenance, and replacement of recreation lands and facilities under P.L. 89-72. Local interests must

also agree to prevent encroachments on flow-carrying capacities of stream channels below the reservoir to the extent needed to provide reasonably effective reservoir operation. Commonwealth of Kentucky has indicated intent to fulfill requirements for recreation cost sharing and has assumed responsibility for channel encroachments and pollution control. The Commonwealth furnished assurance agreements covering prevention of encroachment on capacity of stream channels in April and May 1973 and executed the recreation cost sharing contract in April 1973. On April 2, 1980, the U.S. District Court for the Western District of Kentucky ruled that the 1973 recreation cost sharing contract between the Commonwealth and the United States that provided for repayment after completion was invalid under the Kentucky Constitution which prohibits one General Assembly from obligating future appropriations that would be binding on a subsequent legislature. In response to the Court's ruling, the Commonwealth and the United States entered into a new contract providing for cash contributions. Contract was approved by the Secretary of the Army June 11, 1980. The contract was found to be valid and enforceable by the Court July 14, 1980.

Operations during fiscal year. New work: None. Maintenance: New controls, vain selector, and travel wiring were installed in the tower elevator. During the 2007 flood season estimated damages of \$325,000 were prevented. Visitor expenditures were \$18,915,711.

Condition at end of fiscal year. Engineering and design studies are complete. Land acquisition is 100 percent complete. Construction was started in June 1974. All major construction items are complete. The dam gates were closed in January 1983 for permanent impoundment. Dedication ceremony was May 28, 1983. Two sections of county road were washed out by heavy rainfall. Both sections were originally upgraded for project operation prior to washout. The repairs were completed by the Corps in 1996-97 at a cost of \$700,000.

41. WABASH RIVER BASIN

Location. Works covered by this project are located in the Wabash River Basin, a drainage area of 33,100 square miles, covering parts of Indiana, Illinois, and Ohio.

Existing project. One local protection project and five reservoir projects were authorized for this basin plan. (See Table 24-B for authorizing legislation and Table 24-J for project list and total cost of basin plan.)

42. WEST FORK OF MILL CREEK LAKE, OH

Location. Dam is on West Fork of Mill Creek 6.5 miles above its junction with Mill Creek and 2 miles northeast of Mount Health, OH, and 10 miles north of downtown Cincinnati. Reservoir extends upstream about 3 miles and is in Hamilton County, OH. (See U. S. Geological Survey map of Glendale, OH.)

Existing project. An earth embankment dam and a reservoir for flood control and allied purposes. Total storage capacity of reservoir is 11,300 acre-feet, of which 9,850 acre-feet is for flood control. For further details, see page 1119 of Annual Report for 1962. Cost of

completed new work is \$4,722,463 made up of \$3,092,941 Federal cost for the initial project, \$520,800 non-Federal cost for sewer relocation and dam, \$50,000 non-Federal contributed funds in fulfillment of project authorization and \$529,361 Federal cost and \$529,361 non-Federal contribution in kind for recreation facilities under the completed projects program. Existing project selected for construction under additional authorization for Ohio River Basin in 1946 Flood Control Act.

Local Cooperation. Local interests were to release necessary land under their control and give assurance that future channel encroachment below dam site would be prevented. For enlargement of reservoir to include a conservation pool, local interests would contribute one-half additional cost of such pool, including one-half cost of relocation of sanitary sewer, and agree to hold the United States free from damages resulting from its provision. Board of County Commissioners of Hamilton County, Ohio, adopted a resolution October 8, 1947, signifying willingness to fulfill requirements including provision of conservation pool. Assurances were executed on same date. A contract with the United States for relocation of sanitary sewer outside reservoir area in order to include conservation pool in project was accepted by Hamilton County, in which the United States paid one-half cost of such relocation work. Hamilton County Commissioners furnished \$50,000, required as a local contribution toward additional cost of providing conservation pool. Hamilton County Park District has undertaken development and management of recreation facilities in reservoir area for use of the public in accordance with the license granted by Secretary of the Army on October 31, 1951. Contract for cost shared recreation development under the completed works program was executed by the Board of Park Commissioners, Hamilton County Park District, Ohio, in September 1975 and approved by the Chief of Engineers in December 1975.

Operations during fiscal year. New work: None. Maintenance: Routine maintenance was performed. During the 2007 flood season estimated damages of \$10,000 were prevented. Visitor expenditures were \$15,961,479.

Condition at end of fiscal year. Construction started in March 1949 and reservoir was placed in operation in December 1952. Project is complete. Cost shared recreation development under the completed projects program is complete.

43. WILLIAM H. HARSHA LAKE, OH

Location. Dam site is on East Fork of Little Miami River between Batavia and Williamsburg, OH, about 6.0 miles above Batavia and 32.6 miles above mouth of the Little Miami River. Entire project lies in Clermont County, OH. (See U.S. Geological Survey map of Batavia, OH.)

Existing project. A reservoir for flood control and allied purposes. It includes an earthfill dam, outlet works, an uncontrolled saddle spillway, and a dike to close a saddle north of spillway. Total storage capacity of reservoir is 294,800 acre-feet, of which 210,600 acre-feet

is reserved for flood control storage. Cost of completed new work is \$52,023,157 and an estimated \$3,485,840 non-Federal reimbursement for water supply storage. Existing project was authorized by general authorization for Ohio River Basin in 1938 Flood Control Act. Project name was changed from East Fork Lake to William H. Harsha Lake effective January 4, 1981, by Public Law 96-383, October 6, 1980.

Local Cooperation. None required. However, the State of Ohio requested inclusion in the project of storage for future municipal and industrial water supply uses. Contract with State of Ohio for water supply storage under provisions of Water Supply Act of 1958, as amended, was approved by Secretary of the Army, May 20, 1970. Under terms of contract, State will reimburse the Federal Government for costs allocated to water supply storage over a period not to exceed 50 years after use of this storage is initiated plus estimated annual amount for cost of operation, maintenance, and major capital replacements required for the water supply facilities.

Operations during fiscal year. New work: None. Maintenance: Routine maintenance was performed. During the 2007 flood season estimated damages of \$164,000 were prevented. Visitor expenditures were \$39,638,775.

Condition at end of fiscal year. Construction was started in May 1970. Project is complete and reservoir was placed in operation in February 1978.

44. INSPECTION OF COMPLETED FLOOD CONTROL PROJECTS

Flood Control Act of June 22, 1936, and subsequent acts require local interests to maintain and operate local protection projects in accordance with regulations prescribed by Secretary of the Army. Inspections were made to determine extent of compliance and to advise interests as necessary to measures required to correct deficiencies. (See Table 24-K for the latest dates of inspection performed on the local protection projects, channel improvements, and bank revetments).

Fiscal year costs were \$478,158. Total costs to September 30, 2007, were \$7,489,134.

45. OTHER AUTHORIZED FLOOD CONTROL PROJECTS

See Table 24-E.

46. FLOOD CONTROL WORKS UNDER SPECIAL AUTHORIZATION

Environmental restoration activities pursuant to Section 1135, 1986 Water Resources Act, as Amended. There were no costs for fiscal year 2006.

Flood control activities pursuant to Section 205, 1948 Flood Control Act, Public Law 858, 80th Congress, as amended. Cost for fiscal year were \$46,111 for six feasibility reports; \$15,228 for plans and specifications on two projects; \$4,450 for one project completing construction; and \$19,967 for coordination activities.

Reflects federal cost only, for full costs see table 24-L.

Emergency bank protection (Section 14, 1946 Flood Control Act, Public Law 526, 79th Congress). Costs for fiscal year were \$88,037 for four planning and design analyses; \$44,174 for two projects under construction; and \$21,448 for coordination activities.

Reflects federal cost only, for full cost see table 24-L.

Clearing and Snagging (Section 208). Cost for fiscal year was \$9,420 for one Planning Design Analysis.

EMERGENCY MANAGEMENT and SECURITY BRANCH

Emergency flood control; activities pursuant to Public Law 99, 84th Congress, and antecedent legislation. The Louisville District participated in the following emergency management activities.

Civil Disaster Response. The pace of civil disaster deployments slowed drastically in FY07. Louisville District (LRL) provided 6 responders to Louisiana in response to Hurricane Katrina during FY07. The LRL Debris Planning and Response team (PRT) was alerted and mobilized in response to the October 2006 Buffalo, NY snowstorm. Three team members were actually deployed to provide technical assistance to local governments and conduct oversight for FEMA. LRL also provided a dam safety expert to Hawaii following an earthquake in October 2006.

Disaster Equipment Resource Center. LRL retained the Disaster Equipment Resource Center mission in FY07. The mission includes procurement of all types of special equipment or services that are not part of the normal ESF #3 missions. The center was alerted several times but no actual operations were required.

Local Government Liason Program. Headquarters USACE assigned coordination of the Local Government Liason (LGL) program to LRL in FY06. The LGL program involves training, certifying and deployment of a national cadre of volunteers who coordinate USACE and other Federal government support at the county and parish government level. The LRL EOC develops and maintains the standards for cadre membership, screens and accepts potential cadre members, manages and deploys the cadre, and works directly with FEMA and other federal and state agencies for its use. The District EM has the authority to speak for HQ USACE in this program. There were several alerts but no deployments during FY07.

Assistance to State Governments under Public Law 84-99. District team members coordinated with both the States of Kentucky and Indiana on emergency related issues during FY07.

Kentucky. Assistance to Kentucky included briefings to the Division of Emergency Management and other state agencies, hydrology forecasts and flood fight assistance. In January 2007, high water resulted in requests for sandbags for Christian County, pumps for the

city of Uniontown, and technical assistance for Livingston County and the City of Smithland in western Kentucky. Two responders were deployed for technical assistance and the cost of the response was \$40,142.98.

Indiana. In August 2007, high water in northwest Indiana caused closure of Interstate 80 near Chicago and resulted in a request for assistance for pumps and sandbags. LRL provided a rapidly deployable sandbag wall and pumps. Other assistance to Indiana included coordination following storm events, debris response training and participation in the ARDENT SENTRY homeland security exercise.

Rehabilitation efforts under Public Law 84-99. The McGinnis Levee (Knox and Greene Counties, Indiana), an eligible non-federally constructed, operated and maintained levee was damaged by flooding in the Wabash River Basin in Indiana during January 2005. The Project Information Report (PIR) was prepared and submitted to LRD during FY05 for review and approval. The McGinnis Levee PIR was approved in FY06 but funding for repairs was not available until spring of 2006. The McGinnis Levee repair was completed in May 2007.

Geographic Information Systems (GIS). The modeling group of the Emergency Management and Security (EM&S) Branch has developed the capability to assess incoming hurricane possible damage for CONUS and OCONUS interests in the Atlantic, Caribbean, Near Pacific and Far Pacific Basins. All models are based on ESRI's ArcGIS 9.x and incorporate significant automation for model execution and display output production. These models, collectively referred to as Mission Models, are now widely shared though Federal agencies, State governments and local government interests.

The new model capability allowed the participation with New York City Office of Emergency Management in a new effort to create detailed operational models to assess the potential impacts of hurricanes on the five boroughs that comprise the City. The effort was sponsored by Department of Homeland Security and New York District provided significant local support. The project was well received at the City-level and several presentations have been made to describe the efforts and results.

The advanced modeling capability allowed for participation in a major two-week hurricane exercise for the Hawaiian Islands. The exercise, Makani Pahili 2007, involved various Federal, State and local agencies and included detailed response planning workshops with the end result intended to be a significantly updated hurricane plan for the islands.

Inland Electronic Navigation Chart. Production of Inland Electronic Navigational Charts (IENC) continued. LRL is responsible for all quality control and some new production of the LRD's electronic charts. New chart production includes more of the Tennessee River and the first seven miles of the Allegheny River. Updates and maintenance of the Ohio, Monongahela, Kanawha, Green,

Cumberland and Tennessee Rivers is on-going. The IENC program has now become involved in creating a Corps-wide Paper Navigation Chart Standard. Representatives from the district serve on this committee, which anticipates releasing the standard in early calendar year 2008.

Critical Infrastructure Security Program. Over the past year, the Security Team has brought all eleven Critical Infrastructure Security Program (CISP) sites online and has been undergoing Contractor Field Testing (CFT), Performance Verification Testing (PVT), and four phases of Endurance Testing and Reporting. All testing is finished and the fine tuning of the equipment is winding down. Major inspections by the contractor and government inspectors are being accomplished at present. Inspections should be completed by June 08. Work remaining pertains to a small punch list of items at most sites, which includes lightning suppression at all of the sites that had been overlooked. All sites have passed the final endurance test and have been accepted to start a one year warranty period. Stability of the systems is still questionable due to the sensitivity of some of the equipment. These issues are being caused by the usage of Government mandated detection devices. Over the next year or two, these sensitivity issues will need to be addressed and appropriate action taken to eliminate the deficiencies. It seems that the HQ mandated equipment is not robust enough to handle the environment that we have subjected it to. All eleven sites have been included in the Central Monitoring System (CMS) at the District Office. The sites have all been certified by the Commander to meet Baseline Security Posture (BSP) as mandated by Division and HQ.

Inspection of Completed Works Program

National Levee Database. The U.S. Army Corps of Engineers embarked on a project to design, build, and maintain a National Levee Database (NLD). The NLD will contain pertinent information on levees in the Rehabilitation and Inspection Program to include location and geospatial information for all of the features of the project. The Louisville District was the first of five Districts designated to perform Pilot Projects of the NLD for the Corps. Initial District efforts consisted of preparing a levee inventory which included such digital information as as-builts, permits, design memorandums, O&M Manuals, cross-section locations identified for critical points for the risk analysis, and a comprehensive summary of transition points on the project for which the contractor acquired geospatial points in the field.

The NLD will not only provide current information on each levee project, but it will also be used in the future for such efforts as emergency flood fighting, risk assessments, inspections, and FEMA certification. The contractor completed the initial field surveys and the draft database was quality assurance reviewed by the District. The contractor will be making additional surveys and corrections to the database. The final database is scheduled to be delivered to HQ by the end of January

2008. The NLD will be a living document with maintenance and updating continuing to occur in the future.

FEMA Certification. Certification of local flood protection projects for FEMA will become a significant effort for the Corps during the next few years. During the FY, efforts continued with FEMA to outline the communities and projects where Map Modernization (MAPMOD) mapping was already being initiated in order to prioritize the flood protection projects where the Corps may be requested to perform certification efforts. The Louisville District is scheduled to perform a certification study for the City of Covington, Kentucky in early 2008.

I-Walls. In order for the Corps to further implement lessons learned from Hurricane Katrina in New Orleans, all Corps Districts were required during this fiscal year to perform a Phase II evaluation of the I-Walls greater than 6 feet in height. The District reported 14 of the 16 projects greater than 6 feet in height do not meet the strictest interpretation of the USACE guidance. Many of the projects were found to have limited subsurface information.

Since the construction of many of these projects on the Ohio River, numerous USACE reservoirs were constructed along tributaries to the Ohio River. The storage capacity of these reservoirs reduced the risk associated with a flood event equivalent to 1937, if an identical series of rainfall events were to occur today. On this basis, the Louisville District recommended that 10 projects be scheduled for additional evaluation in Phase III.

General Investigations

47. SURVEYS

Fiscal year costs was \$32,967 for one navigation study; \$253,863 for three flood damage prevention studies; \$19,867 for one special studies; and \$83,285 for four miscellaneous activities.

Reflects Federal cost only, for full cost see Table 24-M.

48. PRECONSTRUCTION ENGINEERING AND DESIGN

Fiscal year costs were \$84 for one Navigation project; \$358,079 for two flood control projects.

Reflects Federal cost only, for full cost see Table 24-M.

49. COORDINATION WITH OTHER AGENCIES

Fiscal year total cost was \$7,149 for one coordination with other agencies project and \$192,499 for ten planning assistance to states projects.

Reflects federal cost only, for full costs see Table 24-M.

50. COLLECTION AND STUDY OF BASIC

DATA

study.

Fiscal year total cost was \$49,759 for three flood plain management projects; and \$8,008 for one hydrologic

¹ Includes \$85,000 public works funds.

² Includes \$2,000 emergency relief funds, \$204,444 "maintenance and operation of dams and improvements of navigable waters" and \$3,842,667 expended from 1888 to 30 June 1936, for operation and care from permanent indefinite appropriation. Includes \$725,715 from Productive Employment Appropriation Act (PL 98-8) of 1983.

³ Includes \$693,690 (non-federal) contributed funds received and \$690,103 (non-federal) expended to date

⁴ Includes \$316,871 under "maintenance and operation of dams and other improvements of navigable waters", and \$6,405,372 expended between July 5, 1885 and June 30, 1937 on operation and care from permanent indefinite appropriation. Includes \$149,700 from Productive Employment Appropriation Act (PL 98-8) of 1983. Includes \$57,000 (non-federal) contributed funds received and \$45,194 (non-federal) expended to date.

⁵ Includes \$1,977,548 (non-federal) contributed funds received and \$1,949,598 (non-federal) expended to date

⁶ Includes \$1,285,099 (non-federal) contributed funds received and \$1,099,880 (non-federal) expended to date

⁷ Includes \$418,970 (non-federal) contributed funds received and \$418,965 (non-federal) expended to date

⁸ Includes \$945,666 (non-federal) contributed funds received and \$503,282 (non-federal) expended to date

⁹ Includes \$400,000 (non-federal) contributed funds received and \$393,217 (non-federal) expended to date

¹⁰ Includes \$965,133 (non-federal) contributed funds received and \$965,123 (non-federal) expended to date.

¹¹ Includes \$1,230,352 (non-federal) contributed funds received and \$1,174,444 (non-federal) expended to date

¹² Includes \$3,972,000 (non-federal) contributed funds received and \$2,702,175 (non-federal) expended to date

¹³ Includes \$964,000 (non-federal) contributed funds received and \$677,527 (non-federal) expended to date

¹⁴ Includes \$550,019 (non-federal) contributed funds received and \$541,992 (non-federal) expended to date

¹⁵ Includes \$917,572 Code 511 funds and \$4,212,028 Code 772 funds received and \$917,572 Code 511 funds and \$3,630,993 Code 772 funds expended to date.

¹⁶ Includes \$4,227,000 (non-federal) contributed funds received and \$4,121,419 (non-federal) expended to date.

¹⁷ Includes \$3,765,000 (non-federal) contributed funds received and \$2,656,839 (non-federal) expended to date.

¹⁸ Includes \$2,224,948 Code 711 funds, \$110,107 Code 713 Federal funds and \$108,418 Code 713 non-Federal funds.

¹⁹ Includes \$100,000 Supplemental funds; \$326,900 Special Recreation Use Fees; and \$668,025 "maintenance & operation of dams and other improvements of navigable water".

²⁰ Includes \$7,497,492 (non-federal) contributed funds and \$100,706 Code 711 funds.

²¹ Includes \$3,511 "maintenance and operation of dams and other improvements of navigable water."

²² Includes \$61,451 public work acceleration executive 1963 funds, \$143,088 Code 711 funds, and \$243,619 Code 712 funds.

²³ Includes \$52,240 Special Recreation Use Fees and \$336 "maintenance and operation of dams and other improvements of navigable water."

²⁴ Includes \$5,476 "maintenance and operation of dams and other improvements of navigable water" and \$15,000 non-federal contributed funds.

²⁵ Includes \$35,814 Code 711 funds, \$113,321 Code 713 funds, and \$113,094 (non-federal) contributed funds received and expended to date.

²⁶ Includes \$76,724 Code 711 funds.

²⁷ Includes \$51,854 Special Recreation Use Fees.

²⁸ Includes \$6,900,000 of U.S. Forest Service Funds.

REPORT OF THE SECRETARY OF THE ARMY ON CIVIL WORKS ACTIVITIES FOR FY 2007

- ²⁹ Includes \$8,126 "maintenance and operation of dams and other improvements of navigable water."
- ³⁰ Includes \$19,683 Code 711 funds, \$353,995 Code 713 funds, & \$353,995 non-Federal contributions in kind for recreation facilities.
- ³¹ Includes \$573 "maintenance and operation of dams and other improvements of navigable water".
- ³² Includes \$133,413 Code 711 funds, \$183,732 Code 713 funds, and \$40,001(non-federal) contributed funds.
- ³³ Includes \$114,280 Special Recreation Use Fees and \$664,025 under "maintenance and operation of dams and other improvements of navigable water".
- ³⁴ Includes \$155,354 Code 713 funds and \$193,422 (non-federal) contributed funds received and expended to date.
- ³⁵ Includes \$215,000 Code 711 funds, \$174,392 Code 713 funds, \$239,200 (non-federal) contributed funds and \$174,392 non-Federal contribution in kind for recreational facilities, \$53,133,872 in Code 817 funds for major rehab..
- ³⁶ Includes \$1,185 Code 711 funds, \$869,158 Code 713 funds, \$7,797,604 contributed funds and \$870,343 non-Federal contribution in kind for recreational facilities.
- ³⁷ Includes \$54,460 from Productive Employment Appropriation Act (PL 98-8) of 1983.
- ³⁸ Includes \$21,897 public works acceleration executive 1963 funds and \$2,594,274 Code 711 funds received and expended to date.
- ³⁹ Includes \$204,920 Special Recreation Use Fees and \$52,000 Supplement Funds, \$527,225 "maintenance and operation of dams and other improvements of navigable water".
- ⁴⁰ Includes \$20,568,369(non-federal) contributed funds received and \$20,182,445 (non-federal) expended.
- ⁴¹ Includes \$196,306 public works acceleration executive 1963 funds and \$867,396 Code 711 funds, \$22,612 Code 713 funds, and \$22,612 (non-federal) contributed funds and \$7,140,000 Code 540 funds.
- ⁴² Includes \$236,640 Special Recreation Use Fees and \$668,025 under "maintenance and operation of dams and other improvements of navigable water".
- ⁴³ Includes \$315,549 Code 713 funds, \$163,867(non-federal) contributed funds, and \$315,549 non-Federal contribution in kind for recreation facilities received and expended to date.
- ⁴⁴ Includes \$4,013,093 (non-federal) contributed funds received and expended to date.
- ⁴⁵ Includes \$529,361 Code 713 funds, \$50,000 (non-federal) contributed funds, \$529,361 non-Federal contribution in kind for recreation facilities, and \$520,000 non-Federal cost for sewer relocation and dam.
- ⁴⁶ Includes \$58,571 for preconstruction planning, engineering and design completed before FY 1953.
- ⁴⁷ Includes \$8,764 "maintenance and operation of dams and other improvements of navigable water."

LOUISVILLE, KY DISTRICT
AUTHORIZING LEGISLATION

TABLE 24-B

Acts	Work Authorized	Documents
GREEN AND BARREN RIVERS, KY (See Section 3 of Text)		
Aug 11, 1888	Purchase of original improvement	H. Doc 111, 49th Cong., 2d Sess., Ann. Rept. 1887, p.1903 Annual Report, 1891, p. 2439
Mar 3, 1893 ¹	Construction of Lock 2, Green River	Annual Report, 1891, p. 2478
Jul 13, 1892	Construction of Lock 5, Green River	
Jul 13, 1902	Construction of Lock 6, Green River	
Mar 3, 1905 ²	Appropriated \$5,000 for continuing improvements of Green River above mouth of Big Barren River, with provision "That the Secretary of War may, in his discretion, expend such portion of said amount as may be necessary for removal of snags in Nolin River."	
Mar 3, 1909	Construct new Lock 1 and new Lock and Dam 2, Green River	S. Doc. 82, 83d Cong., 2d Sess. Rivers and Harbors Committee Doc. 2, 71st Cong., 1st Sess., and H. Doc. 685, 69th Cong., 2d Sess.
Jul 3, 1930 ²	Construct new locks at Dam 5, Green River and Dam 1, Barren River; modification of Dam 5, Green River, widens bends in Bear Creek, KY	
Jun 26, 1934 ³	Operation and care of locks and dams with War Department Appropriations for rivers and harbors	
Aug 30, 1935 ²	Improvement of Nolin River	H.D. 480, 72d Cong., 2d Sess. S.D. 82, 83d Congress, 2d Sess.
Sep 3, 1954	Channel enlargement of lower 103 miles of Green River revocation of authorities for improvement of Bear Creek and Nolin River	
KENTUCKY RIVER (See Section 4 of Text)		
1879	Existing project was adopted	H. Ex, Doc 47, 45th Cong., 3d Sess., Ann. Rept. 1879, p.1398
Jun 26, 1934 ³	Operation and care of locks and dams	Public Law 99-662, 99 th Congress 2 nd Session Public Law 102 – 102 nd Congress 2 nd Session
Nov 17, 1986	Authorized disposition of Kentucky River Locks & Dams 5 through 14 without any construction cost	
1992	Appropriated not more than \$300,000 to identify the most critical repair items to enhance the dependability of the dams for their water supply function prior to transfer to the Commonwealth of Kentucky	
1993	Appropriated \$5,000,000 for critical maintenance work on Locks and Dams 5-14 and directs the Corps to transfer those facilities to the Commonwealth of Kentucky	Public Law 103-
1995	Appropriated \$3,000,000 to continue Locks and Dams 5-14 repairs in preparation for transfer	Public Law 104-46, 104 th Congress 1 st Session
Aug 26, 1999	Appropriated \$2,000,000 for work on lock and dam #10	Public Law 106-377, 106 th Congress, 1 st Session
Dec 21, 2000	Authorization to stabilize and renovate lock and dam #10	Public Law 106-553, 106 th Congress 1 st Session
OHIO RIVER BASIN (Louisville Dist.) (See Section 36 of Text)		
Aug 28, 1937	Construct levee, floodwalls, and drainage structures for protection of cities and towns in Ohio River Basin, projects to be selected by Chief of Engineers with approval of Secretary of War, at a cost not to exceed \$24,877,000 for construction	Flood Control Committee Document 1, 75th Congress, 1st Session
Jun 28, 1938	Approved general comprehensive plan for flood control and other purposes in Ohio River Basin as may be advisable in discretion of Secretary of War and Chief of Engineers, and for initiation and partial accomplishment of plan, authorized \$75 million for reservoirs and \$50.3 million for local protection works, individual projects to be selected and approved by Chief of Engineers, subject to provision that authorization shall include diversion of Cache River above Cairo, Illinois, and protection of area north of Cairo drainage district by levees at an estimated cost of \$2 million	Flood Control Committee Document 1, 75th Congress, 1st Session
Aug 18, 1941	Additional \$45 million for further prosecution of comprehensive plan for Ohio River Basin	
Dec 22, 1944	Additional \$70 million for further prosecution of comprehensive plan for Ohio River Basin, including plan of improvement for flood control and other purposes in Kentucky River Basin Flood protection works at Taylorsville, KY at an estimated cost of \$129,350	H. Doc. 504, 78 th Congress, 2d Session S.D. 105, 78th Cong., 1st Sess.

**TABLE 24-B
CONTINUED****AUTHORIZING LEGISLATION**

Acts	Work Authorized	Documents
	Channel improvement of lower Rough River and Barnett Creek at an estimated cost of \$360,000	H.D. 535, 78th Congress 2d Session
Jul 24, 1946	Additional \$125 million for further prosecution of comprehensive plan, including plan of improvement for flood control in Wabash River Basin, Illinois, and Indiana, at an estimated cost of \$9,629,000 Also, West Fork of Mill Creek at an estimated cost of \$1,527,000.	H.D. 197, 80th Congress 1st Session H.D. 198, 80th Cong., 1st Session
May 17, 1950	Additional \$100 million for prosecution of comprehensive plan for Ohio River Basin, including necessary bank stabilization measures at New Harmony Bridge, Indiana, at an estimated cost of \$500,000.	
Jul 3, 1958	Flood control Act of 1958 modified comprehensive plan to provide for Monroe Reservoir on Salt Creek, White River Basin, Indiana, at an estimated cost to the United States of \$4,350,000; cost to local interests, \$5,141,000.	H.D. 192, 85th Congress, 1st Session
Oct 23, 1962	Flood Control Act of 1962 deleted Jessamine Creek Reservoir on Kentucky River, Kentucky, from comprehensive plan for Ohio River Basin	H.D. 423, 87th Congress, 2d Session
Dec 30, 1963	Additional \$150 million for further prosecution of comprehensive plan for Ohio River Basin	Pub. Law 88-253, 88th Cong., 1st Session
Jun 18, 1965	Additional \$89 million for further prosecution of comprehensive plan for Ohio River Basin	Public Law 89-42, 89th Cong., 1st Session
May 12, 1967	Additional \$38 million for further prosecution of comprehensive plan for Ohio River Basin	Public Law 90-17, 90th Cong., 1st Session
Aug 13, 1968	Additional \$35 million for further prosecution of comprehensive plan for Ohio River Basin	Public Law 90-483, 90th Cong., 2nd Session
Jun 19, 1970	Additional \$69 million for further prosecution of comprehensive plan for Ohio River Basin	Public Law 91-282, 91st Cong., 2nd Session
Mar 7, 1974	Additional \$120 million for further prosecution of comprehensive plan for Ohio River Basin Fifty-four local protection projects and one reservoir project in comprehensive plan for Ohio River Basin were deauthorized August 5, 1977, under Section 12, Water Resources Development Act of 1974 Two additional local protection projects in comprehensive plan for Ohio River Basin were deauthorized November 6, 1977, under Section 12, Water Resources Development Act of 1974	Public Law 93-251, 93rd Congress, 2nd Session
Nov 13, 1995	Directed use of \$1,000,000 of funds appropriated in PL 104-46 for construction of the Ohio River Flood Protection, Indiana Project.	Public Law 104-46, 104th Congress, 2nd Session
WABASH RIVER BASIN (See Section 41 of Text)		
Aug 13, 1968	Construction of five multipurpose reservoirs and one local protection project in Wabash River Basin, IL & IN, with provision that construction of Big Walnut Lake, IN, project must be approved by the President. Authorization of \$50 million for initiation of partial accomplishment of project	S.D. 96, 90th Congress, 2nd Session
Dec 29, 1981	Two multiple purpose reservoirs in Wabash River were deauthorized.	Public Law 97-128, 97th Congress, 2nd Session
May 1, 1997	Two Additional reservoir projects were deauthorized	Public Law 99-662, 99th Congress, 2nd Session Public Law 100-676 100th Congress, 2nd Session
MIAMI RIVER BASIN, PLEASANT RUN, VICINITY FAIRFIELD, OH		
Nov 17, 1986	Three dry bed reservoirs and a channel improvement were authorized in Section 401 of the Water Resource Development Act of 1986.	Public Law 99-662, 99th Congress, 2nd Session

LOUISVILLE, KY DISTRICT
AUTHORIZING LEGISLATION

**TABLE 24-B

Acts	Work Authorized	Documents
HAZARD, KENTUCKY		
Nov 17, 1988	Approximately 6 miles of channel improvement were authorized in Section 3 of the Water Resources Development Act of 1988.	Public Law 100-676, 100th Congress, 2nd Session
Nov 28, 1990	Flood control measures to prevent a January 1957 flood reoccurrence in the vicinity of Hazard, Kentucky at a total cost of \$30,000,000 was authorized for design and construction in Section 108 of the Water Resource Development Act of 1990.	Public Law 101-640, 101st 2nd Session
HOLES CREEK, OHIO		
Nov 17, 1986	The project for flood control, Miami River, Little Miami River, Interim Report No2, West Carrollton - Holes Creek, Ohio: Report of the Chief of Engineers dated December 23, 1981, at a total cost of \$8,910,000, with an estimated first Federal Cost of \$6,230,000 and an estimated first non-Federal cost of \$2,680,000.	Public Law 99-662, 99th Congress, 2nd Session
Aug 17, 1999	Holds the total amount projected as the non-federal share as of September 30, 1996 in the Project Cooperation Agreement executed on that date; and 100% of the amount of any increases in the cost of the locally preferred plan over the cost estimated in the Project Cooperation Agreement.	Public Law 106-53 106th Congress, 1st Session
SALYERSVILLE, KENTUCKY		
Nov 17, 1986	Flood control measures to prevent a December 1978 flood reoccurrence in the vicinity of Salyersville, Kentucky at a total project cost of \$7,000,000 was authorized for design and construction in section 401(e)(1) of the Water Resource Development Act of 1986. With respect to the project, Congress has determined that the benefits exceed the cost of such flood control measures.	Public Law 99-662, 99th Congress, 2nd Session
Nov 5, 1990	Provided \$400,000 to construct the Salyersville, Kentucky cut-through as authorized by PL 99-662 401(e)(1) in accordance with the Special Project Report for Salyersville, Kentucky, concurred in by the Ohio River Division Engineer on or about July 26, 1989.	Public Law 101-514, 101st Congress, 2nd Session
Aug 17, 1991	Provided \$600,000 to continue construction of the Salyersville, Kentucky cut-through as authorized by PL 99-662 section 401(e)(1) in accordance with the Special Project Report for Salyersville, Kentucky, concurred in by the Ohio River Division Engineer on or about July 26, 1989.	Public Law 102-104, 102nd Congress, 1st Session
Sep 12, 1996	Additional \$3,000,000 to continue construction of the Salyersville, Kentucky cut-through.	H.D. 3816, 104th Congress, 2nd Session
FRANKFORT, SOUTH FRANKFORT, KENTUCKY		
Nov 28, 1990	Flood protection in accordance with Plan R-1 of the Louisville District Commander's Re-evaluation Report, dated June 1990 and a executed LCA no later than October 1991 was authorized in Section 102 of the Water Resources Development Act of 1990.	Public Law 101-640, 101st Congress, 2nd Session
POND CREEK, JEFFERSON COUNTY, KENTUCKY		
Sep 25, 1996	Provide \$10,993,000 to construct the Pond Creek, Jefferson County, Kentucky project for flood control in accordance with the Report of the Chief of Engineers dated June 28, 1994. The major components of the Recommended Plan include detention basin storage and channel enlargement, in addition to wetland restoration and recreation.	Public Law 104-303, 104th Congress, 2nd Session
DUCK CREEK, CINCINNATI, OHIO		
Sep 25, 1996	Provide \$11,960,000 to construct the Duck Creek, Cincinnati, Ohio flood damage reduction project in accordance with the Chief of Engineers Report dated June 24, 1994. The project consists of floodwalls/ levees and channel relocation.	Public Law 104-303, 104th Congress, 2nd Session
Jan 24,2000	Modified to authorize the Secretary to carry out the project at a Total cost of \$36,323,000 and non-Federal share of the cost Of the project shall not exceed \$4,200,000.	Public Law 406-541, 106th Congress, 2nd Session

1 At normal pool Dam 48, Ohio River, Elev. 337.3, Green River datum (Elev. 338.0 Ohio River datum)

2 New Lock 1 placed in operation May 25, 1956, old Dam 1, completed 1835-40, replaced with new cellular concrete masonry dam constructed 1970-71 with O&M funds at cost of \$822,000.

3 Does not include \$179,110 cost of old Lock and Dam 1.

4 New Lock and Dam 2, placed in operation June 18, 1956.

5 Does not include \$295,696 cost of old Lock and Dam 2.

6 Operation discontinued September 30, 1981.

7 Breaching of dam on May 24, 1965, stopped through traffic to Bowling Green, KY.

8 With moveable A-frame crest 3 feet high.

9 Operation discontinued August 1, 1951.

10 Does not include \$179,434 cost of old Lock and Dam 5. Transferred to State, December 1996.

11 Distance from mouth of Green River is 164.5 miles. Lock closed to navigation as the result of loss of pool at Green River Lock and Dam 4 on May 24, 1965.

12 Piles in old gravel dam completed in 1934.

13 Includes \$729,269 for new large lock completed in 1934.

14 At normal pool McAlpine Dam, Ohio River Elev. 421.8 Kentucky River datum (Elev. 420 Ohio River datum).

15 Reconstruction completed by United States in 1882.

16 Built by State of Kentucky. Cost given is for repairs by United States to Locks and Dams 1 through 5. Original construction costs to State were: L&D 1, \$220,300; L&D 2, \$151,983; L&D 3 \$135,857; L&D 4, \$131,607; and L&D 5, \$137,436.

17 Lock was closed to traffic and placed in caretaker status in September 1982.

HUNTINGTON, WV, DISTRICT

All cost and financial statements for projects are listed at the end of this chapter. All other tables are referenced in the text and also appear at the end of this chapter.

The Huntington District includes central and south-eastern Ohio, all of West Virginia except the northern panhandle and northeastern portion, the

eastern portion of Kentucky, a portion of midwestern Virginia, and a very small portion of northwestern North Carolina, embraced in the drainage basin of the Ohio River and its tributaries from approximate river mile 127 (below Pittsburgh, PA) to approximate river mile 438, immediately upstream from Foster, KY. The drainage area of the Huntington District is approximately 44,914 square miles.

NAVIGATION

1. CONSTRUCTION OF LOCKS AND DAMS ON THE OHIO RIVER

See this heading under Chapter 19 – Ohio River.

2. KANAWHA RIVER, WV

Location. The Kanawha River is approximately 97 miles in length and is formed by the junction of the New and Gauley Rivers, a short distance above Kanawha Falls, WV, and flows generally northwesterly to the confluence with the Ohio River at Point Pleasant, WV.

Previous projects. For details of previous projects see the Annual Reports for 1875, 1915 and 1938.

Existing project. The existing project consists of three navigation structures on the Kanawha River. London Locks and Dam are located approximately 83 miles above the mouth of the Kanawha River and approximately two miles downstream from Montgomery, WV. Marmet Locks and Dam are located approximately 68 miles above the mouth of the Kanawha River at Marmet, WV. Winfield Locks and Dam are located approximately 31 miles above the mouth of the Kanawha River at Winfield, WV. The lower 31 miles of the Kanawha River are located in the Robert C. Byrd Locks and Dam navigation pool. For information about Robert C. Byrd Locks and dam, see Chapter 19 – Ohio River. This system of locks and dams provides a navigable depth of nine feet from the mouth of the Kanawha River to a point approximately 91 miles upstream. For further cost details see Table 25-A and Appendix C. Public Law 99-88 authorized the initiation of engineering and design and real estate acquisition for Winfield locks replacement, and WRDA 1986 authorized the construction of the project. The project consisted of construction of an additional 800 foot by 110 foot lock chamber adjacent to the existing locks and continued use of the riverward lock chamber and the navigation dam. The contracts for Lock Replacement are complete. Dedication of the new lock took place on November 21, 1997. The fully funded estimate is \$236,300,000, which is 50 percent Federal cost and 50 percent Inland Waterways Trust Fund cost. Remaining activities include completion of the system environmental mitigation requirements and disposal of surplus lands to the National Guard.

Public Law 104-303 authorized construction of a new lock chamber at Marmet Locks and Dam. The plan includes construction of a new 800 foot by 110 foot lock chamber on the right descending bank landward of the existing locks and the continued use of the twin 360 foot by 56 foot chambers and rehabilitation of the existing navigation dam. Real estate acquisition activities, begun in FY 1998, are complete. The contract for lock replacement was awarded in May 2002 and is 80% complete. The fully funded estimate is \$405,000,000, which is 50% Federal cost and 50% Inland Waterways Trust Fund cost. The new lock is scheduled to be operational in 2008 with all construction complete in 2009. The London Locks and Dam major rehabilitation efforts are complete. For details, see the Annual Report for 2004.

In addition to the navigation structures on the Kanawha River, the Corps of Engineers participated with the City of Charleston in construction of a riverfront park on the right descending bank near downtown Charleston. For details, see the Annual Report for 2005.

In FY 2006, a contract was awarded for \$2,500,000 for the bulkhead crane and rail replacement at Marmet.

Security measures were completed at the London Locks and Dam at a cost of \$690,000 in FY 2006; at the Marmet Locks and Dam at a cost of \$686,000 in FY 2005; and at Winfield Locks and Dam at a cost of \$1,736,000. Physical security improvements included fencing, window and door hardening, and the hardening of other access points into buildings. Electronic security improvements included the installation of intrusion detection systems, CCTV surveillance, and a system for electronic access control to critical areas of the projects.

Local cooperation. All requirements for local cooperation have been completed.

Terminal facilities. There are 100 terminals along the Kanawha River located from the mouth of the river to 30 miles east of Charleston, WV. These terminals are constructed principally of steel and wood mooring piles and steel pile mooring cells. Eighteen of these terminals have railroad connections. Five terminals are paved wharves and one is owned by the City of Charleston, WV. The remaining terminals are privately owned. The principal commodities handled are coal, chemicals,

acids, cement, gasoline and oil, and sand and gravel. For further details see the 1962 Annual Report.

Operations during the fiscal year. The locks and dams were operated as required and necessary repairs and improvements were made to the locks and dams as well as to the appurtenant structures and grounds. Channel inspections were conducted periodically. In FY 2007, 24,962 cubic yards at a cost of \$159,929 was dredged by contract on the Kanawha River

3. OPEN CHANNEL WORK, OHIO RIVER

See this heading under Chapter 19 – Ohio River.

4. DREDGING

Channel inspections are conducted periodically on the Big Sandy River, Elk River, and the Portsmouth Harbor as necessary. No dredging was conducted on the Elk River or at the Portsmouth Harbor in FY 2007. During FY 2007, 236,211 cubic yards was dredged by contract on the Big Sandy River at a cost of \$1,306,760.

5. OTHER AUTHORIZED NAVIGATION PROJECTS

See Table 25-c.

FLOOD CONTROL

6. ALUM CREEK LAKE, OH

Location. The damsite is located in Delaware County, OH, on Alum Creek, a tributary of Big Walnut Creek, approximately 26 miles above the mouth of Alum Creek and 15 miles north of Columbus, OH, and approximately 157 miles above the mouth of the Scioto River. The reservoir is located in Delaware County, OH.

Existing project. The existing project consists of a rolled earthfill dam 93 feet in height and 10,200 feet in length with a gate controlled spillway located in the right abutment. The reservoir provides for a total storage of 134,800 acre-feet and controls a drainage area of approximately 123 square miles. See also Appendix A. Construction of the dam and

appurtenant works was initiated in August 1970 and completed in August 1974. A total of 405 tracts of land were acquired for the project. The non-Federal sponsor is required to reimburse the Government an estimated \$27,880,000, exclusive of interest, for cost allocated to water supply. The Ohio Department of Natural Resources reimburses the Government \$1,500,000 towards the principal and interest on this amount and \$250,000 for the cost of providing the water annually. The total cost of the project was \$56,267,422.

Local cooperation. For details of required local cooperation see the 1981 Annual Report.

Operations during the fiscal year. The entire project is complete. The project was operated for flood control as required and necessary repairs were made to the structure and appurtenances. During the fiscal year the project prevented flood damages estimated to be \$10,833,000. To date, the project has prevented an estimated \$139,755,000 in flood damages.

7. BEECH FORK LAKE, WV

Location. The damsite is located in Wayne County, WV, on Beech Fork Creek, a tributary of Twelvepole Creek, approximately four miles above the mouth of Beech Fork Creek and 20 miles above the confluence of Twelvepole Creek and the Ohio River. The reservoir is located in Wayne County, WV.

Existing project. The existing project consists of a rolled earth-fill dam 86 feet in height and 1,080 feet in length, an uncontrolled spillway landward of the left abutment of the dam with a control structure at the upstream end. The reservoir provides a total storage of 37,540 acre-feet and controls a drainage area of approximately 78 square miles. Construction of the dam was initiated in December 1972 and completed in February 1977. See also Appendix A. A total of 485 tracts of land were acquired for the project. The total cost of the project was \$41,987,500.

Local cooperation. None required.

Operations during the fiscal year. The entire project is complete. The project was operated for flood control as required and necessary repairs were made to the structure and appurtenances. To date the project has prevented an estimated \$20,419,000 in flood damages.

8. BLUESTONE LAKE, WV

Location. The damsite is located on the New River in Summers County, WV, approximately three miles above Hinton, WV, and one mile from the confluence of the New and Greenbrier Rivers. The reservoir is located in Summers County, WV, and Giles County, VA.

Existing project. The existing project consists of a concrete gravity dam 165 feet in height and 2,048 feet in length. Appurtenant structures consist of a gated spillway 790 feet in length located in the channel section of the dam. The stilling pool is formed by a 23-foot-high weir located 364 feet downstream of 16 gated sluices through the spillway section and discharging into the stilling pool. Penstocks were installed at the time of construction to permit the future installation of hydropower. The reservoir provides for a total storage of 631,000 acre-feet and controls a drainage area of approximately 4,565 square miles. See also Appendix A. For further details see the 1939 and 1962 Annual Reports. Construction of the dam was initiated in January 1942 and completed in April 1952. A total of 338 tracts of land were acquired for the project. The total cost of the project was \$29,458,652, which includes expenditures under the recreation at completed projects program.

In FY 2000 Dam Safety Assurance activities were initiated at Bluestone Dam. The project has been categorized as Class II in the Corps' inventory based on the 2005 Portfolio Risk Assessment. Modifications include increasing the height of the dam 8 feet; installing over 600 anchors; constructing thrust blocks; constructing gate closures across State Route 20; modifying penstocks to supplement discharge capacity; and relocating electrical lines. The Phase 1 contract, consisting of construction of a temporary access bridge, modification to existing penstocks, and construction of concrete thrust block is complete. Phase 2A, consisting of constructing a fishing pier, Route 20 gate closure, east abutment, and miscellaneous other work, was awarded in June 2004 and is complete. Phase 2B, consisting of installation of anchors on critical monoliths, was awarded in August 2005 and is about 25% complete due to a bid protest which delayed the notice to proceed. Phase 2C is in the design stage. The fully funded estimate for this work is \$232,000,000 (full Federal expense).

Public Law 106-53, Section 361, authorized the Corps to implement a plan for debris management at Bluestone Lake, which included a multi-level intake

tower for passing drift through the dam, improved access to Leatherwood Landing to facilitate debris removal from the lake surface, improved operating equipment, a public awareness program, and downstream cleanup of manmade debris. In April 2001, a contract to construct the tower and other project features was awarded and is complete. The fully funded estimate for this work is \$15,700,000.

The Project Cooperation Agreement to provide for downstream cleanup is currently being developed and is expected to be executed in FY 2008. The public awareness program has been developed and is being conducted by non-Federal interests throughout the watershed.

Security measures were completed at the project at a cost of 390,000 in FY 2006. Physical security improvements included fencing, window and door hardening, and the hardening of other access points into buildings. Electronic security improvements included the installation of intrusion detection systems, CCTV surveillance, and a system for electronic access control to critical areas of the projects.

The Tri-Cities Power Authority (TCPA) has been authorized to develop and construct hydroelectric generating facilities at Bluestone Lake by Section 4 of the Flood Control Act of June 28, 1938 (52 Stat. 1217), as modified by Section 547 of Public Law 106-541 (commonly referred to as the Water Resources Development Act (WRDA) 2000) and Section 122 of Public Law 109-103 (commonly referred to as the Energy and Water Development Appropriations Act (E&WDDA) 2005). TCPA, an administrative entity established pursuant to Section 8-23-1 et seq. of the West Virginia code, is comprised of the West Virginia cities of Hinton, Philippi and White Sulphur Springs. WRDA 2000 requires TCPA to enter into a tri-party agreement with the Secretary of the Army (acting through the Commander, U.S. Army Corps of Engineers, Huntington District) and the Secretary of Energy (acting through the Administrator of the Southeastern Power Administration (SEPA)). The Huntington District, SEPA and TCPA are currently in the process of developing the tri-party agreement. Concurrently, TCPA is performing analyses and developing documentation for the NEPA process. As the Corps of Engineers is the lead Federal agency in this project, the Huntington District is providing oversight and input to the NEPA process.

Local cooperation. None required.

Operations during the fiscal year. The entire project is complete. The project was operated for flood control as required and necessary repairs were made to the structure and appurtenances. During the fiscal year the project prevented flood damages estimated to be \$428,000. To date, the project has prevented an estimated \$2,070,518,000 in flood damages.

9. BURNSVILLE LAKE, WV

Location. The damsite is located in Braxton County, WV, on the Little Kanawha River, approximately two miles above Burnsville, WV, and 124 miles above the confluence of the Little Kanawha River and the Ohio River. The reservoir is located in Braxton County, WV.

Existing project. The existing project consists of a rockfill embankment dam 89 feet in height and 1,400 feet in length with a gated spillway in the left abutment. The outlet works is an integral part of the spillway, consisting of five sluice gates and one low flow sluice. The reservoir provides for a total storage of 65,900 acre-feet and controls a drainage area of approximately 165 square miles. Construction of the dam was initiated in June 1974 and completed in January 1976. See also Appendix A. A total of 357 tracts of land were acquired for the project. The total cost of the project was \$57,166,839.

Local cooperation. None required.

Operations during the fiscal year. The entire project is complete. The project was operated for flood control as required and necessary repairs were made to the structure and appurtenances. During the fiscal year the project prevented flood damages estimated to be \$1,037,000. To date, the project has prevented an estimated \$134,613,000 in flood damages.

10. DEER CREEK LAKE, OH

Location. The damsite is located in Pickaway County, OH approximately seven miles south of Mount Sterling, OH, on Deer Creek, a tributary of the Scioto River, approximately 21 miles above the mouth of Deer Creek and approximately 106 miles above the mouth of the Scioto River. The reservoir is located in Pickaway and Fayette Counties, OH.

Existing project. The existing project consists of a rolled earth-filled dam 93 feet in height and 3,880 feet in length, a 741-foot concrete gravity channel section controlled by three tainter gates, an outlet works consisting of five gated sluices through a concrete spillway section discharging into a stilling basin and an earth dike 15 feet by 4,600 feet in a saddle located approximately four miles southwest of the damsite. The reservoir provides a total storage of 102,540 acre-feet and controls a drainage area of approximately 278 square miles. Construction of the dam was completed in May 1968. A total of 138 tracts of land were acquired for the project. For further project details see the 1965 Annual Report. See also Appendix A. The total cost of the project was \$20,406,545, including expenditures under the recreation at completed projects program.

Local cooperation. For details of required local cooperation see the 1981 Annual Report.

Operations during the fiscal year. The entire project is complete. The project was operated for flood control as required and necessary repairs were made to the structure and appurtenances. The project prevented an estimated \$1,919,000 in flood damages during the fiscal year. To date, the project has prevented an estimated \$67,565,000 in flood damages.

11. DELAWARE LAKE, OH

Location. The damsite is located on the Olentangy River, approximately six miles north of Delaware, OH, and approximately 32 miles above the confluence of the Olentangy and Scioto Rivers at Columbus, OH. The reservoir is located in Delaware, Marion and Morrow Counties, OH.

Existing project. The existing project consists of a rolled earth-fill dam 92 feet in height and 18,600 feet in length, a gate controlled ogee type spillway, and five outlet conduits in the channel. The reservoir provides for a total storage of 132,800 acre-feet and controls a drainage area of approximately 386 square miles. Construction of the dam was initiated in April 1946 and completed in July 1948. For further details see the 1962 Annual Report. See also Appendix A. Total real estate requirements of 7,703 acres of fee acquisition and 2,428 acres of flowage easements were acquired for the project. The total cost for the project was \$7,631,821.

Local cooperation. None required.

Operations during the fiscal year. The entire project is complete. The project was operated for flood control as required and necessary repairs were made to the structure and appurtenances. During the fiscal year the project prevented flood damages estimated to be \$2,749,000. To date, the project has prevented an estimated \$126,693,000 in flood damages.

12. DEWEY LAKE, KY

Location. The damsite is located on Johns Creek, approximately seven miles southeast of Paintsville, KY, and approximately six miles above the confluence of Johns Creek and the Levisa Fork of the Big Sandy River. The reservoir is located in Floyd County, KY.

Existing project. The existing project consists of an earthfill dam 118 feet in height and 913 feet in length, a controlled outlet works discharging through a channel excavated in the left abutment, and a rolled earth-fill dike blocking a low divide to Brandykeg Creek and the Levisa Fork. The reservoir provides for a total storage of 93,300 acre-feet and controls a drainage area of approximately 207 square miles. Construction of the dam was initiated in March 1946 and completed in July 1949. For further project detail see the 1965 Annual Report. See also Appendix A. Total real estate requirements for the project of 12,458 acres in fee acquisition and 1,170 acres in flowage easements were acquired for the project. The total cost of the project was \$7,845,547, including expenditures for recreation under the completed project program.

Dam safety assurance activities are complete at Dewey Dam. Modifications include raising the height of the main dike with compacted earth, construction of a parapet wall across the dam, addition a 125-foot auxiliary spillway, and restricting the existing spillway to its original design capacity by providing vertical restriction walls on each side. A construction contract was awarded in May 2000 and is 100% complete. The total cost for this work was \$20,573,500 (full Federal expense).

Local cooperation. None required.

Operations during the fiscal year. The entire project is complete. The reservoir was operated for flood control as required and necessary repairs were made to the structure and appurtenances. During the fiscal year the project prevented flood damages estimated to be \$6,690,000. To date, the project has

prevented an estimated \$91,157,000 in flood damages.

13. DILLON LAKE, OH

Location. The damsite is located on the Licking River, approximately six miles above the confluence of the Licking and Muskingum Rivers at Zanesville, Ohio. The reservoir is located in Muskingum County, OH.

Existing project. The existing project consists of a rolled earth-fill dam 118 feet in height and 1,400 feet in length, a controlled outlet works discharging through a 20-foot conduit in the right abutment, an ungated 280-foot spillway adjacent to the left abutment of the dam, and two rolled earthfill dikes. The reservoir provides for a total storage of 274,000 acre-feet and controls a drainage area of approximately 748 square miles. Construction of the dam was completed in July 1959. For further project details see the 1962 Annual Report. See also Appendix A. Total real estate requirements of 8,232 acres in fee acquisition and 5,380 acres of flowage easements were acquired for the project. See also Appendix A. The total cost of the project was \$30,218,135.

In FY 2006 a contract was awarded for \$1,360,000 for construction of the spill bridge.

Local cooperation. None required.

Operations during the fiscal year. The entire project is complete. The project was operated for flood control as required, and necessary repairs were made to the structure and appurtenances. During the fiscal year the project prevented flood damages estimated to be \$23,349,000. To date, the project has prevented an estimated \$594,290,000 in flood damages.

14. EAST LYNN LAKE, WV

Location. The damsite is located in Wayne County, WV, approximately six miles southeast of Wayne, WV, 10 miles above the mouth of East Fork and 42 miles above the confluence of Twelvepole Creek and the Ohio River. The reservoir is located in Wayne County, WV.

Existing project. The existing project consists of an earth-fill dam 113 feet in height and 652 feet in

length, an uncontrolled spillway near the left abutment of the dam, and a 13-foot reinforced concrete tunnel in the right abutment with a control structure at the upstream end. The reservoir provides for a total storage of 82,500 acre-feet and controls a drainage area of approximately 133 square miles. A total of 552 tracts of land were acquired for the project. See also Appendix A. The total cost of the project was \$85,872,963.

Local cooperation. None required.

Operations during the fiscal year. The entire project is complete. The project was operated for flood control as required and necessary repairs were made to the structure and appurtenances. During the fiscal year the project prevented flood damages estimated to be \$436,000. To date, the project has prevented an estimated \$84,085,000 in flood damages.

15. FISHTRAP LAKE, KY

Location. The damsite is located in Pike County, KY, on the Levisa Fork of the Big Sandy River, approximately 15 miles upstream from Pikeville, KY, approximately three miles above the confluence of Levisa and Russell Forks and 103 miles above the mouth of the Levisa Fork. The reservoir is located in Pike County, KY.

Existing project. The existing project consists of a rock-fill dam 195 feet in height and 1,100 feet in length, a controlled spillway containing four tainter gates located in the valley wall adjacent to the left abutment of the dam; the outlet works consist of an intake structure with three conduits controlled by slide gates and discharging into a horseshoe shaped tunnel. The reservoir provides for a total storage of 164,360 acre-feet and controls a drainage area of approximately 392 square miles. The dam was completed in February 1969. See also Appendix A. A total of 1,301 tracts of land were acquired for the project. The total cost for the project was \$54,754,126, which includes expenditures under the recreation at completed projects program.

Local cooperation. None required.

Operations during the fiscal year. The entire project is complete. The project was operated for flood control as required, and necessary repairs were made to the structure and appurtenances. During the fiscal year the project prevented flood damages estimated to be \$154,030,000. To date, the project

has prevented an estimated \$605,509,000 in flood damages.

16. GRAYSON LAKE, KY

Location. The damsite is located in Carter County, KY, on the Little Sandy River approximately 49 miles above the confluence with the Ohio River, and 11 miles upstream from Grayson, KY. The reservoir is located in Carter County, KY.

Existing project. The existing project consists of a random earthfill dam 120 feet in height and 1,460 feet in length, and a controlled outlet works discharging through a 14-foot spillway beyond the left abutment. The reservoir provides for a total storage of 119,000 acre-feet and controls a drainage area of approximately 196 square miles. The dam was completed in January 1968. See also Appendix A. A total of 484 tracts of land were acquired for the project. The total cost of the project was \$19,162,741, which includes expenditures for recreation facilities under the completed projects program. The non-Federal sponsor is required to reimburse the Government for cost allocated to water supply. The Rattlesnake Ridge Water District reimburses the Government \$5,600 towards the principal and interest of the construction cost and \$4,500 for the cost of providing the water annually.

Local cooperation. None required.

Operations during the fiscal year. The entire project is complete. The reservoir was operated for flood control as required and necessary repairs were made to the structure and appurtenances. During the fiscal year the project prevented flood damages estimated to be \$380,000. To date, the project has prevented an estimated \$107,841,000 in flood damages.

17. GREENBRIER RIVER, MARLINTON, WV

Location. The Greenbrier River Basin is located in eastern West Virginia. The Greenbrier River flows 167 miles through the counties of Pocahontas, Greenbrier, Monroe, and Summers. The basin has a drainage area of 1,641 square miles. The town of Marlinton is located along the Greenbrier River, 109 miles upstream from its confluence with the New River. The project area includes approximately 4

miles of the Greenbrier River, the lower mile of Knapps Creek, and along Stony Creek downstream of the community of Campbelltown. Marlinton is served by WV Route 39 (WV 39) and US Route 219. The tributaries of Stony Creek (23 sq. mi. drainage area) and Knapps Creek (134 sq. mi. drainage area) both enter the Greenbrier River within the project area. The drainage area for the Greenbrier River at Marlinton is approximately 518 square miles.

Existing Project. The plan for the Marlinton Local Protection Project consists of over 16,000 feet of levee/floodwall to be built on both sides of the river, protecting the downtown Marlinton and Riverside areas, with pump stations to handle interior drainage, in addition to utility relocations, acquisitions, and environmental mitigation. There will be four gate openings in the Marlinton section of the project, two for the Greenbrier Trail and two for town streets. The current project estimate is \$93,500,000 and the project is to be cost shared 88% Federal and 12% non-Federal, in accordance with ability to pay legislation. The local share is \$11,500,000 and is to be used for Lands, Easements, Real Estate, Relocations, and Disposal (LERRDs). The project was authorized by Sec 579 WRDA 1996, P.L. 104-303, as amended by Sec. 360 of WRDA 1999, P.L. 106-53; with this emendment \$47,000,000 is authorized to be appropriated.

Local cooperation. Local interests are required to provide all lands, easements, and rights-of-way; to verify or relocate buildings, utilities, roads, bridges (except railroad bridges), and other facilities where necessary; pay a cash contribution of at least 5%, as required by the Water Resources Development Act of 1986, of the costs allocated to flood control; and bear all costs of operation, maintenance, and replacement of flood control facilities. The local cost share to date has been deferred under a design waiver and is due to be paid back when the Project Cooperation Agreement is executed.

Operations during the fiscal yearProject construction for this project has not started. Current estimated completion date is 2014 contingent on execution of a PCA in FY08.

18. ISLAND CREEK AT LOGAN, WV

Location. The project is located at Logan, WV, at the confluence of the Guyandotte River and Island Creek. It consists of approximately 0.7 miles of channel improvement, construction of two retaining walls, and installation of a flood warning system. The proposed channel project, along with the flood warning system, will significantly reduce the threat to life and property.

Existing Project. The recommended project includes widening the Island Creek channel to an 80-foot bottom width for a distance of 3,700 feet upstream of its confluence with the Guyandotte River. In two locations along this channel reach, post and panel retaining walls will be constructed to stabilize the creek bank behind adjacent commercial structures. The project also includes removal of an existing sandbar and implementation of a flood warning system. The project was authorized by Section 401 of the Water Resources Development Act of 1986 (P.L. 99-662) at a total cost of \$86,000,000, with an estimated first Federal cost of \$62,200,000 and an estimated first non-Federal cost of \$23,800,000.

Local cooperation. Local interests are required to provide all lands, easements, and rights-of-way; to verify or relocate buildings, utilities, roads, bridges (except railroad bridges), and other facilities where necessary; pay a cash contribution of at least 5%, as required by the Water Resources Development Act of 1986, of the costs allocated to flood control; and bear all costs of operation, maintenance, and replacement of flood control facilities. The sponsor's financial partner (West Virginia Conservation Agency) currently has funds set aside to begin acquisition of LERRRDs. It is anticipated the sponsor will negotiate an agreement for the Corps to acquire real estate for the project on their behalf. The total estimated cost of the project is \$36,000,000, of which \$10,070,000 is non-Federal.

Operations during the fiscal year. Funds to initiate construction were appropriated in FY 2006. Construction on this project has not yet started. During the year, \$99,841 was expended coordinating higher authority review of the general re-evaluation report and coordination of the draft PCA with the sponsor.

19. JOHN W. FLANNAGAN DAM AND RESERVOIR, VA

Location. The damsite is located in Dickenson County, VA, approximately four miles northwest of Haysi, VA, on the Pound River approximately two miles above the confluence of the Pound River and Russell Fork and approximately 150 miles above the mouth of the Big Sandy River. The reservoir is located in Dickenson County, VA.

Existing project. The existing project consists of a rock-fill dam 250 feet in height and 970 feet in length, an outlet tunnel located near the left abutment of the dam with a control structure at the upstream end, and spillway controlled by six tainter gates located in a saddle just upstream from the damsite. The reservoir provides for a total storage of 145,700 acre-feet and controls a drainage area of approximately 221 square miles. The project was modified to include water quality control by adding control gates to the previously uncontrolled spillway, which increased the total storage capacity by 39,000 acre-feet. The dam was completed in December 1963. See also Appendix A. A total of 382 tracts of land were acquired for the project. The total cost of the project was \$20,444,383, which includes expenditures under the recreation at completed projects program. The non-Federal sponsor is required to reimburse the Government for cost allocated to water supply. The John W. Flannagan Water Authority reimburses the Government \$8,700 for the cost of providing the water annually.

Local cooperation. None required.

Operations during the fiscal year. The entire project is complete. The project was operated for flood control as required and necessary repairs were made to the structure and appurtenances. During the fiscal year the project prevented flood damages estimated to be \$39,917,000. To date, the project has prevented an estimated \$284,698,000 in flood damages.

20. LEVISA AND TUG FORKS OF THE BIG SANDY RIVER AND UPPER CUMBERLAND RIVER, WV, VA, AND KY

Location. The Levisa and Tug Forks form the Big Sandy River at Louisa, KY. The Cumberland portion is the Upper Cumberland River basin above

Cumberland Falls, KY. The basin is approximately 100 miles in length and averages approximately 30 miles in width in the lower portion and approximately 10 miles in width above Harlan, KY. The Big Sandy Basin is within the Huntington District, and the Cumberland Basin is within the Nashville District. This report covers that portion of the project located in the Huntington District.

Existing project. The authorizing language (Section 202 of PL 96-367, 1981) authorized the Corps of Engineers to design and construct such flood control measures as are determined to be necessary and advisable to prevent future flood damages at several named communities in the Tug and Levisa Forks and Upper Cumberland River Basins, such as occurred in April 1977. The plan includes levees, floodwalls, and pump stations; the floodproofing and evacuation of structures located in the flood hazard areas; and development of relocation sites for the affected areas. Work continues on an annual basis with available funding. Structural measures have been completed at West Williamson and Williamson, WV; South Williamson, KY; and Matewan, WV. Flood warning systems have been completed for the Levisa Basin and Tug Basin. Non-structural measures are complete at Williamson, WV; Matewan, WV; South Williamson, KY; Upper Mingo County, WV; Wayne County, WV and Hatfield Bottom, WV. The Kimball Town Hall/ Firestation Relocation construction contract, McDowell County awarded in September 2004 is complete.

Subsequent legislation (WRDA 1986), required that non-Federal interests cost share construction at no less than 5%. The fully funded estimate for the project is \$2,471,474,000, which includes \$133,315,000 in non-Federal contributions.

Local cooperation. Local cooperation requirements are met through execution of Project Cooperation Agreements (PCAs) with local sponsors as each project moves into the implementation phase. The agreements contain requirements in accordance with the cost sharing legislation outlined above.

Operations during the fiscal year. Planning efforts to determine what is necessary and advisable to address flooding problems have been completed for the Levisa and Tug Fork Basins and are underway for Pike County in the Levisa Fork Basin and for Floyd County and Johnson County, in Kentucky.

Implementation of structural and non-structural measures is underway throughout the project basins as follows:

West Virginia Elements: McDowell Co. – school relocations are complete for and will be initiated for Bradshaw Elementary and High Schools, in addition to the voluntary floodproofing and acquisition program.

Kentucky LRH Elements: Floodproofing and acquisition continues for Pike and Martin Counties. Town of Martin, KY, construction of the Phase 1 redevelopment site is complete and will serve as the location of an alternative school, town hall, and police station. Detail Project Report (DPR) activities for Pike Levisa and Floyd County (Phase 1) are being reviewed and finalized. The Johnson County DPR continues.

Virginia Elements: In Grundy, VA, construction continues on the levee/ringwall feature which was awarded in February 2006 and is 95% complete. Flood Warning and Emergency Evacuation Plans have been initiated for Buchanan and Dickenson Counties.

To date, flood damages prevented in the area include: south willismson, KY: \$1,826,000; and Willismson LPP, WV \$3,801,000.

21. LOWER MUD RIVER, MILTON, WV

Location. The project is located along the Mud River near Milton, WV.

Existing Project. The plan will provide flood protection for the City of Milton, located in Cabell County, WV. The recommended plan is a levee, approximately 8,300 feet long, which would provide protection up to a 250-year flood event. Milton has experienced major flooding each decade since the 1960's. The March 1997 flood of record was a 27-year event. A recurrence of that flood today would cause damages in excess of \$31 million, and damage more than 350 residential structures, 80 businesses, and 20 public facilities. The project was authorized for construction by Sec. 580 WRDA 1996 (PL 104-30) as amended by Sec 340 WRDA 2000 (PL 106-54) and Section 3170 of WRDA 2007 (PL 110-114).

Local cooperation. The cost share is prescribed as 75% Federal and 25% non-Federal. Local interests are required to provide all lands, easements, and rights-of-way; to verify or relocate buildings, utilities, roads, bridges (except railroad bridges), and other facilities where necessary; pay a cash

contribution of at least 5%, as required by the Water Resources Development Act of 1986, of the costs allocated to flood control; and bear all costs of operation, maintenance, and replacement of flood control facilities. The local sponsor for the project is the city of Milton. The West Virginia Conservation Agency has agreed to provide funding to meet the non-federal cost share. The sponsor supports the recommended flood protection project.

Operations during the fiscal year. During FY 2007, \$452,891 was expended in the various activities related to this project. WRDA 2007 authorizes the construction of the recommended plan at a total cost of \$57.1 million. Corrective language was provided to allow for construction and selection of the 250-year level of protection levee. The decision document will be submitted to HQUSACE for approval. Subsequent activities are premised on this approval.

22. MASSILLON, OH

Location. The project is located in Stark County, on the Tuscarawas River, approximately 200 miles above the mouth of the Muskingum River.

Existing project. The existing project consists of channel improvement to the Tuscarawas River, combined with the construction of drainage facilities, levees and pump stations. For further details see the 1962 Annual Report. Construction was initiated in July 1940 and completed in October 1951. The total cost of the project was \$8,139,406.

Local cooperation. None required. See the 1962 Annual Report for details of local contribution of work beyond the scope of the project. To date, the system has prevented an estimated \$5,711,000 in flood damages.

Operations during the fiscal year. Routine inspections were conducted to determine that the improved channel was maintained in satisfactory condition.

23. MUSKINGUM RIVER LAKES, OH

Location. The Muskingum River and its tributaries lie in Southeast Ohio and drain approximately 8,000 square miles. The headwaters rise about 25 miles south of Lake Erie and flow into the Ohio River at Marietta, OH, 172 miles below

HUNTINGTON, WV, DISTRICT

Pittsburgh, PA. The reservoirs are located in Ashland, Carroll, Coshocton, Muskingum, Guernsey, Harrison, and Tuscarawas Counties.

Existing project. The existing project consists of 14 reservoirs and appurtenant works in the Muskingum River Basin. The existing project was originally authorized by the Public Works Administration in February 1934. Construction of the system was initiated in January 1935 and completed in November 1938. The system was initially operated and maintained by the Muskingum Watershed Conservancy District of Ohio, the sponsoring agency, from July 1938 to August 1939 when operation and maintenance became the responsibility of the Corps of Engineers in accordance with the provisions of the 1939 Flood Control Act. For further project details, see the 1962 Annual Report. See also Appendix A. The total cost of the project was \$41,247,815, which includes expenditures under the recreation at completed projects program.

A significant Major Rehabilitation program was approved in December 1977 in order to assure the integrity of the existing 14 structures under the originally designed maximum pool conditions. Underseepage and abutment seepage problems are being corrected through the installation of downstream blankets, toe drains and/or relief wells and grouting.

A related but separate program entitled Dam Safety Assurance has been initiated. Under current hydrologic design standards, deficiencies either exist or have been addressed in the spillways at the 16 projects in the Muskingum system. Corrective measures, including widening present spillways, constructing new spillways and installing parapet walls on top of the dams, have been completed at 8 of the 16 projects. Eight remaining projects with deficiencies need corrective measures. In some cases, new seismic criteria will require dams to be evaluated for seismic deficiencies and corrective measures will be taken if deficiencies are found. Dam Safety Assurance activities are 100% complete at Beach City Lake. Modifications involved upgrading spillway adequacy including raising the dam and dike, constructing a parapet wall, raising roadways, and modifying a railroad stoplog closure. The fully funded estimate for this work was \$3,789,578, which includes \$130,740 from the non-Federal sponsor, the Muskingum Watershed Conservancy District. Work was begun at Magnolia Levee, which protects the town of Magnolia during flood events, and is a part of the Bolivar Dam project. Magnolia Levee

experienced a seepage problem during high water and was in danger of failure. Construction was completed in FY 2005. The remaining activity is real estate closeout, which is expected to be completed in FY 2007.

A Dam Safety Assurance Program Evaluation Report for Dover Dam has been submitted to LRD for approval. Muskingum Dam Safety seepage and stability analyses have been initiated at Bolivar and Mohawk Dams. A study of the operation of the existing projects is also underway, including an optimization study and analysis of water resource needs in the basin. A study of the outlet tunnels at Atwood, Clendening, Leesville, Piedmont, and Tappan has been conducted.

In FY 2006, \$150,000 was expended to complete the Muskingum Systems Operations Study. The report serves as the initial phase of the process to revitalize the Muskingum Reservoir System. It develops a preliminary plan of action for proceeding with projects under existing Corps authorities, and supports a legislative initiative for a comprehensive study with General Investigations funding. It documents the findings and assesses the current needs in the basin through a multidisciplinary strategy and a multifunctional team. The scope of renewal and revitalization is robust, multi-faceted, and estimated to cost more than \$2,000,000,000 spanning several decades. The next phase would be the detailed study stage in which the Corps of Engineers would undertake a comprehensive assessment to further define and quantify the potential scope of problems and opportunities. Detailed studies to address the needs identified in the report could proceed under existing USACE authorities with multiple sources of funding - mainly the very limited operations and maintenance funds - or the Corps could await authorization of a comprehensive study before proceeding. The final phase of the process would be the implementation stage. In this phase the Corps would implement the program plan of action by proceeding without specific program authorization using existing authorities requiring feasibility reports to Congress on a project-by-project basis, or be directed to implement a comprehensive program following Congressional authorization. The USACE believes the most efficient means to address the revitalization of the Muskingum Basin is through a comprehensive program.

Local cooperation. All requirements for local cooperation have been met. For further details see the 1942 Annual Report.

Operations during the fiscal year. The projects were operated for flood control as required, and necessary repairs were made to the structures and appurtenances. The system prevented an estimated \$222,319,000 in flood damages during the fiscal year. To date, the system has prevented an estimated \$3,556,992,000 in flood damages.

24. NEWARK, OH

Location. The project is located in Licking County, OH at the junction of the North and South Forks of the Licking River, approximately 29 miles above the confluence with the Muskingum River at Zanesville, OH.

Existing project. For details of the existing project see the 1981 Annual Report. Construction of the existing project was initiated in July 1940 and completed in November 1941. As a result of the 1968 Flood Control Act the existing project was modified to include improvement of the interior drainage facilities, construction of Log Pond Run diversion channel and modification of the North Fork Channel. Construction of the Log Pond Run diversion channel was awarded in September 1980 and completed in December 1981. The total cost of the project was \$11,151,232.

Local cooperation. For details of required and completed local cooperation see the 1981 Annual Report.

Operations during the fiscal year. Routine inspections were conducted to determine that the improved channel was maintained in satisfactory condition. To date, the project has prevented an estimated \$3,299,000 in flood damages.

25. NORTH BRANCH OF KOKOSING RIVER LAKE, OH

Location. The damsite is located in Knox County, OH, on the North Branch of Kokosing River, approximately nine miles above the confluence of the Kokosing and North Branch Rivers, and two miles northwest of Fredericktown, OH. The reservoir is located in Knox County, OH.

Existing project. The existing project consists of a rolled-earth dam 70 feet in height and 1,400 feet in length with an uncontrolled spillway adjacent to the right abutment, and an uncontrolled, reinforced concrete outlet work located in the right abutment of the dam. The reservoir provides for a total storage of 14,885 acre-feet and controls a drainage area of approximately 45 square miles. A total of 56 tracts of land were acquired for the project. Construction of the dam was completed in May 1972. See also Appendix A. The total cost of the project was \$6,665,985, which includes expenditures under the recreation at completed projects program.

Local cooperation. None required.

Operations during the fiscal year. The entire project is complete. The project was operated for flood control as required and necessary repairs were made to the structure and appurtenances.

26. NORTH FORK OF POUND RIVER LAKE, VA

Location. The damsite is located in Wise County, VA, on the North Fork of Pound River, approximately one mile upstream from the confluence of the North and South Forks which form the Pound River and approximately three miles upstream from Pound, VA. The reservoir is located in Wise County, VA.

Existing project. The existing project consists of a rockfill dam, 122 feet in height and 600 feet in length, an uncontrolled spillway in a saddle upstream from the dam, and an outlet tunnel in the right abutment with a control structure at the upstream end. The reservoir provides a total storage of 11,300 acre-feet and controls a drainage area of approximately 17 square miles. Construction of the dam was completed in January 1966. See also Appendix A. A total of 127 tracts of land were acquired for the project. The total cost for the project was \$6,186,901, which includes expenditures for recreation under the completed projects program. The non-Federal sponsor is required to reimburse the Government for cost allocated to water supply. The Town of Pound, VA reimburses the Government \$5,000 for the cost of providing the water annually.

Local cooperation. None required.

Operations during the fiscal year. The entire project is complete. The project was operated as required for flood control and necessary repairs were

HUNTINGTON, WV, DISTRICT

made to the structure and appurtenances. During the fiscal year the project prevented flood damages estimated to be \$2,463,000. To date, the project has prevented an estimated \$15,477,000 in flood damages.

27. OHIO RIVER BASIN (HUNTINGTON DISTRICT)

Location. The work covered by this project consists of a series of levees, floodwalls, channel improvements and dams and lakes in the Ohio River Basin within the Huntington District.

Existing project. The existing project consists of the individual projects considered in the Ohio River Basin comprehensive plan within the Huntington District.

Operations during the fiscal year. The completed local protection projects are operated and maintained by local interests, except for those local protection projects for which individual reports have been included. During the fiscal year the project prevented flood damages estimated to be \$15,600,000. To date the project has prevented flood damages of an estimated cumulative total of \$1,080,685,000.

28. PAINT CREEK LAKE, OH

Location. The damsite is located in Ross County, OH, on Paint Creek, a tributary of the Scioto River, approximately 37 miles above the mouth of Paint Creek and 100 miles above the mouth of the Scioto River and approximately four miles east of New Parkersburg, OH. The reservoir is located in Ross and Highland Counties, OH

Existing project. The existing project consists of a rock and random earth fill dam, 118 feet in height and 700 feet in length, a gate controlled spillway located near the right abutment, an outlet tunnel located in the right abutment with a control structure at the upstream end, and a random rockfill dike located at the right abutment of the spillway. The reservoir provides for a total storage of 145,000 acre-feet and controls a drainage area of approximately 576 square miles. Construction of the dam was completed in July 1973. See also Appendix A. A total of 257 tracts of land were acquired for the project. The total cost for the project was

\$26,969,962, which includes expenditures under the recreation at completed projects program. The non-Federal sponsor is required to reimburse the Government for cost allocated to water supply. The Highland County Water Authority reimburses the Government 0.764% of annual operation and maintenance for the project towards principal and interest of the construction cost and \$8,000 for the cost of providing the water annually.

Local cooperation. For details of required local cooperation see the 1981 Annual Report.

Operations during the fiscal year. The entire project is complete. The project was operated for flood control as required and necessary repairs were made to the structure and appurtenances. During the fiscal year the project prevented an estimated \$21,000 in flood damages. During the fiscal year the project prevented flood damages estimated to be \$93,000. To date, the project has prevented flood damages estimated to be \$3,441,000.

29. PAINTSVILLE LAKE, KY

Location. The damsite is located in Johnson County, KY, on Paint Creek, a tributary of the Levisa Fork of the Big Sandy River, approximately eight miles above the mouth of Paint Creek, and four miles west of Paintsville, KY. The reservoir is located in Johnson and Morgan Counties, KY.

Existing project. The existing project consists of a rockfill dam 153 feet in height and 1,600 feet in length, an uncontrolled spillway located southwest of the right abutment of the dam, and an outlet tunnel in the right abutment with a control structure at the upstream end. The reservoir provides for a total storage of 73,500 acre-feet and controls a drainage area of approximately 93 square miles. Construction of the dam was initiated in September 1976 and was completed in September 1980. See also Appendix A. A total of 635 tracts of land were acquired for the project. The total cost of the project was \$60,194,986. The local sponsor has reimbursed the Government \$377,000 for the cost sharing portion of recreation development.

Local cooperation. None required.

Operations during the fiscal year. The project was operated for flood control as required and necessary repairs were made to the structure and appurtenances. During the fiscal year the project prevented flood damages estimated to be \$1,223,000.

To date, the project has prevented flood damages estimated to be \$19,722,000.

Annual Report. Total costs of local requirements were \$62,000.

30. R. D. BAILEY LAKE, WV

Existing project. The damsite is located in Wyoming County, WV, on the Guyandotte River approximately 108 miles above the confluence with the Ohio River and one mile east of Justice, WV. The reservoir is located in Mingo and Wyoming Counties, WV.

Existing project. The existing project consists of a rolled rockfill dam with a concrete face, 310 feet in height and 1,397 feet in length, an uncontrolled spillway located in a saddle in the right abutment of the dam, and an outlet tunnel in the left abutment with a control structure located at the upstream end. The reservoir provides for a total storage of 203,700 acre-feet and controls a drainage area of approximately 540 square miles. Construction of the dam was initiated in November 1973 and completed in December 1979. See also Appendix A. A total of 2,109 tracts of land were acquired for the project. The total cost of the project was \$261,251,678.

Local cooperation. None required.

Operations during the fiscal year. The entire project is complete. The project was operated for flood control as required and necessary repairs were made to the structure and appurtenances. During the fiscal year the project prevented flood damages estimated to be \$6,692,000. To date, the project has prevented flood damages estimated to be \$190,549,000.

30. ROSEVILLE, OH

Location. The project is located in Muskingum and Perry Counties, OH on Moxahala Creek, approximately six miles from the confluence with Jonathan Creek, a tributary of the Muskingum River.

Existing project. The existing project consists of 7,291 feet of channel improvement; 6,400 feet of levee and railroad embankment enlargements; and the necessary appurtenances for interior drainage. The total cost of the project was \$910,785. Construction was initiated in August 1959 and completed in October 1960.

Local cooperation. All requirements for local cooperation have been completed. See also the 1962

Operations during the fiscal year. Routine inspections of the improved portion of the project were conducted to determine that the project was maintained in satisfactory condition. During the fiscal year the project prevented flood damages estimated to be \$15,000. To date, the project has prevented an estimated \$1,347,000 in flood damages.

32. SUMMERSVILLE LAKE, WV

Location. The damsite is located at Ruckers Bend in Nicholas County, WV on the Gauley River approximately 35 miles above the confluence of the Gauley and New River at Gauley Bridge, WV. The reservoir is located in Nicholas County, WV.

Existing project. The existing project consists of a rockfill dam 390 feet in height and 2,280 feet in length, an outlet tunnel in the right abutment with a control structure located at the upstream end, an uncontrolled spillway located west of the right abutment and two earthfill dikes. The reservoir provides for a total storage of 413,400 acre-feet and controls a drainage area of 803 square miles. See also Appendix A. Construction of the dam was initiated in March 1960 and completed in March 1966. A total of 9,346 acres of land were acquired for the project. The total cost of the project was \$48,375,884, which includes expenditures under the recreation at completed projects program. The non-Federal sponsor is required to reimburse the Government for cost allocated to water supply. The City of Summersville, WV reimburses the Government \$4,100 towards the principal and interest of the construction cost and \$1,700 for the cost of providing the water annually.

Local cooperation. None required.

Operations during the fiscal year. The entire project is complete. The project was operated for flood control as required and necessary repairs were made to the structures and appurtenances. During the fiscal year the project prevented flood damages estimated to be \$3,048,000. To date, the project has prevented an estimated \$632,512,000 in flood damages.

33. SUTTON LAKE, WV

Location. The damsite is located on the Elk River in Braxton County approximately one mile above Sutton, WV, and 101 miles above the mouth of the Elk River. The reservoir is located in Braxton and Webster Counties, WV.

Existing project. The existing project consists of a concrete gravity dam 210 feet in height and 1,178 feet in length, a gated spillway in the channel section of the dam comprised of six tainter gates supported by piers, and an outlet works comprised of five gate sluices through the spillway section. The reservoir provides for storage of 265,300 acre-feet and controls a drainage area of 537 square miles. See also Appendix A. Construction of the dam was initiated in 1949 and completed in June 1960. The total cost of the project was \$37,029,585.

Local cooperation. None required. See the 1981 Annual Report for contributed funds.

Operations during the fiscal year. The entire project is complete. The project was operated for flood control as required and necessary repairs were made to the structure and appurtenances. During the fiscal year the project prevented flood damages estimated to be \$2,138,000. To date, the project has prevented an estimated \$375,798,000 in flood damages.

34. TOM JENKINS DAM, OH

Location. The damsite is located in Athens County, OH on the East Branch of Sunday Creek, a tributary of the Hocking River, approximately three miles north of Glouster, OH, and 57 miles above the mouth of the Hocking River. The reservoir is located in Athens County, OH.

Existing project. The existing project consists of a rolled-earth dam, 84 feet in height and 944 feet in length, a controlled works discharging through a tunnel in the left abutment, and an uncontrolled spillway in the ridge running south from the damsite. The reservoir, known as Burr Oak Lake, provides for a total storage of 26,900 acre-feet and controls a drainage area of approximately 33 square miles. See also Appendix A. Construction of the project was initiated in March 1948 and completed in February 1950. A total of 100 acres of land were acquired for the project. The total costs of the project were \$2,086,503, which includes expenditure under the

recreation at completed projects program. The non-Federal sponsor is required to reimburse the Government for cost allocated to water supply. The Ohio Department of Natural Resources reimburses the Government \$1,500 for the cost of providing the water annually.

Local cooperation. All requirements of local cooperation have been met. See also the 1962 Annual Report. Contributed funds in the amount of \$575,000 have been received from the State of Ohio.

Operations during the fiscal year. The entire project is complete. The project was operated for flood control as required and necessary repairs were made to the structure and appurtenances. During the fiscal year the project prevented flood damages estimated to be \$8,000. To date, the project has prevented an estimated \$26,525,000 in flood damages.

35. WEST COLUMBUS, OH

Location. The project is located on the right bank of the Scioto River in the western part of the City of Columbus, OH, across the river from the downtown area in Franklin County. It is generally bounded by the Scioto River on the north, Interstate 71 on the east, and Frank Road on the south. The area being protected, approximately 2,800 acres, is completely urban with a mix of residential, industrial and commercial development.

Existing project. The project under construction consists of a 7.2-mile system including levee, floodwall and high ground. It protects 6,170 structures and 2,800 acres of lands. Fourteen gate closures, interior drainage facilities, construction of two new pump stations and reworking two existing pump stations are included. The project has been operable for flood control since October 2002.

Local cooperation. Local interests are required to provide all lands, easements, and rights-of-way; to verify or relocate buildings, utilities, roads, bridges (except railroad bridges), and other facilities where necessary; pay a cash contribution of at least 5%, as required by the Water Resources Development Act of 1986, of the costs allocated to flood control; and bear all costs of operation, maintenance, and replacement of flood control facilities.

Operations during the fiscal year. Funds to initiate construction were appropriated in Fiscal Year

1993. The total estimated cost of the project is \$150,000,000 of which \$37,500,000 is non-Federal.

36. YATESVILLE LAKE, KY

Location. The damsite is located in Lawrence County, KY on Blaine Creek, a tributary of the Big Sandy River, approximately five miles west of Louisa, KY, and 18 miles above the mouth of Blaine Creek. The reservoir is located in Lawrence County, KY.

Existing project. The existing project consists of an earth and rockfill dam, 104 feet in height and 760 feet in length, and an uncontrolled spillway located one-half mile southeast of the right abutment of the dam. The outlet works consists of a 13-foot diameter tunnel through the left dam abutment. The reservoir provides for a total storage of 86,951 acre-feet and controls a drainage area of approximately 208 square miles. See also Appendix A. A total of 778 tracts of land were acquired for the project. Construction was completed in May 1995. The total cost of the project was \$99,453,537.

Local cooperation. None required.

Operations during the fiscal year. The entire project is complete. The project was operated for flood control as required and necessary repairs were made to the structure and appurtenances. During the fiscal year the project prevented flood damages estimated to be \$28,000. To date the project has prevented an estimated \$23,586,000 in flood damages.

37. INSPECTION OF COMPLETED FLOOD CONTROL PROJECTS

The Flood Control Act of June 22, 1936, and subsequent acts require local interests to furnish assurances that they will operate and maintain certain local protection projects after completion in accordance with regulations prescribed by the Secretary of the Army. District Engineers are responsible for the administration of these regulations within their respective districts. The Huntington District is responsible for inspecting projects within the district's geographic boundaries in Kentucky, Ohio, and West Virginia. During the fiscal year, maintenance inspections were made of those

completed units transferred to local interests for operation and maintenance. Local interests were advised, as necessary, of measures required to maintain the projects in accordance with the standards prescribed by regulations. Total costs for fiscal year 2007 were \$239,782; total costs through 2007 were \$2,960,000. The flood control works inspected and the dates of inspection are tabulated in Table H.

38. FLOOD CONTROL WORK UNDER SPECIAL AUTHORIZATION

Emergency bank protection activities pursuant to Section 14 of the 1946 Flood Control Act (PL 79-526), are tabulated as follows:

<u>Location</u>	<u>FY 2007 Cost</u>
Sec 14, Coordination Account.....	\$19,598
Kanawha River, Charleston, WV Magic Island....	21,455
7 th St W. Ohio River Huntington, WV	376
Tuscarawas Co., Johnson County Rd, OH.....	29,577

Flood control activities pursuant to Section 205 of the 1948 Flood Control Act (PL 80-852), are tabulated as follows:

<u>Location</u>	<u>FY 2007 Cost</u>
Sec 205, Coordination Account.....	\$18,061
Mercer County, WV	1,828
Magazine Branch, Elk River, WV	475
Zimber Ditch, Stark Co, OH.....	18,076
Buckeye Lake, OH	8,335
North Sand Branch, Raleigh Co, WV.....	7,826
WV Statewide FWS.....	3,101
Brush Creek, Gladly Fork, Princeton, WV	1,638
Hoods Creek, KY	238
Dick Creek, OH	10,966

Flood Control activities pursuant to Section 208 of the 1954 Flood Control Act (PL 83-780) are tabulated as follows:

<u>Location</u>	<u>FY 2007 Cost</u>
Dickenson Co., VA.....	2,435

Activities pursuant to Section 107 of the 1960 River and Harbor Act (PL 86-645) for small navigation projects are tabulated as follows:

<u>Location</u>	<u>FY 2007 Cost</u>
Greenup Slackwater Harbor, KY.....	\$6,598

HUNTINGTON, WV, DISTRICT

Activities pursuant to Section 1135 of WRDA 1986 (PL 99-662) for Project Modifications to Improve the Environment are tabulated as follows:

<u>Location</u>	<u>FY 2007 Cost</u>
Sec 1135, Coordination Account.....	\$ 0
Wills Creek, Mason Mine 280, OH.....	39,587

Activities pursuant to Section 206 of WRDA 1996 (PL 104-303) for Aquatic Ecosystem Restoration are tabulated as follows:

<u>Location</u>	<u>FY 2007 Cost</u>
Sec 206, Coordination Account.....	\$0
5 th Avenue Dam Removal, Columbus, OH.....	414,433
Watauga, NC	12,488

ENVIRONMENTAL INFRASTRUCTURE

39. CENTRAL WEST VIRGINIA ENVIRONMENTAL INFRASTRUCTURE

Location: The project area consists of 18 counties in Central West Virginia and includes portions of Huntington, Pittsburgh, and Baltimore Districts. The program purpose is to provide design and construction assistance for environmental infrastructure and resource protection and development, including projects for wastewater treatment, water supply, and surface water resource protection and development. Only those projects which are publicly owned may participate in the program.

Existing projects: In 2007 there were five projects underway in Huntington District: North Putnam PSD, Silverton PSD, Flatwoods – Canoe Run PSD, Cottageville PSD and Upper Fishers Branch/Guthrie. Work is authorized by Sec 571 of the Water Resources Development Act of 1999 (PL 106-53).

Local Cooperation. The program requires reimbursable Project Cooperation Agreements to be executed with local sponsors that stipulate cost sharing provisions of 75% Federal and 25% non-Federal participation.

Operating during the fiscal year: During the year, \$308,061 was expended in Huntington District in the various activities related to this program. PCAs were executed for the Upper Fishers/Guthrie,

Silverton PSD, Flatwoods-Canoe Run PSD, and North Putnam Construction projects.

40. OHIO ENVIRONMENTAL PROGRAM

Location: The program provides environmental infrastructure assistance to communities throughout the State of Ohio and includes portions of Huntington, Louisville, Pittsburgh, and Buffalo Districts. The program includes project design and construction assistance for wastewater treatment and related facilities, combined sewer overflows, water supply and storage and related facilities, mine drainage, environmental restoration, and surface water resource protection and development. Reimbursable projects are allowed.

Existing project: In 2007 within Huntington District there were 18 projects underway in Ohio: ; Village of Hamden/Wellston; Pickaway County; Fayette County, Village of Bloomingburg; Morgan County, Bishopville; Village of Corning; Morgan County, Village of McConnellsville; Buckeye Lake; Muskingum County, City of Zanesville; Rushsylvania; Village of West Jefferson; City of Louisville; Stark County, Zimber Ditch; Gallia County; Hanover; Higginsport; Marysville; North Pickaway;, and New Albany. Work is authorized by Sec 594 of the Water Resources Development Act of 1999 (PL 106-53), as amended by FY 2006 Energy and Water Appropriations Act.

Local cooperation: The program requires reimbursable Project Cooperation Agreements to be executed with local sponsors that stipulate cost sharing provisions of 75% Federal and 25% non-Federal participation.

Operating during the fiscal year: During the year, \$4,757,722 was expended in Huntington District in the various activities related to this program. During FY 2007 PCAs were executed for: North Pickaway, Marysville, Hanover, City of Louisville, Buckeye Lake, Gallia, and New Albany.

41. SOUTHERN AND EASTERN KENTUCKY ENVIRONMENTAL INFRASTRUCTURE

Location: The project area consists of a 29 county region in southern and eastern Kentucky, which includes portions of the Huntington, Nashville, and Louisville Districts. The program provides for design and construction assistance of environmental infrastructure projects. The focus of the program is on wastewater treatment and collection systems. Reimbursable projects are allowed.

Existing project: Within Huntington District, eight projects were underway in 2006 in eastern Kentucky. These were Barrenshee Creek, Fleming-Neon, Tug Valley Sewer, Henry Clay Area, Booneville, Pikeville – Indian Hills, Oakdale Christian High school and Morehead. Work is authorized by Sec 531 of the Water Resources Development Act of 1996 (PL 104-303); as amended by Sec 532 of Water Resources Development Act of 1999.

Local cooperation: The program requires reimbursable Project Cooperation Agreements (PCAs) to be executed with local sponsors that stipulate cost sharing provisions of 75% federal and 25% non-federal.

Operating during the fiscal year: During the year, \$305,010 was expended in Huntington District in the various activities related to this program. A PCA was executed for Morehead, Hilltop Estates.

42. SOUTHERN WEST VIRGINIA ENVIRONMENTAL INFRASTRUCTURE

Location. The project area consists of 16 counties in southern West Virginia (all within Huntington District). The program provides for design and construction assistance of environmental infrastructure, largely water supply and wastewater treatment facilities, in that region.

Existing projects. In 2007, the program included the following seven projects: Boone Wastewater Treatment Plant and Extension Project, Kilsyth Wastewater Treatment Plan and Extension Project, Cool Ridge/Flat Top Wastewater Treatment Plan Project, and Piney Creek Sewer Interceptor Project, Marsh Fork Treatment Plant & Collection

System, Hinton Wastewater Collection System, and Anchor Road Water Extension. Work is authorized under Section 340 of the Water Resources Development Act of 1992 (PL 102-580) as amended by FY 2006 Energy and Water Appropriation Act.

Local Cooperation: The program requires reimbursable Project Cooperation Agreements to be executed with local sponsors that stipulate cost sharing provisions of 75% Federal and 25% non-Federal participation.

Operating during the fiscal year: During the year, \$213,733 was expended in this program. A PCA was executed for Anchor Road Water Extension.

EMERGENCY RESPONSE ACTIVITIES – FLOOD CONTROL AND COASTAL EMERGENCIES

43. DISASTERS

The District’s Emergency Operations Center was activated once for flood and hurricane related disasters without any work for FEMA and three times for flood and hurricane related disasters with work for FEMA (through other COE).

44. OPERATIONAL PROGRAM AREAS

FY 2007 costs were \$501,958, with \$416,324 for disaster preparedness and \$85,634 for emergency operations.

45. EMERGENCY WORK IN SUPPORT OF OTHER FEDERAL AGENCIES

The following was performed for FEMA, under the Stafford Act/Federal Response Plan :

<u>Disaster</u>	<u>FY 2007 Cost</u>
May 2004 Flooding (WV)	19,020

46. EMERGENCY FLOOD RECOVERY

Flood recovery activities pursuant to Section 402 of the 2005 Emergency Supplemental Appropriations Act for Defense, the Global War on Terror and

HUNTINGTON, WV, DISTRICT

Tsunami Relief (PL 109-13), are tabulated as follows:

<u>Location</u>	<u>FY 2007 Cost</u>
Ceredo Kenova, WV Levee Repairs.....	\$30,000
St. Mary's, WV Road Embankment Repairs	30,000

GENERAL INVESTIGATIONS

47. SURVEYS

Fiscal year 2007 costs were \$1,074,500 itemized as follows:

<u>Project and Location</u>	<u>FY 2007 Cost</u>
Reconnaissance and Feasibility Studies	
South Charleston, WV Port	6,189
South Charleston, WV Port (contributed).....	2,230

American Heritage Rivers Navigation.....	75,059
Interagency Water Resource Development	24,253
North American Waterfowl Management	981

48. PRECONSTRUCTION ENGINEERING AND DESIGN

Fiscal year 2006 costs were \$ 490,119 itemized as follows:

Greenup Locks and Dam, KY and OH

The project was authorized for construction by Section 101(b)(15) of WRDA 2000 at \$175,500,000. The Greenup plan of improvement includes a 600-foot extension of the existing 600-foot auxiliary lock to provide an overall length of 1200 feet, extension of the downstream guide wall, filling and emptying system improvements, installation of a miter gate

quick change-out system (MGQCS) for faster repairs to the lock miter gates and environmental mitigation measures. Plans and specifications are complete for the mooring cells and a new miter gate. Work completed during FY 2006 included: design of the lock extension.

<u>Project and Location</u>	<u>FY 2007 Cost</u>
Greenup L&D KY and OH.....	\$128,073

Parkersburg Riverfront Park, WV

The project was authorized for construction by Section 557(1) of the WRDA 1999 (P.L. 106-53) at a total cost of \$8,400,000, with an estimated Federal cost of \$4,200,000 and an estimated non-Federal cost of \$4,200,000.

The project is an expansion and upgrade of an existing recreation facility cost-shared between the Corps and the City of Parkersburg, WV in the early 1980's. The current recreation facility is the primary river terminal for regular ferry service between West Virginia and the Blennerhassett Island Historic WV State Park. Visitor usage of the Parkersburg Riverfront Park for recreation at the site and access to the river is very high and increases annually. Visitor use demands are exceeding the planned uses of the site in the 1980's. A Limited Revaluation Report (LRR) of the 1998 Feasibility Study was completed in May 2004. PED Agreement was signed in August 2004 between Corps and City of Parkersburg.

<u>Project and Location</u>	<u>FY 2007 Cost</u>
Parkersburg Riverfront Park, WV	\$190,573
Parkersburg Riverfront Park, WV (contributed)....	90,630

49. COORDINATION WITH OTHER AGENCIES

Fiscal year 2007 costs were \$17,121 itemized as follows:

<u>Project</u>	<u>FY 2006 Cost</u>
Coop. with Other Water Agencies.....	4,556
Planning Assistance to States – Negotiations	21,802
PAS-OH, Marietta FMS	2,622
PAS-OH, Marietta FMS (contr)	-657
PAS-WV, Mabscott Flood Analysis.....	1,004
PAS-WV, Mabscott Flood Analysis (contr).....	5,466

50. COLLECTION AND STUDY OF BASIC DATA

Fiscal year 2006 costs were \$155,838 itemized as follows:

Project	FY 2006 Cost
National Flood Proofing Committee.....	42,578
Flood Plain Management Services	60,815
Technical Services	11,807
Quick Responses	2,982
Hydrologic Studies	902

Notes for Table 25-A

¹Includes \$4,294,612 for new work for previous projects, \$4,498,636 Emergency Relief funds, \$9,004,800 Public Works funds and \$686,317 Code 713 funds.

²Includes \$3,883,513 for maintenance of previous projects and \$546,090 Maintenance and Operation funds.

³Public Works Acceleration funds.

⁴Includes \$102,000 Inland Waterways Trust funds.

⁵Includes \$164,324 Inland Waterways Trust Fund.

⁶Includes \$36,650,000 Inland Waterways Trust funds.

⁷Includes \$30,084,534 Inland Waterways Trust funds.

⁸Includes \$2,649,000 Inland Waterways Trust funds.

⁹Includes \$100,740 Inland Waterways Trust funds.

¹⁰Includes \$1,063 Maintenance and Operation funds.

¹¹Includes \$543,960 Emergency Relief funds, \$9,698 Public Works Acceleration funds, \$211,850 Code 711 funds and \$75,000 Code 713 funds.

¹²Includes \$2,795 Maintenance and Operation funds.

¹³Includes \$748,281 Maintenance and Operation funds.

¹⁴Excludes \$225,090 contributed funds. Includes \$590,000 Code 711 funds.

¹⁵Includes \$130,000 provided by the Productive Employment Act of 1983.

¹⁶Includes \$240,000 provided by the Productive Employment Act of 1983.

¹⁷Includes \$23,087 Public Works Acceleration funds, \$1,089,940 Code 711 funds and \$231,105 Code 713 funds.

¹⁸Includes \$82,900 Special Recreation Use Fee Funds and \$747,028 Maintenance and Operations Funds.

¹⁹Includes \$100,000 provided from the Productive Employment Act of 1983.

²⁰Includes \$1,924 Maintenance and Operations funds.

²¹Includes \$209,918 Special Recreation Use Fee Funds and \$747,028 Maintenance and Operations Funds.

²²Includes \$362,649 Code 711 funds and \$10,000 Code 712 funds.

²³Includes \$38,000 Special Recreation Use Fee Funds and \$748,714 Maintenance and Operations Funds.

²⁴Includes \$406,919 Code 711 funds and \$2,317 code 713 funds.

²⁵Includes 422,983 Code 711 funds

²⁶Includes \$88,710 special recreation use funds.

²⁷Includes Cost from Ohio River Division of \$696,000. Excludes \$21,711,820 cumulative contributed funds.

²⁸Includes \$477,813 contributed funds.

²⁹Includes \$27,190,000 National Industrial Recovery funds and \$528,288 Code 711 funds.

³⁰Includes \$206,815 Maintenance and Operations funds.

³¹Includes \$61,945 Public Works Acceleration funds.

³²Excludes \$602,765 contributed funds.

³³Includes \$45,177 Code 711 funds.

³⁴Includes \$64,233 Code 711 funds.

³⁵Includes \$68,200 special recreation use fees.

³⁶Includes \$10,920 Emergency Relief funds.

³⁷Includes \$14,153 Code 711 funds.

³⁸Includes \$31,496 special recreation use fee funds.

³⁹Includes \$5,534 Consolidated Army funds.

⁴⁰Includes \$60,000 provided from the Productive Employment Act of 1983, and \$85,233 Maintenance and Operations Funds.

⁴¹Excludes \$1,554,707 cumulative contributed funds.

⁴²Includes \$300,062 Code 711 funds.

⁴³Includes \$214,112 special recreation use fee funds, \$300,000 provided from the Productive Appropriations Act of 1983, and \$120,016 Maintenance and Operation Funds.

⁴⁴Includes \$1,837,337 Code 711 funds and \$287,843 Accelerated Public Works funds. Excludes \$62,800 contributed funds.

⁴⁵Includes \$267,634 special recreation use fee funds, \$215,000 provided from the Productive Employment Appropriations Act of 1983, and \$144,562 Maintenance and Operations Funds.

⁴⁶Includes \$8,064 Code 711 funds and \$30,000 Public Works Acceleration funds. excludes \$575,000 contributed funds.

⁴⁷Excludes \$7,135,157 cumulative contributed funds.

⁴⁸Excludes \$ 1,738,743 cumulative contributed funds.

REPORT OF THE SECRETARY OF THE ARMY ON CIVIL WORKS ACTIVITIES FOR FY 2007

Table 25-C Other Authorized Navigation Projects

Project	Status	For Last Full Report See Annual Report For	Cost to Sep 30, 2006		
			Construction	Operation and Maintenance	Contributed Funds Expended
Big Sandy River, WV and KY including Levisa and Tug Forks ^{1 and 2}	completed	1952	1,586,236	15,698,111	131,473
Elk River, WV ³	completed	1903	30,259		
Gauley River, WV ⁴	completed	1903	14,761		
Guyandotte River, WV ⁵	completed	1915	27,500		
Little Kanawha River, WV ⁶	completed	1960	470,536	1,023,854	
Muskingum River, OH ⁷	completed	1955	301,912	6,171,897	6,041
New River, WV and VA ⁵	completed	1899	109,691		
Scioto River at Portsmouth, OH ⁸	completed	1953	10,951	16,593	

¹In addition, \$140,068 expended from funds transferred from Department of Commerce, Under accelerated public works program, for repairs of eroded bank at Lock 3 on Big Sandy River, at Louisa, KY.

²Operations and maintenance suspended June 30, 1952.

³Work closed September 1902. Property transferred to Kanawha River improvements.

⁴Work closed September 1902. Abandonment recommended in H. Doc 467, 69th Congress.

⁵Work suspended.

⁶Operation and maintenance suspended June 30, 1951.

⁷Collections from licensed non-Federal hydroelectric utilities for use of dams on Muskingum River for fiscal years 1923-1953 were \$79,154.

⁸P.L. 954, August 31, 1954, authorized Secretary of Treasury to pay Portsmouth Sand and Gravel Co. \$75,000 in full settlement of claims against government for damages resulting from change in Scioto River Channel.

Navigation

1. MISSOURI RIVER, SIOUX CITY, IA TO MOUTH (SIOUX CITY, IA TO RULO, NE)

Location. Channel of the Missouri River extending from Sioux City, IA to Rulo, NE.

Previous Projects. For details see page 1893, Annual Report for 1915, and page 1175, Annual Report for 1938.

Existing Project. A navigation channel of 9-foot depth and width not less than 300 feet, obtained by revetment of banks, rock dikes to contract and stabilize waterway, cutoffs to eliminate long bends, closing minor channels, and removal of snags and dredging as required. Construction was initiated on this section of the project (Sioux City to Rulo) in FY 1928, the bank stabilization work was completed in April 1979, and the navigation feature was completed in September 1980. A reliable channel suitable for navigation is available through this section. Controlling depth at ordinary stages of the river is 9 feet, with additional depths available during high stages. Commercial navigation was inaugurated on this section in May 1939, and common carrier transportation service was inaugurated in October 1946. Seven riverside recreation sites are complete and in operation. (See Table 26-A for total cost of construction.)

Local Cooperation. Requirements are described in full on page 26-2 of FY 1988 Annual Report.

Terminal Facilities. Terminal facilities for loading and unloading grain, liquids and dry bulk products are maintained by private interests at various locations on this section of the river. A complete list of terminal facilities is included in the Missouri River navigation maps and can be obtained from the Omaha District for a small fee.

Operations During FY. District personnel accomplished channel reconnaissance, surveys and mapping, engineering and design, surveys and layouts of construction, and supervision and administration. Local interests operate and maintain the recreation sites. Government Hired Labor Forces completed maintenance, which consisted of placing stone on damaged structures and placing structure markers to aid navigation.

2. NAVIGATION WORK UNDER SPECIAL AUTHORIZATION

Small Navigation Projects Not Specifically Authorized by Congress (Sec. 107 of the River and Harbor Act of 1960, as amended, Public Law 645, 86th Congress).

No work during the period.

Flood Control

3. ABERDEEN, SD

Location. This project is in the Moccasin Creek sub basin in the city of Aberdeen, Brown County, South Dakota. Aberdeen is located in the James River Valley in the northeast quarter of South Dakota.

Existing Project. The selected alternative is a 100-year event levee 2.9 miles long on the northeast side of Aberdeen that will prevent 49 percent of the average annual flood damages to structures and contents in that area. The levee will essentially block existing drainage to Moccasin Creek, and a combination of culverts with gates and detention ponds was incorporated into the design to mitigate this interior drainage problem. A two-foot road raise at Fairgrounds Road is also included.

Local Cooperation. Section 205, Flood Control Act of 1948, as amended applies. The city of Aberdeen and Brown County are paying the local share of the project.

Operations During FY. Construction advertisement and award of Phase II was completed in FY 2004. Project was completed in December, FY 2005. The O&M Manuals were completed during FY 2007. Financial closeout was also completed in FY 2007.

4. ANTELOPE CREEK, LINCOLN, NEBRASKA

Location. Antelope Creek is located in the southeastern portion of Nebraska in Lancaster County and passes through the state capital of Lincoln.

Existing Project. The project consists of 2 miles of improved channel extending upstream from the mouth of Antelope Creek, a portion of which is a by-pass channel adjacent to a 4,060 foot-long concrete conduit in the downtown area. The project also

REPORT OF THE SECRETARY OF THE ARMY ON CIVIL WORKS ACTIVITIES FOR FY 2007

includes a labyrinth weir control structure, two existing bridge replacements, one bridge modification, and 2.29 miles of recreation trails along the proposed channel project. The channel improvement project will provide flood damage reduction to the city of Lincoln and the University of Nebraska-Lincoln campus. The Antelope Creek project is just one piece of a larger Antelope Valley project, which combines flood control, urban revitalization, and transportation projects.

Local Cooperation. This project is authorized under Section 101(b)(19) of the Water Resources Development Act of 2000. The Project Cooperation Agreement (PCA) with the Lower Platte South Natural Resources District and the Joint Antelope Valley Authority to sponsor the Antelope Creek project was executed in October 2002. PCA Amendment #1 was executed in March 2005 that afforded the sponsor authority to perform Section 215 project work. The current non-Federal cost estimate is \$28,594,000. The current Federal cost estimate is \$28,594,000 for a total project cost of \$57,188,000.

Operations During FY. Hawkins Construction Company, Omaha, Nebraska, completed construction of Phase 2A in May 2007. Omaha District completed the design and advertised Phase 2B channel segment (Y Street to S Street). Hawkins Construction Company was awarded the Phase 2B construction contract in January 2007 and commenced construction the following month. Phase 2B construction completion is scheduled for Summer 2008. Omaha District initiated the design of Phase 3 channel segment (S Street to J Street). Advertisement and award of the Phase 3 is scheduled for FY 2008. Real Estate reviewed numerous Phase 3 sponsor acquisitions. Sponsor initiated and completed several utility and road/bridge relocation construction contracts, building demolitions, and continued extensive work on adjacent sponsor roadway projects.

5. BEAR CREEK LAKE, CO

Location. The dam site is on Bear Creek in Jefferson County, CO, about 8 miles above the confluence of Bear Creek with the South Platte River at Denver.

Existing Project. Earthfill dam 180 feet high, with a crest length of about 5,300 feet; and a supplementary earthfill dike with a height of 65 feet and a crest length of 2,100 feet, to the south of the main dam, and an uncontrolled earth and rock-cut emergency spillway. The lake provides storage capacity of 30,600 acre-feet for flood control and 1,979 acre-feet for

sediment and recreation. Construction of the project was initiated in October 1973 and was completed in September 1982, exclusive of recreation facilities. (See Table 26-A for total cost of construction.)

Local Cooperation. Requirements are described in full on page 21-3 of FY 1981 Annual Report.

Operations During FY. Maintenance: Continued routine operation and maintenance activities.

6. BIG SIOUX RIVER AND SKUNK CREEK, SIOUX FALLS, SOUTH DAKOTA

Location. Sioux Falls is located on a large bend of the Big Sioux River and at the confluence with Skunk Creek in the south half of Minnehaha County in southeastern South Dakota.

Existing Project. The project builds upon an existing project. It consists of raising an existing levee from the diversion dam to the upstream tie-off, raising the diversion channel levee, modifying the chute and stilling basin, raising the diversion dam, raising the levees on Skunk Creek, raising Big Sioux levees downstream of Skunk Creek, adding an inflatable dam on the Big Sioux upstream of Skunk Creek, and providing for bridge improvements.

Local Cooperation. This project is authorized under Section 101 of the Water Resources Development Act of 1996. The Project Cooperation Agreement (PCA) with the city of Sioux Falls to sponsor the Big Sioux River project was executed on 14 August 2000. The current non-Federal cost estimate is \$11,691,000. The current Federal cost estimate is \$35,056,000, for a total project cost of \$46,747,000.

Operations During FY. Phase 2A construction continued with the levee raise and construction of the bike path south of 41st Street. Phase 2A contract completion is expected in FY08. Phase 2B contract was awarded in August 2007.

7. BOWMAN-HALEY LAKE, ND

Location. The dam site is on North Fork of Grand River in southwestern North Dakota, about 6 miles above Haley, ND.

Existing Project. An earth-fill dam 79 feet high, with a crest length of 5,730 feet, and a reservoir with a flood storage capacity of about 72,700 acre-feet, plus 19,780 acre-feet for sediment storage, fish and wildlife conservation, recreation, and future water supply for

OMAHA, NE, DISTRICT

communities of Bowman, Reeder, Scranton, and Gascoyne, ND. Construction was initiated in July 1964, and the project was completed in 1970. (See Table 26-A for total cost of construction.)

Local Cooperation. Requirements are described in full on page 26-2 of FY 1988 Annual Report.

Operations During FY. Maintenance: Continued routine operation and maintenance activities.

8. BUFORD TRENTON IRRIGATION DISTRICT, ND (LAND ACQUISITION)

Location. The Buford Trenton Irrigation District (BTID) is located in the flood plain along the left (north) bank of the Missouri River near its confluence with the Yellowstone River, in Williams County near Williston, ND.

Existing Project. The project consists of the acquisition of permanent flowage and saturation easements within and surrounding the BTID for land that has been affected by rising ground water and the risk of surface flooding. There are approximately 65 affected landowners and 120 tracts. Approximately 10,000 acres are irrigable and 1,750 non-irrigable. Acquisition of easements and relocation assistance under P. L. 91-646 began in FY 1998. The total cost of the project is capped at \$34,000,000 by authorizing legislation.

Location Cooperation. The project is authorized under Section 336(a) of the Water Resources Development Act of 1996, P. L. 104-303. Local cooperation is not applicable.

Operations During FY. During FY 2007, several additional easements on private lands were purchased by the government. In addition, offers were initiated on the remaining easements. The purchase of one additional easement and an infrastructure agreement will be executed in FY08. Project close-out is anticipated in FY08 as well.

9. CHATFIELD LAKE, CO

Location. A dam site on the South Platte River, just below the mouth of Plum Creek, about eight miles upstream from Denver, CO.

Existing Project. Consists of rolled earth-fill dam with a maximum height of 148 feet and a crest length of 13,136 feet; a reservoir with flood control capacity of 235,098 acre-feet and sediment capacity of 26,692 acre-

feet, which will be used for recreation; and an enlarged channel from the dam downstream to Denver to accommodate reservoir flood releases. The Corps participated with local interests in acquisition of lands and development of recreation facilities immediately downstream of the Chatfield Dam in lieu of a portion of the channel improvement. Construction of the project was initiated in August 1967 and was physically completed in 1992. (See Table 26-A for total cost of construction.)

Local Cooperation. Requirements are described in full on page 26-3 of FY 1993 Annual Report.

Operations During FY. Maintenance: Continued routine operation and maintenance activities.

10. CHERRY CREEK LAKE, CO

Location. A dam site on Cherry Creek in Arapahoe County, CO, approximately 6 miles southeast of Denver, CO, just outside of city limits. Cherry Creek joins South Platte River within city limits of Denver,

Existing Project. A rolled earth-fill dam with maximum height of 141 feet above streambed and a crest length of 14,300 feet. Project includes a reinforced concrete outlet works and an uncontrolled side channel spillway canal discharging into adjacent Toll Gate Creek. Cherry Creek project provides reservoir storage capacity of 92,126 acre-feet below spillway canal invert and, in addition, a surcharge storage of 134,470 acre-feet. Plan of operation in ultimate development for multiple-purpose uses includes 13,960 acre-feet for sediment storage and 79,960 acre-feet for conservation purposes. Construction began in FY 1946 and was completed in June 1961, exclusive of recreation facilities. (See Table 26-A for total cost of construction.)

Local Cooperation. None required except for recreation cost sharing.

Operations During FY. Maintenance: Continued routine operation and maintenance activities.

11. DENISON, IA

Location. East Boyer River is a left bank tributary of Boyer River. The East Boyer River is located south of Denison, Iowa. Denison is located in western Iowa in Crawford County.

REPORT OF THE SECRETARY OF THE ARMY ON CIVIL WORKS ACTIVITIES FOR FY 2007

Existing Project. The proposed project will construct a right bank levee and floodwall along the East Boyer River to reduce recurring flooding problems in the City of Denison, Iowa.

Local Cooperation. Section 205, Flood Control Act of 1948, as amended, applies. The City of Denison is paying the local share of this project. The Project Cooperation Agreement with the City of Denison, Iowa, to sponsor the Denison project was executed in November 2003. The current non-Federal cost estimate is \$1,554,538. The current Federal cost estimate is \$2,887,000 for a total project of \$4,441,538.

Operations During FY. Western Corporation substantially completed construction in August 2007. A project dedication ceremony is scheduled for early FY08.

12. FALL RIVER BASIN, SD

Location. In Custer and Fall River Counties, in and near the town of Hot Springs, SD. Hot Springs unit is in the town of Hot Springs, immediately south of the junction of Cold Brook and Hot Brook, which combine to form the Fall River. Cold Brook Lake unit is approximately 1.25 miles north of the town of Hot Springs on Cold Brook, and Cottonwood Springs Lake unit is approximately 4.5 miles west of the town of Hot Springs on Cottonwood Springs Creek, one-half mile upstream from its confluence with Hot Brook.

Existing Project. The general plan of improvement provides flood protection for Hot Springs, SD. The Hot Springs channel improvement unit consisted of widening, deepening and straightening 6,000 feet of channel of Fall River. The Cold Brook Lake unit, an earth-fill dam with appurtenant structures, controls an area of 70.5 square miles. The Cottonwood Springs Lake unit consists of an earth-fill dam with appurtenant structures and controls an area of 26 square miles. Construction of Hot Springs unit was completed during FY 1951. Construction of Cold Brook unit dam and appurtenances was completed in FY 1953 with the exception of a road and parking area, which were completed in FY 1955. Construction of the Cottonwood Springs Dam was completed in FY 1970, with the exception of the recreation facilities, which were completed in FY 1972. (See Table 26-A for total cost of construction.)

Local Cooperation. Local cooperation requirements have been fully complied with.

Operations During FY. Maintenance: Routine

operation and maintenance activities were continued on the Cottonwood Springs and Cold Brook Dams and structures.

13. LOGAN CREEK, PENDER, NE

Location. This project is located in northeastern NE, approximately 75 miles north-northwest of Omaha, NE. Pender is located along the right bank of Logan Creek, about midpoint in the Logan Creek basin.

Existing Project. The selected and constructed plan is a combination levee and floodwall with a detention storage feature. It provides flood protection from Logan Creek as well as incidental benefit from Stage Creek flooding to the Village's residential and industrial area as well as its central business district. The levee extends approximately 15,000 feet in length along the north, east, and south edge of the community, averaging 10 feet in height.

Local Cooperation. Section 205, Flood Control Act of 1948, as amended; Flood Damage Reduction applies. The Village of Pender is paying the local share of the project.

Operations During FY. Real Estate crediting and project closeout activities continued during FY 2007, and are projected for completion in FY 2008.

14. MISSOURI NATIONAL RECREATIONAL RIVER, NE AND SD

Location. On the Missouri River between Gavins Point Dam and Ponca State Park, NE. This includes Cedar and Dixon Counties in Nebraska, and Yankton, Clay, and Union Counties in South Dakota.

Existing Project. The designation as a National Recreational River will preserve outstanding and important scenic values and will provide additional opportunities for river access and recreation use. The project provides erosion control, consisting of bank stabilization and river management techniques designed to preserve the existing environment, and at the same time preserves high bank flood plain lands. Estimated total cost of construction is \$25,041,000 of which \$21,000,000 is the Federal cost of construction and \$4,041,000 is the non-Federal contributed funds.

Local Cooperation. All recreational construction on this project will be done in accordance with the cost-sharing and financing concepts reflected in the Water Resources Development Act of 1986. A cost-sharing contract with the state of South Dakota for the Myron

Grove access site was signed on June 24, 1986; and the Yankton-Riverside Park Section 215 Agreement was signed on April 24, 1989. Construction was completed in June 1987 and June 1991, respectively. A Section 215 agreement was signed on May 30, 2001 with the Nebraska Game and Parks Commission for construction of the Ponca Resource and Education Center which was completed in 2004.

Operations During FY. Bank stabilization contracts were awarded for Mulberry Bend and Ponca, Nebraska during FY07.

15. MISSOURI RIVER, KENSLERS BEND, NE, TO SIOUX CITY, IA

Location. Project is along Missouri River between Ponca Bend, NE, and combination bridge at Sioux City, IA.

Existing Project. Construction of dikes, revetments and channel improvement along Missouri River from Miners Bend and vicinity, SD and NE, to Sioux City, IA. Project was started in June 1946 and completed in June 1961. (See Table 26-A for total costs.)

Operations During FY. Routine operation and maintenance activities continued.

16. PAPILLION CREEK AND TRIBUTARIES LAKES, NE

Location. The Papillion Creek basin is located in Washington, Douglas, and Sarpy Counties, NE. Big Papillion Creek rises west of Blair and flows southeasterly through metropolitan Omaha. It is joined by the Little Papillion Creek just above Offutt AFB, forming Papillion Creek. The combined creeks flow along the side of Offutt AFB to its confluence with the Missouri River.

Existing Project. The project consists of a series of four dams and reservoirs, channel improvements, an effluent storage facility, and a flood warning system on tributaries of Papillion Creek. Construction was initiated in FY 1972. Completed projects include Standing Bear Lake, Glenn Cunningham Lake, and Wehrspann Lake. Estimated total costs for the project is \$68,659,000 consisting of \$64,334,000 in Federal funds (\$1,367,000 to be reimbursed by the non-Federal sponsor) and \$2,958,000 non-Federal other costs and cash contributions.

Local Cooperation. Requirements are described

in full on page 21-6 of FY 1981 Annual Report.

Operations During FY. Maintenance: Routine operation and maintenance activities continued.

17. PERRY CREEK, IA

Location. The Perry Creek basin is located in Woodbury and Plymouth Counties in northwestern Iowa. The downstream five miles of the basin lie within the corporate limits of Sioux City, IA, and drain the central portion of the city.

Existing Project. The project consists of 14,800 linear feet of grass and rock lined channel, 1,500 linear feet of new conduit, modification of 710 linear feet of existing conduit, and a concrete stilling basin, to provide capacity for the 100-year event. Also included are 4.25 miles of hiking/biking trail and a basin-wide flood warning system. Estimated project cost is \$95,143,000, of which \$57,836,000 is Federal cost and \$37,307,000 is non-Federal cost.

Local Cooperation. The project is authorized under the 1986 Water Resources Development Act and reauthorized in Section 151 of the Energy and Water Development Appropriations Act, FY 2004 (PL 108-137, December 1, 2003). The city of Sioux City, IA, is the local sponsor.

Operations During FY. The Phase 4 construction contractor continued construction on the grading of the channel, and constructed the bike trails and bridges during FY 2007. Phase 4 contract is scheduled for completion in FY08.

18. PICK-SLOAN MISSOURI BASIN PROGRAM (OMAHA DISTRICT)

Location. Flood control improvements in this project are along the Missouri River and several of its principal tributaries and in states comprising the Missouri River Basin.

Existing Project. A general comprehensive plan for flood control and other purposes in the Missouri River Basin provides for levees along Missouri River between Sioux City, IA, and mouth and reservoirs on the Missouri River main stem and tributaries. See individual reports and Table 26-I for projects in the Omaha District included in the program.

19. PIPESTEM LAKE, ND

REPORT OF THE SECRETARY OF THE ARMY ON CIVIL WORKS ACTIVITIES FOR FY 2007

Location. On Pipestem Creek in Stutsman County, ND, three miles upstream from where Pipestem Creek joins the James River at Jamestown, ND.

Existing Project. The project consists of a rolled earthfill dam approximately 99.5 feet high with a crest length of 4,000 feet and outlet works of a gated reinforced concrete conduit. The reservoir provides 142,107 acre-feet of storage. The multipurpose pool provides space for silt storage and 840 acres of water surface for fish, wildlife and recreation needs. Construction of the project was initiated in FY 1970 and completed in FY 1977. (See Table 26-A for total construction costs.)

Local Cooperation. Requirements are described in full on page 26-6 of FY 1988 Annual Report.

Operations During FY. Routine operation and maintenance activities continued.

20. SALT CREEK AND TRIBUTARIES, NE

Location. Salt Creek Basin comprises an area of about 1,627 square miles in and around Lincoln in southeastern Nebraska.

Existing Project. The authorized project consists of a system of 10 dams and reservoirs, channel clearing, enlarging and realignment, levees and necessary bridge alternations. Pursuant to Senate Resolution adopted August 7, 1964, which authorized a review of the Salt Creek survey report, additional units were placed in "inactive" classification. Construction of the project began in the spring of 1962. All work under the active portion of the project, consisting of the 10 dams and reservoirs and the channel improvements and levees through Lincoln, was completed in 1969. Funds were transferred to the project in FY 1980 with concurrence of Congressional Committees. These funds were used to determine an effective method of correction for the dispersive clay problem in the completed downstream levees through Lincoln. (See Table 26-A for total construction costs.)

Local Cooperation. Requirements are described in full on page 26-6 of FY 1988 Annual Report.

Operations During FY. Maintenance: Routine operation and maintenance activities continued.

21. SOUTH PLATTE RIVER BASIN, CO

Location. Flood control improvements in this project are along the South Platte River and its tributaries in Colorado.

Existing Project. General plan for flood control and other purposes to provide for construction of Chatfield Lake on the South Platte River, Bear Creek Lake on Bear Creek, and levee and channel improvements on the South Platte River. (See individual reports and Table 26-B for authorizing legislation).

22. WESTERN SARPY AND CLEAR CREEK, NE

Location. The Western Sarpy and Clear Creek project area is located along and on both banks of the Lower Platte River and a portion of the Elkhorn River in Eastern Nebraska, specifically in Saunders and Sarpy Counties.

Existing Project. The proposed project will consist of 50-year left and right bank levees. Existing levees will be reconstructed, along with portions of new levee construction. The project will incorporate a new Camp Ashland (Nebraska Army National Guard) levee that has been funded by the Guard. Conservation measures to lessen impacts to endangered species are included with the project. Also, the sponsors are completing nonstructural measures, consisting of flood proofing of cabins and homes.

Local Cooperation. This project is authorized under Section 101(b)(21) of the Water Resources Development Act of 2000. The Papio-Missouri River Natural Resources District, the Lower Platte North Natural Resources District, and the Lower Platte South Natural Resources District are paying the local share of this project. The Project Cooperation Agreement with the Papio-Missouri River Natural Resources District, the Lower Platte North Natural Resources District, and the Lower Platte South Natural Resources District to sponsor the Western Sarpy and Clear Creek project was executed in April 2004. The current non-Federal cost estimate is \$7,582,000. The current Federal cost estimate is \$14,082,000, for a total project cost of \$21,664,000.

Operations During FY. Omaha District continued design work during FY 2007, completing the design and advertisement of one levee segment.

23. VAN BIBBER CREEK, CO

Location. Van Bibber Creek is a right bank tributary of Ralston Creek with the confluence in Arvada, CO. The potential project area includes approximately one mile of the downstream portion of the creek located partially in Arvada and partially in Jefferson County.

Existing Project. The proposed project would include channel improvements including an underground conduit to convey Van Bibber Creek flood waters to Ralston Creek.

Local Cooperation. Section 205, Flood Control Act of 1948, as amended, applies. The City of Arvada is paying the local share of this project. The Project Cooperation Agreement with the City of Arvada, Colorado, to sponsor the Van Bibber Creek project was executed in April 2002.

Operations During FY. Real Estate crediting continued in FY 2007. Contract closeout, O&M manual preparation, and Real Estate crediting are scheduled for completion in FY 2008.

24. WOOD RIVER, GRAND ISLAND, NE

Location. This project is located in Hall County Nebraska, approximately midway between the city of Grand Island and Interstate 80.

Existing Project. This project consists of a five-mile long diversion channel with levees on both sides. The channel diverts Wood River flood flows to the Platte River. The diversion structure is located downstream from the Highway 281 bridge that crosses the Wood River. The diversion channel begins at that point and runs eastward to the Platte River. The current county and city bridges that cross the channels were designed and constructed by the sponsor. In addition, a two-mile long tie-off levee and small diversion channel were built west of highway 281 to prevent Wood River flood flows from spilling into the Warm slough basin nearby and outflanking the diversion channel.

Local Cooperation. This project is authorized under the Water Resources Development Act (WRDA) of 1996, Section 101K modified by WRDA of 1999, Section 335. The Project Cooperation Agreement (PCA) with the Central Platte Natural Resources District was executed on May 2, 2000. The current non-Federal cost estimate is \$4,134,000. The current Federal cost estimate is \$10,865,000, for a total project cost of \$14,999,000.

Operations During FY. Project is complete and

financial closeout is expected in FY 2008.

25. INSPECTION OF COMPLETED FLOOD CONTROL WORKS

Flood Control Act of June 22, 1936, and subsequent acts require local interests to furnish assurances that they will maintain and operate certain local protection projects after completion, in accordance with regulations prescribed by Secretary of the Army. District Engineers are responsible for administration of these regulations within the boundaries of their respective districts.

Inspections of completed local protection projects which have been turned over to local interests for maintenance and operation during the FY are set forth in Table 26-J, Inspections of Completed Local Protection Projects. FY 2007 costs were \$298,627.

26. SCHEDULING FLOOD CONTROL RESERVOIR OPERATIONS

Under Sections 7 and 9, Flood Control Act of December 22, 1944, the Corps of Engineers is responsible for detailed scheduling of operations involving storage capacity reserved for or assigned to flood control in reservoirs constructed by the Bureau of Reclamation as well as those constructed by the Corps of Engineers. Costs for FY 2007 were \$276,609; and total costs through September 30, 2006 were \$11,890,070.

27. FLOOD CONTROL ACTIVITIES UNDER SPECIAL AUTHORIZATION

Emergency Response Activities - Repair, Flood Fighting and Rescue Work (Public Law 99, 84th Cong., and antecedent legislation.)

Operational Program Areas. FY costs as follows:

Preparedness:	
All Hazards Planning Activities.....	\$ 403,785
All Hazards Training & Exercise.....	542
Facilities.....	19,069
National Centers of Expertise.....	0
Emergency Operations:	
Response Operations.....	173,721
After Action Report.....	0
Post Flood Response.....	0

REPORT OF THE SECRETARY OF THE ARMY ON CIVIL WORKS ACTIVITIES FOR FY 2007

Acquisition of Supplies & Equipment.....	22,359
Operational Support.....	0
Support For Others.....	26,771,786
Rehabilitation of Flood Control Works:	
Rehab. Federal Flood Control Works.....	68,740
Rehab. Non-Federal Flood Control Works.....	0
Shore Protection.....	0
Field Investigations.....	0
Inspections.....	40,236
Interagency Levee Activities.....	0
Initial Eligibility Inspections.....	29,644
Emergency Water Supplies & Drought Assistance	
Drought Assistance.....	4,156,624
Field Investigations.....	19,653
Advance Measures:	
Advance Measure Assistance.....	0
Field Investigations.....	0
Hazard Mitigation (By State):	
Hazard Mitigation Team Activities.....	0

Small Flood Control Projects Not Specifically Authorized by Congress (Sec. 205, 1948 Flood Control Act as amended, Public Law 858, 80th Cong., June 30, 1948 as amended.)

Federal costs for FY 2007 were \$1,284,834 for feasibility studies, plans and specifications and construction measures. See Table 26-L for detailed breakdown by project.

Emergency Streambank Protection (Sec. 14, 1946 Flood Control Act, Public Law 526, 79th Cong., July 24, 1946 as amended.)

Operations under this heading were as follows: Federal costs for FY 2007 were \$238 for projects in the planning and design analysis phase and projects in the construction phase. This minimal value is a result of project closeout and sponsor refunds. See Table 26-L for detailed breakdown by project.

Environmental

28. CALIFORNIA BEND, NE

Location. The remnant river channel and floodplain land along river miles 648.5 - 650.0 along the Missouri River, in Washington County, about one mile east of Blair, NE.

Existing Project. The project to be modified is the Missouri River Navigation and Bank Stabilization Project. The California Bend modification will restore river flows through the historic river channel adjacent to the navigation channel, to restore fish breeding,

brood rearing, resting and feeding habitat, and to benefit the riverine ecosystem as a whole. The downstream end of a 1.5-mile long backwater will be enlarged to provide a permanent connection to the navigation channel, and about 1 mile of excavation will connect its upstream end to the river. This will create permanent flows through about 2.5 miles of channels. Some of the surrounding farmland will be restored to floodplain forest. Also several of the spur dikes along the navigation channel will be lowered to enable navigation flows to create shallow margins along the river.

Local Cooperation. Section 1135 of 1986 WRDA applies. The Papio-Missouri River Natural Resources District is providing all needed cost-sharing, including real estate interests valued at approximately \$605,271, and cash of about \$379,624.

Operations During FY. Final inspection for construction contract was conducted October 28, 2003. Several contract modifications were issued during the contract period. Final amount paid to Pentzien, Inc. was \$2,083,823.16. The O&M Manual is complete, and the project was turned over to the Sponsor. Financial closeout is complete.

29. CHEYENNE RIVER SIOUX TRIBE, LOWER BRULE SIOUX TRIBE, AND STATE OF SOUTH DAKOTA TERRESTRIAL WILDLIFE HABITAT RESTORATION

Location. Lands located in the state of South Dakota and acquired by the Secretary of the Army for the implementation of the Pick-Sloan Missouri River Basin program. Lands to be transferred to the State are Corps nonoperational lands located above the top of the exclusive flood pool of the Oahe, Big Bend, Fort Randall and Gavins Point projects and located outside of the external boundaries of a reservation of an Indian Tribe. Lands to be transferred to the Secretary of the Interior are nonoperational lands located above the top of the flood pool of the Big Bend and Oahe projects and located within the external boundaries of the reservation of the Cheyenne River Sioux Tribe and the Lower Brule Sioux Tribe.

Existing Project. Review and submittal to congress wildlife habitat restoration plans developed by the State and Indian Tribes. Accomplish the transfer of Corps of Engineers land to the State of South Dakota and the Department of Interior for the two Indian

Tribes. Estimated total cost of the project is \$103,914,000.

Local Cooperation. This project has no cost-sharing sponsor. The entire project is being borne by the Federal government with no cost to either local or tribal governments or the affected state. Therefore, no Project Cooperation Agreements are required. Restoration of terrestrial wildlife habitat loss programs are being accomplished by the transferees through the use of grant instruments until ten years from date of enactment under which the trust funds established under project authorization are fully capitalized.

Operations During FY. Coordination efforts with state and tribal entities continued. Grant agreements were implemented.

30. FORT PECK FISH HATCHERY, MONTANA

Location. The project is located along the Missouri River in northeastern Montana, approximately 18 miles southeast of Glasgow and downstream from the Fort Peck Dam. The hatchery site is located on approximately 96 acres of Corps project land.

Existing Project. This project improves important fisheries resources in the area through construction of a fish hatchery downstream of the existing dam. The hatchery includes 96 acres of land, and an allocation of water for propagation of cool-, warm-, and cold-water fish, such as walleye, northern pike, sauger, small- and largemouth bass, catfish, salmon and pallid sturgeon. The hatchery has the flexibility to raise other species that have been hit by heavy fishing pressure in recent years. The project is authorized at \$25,000,000.

Local Cooperation. Section 325 of the Water Resources Development Act of 2000 applies. The legislation requires that the State of Montana be credited for all costs of stocking Fort Peck Lake during the period beginning January 1, 1947 and the costs to the State of Montana and the counties having jurisdiction over land surrounding Fort Peck Lake for the construction of local access roads to the lake. With the construction completion of the fish hatchery project, the operation, maintenance, repair, and replacement of the hatchery will be a non-Federal responsibility, with the exception of the costs of operation and maintenance associated with raising threatened or endangered species. These costs are addressed through a separate agreement between the Corps of Engineers and the Montana Department of Fish, Wildlife and Parks.

Operations During FY. All design activities for the Fort Peck Fish Hatchery project have been

completed. All construction activities on the Intake Structure and Pump House contract, Electrical Extension contract and the Rearing Ponds and Hatchery Complex package are complete. The commissioning of the hatchery occurred in July 2006. Financial close-out was accomplished in FY 2007.

31. LOWER DECATUR, NE

Location. The Missouri River's right (west) overbank including side channels, from river mile 684.5 to 689 on the Missouri River in Burt County, NE, about 2 miles southeast of Decatur, NE.

Existing Project. Modification of the Missouri River Bank Stabilization and Navigation Project (MRBSN) constructed from 1935 to 1982. Lower Decatur Bend is one of many bend cutoffs (straightenings) created by the Corps during channelization of the Missouri River for navigation and bank stabilization. The proposed project modification includes 3 main off-stream aquatic components: side-channel restoration, lowering of the riverward extent of closure spur dikes, and revetment lowering over an extended length to allow river flows to erode the river bank behind the revetment, thereby increasing the top width of the channel over an extended area. An opportunity existed at Lower Decatur Bend to restore the physical habitat to configurations more similar to those that existed prior to the channelization of this reach of the river.

Local Cooperation. Section 1135 of 1986 WRDA applies. The Papio-Missouri River Natural Resources District is providing all needed cost sharing, including real estate interests valued at approximately \$718,000 and cash of about \$220,000.

Operations During FY. Full implementation funding was received. Design was completed and the construction contract was advertised by the sponsor's goal of June 30. A low bid saved the Corps and sponsor approximately \$1.4 million, giving a total project cost of approximately \$3.75 million. Construction contractors began in August, made progress on part of the chute excavation, and prepared for lowering of the bank revetment which would begin after navigation season.

32. MISSOURI RIVER FISH & WILDLIFE MITIGATION, IA, KS, MO, MT, NE, ND & SD

Location. The project extends along the Missouri River from Sioux City, IA, to the mouth near St. Louis, Missouri.

REPORT OF THE SECRETARY OF THE ARMY ON CIVIL WORKS ACTIVITIES FOR FY 2007

Existing Project. To mitigate a portion of the fish and wildlife habitat losses resulting from the construction and operation of the Missouri River Bank Stabilization and Navigation project. Estimated total cost of the project is \$3,739,687,000 federal funds.

Local Cooperation. This project has no cost-sharing sponsor. The entire project is being borne by the Federal government with no cost to either local governments or the affected states. Therefore, no Project Cooperation Agreement is required. Although the affected states are not participating financially in the project, the states are very actively involved in the planning and design of the project. The states also are participating in the project by furnishing perpetual easements for construction and operation on existing state-owned lands. The states of Missouri and Iowa are the primary donors of such easements.

Operations During FY. Several shallow water habitat (SWH) design activities occurred in FY 2007. They include completed or partial development of Plans and Specifications (P&S) for Baltimore Bottoms chute project; Boyer Bend backwater project; Bullard Bend backwater project; Dalby Bottoms project; Fawn Island chute project; Lower Barney Bend chute project; Lower Calhoun chute project; Middle Decatur Bend chute project; Plattsmouth Bend backwater phase II project; and Tobacco Island chute revision project; Wolf Creek chute project and several design packages for River Structure Control Modifications from Sioux City, Iowa to Rulo, Nebraska. The P&S for a floodplain development project at Langdon Bend was completed. The P&S for a cottonwood reforestation project at Little Bend in South Dakota were also completed. There were also a number of construction activities ongoing during this period. The Omaha District projects included Council Bend Chute and several River Control Structure Modification projects including a revetment notching at Desoto Bend and the Kansas City District projects were Baltimore Bottom Chutes B and C, Jameson Island Chute, Rush Bottoms Chute, Tarkio River Chutes, and Howell Island Dike Extensions and Notching. Several construction contracts were awarded for the creation of emergent sandbar habitat below the Gavins Point Project. A 40 acre sandbar is located at River Mile (RM) 791.5; a 49 acre sandbar at RM 774; and a 74 acre sandbar with 15 acres of backwater at RM 777.7. Improvements were made to the fish hatcheries in MT, ND, SD, and MO.

33. NATHAN'S LAKE/DEER CREEK AQUATIC HABITAT IMPROVEMENT, NE

Location: The project is located in the Missouri

River floodplain, several remnant wetland basins and a ditched creek channel, from river mile 632.8 to 633.5 on the Missouri River in Washington County, Nebraska, about 3 miles north of Omaha and 4 miles southeast of Ft. Calhoun, Nebraska.

Existing Project. Construction of Nathan's Lake and Mud Lake islands and shallow fingers, expansion of wetland areas, construction of a diversion sediment basin and the west ditch and west berm. Additional work will include emphasis on palustrine emergent wetland benefits as well as stream riparian restoration related to those wetlands and the river. This is the first Section 206 project authorized for study nationwide and the work will be a component of the sponsor's Missouri River Corridor Plan.

Local Cooperation. Section 206 of the Water Resources Development Act of 1996 (P.L. 104-303), as amended applies. The Papio-Missouri River Natural Resources District is the local sponsor and providing all necessary cost sharing including real estate interests valued at \$215,793 and cash in the amount of \$112,678.

Operations During FY. O&M Manuals and Real Estate certification were completed in FY 2006. The project was turned over to the local sponsor in FY 2006. Financial completion and closeout was accomplished in FY 2007.

34. RURAL MONTANA, MT

Location. This authority is to establish a program for providing environmental assistance to non-federal interests in rural Montana.

Existing Project. The authorization will establish a program for providing environmental assistance to non-federal interests in Montana. Assistance may be in the form of design and construction assistance for water related environmental infrastructure and resource protection and development projects. There is authorized to be appropriated \$25,000,000 for this program.

Local Cooperation. Section 595 of WRDA 1999 applies. The Federal share of project costs under each local cooperation agreement entered into shall be 75 percent and may be provided in the form of grants or reimbursements.

Operations During FY. Project Cooperation Agreements were established for eight projects; Helena, Martinsdale, Sheridan, Belgrade, Lewistown, Stevensville, Butte and Bigfork, for a total of \$4.5

million.

35. SAND CREEK, WAHOO, NE

Location. The Sand Creek Watershed study area is located in eastern Nebraska in Saunders County. This is a reach extending for several miles on Sand Creek, upstream of the confluence of Sand Creek and Wahoo Creek.

Existing Project. This project consists of the creation of a large and diverse lake, wetland, and upland habitat complex in the lower part of the watershed just below the confluence of Sand and Duck Creeks and just above the City of Wahoo. In addition, seven smaller ponds, wetland, and upland habitat complexes will be created in the upper reaches of the watershed. Bottomland wetlands will be created at both the upper and lower parts of the watershed. Total project costs are currently estimated at \$15,107,000 with a Federal share of \$9,159,000.

Local Cooperation. The Project is authorized under Section 101(b)(20) of the Water Resources Development Act of 2000. The local sponsor is the Lower Platte North Natural Resources District.

Operations During FY. Sediment Trap contract awarded in September 2007. Design continued on Breakwater Structure.

36. UPPER CENTRAL PLATTE VALLEY COLFAX REACH, CO

Location. The project is 13 miles downstream of Chatfield Reservoir on the South Platte River in the City and County of Denver. The length of the reach is approximately 3000 feet from just upstream of Lakewood Gulch to approximately 500 feet downstream of I-25.

Existing Project. The project reestablished and improved the ecosystem structures and functions by restoring fish and wildlife habitat through environmentally sensitive bank modification and creating a low flow meandering channel. Rock jetties, drop structures and a 250 cfs low flow channel are project features. Wetlands and riparian communities were reestablished along the east bank to create an improved wildlife corridor. Total project costs are currently estimated at \$6,000,000 with a Federal share of \$4,500,000.

Local Cooperation. Section 1135 of 1986 WRDA applies. The Greenway Foundation with the support of

the City Of Denver is providing all needed cost sharing including real estate interests.

Operations During FY. Project is complete pending documentation of sponsor costs for financial closeout.

37. WEHRSPANN LAKE AQUATIC

Location. The existing Papio Dam #20 and its Wehrspann Lake are located on a tributary to the South Branch Papillion Creek, West Branch Papillion Creek Basin, Sarpy County, NE, about 4 miles southwest of Omaha. The subimpoundment is located in the headwaters of Wehrspann Lake, within the lake's flood control pool, and within the existing project's boundaries.

Existing Project. Wehrspann Lake Aquatic Improvement Project - Modification of Wehrspann Lake, completed in 1984 as Papio Dam #20 for flood control and recreation. Wehrspann Lake site is located within Omaha, NE metropolitan area, and as such it is highly visible, heavily utilized and an important ecological, recreational, and educational resource. The modification, a subimpoundment in the lake's flood control pool, will play an essential role in maintaining water quality and fish habitat within Wehrspann Lake by decreasing the amounts of influent nutrients and especially sediment. Total project costs ended at \$2,787,747 with a Federal share of \$2,094,785.

Local Cooperation. Section 1135 of 1986 WRDA applies. Papio-Missouri River Natural Resources District is providing all needed cost sharing including real estate interests.

Operations During FY. Although project construction was substantially complete in FY 2001, there were several minor modifications required. During FY 2003, a contract for installation of relief wells and additional riprap was completed. Additional work was completed in FY 2005 to continue with the replacement of mitigation plantings. Financial closeout was completed in FY 2007.

Multiple-Purpose Projects Including Power

38. BIG BEND DAM-LAKE SHARPE, MISSOURI RIVER BASIN, SD

Location. On the Missouri River, 987.4 miles above the mouth, near Fort Thompson, SD, and approximately 20 miles upstream from Chamberlain, SD. Dam is located in the upstream reach of Fort Randall reservoir (Lake Francis Case). Big Bend reservoir (Lake Sharpe) extends upstream to Pierre, SD.

Existing Project. A rolled earth-fill dam 95 feet high, with a crest length of 10,570 feet, a hydroelectric generating plant consisting of five 58,500 kilowatt units, three 67,276 kilowatt units, and a chute-type gated spillway. Reservoir provides gross storage of 1,859,000 acre-feet. Federal cost of the project was \$107,498,000. Construction began in September 1959 and was completed in September 1977, except for Code 710 recreation facilities.

Local Cooperation. None required except for recreation cost-sharing.

Operation During FY. Maintenance: Project was operated in conjunction with other Missouri River reservoirs for flood control, power production and other multiple purpose uses. Normal operation and maintenance procedures were accomplished during the FY. During the period, 479,873,750 net kilowatt-hours of electricity were produced.

39. FORT PECK DAM AND LAKE, MT

Location. The reservoir is in the Missouri River Valley in McCone, Valley, Garfield, Phillips, Petroleum, and Fergus Counties, MT. Dam is approximately 1,771.6 miles above the mouth of the Missouri River. Nearest towns are Glasgow, 17 miles northwest; and Nashua, nine miles north.

Existing Project. A hydraulic earthfill dam with a maximum height of 251 feet, with a crest length of 21,026 feet, and a reservoir for flood control, irrigation, navigation, hydroelectric power, and other purposes, with a gross storage capacity of 18,688,000 acre-feet at maximum operating pool. Work started on the original project in October 1933 and on the second power plant in August 1956. The project was completed in 1965. The power installations at the project were updated in FY 1979. The five generators have a total output of 185,250 KW: two generators at 40,000 KW each, two generators at 43,500 KW each and one generator at

18,250 KW. See page 818 of 1965 Annual Report and page 905 of 1958 Annual Report for project details. Federal cost of the project was \$158,428,000,

Local Cooperation. None required except for recreation cost-sharing.

Operations During FY. Maintenance: Project was operated in conjunction with the other Missouri River reservoirs for flood control, navigation, power production, and other multiple purpose uses. Normal operation and maintenance procedures were accomplished during the FY. Generating facilities produced 684,637,400 net kilowatt hours of electricity.

40. FORT RANDALL DAM-LAKE FRANCIS CASE, MISSOURI RIVER BASIN, SD

Location. Located on the Missouri River in Charles Mix and Gregory Counties, SD, about 82 miles above Yankton, SD. Site is 880 miles above the mouth of the Missouri River and 148 miles above Sioux City, IA.

Existing Project. A rolled earth-fill dam with a maximum height of 165 feet; a crest length of 10,700 feet; and a reservoir for flood control, irrigation, navigation, hydroelectric power, and other purposes, with a gross storage capacity of 5,418,000 acre-feet at maximum operating pool. The power installation consists of eight units rated at 40,000 kilowatts each. Construction began in May 1946 and was completed in 1969, except for Code 710 recreation facilities. Federal cost of the project was \$199,066,000. Non-Federal contribution for constructing approaches to the Platte-Winner Bridge was \$720,000.

Local Cooperation. None required except for recreation cost-sharing and bridge approaches.

Operations During FY. Maintenance: Project was operated in conjunction with other Missouri River reservoirs for flood control, navigation, power production, and other multiple purpose uses. Normal operation and maintenance procedures were accomplished during the FY. Generating facilities produced 926,767,030 net kilowatt hours of electricity.

41. GARRISON DAM MAJOR REHABILITATION, LAKE SAKAKAWEA, ND

Location. Located on the Missouri River in McLean and Mercer Counties, ND, about 11 miles south of Garrison, ND, and 9 miles west of Coleharbor,

ND, 1,389.9 miles about the mouth and 75 miles above Bismarck.

Existing Project. Garrison Dam is a multi-purpose project consisting of a rolled earth-filled dam with a sheet pile cutoff, a hydroelectric power plant, and a reservoir with storage capacity of 23,821,000 acre feet for flood control, navigation, power, recreation, irrigation, and municipal water supply. This major rehabilitation project will replace the turbine runners on all five existing units with new runners designed to improve reliability and maximize efficiency over a broad range of operating conditions and upgrade the electrical power train, including the switchyard, for a total project cost of \$105,183,000.

Local Cooperation. None required.

Operations During FY. Continued installation of new governors for each of the 5 units. Completed design of exciters and awarded a \$2,861,903 contract for installation. Finished the design of the kidney loop filters and horizontal pumps and awarded an installation contract of \$722,835. Completed design of the 115 kV generator step unit transformers and initiated design on the 230 kV GSU transformers and autotransformers. Design work continued on the next critical portion of work (electrical power train) which includes transformers, switchyard, power cables, and miscellaneous support systems. The continuation of the major rehabilitation will allow us to improve the plant reliability and get the increased power from the power house upgrades to the public.

42. GARRISON DAM-LAKE SAKAKAWEA, MISSOURI RIVER BASIN, ND

Location. Located on the Missouri River in McLean and Mercer Counties, ND, about 11 miles south of Garrison, ND, and 9 miles west of Coleharbor, ND. 1,389.9 miles above the mouth and 75 miles above Bismarck, ND.

Existing Project. A rolled earth-fill dam 11,300 feet long with a maximum height of 210 feet, and a reservoir for flood control, irrigation, navigation, hydroelectric power, and other purposes, with a gross storage capacity of 23,821,000 acre-feet. It provides five power units (three units rated at 109,250 kilowatts each and two units rated at 95,000 kilowatts each), three flood control tunnels, and a gated spillway. Federal cost of the project was \$299,938,000, including \$4,208,000 for major rehabilitation. Non-Federal contribution in connection with widening Snake Creek Embankment was \$687,000. Construction of the

project was initiated in April 1946 and completed in 1966, except for recreational development using Code 710 funds.

Local Cooperation. None required except cost-sharing with the state of North Dakota for widening the Snake Creek Embankment and recreation cost-sharing.

Operations During FY. Maintenance: Project was operated in conjunction with other Missouri River reservoirs for flood control, navigation, power production, and other multiple purpose uses. Normal operation and maintenance procedures were accomplished during the FY. Generating facilities produced 1,313,192,670 net kilowatt hours of electricity.

43. GAVINS POINT DAM-LEWIS AND CLARK LAKE, MISSOURI RIVER BASIN, NE AND SD

Location. On the Missouri River in Yankton County, SD, and Knox County, NE, about four miles upstream from Yankton, SD, and 811.1 miles above the mouth.

Existing Project. A concrete and rolled earth-fill dam with a maximum height of 74 feet, and a reservoir for flood control, irrigation, navigation, hydroelectric power, and other purposes, with a gross storage capacity of 470,000 acre-feet at maximum operating pool. The power installation consists of three units rated at 44,099 kilowatts each. Federal cost of the project was \$49,617,000. Construction of the original project was initiated in March 1952 and completed in 1964.

Local Cooperation. None required except for recreation cost-sharing.

Operations During FY. Maintenance: Project was operated in conjunction with other Missouri River reservoirs for flood control, navigation, power production, and other multiple purpose uses. Normal operation and maintenance procedures were accomplished during the FY. Generating facilities produced 489,640,190 net kilowatt hours of electricity during FY 2007.

44. OAHE DAM-LAKE OAHE, MISSOURI RIVER BASIN, SD AND ND

Location. Dam is on the Missouri River in Hughes and Stanley Counties, SD, about six miles northwest of Pierre, SD, and 1,072.3 miles above the mouth.

Existing Project. A rolled earth-fill dam with maximum height of 245 feet; a crest length of 9,300 feet; and a reservoir for flood control, irrigation, navigation, hydroelectric power, and other purposes, with a gross storage capacity of 23,137,000 acre-feet at maximum operating pool. It contains seven power units rated at 112,290 kilowatts each. Federal cost of the project was \$346,521,000. Construction was initiated in August 1948 and the project was placed in operation in June 1963.

Local Cooperation. None required except for recreation cost-sharing.

Operations During FY. Maintenance: Project was operated in conjunction with other Missouri River reservoirs for flood control, navigation, power production, and other multiple purpose uses. Normal operation and maintenance procedures were accomplished during the FY. Generating facilities produced 1,110,346,940 net kilowatt hours of electricity.

45. MISSOURI RIVER, BETWEEN FT. PECK DAM, MT AND GAVINS POINT DAM, SD, NE

Location. The project is located along the Missouri River between Fort Peck Dam, MT, and a point 59 miles downstream of Gavins Point Dam, SD and NE.

Existing Project. Consists of undertaking measures, including maintenance and rehabilitation of existing structures, to alleviate bank erosion and related problems associated with releases from the six Missouri River main stem dams that the Secretary determines will be needed. In lieu of structural measures, lands may be acquired in affected areas from willing sellers. The costs of the measures shall be apportioned among project purposes as a joint-use operation and maintenance expense. Estimated Federal cost of the project is between \$140 million for construction or \$14 million for the land requisition alternative. Cost is limited to no more than \$3 million per FY.

Local Cooperation. Non-federal funds are not required for this project. One reach, the Missouri National Recreational River downstream from Gavins Point Dam, requires, under its separate authorization, that the landowners make available appropriate land interests to maintain the recreational and scenic qualities of the river and adjacent lands. In the other river reaches, lands can be acquired on a willing-seller

basis if land acquisition is the recommended measure for erosion control at a given river site.

Operations During FY. Continued coordination for sloughing easements in pursuit of real estate acquisitions in response to requests from landowners. Continued EIS/cumulative impacts study to determine effects of bank erosion.

46. PIERRE, SD

Location. The project area consists of the Missouri River just downstream of Oahe Dam near Pierre and Fort Pierre, South Dakota.

Existing Project. The legislation authorizes that the Secretary may acquire from willing sellers such land and property in the vicinity of Pierre, South Dakota or flood proof or relocate such property within the project area, as the Secretary determines is adversely affected by the full wintertime Oahe Powerplant releases. Total cost of this project is held at \$35,000,000 by authorizing legislation.

Local Cooperation. This project has no cost-sharing sponsor. The entire project is completely federally

financed as the mitigation is for a problem caused by the Oahe Dam project. By funding the project 100 percent Federal, the costs are allocated to the Oahe Project with 45.83 percent of the costs considered as joint costs to allocate for repayment by the Western Area Power Administration (WAPA). When WAPA invokes the sub-allocation of 15.8 percent of power costs to future irrigation, the 45.83 percent joint use costs will actually result in a final cost share of 38.6 percent to be repaid by non-Federal interests.

Operations During FY. Throughout the year, coordination with affected property owners to finalize buyback or flood proofing remedies for each tract affected occurred. One hundred thirty nine tracts and their owners received the opportunity for reimbursement under this project authority. Appraisal activities, title evidence, and acquisition of one hundred nine tracts with multiple owners resulted in relocation actions under the authority of PL 91-646. Owner's policies, warranty deeds and closing actions were also completed.

Miscellaneous

47. MISSOURI RIVER MASTER WATER CONTROL MANUAL REVIEW AND

UPDATE

Location. The area being studied is the Missouri River basin, to include the Missouri River Mainstem Reservoir System (System). States included in the study area include Nebraska, Montana, North Dakota, South Dakota, Iowa, Kansas, and Missouri.

Existing Project. The Missouri River Master Water Control Manual (Master Manual) sets forth the technical criteria for the operation of the System for the Congressionally authorized project purposes of flood control, hydropower, water supply, water quality, irrigation, navigation, recreation, and fish and wildlife. During the late 1980's, the Missouri River basin experienced a moderate to severe drought, impacting upon the System for the first time since it filled in 1967. The Master Manual Review and Update was initiated in 1989 as a result of the severe impacts on people and industries that use the Missouri River.

There are a myriad of complex operational and resource management issues. Upriver interests want high,

stable lake levels to address recreation, irrigation and hydropower needs. Environmental interests seek a hydrograph that more closely approximates the natural hydrograph of the Missouri River. Downriver interests (below the dams) support different flow regimes for commercial navigation, flood protection, municipal water supply, and thermal generation. The Corps' objective was to implement a water control plan that serves Congressionally authorized project purposes, complies with the environmental laws including the Endangered Species Act (ESA), and fulfills the Corps' responsibilities to Native American Tribes.

Local Cooperation. None required.

Operations During FY. The elements of the Master Manual dealing with water conservation during drought were changed with the revision of the Master Manual in March 2004. Since that time the Northwestern Division (NWD) has implemented these revised criteria into the regulation of the water stored in the System, which has helped conserve more water in the System as the drought that began in the year 2000 continues. After the revision of the Master Manual in 2004 for drought conservation, NWD continued the review and update of the Master Manual to incorporate "spring pulses" from Gavins Point Dam, the lowest dam on the System. Spring pulses in March and May were included as an element of the reasonable and prudent

alternative to jeopardy for the endangered pallid sturgeon in the U.S. Fish and Wildlife (USFWS) 2003 Amended Biological Opinion. The pulses are intended to trigger spawning of the pallid sturgeon. The 2003 Amended BiOp provided the Corps an opportunity to develop a spring pulse plan Basin Tribes and stakeholders. Spring pulses from Gavins Point Dam (in particular the May pulse) were controversial throughout the Master Manual Review and Update Process that culminated with the Record of Decision in 2004. Upstream Tribes and interests are concerned about releasing water from the upper reservoirs since they are considerably drawn down due to the current drought. Potential impacts to water supply, water quality, recreational access, and cultural resources are key issues. Downstream interests concerns center around potential crop damage caused by impacts of the May pulse on interior drainage and groundwater. In light of the controversy surrounding the pulses, NWD sought assistance from the U.S. Institute for Environmental Conflict Resolution (USIECR). The USIECR and their contractor, CDR Associates, in conjunction with Basin Tribes and stakeholders initiated a facilitated process to develop spring pulses that provided benefit to the pallid sturgeon, but minimized impacts to Basin Tribes and stakeholders. While the process did not achieve consensus, considerable information was gained which shaped the technical criteria for the spring pulses that were included in the Master Manual in March 2006. These technical criteria included provisions for a "preclude" level, which is the level of water-in-storage (storage) below which the spring pulses would be foregone. The March 2006 spring pulse was not implemented because the amount of water in System storage was below the March pulse preclude level. The amount of water in System storage was above the May preclude in 2006, and a May pulse was implemented. Monitoring to determine potential impacts of the May pulse on interior drainage and groundwater, cultural resources, and to determine the biological response of the pallid sturgeon to the pulse was conducted. During 2006 the State of Missouri brought suit to challenge the Corps revision of the Master Manual for the spring pulses on the grounds that the Corps did not comply with the provisions of the National Environmental Policy Act. That lawsuit was decided in November of 2006 in favor of the Corps. The State of Missouri subsequently appealed to the Eighth Circuit Court.

REPORT OF THE SECRETARY OF THE ARMY ON CIVIL WORKS ACTIVITIES FOR FY 2007

48. CATASTROPHIC DISASTER PREPAREDNESS AND SUPPORT FOR FEMA

P. L. 93-288 (and Antecedent Legislation)

KANSAS CITY, MO DISTRICT

The district comprises a portion of southwestern Iowa; northwestern, central and western Missouri; northern Kansas; southern Nebraska; and a portion of northeastern Colorado embraced in drainage basin of the Missouri River and tributaries from Rulo, Nebraska, to the mouth. Report on navigation project for section of Missouri River from Sioux City, Iowa, to Rulo, Nebraska, is in report of Omaha District.

Navigation

1. MISSOURI RIVER, SIOUX CITY, IA, TO MOUTH (RULO, NE, TO MOUTH)

Location. Jefferson, Madison, and Gallatin Rivers conjoin at Three Forks, Montana, to form the Missouri River, which flows southeasterly 2,315 miles (1960 mileage) across or along seven states to the Mississippi River, 17 miles above St. Louis. For description see page 1149, Annual Report for 1932. The river is commercially navigable from Sioux City, Iowa, to the mouth, a distance of 732 miles. The portion of project in Kansas City District extends from Rulo, Nebraska, to the mouth, a distance of 498 miles.

Previous Projects. For details see page 1891 of Annual Report for 1915, and pages 1153 and 1175 of Annual Report for 1938.

Existing Project. A channel of 9-foot depth and width not less than 300 feet, obtained by revetment of banks, construction of permeable dikes to contract and stabilize the waterways, cutoffs to eliminate long bends, closing minor channels, removal of snags, and dredging as required. The improved reach within the Kansas City District extends from the mouth to Rulo, Nebraska, a distance of 498.4 miles. The Bank Stabilization and Navigation features of the project were completed in September 1980. For the reach from Rulo, Nebraska, to the mouth, the total construction cost was \$237,942,190 including \$8,665,594 for previous project. River access sites have been completed at 11 locations. Ordinary and extreme stage fluctuations are 16 and 38 feet, respectively.

Local cooperation. Cooperation from benefited localities may be required where any improvement may confer special benefit. The receipt of contributions from private parties are to be expended along with Government funds upon authorized work where such work would be in the interest of navigation, as authorized by 1915 Rivers and Harbors Act. Secretary of the Army approved general principle of cooperative construction on Missouri River below Kansas City on basis that 25 percent of cost of any special installation shall be paid by the United States and 75 percent by local interests. Total contributed by local interests in cooperation with the United States from 1918 to June 30, 1964, was \$675,663, of which \$8,647 was returned to contributors. Local interests must share in cost of recreation facilities in accordance with provisions of the Federal Water Project Recreation Act of 1965.

Local interests have contributed \$171,816 for cost sharing on construction of recreation in addition to constructing portions of the facility.

Terminal facilities. A listing of terminal facilities was included in Missouri River Navigation Charts and can be obtained from Kansas City District Engineer for a small fee.

Operations During fiscal year. Field hired labor accomplished repairs of 12 high priority dikes to correct low water navigation problems. In addition, a Contractor repaired 53 high priority navigation structures. Contract and District personnel constructed over 140 notches to improve aquatic habitat of the river. District personnel also accomplished channel reconnaissance, stream gauging condition studies, surveys and mapping, engineering and design, surveys and layouts of construction, and contract supervision and administration. Project tonnage on the river for CY 2006 is estimated at 8 million tons, excluding waterway improvement materials. District estimates the recreation use on the Missouri River (NWK) at 1.3 million recreation days annually.

2. MISSOURI RIVER FISH AND WILDLIFE RECOVERY, IA, KS, MO, MT, NE, ND, and SD

Location. This project authority extends along the Missouri River from Sioux City, Iowa, to the mouth near St. Louis, Missouri, a river distance of 735 miles. Individual project site may be located along the 735 miles at locations adjacent with the river and within the historic floodplain.

Existing project. This project was authorized under WRDA86 and WRDA99. The purpose of this project is to mitigate losses of fish and wildlife habitat resulting from construction and operation of the Missouri River Bank Stabilization and Navigation Project. An estimated 522,000 acres of aquatic and terrestrial floodplain habitats have been lost in the project area. A total of 166,750 acres has been authorized for mitigation, roughly 32% of the estimated loss. The major components of the Mitigation project are acquisition, design, development and monitoring of floodplain habitats. The mitigation can be implemented on either existing publicly owned lands or could involve acquisition of private lands from willing sellers. The estimated funded cost of the project is \$1,330,000,000 (Oct 2001 price level). The project is 100% Federally funded, including O&M. If the project is funded through 2042, the estimated project cost after

inflation is \$3,100,000,000. Kansas City District has overall project management responsibility. Omaha District is involved in the implementation of the project in the States of Iowa and Nebraska. Field hired labor, construction contractors and District personnel routine maintenance of a variety of river navigation and bank stabilization structures and performed other work including channel reconnaissance, stream gauging condition studies, surveys and mapping, engineering and design, surveys and layouts of construction and supervision and administration of work. Much special effort (\$422,200) was devoted to activities needed to carryout mandates associated with recent USFWS Biological Opinions concerning river habitats for Threatened and Endangered Species. Work also commenced on a special study of river bed degradation in the Kansas City reach of the river.

Local cooperation. There is no non-Federal sponsor for the project. The U.S. Fish & Wildlife Service, EPA and the states of Iowa, Nebraska, Kansas, and Missouri are voluntarily serving on a coordinating team, which is actively involved in ongoing project activities and site-specific operation and maintenance.

Operations During FY. Funding was continued for land acquisition and construction of mitigation features. Total expenditures for FY 07 were \$55,738,683 (\$17,779,444 NWK + NWO \$37,959,239). The Kansas City District executed the largest budget to date on the Missouri River Fish and Wildlife Recovery Program, in 2007. Work completed by the district included the following: Completion of land acquisition of 3,647 acres in Missouri and Kansas, including 1,757 acres in Kansas and 1,890 acres in Missouri. Complete construction of fish and wildlife habitat at the Columbia Bottoms, Eagle Bluffs, and Worthwine Island Conservation Areas. Initiation of fish and wildlife habitat construction located at the Jameson Island and Baltimore Bend Units of the USFWS Big Muddy Refuge, and the Rush Bottoms Bend Mitigation Site. NWK worked to address issues raised by the Missouri Clean Water Commission. Completion of NEPA documentation and fish and wildlife habitat designs at the Lower Hamburg Bend Mitigation Site, the Thurnau Conservation Area, and the Baltimore Bend Unit of the USFWS Big Muddy Refuge was successful. Removal of the abandoned Rocheport Cave bat gate. NWK completed sole-source contracts with Kansas Department of Wildlife and Parks and Missouri Department of Conservation for long term management and operation of mitigations sites in Kansas and Missouri. Successful

completion for the second year of a three year biological and physical monitoring project at constructed chutes in Missouri. NWK completed land surveys at the Berger Bend, Hare, and Wolf Creek Bend Mitigation Sites.

Flood Control

3. BLUE RIVER BASIN, KANSAS CITY, MO

Location. Along the left bank of the Blue River from U.S. Highway 71 upstream for a distance of about 1-1/4 miles in Jackson County, Missouri, to the Bannister Federal Complex levee.

Existing project. The recommended project includes construction of approximately 1-1/4 miles of levee to provide flood protection to 280 acres in the Dodson Industrial Area and surrounding area in Kansas City. Estimated Federal cost through construction of the project (2005) is \$14,512,000, and estimated non-Federal cost of lands damages and relocations is \$7,031,000. Funds were provided in FY 2002 for a new construction start.

Local Cooperation. The Project Cooperation Agreement (PCA) was executed in September 2001.

Operations During FY. Phase 1 of the project, consisting of construction of the floodwall, was completed September 2004. Phase 2, consisting of an I-wall transition, was completed in March 2006. The Phase 3 construction contract, consisting of sewer modifications, drainage structures, and earthen embankment was awarded September 2006 and is currently under construction. Phase 4, which is the final component of the project, is at a 65 percent level of design completion for FY2007.

4. BLUE RIVER CHANNEL, KANSAS CITY, MISSOURI

Location. Along the Blue River and tributaries in Jackson County, Missouri.

Existing Project. Project consists of 12.5 miles of improved channel along the Blue River within Kansas City, Missouri. Estimated Federal cost through construction of the project (2005) is \$241,704,000, and estimated non-Federal cost of lands, damages and relocations is \$35,594,000.

Local Cooperation. Section 2, Flood Control Act of June 22, 1936 applies. The City of Kansas City, Missouri, passed a resolution of intent on December 9, 1975 to provide the required assurances

KANSAS CITY, MO DISTRICT

of local cooperation when requested. The Kansas City District Engineer signed the Section 221 agreement on September 8, 1983.

Operations During FY. All work on stages 1 and 2 has been completed. The Stage 3 reach of the project consists of six construction contracts. The 12th to 19th Street, the 19th to Stadium Drive and the Stadium Drive to Brush Creek and the Alteration of the Union Pacific Railroad Bridges contracts are complete. The fifth contract consisting of work from Brush Creek to 53rd Street was awarded 30 November 2007, and is currently under construction. A General Reevaluation Report study effort continues.

5. CLINTON LAKE, WAKARUSA RIVER, KANSAS

Location. Damsite is on Wakarusa River at the west edge of Lawrence, in Douglas County, Kansas. The lake extends into Shawnee and Osage Counties, Kansas.

Existing project. An earthfill dam about 9,250 feet long constructed to a height of about 114 feet with an uncontrolled spillway in left abutment. Total reservoir storage capacity 397,200 acre-feet (258,300 for flood control, 28,500 for sediment reserve, and 110,400 of multipurpose storage for municipal and industrial waste supply and recreation). Cost of constructing the completed project was \$57,415,433. Construction was initiated in January 1972, and the project was placed in operation in November 1977.

Local cooperation. Section 2, Flood Control Act of June 28, 1938 applies. Reimbursement in the estimated amount of \$6,768,000 is required for water supply storage in accordance with the Water Supply Act of 1958. A contract was signed by the State on September 6, 1978 and was approved by the Secretary of the Army on October 30, 1978. Utilization of storage was initiated in December 1979. Repayment also began at that time.

Operations During FY. Visitation for FY 2007 was 9,578,904 visitor hours. Maintenance: Activities consisted of ordinary operation and maintenance.

6. HARLAN COUNTY LAKE, REPUBLICAN RIVER, NEBRASKA

Location. Dam is on main stem of Republican River about 235 miles above confluence of stream with Smoky Hill River. Site is in Harlan County, 1-

1/2 miles south of Republican City and 13 miles west of Franklin, Nebraska.

Existing project. An earthfill dam about 107 feet above streambed with a total length of 11,827 feet, including a gate-controlled, concrete, gravity-type spillway section near the center of dam. Reservoir provides storage capacity of 814,111 acre-feet (500,000 for flood control and 314,111 [sediment survey effective January 2001] for irrigation, sedimentation allowance, and other authorized purposes.). Initial cost of constructing the project was \$45,279,532. Total Federal cost of project, including \$1,017,623 for major rehabilitation work and \$1,832,394 supplemental recreation development (Code 710), is \$48,129,549. Construction of the project was initiated in August 1946. The project was placed in operation in December 1952. Major rehabilitation work was completed in FY 1968.

Local cooperation. Section 2, Flood Control Act of 1938, applies.

Operations During FY. Visitation for FY 2007 was 7,042,067 visitor hours. Unexpected flooding in the Republican River Basin contributed to a rise in pool elevation to more historic levels. Maintenance activities consisted of evacuating low water boat ramps and day use sites within the low pool area and restoring existing ramps and day use sites. Other activities included installing a new CXT shower building in Hunter Cove Park.

7. HILLSDALE LAKE, BIG BULLCREEK, KANSAS

Location. The project is located approximately 12 miles above the mouth of Big Bull Creek, a tributary of the Marais des Cygnes River and about 2½ miles west of Hillsdale, in Miami County, Kansas.

Existing project. An earthfill embankment about 11,600 feet long (including approximately 3,300 feet of dike section) about 75 feet above rising valley flood plain. The spillway is gravity type uncontrolled and the outlet works are controlled. The total reservoir storage capacity is 160,000 acre-feet (81,000 for flood control, 11,000 for sediment reserve, and 68,000 for multipurpose storage for water supply, water quality control, and recreation). Construction was initiated in December 1974, and the project was placed in operation in October 1981. Federal cost of construction was \$64,161,400.

REPORT OF THE SECRETARY OF THE ARMY ON CIVIL WORKS ACTIVITIES FOR FY 2007

Local cooperation. Section 2, Flood Control Act 1938, applies. Local interests must make reimbursement of \$21,145,338 for water supply storage in accordance with Water Supply Act of 1958. The Kansas Water Resources Board signed a contract in January 1974, approved by the Secretary of the Army in April 1974, for the entire 53,000 acre-feet of water supply storage. The Kansas Department of Wildlife and Parks has a 50-year lease on 12,880 acres for management of land and water areas for public park, recreational, and fish and wildlife purposes.

Operations During FY. Visitation for FY 2007 was 1,068,273 visitor hours. Maintenance: Activities consisted of ordinary operation and maintenance.

8. KANOPOLIS LAKE, SMOKY HILL RIVER, KANSAS

Location. The dam is on the Smoky Hill River about 184 river miles above the mouth of the stream, and about 11 miles northwest of Marquette, Kansas.

Existing project. An earthfill dam about 131 feet above streambed, having a total length of 15,360 feet, including 4,070 feet of dike section on the left abutment and 2,550 feet of dike section on right abutment. The reservoir provides storage capacity of 450,000 acre-feet, (400,000 for flood control and 50,000 for recreation and streamflow regulation). Outlet works and spillway are in right abutment. Initial cost of constructing the project was \$12,327,735. Total Federal cost of project, including \$249,492, supplemental recreational development (Code 710), was \$12,577,227. Construction was initiated in June 1940, and project was placed in operation in May 1948.

Local Cooperation. Section 2, Flood Control Act of 1938, applies.

Operations During FY. Visitation for FY 2007 was 1,283,535 visitor hours. Maintenance: Activities consisted of ordinary operation and maintenance including special emphasis on road repair and upgrading sanitary facilities to improve accessibility. Spring floods returned the pool to normal and above levels for the first time in two years.

9. LITTLE BLUE RIVER LAKES, MO

Location. This project consists of two lakes in Jackson County, Missouri, located in Kansas City, Missouri, and suburban communities. The Blue

Springs Lake site is on the East Fork of the Little Blue River about ½ mile south of U.S. Highway 40, and the Longview Lake site is on the main stem at approximately 109th Street.

Existing Project. The Blue Springs dam is an earthfill embankment about 2,500 feet long and rising about 78 feet above the streambed, with an uncontrolled service spillway and uncontrolled outlet conduit. The total reservoir storage capacity is 26,600 acre-feet (15,700 for flood control, 10,600 for multipurpose storage for water quality and recreation, and 300 for sedimentation).

The Longview dam is an earthfill embankment about 1,900 feet long and rising about 120 feet above the streambed, with an uncontrolled service spillway and an uncontrolled outlet conduit. The total reservoir storage capacity is 46,900 acre-feet (24,300 for flood control and 20,600 for multipurpose storage for water quality and recreation, and 2,000 for sedimentation). Federal cost (1992) for both lakes through construction of the project was \$140,809,200. Construction was initiated in September 1977, and the project became operational in September 1988.

Local cooperation. Section 2 of the Flood Control Act of June 28, 1938 applies. Local interest must share in separable costs allocated to recreation in accordance with Federal Water Project Recreation Act of 1965. The Jackson County Legislature approved a recreation cost-sharing contract on July 5, 1974, which was approved by the Secretary of the Army on June 24, 1976. A supplemental agreement, signed by Jackson County officials on June 5, 1978, and approved by the Secretary of the Army January 10, 1979, revised the existing contract to include additional costs involved in raising the multipurpose pool elevation at the Blue Springs Lake. Reimbursement for recreation was \$15,047,000, which \$450,000 was accomplished during construction by local interests.

Operations During FY. Visitation for FY 2007 was 3,173,759 visitor hours. Maintenance: Activities consisted of ordinary operation and maintenance.

10. LONG BRANCH LAKE, LITTLE CHARITON RIVER, MO

Location. The Damsite is on the East Fork Little Chariton River in north central Missouri about 2 miles west of Macon in Macon County.

Existing project. An earthfill dam about 3,800 feet long and about 71 feet high with an uncontrolled

KANSAS CITY, MO DISTRICT

outlet conduit and an uncontrolled service spillway in the right abutment. Total reservoir storage capacity is 65,000 acre-feet (29,000 for flood control, 4,000 for sediment reserve, and 32,000 of multipurpose storage for water supply, water quality control, fish and wildlife, and recreation). Estimated Federal cost (1997) is \$20,288,000, and estimated non-Federal cost is \$3,605,000. Construction was initiated in March 1973. The project was placed in useful operation for flood control on September 1, 1980.

Local cooperation. Section 2, Flood Control Act of June 28, 1938 applies. Local interests must make reimbursement of \$5,567,000 for water supply storage in accordance with Water Supply Act of 1958 and share in separable cost of \$3,589,000 allocated to recreation in accordance with Federal Water Project Recreation Act of 1965. On September 15, 1972 the Secretary of the Army approved a contract signed by the City of Macon, Missouri, for water supply and recreation development. Missouri State agencies indicated their intent to sponsor future water supply and signed a contract on June 17, 1977 to sponsor recreational development in lieu of the City of Macon. After review by the Office of the Secretary of the Army, the state signed the contract in December 1979, and it was approved by the Secretary of the Army on April 18, 1980. Supplemental Agreement No. 1 to this contract was approved December 28, 1993 to provide for additional recreational facilities.

Operations During FY. Visitation for FY 2007 was 1,643,848 visitor hours. Maintenance activities consisted of ordinary operation and maintenance.

11. MELVERN LAKE, MARAIS DES CYGNES (OSAGE) RIVER, KS

Location. Damsite is on Marais des Cygnes (Osage) River in Osage County, Kansas, about 4 miles west of Melvern, Kansas.

Existing project. An earthfill dam about 9,700 feet long and about 98 feet high with an uncontrolled chute-type spillway in the left abutment. Total reservoir storage capacity is 363,000 acre-feet (200,000 for flood control, 26,000 for sediment reserve, and 137,000 for multipurpose storage for water supply, water quality control, and recreation). Cost of constructing the completed project was \$37,436,530. Construction was initiated in July 1967, and the project was placed in operation in August 1972.

Local cooperation. Section 2, Flood Control Act of 1938 applies. Project storage was reallocated in 1989 to include municipal and industrial water supply in accordance with provisions of the Water Supply Act of 1958. In accordance with the provisions of the Memorandum of Understanding between the State of Kansas and the Department of the Army dated 1985, payment in full of \$7,131,834 for 50,000 acre-feet of water supply storage was made in March 1995. Utilization of storage for water supply was initiated in September 1993 under an interim contract and continues under the current contract signed in January 1995.

Operations During FY. Visitation for FY 2007 was 5,303,045 visitor hours. Maintenance Activities consisted of ordinary operation and maintenance and improvements with the addition of nine new restroom facilities that meet ADA requirements in three recreation areas.

12. MILFORD LAKE, REPUBLICAN RIVER, KS

Location. The Damsite is on the Republican River near the village of Alida about 10 miles above confluence of Republican and Smoky Hill Rivers which form Kansas River; and about 4 miles northwest of Junction City, Kansas.

Existing project. An earthfill dam about 6,300 feet long and 126 feet high with an uncontrolled service-chute spillway in a saddle on right abutment. Total reservoir storage capacity is 1,160,000 acre-feet (700,000 for flood control, 160,000 for sediment reserve and 300,000 of multipurpose storage for water supply, water quality control, and recreation). Water supply storage is included in the project at the request of the Governor of Kansas under provisions of the Federal Water Supply Act of 1958. Initial cost of constructing the completed project was \$48,268,843. Total Federal cost of project, including \$1,297,649 supplemental recreational development (Code 710), was \$49,566,492. Construction was initiated in July 1961. The project was placed in operation in June 1965.

Local cooperation. Section 2, Flood Control Act of 1938 applies. Local interests must make reimbursement of \$12,162,134 for water supply storage in accordance with Water Supply Act of 1958. Utilization of storage for water supply was initiated in October 1984. Reimbursement was initiated, at the option of the State, in September 1976.

Operations During FY. Visitation for FY 2007 was 7,066,251 visitor hours. Maintenance: Activities included ordinary operation and maintenance, road repairs, upgrading sanitary facilities to improve accessibility.

13. MISSOURI RIVER LEVEE SYSTEM IA, NE, KS AND MO (RULO, NE, TO MOUTH)

Location. On both banks of the Missouri River from Sioux City, Iowa, about 760 miles to the mouth near St. Louis, Missouri. The portion of the project in Kansas City District extends from Rulo, Nebraska, 498 miles to mouth.

Existing project. A series of levee units and appurtenant works along both sides of Missouri River from Sioux City, Iowa, to the mouth, for protection of agricultural lands and small communities against floods. Estimated fully funded (2002) for the active portion of the project from Rulo, Nebraska, to mouth is \$209,379,000, including \$157,521,000 Federal and \$22,720,000 non-Federal contributions, and costs of \$29,138,000 for lands and damages are to be borne by local interests. Remaining portion of project consists of units on which planning and construction are being delayed pending restudy to assure that additional levee construction is economically justified. Current cost estimate for deferred, inactive, and deauthorized portion of project Rulo, Nebraska, to mouth is \$168,865,000 (1964, 1986, and 1987 price levels), of which \$153,233,000 is Federal cost for construction and \$15,632,000 for lands and damages to be borne by local interests. Construction of the project was initiated in June 1948.

Local cooperation. Section 3, Flood Control Act of 1936 applies. Fully complied with for all completed units and units under construction. Local sponsors provide all operation and maintenance.

Operations During FY. Status of individual units of active portion at end of fiscal year is shown in Table 27-H on Missouri River Levee System. The contract to construct Unit L-385 was awarded on 28 March 2002 with the notice to proceed being issued on April 26, 2002. The project is about 99% complete as of January 2006. The design for L-142 Unit was 95% complete in FY 2005. No funding allocated to this project in FY 2006 and FY 2007 has prevented any further progress.

14. PERRY LAKE, DELAWARE RIVER

Location. The Damsite is on the Delaware River about 5 miles above the mouth in Jefferson County, and about 3 miles northwest of Perry, Kansas.

Existing project. An earthfill dam about 7,750 feet long constructed to an elevation about 95 feet above valley floor with gated-outlet works and an uncontrolled spillway in left abutment. Total reservoir storage capacity is 770,000 acre-feet (480,000 for flood control, including 140,000 for sediment reserve and 150,000 of multipurpose storage for water supply, water quality control, and recreation). Water supply storage is included in the project plan at the request of the State of Kansas under provisions of the Federal Water Supply Act of 1958. Initial cost of constructing the completed project was \$48,371,706. Total Federal cost of project, including \$724,212 supplemental recreational development (Code 710), is \$49,095,918. Construction was initiated in March 1964, and the project was placed in operation in January 1969.

Local cooperation. Section 2, Flood Control Act of 1938 applies. Local interests must make reimbursement of \$8,551,805 for water supply storage in accordance with Water Supply Act of 1958. Utilization of storage for water supply was initiated in October 1991. Reimbursement was initiated at the option of the State in September 1978.

Operations During FY. Visitation for FY 2007 was 5,070,671 visitor hours. Maintenance Activities included ordinary operation and maintenance, road repairs in Longview Park, renovation work on the relief well ditch below the dam, spillway levee rehabilitation, the purchase of two CXT toilets and the construction of a new group picnic shelter which was completed by local boy scouts.

15. PICK-SLOAN MISSOURI BASIN PROGRAM (KANSAS CITY DIST.)

Location. Flood control improvements included in this project are on and along the Missouri River and several of its principle tributaries, in states comprising the Missouri River Basin.

Existing project. The Pick-Sloan Missouri Basin program for flood control and other purposes in Missouri River Basin provides for levees along Missouri River between Sioux City, Iowa, and the mouth, flood-protection works at certain municipalities, and reservoirs on main stem of

KANSAS CITY, MO DISTRICT

Missouri River and on tributaries for control of flooding. (See Table 27-B for authorizing legislation and Table 27-I on Kansas City District projects included in Pick-Sloan Missouri Basin program.) See individual project reports.

16. POMME DE TERRE LAKE POMME DE TERRE RIVER, MO

Location. The dam is on the main stem Pomme de Terre River, about 44 miles above the mouth in Hickory County, Missouri. The lake extends upstream into Polk County, Missouri. The site is about 4 miles south of Hermitage, Missouri, and 20 miles north of Bolivar, Missouri.

Existing project. An earth and rockfill dam about 4,630 feet long constructed to about 155 feet above riverbed and a dike section on left abutment about 2,790 feet long, providing storage capacity of 650,000 acre-feet (407,000 for flood control and 243,000 for sedimentation and multi-purpose). Initial cost of constructing the complete project was \$14,946,784. Total Federal cost of project, including \$329,140 area redevelopment and \$2,089,529 supplemental recreational development (Code 710), is \$17,365,453. Construction was initiated in January 1957, and the project was placed in useful operation in October 1961.

Operations During FY. Visitation for FY 2007 was 14,767,083 visitor hours. Maintenance: Activities consisted of ordinary operation and maintenance, completion of a new sewage system at the Outlet Park, and continued repair of severe tornado damage to the Damsite Campground.

17. POMONA LAKE, ONE HUNDRED TEN MILE CREEK, KS

Location. The dam is on One Hundred Ten Mile Creek, a tributary of Marais des Cygnes (Osage) River, 7 miles above mouth of stream in Osage County, Kansas, about 8 miles northwest of Pomona, Kansas, and 34 miles upstream from Ottawa, Kansas.

Existing project. An earthfill dam 7,750 feet long constructed to an average height of about 85 feet above streambed, with gated-outlet works and an ungated chute-type spillway near left abutment. Total reservoir storage capacity is 230,000 acre-feet (160,000 for flood control, 14,000 for sediment reserve, and 56,000 of multipurpose storage for water quality control, and recreation). Initial cost of constructing the completed project was \$13,272,108. Total Federal cost of project, including \$731,130

supplemental recreational development (Code 710), was \$14,003,238. Construction began in July 1959, and the project was placed in operation in October 1963.

Local cooperation. Section 2, Flood Control Act of 1938 applies. Pomona has water supply reimbursement under Water Supply Act of 1958 totaling \$862,923.

Operations During FY. Visitation for FY 2007 was 3,537,692 visitor hours. Maintenance: Activities consisted of ordinary operation and maintenance.

18. RATHBUN LAKE, CHARITON RIVER, IA

Location. The Damsite is on the Chariton River about 7 miles north of Centerville and 1 mile north of Rathbun, Appanoose County, Iowa.

Existing project. An earthfill dam 10,600 feet long constructed to an elevation about 86 feet above valley floor, with gated-outlet works and an uncontrolled service chute with paved sill spillway about a mile upstream from left abutment. Total reservoir storage capacity is 552,000 acre-feet (339,000 for flood control, 24,000 for sediment reserve and 189,000 of multipurpose storage for navigation, water quality control, and recreation). Initial cost of constructing the project was \$27,033,210. Total Federal cost of project, including \$588,948 supplemental recreation development (Code 710), was \$27,622,158. Construction of the project was initiated in September 1964 and completed in November 1969. The operating plan for this project was revised to reduce flood control releases during critical times of the year to allow local farmers better access during planting and harvesting and to facilitate field drainage and drying out. The revised plan has resulted in more frequent high pool elevations than anticipated, which has inundated roads and recreation facilities.

Local cooperation. Section 2, Flood Control Act of 1938 applies.

Operations During FY. Visitation for FY 2007 was 7,223,046 visitor hours. Maintenance: Activities included ordinary operation and maintenance and completion of the Critical Project Security Program.

19. SMITHVILLE LAKE, LITTLE PLATTE RIVER, MO

Location. The Damsite is on the Little Platte River about 1 mile northeast of Smithville and about 5 miles north of Kansas City, in Clay and Clinton Counties, Missouri.

Existing project. Earthfill dam about 4,200 feet long and 95 feet high with an uncontrolled service spillway. A dike about 2,400 feet long crosses a saddle in the left abutment. Total reservoir storage capacity is 246,500 acre-feet (92,000 for flood control, 52,300 for sediment reserve, and 102,200 of multipurpose storage for water supply, water quality control, and recreation). Cost of constructing the project was \$87,685,314. Construction was initiated in November 1973, and the project was placed in operation in March 1982.

Local cooperation. Section 2, Flood Control Act of June 28, 1938 applies. Reimbursement of \$24,000,000 will be required for water supply storage in accordance with Water Supply Act of 1958, and reimbursement of \$7,500,000 will be required for recreation development in accordance with Federal Water Recreation Act of 1965. Additional non-Federal contribution for recreation amounts to \$737,000. All contracts for local cooperation were approved by the Secretary of the Army on November 27, 1972.

Operations During FY. Visitation for FY 2007 was 7,890,691 visitor hours. Maintenance: Activities consisted of ordinary operation and maintenance, road repairs, and initiation of a Section 1135 Shoreline Protection Program at twenty-five percent complete and the completion of the Critical Project Security Program.

20. TURKEY CREEK BASIN, KS & MO

Location: The Turkey Creek Basin is a 23-square mile area within Kansas City, KS and suburbs in Johnson and Wyandotte Counties in Kansas.

Existing Project. The recommended project is estimated to cost \$92,547,000, with an estimated Federal cost of \$56,852,000 and an estimated non-Federal cost of \$35,695,000, including construction of channel modification and structures to control hillside runoff. This project was reauthorized in 2003 and has moved into Construction, General funding.

Local Cooperation. The PCA was signed in FY 2006.

Operations During FY. In FY 2007, construction has continued on tunnel retrofitting. In addition, work has progressed on railroad bridge modifications and design has continued on channel modifications.

21. TUTTLE CREEK LAKE, BIG BLUE RIVER, KS

Location. The dam is on the main stem of the Big Blue River, about 12 miles above the stream mouth in Riley and Pottawatomie Counties, Kansas. Site is about 3 miles north of Manhattan, Kansas.

Existing project. An earth and rock-fill dam 7,500 feet long and 157 feet high. Total reservoir storage capacity is 2,346,000 acre-feet (1,933,000 for flood control, 228,000 for sediment reserve and 185,000 for multipurpose storage, for low-flow regulation, navigation, and recreation). Initial cost of constructing the completed project was \$80,051,031. Total Federal cost of project, including \$533,048 supplemental recreational development (ode 710), was \$80,584,079. Construction began in October 1952. Project was placed in Operation in July 1962.

Local cooperation. Section 2, Flood Control Act of 1938 applies.

Operations During FY. Visitation for FY 2007 was 1,781,553 visitor hours. The project provided primary water releases into the Big Blue and Kansas Rivers to meet minimum in-stream flow requirements in accordance with agreements with the state of Kansas. The project also provided water releases for supplemental navigation flows on the Missouri River for a portion of the navigation season in fiscal year 2007. Maintenance: Activities included ordinary operation and maintenance.

Dam Safety Assurance Program: A \$246 million project to address seismic and hydrologic concerns at Tuttle Creek Dam was approved in 2003. Recent investigation and construction modifications will bring the project in under budget and ahead of schedule. In 2006 the design and development of contracts for all aspects of the project were underway. The state of the art Dam Failure Warning System was completed in 2005 and is currently operational. Construction was completed on new campgrounds that serve the purpose of mitigating impacts to the existing downstream campgrounds. The base contract for the Ground Modification Project was awarded in September of 2005. A downstream test program, which was an option to the contract, was awarded in April of 2006 for 3.6 million and completed in 2007. Stabilization of the

KANSAS CITY, MO DISTRICT

downstream toe of the dam began in 2007. The spillway tainter gate contract was awarded in June of 2007 for \$6.9 million.

22. WILSON LAKE, SALINE RIVER, KS

Location. The dam is on the Saline River about 130 miles above its mouth, near the eastern edge of Russell County, Kansas, about 50 miles west of Salina, 10 miles north of Wilson, and 20 miles east of Russell, Kansas.

Existing project. An earthfill dam about 5,600 feet long and 160 feet high with a gated-outlet works, chute spillway, storage capacity is 776,000 acre-feet (511,000 for flood control, 40,000 for sediment reserve and 225,000 multipurpose storage for irrigation, navigation, and low-flow regulation). Initial cost of constructing the project was \$20,015,023. Total Federal cost of project, including \$448,344 supplemental recreational development (Code 710), was \$20,463,367. Construction began in April 1961, and the project was placed in operation in December 1964.

Local cooperation. Section 2, Flood Control Act of 1938, applies.

Operations During FY. Visitation for FY 2007 was 1,935,498 visitor hours. Maintenance: Activity included ordinary operation and maintenance and upgrading sanitary facilities to meet accessibility standards. Several park roads received asphalt overlay. High water events brought the pool back within two feet of normal levels.

23. SCHEDULING OF FLOOD CONTROL RESERVOIR OPERATIONS

Under Sections 7 and 9, 1944 Flood Control Act, the Corps is responsible for detailed scheduling of operations concerning storage capacity reserved for or assigned to flood control in reservoirs constructed by Bureau of Reclamation as well as those constructed by the Corps. Fiscal Year costs were \$275,000.

24. INSPECTION OF COMPLETED FLOOD CONTROL PROJECTS

Flood Control Act of June 22, 1936, P.L. 738, and subsequent acts require local interests to furnish assurances that they will maintain and operate certain local protection projects after completion in accordance with regulations prescribed by the

Secretary of the Army. District Engineers are responsible for administration of these regulations within boundaries of their respective district. (See Table 27-J on inspection of completed flood control projects.)

Multiple-Purpose Projects Including Power

25. HARRY S. TRUMAN DAM AND RESERVOIR, OSAGE RIVER, MO

Location. The Damsite is on the main stem of the Osage River about 1.5 miles northwest of Warsaw, Benton County, Missouri. Reservoir extends into Bates, Henry, Hickory, St. Clair, and Vernon Counties, Missouri.

Existing project. An earthfill dam about 5,000 feet long constructed to an average height of about 96 feet above streambed, including a gate-controlled overfall spillway and a power installation consisting of six inclined pump-generating units with a combined generating capability of 160,000 kilowatts. Total reservoir storage capacity is 5,202,000 acre-feet (3,918,000 for flood control, 244,000 for sediment reserve, and 1,040,000 multipurpose storage for power, low-flow regulation, and recreation). The operating purposes of the project are flood control, hydroelectric power, water supply, recreation, and fish and wildlife. Public Law 91-267, approved May 26, 1970, authorized a change in project name from Kaysinger Bluff Dam and Reservoir, Osage River Basin, Missouri, to the Harry S. Truman Dam and Reservoir. Initial cost of constructing the completed project was \$550,909,000. Construction of relocated Missouri Highway M-13 was initiated September 1964 and completed May 1966. Construction of the dam and reservoir was initiated in October 1964. The project was operational for flood control in October 1979, and multipurpose pool was reached in November 1979. The first power unit was placed on line on December 22, 1979. Subsequent problems with the turbine bearings required remedial repair that was completed in FY 1999. Through September 2007, power generation totaled 6,976,932,380 kilowatt-hours. Of the gross income from the sale of power by Southwestern Power Administration, \$175,496,815 was allocated to the Corps of Engineers for project power operating costs, interest, and investment recovery.

Local cooperation. Section 2, Flood Control Act of 1938 applies.

REPORT OF THE SECRETARY OF THE ARMY ON CIVIL WORKS ACTIVITIES FOR FY 2007

Operation During FY. Visitation for FY 2007 was 9,364,977 visitor hours. During FY 2007, 331,280,000 kilowatt-hours of electrical power were generated. Power generation was much greater than normal resulting from two consecutive high water events in May and July. The sixth highest pool of record occurred in July and caused extensive inflow of flood debris. Cleanup costs were \$775,000. Maintenance activities consisted of ordinary operation and maintenance, road work, boat ramp expansion, and installation of an accessible lift for the disabled at the visitor center. Work continued on certification of hydraulic steel structures in preparation for draft tub bulkhead cylinder repairs.

26. STOCKTON LAKE, SAC RIVER, MO

Location. The Damsite is on the Sac River about 49.5 miles above its confluence with the Osage River, and about 1 mile east of Stockton, Cedar County, Missouri. The lake extends into Dade and Polk Counties.

Existing project. A rock-shell dam with impervious core about 5,100 feet long constructed to an average height of about 128 feet, with a gated overfall spillway and a 45,200-kilowatt power installation. Total reservoir storage capacity is 1,674,000 acre-feet (774,000 for flood control, 25,000 for sediment reserve and 875,000 multipurpose storage for power and recreation). The authorized project purposes are flood control, hydroelectric power, water quality, water supply, recreation, and fish and wildlife. Initial cost of constructing the completed project was \$75,715,300. Cost of the project, including \$3,758,000 for downstream channel work and \$502,057 for supplemental recreational development (Code 710), was \$79,975,357. Construction was initiated in October 1963, and the project was placed in operation in December 1969. Power operation problems were encountered with the initial operation in March 1973 because the downstream channel did not have the capacity which earlier observations and computations indicated. As a result, it has been necessary to restrict the power operation to about the 30,000-kilowatt level. Right-of-way for construction of a channel cutoff and bridge at Horseshoe Bend were acquired, and construction completed. Sloughing easements downstream to Caplinger Mills were acquired. Completion assured downstream channel capacity to Caplinger Mills of 8,000 c.f.s. for powerplant operation. Discharge in this range will accommodate power operations at a 39,500-kilowatt level. Through September 2007, power generation totaled 1,940,562,700 kilowatt-hours. Of the gross

income from the sale of power by Southwestern Power Administration, \$53,580,877 was allocated to the Corps of Engineers for project operating costs, interest, and investment recovery.

Local cooperation. Section 2, Flood Control Act of 1938, applies.

Operations During FY. Visitation for FY 2007 was 6,627,147 visitor hours. During FY 2007 1,940,562,700 kilowatt-hours of electrical power were generated. Activities consisted of ordinary operation and maintenance and preservation of a downstream archeological site known as "Big Eddy". The 161Kv transmission line owned by KAMO that crosses the Little Sac Arm of Stockton Lake near the 245 Highway Bridge collapsed into the lake leaving the power plant with no direct line to transfer power on the Springfield Morgan Line. Upon receipt of guidance from NWD, the draft tube bulkheads were inspected as part of the HSS program. CXT facilities were installed at the Greenfield, Cedar Ridge North and Hawker Point boat ramps. A double CXT was installed at the Orleans Trail beach. Additional non routine items included replacement of the heating and lighting systems in the maintenance building, replacement of the security fence at the overlook, and chip and seal repairs to the roads and parking lots in the Hawker Point Park. Additional ice guards were added to the roof of the Project Office building. The Cedar Ridge Fee booth was replaced. Cathodic protection testing was accomplished on the gasoline and diesel tanks located in the maintenance yard.

Work Under Special Authorities

27. CONTINUING AUTHORITIES

Small Beach Erosion Control Projects Not Specifically Authorized by Congress (Sec. 103, 1962 River and Harbor Act as amended, Public Law 874, 87th Cong., Oct. 23, 1962, as amended).

Each project selected must be complete in itself, economically and environmentally justified, and limited to a Federal cost of not more than \$3 million. The local sponsoring agency must agree to provide without cost to the Department of the Army, all lands, easements, and rights-of-way, including highway bridge, and utility relocations and alterations; hold and save the Department of the Army free from damages; maintain and operate the project after completion; assume all project costs in excess of the Federal cost limit; and prevent future encroachments on improved channels. The non-Federal sponsors of Section 103 projects are required

KANSAS CITY, MO DISTRICT

to pay 50 percent of all feasibility study costs over \$100,000. The sponsor must pay in cash during the construction at least 5 percent of the construction cost. The sponsor's cash and other contributions must equal 35 percent of the total construction cost, but will not be required to exceed 50 percent. There were supervisory and administrative negotiations under the Section 103 Coordination Account in FY 2007. See Table 27-K for expenditures under Section 103 during 2007.

Small Flood Control Projects Not Specifically Authorized by Congress (Sec. 205, 1948 Flood Control Act, Public Law 858, 80th Cong., June 30, 1948, as amended).

Each project selected must be complete in itself, economically and environmentally justified, and limited to a Federal cost of not more than \$7 million. The local sponsoring agency must agree to provide without cost to the Department of the Army, all lands, easements, and rights-of-way, including highway bridge, and utility relocations and alterations; hold and save the Department of the Army free from damages; maintain and operate the project after completion; assume all project costs in excess of the Federal cost limit; and prevent future encroachments on improved channels. The non-Federal sponsors of Section 205 projects are required to pay 50 percent of all feasibility study costs over \$100,000. For structural flood control projects, the sponsor must pay in cash during the construction at least 5 percent of the construction cost. The sponsor's cash and other contributions must equal 35 percent of the total construction cost, but will not be required to exceed 50 percent. There were no Section 205 projects under construction in FY 2007. See Table 27-K for expenditures under Section 205 during 2007.

Emergency Streambank Protection (Section 14, 1946 Flood Control Act, Public Law 526, 79th Cong., July 24, 1946) as amended.

Each project selected must be complete in itself, engineering feasible, economically justifiable environmentally acceptable, and limited to a Federal statutory cost of not more than \$1,000,000. The local sponsoring entity must agree to provide without cost to the Department of the Army, all lands, easements, and rights-of-way, including highway, highway bridge, and utility relocations and alterations required for project construction; provide over the period of construction, an amount equal to not less than 35 percent or more than 50 percent of total project cost, at least 5 percent of which will be cash; operate, maintain, repair, replace, and rehabilitate the project upon completion; hold and save the Department of

the Army free from damages arising from the construction, operation, and maintenance of the completed project; and assume all project costs in excess of the Federal statutory cost limit. See Table 27-K for Emergency Streambank Protection expenditures during FY 2007.

Argosy Road Bridge, Riverside, Missouri

Location. The project is located at the Argosy Road Bridge in Riverside, Missouri on the Line Creek tributary to the Missouri River.

Existing project. The severe bank erosion of Line Creek over a 900 foot length is threatening to undermine the piers and the abutments of the Argosy Road Bridge on a large City of Riverside commercial/industrial access road.

Local cooperation. Section 14, Flood Control Act of 1946 applies.

Operation during fiscal year. During FY 2007, Work continued on the design and plan specifications incurring costs of \$16,538.

Platte River Bridge, Conception, Missouri

Location. The project is located at the City of Conception in northwestern Missouri, in Nodaway County on the Platte River.

Existing project. The severe bank erosion of the Platte River over an 800 foot length is threatening to undermine and cut off access to the major concrete county bridge at Conception, Missouri.

Local cooperation. Section 14, Flood Control Act of 1946 applies.

Operation during fiscal year. During FY 2007, Work continued on the design and plan specifications incurring costs of \$18,251.

Platte City Sewer Stabilization Project, Platte City, Missouri

Location. The project is located at Platte City, Missouri, in Platte County on the Platte River.

Existing project. There is severe bank erosion of the Platte River over a 600 foot length and is threatening to undermine and destroy the City's major sanitary sewer main.

REPORT OF THE SECRETARY OF THE ARMY ON CIVIL WORKS ACTIVITIES FOR FY 2007

Local cooperation. Section 14, Flood Control Act of 1946 applies.

Operation during fiscal year. During FY 2007, Work continued on the design and plan specifications incurring costs of \$39,453.

Rush Creek at English Landing Park, Parkville Missouri

Location. The project is located at T51N, R34W, Section 35, Platte County, Missouri; approximately 10 miles north of Kansas City, Missouri.

Existing project. Stream bank erosion is occurring on the both the left and right banks of Rush Creek, impacting the historic Waddell "A" Truss Bridge and the Main Street Bridge, the Parkville public water main, sanitary sewer force main, low water crossing, large sanitary pumping station, administrative office, parking lots, and three baseball fields. The Waddell A Truss Bridge, listed on the National Register of Historic Places, is used as a footbridge crossing Rush Creek. The erosion area is roughly 2000 feet long and if the site remains unprotected, eventual loss of the bridges, utility lines, pumping station, and ball fields can be expected. A long-term solution to the problem is needed. The area around Rush Creek is a very high public use area, especially for children, and represents an immediate and significant hazard to life safety, the entire area bounded by orange warning fence.

Local cooperation. Section 14, Flood Control Act of 1946 applies.

Operation during fiscal year. During FY 2007, Work continued on the design and plan specifications and completed award of construction contract with the project incurring costs of \$616,228.

South Fork Clear Creek, Route FF, Marysville, Missouri

Location. The project is located at the MoDOT Route FF Bridge on the South Fork of Clear Creek, 7 miles west of Maryville, Missouri in Nodaway County.

Existing project. The severe bank erosion of the South Fork of Clear Creek is threatening to cut off the abutment of the large concrete MoDOT Bridge at on Route FF Highway.

Local cooperation. Section 14, Flood Control Act of 1946 applies.

Operation during fiscal year. During FY 2007, Work continued on the design and plan specifications incurring costs of \$28,249.

Stranger Creek at K-32, Kansas

Location. The project is located along Kansas Highway 32 at Linwood, Kansas adjacent to the Stranger Creek.

Existing project. The severe bank erosion of Stranger Creek over a 1,000 foot length adjacent to Highway K-32 is threatening to cut of access of that important Kansas arterial and flank the bridge abutment.

Local cooperation. Section 14, Flood Control Act of 1946 applies.

Operation during fiscal year. During FY 2007, Work continued on the design and implementation phase incurring costs of \$3,280.

Project Modifications for Improvement of Environment (Section 1135, Water Resources Development Act of 1986, Public Law 662, 99th Cong., November 17, 1986).

Section 1135 authorizes review of the operation of completed water resources projects to determine need for modifications for the purpose of improving environmental quality. See Table 27-K for Section 1135 studies status and expenditures for FY 2007.

Kansas City Riverfront, Missouri

Location. The project will modify the Corps of Engineers Missouri River Bank Stabilization and Navigation Project (BSNP). The project entails construction of approximately 0.2 acre of emergent wetland, 1.3 acres of planted bottomland hardwood, 3 acres of native grasses and forbs, and preservation of 0.2 acres along the riverfront.

Existing project. The project is located in Kansas City, Missouri on the Port Authority property between downtown Kansas City and the Missouri River. The project is bounded by Interstate 35 to the east and the Corps of Engineers wharf area to the west, at the foot of Main Street.

Local cooperation. Section 1135, Water Resources Development Act of 1986 applies.

KANSAS CITY, MO DISTRICT

Operation during fiscal year. During FY 2007, Work continued on design and implementation phase incurring costs of \$54,085 on the project.

Rathbun Lake Habitat Restoration Project, **Iowa**

Location. The Rathbun Lake is located on the Chariton River at river mile 142.3, approximately seven miles northwest of Centerville, Iowa, and 85 miles southeast of Des Moines, Iowa. The restoration project is located on the South Fork Chariton River within the upper portion of the flood control pool of Rathbun Lake.

Existing project. This project is part of a larger restoration and resource protection strategy being undertaken by IDNR and the Corps of Engineers at Rathbun Lake and their associated environs including aquatic restoration opportunities. It consists of wetland, aquatic, shoreline / riparian restoration supporting the lake ecosystem. This wetland project would comprise a total of 200 acres wetlands when the entire area is flooded to provide habitat for migrating waterfowl. The wetland area would be operated, as needed, in series with IDNR's Coffee Marsh wetland located to the east. Water control structures would allow greater control of the seasonal water regime in this wetland and in Coffee Marsh, greatly enhancing effective habitat management. No fee title land acquisition is required for the project. Shoreline restoration will contribute the comprehensive habitat corridor supporting a contiguous ecosystem at the lake.

Local cooperation. Section 1135, Water Resources Development Act of 1986 applies.

Operation during fiscal year. During FY 2007, Work continued on design and implementation phase in restoration incurring costs of \$83,191 on the project.

Smithville Aquatic Plantings

Location. The project is located at Smithville Lake in Clay County, Missouri on the Little Platte River at the town of Smithville, Missouri, 20 miles north of Kansas City, Missouri.

Existing project. The project will improve and restore approximately 3,000 feet of lake shoreline, and up to 75 coves including the stabilization of 5 points bars, providing bank stabilization, food and shelter for fish and aquatic life, sediment reduction,

pollutant/nutrient absorption and a general improvement in water quality.

Local cooperation. Section 1135, Water Resources Development Act of 1986 applies.

Operation during fiscal year. During FY 2007, Work continued on design and implementation phase incurring costs of \$17,945 on the project.

Aquatic Ecosystem Restoration (Section 206, Water Resources Development Act of 1996, Public Law 303, 104th Cong., October 12, 1996). Section 206 authorizes small aquatic ecosystem restoration projects to improve the quality of the environment if in the public interest and cost effective. The feasibility study continues for the Chariton Watershed Section 206 project. It will authorize and construct an array of several hundred small detention structures and in stream structures to improve aquatic, riparian, and wetland habitat in the basin. It will serve to reduce sediment and contaminant inflow into Rathbun Lake, greatly improving water quality and habitat in the lake. See Table 27-K for Section 206 Studies status and expenditures for FY 2007.

Chariton River/Rathbun Lake Watershed, **Iowa**

Location. The project is located in south central Iowa encompassing portions of Appanoose, Clarke, Decatur, Lucas, Monroe, and Wayne counties.

Existing project. Rathbun Lake supplies water to the Rathbun Regional Water Association (RRWA). The RRWA provides 7 million gallons of water daily to over 70,000 people in 18 counties in Southern Iowa and Northern Missouri. Rathbun Lake also provides recreation opportunities to over one million visitors annually, flood protection for 150,000 acres of land, fish and wildlife habitat in the 11,000-acre lake and on 21,000 acres of adjacent public lands, and downstream water quality improvement. The watershed of Rathbun Lake includes over 354,000 acres. There are approximately 27,000 acres of floodplain in the watershed. The entire watershed has been subdivided into 61 sub-watersheds ranging in size from approximately 2,589 acres to 16,430 acres. Twenty-two of these sub-watersheds have been identified as priority hydrologic units in terms of the amount of sediment that they contribute to Rathbun Lake. The consequences of increased erosion include: significant degradation of in-stream and lake habitat for fish and aquatic organisms, increased water treatment costs, and reduced sediment storage in Rathbun Lake. This project will

REPORT OF THE SECRETARY OF THE ARMY ON CIVIL WORKS ACTIVITIES FOR FY 2007

identify locations for over 200 structures (small ponds or wetlands) that will reduce the amount of sediment delivered to Rathbun Lake while increasing wildlife habitat, aquatic habitat, water quality in Rathbun Lake, and wetland acreage in the watershed. Additional benefits include: water sources for pastured livestock, recreation opportunities for landowners, and the general public improved subsurface water quality, reduced streambank erosion, slowing of stormwater, and rural fire protection.

Local cooperation. Section 206, Water Resources Development Act of 1996 applies.

Operation during fiscal year. During FY 2007, Work continued on design and implementation phase incurring costs of \$638 on the project.

28. EMERGENCY RESPONSE ACTIVITIES

A. Disaster Preparedness.

(1) The Disaster Preparedness Program (DPP) involves planning, training, inspection of flood control projects, and maintaining supplies and equipment. Planning activities also involve development of response and recovery plans and exercises in support of natural/national disasters and terrorist activities.

(2) Emergency Management (EM) Branch provided District representation at the monthly meetings for the interagency Kansas City Regional Continuity of Operations (COOP) Working Group and assisted in the development of the Kansas City Regional Interagency Pandemic COOP Exercise (KC PRICE '07). The exercise was an interagency tabletop exercise conducted in June 2007 and focused on a pandemic influenza outbreak.

(3) The National Disaster Program Manager participated in the NWD PDT for development of the All Hazards Policy. The All-Hazards Plan will be used to prepare a command to conduct incident response operations and, on order, provide relief to disaster victims in a timely manner, and to support post-disaster recovery operations.

(4) EM personnel attended the annual conference of the Missouri State Emergency Management Agency in April 2007 and the NWD Regional EM conference Boulder, CO in June 2007.

(5) Disaster preparedness includes operational readiness, maintaining the necessary supplies and equipment to support disaster response. To support flood-fighting efforts, an inventory is maintained of over 1 million sandbags, 55 pumps and 2 sandbag filling machines.

(6) Corp personnel provided flood fight training for the sponsors of the St. Joseph and Marysville, MO Flood Protection Projects in March 2007.

(7) Activities to support disaster preparedness in FY 2007 included training of the District's Emergency Water Planning and Response Team (PRT). In April 2007 the District's Water Team assumed the role as primary National ESF#3 Water Team from the New England District until April 2008. NWK Water Team members attended training during 2007 and selected members participated in an SOP rewrite workshop.

B. Public Law 84-99. Rehabilitation of Flood Control Works. Following the May and July 2007 floods, 30 non Federal and 10 Federal levees experienced some damage. Field inspections were conducted and Project Information Reports were prepared. Rehabilitation efforts consumed most of the year with a goal of having all repaired by the Spring 2008 flood season. Funding was received for these rehabilitation efforts in July and August of 2007.

C. Inspection of Completed Works (ICW) Program. Thirty-nine (39) Federal flood control projects were inspected during FY 2007.

D. Emergency Response.

(1) In early May 2007, the District was impacted by major flooding on the Missouri River. The District activated their EOC with 24 hour coverage. Initial forecasts were for river stages to surpass the record 1993 stages in several locations. Although this did not happen, the River did reach a record stage at Napoleon, Missouri, the site of the Districts' Missouri River Area Office. During the two week response almost 200 District personnel responded in some manner and almost one million sandbag and several pumps were issued to the State and impacted Counties.

(2) The District also responded to flooding in early July 2007 that impacted communities in the Marais des Cygnes River Basin in eastern Kansas as well as Abilene and Salina, KS. Support was given to

KANSAS CITY, MO DISTRICT

the City of Osawatomie, the sponsor of the Federal Levee Project there. Numerous sandbags and pumps were also issued. The District also provided these same resources to areas within the Tulsa District as requested.

(3) In FY 2007, the District provided a Water Action Officer to FEMA's NRCC in support of August's Hurricane Dean.

(4) The deployments to Iraq and Afghanistan for the Global War on Terrorism (GWOT) missions continued. EM staff facilitated the deployment of District employees during FY 2007. The effort is expected to continue through FY 2008.

General Investigations

29. GENERAL INVESTIGATIONS

Fiscal year 2007 costs totaled \$1,172,650 for all General Investigations activities. See Table 27-L, which covers Surveys, Collection and Study of Basic Data and Preconstruction Engineering and Design expenditures in FY 2007.

Other Activities

30. CATASTROPHIC DISASTER PREPAREDNESS PROGRAM

FY 2007 expenditures of \$24,290 provided for activities required for local and national preparedness.

31. MISSOURI RIVER BASIN COLLABORATIVE WATER RESOURCES, PLANNING/PARTNERING PROCESS

Missouri River Basin Association and the Corps will manage and facilitate the process of collaboration for some limited studies. The collaborative effort allows input from the states, tribes, and Federal agencies economic and environmental interest groups and the general public on both the operation issues, i.e. Master Manual, and non-operational issues. In addition, the collaborative process could address recreation industry development, ecosystem management, streambank erosion, project mitigation, structural changes for endangered species, environmental monitoring tribal water rights, and support to navigation and agriculture.

32. REGULATORY PROGRAM

Statutes. The Corps of Engineers is charged with regulatory responsibility for all waters of the United States, including wetlands. This is accomplished through a Department of the Army permit program pursuant to Section 10 of the Rivers and Harbors Act of 1899 and Section 404 of the Clean Water Act.

Operations During FY 2007. The Kansas City District completed 1,935 permit actions (IP, GP, NWP, and NPR) during the year. A total of 79 violations were reported and evaluated. Sixty-Seven of the violations were resolved by issuance of permits, voluntary restoration, administrative action or other means. The remaining twelve violations were unresolved at the end of the reporting period. The total cost of the regulatory program in the Kansas City District for FY 2007 was \$3,119,842 (including Permit Evaluation - \$2,696,308, Enforcement - \$243,264, and Compliance-Authorized Activities - \$18,270).

Special projects and significant actions during the year included: Mitigation: As a Lead District Initiative project, NWK worked with the other Missouri Districts to complete and implement the Missouri Stream Mitigation Method. The method is a quick conditional assessment of a stream that results in a rationale for required stream mitigation based upon a credit and debit system.

Permit Actions: a.) Commercial Sand Dredging: 1.) Missouri River. Permit reauthorization for the Missouri River was completed. Department of the Army (DA) permits were issued to four active dredging companies and permit denials were issued to four inactive dredging companies and two new dredging companies. The first level permit decision reconsideration process of the Administrative Appeals Program is underway at the request of the applicants. 2.) Kansas River. DA Permits were issued to five active dredging companies for continued operation on the river. The current authorization is valid for a period of five years. b.) Coal Fired Energy. NWK accepted the cooperating agency role in the review of the NEPA document for a proposed Associated Electric Cooperative 660 Megawatt power plant at Norborne, Missouri. The USDA is the lead federal agency. c.) South Lawrence Trafficway. NWK is consulting with the Federal Highway Administration on DA Permit compliance concerning the proposed construction of the South Lawrence Trafficway, Lawrence, Kansas. Federal Highway proposes to adopt the Kansas City

REPORT OF THE SECRETARY OF THE ARMY ON CIVIL WORKS ACTIVITIES FOR FY 2007

District's FEIS, complete their Section 4(f) evaluation, and write their agency's Record of Decision. NWK circulated a request to the signatories of the MOA concerning historic properties to include the FHWA as a signatory. The amendment was signed by all parties. d.) Gardner KS, Intermodal Facility. BNSF submitted an application to construct a large intermodal storage and transport facility at Gardner, Kansas. A public meeting in lieu of a public hearing was conducted and the NEPA document is being developed. Several studies to determine environmental impacts as outlined in NEPA are being conducted by the applicant. e.) TransCanada Keystone Pipeline, L.P. (Keystone). The project proponent applied to the U.S. Department of State (DOS) for a Presidential Permit to construct and operate a crude oil pipeline and related facilities to transport Western Canadian Sedimentary Basin crude oil from an oil supply hub in Alberta, Canada to destinations in the Midwest United States. DOS has initiated an Environmental Impact Statement and NWK is cooperating agency along with other impacted Corps Districts. A draft Section 10 and 404 permit application identifies within NWK Regulatory Boundaries, 305 miles of pipeline in Kansas and 145.5 miles of pipeline in Missouri, with crossings of several hundred potential jurisdictional waters. f.) Rockies Express Pipeline, LLC. NWK completed jurisdictional determinations and Nationwide Permit determinations for 244 miles of natural gas pipeline involving 949 crossings of waterbodies within NWK portions of Kansas and Missouri. g.) East Side Investments, LLC; Newmarket V, LLC; and the City of Wichita, Kansas. Evaluation of this joint application for commercial development and stormwater detention in Cadillac Lake (wetlands) continues. Significant public interest warranted holding a large public meeting for the project. h.) Kansas Watershed District Master Plan Permits. Due to changed conditions, outdated NEPA documents and new environmental concerns, the District Engineer suspended all of these master plan permits. The permits had been issued to individual Watershed Districts in the mid-1990's for hundreds of water control structures included in their Master Plans. A final decision on the disposition of these permits is pending.

General Permits: a.) Lake of the Ozarks. The Standard Operating Procedures (SOP) for General Permit 38M (GP-38M) was finalized with AmerenUE. The SOP outlines the verification process and the interagency coordination and reporting requirements. GP-38M authorizes various shoreline activities, which occur below the ordinary high water mark (658.5 Union Electric datum) at the

Lake of the Ozarks. AmerenUE continues to verify authorization of activities under GP-38M. b.) Concurrent with national reissuance of the Nationwide Permits (NWP), NWK implemented regional conditions for the NWPs in Kansas and Missouri. In order to ensure that the NWPs result in only minimal impacts, the Division Engineer approved 16 regional conditions for the State of Kansas and 17 regional conditions for the State of Missouri. Conditional Programmatic Section 401 water quality certifications were obtained for most of the NWPs from the Kansas Department of Health and Environment, Missouri Department of Natural Resources and the U.S. Environmental Protection Agency for Indian Country within Kansas.

Mitigation Banks and In-lieu Fee Mitigation:

a.) Missouri Department of Transportation (MoDOT). The Mari-Osa Delta Wetland and Stream Mitigation Bank was approved and constructed. The bank was the first to be constructed under the approved state-wide Compensatory Mitigation Umbrella Agreement (2005). One additional bank was proposed by MoDOT. It is located on property owned by the Corps of Engineers and located at Blue Springs Lake. b.) Terra Technologies, Inc. This firm proposed three private wetland mitigation banks in Jackson, Cass, and Carroll Counties, Missouri. Decisions to execute a banking agreement are pending. c.) Watershed Institute. Initiated interagency meeting to discuss a proposed In-Lieu Fee mitigation arrangement for the State of Missouri. The Watershed Institute is addressing comments provided at the meeting with the intent of final prospectus submittal in 2008.

Highway Projects: a.) The MoDOT submitted an application for the proposed upgrades to the I-70/I-35/I-29 corridor in downtown Kansas City, Missouri. The project includes construction of a bridge over the Missouri River to replace the existing "Paseo" bridge as a Design-Build project. The DA Permit was issued 14 November 2007 (FY 08). b.) Issued a standard DA Permit to MoDOT for construction of the Route 54 Expressway through Osage Beach, Miller County, Missouri.

Historic Properties: a.) The Section 106 consultation process on the Kenneth Smith Residence and Golf Club Factory is ongoing. The property has been determined to be eligible for listing on the National Register of Historic Places. The consulting party members include; the Kansas State Historical Society, the Kansas Preservation Alliance, the National Trust for Historic Preservation, Fairway Hills Homes Association, and the Advisory Council

KANSAS CITY, MO DISTRICT

on Historic Preservation. b.) The first amendment to the Memorandum of Agreement (MOA) concerning historic properties that will be adversely affected by construction of the South Lawrence Trafficway was initiated. The proposed amendment added the Federal Highway Administration (FHWA) as a signatory to the previously executed MOA. FHWA is seeking federal funding to assist with the proposed road construction project. c.) Horse Thief Reservoir by Pawnee Watershed District No. 81. Multiple Tribes invited to consult on proposed impacts to a National Register eligible archeological site within the proposed reservoir construction limits. The Osage Nation has indicated they will sign the final Section 106 Memorandum of Agreement and accept the provisions for mitigating the impacts to the archaeological site. All other parties have signed the agreement.

Appeals: Wet Walnut Watershed Joint District No. 51 appealed their proposed DA Permit based on special conditions of the permit that required maintenance of downstream flows. NWD upheld NWK's permit decision and determined that the applicants appeal did not have merit. The Appeal was received on 18 September 2006, and decision from NWD was rendered on 14 February 2007. The applicant chose to abandon the project rather than comply with or propose an alternate mitigation plan.

Other Items: a.) Participated in pre-application consultation concerning the proposed drinking water reservoir planned by the North Central Missouri

Regional Water Commission in the East Fork Locust Creek Watershed. USDA is the lead federal agency for the project and they are exploring potential mitigation options to offset impacts from lake construction. No permit application has been submitted. b.) Initiated a wetland mitigation study to assess the success of Corps compensatory wetland mitigation in the state of Kansas. Compensatory mitigation sites across the state will be evaluated on meeting wetland criteria, permit compliance and to an extent, wetland functions. The study should be completed by January 2008. c.) Development of a NWK Compliance Inspection Guide will produce a living document that compiles compliance inspection strategies, National SOP, and NWK Policy into one manual. The target date for completion of the inspection guide is January 2008. d.) NWK completed field testing for the Great Plains Regional Wetland Delineation Supplement and participated in the development of the Midwest Regional Wetland Delineation Supplement. e.) NWK presented the Draft Midwest Regional Wetland Document to the South-Central Chapter of the Society for Wetland Scientists. In addition, information on the post Rapanos/Carabell guidance on Clean Water Act jurisdiction was presented. f.) NWK completed the final phase of the RAMS-ORM database conversion. The OMBIL Regulatory Module (ORM) was first implemented in October 2006. Major enhancements to the first version of ORM brought forth a new web-based ORM II application which replaced ORM I in the spring of 2007.

1/ Includes \$8,665,595 cost of new work for previous project.

2/ Includes \$738,109 for maintenance of previous project and correction of FY03 total.

3/ Includes funds appropriated under FY 1993 Emergency Flood Supplemental Appropriation, 96 3/7 3123: Missouri River, Rulo NE to Mouth, \$40,000; and Milford Lake, KS, \$40,000

4/ Exclude \$35,296 non-Federal contribution not required for authorized Blue River Channel project (Blue River Channel Mobay Chemical (1984-1987)

5/ Excludes \$118,805 non-Federal contribution not required for authorized Clinton Lake project (1973-1979).

6/ Excludes cost of materials furnished Harlan County project without charge in the amount of \$24,198.

7/ Excludes cost of materials furnished Kanopolis Lake project without charge in the amount of \$7,885.

8/ Excludes \$2,732,554 thru FY 1990 non-Federal contributions not required for authorized Little Blue Lakes project.

9/ Corrected total. Excludes \$42,149 interest during construction at Long Branch Lake project, and \$500,000 work-in-kind.

10/ Corps is relocating utilities requested by sponsor, City of Riverside, MO, that is required for the authorized project.

11/ Dam Safety Assurance.

REPORT OF THE SECRETARY OF THE ARMY ON CIVIL WORKS ACTIVITIES FOR FY 2007

TABLE 27-B		AUTHORIZING LEGISLATION	
See Section in Text	Date of Act	Project and Work Authorized	Documents
1.		MISSOURI RIVER, SIOUX CITY, IA, TO MOUTH (RULO, NE, TO MOUTH)	
	Jul 25, 1912	Project adopted for securing a permanent navigable channel of 6-foot depth from Kansas City, MO to mouth.	H. Doc. 1287, 61st Cong., (contains latest published map). P.L. 241-62
	Aug 8, 1917	Fixed upstream limit of improvement at upper end of Quindaro Bend (274.8 miles from mouth) and provided for dredging.	H. Doc. 463, 64th Cong., (contains latest published map).
	Mar 3, 1925	For a minimum width of 200 feet and depth of 6 feet, with a reasonable additional width around bends, mouth to upper end of Quindaro Bend, Kansas City, MO.	P.L. 585-68
	Jan 12, 1927	Appropriation of \$12 million authorized for securing a 6-foot channel depth between Kansas City, MO, Quindaro Bend, and Sioux City, IA.	H. Doc. 1120, 60th Cong., P.L. 560-70
	Jul 3, 1930	Appropriation of \$15 million additional authorized; Additional allotments totaling \$29,153,108 were made by Public Works Administration under provisions of National Industrial Recovery Act of 1933, and \$9,669,791 allotted under provisions of Emergency Relief Appropriation Act of 1935.	P.L. 67-73 H.R. 11781 P.L. 520-71
	Aug 30, 1935	Completion of improvement from mouth to Sioux City, IA.	H. Doc. 238, 73d Cong., (contains latest published map). P.L. 409-73
	Mar 2, 1945	Securing a navigable channel of 9-foot depth and a minimum width of 300 feet.	H. Doc. 214, 76th Cong., (contains latest published map). P.L. 14-79
2.		MISSOURI RIVER FISH AND WILDLIFE RECOVERY, IA, KS, MO, MT, NE, ND & SD	
	Nov 17, 1986	Project for mitigation of fish and wildlife losses Missouri River Bank Stabilization and Navigation Project, MO, KS, IA & NE: April 24, 1984, Report of Chief of Engineers, authorized at estimated cost of \$51,900,000.	Title VI, Section 601(a), Water Resources Development Act of 1986, P.L. 99-662.
	Aug 17, 1999	The above act is modified to increase by 118,650 acres the amount of land and interest in land to be acquired for the project.	Title III, Section 334, Water Resources Development Act of 1999, P.L. 106-53
3.		BLUE RIVER BASIN, KANSAS CITY, MO	
	Oct 12, 1996	Project for flood control along the left bank of the Blue River from U.S. Highway 71 upstream for a distance of about 1 1/4 miles in Jackson County, MO, to the Bannister Federal Complex levee: Report of the Chief of Engineers, dated Sep 5, 1996, at a total cost of \$17,082,000, with an estimated Federal cost of \$12,043,000 and an estimated non-Federal cost of \$5,039,000.	Title I, Section 101(a), Water Resources Development Act of 1996, P.L. 104-303

KANSAS CITY, MO DISTRICT

Trimble Wildlife area, Smithville Lake, MO	Completed	1990	1,570,000	--

^{1/} Authorized by the Chief of Engineers under Section 205, Public Law 858, 80th Congress, as amended.

^{2/} Required non-Federal contributions \$129,680.

^{3/} Inactive units Little Chariton River (East and Middle Fork) and Mussel Fork were deauthorized Jan 1, 1990, by Section 1001(b)(1) of the Water Resources Development Act of 1986, P.L. 99-662. Construction cost includes \$481,106 cost of completed Shoal Creek Unit and \$211,600 cost of deauthorized Little Chariton River and Mussel Fork units.

^{4/} Includes \$130,841 non-Federal contributions.

^{5/} Inactive units Kansas Avenue Bridge and Approach, and Lower Argentine Units were deauthorized July 9, 1995, in accordance with Section 1001(b)(2) of WRDA of 1986, P.L. 99-662. Construction cost above includes \$67,500 for deauthorized Bridge and Approach Unit; does not include \$1,181,000 non-Federal Contributions.

^{6/} Includes \$619,787 non-Federal contributions for work desired by local interests, but not required under the project. The project as a whole is complete except for Turkey Creek facilities in Central Industrial District Unit.

^{7/} Includes \$153,377 non-Federal contributions.

Navigation

1. CHETCO RIVER, OR

Location. Rises in Siskiyou Mountains of Coast Range at an elevation of 4,000 feet, flows for about 51 miles in a circuitous route, and empties into Pacific Ocean at Brookings, OR, 300 miles south of entrance to Columbia River and 345 miles north of San Francisco Bay. (See National Oceanic and Atmospheric Administration Charts 18600 and 18203).

Existing project. Provides for two jetties at the mouth of the river. Modification of 1965 authorized an entrance channel 120 feet wide by 14 feet deep; a barge turning basin about 250 feet wide, 650 feet long, and 14 feet deep; and a small boat access channel 100 feet wide by 12 feet deep. Also authorized was a 450-foot extension of North Jetty with an increase in elevation of existing portion and a protective dike about 1,800 feet long with a top elevation of 18 feet. Mean lower low water is plane of reference. Tidal range between mean lower low water and mean higher high water is 6.9 feet and extreme is about 12 feet.

Construction of jetties was completed December 1957. Removal of rock pinnacles and an abandoned bridge structure was accomplished in June 1959. Under authorized modification of October 1965, two contracts were completed. Construction of entrance channel and extension of North Jetty was completed in July 1969. Construction of a protective dike, turning basin and small boat access channel was completed in March 1970. The authorization was modified by WRDA 92 to "direct the Secretary of the Army to assume maintenance of the approximately 200-foot long access channel to the south commercial boat basin consistent with authorized project depths". This channel will be maintained in lieu of the small boat access channel.

Local cooperation. Fully complied with.

Terminal facilities. The Port of Brookings has developed two large boat basins, one for commercial fishing boats and the other for sport boats, and a public boat-launching ramp. There are four fish receiving docks and a sea-going barge dock for lumber loading and storage. There is also a privately owned marina and a Coast Guard Station.

Operations During FY. Maintenance: Routine operations and maintenance continued. (See Table 28R for dredging operations.)

2. COLUMBIA AND LOWER WILLAMETTE RIVERS BELOW VANCOUVER, WA AND PORTLAND, OR

Location. The Columbia River rises in British Columbia, through which it flows for 425 miles. It enters the United States in northeastern Washington, and empties into the Pacific Ocean 645 miles north of San Francisco Bay and 160 miles south of Strait of Juan DeFuca. Total length of river is 1,210 miles. (See NOAA Charts 18520, 18521, 18522, 18523, 18524, 18526, and 18531; also Geological Survey Map of Washington.) Willamette River rises in Cascade Range in western Oregon, flows northerly, and empties into Columbia River about 100 miles from the sea. Its length from source of Middle Fork is about 294 miles. Project embraces 103.5 miles of Columbia River below Vancouver, WA, and 14.6 miles of Willamette River below Portland, OR. (See NOAA Chart 18526 and Geological Survey Map, State of Oregon.)

Existing project. Provides for a channel 35 feet deep and 500 feet wide from River Mile 106.5 to 105.5, the distance between existing highway and railroad bridges; a channel 40 feet deep and 600 feet wide from Vancouver, WA, River Mile 105.5 to mouth of Columbia River, River Mile 3; a turning basin at Vancouver, WA, 40 feet deep, 800 feet wide, and about 5,000 feet long; a turning basin at Longview, WA, 40 feet deep, average width of 1,200 feet, and about 6,000 feet long; and a channel 40 feet deep in the Willamette River with varying widths of 600 to 1,900 feet from the mouth (River Mile 0) to Broadway Bridge (River Mile 11.6) which encompasses Portland Harbor area, subject to provisions that channel from mouth of Willamette River to turning basin at Vancouver, WA, be limited to 500 feet in width until need for additional width is demonstrated by developed traffic. Existing project also provides for auxiliary channels 10 feet deep and 300 feet wide near Cathlamet, WA; 30 feet deep and 300 feet wide in St. Helens, (Oregon); and 30 feet deep and 500 feet wide connecting upper end of St. Helens Channel with main ship channel of Columbia; 24 feet deep and 200 feet wide along frontage of town of Rainier, OR, extended to its upper and lower ends to deep water in Columbia River, 8 feet deep and 150 feet wide from this depth in Columbia River through old mouth of Cowlitz River to a point about 3,000 feet upstream from present terminus of harbor line; a channel from Longview Port dock downstream along pier head line and past Weyerhaeuser Timber Co. plant at Longview to a connection with main ship channel below Mount Coffin, the downstream 2,400 feet of this channel to be 30 feet deep and 300 feet

REPORT OF THE SECRETARY OF THE ARMY ON CIVIL WORKS ACTIVITIES FOR FY 2007

wide and remainder to be 28 feet deep and 250 feet wide; construction of a small boat mooring basin at Astoria, OR, to include a sheet pile, sand-filled breakwater about 2,400 feet long with a 30-foot roadway along its full length, and steel pile shore wings totaling about 1,460 feet long and for stone-and-pile dikes and revetments. Plane of reference in estuary from mouth of Harrington Point is mean lower low water; thence to Portland and Vancouver, adopted low water. Tidal range between mean lower low water and mean higher high water at mouth of Columbia is about 8 feet, and at Portland and Vancouver, about 3 feet at low stage of rivers. Extreme tidal ranges are about 13 and 3 feet, respectively. Annual freshets have little effect on stage of tide at mouth of Columbia; at Portland and Vancouver, they average about 12 feet, while highest now reached a stage of 33 feet above water at Portland.

Work on the 40-foot channel in Columbia River from Portland, OR, and Vancouver, WA, to the sea was completed in 1976. Auxiliary channel in vicinity of Longview was completed in 1949, and improvement of mouth of Cowlitz River and small boat mooring basin at Astoria were completed in 1950. Project depths are maintained all year except for the period immediately following the annual freshet in May-June when shoaling occurs at several locations. Timing of vessel movement with tidal fluctuations permits maximum draft conditions. In Columbia and Willamette Rivers between mouth and Broadway Bridge at Portland a depth of 40 feet at low tide and 42 feet at high tide is practicable all year. In Columbia River between mouth of Willamette River and Vancouver, WA, depths of 40 and 42 feet at low and high tide, respectively, are practicable all year. (For details relating to previous project, see pages 1995 and 1998 of Annual Report for 1915 and page 1746 of Annual Report for 1938.)

Local cooperation. Fully complied with. Requirements are described in full on page 37-3 of FY 1981 Annual Report.

Terminal facilities. At Portland, OR, there are six Port of Portland terminals consisting of 43 berths equipped to handle general cargo, bulk cargo, lumber, automobiles, lift-on-lift-off and roll-on-roll-off containers, and break-bulk vessels. The Port of Portland owns and operates a major ship repair yard, which includes the west coast's largest, and the world's third largest, floating dry dock. Also available in the harbor area are privately operated facilities for receiving, storing and out loading petroleum, wood chips, grain, logs, sand and gravel, cement, and steel products.

At Astoria, OR, there is a terminal with facilities for receiving and handling various types of general cargo.

At Vancouver, WA, there are municipal facilities capable of berthing five ships simultaneously. Each berth is completely outfitted with mechanical and lift facilities for receiving and handling all types of cargo. The port has a low dock to handle roll-on-roll-off and side-port discharging vessels. The grain terminal has a storage capacity of 4,500,000 bushels.

Port of Longview has a public terminal on Columbia River and a privately owned grain elevator with a capacity of 6,900,000 bushels. This port also has a heavy lift facility, with a capacity of 600 tons.

Port of Kalama has two berthing areas, one port owned and one private.

At other locations on the Columbia River between Portland and Columbia River entrance there are sufficient private facilities to accommodate river vessels and fishing craft. These facilities, with planned extensions, are considered adequate for existing commerce. (For details, see Port Series Nos. 33 and 34, Corps of Engineers, published in 1974 and 1975 respectively.)

Operations During FY. Maintenance: Routine operations and maintenance continued. (See Table 28R for dredging operations and Table 28H total cost of existing project.)

3. COLUMBIA RIVER AT BAKER BAY, WA

Location. Baker Bay is a shallow body of water about 15 square miles in extent on the north side of Columbia River Estuary near its mouth. The bay is separated from the river by Sand Island, a low-lying sand bar only a few feet above high tide level. (See NOAA Chart 18521.)

Existing project. A mooring basin 10 and 12 feet deep, about 20 acres in extent with protecting breakwaters; and a west channel 16 feet deep and 200 feet wide for the first 2,000 feet, then 16 feet deep and 150 feet wide to the boat basin; a channel east of Sand Island to Port of Ilwaco, a distance of about 4 miles. Mean lower low water is plane of reference. Tidal range between mean lower low water and mean higher high water is about 8 feet, and extreme about 13 feet.

Channel extending through easterly passage of Sand Island was completed in 1934. This portion of authorized project is not passable and is not maintained at the present time. Dredging west channel to 8 feet was accomplished September 1948. Deepening west channel to 10 feet, and boat basin and breakwater construction at Ilwaco, WA, was

PORTLAND, OR, DISTRICT

finished December 1957, and again, deepening of the west channel to 16 feet completed in August 1985 under Section 107, finished the project.

Local cooperation. Fully complied with.

Terminal facilities. Wharves, floats, ramps, and berths, for fishing craft, barges and towboats. Small-boat basin and protecting breakwater provides moorings for numerous fishing and recreational craft all year. Facilities are considered adequate for existing commerce.

Operations During FY. Maintenance: A project condition survey and miscellaneous inspections were performed.

4. COLUMBIA RIVER BETWEEN CHINOOK, WA, AND HEAD OF SAND ISLAND

Location. At easterly end of Baker Bay, lying on north side of Columbia River near mouth. (See Coast and Geodetic Survey Chart 6151.)

Existing Project. Channel 10 feet deep and 150 feet wide, extending from head of Sand Island to Chinook; a turning and mooring basin at upper end of channel, 10 feet deep, 660 feet long, and ranging from 275 to 500 feet wide; reconstruction of easterly 393 feet of existing breakwater; and extension of existing breakwater easterly and thence northerly to connect with shore in vicinity of Portland Street, Chinook, WA. Tidal range between mean lower low water and mean higher high water is about 8 feet and extreme about 13 feet.

Project as originally authorized was completed in 1940. The 10-foot channel depth modification was accomplished September 1958. Rehabilitation of existing breakwater was completed September 1962.

Local cooperation. Fully complied with.

Terminal facilities. Chinook Packing Company owns a wharf for receiving fresh fish, and one additional fish buying company is located at Chinook. A portion of wharf is also used as a public landing. At upper end of channel there is a turning and mooring basin with facilities for mooring 350 fishing and recreational craft. Adequate terminal and mooring facilities include a public launching ramp, hoist with 10-ton capacity and suitable supply facilities.

Operations During FY. Maintenance: A project condition survey and miscellaneous inspections were performed.

5. COLUMBIA RIVER AT THE MOUTH, OR AND WA

Location. The Columbia River entrance is 645 miles north of San Francisco Bay. Project is about 120 miles downstream of Portland, OR and Vancouver, WA. For description of Columbia River see Section 3.

Existing project. Provides for a one-half-mile-wide channel across a bar 55 feet deep (mean lower low water) for the northernmost 2,000 feet, and 48 feet deep (mean lower low water) along the southern 640 feet, to be secured by two rubble mound jetties, spur jetty "A" on the north shore and by dredging. The North Jetty is about 2.5 miles long and the South Jetty about 6.6 miles long; spur jetty "A" is about 0.3 miles long. Tidal range on bar between mean lower low water and mean higher high water is about 8 feet, and extreme about 13 feet. Ocean Dredged Material Disposal Sites include the deep water site and a shallow water site both designated by the Environmental Protection Agency on April 1, 2005. An additional Clean Water Act Disposal Site known as the North Jetty Site is also available for use.

The originally authorized project depth of 40 feet was completed in 1918, South Jetty completed in 1914 and North Jetty in 1917. A spur jetty (jetty "A") was completed in 1939 (repaired in 1961) for the purpose of channel stabilization. Spur jetty "B" currently is classified "inactive." Dredging of the 48-foot bar channel started April 1956 was completed in September 1957. South Jetty rehabilitation started June 1962 was completed September 1964. North Jetty rehabilitation started January 1965 was completed April 1965. Additional rehabilitation of the South Jetty was initiated in May 1982 and completed in September 1982. Deepening bar channel to 55 feet completed September 1984. In FY 95 a 500-foot section of the south jetty was removed to allow unimpeded access by fisheries resources to 603 acres of intertidal habitat under Section 1135 authority. Interim repairs were completed for the North and South Jetties from FY 2004 to 2007. The North Jetty interim repair was completed in November 2005 with 58,000 tons of stone placed over 3,000 feet. The South Jetty interim repair was completed in September of 2007 with 168,000 tons placed over 5,300 feet. Reach A was finished in 2006 with 82,000 tons of stone placed over 2,200 feet and Reach B was completed in 2007 with 86,000 tons placed over 3,100 feet. (For details relating to previous projects, see page 1999 of the Annual Report for 1915 and page 1740 of Annual Report for 1938.)

Local cooperation. Fully complied with. Local interests contributed \$500,000 toward construction of the North Jetty, which was completed in 1917.

Operations During FY. Reach B of the South Jetty interim repair was completed. Maintenance: Routine operations and maintenance continued. (See Table 28R for dredging operations.) Major Rehabilitation Study on-going.

6. COLUMBIA RIVER BETWEEN VANCOUVER, WA, AND THE DALLES, OR

Location. On Columbia River, between Interstate Bridge at Vancouver, WA, 106.5 miles above mouth and The Dalles, OR, mile 191. For description of Columbia River, See Section 3, "Columbia and Lower Willamette Rivers below Vancouver, WA, and Portland, OR."

Existing project. Channel 27 feet deep and 300 feet wide between Vancouver, WA, and The Dalles, OR, 84.5 miles; a channel 10 feet deep and 200 feet wide at the upstream entrance to Oregon Slough, OR; a suitable turning basin adjacent to site of port development in the vicinity of Camas and Washougal, WA; a boat basin at Hood River, OR, 500 by 1,300 feet and 10 feet deep at normal Bonneville pool level, with a connecting channel 10 feet deep to deepwater, and a protecting breakwater on easterly side; a barge channel to waterfront at Bingen, WA, 10 feet deep at normal Bonneville pool level, 200 feet wide and about 1 mile long, and an access channel 7 feet deep at normal Bonneville pool level, 100 feet wide and about 1,000 feet long, to a natural mooring basin for small boats near east end of channel; and construction of The Dalles small boat basin, to provide a breakwater and shear boom protected basin about 400 by 800 feet in size with depth of 8 feet below a pool elevation of 72.5 feet at mean sea level. Tidal range between mean lower low water and mean higher high water at Vancouver is about 3 feet and at Bonneville about 0.2 foot at low stages of the river. Extreme tidal ranges are about 4 feet and 0.4 foot, respectively.

Existing project is complete. Construction of The Dalles small boat basin was completed in 1949. Channel dredging at upper end of Oregon Slough was accomplished in 1957. Project depth of 27 feet between Bonneville and The Dalles, OR, was achieved April 1959. The 27-foot channel depth between Vancouver, WA, and Bonneville, OR, was completed May 1938. Improvement of lower entrance of Bonneville Dam lock was completed in May 1961. At the present time, the channel is maintained to a depth of 17 feet, which is adequate

for user traffic. Construction of a boat basin at Hood River, OR, and of Camas-Washougal, WA, turning basin was accomplished February 1962. Construction of a barge channel in Columbia River near Bingen, WA, was completed September 1963. Small boat recreation channel 100 feet wide 6 feet deep at South Channel Government Island completed 1985 under section 107.

Local cooperation. Fully complied with.

Terminal facilities. At Vancouver, WA, upstream of Interstate Highway Bridge at River Mile 108.1 on site of former shipyard are numerous shipbuilding facilities equipped with railway and river moorage facilities. Also in this area are a paper-storage warehouse with barge slip, two boat-building businesses, and a storage dock with gantry crane. Sites are available for development to suit lessee.

At Camas, WA, about 13.5 miles upstream from Vancouver, there is a private wharf used for transfer of paper-mill supplies and paper to and from barges, and facilities for discharging bulk oils from barges.

At Port of The Dalles (mile 44 above Bonneville) there is a municipal wharf 125 by 1,100 feet for use by tugs and barges. There is a one-story timber and corrugated iron warehouse, 94 by 461 feet, on this wharf. A private elevator with a capacity of 40,000 bushels and a public elevator of 1,113,800-bushel capacity for handling bulk grain to barges are also at The Dalles. Public elevator has rail, truck, and water connections. There is a port owned rail connection about three-fourths mile below municipal wharf where certain types of cargo may be handled between railroad cars and barges.

At numerous locations along the entire waterway there are facilities for transfer of logs to water from trucks and public and private boat basins. Facilities are considered adequate for present commerce.

Operations During FY. Maintenance: Routine operations and maintenance continued. (See Table 28R for dredging operations.)

7. COLUMBIA RIVER CHANNEL IMPROVEMENTS, OR

Location. The project area includes the Lower Columbia and Willamette Rivers. Work includes deepening the existing 40 feet deep navigation channel to 43 feet, construction of wildlife mitigation features and environmental restoration features. The Columbia River section extends from the mouth near river mile (RM) 3 to RM 106.5. The Willamette River section extends from the mouth to RM 11.6. The Willamette River portion of the project has been

PORTLAND, OR, DISTRICT

deferred and will be reevaluated in a subsequent NEPA document after resolution of cleanup issues associated with its being named to the federal National Priorities List by USEPA under the Comprehensive Environmental Response, Compensation, and Liability Act.

Existing project. Refer to Columbia & Lower Willamette Rivers below Vancouver, WA and Portland, OR project

Local cooperation. The project is sponsored by the five lower Columbia River Ports: Port of Portland, on the Oregon side and the Ports of Vancouver, Woodland, Kalama, and Longview on the Washington side.

Operations During FY. New Work: In September 2007 a contract was awarded to Great Lake Dredge and Dock Company of Chicago, Illinois. The dredge Terrapin Island mobilized to the area during the FY. The majority of the 7.4 million cubic yards of material will be performed in FY 2008.

New work: Consolidated rock contract was awarded in April 2007 to John McAmis, of Chico, California. The dredged Megan Renee was given notice to proceed in May 2007. Work will span two fiscal years with a scheduled completion date of 30 April 2008. Area to be dredged is approximately river mile 104 to 105, near the Port of Vancouver, WA. This one mile of work was awarded for \$9.8 million.

Webb Mitigation Site contract was awarded in May 2007 to Big River construction of Astoria, OR. Work will span two fiscal years. All earth work to construct the levee for the mitigation site was completed in FY 2007. Total amount of the contract was \$2.6 million.

Woodland Bottom, Chumbley property was completed with all hybrid cottonwoods logged off the site.

The Tenasillahe ecosystem restoration site was completed.

8. COOS BAY, OR

Location. On Oregon coast 200 miles south of mouth of Columbia River and 445 miles north of San Francisco Bay. It is about 13 miles long and 1 mile wide, with an area at high tide of about 15 square miles. (See NOAA Charts 18580 and 18587.)

Existing project. Initial Authorization included two rubble mound, high-tide jetties at entrance; a channel across the outer bar 45 feet deep and 700 feet

wide, reducing gradually to 35 feet deep and 300 feet wide near River Mile 1 and continuing to about mile 9; thence a channel 35 feet deep and generally 400 feet wide to mile 15; an anchorage area 35 feet deep, 800 feet wide, and 1,000 feet long at Empire (River Mile 5.5); turning basins at North Bend (River Mile 12.5) and Coalbank (River Mile 14.7) 35 feet deep, 650 feet wide and 1,000 feet long; a channel 22 feet deep and 150 feet wide from Smith's Mill (River Mile 15) to Millington (River Mile 17); a small boat basin, about 500 by 900 feet at Charleston, with a connecting channel, 16 feet deep, 150 feet wide and 6,200 feet long, to deep water in Coos Bay, and construction of a protecting breakwater and bulkhead. Plane of reference is mean lower low water. Tidal range between mean lower low water and mean higher high water is 7 feet and extreme is about 11 feet at both the entrance and at Coos Bay.

South Jetty was completed in 1928, North Jetty in 1929, and 24-foot channel in 1937. The South Jetty was restored in 1941 and 1942 by construction of a concrete cap for full length of the jetty. Excavation of channel to 30 feet deep and generally 300 feet wide from entrance of Isthmus Slough was completed in 1951. Dredging outer bar channel to a depth of 40 feet, decreasing to 30 feet at Guano Rock was completed in 1952. Construction of the Charleston Channel and small-boat basin was completed in September 1956. Rehabilitation of South Jetty was started in June 1962 and completed December 1963. Repair of North Jetty was completed in August 1989. Construction of the deeper and wider channel to mile 15 was completed in 1979. Deepening of Charleston channel and turning basin was completed in 1985 under Section 107. (For details relating to previous projects, see page 1987 to Annual Report for 1915 and page 1728 of Annual Report for 1938.)

A modification to the existing project was authorized in the FY 1996 Energy and Water Development Appropriations Act, Public Law 104-46, November 13, 1995. This authorization provided for deepening the channel by 2 feet to 47 feet below mean lower low water (MLLW) from the entrance to Guano Rock (river mile 1) and to 37 feet below MLLW from river mile 1 to 15. Public Law 104-46 also provided for deepening by two feet and expanding the turning basin at river mile 12 by 100 feet from 800 by 1000 feet to 900 by 1000 feet. The excavation material for the channel deepening was transported to the ocean for disposal. The cost for preparation of the plans and specifications and the construction of the project was \$11,616,000, of which \$8,116,000 was federal and \$3,500,000 was non-federal. In addition, the sponsor paid 100 percent of the estimated cost for dredging the berth areas.

Local cooperation. Fully complied with. Requirements are described in full on page 37-5 of FY 1981 Annual Report.

The sponsor, International Port of Coos Bay, signed a Project Cooperation Agreement on May 8, 1996 for the project modification to deepen the channel as authorized in Public Law 104-46. In accordance with cost sharing requirements of the Water Resources Development Act of 1986, the Federal Government provided 75 percent of the costs associated with the general navigation features of the project. The non-federal sponsor was required to provide 25 percent of the total construction cost of the general navigation features up front. The sponsor was also required to provide an additional 10 percent of the cost of the general navigation features of the project in cash over a period not to exceed 30 years.

Terminal facilities. At North Bend there is a municipal dock 649 feet long fronting on channel, about 2,380 feet of privately owned mill docks, and three oil receiving terminals in vicinity.

At Coos Bay there is a privately owned dock with a frontage of 1,345 feet, open to the public on equal terms; several small landings for fishing and harbor craft; and three lumber docks with 1,300-foot, 576-foot and 500-foot frontages, respectively.

In the North Spit industrial area, there is one woodchip loading facility having a frontage of 1200 feet and a smaller T-dock operated by the Port of Coos Bay.

At Eastside, on Isthmus Slough, there is a 200-foot dock.

At Empire there is a privately owned lumber dock with frontage of 510 feet, and an oil terminal, owned by Port of Coos Bay, for receipt of petroleum products by barge. A barge slip also owned by the Port was completed in 1986.

At Charleston there are wharves, for receipt of fresh fish and shellfish and large seafood receiving and processing plant. There are also two municipally owned small-boat basins, open to all on equal terms, capable of mooring 250 fishing and recreation craft. Servicing facilities for small craft are available at all facilities and public launching ramps have been constructed in Charleston area by private interests. A privately owned floating moorage on Joe Ney Slough has facilities for mooring about 50 fishing vessels.

At Jordan Cove area there is a dock, 248 feet long, for wood chip ships.

Operations During FY Maintenance: Routine operations and maintenance continued. (See Table 28R for dredging operations.)

9. COQUILLE RIVER, OR

Location. Rises in Coast Range, flows generally westerly for about 100 miles, and empties into Pacific Ocean at Bandon, OR, 225 miles south of mouth of Columbia River and 420 miles north of San Francisco Bay. (See NOAA Charts 18580 and 18186.)

Existing project. Two rubble mound high-tide jetties at river mouth, South Jetty 2,700 feet long and the north, 3,450 feet long; and a channel 13 feet deep at mean lower low water and of suitable width from the sea to a point 1 mile above old Coquille River Lighthouse, and snagging to State Highway Bridge at city of Coquille. Mean lower low water is plane of reference. Tidal range between mean lower low water and mean higher high water at mouth is 7 feet and extreme about 10 feet.

Jetties were completed in 1908 and entrance channel in 1933. North Jetty was reconstructed in 1942 and a 750-foot extension to easterly end was constructed in 1951. South Jetty was repaired in 1954 and North Jetty in 1956. Coquille Lighthouse rehabilitation was completed June 21, 1976. Port of Bandon constructed boat basin facility in conjunction with protective breakwater and entrance channel construction in 1985, under Section 107. (For details relating to previous projects, see page 1986 of Annual Report for 1915 and page 1727 of Annual Report for 1938.)

A plan to deepen the entrance channel of the Coquille River from 13 feet to 18 feet was approved in May 1988. The economics were reevaluated in FY1993 and the project was not economically feasible at that time.

Local cooperation. Restoration of lighthouse using Code 710, Recreation Facilities at Completed Projects funding, and required 50 percent cost sharing with non-Federal sponsor (Oregon State Parks).

Terminal facilities. At Bandon: A publicly owned wharf and a small-boat basin open to all on equal terms.

Operations During FY Maintenance: Routine operations and maintenance continued. (See Table 28R for dredging operations.)

10. DEPOE BAY, OR

Location. Harbor on Oregon coast 100 miles south of mouth of Columbia River. (See Coast and Geodetic Survey Chart 5902.)

PORTLAND, OR, DISTRICT

Existing project. Two breakwaters north of entrance; an entrance channel 8 feet deep and 50 feet wide; an inner basin 750 feet long, 390 feet wide and 8 feet deep with retaining wall along easterly side; and a stone spending beach. Mean lower low water is plane of reference. Tidal range between mean lower low water and mean higher high water is 8 feet and extreme is about 12 feet. Project as originally authorized was completed in 1939 and project modifications, enlarging the basin and deepening to 8 feet, were accomplished in June 1952 and August 1966.

Local cooperation. Fully complied with.

Terminal facilities. Facilities, in inner basin, consist of landings and floats to accommodate operators of excursion and commercial fishing boats. Facilities considered adequate for existing commerce.

Operations During FY. Maintenance: Completed final repairs associated with the Depoe Bay slide repair. Specific work included parking lot paving, correcting drainage concerns and replacement/restoration of the dock fencing.

11. PORT ORFORD, OR

Location. On Oregon coast 250 miles south of Columbia River entrance and 390 miles north of San Francisco Bay. (NOAA Chart 18203 and Geological Survey Quadrangle, Port Orford, OR)

Existing project. Improvement of harbor by 55-foot extension of existing locally constructed breakwater and dredging of a channel 16 feet deep, 90 feet wide, and 750 feet long. Breakwater was completed October 1968. Channel was completed September 1971. The authorization was modified by WRDA 92 to allow the Corps to maintain the authorized navigation channel within 50 feet of the port facility.

Local cooperation. Fully complied with.

Terminal facilities. In FY 2000 local interests replaced the aging wooden pile dock with a sheet pile bulkhead and backfill dock. This dock provides almost 3 acres of dock area and two large-capacity cranes.

Operations During FY. Maintenance: Routine operations and maintenance continued. (See Table 28R for dredging operations.)

12. ROGUE RIVER HARBOR AT GOLD BEACH, OR

Location. Rises in Cascade Range in southwestern Oregon; flows westerly through Coast Range, and empties into Pacific Ocean 264 miles south of mouth of Columbia River and 381 miles north of San Francisco Bay. (See NOAA Chart 18202.)

Existing project. Two jetties at entrance, and a channel 13 feet deep and 300 feet wide from ocean to a point immediately below State highway bridge, about 1 mile, including widening channel at a point about 0.25 mile below bridge to form a turning basin 13 feet deep, 500 feet wide, and 650 feet long, and a Boat Basin Channel 10 feet deep by 100 feet wide approximately 2,500 feet long. At request of local interests, turning basin was located in south portion of estuary downstream from a point 0.25 mile below bridge. This change was effected to permit adequate terminal facilities to be constructed adjacent to turning basin. Mean lower low water is plane of reference. Range of tide between mean lower low water and mean higher high water is 7 feet, and extreme about 14 feet.

Project as authorized has been completed. Construction of two jetties at entrance was completed September 1960. Dredging river channel by contract and entrance bar by government plant was completed October 1961. North Jetty rehabilitation along channel side was completed October 1966. Breakwater construction and dredging, under contract awarded in September 1964, was 17 percent accomplished when flood of December 1964 destroyed all completed works. Contract was terminated as further construction at that location was considered unfeasible. Bank protection work at Wedderburn location was completed in October 1972. A breakwater, constructed by Port of Gold Beach, was completed during 1973. In 1985, three pile dikes, located on the south side of channel ocean ward of the boat basin entrance, were completed. In 1997, at the direction of Congress, the boat basin entrance channel was relocated approximately 1,000 feet upstream to a new opening in the breakwater provided by the Port of Gold Beach.

Local cooperation. Fully complied with.

Terminal facilities. There are various landings for fishing and recreational craft. At Wedderburn, across river from Gold Beach, is a facility to accommodate excursion passengers and small freight items destined for various private landings between Wedderburn and

REPORT OF THE SECRETARY OF THE ARMY ON CIVIL WORKS ACTIVITIES FOR FY 2007

Agness, OR. Facilities considered adequate for existing commerce.

Operations During FY. Maintenance: Routine operations and maintenance continued. (See Table 28R for dredging operations.)

13. SIUSLAW RIVER, OR

Location. Rises in coast range, flows about 110 miles westerly and empties into Pacific Ocean about 160 miles south of entrance of Columbia River and 485 miles north of San Francisco Bay, CA. (See NOAA Charts 19583 and 18580.)

Existing project. Provides for 2 high-tide, rubble mound jetties 750 feet apart at the outer end, the North Jetty 8,390 feet long (600 feet un-constructed) and the south jetty 4,200 feet long; an entrance channel 18 feet deep and 300 feet wide from deep water in ocean to a point 1,500 feet inside the outer end of existing North Jetty; thence a channel 16 feet deep, 200 feet wide with additional widening at bends, and about 5 miles long, to a turning basin, 16 feet deep, 400 feet wide, and 600 feet long, opposite Siuslaw dock at Florence; a channel 12 feet deep, 150 feet wide from Florence to mile 16.5; and at River Mile 15.5 a turning basin 12 feet deep, 300 feet wide, and 500 feet long. Mean lower low water is plane of reference. Tidal range between mean lower low water and mean higher high water at mouth of river is 7 feet and extreme about 11 feet. During low stages of river, tidal effect extends to Mapleton, 20.5 miles above mouth. (For details relating to previous project, see page 1988 of Annual Report for 1915.)

A modification to the existing project was authorized by public law 96-367, October 1, 1980. North and South Jetty modifications were completed in FY 86. Modifications provide for extending the North and South Jetties by 1,900 and 2,300 feet respectively. The jetty extensions terminate at approximately the minus 25-foot contour. Spur jetties were constructed on each jetty extension to reduce long shore currents from transporting material around the heads of the jetties. Each spur jetty is 400 feet long and originates approximately 900 feet shoreward of the jetty head. The North Jetty spur is oriented 45 degrees to the north of the existing jetty alignment and the South Jetty spur 45 degrees to the south of the jetty alignment.

In cooperation with local interests and the U.S. Coast Guard, the entrance channel was realigned in FY00. This has resulted in a safer entrance and reduced dredging.

Local cooperation. Fully complied with.

Terminal facilities. Port dock at Florence, 150 feet wide and 350 feet long, is about 5.3 miles above river entrance and accommodates a fish-receiving station at east end of wharf which maintains a 2-ton capacity winch and supplies gasoline, oil and ice to fishermen. Other facilities at Florence consist of various float ways that provide docking facilities for fishing vessels and other small craft and a floating dock with accommodations for 75 commercial fishing vessels. Adjacent to commercial basin is mooring basin with accommodations for 200 sport boats of all sizes.

Modern docks for loading ocean-going barges with packaged lumber is maintained at Mapleton and owned by the Davison Lumber Company.

There are also a number of private landings and log booms between Cushman and Mapleton to accommodate river traffic. These facilities are considered adequate for existing traffic.

Operations During FY. Maintenance: Routine operations and maintenance continued. (See Table 28R for dredging operations.)

14. SKIPANON CHANNEL, OR

Location. In tidal waterway extending south 2.7 miles from deep water in Columbia River. Channel enters Columbia about 10 miles above mouth and 4 miles below Astoria, OR. (See NOAA Chart 18523.)

Existing project. Channel 30 feet deep and generally 200 feet wide extending from deep water in Columbia River to railroad bridge at Warrenton, OR, distance of 1.8 miles, turning basin of same depth, mooring basin 12 feet deep at mean lower low water at Warrenton, OR, and channel 7 feet deep, generally 40 feet wide, with increased widths at log dumps and terminals, for 4,500 feet via cutoff channel above railroad bridge. Channel is maintained to 17 feet, which is adequate for user traffic. Mean lower low water is plane of reference. Tidal range between mean lower low water and mean higher high water is about 8 feet; extreme is about 13 feet.

Project as authorized is complete. Dredging river channel and turning basin was completed in 1939. Construction of small-boat mooring basin at Warrenton, OR, was completed October 1957, and fill stabilization work was accomplished in August 1958.

Local cooperation. None required.

PORTLAND, OR, DISTRICT

Terminal facilities. City of Warrenton owns wharf with a 300-foot frontage open to public on equal terms. One privately owned cannery wharf with a 300-foot frontage is used for unloading fish and handling fishnets. One privately owned boatyard has floats and moorage facilities for use by a maximum of 80 small boats. Small-boat basin has facilities for numerous fishing and recreation craft, and a privately owned lumber mill has a barge loading facility for chips and lumber. Facilities are considered adequate for existing commerce.

Operations During FY. Maintenance: None. Project depth was adequate for current use.

15. TILLAMOOK BAY AND BAR, OR

Location. Bay is on Oregon coast about 50 miles south of mouth of Columbia River. (See NOAA Charts 18520 and 18558.)

Existing project. Provides for a jetty about 5,700 feet long on north side of entrance and a jetty 8,000 feet long on south side; a channel through bar 18 feet deep and of such width as can be practically and economically obtained; for a channel 200 feet wide and 18 feet deep from deep water in bay to Miami Cove; and for initial dredging to 12 feet deep of a small-boat basin and approach thereto at Garibaldi, OR. Project also provides for improvement of Bay ocean Peninsula, OR, by construction of sand and rock fill dike 1.4 miles long, on alignment extending between Pitcher Point and town of Bay Ocean. Mean lower low water is plane of reference. Tidal range between mean lower low water and mean higher high water is 8 feet; extreme is about 14 feet. Hobsonville Channel portion of project is inactive.

Except for construction of Hobsonville Channel portion, classified inactive, channels were completed in 1927, North Jetty in 1933, improvement of Bay ocean Peninsula in 1956 and small-boat basin in 1958. The North Jetty was rehabilitated in 1965 and again in 1991. South Jetty construction was initiated in 1969, extended in 1974, and completed to the authorized 8,000 feet in 1978. 18-foot channel to Miami Cove is inactive due to mill closure. (For details relating to previous projects, see page 1989 of Annual Report for 1915 and page 1474 of Annual Report for 1936.)

Local cooperation. Fully complied with. Requirements are described in full on page 37-9 of FY 1981 Annual Report.

Terminal facilities. At Garibaldi: A facility owned by the Port of Bay City, for shipping lumber

and receiving logs, a public landing suitable for mooring fishing vessels, towboats, and other craft. Small-boat basin has adequate facilities for mooring fishing and recreational craft. A privately owned boat ramp and moorage is available for recreational craft.

At Bay City: A privately owned wharf used exclusively for receipt of fresh fish and shellfish. Facilities considered adequate for existing commerce.

Operations During FY. Maintenance: North Jetty shoreline monitoring was completed.

16. UMPQUA RIVER, OR

Location. Rises in Cascade Range, flows westerly about 120 miles, and empties into Pacific Ocean 180 miles south of Columbia River and 465 miles north of San Francisco Bay. (See NOAA Charts 18580 and 18584.)

Existing project. A jetty on north side of entrance about 8,000 feet long, a South Jetty 4,200 feet long extending to a point 1,800 feet south of outer end of North Jetty; dredging to provide a usable entrance channel 26 feet deep, and a river channel 22 feet deep and 200 feet wide, from mouth to Reedsport, a distance of about 12 miles with a turning basin at Reedsport 1,000 feet long, 600 feet wide, and 22 feet deep; deepening of channel at Winchester Bay to 16 feet deep by 100 feet wide for 3,100 feet, then adding 16 feet deep by 100 feet wide for 500 feet, and 12 feet deep by 75 feet wide for 950 feet beyond boat basin making up the East Boat Channel. A new West Boat Channel was added 16 feet deep by 100 feet wide for 4,300 feet and completed in 1984. Project was modified in 1951 to provide a channel in Scholfield River, but this portion of the project is currently inactive. Mean lower low water is plane of reference. Tidal range between mean lower low water and mean higher high water at river mouth is 7 feet, and extreme range is about 11 feet.

North Jetty was completed in 1930. Extension to original South Jetty was completed in 1938. Dredging a 22-foot channel from mouth of river to Reedsport was completed in 1941. Gardiner Channel and turning basin was completed in 1949 and Winchester Bay Channel and mooring basin in 1956. Rehabilitation of South Jetty was completed August 1963. Extension of training jetty was completed October 9, 1980. Deepening Winchester Bay East Channel and new West Channel completed 1984 under Section 107. (For details relating to previous projects, see page 2967 of Annual Report for 1898 and page 1732 of Annual Report for 1938.)

Local cooperation. None required.

REPORT OF THE SECRETARY OF THE ARMY ON CIVIL WORKS ACTIVITIES FOR FY 2007

Terminal facilities. At Gardiner there is about 650 feet of wharf frontage. Port of Umpqua owns one wharf with 456 feet of water frontage, of which 228 feet is usable for vessels and another with about 75 feet of water frontage which has not been used generally for commercial shipping.

On Bolon Island across the river from Reedsport a wharf was constructed which has about 5 acres of open storage for lumber and available to all on equal terms.

At Winchester Bay, 2 miles from river entrance there is a major sports and commercial fishing harbor. Facilities are considered adequate for existing commerce.

Operations During FY. Maintenance: Routine operations and maintenance continued. (See Table 28R for dredging operations.)

17. WILLAMETTE RIVER AT WILLAMETTE FALLS, OR

Location. Locks and dam covered by this project are at Willamette Falls, a rocky reef in Willamette River at Oregon City, OR, about 26 miles above mouth of river.

Existing project. Canal and locks were originally constructed by private interest in 1873 and were purchased by the United States in April 1915 for \$375,000. Final report on purchase and rehabilitation of canal and locks is in the Annual Report for 1923, when project was reported 98 percent complete. The project includes four locks a canal basin and an extra guard lock used to prevent flooding when river levels are high. The system acts as a fluid staircase between the upper and lower reaches of the Willamette River. Total length of existing canals and locks is about 3,500 feet. Principal features of existing canal and locks at Willamette Falls are set forth in Table 28-J. Ordinary fluctuation of stage of water above locks is 12 feet and extreme, due to flood conditions, 20 feet. Below locks, ordinary fluctuation is 15 feet and extreme 50 feet.

Until the 1940's, the gates were opened manually. Now, the gates are operated by hydraulic pumps controlled by switches in two control stations with the aid of closed-circuit television and radio communication. All the gates have been replaced under minor rehabilitation funds. Existing locks and grounds are in good condition and in continuous operation. New service building was completed in 1988 costing \$523,000. The project was placed on the National Register of Historic Places in 1974, and was established as an Oregon Civil Engineering Landmark in 1991.

As a result of the mill closure in 1996, one of two shifts was eliminated and hours of operation reduced.

Local cooperation. Fully complied with. 2006 Agreement signed with the Corps of Engineers and the Oregon Department of Transportation to address transportation enhancement activities under provisions of 23 USC 132 and Section 225 of WRDA 1992.

Terminal facilities. Simpson Paper closed the mill in 1996 after over 100 years of operations. The mill was sold to West Linn Paper. West Linn Paper has a timber wharf about 850 feet long, extending to and supported by a concrete division wall built in lock canal by the United States. The use of the wharf for operations purposes by the mill may be changed due to shipping changes by the new owner.

Operations During FY. Maintenance: Limited routine operation and maintenance continued, in a caretaker status with contributed funds to operate the lock for a limited period of time annually.

18. YAQUINA BAY AND HARBOR, OR

Location. Yaquina Bay is on Oregon coast, 113 miles south of mouth of Columbia River. (See NOAA Charts 18580 and 18581.)

Existing project. Two high tide rubble mound jetties at entrance, North Jetty 7,000 feet, and South Jetty 8,600 feet long; a spur jetty on channel side of South Jetty 4,700 feet from its sea end, 800 feet long; five groins channel ward from South Jetty; channel 40 feet deep for a general width of 400 feet across bar and at outer end of entrance channel; a channel 30 feet deep and 300 feet wide to a turning basin of same depth, 900 to 1,200 feet wide and 1,400 feet long, and a channel 18 feet deep and 200 feet wide from 30-foot channel at about mile 2.4, thence upstream to abandoned railroad terminus at Yaquina, a distance of about 4.5 miles. Project also provides for two small boat-mooring basins at Newport, OR. Mean lower low water is plane of reference. Tidal range between mean lower low water and mean higher high water is 8 feet and extreme is about 12 feet. At mile 1.2 a 1,300 foot long breakwater protecting the Port of Newport South Beach Marina together with an entrance channel 8 feet long by 100 feet wide for a distance of 2,035 feet.

Project as originally authorized was completed in May 1952. Restoration of jetties was completed in 1934 and extension of North Jetty 1,000 feet seaward was completed in 1940. Construction of mooring basin at Newport and dredging of channel and

turning basin to project dimensions, were completed during FY 1949. Restoration of North Jetty was again accomplished in 1956. Under modification of July 3, 1958, extension of North Jetty was completed in September 1966, dredging of 40-foot bar channel and 30-foot river channel was completed in October 1968, and extension of South Jetty was completed in June 1972. The North Jetty was rehabilitated in 1978, in 1988, and again in 2001. (For details relating to previous projects see Annual Report for 1893, part 4, page 3314, and Annual Report for 1938, page 1736.)

Local cooperation. None required.

Terminal facilities. At McLean Point, on north side of bay, about 2 miles from entrance, Port of Newport has two berths capable of serving ocean-going vessels, one 435 feet long, the second 520 feet long. At the time the second berth was dredged, a retaining wall and fill of 6 acres were constructed adjacent to deep water. There now is 40 acres of filled land adjacent to deep water, and of this total 7 acres were constructed in 1956-57. This facility has necessary carriers and lifts trucks for handling lumber cargoes, warehouse for covered cargo storage, and is open to all on equal terms.

Port of Newport also has a public wharf with 300 feet of frontage for servicing fishing boats. In addition, Port of Newport maintains 510 berths for mooring commercial and sport fishing vessels. There are several seafood companies on the bay, which have their own facilities for handling fresh fish and crab. Supplies and petroleum products are readily available for small vessels. On south side of bay about 1.2 miles above entrance, Port of Newport has constructed South Beach Marina which can handle approximately 600 pleasure craft and shallow draft fishing boats. Public facilities include public automobile and boat trailer parking, boat launching ramp, fuel dock, fishing pier, and picnic area. A dry boat moorage of 120 boats is complete. A swing hoist with 3-ton capacity is currently available and one with 60-ton capacity is planned.

About 2.0 miles above entrance, Oregon State University, in conjunction with the Marine Science Center on 52 acres, maintains a 220-foot pier for docking large and small research vessels and a 100-foot float for docking small boats. Docking facilities are restricted to research vessels and State of Oregon small boats.

Operations During FY. Maintenance: Routine operations and maintenance continued. (See Table 28R for dredging operations.)

19. YAQUINA RIVER, OR

Location. Rises in Coast Range, flows about 50 miles in a westerly direction, and empties into Yaquina Bay, on Oregon coast. (See US Coast and Geodetic Survey Charts Nos. 5802 and 6058.)

Existing project. Provides for two controlling half-tide dikes of piling, brush, and stone, each about 1,100 feet long (constructed by local interests), and for a channel 10 feet deep and generally 150 feet wide on Yaquina River and 200 feet wide in Depot Slough, extending from town of Yaquina near RM 4.0 to Toledo at RM 14.4.

Mean lower low water is plane of reference. Tidal range between lower low water and mean higher high water is 8 feet and extreme about 12 feet. Freshet heights are about 12 feet at mouth of Depot Slough. Channel work authorized March 1913 was completed in 1914. Additional work authorized in 1960 was completed in 1969.

Local cooperation. Fully complied with.

Terminal facilities. Near town of Yaquina at river mouth, which is also head of Yaquina Bay, there is a moorage for small vessels and a small-craft shipyard. The Port of Toledo has public-terminal facilities for accommodation of local craft. There are also privately owned facilities for loading lumber barges, receipt of bunker fuel, and log rollways for receipt of logs. These facilities are considered adequate for existing commerce.

Operations During FY. Maintenance: None. Project depth was adequate for current use.

20. PROJECT CONDITION SURVEYS

Hydrographic surveys are conducted to determine navigation conditions at boat basins, small navigation projects, and channels not funded on a project basis for the current FY. Soundings in subject areas are conducted in order to evaluate shoaling conditions. Hydrographic charts are prepared and distributed. FY costs were \$180,000. See Table 28-I for surveys conducted during the FY.

21. NAVIGATION ACTIVITIES UNDER SPECIAL AUTHORIZATION

Navigation Activities Pursuant to Section 107 of the 1960 Rivers and Harbors Act, Public Law 645, 86th Congress, as Amended. In addition to general requirements, each project is limited to a federal statutory cost of not more than \$4,000,000 per project. The local sponsor must agree to provide an

amount, in cash, not less than 10 percent or more than 50 percent of total project cost for navigation depending upon the planned depth of channel or basin; pay an additional 10 percent of the construction costs in cash over a period not to exceed 30 years after project completion. The non-federal sponsor must also agree to provide, maintain, and operate an adequate public parking, landing or wharf, service facilities, berthing areas, floats, pier, slips and similar marina and mooring facilities. The remaining portion of the project, such as the access channel or breakwater structure, is maintained by the Corps of Engineers at Federal expense within a limited amount. Federal expenditures for operation and maintenance under the Section 107 authority are administratively limited to the greater of \$4,500,000, or 2.25 times the Federal costs of the project including costs for the feasibility through the construction phases. No projects were under construction during the FY.

See Table 28-L for expenditures during the FY.

Mitigation of Shore Damages Attributable to Navigation Works, Pursuant to Section 111 of the 1968 Rivers and Harbors Act Public Law 483, 90th Congress, as Amended. In addition to general requirements, each project is limited to a federal statutory cost of not more than \$5,000,000. The non-federal sponsor must agree to provide a cost share amount in the same proportion as the cost sharing provisions applicable to the project causing the damage. The non-federal sponsor must also provide interests in real estate in the same manner required for the project causing the shore damage. The non-federal sponsor must also agree to operate and maintain the mitigation measures, and, in the case of interest in real property acquire in conjunction with nonstructural measures, to operate and maintain the property for public purposes in accordance with regulations prescribed by the Corps of Engineers. No projects were under construction during the FY.

See Table 28-L for expenditures during the FY.

Shore Protection

22. SHORE PROTECTION ACTIVITIES UNDER SPECIAL AUTHORIZATION

Hurricane and storm damage reduction pursuant to Section 103 of the River and Harbor Act of 1962, Public Law 874, 87th Congress, as Amended. In addition to general requirements, each project is limited to a Federal statutory expenditure of not more than \$3,000,000 per project. Costs for protection of federally owned properties are 100

percent Federal. Costs assigned to areas meeting public use criteria are 35 percent non-Federal. Costs assigned to protection of privately owned undeveloped lands and shores that are not open to the public are 100 percent non-Federal. No projects were under construction during the FY

See Table 28-L for expenditures during the FY.

Flood Control

23. APPLGATE LAKE, ROGUE RIVER BASIN, OR

Location. In Jackson County, OR, on Upper Applegate River, a tributary of Rogue River, at River Mile 46, about 23 airline miles southwest of Medford, OR.

Existing project. A gravel-fill embankment dam, 242 feet high from streambed to crest with an overall length of 1,300 feet. A gate-controlled concrete chute-type spillway on the left abutment, and a regulating outlet conduit, and intake tower with multilevel intakes. Applegate Lake, 5 miles long, provides 75,000 acre-feet of usable storage for flood control and water conservation utilization. Project controls runoff from a drainage area of 223 square miles. In addition to flood control, the reservoir is operated to provide irrigation, fish and wildlife enhancement, water quality control, and recreation benefits. Recreation facilities were provided by the Corps of Engineers, with operation and maintenance by the USFS under a memorandum of agreement. Project is complete and operating.

Freshets regulated by Applegate Lake on Applegate River and Rogue River are shown in Table 28-K.

Local cooperation. Authorizing act requires that State of Oregon insure maintenance of stream flow released for fishery. In addition, costs allocated to irrigation would have to be repaid in a manner and to an extent consistent with reclamation laws and policies. Oregon Department of Fish and Wildlife made filing May 31, 1962 with State Engineer for water rights for use of stored water and natural flows for fish habitat improvement in amounts and at times specified in project authorization. The U.S. Bureau of Reclamation has made a feasibility study of Applegate Irrigation Division. The results of the study indicate that at present there does not appear to be a feasible Federal irrigation project for the Applegate River valley. Local interests have furnished all local cooperation specified by the 1970 Flood Control Act. The Secretary of the Army approved the assurances on May 8, 1975.

PORTLAND, OR, DISTRICT

Operations During FY. Maintenance: Routine operation and maintenance continued.

24. BLUE RIVER LAKE, OR

Location. On Blue River, a major tributary of McKenzie River, 1.8 miles above confluence of the two streams at the confluence of Quartz Creek and Blue River and about 42 miles easterly of Eugene, OR.

Existing project. A gravel-filled embankment dam of 1,329 feet long at crest including spillway and 319 feet above the lowest point of the general foundation. A concrete gravity chute-type spillway with two gates is located on left abutment. Outlet works are in left abutment. On left shore of reservoir an earth-and-gravel fill embankment, about 1,535 feet long and 70 feet high, closes a low saddle between Blue River and McKenzie River. Project controls runoff from drainage area of 88 square miles. Reservoir provides 85,000 acre-feet of usable flood control storage and is operated as a unit of coordinated reservoir system to protect Willamette River Valley and increase low water flows for navigation and other purposes. The U.S. Forest Service under a Memorandum of Agreement provides recreation facilities. Project is complete. Construction of dam and appurtenant works was initiated in May 1963 and operation for flood control was effective in October 1968. Settlement of claims was completed in May 1974. The project is operated remotely from Lookout Point Dam in Lowell, OR.

Eugene Water and Electric Board (EWEB) were granted a FERC license in November 1989 to install two small hydropower units at Blue River Lake project. EWEB has delayed their plans for hydropower units pending the conclusion of a Corps proposal to add water temperature control to the regulating outlet tower. Refer to the Willamette River Temperature Control project write-up for additional information.

Freshets regulated by Blue River Lake project on Blue River, a major tributary of McKenzie River, are shown in Table 28-K.

Local cooperation. None required.

Operations During FY. Maintenance: Routine operation and maintenance work performed.

25. COTTAGE GROVE LAKE, OR

Location. On Coast Fork of Willamette River, 29 miles from mouth. Coast Fork rises in Douglas County, OR, on western slope of Cascade Range and

northern slope of Calapooia Range, flows north for 49 miles, and unites with Middle Fork to form main Willamette River.

Existing project. An earth fill dam, 1,750 feet long at crest, 114 feet high from lowest point of the general foundation, a concrete gravity free overflow spillway 264 feet long near the right abutment, and a concrete gravity non-overflow section 96 feet long forming the right abutment. Total length of dam is 2,110 feet. Outlet works, consisting of three gate-controlled conduits, pass through spillway section. Reservoir provides 30,060 acre-feet of usable flood control storage and controls runoff of drainage area of 104 square miles. Project is operated as a unit of coordinated reservoir system to protect Willamette River Valley and increase low water flow for navigation and for other purposes. Recreational development consists of day use and overnight facilities at five sites operated by the Corps of Engineers. Construction of project initiated August 1940 was completed April 1952. Dam and reservoir have been in continuous operation since September 1942. The project is operated remotely from Lookout Point Dam in Lowell, OR.

Freshets regulated by Cottage Grove Lake on Coast Fork Willamette River are shown in Table 28-K.

Local cooperation. Development of additional recreation facilities will require a local sponsor willing to cost share and assume all operation and maintenance of park facilities.

Operations During FY. Maintenance: Routine operation and maintenance continued.

26. DORENA LAKE, OR

Location. On Row River, OR, 7 miles from mouth. Row River rises in Lane County on western slope of Cascade Range, flows northwest for 19 miles, and enters Coast Fork of Willamette River 19.5 miles above mouth.

Existing project. An earth fill embankment dam of, 3,352 feet long at crest and 145 feet high from lowest point of the general foundation. Concrete gravity free-overflow spillway, 200 feet long, forms right abutment. Outlet works on five slide-gate-controlled conduits pass through spillway section. Reservoir provides 70,500 acre-feet of usable flood control storage and controls runoff of 265 square miles. The Project is operated as a unit of coordinated reservoir system to protect Willamette River Valley and increase low water flows for navigational and

REPORT OF THE SECRETARY OF THE ARMY ON CIVIL WORKS ACTIVITIES FOR FY 2007

other purposes. Construction of project initiated June 1941 was completed October 1952 except for construction of additional recreation facilities that were funded under the Code 710 program. Future recreation facility construction will be accomplished in accordance with the cost-sharing contract with Lane County, OR. Dam and reservoir have been in continuous operation since November 1949. The project is operated remotely from Lookout Point Dam in Lowell, OR.

Freshets regulated by Dorena Lake project on Row and Coast Fork Willamette Rivers are shown in Table 28-K.

Local cooperation. A multiple project cost sharing agreement has been in force with Lane County since Sept. 1976. It includes 4 projects and 14 parks. At Dorena Lake, 6 parks included in the agreement are managed by Lane County under a lease agreement. Future recreation development will require cost sharing.

Operations During FY. Maintenance: Routine operation and maintenance continued.

27. ELK CREEK LAKE, ROGUE RIVER BASIN, OR

Location. In Jackson County, OR at River Mile 1.7 on Elk Creek, a tributary of Rogue River, about 26.5 miles northerly from Medford, OR.

Existing project. Construction work for the 249-foot high roller compacted concrete gravity dam, 2,600 feet long at the crest, with a gate controlled concrete chute spillway, regulating outlet conduits, power penstock and multiple use intake tower attached to the upstream face of the dam has been halted due to a court injunction. The project would control runoff from a drainage area of 135 square miles, and provide future municipal and industrial water supply, irrigation, fish and wildlife enhancement, water quality control, and recreation benefits.

Funds to initiate preconstruction planning were appropriated in FY65, and for construction in FY71. Construction was deferred in FY77 due to a lack of state support. Following significant review, evaluation, and a public hearing, the Water Policy Review Board reversed its position and in April 1981 voted to support Elk Creek. Funds were appropriated in FY82 and FY83 to update and continue project design, plans, and specifications. Funds were appropriated in FY85 to resume construction. After initiation of construction, an injunction was placed against completion of the project and additional

analysis under National Environmental Policy Act (NEPA) was required in order to remove the injunction. Construction of the project was terminated with the project at 83 feet, one-third its design height.

After completion of the final Environmental Impact Statement Supplemental #2, the Department of Justice filed a motion with the Court to remove the injunction. The Ninth Circuit Court of Appeals issued a ruling on April 21, 1995. In a 2-1 decision, the Court also reversed the District Court decision that EISS #2 met the requirements of the earlier Ninth Circuit opinion and awarded attorneys fees to the plaintiffs. The case was remanded with instructions to prepare a third supplement adequately addressing all issues raised under the NEPA process.

Due to the Ninth Circuit Court of Appeals decision and the current Federal budgetary climate, the Corps does not plan to perform the environmental studies under NEPA necessary to remove the Federal court injunction against completion of the project. Therefore, an evaluation of the requirements for long term of the project in its uncompleted state will be required.

The FY97 Energy and Water Development Appropriation Act provided funds for long-term management in an incomplete state, including passive fish passage. Since 1998 the Corps has attempted to remove a section of the Dam to provide a long-term fish passage solution at the project. A National Marine Fisheries Service January 2001 Biological Opinion stated that this was not the only option available to avoid jeopardy to listed Coho Salmon. The Opinion also stated that there was the potential that risks associated with a new trap haul facility could be reduced to an acceptable level. Based on concerns raised by locally elected officials, an agency level review of our plan to remove a section of the Dam was conducted. In order to allow for this review, our effort to remove a section of the Dam was deferred in FY02. Until a permanent fish passage solution is implemented, fish passage around the project will be provided through operation of a temporary trap and haul facility.

Local cooperation. Authorizing act requires that State of Oregon take action prior to construction to insure maintenance in stream of flow to be released for fishery. In addition, costs allocated to irrigation would have to be repaid in a manner and to an extent consistent with the U.S. Bureau of Reclamation laws and policies. On February 24, 1966, State of Oregon Water Resources Board filed for withdrawal rights of 25 cubic feet per second to maintain a minimum flow for fish. Development of recreation facilities requires a local sponsor willing to cost share in recreation

PORTLAND, OR, DISTRICT

development and assume operations and maintenance of park facilities.

Operations During FY. New Work: Continued to operate the existing dam and temporary fish trap and haul facility and proceeded with technical work preparatory to construct the “notch” which is necessary to provide permanent fish passage through the incomplete dam structure.

28. FALL CREEK LAKE, OR

Location. On Fall Creek, a tributary of Middle Fork Willamette River, about 7 miles above confluence of the streams and about 19 miles southeasterly of Eugene, OR.

Existing project. An earth-and-gravel fill embankment about 5,100 feet long at crest and 193 feet high from lowest point of the general foundation. A gated concrete gravity spillway is in left abutment. Outlet is in right abutment. Reservoir provides 115,000 acre-feet of usable flood control storage and is operated as a unit of coordinated reservoir system to protect Willamette River Valley and increase low water flows for navigation and other purposes.

Construction of project began May 1962 and was essentially complete November 1965. Reservoir storage for flood control was effective October 1965. The project is operated remotely from Lookout Point Dam in Lowell, OR. Sky Camp Lodge was completed October 1978. Future recreation facilities will be provided in accordance with the cost-sharing contract with Bethel School District. Bethel School District has a sub-agreement with the Springfield Kiwanis Club for management of this facility. The Corps manages one park at the project.

Freshets regulated by Fall Creek Lake project on Fall Creek, a tributary of the Middle Fork, Willamette River are shown in Table 28-K.

Local cooperation. Fall Creek parks are managed by Oregon State Parks under lease agreement. Future development will not require a cost sharing agreement.

Operations During FY. Maintenance: Routine operation and maintenance continued.

29. FERN RIDGE LAKE, OR

Location. On Long Tom River, 23.6 miles from the mouth. Long Tom River raises in Lane County, OR, on eastern slope of Coast Range, flows north for 50 miles, and enters Willamette River 147 miles above its mouth.

Existing project. A main dam of 6,624 feet long at crest and 49 feet high from lowest point of the general foundation and two auxiliary dikes, 915 and 3,929 feet long, along northeasterly boundary of lake. Main dam consists of an earth fill embankment dam 6,330 feet long, a concrete gravity spillway near left abutment with a non-overflow structure 46 feet long, containing outlet works, and an overflow structure, 248 feet long, controlled by six automatic gates. Project includes rectification of channel of Long Tom River downstream of dam. Reservoir provides 110,000 acre-feet of usable flood control storage and controls runoff of tributary drainage area of 275 square miles. Reservoir protects Long Tom River Valley and is operated as a unit of coordinated reservoir system to protect Willamette River Valley generally and to increase low water-flows for navigation and other purposes. Dam was originally constructed in 1941 to height of 47 feet. Provision of additional storage for flood control was obtained in 1965 by raising embankments 2 feet to 49 feet above lowest point of the general foundation. The project is operated remotely from Lookout Point Dam in Lowell, OR.

In December 2004, a panel of experts determined that the embankment dam was in an “active state of failure.” The panel recommended severe restrictions on reservoir operations and immediate repairs to the dam. Subsequent analysis determined that the probability of a storm event that would cause severe flooding downstream, with these new restrictions in place, was very high. Authority for an emergency repair of the dam was supported at all Corps levels. The Portland District began design work in early February 2005, awarded a contract in May and completed a repair of the entire 1.1 mile-long embankment dam prior to the 2005/2006 flood control season. The repair involved removing approximately 1/3rd of the embankment dam, replacing the internal drain system and restoring the embankment. Over 60,000 cubic yards of material excavated from the dam repair were used to develop 3 new sub impoundments comprising 394 acres of sub-impoundments managed for over wintering waterfowl or to control non-native vegetation.

Construction of project initiated April 1940 was completed August 1951, except for provision of additional storage for flood control authorized in 1962 and completed April 1965, and construction of additional recreation facilities funded through the Code 710 program. Construction of three water flow impoundments was completed in 1994 under Section 1135 authority. Dam and reservoir have been in continuous operation since December 1941. Development of future recreation facilities will be in accordance with the cost-sharing contract with Lane

County, and requires a 50 percent contribution by the county. Development is subject to availability of funds by the Government and the county.

Portions of Federal lands surrounding Fern Ridge Lake were recently designated critical habitat for Fender's Blue Butterfly, Kincaid's Lupine and the Willamette Daisy, all federally listed species. Approximately 250 acres of Fern Ridge are designated as one of the Corps' few Research Natural Areas, and provide some of the best examples of remnant Willamette Valley wet prairie. Routine O&M efforts include restoration of both upland and wet native prairie plant communities, in cooperation with many local and regional partners.

Freshets regulated by Fern Ridge Lake project on Long Tom River are shown in Table 28-K.

Local cooperation. Fern Ridge Lake is included in the Lane County multiple project cost sharing agreement. Three parks are managed by Lane County under lease agreements. Future development will require cost sharing. The Oregon Department of Fish and Wildlife co-manages 5,000 acres of land and water for migratory waterfowl under a license agreement

Operations During FY. Maintenance:
Routine operation and maintenance continued.

30. LOWER COLUMBIA RIVER BASIN BANK PROTECTION, OR AND WA.

Location. Columbia River and tributaries between Sandy River, OR, and Mouth of Columbia River.

Existing project. Provides for construction of approximately 224,000 linear feet of bank protection works at 96 locations along Lower Columbia River below River Mile 125 and along principal tributaries in this reach, to protect existing improvements such as levees and developed industrial lands from further erosion. Existing project is a unit of general comprehensive plan for flood control, navigation, and other purposes in Columbia River Basin. Construction of project began in July 1961 and is 88 percent complete. A total of 191,000 linear feet of bank protection work at 84 locations has been completed.

Local cooperation. Flood Control Act of 1950 provides local interests furnish lands and rights-of-way; make necessary highway, Highway Bridge, and utility alterations; hold the United States free from damages; and maintain and operate completed works. Under Section 103 of the Water Resources Development Act of 1986, Local Interests will also

be required to make cash contribution for construction of each site.

Operations During FY. New Work: None.

31. MOUNT ST. HELENS SEDIMENT CONTROL, WA.

Location Sediment Retention Structure (SRS) - North Fork Toutle River, 2 miles upstream from its confluence with the Green River, in Cowlitz County, southwest Washington. Levee Improvements - Kelso, Washington on the Cowlitz River (river mile 3 to river mile 8). The river systems impacted by the project include Toutle, Cowlitz and a portion of the Coweeman and Columbia Rivers. Most of the population affected by the problems resides in the communities of Longview, Kelso, Lexington, and Castle Rock, Washington.

Existing project. The project was authorized by the Supplement Appropriations Act, 1985 (Public Law 88, 99th Congress, August 15, 1985). The Act includes authorization "... to construct, operate and maintain a sediment retention structure near the confluence of the Toutle and Green River, Washington, with such design features and associated downstream actions as are necessary, in accordance with the Feasibility Report of the Chief of Engineers dated December 1984." As authorized, the project will provide a permanent solution to potential flooding on the Cowlitz River from sedimentation problems created by the eruption of Mt. St. Helens. The Decision document recommended construction of a single sediment retention structure (SRS) with a 125-foot high spillway at the Green River site on the North Fork Toutle River, improvements to the levee system at Kelso, Washington, and out-year dredging downstream from the SRS and/or other measures to maintain authorized flood protection levels through year 2035.

Local cooperation. Local interests were responsible for provision of all lands, easements, and rights-of-way for the sediment retention structure, dredging disposal areas, and levee improvements. Local interests were also responsible for all alterations and relocations of buildings, roads, bridges and other structures or utilities made necessary by implementation of the project. In addition, operation and maintenance of fish facilities, the levee system at Kelso and dredged material disposal sites are the responsibility of local interests. Non-federal cash contribution is \$3,600,000 and the estimated non-federal land, easements, right-of-ways, and relocations costs are \$21,000,000.

PORTLAND, OR, DISTRICT

Operations During FY. New Work: Cowlitz River monitoring stream gages and hydrographic surveys were used to collect data to assess rates of sediment movement and fill in the river, and ultimately to calculate the current flood protection levels. Verification analysis comparing forecasted vs. actual sediment migration identified the need to update historic assumptions regarding channel geometry and hydrology for use in future Level of Protection forecasting. Current efforts are focused on collecting and analyzing sediment data to assess whether the congressionally mandated flood control can be maintained through the project life, year 2035. Recent monitoring has identified the need to dredge the lower Cowlitz River. The ongoing data collection and analysis work is a critical step in determining what additional measures will be required to maintain long-term flood protection for these communities.

Maintenance: Routine operation and maintenance continued.

32. WILLAMETTE RIVER BASIN BANK PROTECTION, OR.

Location. On Willamette River and tributaries, between Cascade Range and Coast Range, from a point south of Eugene to Portland, OR.

Existing project. Projects provide for clearing, sloping, and riveting riverbanks; construction of pile and timber bulkheads and drift barriers; minor channel improvements; and maintenance of existing works for control of floods and prevention of erosion at various locations along Willamette River and its tributaries to maintain an efficient discharge channel below the flood control reservoirs operated by the Corps. The current scope of the project is a total of 510,000 linear feet of bank protection at 236 locations. Estimated Federal cost is \$30,700,000.

Construction of project began in 1938 and is 96 percent complete. A total of 489,795 linear feet of bank protection work at 230 locations consisting of revetment of riverbanks, pile and timber bulkheads, drift barriers, and channel improvements, have been completed along the Willamette River and its tributaries. The 65 projects completed before the Flood Control Act of 1950 are maintained by the Corps.

Local cooperation. Section 3, Flood Control Act of 1936; the 1950 FCA required local sponsorship and maintenance of revetments. PL 81-516, Flood Control Act of May 17, 1950 (H. Doc. 531, 81st Congress, 2nd Session, 8-volume encyclopedic

project authorization, 1949) and Section 103, Water Resources Development Act of 1986 applies.

Estimated costs for all requirements of local cooperation under terms of project authorization were \$2,300,000.

Operations During FY. New work: None.

Maintenance: Continued coordination and evaluation of local erosion problems. Awaiting publication of the draft Willamette River Basin Biological Opinion to determine future course of actions with regard to revetment maintenance and repairs.

33. WILLOW CREEK LAKE, HEPPNER, OR.

Location. On Willow Creek immediately upstream from Heppner and just downstream from junction of Balm Fork and Willow Creek in Section 35, Township 2 South, Range 26 East, Willamette Meridian.

Existing project. Project provides flood protection to the city of Heppner and downstream area by controlling runoff from a drainage area of 96 square miles. The dam is a roller compacted concrete structure 160 feet high at crest elevation 2,130. Ancillary features include a center uncontrolled spillway with a maximum flood capacity of 93,300 cfs (cubic feet per second), an outlet works with a capacity of 500 cfs, a minor flow works and diversion works. Gross storage capacity of the project is 13,250 acre-feet, consisting of 7,750 acre-feet for exclusive flood control, 1,750 acre-feet for joint flood control and irrigation, 1,750 acre-feet exclusive irrigation, and 2,000 acre-feet dead storage for fish, wildlife, recreation, sediment accumulation, and aesthetics. Limited recreation facilities are being provided.

Willow Creek Parks and Recreation District has leased recreation facilities and operates a campground and day use area at Willow Creek Lake. A courtesy handling dock was constructed by the Recreation District utilizing Oregon State Marine Board funds. A playfield area below the dam has been leased to the City of Heppner. The Corps of Engineers manages a fishing access site and wildlife management area where dispersed recreation occurs.

The final Environmental Impact Statement was filed with the Environmental Protection Agency on December 20, 1979. The provisions of the Clear Water Act were met by a Section 404(b) (1) Evaluation and a public notice issued January 12, 1980, and a section 401 certification from the State of

REPORT OF THE SECRETARY OF THE ARMY ON CIVIL WORKS ACTIVITIES FOR FY 2007

Oregon on February 15, 1980. Land acquisition is about 99 percent complete.

Local cooperation. Development of additional recreation facilities will require a local sponsor willing to cost share and assume all operation and maintenance of facilities.

Operations During FY. Maintenance: Routine operation and maintenance continued.

34. INSPECTION OF COMPLETED FLOOD CONTROL PROJECTS

Funds appropriated for inspection of completed local flood protection works are used to determine maintenance condition of completed works, and to ascertain whether local interests properly maintain those works. Numerous levied areas and federal constructed bank protection works were inspected at locations along both banks of Lower Columbia River below Bonneville Dam, along Oregon Coast, in eastern Oregon, in southern Oregon and in Willamette River Basin. A representative of sponsoring districts accompanied the Portland the District representatives performing the levee inspections. Deficiencies in maintenance and needs for repair were discussed with sponsoring districts' representatives and a report was sent to each sponsor with outlining the inspection results and recommendations for maintenance. The program to improve maintenance of completed Federal projects initiated by House Appropriations Committee on Civil Functions was continued. A rating of "Fair" will no longer be eligible for rehabilitation consideration per guidance provided in a policy letter dated September 26, 2006.

Refer to Table 28-Q for information relating to completed works. FY costs were \$199,789.

35. SCHEDULING FLOOD CONTROL RESERVOIR OPERATIONS

Corps of Engineers monitored flood control operations at four Bureau of Reclamation projects (Prineville, Ochoco, Emigrant, and Scoggins), one local project operated by Douglas County (Galesville), and two municipal power project operated by Tacoma Power (Mossyrock and Mayfield). The projects were partially constructed with flood control funds, thereby subjecting project operation to monitoring by the Corps of Engineers under Section 7, Flood Control Act of 1944.

The four Bureau of Reclamation projects, the Douglas County project, the two Tacoma Power projects were operated during the FY within the flood control regulations specified for each project.

Reservoirs, in particular in western Oregon, were able to capture significant storm runoff during December and January thus providing flood damage reduction benefits. Total cost of monitoring and flood control direction of the six projects during the FY was \$62,045.

36. FLOOD CONTROL ACTIVITIES UNDER SPECIAL AUTHORIZATION

Flood Control Activities Pursuant to Section 205 of the 1948 Flood Control Act, Public Law 858, 80th Congress, as Amended: In addition to general requirements, each project selected is limited to a federal statutory cost of not more than \$7,000,000. The local sponsor must agree to provide an amount not less than 35 percent or more than 50 percent of total project cost, at least 5 percent of which will be cash; and operate, maintain, repair, replace, and rehabilitate the project upon completion. No projects were under construction during the FY.

See Table 28-L for expenditures during the FY.

Emergency Stream bank Protection Activities Pursuant to Section 14 of the 1946 Flood Control Act, Public Law 526, 79th Congress, as Amended: In addition to general requirements, each project is limited to a federal statutory expenditure of not more than \$1,000,000 per project. The local sponsor must agree to provide an amount not less than 35 percent or more than 50 percent of total project cost at least 5 percent of which will be cash; and operate, maintain, repair, replace, and rehabilitate the project upon completion. No projects were under construction during the FY.

See Table 28-L for expenditures during the FY.

Snagging and Clearing for Flood Control Activities Pursuant to Section 208 of the 1954 Flood Control Act, Public Law 780, 83rd Congress, as Amended: In addition to general requirements, each project is limited to a federal statutory expenditure of not more than \$500,000 per project. The local sponsor must agree to provide an amount not less than 35 percent or more than 50 percent of total project cost at least 5 percent of which will be cash; and operate, maintain, repair, replace, and rehabilitate the project upon completion. No projects were under construction during the FY.

See Table 28-L for expenditures during the FY.

Multiple-Purpose Projects Including Power

37. BONNEVILLE LOCK AND DAM - LAKE BONNEVILLE, OR AND WA

Location. Project is on Columbia River, 40 miles east of Portland, OR, about 146 miles above mouth of river. For description of Columbia River, see Sec # 2.

Existing project. A dam, power plant, and lock for power and navigation. Spillway dam extends across main channel from Cascade Island (WA) to Bradford Island (OR). Overflow crest at 24 feet above mean sea level is surmounted by 18 vertical-lift steel gates, 16 with remote control hoists placed between piers which extend to elevation 99 feet where a service roadway provides access, and two 350-ton gantry cranes for regulating gates. Powerhouse No. 1 extending across Bradford Slough to the Oregon shore has an installation of 10 units, consisting of two units of 48,000 kilowatts, and eight units of 60,000 kilowatts each, totaling 576,000 kilowatts. Ordinary and extreme fluctuations of river at lower lock gate are about 21 and 47 feet respectively. Project includes fish ladders to serve main channel, Bradford Slough Channel, and Powerhouse II channel. Navigation lock and powerhouses are founded on andesite, and main dam rests on solidified sedimentary rock of volcanic origin. The pool created by dam provides a navigable channel 27 feet deep between Bonneville and The Dalles Dams, a distance of 47 river miles. Principal data concerning navigation lock, spillway dam, and power plant are set forth in Table 28-N.

Dam, navigation lock, 10-unit power generating installation, fish ways, and attendant buildings and grounds cost \$83,239,395, of which \$6,072,480 is for navigation facilities, \$39,350,824 for power facilities and \$37,816,091 for joint facilities, consisting of dam, fish ways, buildings and grounds, and headwall section of power units 0 to 6, cost of which \$2,106,000 is allocated to dam and lake facilities.

In response to flow regulations and peaking from upstream plants operating under conditions of Canadian storage and Pacific Northwest-Southwest Intertie, two modifications were undertaken at the Bonneville project. The modification for peaking project was undertaken to minimize adverse environmental effects under rapidly changing flow conditions from upstream dams. The project was completed in 1978 at a cost of \$27,195,000. The second modification provided for increased power installation by building a second powerhouse located on the Washington shore adjacent to the end of the

existing spillway. The new powerhouse contains eight units of 66,500 kilowatts each and two fish attraction turbine generator units of 13,100 kilowatts each for a combined capacity of 558,200 kilowatts, bringing the entire Bonneville capacity to 1,145.7 megawatts. Additional fish facilities consist of the powerhouse collection system, second fish ladder on the Washington shore, transportation channel connecting the Cascade Island fish ladder with new exit control section, and fingerling bypass facilities which include fish screens in both the powerhouses. To provide for the anticipated increased visitor use, onsite visitor facilities are included. Under authority of the Bonneville Project Act (August 20, 1937), a letter from Bonneville Power Administration to North Pacific Division dated January 21, 1965, requested construction of a second powerhouse.

Construction of original project started October 1933, was completed February 1943. Modification of powerhouse control equipment started March 1957 was completed September 1958. First two power units were placed in operation during FY 1938. Powerhouse with complete installation of 10 units was in operation December 1943.

Construction of modification for peaking work commenced in September 1970 and was completed in September 1978.

Construction of second powerhouse is complete. Final environmental impact statement was filed with Council on Environmental Quality in April 1972. In response to increasing visitation which now exceeds 600,000 a year at the dam site itself and 2,700,000 project wide, a visitor center with windows into the fish ladders, a 60-seat theatre, exhibits and displays was completed on Bradford Island in 1975. Units 11 through 18 were on-line by October 1982. The visitor facility for the new powerhouse (which does not require cost-sharing) is an integral part of that structure. The total cost for construction of the second powerhouse was \$678,945,000.

In June 1993 work began on the rehabilitation of the First Powerhouse. In the first phase the existing circuit breakers and eight transformers were replaced and the switchyard was rehabilitated. Circuit breaker work was completed in 1995. The remaining work was completed in 1997. Phase I cost was \$24,120,000. The second phase consists of replacing the windings of six generators and replacing ten turbines. The new turbines have minimum gap runners which will increase efficiency and reduce injuries to fish. Second phase work was contracted in 1994 and is scheduled for completion in 2010. Phase II will cost an estimated \$143,000,000. Phase II has expanded to include all 10 first power house turbines and generator windings.

REPORT OF THE SECRETARY OF THE ARMY ON CIVIL WORKS ACTIVITIES FOR FY 2007

Construction of a new navigation lock just south of the existing lock was authorized in the FY 1985 Supplemental Appropriations Act, Public Law 99-88, August 15, 1985. Inland Waterways Trust Fund funded 50 percent of the project cost in accordance with the Water Resources Development Act of 1986, Public Law 99-662, November 17, 1986. The new lock chamber is 86 feet depth of water over the sill. Cost for construction of the new navigation lock was \$348,100,000. The lock opened to shipping on March 26, 1993. Restoration of the grounds and historic buildings is complete.

The first powerhouse, spillway, navigation lock and associated facilities have been designated as a National Historic District in 1987.

Development of recreation facilities at Home Valley was completed in FY 1989. This is out granted to Skamania County Parks and Recreation Department.

Electrical power generation for the FY is shown on Table 28-P. Net power generated is marketed by Bonneville Power Administration.

Local cooperation. None required, except for non-federal cost sharing for development of recreational facilities.

Operations During FY: Maintenance: Routine operation and maintenance continued. Performed increased activities to protect and enhance the anadromous fisheries in the Northwest. This year we continued the Fish Guidance Efficiency efforts and anticipate completion in early 2008. Continue HTRW site investigation and risk assessment of Bradford Island landfill. Capital improvements include repair/replacement of the static exciters, governors, cranes, power plant efficiency improvements, main unit circuit breakers (completed), and head gates refurbished. Intake Gantry Crane on Powerhouse I was replaced and old crane removed.

Major Rehabilitation: A contract to rehabilitate the generators and turbines in the first powerhouse is in progress. Seven units have been rehabilitated to date.

38. COLUMBIA RIVER TREATY FISHING ACCESS SITES, OR & WA

Location. This project provides for construction of 32 sites along the Columbia River on Bonneville pool, John Day pool, and The Dalles pool.

Existing project. In 1988, Congress provided authority through public law to implement a wide range of land management, transfer, acquisition and development actions to provide fishing access for

Indian tribes who exercise treaty fishing rights on the Columbia River. The law designates certain federal sites on Bonneville, John Day, and The Dalles pools for fishing access. The improvements required at the access sites are specified in the authorizing legislation. They include all weather access roads, camping facilities, boat ramps, docks, sanitation, and fish cleaning facilities. Construction of these facilities will greatly improve access by the four tribes, which have fishing rights along this reach of the Columbia River. In March of 2004, Congress authorized rehabilitation of Celilo Village, OR in conjunction with the ongoing project.

Local cooperation. None required.

Operations During FY. New Work: Completed construction of a new water system, a new sewer system, and a temporary housing area at Celilo Indian Village, OR. Completed acquisition of personal property and legal residents were moved into temporary housing. Initiated construction of permanent housing and the balance of new infrastructure at Celilo Village.

39. COUGAR LAKE, OR

Location. At mile 4.4 on South Fork McKenzie River which joins McKenzie River about 56.5 miles above its confluence with Willamette River. Project is about 42 miles east of Eugene, OR.

Existing project. A rock fill dam with an impervious earth core, about 1,738 feet long at crest and 445 feet high above the streambed. Reservoir is 6 miles long with storage capacity at full pool of 219,000 acre-feet and controls runoff of tributary drainage area of 210 square miles. Spillway is on right abutment and outlet and power tunnels in left abutment. Outlet tunnel is provided with a chute and stilling basin. Power plant consists of two 12,500-kilowatt units with minimum provisions for installing a third unit of 35,000 kilowatts for future peaking capacity. Improvement functions as a unit in coordinated system of reservoirs for multiple-purpose development of water resources in Willamette River Basin Recreation facilities are provided by the U.S. Forest Service. Also authorized (but un-constructed) is a re-regulating dam, Strube Lake, below Cougar Lake, which would permit Cougar to operate as a peaking power plant. The Strube dam would contain two units totaling 4,600 kilowatts. Estimated Federal cost of Strube Lake and Cougar Additional Units is \$114,000,000.

Construction of project initiated June 1956 is complete, excluding Strube Lake and Cougar

PORTLAND, OR, DISTRICT

Additional Unit for which planning is essentially complete. Also, plans and specifications for the first construction contract (relocations) have been completed. Generating units 1 and 2 were placed in commercial operation March 23 and February 4, 1964, respectively. Physical in-service date for flood control was November 29, 1963. Turbines were replaced and generating units were re-wound and commissioned in 2005. The project is operated remotely from Lookout Point Dam in Lowell, OR.

Freshets regulated by Cougar Lake on South Fork McKenzie River are shown on Table 28-K.

Electrical power generation for the FY is shown on Table 28-P. Net power generated is marketed by Bonneville Power Administration.

Project water intakes now use the Willamette River Temperature Control Tower. Refer to number 48, Willamette River Temperature Control project for additional information.

Local cooperation. None required.

Operations During FY. Maintenance: Routine operation and maintenance continued.

40. DETROIT LAKE - BIG CLIFF, OR

Location. On North Santiam River with dam 50 miles from mouth 40 miles southeast of Salem, OR. North Santiam River flows north and west for 85 miles, and unites with South Santiam River to form Santiam River, which 10 miles downstream enters Willamette River 108 miles above its mouth.

Existing project. Main dam and a re-regulating dam, both with power-generating facilities. Detroit Dam is a concrete gravity structure about 1,522 feet long and 454 feet high from lowest point of the general foundation to roadway deck. Spillway is a gate-controlled overflow section, and outlet works are gate-controlled conduits through dam. Powerhouse with two units having a capacity of 50,000 kilowatts each is in right abutment immediately below dam. Reservoir has a storage capacity at full pool of 454,900 acre-feet and controls runoff of tributary drainage area of 438 square miles. It is being operated as a unit in coordinated reservoir system to protect Willamette Valley from floods, to increase low water flows in interest of navigation and irrigation, to generate power, and for other purposes. Re-regulating dam 3 miles downstream at Big Cliff site is concrete gravity type, about 191 feet high from lowest point of the general foundation to roadway deck. Power installation consists of one unit with a capacity of 18,000 kilowatts. Reservoir has a storage capacity of 5,930 acre-feet at full pool. Project is a

unit of comprehensive plan for flood control and other purposes in Willamette Basin. Big Cliff is remotely operated from Detroit. Recreation facilities are provided by the U.S. Forest Service, Oregon State Park System and the town of Detroit.

Construction of project begun in May 1947 was completed December 1960. The two powerhouse generating units were placed in commercial operation June and October 1953. At Big Cliff powerhouse, single generating unit was placed on-line June 1954. Use of Big Cliff Dam for re-regulating fluctuating flow from Detroit units was effective October 1953.

Capital improvements complete in 2006 included repair/replacement of the bridge crane and additional plant automation.

A switchgear fire in June, 2007, due to failed relay protection disrupted power generation at Detroit and Big Cliff power plants and caused significant damage to the facility. Big Cliff was returned to service in August, 2007. Detroit is in the process of repair and plant modernization, and is anticipated to return generating units to service in 2008.

Electrical power generation for the FY is shown on Table 28-P. Net power generated is marketed by Bonneville Power Administration.

Freshets regulated by the Detroit Lake project on North Santiam River are shown in Table 28-K.

Local cooperation. None required.

Operations During FY. Maintenance: Routine operation and maintenance continued. Additional automation work is ongoing, as are reliability upgrades, rewinds on Detroit Units 1&2 and Big Cliff.

41. GREEN PETER-FOSTER LAKES, OR

Location. At approximate mile 5.5 on Middle Santiam River which joins South Santiam River about 56.8 miles above its confluence with Willamette River. Dam is about 30 miles southeast of Albany in Linn County, OR.

Existing project. Main dam and a re-regulating dam, both with power-generating facilities. Green Peter Dam is a concrete gravity structure, 1,400 feet long and 385 feet high above the lowest point of the general foundation with a gate-controlled spillway. Outlet works consist of two conduits through spillway, discharging into a stilling basin. Power plant, on right bank adjacent to spillway stilling basin, consists of two units with an installed capacity of 80,000 kilowatts. Reservoir provides storage capacity at full pool of 430,000 acre-feet, extending 6.5 miles up Quartzville Creek and some 7.5 miles up

REPORT OF THE SECRETARY OF THE ARMY ON CIVIL WORKS ACTIVITIES FOR FY 2007

Middle Santiam River above creek junction, forming a Y-shaped pool. Reservoir controls runoff of tributary drainage area of 277 square miles.

Foster Dam, 7 miles downstream from Green Peter Dam is located on South Santiam River about 38 miles above its confluence with Santiam River and 1.5 miles below its confluence with Middle Santiam River. Foster Dam consists of an earth, gravel, and rock-filled embankment, 146 feet high from lowest point of the general foundation and a concrete gravity gate controlled spillway and stilling basin for a total length of 4,800 feet. Power installation consists of two units with capacity of 20,000 kilowatts. Foster Lake has a storage capacity, at full pool, of 61,000 acre-feet. Project functions as a unit in coordinated system of reservoirs for multiple-purpose development of water resources in Willamette River Basin. Green Peter is remotely operated from Foster.

All construction on Green Peter-Foster Lakes project initiated June 1961 is completed. Green Peter Lake was placed in operation for useful flood control June 1967 as a unit of coordinated reservoir system for protection of the Willamette River Basin. First power-generation unit was placed on the line June 9, 1967 and second, June 28, 1967. Use of Foster Lake for re-regulating fluctuating flows from Green Peter units was effective December 1967. First power generation unit was placed on-line August 22, 1968 and second, September 6, 1968.

Electrical power generation for the FY is shown on Table 28-P. Net power generated is marketed by Bonneville Power Administration.

Freshets regulated by Green Peter Lake project on Middle Santiam River are shown in Table 28-K.

Local cooperation. Future recreation development at Foster or Green Peter will require cost sharing. Recreation facilities at Foster Lake include 4 parks and 2 parks at Green Peter Lake. Five of these parks were developed by the Corps and are operated by Linn County under lease agreement. One park is operated by the Corps.

Operations During FY. Maintenance: Routine operation and maintenance continued. Capital improvements included improvement of main unit exciters.

42. HILLS CREEK LAKE, OR

Location. On the Middle Fork, Willamette River, 47.8 miles from mouth and 26.5 miles upstream from Lookout Point Dam. Middle Fork, Willamette River rises on west slope of Cascade Range and flows northwesterly to its junction with Coast Fork,

Willamette River. Dam is about 45 miles southeast from Eugene, OR.

Existing project. An earth-and-gravel-fill dam about 2,150 feet long at the crest and 338 feet above lowest point of the general foundation. A gate-controlled concrete gravity chute-type spillway is in right abutment. Diversion tunnel, outlet tunnel and power tunnel are in same abutment. Powerhouse with two 15,000-kilowatt units is located next to spillway. Hills Creek Lake is about 8.5 miles long and provides storage capacity at full pool of 356,000 acre-feet. Project controls runoff of drainage area of 389 square miles and is an integral unit of comprehensive plan for development of water resources of Willamette River Basin. Hills Creek Lake and Lookout Point Lake are operated as a unit for control of floods and generation of power on Middle Fork Willamette River. These projects, in conjunction with Dexter re-regulating dam and Fall Creek Lake flood control system, effectively manage flooding risks on the Middle Fork and provide maximum efficient generation of hydroelectric power. The U.S. Forest Service provides recreation facilities. Hills Creek power units are remote controlled from Lookout Point.

Construction of project, initiated May 1956, was completed June 1963. The project was placed in service for useful flood control in November 1961. On May 2, 1962, the two power units were placed on-line. The project is operated remotely from Lookout Point Dam in Lowell, OR.

Electrical power generation for the FY is shown on Table 28-P. Net power generated is marketed by Bonneville Power Administration.

Freshets regulated by Hills Creek Lake on Middle Fork Willamette River are shown in Table 28-K.

Local cooperation. None required.

Operations During FY. Maintenance: Routine operation and maintenance continued.

43. JOHN DAY LOCK AND DAM – LAKE UMATILLA, OR AND WA

Location. On Columbia River about 3 miles downstream from mouth of John Day River and about 215 miles above mouth of Columbia River.

Existing project. A dam, power plant, navigation lock, fish ladders, and appurtenant facilities with a slack-water lake about 75 miles long extending to McNary Lock and Dam. Included is relocation of railroads, highways, utilities, and communities affected by the impoundment. The project as

PORTLAND, OR, DISTRICT

originally authorized would have provided 2,000,000 acre-feet of flood control storage. As modified, the project provides 500,000 acre-feet of flood control storage between elevations 257 and 268. The structure is 5,900 feet in length and stands about 161 feet above streambed. Powerhouse has space for 20 generating units of 135,000 kilowatts each; 16 units have been installed for a present capacity of 2,160,000 kilowatts. In 1998, synchronous condensing capability was added to four units. It was done to provide increased stability to the BPA transmission system. Principal project data are set forth in Table 28-N.

A detailed description of project as authorized and modified is on pages 1992 and 1993 of Annual Report for 1962 under the Walla -Walla District.

Construction began July 1958 and the project was opened to navigation April 1968. The main dam contract is complete. Lock rehabilitation work begun in FY 1980 was completed in FY 1986. Other significant Lock repair work completed in 2004.

Electrical power generation for the FY is shown on Table 28-P. Net power generated is marketed by Bonneville Power Administration.

Local cooperation. Recreation facilities at five parks and 4 wildlife areas are operated and maintained by local agencies under lease agreement with the Corps. Five developed recreation areas are operated and maintained by the Corps of Engineers. Dispersed recreation is also managed by the Corps and occurs at 4 minimally developed sites as well as over 47,000 acres of lands and natural resource areas surrounding Lake Umatilla. In 2003 Sundale shared use site and shared use ramps at LePage and Railroad Island (North Shore) were developed as part of a test associated with the Columbia River Treaty Fishing Access Site program. Further recreation development will require cost sharing and assumption of operation and maintenance by local, non-federal sponsor

Operations During FY.. Maintenance: Routine operation and maintenance continued. Activities to protect and enhance the anadromous fisheries in the Northwest included continuation of a multiyear project to rehabilitate the South Fish Attraction Water Turbines. Capital improvements to the powerhouse included completion of a main unit generator circuit breaker replacement project.

44. LOOKOUT POINT - DEXTER LAKES, OR

Location. On Middle Fork, Willamette River at Meridian site, 21.3 miles from mouth. Middle Fork, Willamette River, rises in Lane County on western slope of Cascade Range and flows northwesterly to its junction with Coast Fork, which is head of

mainstream Willamette River. Dam is about 22 miles southeast from Eugene, OR.

Existing project. A main dam at Meridian site and a re-regulating dam 3 miles downstream at Dexter site. Both dams are earth-and-gravel-fills with concrete spillways and have power generating facilities. Main dam is 258 feet high from lowest point of the general foundation to deck and is 3,381 feet long at crest forming a reservoir 14.2 miles long providing storage of 456,000 acre-feet at full-pool level. Reservoir controls runoff of tributary drainage area of 991 square miles. Spillway, 274 feet long, is a gate-controlled overflow type, forming right abutment. Outlet works consisting of slide-gate-controlled conduits pass through spillway section. Powerhouse has three main generating units with a capacity of 120,000 kilowatts. Dexter re-regulating dam has a maximum height of 107 feet above lowest point of the general foundation and is 2,765 feet long at crest, forming a full pool of 27,500 acre-feet extending upstream to main dam and providing pondage to regulate Lookout Point powerhouse water releases to a uniform discharge. Spillway consists of a gate-controlled overflow section 509 feet long forming right abutment.

Flow regulation is accomplished by use of spillway gates and releases through powerhouse, which contains one 15,000-kilowatt unit. Lookout Point and Dexter Lakes are operated as a single unit of a coordinated system of reservoirs to protect Willamette River Valley against floods; to provide needed hydroelectric power, and to increase low water flows for navigation, irrigation, and other purposes. Existing project authorized as a unit of comprehensive plan for flood control and other purposes in Willamette River Basin.

Construction of project initiated May 1947 was completed June 1961, except for construction of additional recreation facilities funded through the Code 710 programs. Future recreation facilities will be provided in accordance with the cost-sharing contract with Lane County and will require a 50 percent contribution by Lane County and is subject to funding availability by the Government and the County. At Lookout Point powerhouse, generating units #1, #2 and #3 were placed in commercial operation December 1954, February 1955, and April 1955, respectively. At Dexter powerhouse the single unit was placed on-line May 1955. Dexter was placed in operation for re-regulation in December 1954. Dexter main unit circuit breaker and protective relays were updated in 2006. Dexter is remotely operated from Lookout Point.

REPORT OF THE SECRETARY OF THE ARMY ON CIVIL WORKS ACTIVITIES FOR FY 2007

Electrical power generation for the FY is shown on Table 28-P. Net power generated is marketed by Bonneville Power Administration

Freshets regulated by Lookout Point Lake project on Middle Fork Willamette River are shown in Table 28-K.

Local cooperation. Recreation opportunities are provided at three parks on Dexter Lake, two of which are operated by Oregon State Parks via lease instruments. Another park on Dexter is leased to the City of Lowell, OR. The north shore of Lookout Point Lake is operated by the Corps for recreation purposes; including Signal Point Boat Ramp, which was developed cooperatively with the State of Oregon. Ivan Oakes Campground is also operated by the Corps and was rehabilitated and commissioned during the summer of 2007. Future development will not require a cost sharing agreement.

Operations During FY. Maintenance: Routine operation and maintenance continued.

45. LOST CREEK LAKE, ROGUE RIVER BASIN, OR

Location. On Upper Rogue River at mile 153.6 about 30 miles northeasterly from Medford, OR.

Existing project. A rock and gravel-fill embankment dam about 327 feet high from streambed to crest, with an overall length of 3,750 feet with an impervious earth core and a gate-controlled concrete spillway. Powerhouse is on right abutment and houses two Francis-type turbines with installed capacity of 24,500 kilowatts each. Regulating outlet facility with provisions for temperature regulation for releases in interest of fishery enhancement is also on right bank. Reservoir 10 miles long provides 315,000 acre-feet of usable storage. Project provides control of runoff of drainage area of 674 square miles. In addition to flood control, project provides hydroelectric power generation, irrigation, municipal and industrial (M&I) water supply, fish and wildlife enhancement, water quality control and recreation benefits.

Construction of project initiated July 1967 is complete. Generating units 1 and 2 were placed in commercial operation July 6 and July 13, 1977, respectively. Physical in-service date for flood control was February 18, 1977. Final environmental statement was filed with Council on Environmental Quality in June 1972. Four parks at the project provide recreation opportunities. The State of Oregon operates 2 parks, including a 200-unit campground, part of Stewart State Park.

Electrical power generation for the FY is shown on Table 28-P. Net power generated is marketed by Bonneville Power Administration

Freshets regulated by Lost Creek Lake on Rogue River are shown in Table 28-K.

Local cooperation. Authorizing act required that local agencies furnish assurances prior to construction that demands will be made for future use of water supply storage within a period that will permit repayment of costs, including interest, allocated to water supply within life of the project; that State of Oregon take action, prior to construction to insure maintenance in stream of flows to be released for fishery; in addition, costs allocated to irrigation would have to be repaid in manner and to an extent consistent with reclamation laws and policies; and costs allocated to power will be repaid on a system basis by revenue from sales of power in Pacific Northwest Federal system by Bonneville Power Administration. A survey in September, 1980 of M&I water supply needs showed nine communities with water supply needs. A contract for M&I supply has been completed with five of the communities. Assurances for municipal and industrial water supply were obtained from six communities in Rogue River Valley.

On February 26, 1966 Oregon State Department of Fish and Wildlife agreed to operate Cole M. Rivers Fish Hatchery for mitigation and enhancement of fish. The Corps provides full funding for the operation and maintenance of the hatchery. The hatchery became operational in 1972.

Operations During FY. Maintenance: Routine operation and maintenance continued.

46. THE DALLES LOCK AND DAM - LAKE CELILO, WA AND OR

Location. On Columbia River at head of pool behind Bonneville Dam, about 192 miles above mouth of river and 88 miles east of Portland, OR.

Existing project. A dam, power plant, navigation lock, and appurtenant facilities. Improvement provides for navigation and hydroelectric power generation. Dam is designed for a normal pool at elevation 160 feet at mean sea level. Normal pool forms a reservoir extending upstream about 23 miles providing slack water to John Day Dam site. The Dalles Dam is 8,700 feet long and consists of a rock, gravel, and sand river closure section from Oregon shore connecting to a non overflow section which in turn joins powerhouse, then concrete non overflow sections connecting spillway with powerhouse and

PORTLAND, OR, DISTRICT

spillway with navigation lock at right abutment on Washington shore. Fish-passing facilities including two ladders and a fish lock are provided. Powerhouse was constructed for 14 units initially with substructure for eight additional units, an ultimate total of 22 units. Initial installation, excluding two 13,500-kilowatt fish-water units, was 1,092,000 kilowatts. The total generating capacity with all units was 1,806,800 kilowatts. Structures are founded on Columbia River basalt.

Principal data concerning lock, spillway, and powerhouse are set forth in Table 28-N.

Major construction of project initiated February 1952, was completed October 1960 when unit No. 14 was placed in commercial operation. Initial contract for additional units 15-22 was awarded in September 1967. Additional 8-unit phase was completed when unit 22 was placed in commercial operation in November 1973. In 1998, synchronous condensing capability was added to six units. It was done to provide increased stability to the BPA transmission system.

Basic recreation facilities were developed with construction funds at 4 parks on Lake Celilo. These parks were further expanded with code 710 funds in the late 60's and early 70's. Washington State Park Commission operates two parks under a lease agreement. In 2003 the Avery shared use site was developed on a test basis as part of the Columbia River Treaty Fishing Access Program. Dispersed recreation occurs at 4 minimally developed sites and upon over 4000 acres of lands and natural resource areas surrounding Lake Celilo. The shared use site and lands are managed by the Corps.

Studies for adding power generation facilities to the North Shore Fish Ladder Auxiliary Water supply System were initiated in October 1979 and completed in December 1980. These facilities would provide base load generation (3.5 megawatts) and would not impact the present operation of the North Fish Ladder. However, it was determined that it was not within the Chief of Engineer's authority to add these power facilities. A local interest, North Wasco County Public Utility District pursued the construction of these power facilities through the FERC license processes and awarded a construction contract in September 1989.

Seufert Visitor Center was completed in September 1980.

In October 1996 work began on major rehabilitation of powerhouse units 1-14. This rehab project was not funded in the FY 05 civil works appropriation. The Bonneville Power Administration, the Northwest Power Marketing Agency, signed an agreement with the Northwestern Division to fund the completion of this rehab project.

Electrical power generation for the FY is shown on Table 28-P. Net power generated is marketed by Bonneville Power Administration.

Local cooperation. Further recreation development will require cost sharing and assumption of operation and maintenance by local, non-federal sponsor.

Operations During FY. Maintenance: Routine operation and maintenance continued.

Capital improvements included: improvements to the drainage sump oil water separator, replacement of high voltage disconnects and replacement of heat pump #3.

Continued rehabilitation of Units 1-14 with new oil coolers, air coolers, bearings and servo motors.

Environmental

47. COLUMBIA RIVER FISH MITIGATION, OR AND WA

Location. At Bonneville, The Dalles, and John Day Dams on the Columbia River in the States of Oregon and Washington. This project encompasses work at five other locations within Walla Walla District.

Project Description. The eight Corps hydroelectric projects on the lower Columbia and Snake Rivers have been identified as a contributing factor in significantly reduced runs of migrating salmon and steelhead. Eleven stocks of salmon and steelhead that must pass through the project have been listed by NMFS as threatened or endangered under the Endangered Species Act. The Corps has recognized the need to reduce juvenile mortality and has undertaken measures that include fish bypass systems, surface bypass and barge and truck transportation. Spill, as an additional bypass route over the spillways, is being used to divert fish from entering turbine units, but it is a significant adverse economic factor due to forgone electric power generation.

The plan of improvement at the three Portland District dams (Bonneville, The Dalles and John Day) includes biological research, prototype development and testing, operational changes, and design and construction of new or modified fish passage facilities to improve passage efficiencies and survival. The types of improvements under investigation and development include modified juvenile guidance, bypass and outfall systems, surface passage technology, spillway gas abatement,

REPORT OF THE SECRETARY OF THE ARMY ON CIVIL WORKS ACTIVITIES FOR FY 2007

reduced turbine passage injury and mortality, adult fish ways, and juvenile and adult fish monitoring facilities. Other related investigations include studies to analyze impacts of federal Columbia River hydro system operation and other activities on estuary habitat, avian and sea lion predation and factors affecting adult returns and spawning.

The estimated project cost, excluding Bonneville Power Administration contributions, is \$1,600,000,000 which includes improvements in Walla Walla District and in Portland District. The Bonneville Power Administration provided \$9,783,000 for design of the Bonneville juvenile fish monitoring facility and contributions to the construction of the monitoring facility at John Day Dam. For information on the planned improvements at McNary and Snake River dams see Walla Walla District's Annual Report

Local cooperation. None required.

Operations During FY. New work: General: Continued to collect biological and hydraulic data, develop alternatives to improve existing fish bypass methodology and systems, install passage monitoring technology, improve turbine passage survival, and evaluate adult lamprey passage issues.

Bonneville Dam: At the 2nd Powerhouse, continued construction of guidance improvements for the screened bypass system. Continued evaluations of 1st Powerhouse passage and spillway measures. Initiated construction of a fore bay guidance curtain to improve juvenile passage through the surface bypass corner collector at the 2nd powerhouse.

Dalles Dam: Continued passage and survival studies, and evaluations of additional spillway measures, fore bay guidance, sluiceway modifications, and adult ladder improvements. Initiated design document for a new extended downstream spill wall to improve juvenile survival in the tailrace.

John Day Dam: Continued evaluations of alternative juvenile passage improvements, including surface bypass facilities and tailrace measures. Initiated construction of spillway surface bypass weirs for testing in 2008.

48. WILLAMETTE RIVER TEMPERATURE CONTROL, OR

Location. At Blue River and Cougar Lake projects in the McKenzie River sub-basin of the Willamette River basin in western Oregon.

Project Description. The initial project authorization provides for retrofitting the intake tower structures with movable weir intakes to allow modification of water temperatures downstream from Blue River and Cougar projects. A new tower was commissioned at Cougar in 2005 and has proven very effective in emulating natural river temperatures, benefiting Willamette Spring Chinook salmon. Previously, water temperatures were cooler in the spring/summer and warmer in the fall/winter than pre-project conditions, impacting fisheries in the McKenzie sub-basin. Especially affected was Willamette spring Chinook salmon and bull trout, both species of national and regional significance. Construction of the Blue River temperature control tower has been deferred. The estimated total project cost is \$55,000,000.

Local cooperation. None required.

Operations During FY. New Work: Finalized a Post Authorization Change Report which recommends a permanent fish trap and haul facility below Cougar Dam, extended biological monitoring, and a reduction in future hatchery mitigation if natural production above Cougar Dam, is sustained. Prepared a final design and plans and specifications for the new trap and haul facility.

49. LOWER COLUMBIA RIVER ECOSYSTEM RESTORATION

Location. The Lower Columbia River extends from the mouth of the Columbia River to river mile (RM) 145 at Bonneville Lock and Dam. The study areas include the estuary of the Columbia River and all of the tributaries of the Columbia River that are tidally influenced, which include the Willamette River up to Willamette Falls. The river divides the states of Oregon and Washington throughout this area.

Project Description. Section 536 of the Water Resources Development Act of 2000, Public Law 106-541. This program provides the authority to the Secretary to conduct studies and implement ecosystem restoration projects for the lower Columbia River and Tillamook Bay estuaries in Oregon and Washington. The projects will be for the protection, monitoring, and restoration of fish and wildlife habitat and are to have no adverse effect on specified water related needs or private property rights. Actions include protection and enhancement of 10,000 acres of tidal wetlands and other key habitats in the Columbia River estuary over 10 years, beginning in 2001, to rebuild productivity for listed

salmon and steelhead populations. Operation and maintenance of projects is a non-Federal responsibility. Implementation costs of projects on Federal lands will be 100% Federal expense and the operations and maintenance will be the responsibility of the Federal agency that manages the lands.

Current year costs are shown in Table 28-A.

Local cooperation. Studies under Section 536 are subject to the cost sharing requirements of Section 105 of WRDA 1986, including studies on Federal lands. Projects implemented under Section 536 will be cost shared 35% Non-Federal and 65% Federal, and up to 50% of the non-Federal share of project implementation costs can be in-kind services.

Operations During FY. New Work: Activities included ecosystem restoration site identification, plan formulation, monitoring and coordination with local sponsors. Construction continued on the Crims Island site with completion scheduled for FY 2008. Construction continued on the Columbia River Riparian site.

50. ENVIRONMENTAL ACTIVITIES UNDER SPECIAL AUTHORIZATION

Modifications to Structures and Operations of Constructed Corps Projects to Improve the Quality of the Environment, Pursuant to Section 1135 of the 1986 Water Resources Development Act, Public Law 662, 99th Congress, as Amended.

This program provides the authority to modify existing civil works projects to restore the environment. A non-federal entity is required to sponsor the project. The project must accomplish restoration by modifying a Corps project or operation of a Corps project, or be located on Corps project lands. The project must be feasible and consistent with the authorized purpose. The non-federal sponsor generally must assume responsibility of the operation and maintenance associated with the project.

Planning studies, detailed design, and construction costs are shared by the Corps 75 percent and non-federal sponsor 25 percent. Total project costs cannot exceed \$6.7 million with the federal share limited to \$5,000,000 without specific congressional authorization.

See Table 28-L for expenditures under Section 1135 during the FY.

Four projects were under construction during FY 2006.

Lower Columbia Slough, OR

Location: The project modification is located in the City of Portland, Oregon along the Columbia Slough

Project description: Columbia Slough represents a portion of the historic flood plain of the Columbia River extending about 20 miles eastward from the Willamette River to the Sandy River. In its natural state, the flood plain was unstable and the Columbia River seasonally inundated this area. A network of lakes, waterways and wetlands spread over the entire area. It was thickly forested along shorelines and low areas, and was also made up of wetland prairie and oak savannah, bordered by riparian forest. It supported vast populations of waterfowl and other birds, elk, deer, river otter and other smaller mammals. In the 150 years since the first settlers began to adapt the flood plain to their own uses, the area has been transformed from a natural system of lakes, sloughs, and wetlands into a highly managed water system of levees and pumps to provide drainage and flood damage reduction. The project modifies channel and culvert conditions in the Columbia Slough, creates wetlands and restores portions of the riparian buffer/wildlife corridor along the slough. Specific actions include creation of wetland benches/islands along 7.5 miles of the slough replacement of 5 culverts within the slough system, and restoration of approximately 14 acres of riparian and open water habitat.

Local cooperation: The City of Portland signed a Project Cooperation Agreement (PCA) for the project on 28 September 2001.

Operations During FY: No construction was completed this FY due to lack of funding.

Fern Ridge Marsh, OR

Location: This project modification is located at the Fern Ridge Lake project on the Long Tom River, a Tributary of the Willamette River approximately 6 miles west of Eugene, Oregon.

Project description: The Fern Ridge Marsh Restoration Project entails marsh restoration and management actions on 347 acres in the western portion of the Fisher Butte Management Unit (West Fisher Butte sub-unit) at Fern Ridge Lake Project. The restoration will restore and provide for management of 347 acres of marsh habitat via construction of 7 water control structures, 15,900 lineal feet of dikes and rock dikes (carp excluders)

REPORT OF THE SECRETARY OF THE ARMY ON CIVIL WORKS ACTIVITIES FOR FY 2007

within the drawdown zone of Fern Ridge Lake Project. The general intent of the proposed action is the restoration of a more diverse and productive marsh plant and wildlife community in areas currently dominated by reed canary grass. This species is an exotic plant found in extensive stands in shallow water areas around the reservoir perimeter. The total project cost, including lands, is estimated at approximately \$540,000.

Local cooperation: The Oregon Department of Fish and Wildlife signed a local cooperation agreement for the project on July 19, 1999.

Operations During FY: No construction activities were performed this FY.

Fox Creek, OR

Location: This project is located in the city Rainier, Oregon at the mouth of Fox Creek. Fox Creek enters the Columbia River at river mile 67+20.

Project description: The Fox Creek project modifies a dredged material disposal site associated with the Federal Navigation Channel. Flows from Fox Creek were routed through a 72-inch culvert during routine O&M maintenance dredge material disposal actions in 1985. Dredged material was then placed over the culvert. The project modification consists of excavating the dredged material from the former streambed (approximately 535 feet) and restoration of the creek to its approximate former course and gradient. Additionally, reed canary grass was removed over approximately 200 feet of the existing stream channel upstream of the dredged material disposal site. Native riparian trees will be planted along the entire length of the project.

Local Cooperation: The City of Rainier signed a Project Cooperation Agreement on 16 August 2001.

Operations During FY: No construction activities were performed this FY.

Amazon Creek Wetlands Restoration, OR

Location: This project modification is located along Amazon Creek at the western edge of the city of Eugene, Oregon. Amazon Creek is a major drainage channel for Eugene, conveying flows into the Long Tom River, a tributary of the Willamette River.

Project description: Prior to settlement in the 1850's, seasonal wet prairie habitat dominated the landscape of the lower Amazon Creek basin and

much of the Willamette Valley. Since then, nearly all of this wetland type has been lost to agriculture and urban uses. The Amazon Creek Flood control Project built by the Corps in the 1950's further degraded the wetland hydrology when the creek and connecting drainages were canalized and lined with levees. It is estimated that less than one percent of the Willamette Valley's historic wet prairies remains today. The lower Amazon Creek Wetlands Project will restore the historic hydrology and vegetation community to almost 400 acres of wet prairie. All of the land within the project area is owned by the City of Eugene and BLM, having been acquired for wetland protection and restoration purposes. The total project cost, including lands and recreation facilities, is estimated at approximately \$6.2 million.

Phase I involved removing existing levees along Amazon Creek and associated drainages and restoring the channels more natural meandering stream configurations. New levees were set back around the margin of the wetland restoration area to maintain the flood control function of the project. Interior wetland areas will now be subject to the high frequency flooding that occurred prior the flood control project. The new levees were seeded with a combination of native upland grass species. A slotted weir was constructed to maintain the complex flow relationship between the connected channels. Culverts, some gated, will also be installed to maintain drainage and to allow manipulation of surface hydrology for wetland management purposes. Disturbed areas along the stream channels and the old levee footprints will be seeded and planted with native wet prairie, emergent marsh and vernal pool species. The total cost for this completed in 1999 was \$2.0 million.

Phase II involves removal of non-native plant materials on about 120 acres of wetlands and replacement with native wet prairie plants. A major portion of this effort has been the collection and propagation of native plants and seeds. Phase II also includes modification of surface hydrology through filling and restoration of old agricultural drainage channels draining into Amazon Creek. Phase II was initiated in 2000 and completed in 2003.

Phase III construction of recreation facilities was initiated in summer 2002 and completed in March 2003. Facilities included access points, viewing structures, interpretive displays and trails.

Local cooperation: The City of Eugene signed a Project Cooperation Agreement (PCA) for the project on October 26, 1998. The Bureau of Land Management under its West Eugene Wetlands Project also supports the project. In 1999 the City of Eugene requested that the agreement be modified to

PORTLAND, OR, DISTRICT

include the addition of recreation facilities in accordance with recent Corps guidance. The modified PCA was signed in spring 2001

Operations During FY: Activity consisted of developing the Operations Manual.

Restoration and Protection of Aquatic Ecosystems to Improve the Quality of the Environment, Pursuant to Section 206 of the Water Resources Development Act of 1996, Public Law 303, 104th Congress, as Amended. This program provides the authority to perform aquatic ecosystem restoration. A non-federal entity is required to sponsor the project. The non-federal sponsor generally must assume responsibility of the operation and maintenance associated with the project.

Planning studies, detailed design, and construction costs are shared by the Corps 65 percent and non-federal sponsor 35 percent. Total project costs cannot exceed \$6.7 million with the federal share limited to \$5,000,000 without specific congressional authorization. Two projects were under construction during the FY

See Table 28-L for expenditures under Section 206 during the FY.

Eugene Delta Ponds, OR

Location: This project is located in the City of Eugene, Oregon adjacent to the Willamette River.

Project Description: This project is to improve access, connectivity, and water quality within the Delta Ponds by reestablishing a hydrologic connection to the Willamette River and within the pond complex. Further objectives include grading the margins of the ponds to establish flat slopes to restore emergent wetland, forested riparian and other habitats indigenous to this reach of the Willamette River and to control and manage non-native weedy vegetation. Benefits to wildlife and fish habitat would accompany improved water quality, the restoration and enhancement of vegetation, and the establishment of structure such as boulders, large woody debris in the ponds.

Local Cooperation: The City of Eugene, Oregon signed a Project Cooperation Agreement (PCA) for the project on 22 December 2003.

Operations During FY: A two barreled gated culvert structure was completed connecting the upper ponds to the middle pond complex. This provides surface water and fisheries access to these ponds.

East Birch Creek, OR

Location: This project modification is located along an approximately 1-mile reach of East Birch Creek between river miles 8.0 and 9.5 (river km 12.9 and river km 15.2) in Umatilla County, Oregon approximately 8 miles (12.9 km) south of the town of Pilot Rock. East Birch Creek is a fork of Birch Creek, a headwater tributary of the Umatilla River, which empties into the Columbia River.

Project description: Historically, this reach was an important spawning and rearing area for summer run steelhead trout. The Umatilla stock of summer steelhead was designated part of the Mid-Columbia Evolutionarily Significant Unit (ESU) by National Marine Fisheries Service (NMFS) when it listed that stock as "Threatened" under the Endangered Species Act. Land use practices and channel modifications have resulted in physical changes that have degraded habitat quality to a considerable extent. Habitat degradation has resulted primarily from removal of riparian vegetation, disruption of natural geomorphic processes, alteration of stream flows and increased sediment input. Bioengineering techniques are being utilized to the extent practicable to restore salmonid habitat quality, reduce unnatural bank erosion, restore natural channel function, and associated aquatic and riparian biological processes in East Birch Creek. This approach involved development of plans for erosion resistant stream restoration treatments using primarily natural fluvial processes and natural materials. The riparian zone, essential for aquatic ecosystem restoration, has been re-vegetated with native species.

The other primary goal of the environmental restoration work is to restore geomorphic function of the channel, which will generally mean a narrower, deeper, more meandering channel with more stable, vegetated banks and more diverse in stream habitat. This will result in a self-maintaining system that meets specific habitat needs of ESA listed summer steelhead. Summer steelhead uses the proposed project reach for spawning and rearing, therefore, our restoration plan will be based largely on habitat requirements for these life stages.

Local cooperation: Oregon Department of Fish and Wildlife signed a Project Cooperation Agreement (PCA) for the project on 16 August 2001.

Operations During FY: No construction activities were performed this year.

General Investigations

50. SURVEYS

FY costs were \$688,983 of which \$215,224 was for Ecosystem Restoration Studies, \$53,210 for Watershed/Comprehensive Studies, \$374,788 for Miscellaneous Activities and \$45,761 for Coordination with Other Agencies. Contributed funds in the amount of \$202,646 were expended for: \$14,473 Planning Assistance to States Program, \$47,860 Willamette R. Floodplain Restoration Study and \$140,313 Amazon Creek Study.

52. COLLECTIONS AND STUDY OF BASIC DATA

Flood Plain Management Services. Flood Plain Management Services Program comes under Section 206 of the 1960 Flood Control Act, PL 86-645, as amended. Through technical services and planning guidance, the program encourages comprehensive flood plain management planning at all levels to reduce the potential for losses to life and property from floods. Federal and non-Federal agencies and the private sector are assisted with planning and development information for flood hazard areas. This assistance is in the form of local flood plain regulations, Federal Insurance Program requirements, and Executive Order 11988 guidelines. Such assistance may include factual flood information (available or determined) and interpretation on flood frequencies, extent of flooding, floodwater velocity, duration of flooding and floodway limits.

FY costs totaling \$152,401 were associated with the following tasks under the Flood Plain Management Services Program: FPMS Unit \$32,000; Technical Services \$29,921 Quick Responses \$3,708; and special studies \$86,772. FPMS staff attended State of Oregon Map Modernization meetings and provided technical and programmatic information for local communities. Portland District FPMS staff also met with several communities in the Portland District and discussed floodplain management issues and methods. Scopes of work for improving mapping and planning were completed for City of Prineville and Winston in Oregon.

Crest stage gages were constructed and installed on streams in an ongoing program to record data from flood events. About 35% of these gages were serviced and data recovered during the year. The Crest stage gage program now has approximately 214 gages located in the Portland District

Hydrologic Studies: Regulated and unregulated flood frequency flow curves for 14 points in the Willamette River Valley and 6 points in the Rogue

River Valley were updated through water year 2005. FY costs were \$31,846.

Other

53. FLOOD CONTROL AND COASTAL EMERGENCIES

Disaster Preparedness Program: This program encompasses activities associated with preparing and responding to flood events and rehabilitating flood damage reduction systems active in our Rehabilitation and Inspection Program. We are also authorized to plan for all hazards, natural and human caused. Activities include: maintaining an Emergency Operation Center with 24/7 activation capability, publishing plans and procedures, establishing and training response teams, exercising plans and teams, and coordinating with Federal, state and local agencies. This program maintains response supplies and equipment used to supplement state and local requests for flood damage reduction assistance.

Significant activities during FY 2007:

1. Debris Management Team was reduced from three tiers during Hurricane Katrina response, to 24 members.
2. State and Local Liaison program was expanded to include Multnomah County. The program now has at least two liaisons assigned to Multnomah County Drainage District #1, City of Portland, Multnomah County, State of Oregon and four Sectors for a total of 20 members.
3. All Hazard Plans, Training and Exercise Program Manager deployed to Afghanistan for one year. A temporary back fill was obtained from CENAP during August.
4. Department of Homeland Security Top Officials #4 Exercise preparations were conducted during the whole year; exercise in October.

Public Law 84-99 Response: FY 2007 was a drier than normal year; no response.

Public Law 93-288 Assistance to FEMA: No new activity during FY2007.

Public Law 84-99 Recovery: Following the December 2005 – January 2006 coastal storms, rehabilitation assistance was completed in September 2007 for Clatsop County Diking Improvement Company #9, Clatsop County, Oregon.

PORTLAND, OR, DISTRICT

Continuing Eligibility Inspections: New eligibility and inspection standards and FEMA coordination requirements were initiated in FY2007. Portland District was selected to pilot the National Levee Inventory Data Base Development effort. Also, Midland Drainage Improvement Company was selected to pilot the Periodic Inspection; a comprehensive investigation done every five years. Inspections were completed for all Federal and non-Federal flood damage reduction levee systems, but sponsors of bank protection projects received self-inspection letters due to limited funds. The Levee Owner's Manual for Non-Federal Flood Damage Reduction Projects was revised.

Initial Eligibility Inspections: An IEI request was made by the Port of Ridgefield, Clark County, Washington. Project Information Report not initiated due to heavy work load resulting from new CEI standards.

54. GENERAL REGULATORY FUNCTIONS

Regulatory Program regulates activities in all waters of the United States, including wetlands, pursuant to Section 10 of the Rivers and Harbors Act of 1899 and Section 404 of the Clean Water Act. The Corps of Engineers regulatory program is

accomplished through a Department of the Army permit program. During FY 2007, the Portland District completed 700 permit actions during the year and 250 other non-permit regulatory actions, i.e. no permit required, jurisdictional calls, etc. Of the permit actions, only 1 was denied. At the request of permit applicants, another 45 actions were withdrawn.

In addition to these permit actions; the district conducted 300 inspections of issued permits. These inspections identified 24 situations of non-compliance that were subsequently evaluated. During the reporting period 20 compliance violations were resolved by modification of the issued permit, voluntary restoration, administrative action or other means. Additionally, 100 alleged unauthorized activities/violations with no associated permit were reported to the district. Investigations of these activities resulted in 10 new enforcement actions being opened. Issuance of a permit, voluntary restoration, administrative action or other means resolved 16 other pending cases. At the end of the reporting period, 10 enforcement actions remained unresolved.

See Table 28S for expenditures during FY.

Footnotes:

1. Excludes \$17,742 contributed funds for new work.
2. Includes \$1,529,413 for previous project.
3. Includes \$150,955 allotted from deferred maintenance funds, Code 700, \$62,296 for public works accelerated program repair, and \$1,214,865 for previous project. Excludes \$24,320 expended from contributed funds prior to 1964.
4. Excludes \$31,636 contributed by city of Astoria and Bumble Bee Sea Foods, Astoria, OR (not part of regular project). Includes \$223,026 expended from contributed funds prior to 1964 and \$428,136 contributed by Port of Portland and \$14,792 by Port of Vancouver.
5. Includes \$84,930 rehabilitation funds.
6. Includes \$1,986,253 for previous project and \$608,111 allotted and expended under Code 710, recreation facilities at completed project. Excludes \$500,000 contributed funds.
7. Includes \$2,186,000 for previous project and \$1,188,625 under deferred maintenance, Code 700.
8. Includes funds under Code 721 (small authorized projects) \$30,393. Entrance to Oregon slough; \$161,897, Camas-Washougal Turning Basin; \$227,908, Hood River Small Boat Basin; \$157,470, Bingen, WA, Barge Channel; and \$140,619, The Dalles Small Boat Basin.
9. Includes \$2,033,408 under code 700 (Deferred Maintenance).
10. Includes \$802,096 for previous project. Excludes contributed funds.
11. Includes \$178,801 for previous project and \$1,444,640 under Code 700, Deferred Maintenance. Excludes \$8,387 contributed funds.
12. Includes \$340,726 for previous project. Excludes \$72,891 contributed funds. Includes \$36,000 under Code 711.

TABLE 28-A

COST AND FINANCIAL STATEMENT

Footnotes (Cont'd)

13. Includes \$41,467 for previous project and \$78,500 under Code 700, Deferred Maintenance.
14. Excludes \$9,900 contributed funds.
15. Excludes \$13,779 (other funds) contributed for additional landfill and extension of drainage lines.
16. Includes \$21,000, Wedderburn Study Funds.
17. Includes \$1,159,357 for previous project.
18. Includes \$10,611 for previous project and \$188,000 under code 700, Deferred Maintenance.
19. Includes \$77,209 for previous project and \$57,767 under Code 720 (Small Authorized Projects) Garibaldi Boat Basin. Excludes \$592,622 contributed funds and \$300,000 channel dredging by local interest.
20. Includes \$71,498 for previous project. Excludes \$6,450 expended from contributed funds.
21. Includes \$39,242 for previous project. Excludes \$6,450 expended from contributed funds.
22. Excludes \$300,000 contributed funds.
23. Includes \$452,110 on operation and care from permanent indefinite appropriation and \$150,000 under maintenance and operation of dams and other improvements of navigable waters.
24. Includes \$707,313 for previous project and \$170,000 appropriated from public works acceleration program for North Jetty rehabilitation.
25. Includes \$6,026 for previous project.
26. Includes \$96,000 pro rata share of site selection costs in lieu of Quartz Creek Lake.
27. Includes \$1,639,828 allotted and expended under Code 710, recreation facilities at completed project.
28. Includes \$167,878 special recreation use fees. Includes \$201,262 under maint. and operation of dams and other improvements to navigable waters.
29. Includes \$1,038,790 allotted and expended under Code 710, recreation facilities at completed project.
30. Includes \$1,026,264 allotted and expended under Code 710, recreation facilities at completed project.
31. Includes \$3,894,673 allotted and expended under Code 710, recreation facilities at completed project and \$136,482 allotted under 721 (small authorized project) reservoir modifications. Excludes \$2,100 (other funds contributed).
32. Includes \$9,750 allotted under Code 700, deferred maintenance. Includes \$241,678 under maintenance and operation of dams and other improvements to navigable waters.
33. Excludes \$93,733 contributed funds.
34. Includes \$12,200,000 Public Works Administration funds, \$20,240,700 National Recover Act Funds, \$27,195,400 modification for peaking funds, \$136,457 Code 710, recreation facilities at completed project funds and \$6,000 power unit's funds.
35. Includes \$540,000 deferred maintenance funds, Code 700 and \$1,692,148 maintenance and operation of dams and other improvements of navigable waters. Excludes 96-89X4045 funds.
36. Includes \$96,000 pro rata share of site selection costs in lieu of Quartz Creek Lake. Includes \$1,789,988 allotted and \$1,789,954 expended for Strube Lake and Cougar Additional Unit.
37. Includes \$113,000 pro rata share of site selection costs in lieu of Quartz Creek Lake.
38. Includes \$983,934 under maintenance and operation of dams and other improvements of navigable waters. Excludes 96-89X4045 funds
39. Includes \$82,408 under maintenance and operation of dams and other improvements of navigable waters. Excludes 96-89X4045 funds.
40. Includes \$25,984 allotted and expended under 710, recreation facilities at completed projects.
41. Includes \$1,361,900 for O&M and fish evaluation of Spring Creek Hatchery (funds revoked and paid to USFWS at OCE level, but a cost to project); includes \$423,800 special recreation use fees. Includes \$933,438 under maintenance and operation of dams and other improvements of navigable waters. Excludes 96-89X4045 funds.
42. Includes \$457,611 allotted and expended under 710, recreation facilities at completed projects.
43. Includes \$991,562 under maintenance and operation of dams and other improvements of navigable waters. Excludes 96-89X4045 funds.
44. Includes \$978,478 under maintenance and operation of dams and other improvements of navigable waters. Excludes 96-89X4045 funds.
45. Includes \$1,140,747 allotted and expended under 710, recreation facilities at completed projects, and \$52,997,220 allotted and expended additional units 15 - 22 funds.
46. Includes \$721,490 under maintenance and operation of dams and other improvements of navigable waters. Excludes 96-89X4045 funds.
47. Includes \$936,376 under maintenance and operation of dams and other improvements of navigable waters. Excludes 96-89X4045 funds.
48. Includes \$66,678 under maintenance and operation of dams and other improvements of navigable waters.
49. Includes \$861,852 under maintenance and operation of dams and other improvements of navigable waters. Excludes 96-89X4045 funds.
50. Contributed funds initiated w/State of Oregon ODOT Challenge Partnership Agreement 2006.

PORTLAND, OR, DISTRICT

TABLE 28-B

AUTHORIZING LEGISLATION

See Section in Text	Date Authorizing Act	Project and Work Authorized	Documents
1.	Mar 02, 1945	CHETCO RIVER, OR To provide for the stabilization of the channel, by constructing jetties and dredging . Modification of channel entrance and channel improvements. Deepen channel 2 feet to 16 feet, extend the existing jetty S. system 750 feet for the North, and 1,250 feet for the South jetty. Assume responsibility for O&M of the approximately 200-foot-long access channel to the south commercial boat basin consistent with authorized project depths.	Rivers and Harbors Act of 1945, H. Doc. 817,77th Cong., 2d Sess S. Doc. 21, 89th Cong., 1st Sess. Doc. 10, 96th Cong., 1st Sess. PL 102-580, 102nd Cong.
	Oct 27, 1965		
	Dec 04, 1981		
	Oct 31, 1992		
2.	Feb 27, 1911	COLUMBIA AND LOWER WILLAMETTE RIVERS BELOW VANCOUVER, WA AND PORTLAND, OR 2 pipeline dredges and accessories. Increasing main channel to 30 feet. Consolidating improvement below Portland, OR and between Vancouver, WA and mouth of Willamette. For the Cathlamet channel. Construct an additional dredge (dredge was not built) and accessories for better maintenance, and construct contraction works. Channel from deep water in Willamette Slough to deep water in Columbia River. Depth of 25 feet and width of 300 feet from mouth of Willamette River to Vancouver, WA. Closing east channel at Swan Island in Willamette River on condition that main channel to be opened to project dimensions on west side of island by Port of Portland. For a 35-foot channel 500 feet wide from Portland to the sea. A channel 28 feet deep and 300 feet wide from mouth of Willamette River to Vancouver, with 2 turning basins, each generally 28 feet deep by 800 feet wide by 2,000 feet long. A channel in Columbia River from mouth of Willamette to interstate highway bridge at Vancouver, WA, 30 feet deep and 300 feet wide, with 2 turning basins at Vancouver. Maintenance of not to exceed 35 foot depth at low water in Portland Harbor and Willamette River between its mouth and Broadway Bridge at Portland. Auxiliary channels, 30 feet deep, 300 feet and 500 feet at St. Helens. Extension of lower turning basin at Vancouver, WA, 1,000 feet downstream. An auxiliary channel 24 feet deep and 200 feet wide along waterfront at Rainier, OR. Improvement of old mouth of Cowlitz River. An auxiliary channel in vicinity of Longview, WA. 		COLUMBIA AND LOWER WILLAMETTE RIVERS BELOW VANCOUVER, WA AND PORTLAND, OR (Cont'd)	
	Jul 24, 1946	A small-boat mooring basin at Astoria, OR.	H. Doc. 692, 79th Cong., 2d Sess. ¹
	Oct 23, 1962	A channel 35 feet deep and 500 feet wide from mouth of Willamette River to interstate highway bridge at Vancouver, WA, with 2 turning basins of same depth.	H. Doc. 203, 87th Cong., 1st Sess.
	Oct 23, 1962	A channel 40 feet deep and 600 feet wide from at Vancouver, WA, to mouth of Columbia River; a turning basin Vancouver, WA, a turning basin at Longview, WA, and a channel 40 feet deep in Willamette River from mouth to Broadway Bridge which encompasses Portland Harbor area.	H. Doc. 452, 87th Cong., 2d Sess. ¹ 76 Stat. 1173
3.		COLUMBIA RIVER AT BAKER BAY, WA	
	Dec 11, 1933	East Channel	Public Works Administration
	Aug 30, 1935	Main channel	H. Doc. 44, 73d Cong., 1st Sess.
	Mar 02, 1945	West channel 8 feet deep.	H. Doc. 443, 76th Cong., 1st Sess.
	May 17, 1950	West channel 10 feet deep and mooring basin with protecting breakwaters.	S. Doc. 95, 81st Cong., 1st Sess.
4.		COLUMBIA RIVER BETWEEN CHINOOK, WA AND HEAD OF SAND ISLAND	
	Jun 20, 1938	Channel 8 feet deep.	Rivers and Harbors Committee Doc. 50, 75th Cong., 2d Sess.
	Sep 03, 1954	Channel 10 feet deep and mooring basin.	S. Doc. 8, 83d Cong., 1st Sess. ¹
5.		COLUMBIA RIVER AT THE MOUTH, OR AND WA	
	Mar 03, 1905	Extend South Jetty and construct North Jetty and dredging.	Rivers and Harbors Act of 1905, H. Doc. 94, 56th Cong., 1st Sess.
	Dec 22, 1944	Construction, operation, and maintenance of recreation facilities.	Sec. 4, Flood Control Act of 1944, As amended
	Sep 03, 1954	Bar channel of 48-foot depth and spur jetty on north shore. ⁹	H. Doc. 249, 83d Cong., 2d Sess. ¹
	Jul 30, 1983	Deepening the northernmost 2,000 feet of the channel	PL 98-63, 97 Stat. 313
	May 24, 1995	Cross-section to 55 feet. Lower a 500' section of south jetty at river mile 7.	Sec. 1135, PL 99-662, As amended
6.		COLUMBIA RIVER BETWEEN VANCOUVER, WA, AND THE DALLES, OR	
	Aug 26, 1937	Construct a channel 27 feet deep by 300 feet from Vancouver, WA, to Bonneville, OR.	Rivers and Harbors Act of 1937, H. Doc. 94, 74th Cong., 2d Sess. ¹
	Mar 02, 1945	Construct Camas-Washougal turning basin.	H. Doc. 218, 76th Cong., 1st Sess.
	Jul 24, 1946	Construct a channel 27 feet deep by 300 feet wide from Bonneville, OR, to The Dalles, OR.	H. Doc. 704, 79th Cong., 2d Sess.
	Jul 24, 1946	Construct a boat basin at Hood River, OR, 10 feet deep, 500 feet wide, by 1,300 feet long.	H. Doc. 704, 79th Cong., 2d Sess.
	Jul 24, 1946	Construct a barge channel at Bingen, WA, 10 feet deep, 200 feet wide, by 1 mile long, and an access channel 7 feet deep, 100 feet wide, by 1,000 feet long to natural Mooring basin.	H. Doc. 704, 79th Cong., 2d Sess.
	Jul 24, 1946	Construct The Dalles Harbor 8 feet deep, 400 feet wide by 800 feet long.	S. Doc. 89, 79th Cong., 1st Sess. ¹
	Aug, 17, 1999	Maintenance of commercial dock facilities navigation Access (part of John Day drawdown study program).	PL 102-104, 102d Cong., 1st Sess., 105 Stat. 507

PORTLAND, OR, DISTRICT

7.		COLUMBIA RIVER CHANNEL IMPROVEMENTS, OR	
	Aug 17, 1999	Deepen the existing navigation channel to 43 feet.	Water Resources Development Act of 1999, PL 106-53, 113 Stat. 280
8.		COOS BAY, OR	
	Jun 25, 1910	Dredging the Ocean Bar Channel.	Rivers and Harbors Act of 1910, H. Doc. 958, 60th Cong., 1st Sess.
	Mar 02, 1919	A channel 22 feet deep to Smith's Mill.	H. Doc. 325, 65th Cong., 1st Sess.
	Sep 22, 1922	Restore North Jetty 9,600 feet long, constructs a South Jetty about 3,900 feet long, extend 22-foot bay channel from Smith's Mill to Millington.	H. Doc. 150, 67th Cong., 2d Sess.
	Jan 21, 1927	Extend jetties to such lengths as may be practicable within estimate of total cost of jetties, \$3,250,000 given in H. Doc. 150, 67th Cong.	H. Doc. 320, 69th Cong., 1st Sess.
	Jul 03, 1930	A channel 24 feet deep and 300 feet wide, through Pigeon Point Reef, following a location along westerly side of bay.	H. Doc. 110, 70th Cong., 1st Sess. ¹
	Aug 30, 1935	For 24-foot channel from Pigeon Point Reef to Smith's Mill and a turning basin above Marshfield.	S. Committee Print, 73d Cong., 2d Sess. ¹
	Jul 24, 1946	Increased dimensions of channel across bar and to Isthmus Slough and turning basin opposite Coalbank Slough and at city of North Bend; anchorage basins at mile 3.5 and near mile 7.	S. Doc. 253, 79th Cong., 2d Sess.
	Jun 30, 1948	A mooring basin and connecting channel at Charleston.	H. Doc 646, 80th Cong., 2nd Sess.
	Dec 31, 1970	Increase dimensions to provide for bar channel 45 feet deep, inner channel 35 feet deep to mile 15, and deepening and widening existing turning basins and anchorage area.	H. Doc. 151, 91st Cong., 2d Sess.
	Nov 13, 1995	Deepening the authorized channel by 2 feet and expanding one turning basin. The entrance would be 47 feet deep to River Mile (RM) 1 and the inner channel 37 feet between RM 1 and 15.	PL 104-46, 109 Stat. 409
9.		COQUILLE RIVER, OR	
	Jun 25, 1910	Dredging shoals between mouth and Riverton, and removing obstruction between mouth of North Fork and Bandon.	Rivers and Harbors Act of 1910, H. Doc. 673, 61st Cong., 2d Sess.
	Mar 02, 1919	For a 13-foot channel from ocean to Bandon.	H. Doc. 207, 65th Cong., 1st Sess. ¹
	Jul 03, 1930	Deepen channel to 16 feet between sea and eastern end of North Jetty.	H. Doc. 186, 70th Cong., 1st Sess. ¹
	Aug 30, 1935	Present project depth between sea and eastern end of North Jetty.	S. Committee Print, 74th Cong., 1st Sess.
	Dec 22, 1944	Construction, operation, and maintenance of recreation facilities.	Sec. 4, Food Control Act of 1944, As amended
	Mar 02, 1945	For 13-foot depth from sea to a point 1 mile above Coquille River Lighthouse and snagging to State Highway Bridge.	H. Doc. 672, 76th Cong., 2d Sess. ¹

**TABLE 28-J WILLAMETTE RIVER AT WILLAMETTE FALLS, OR
PRINCIPAL FEATURES OF EXISTING CANAL AND LOCKS
(SEE SECTION 17 OF TEXT)**

Usable Lock Dimensions	Series of 4 locks, each 175 feet by 37 feet ¹
Lift of each lock	Lock 1 (Lower), 22.5 feet; Lock 2, 8.7 feet; Lock 3, 10.9 feet and Lock 4 (Upper), 8.1 feet ²
Depth of Miter Sills at Lower Water	Lower Lock, 8.4 feet; Upper Lock, 6 feet
Character of foundation	Rock
Kind of Dam	Fixed ³
Type of Construction	Concrete
Year of Completion	1873; Purchased by United States Apr. 26, 1915
Cost.....	Unknown; purchase price \$375,000

Footnotes:

1. A guard lock 210 by 40 feet, which is used only at higher states of water, is at upper end of canal basin.
2. A concrete division wall, 1,227 feet long, extending from Lock 4 to Guard Lock, separates upper basin of canal from head race, which formerly led directly from basin and supplied water for power plants operated by Crown Zellerbach Corp., and Portland Ry., Light & Power Co., which is now being operated by Portland General Electric Co.
3. The dam is owned by private parties.

TABLE 28-N

**PRINCIPAL DATA CONCERNING COLUMBIA RIVER
NAVIGATION LOCK, SPILLWAY DAM, AND POWERPLANT**

Project

Bonneville Lock and Dam OR and WA - Lake Bonneville (See Section 37 of Text)	NAVIGATION LOCK (NEW)	
	Dimensions:	
	Clear Width of Chamber	86 Feet
	Greatest Length Available for Full Width	675 Feet
	Lift (Vertical):	
	At Extreme Low Water and Normal Pool Level	66 Feet
	At Normal River Stage	59 Feet
	At Extreme High Water	About 30 Feet
	Depth Over Miter Sills at Adopted Low Water	19 Feet
	Character of Foundation	Andesite
	Open to Navigation	March 1993
	SPILLWAY DAM	
	Type of Construction	Concrete Gravity
	Completed	1938
	Capacity	1,600,000 CFS
	Elevation of Gate Sills on Crest of Spillway	23.3 Feet
	Height above Lowest Foundation	About 170 Feet
	Length of Dam Proper	1,090 Feet
	Length of Dam Overall	1,230 Feet
	Width at Base	200 Feet
	Gate Openings	18
	Crest Overflow (Above Mean Sea Level)	24 Feet Pool
	Elevation (Normal)(Above Mean Sea Level)	72 Feet
	POWERPLANT	
	Length (First Powerhouse)	1,027 Feet
Length (Second Powerhouse)	953 Feet	
Width (First Powerhouse)	190 Feet	
Width (Second Powerhouse)	235 Feet	
Height (Roof to Bedrock) (First Powerhouse)	190 Feet	
Height (Roof to Bedrock) (Second Powerhouse)	200 Feet	
Generator (Station Unit)	1 @ 5,000 kW	
Generators (First Powerhouse)	1 @ 48,000 kW	
	1 @ 59,500 kW	
	8 @ 60,000 kW each	
Generators (Second Powerhouse)	8 @ 66,500 kW each	
Fish water Supply Units (Second Powerhouse)	2 @ 13,100 kW each	
Total Rated Capacity	1,145,700 kW	
Speed	75 Revolutions per Minute	
John Day Lock and Dam, OR and WA - Lake Umatilla (See Section 43 of Text)	NAVIGATION LOCK	
	Clear Width	86 Feet
	Clear Length	669 feet
	Lift:	
	Minimum	97 Feet
	Average	105 Feet
	Maximum	113 Feet
	Minimum Water Depth Over Sills	15 Feet
	Opened to Navigation	April 1968
	SPILLWAY DAM	
	Type of Construction	Concrete Gravity
	Completed	March 1968
	Maximum Capacity	2,250,000 cfs
	Crest Elevation	210 Feet
	Control Gates:	
Type	Tainter	
Size, Width by Height	50 ft. by 58.5 Ft.	
Number	20	

**TABLE 28-N

**PRINCIPAL DATA CONCERNING COLUMBIA RIVER
NAVIGATION LOCK, SPILLWAY DAM, AND POWERPLANT**

Project

	POWERPLANT	
	Length	1,975 Feet
	Width	243 Feet
	Generating Units:	
	Number Installed	16
	Space for Additional	4
	Rating, Each	135,000 kW
	Total Installed Capacity	2,160,000 kW
	Total Potential Capacity	2,700,000 kW
	Maximum Structural Height	235 Feet
	First Power-On-Line	July 1968
	IMPOUNDMENT	
	Elevations: Normal Operating Range	268-257 Feet
	Maximum	276 Feet
	Flood Control Storage	500,000 Ac.-ft.
	Lake Length	76.4 Miles
	Lake Water Surface Area at Elevation 268	55,000 Acres
	Navigation Channel, Depth by Width	15 Ft. by 250 Ft.
	Length of Shoreline	200 miles
	NAVIGATION LOCK	
	Type	Single Lift
	Lift Normal	87.5 Feet
	Net Clear Length	675 Feet
	Net clear Width	86 Feet
	Normal Depth Over Upper Sill	20 Feet
	Minimum Depth Over Lower Sill	15 Feet
	Opened To Navigation	March 17, 1957
	SPILLWAY DAM	
	Type	Controlled
	Elevation of Crest	121 Ft. msl
	Top of Crest Gates	162 Ft. msl
	Number of Gates	23
	Size of Gates	50 by 43 Feet
	Height (Foundation to Crest)	120 Feet
	Design Flood	2,290,000 cfs
	POWERPLANT	
	Powerhouse Dimensions	240 by 2,150 feet
	Generators Main Units	14 @ 78,000 kW each
		8 @ 86,000 kW each
	Fish water Supply Units	2 @ 13,500 kW each
	Total Rated Capacity	1,807,000 kW
	Station Service Units	2 @ 3,000 kW each
The Dalles Lock and Dam, OR and WA - Lake Celilo (See Section 46 of Text)

Navigation

1. EDIZ HOOK, WA

Location. Ediz Hook and city of Port Angeles are on the Strait of Juan de Fuca in Clallam County, WA, about 100 miles northwest of Seattle. (See NOAA Survey Chart 18468.)

Existing project. Provides approximately 16,400 linear feet of rock revetment, together with initial beach replenishment and periodic renourishment. Project was completed in October 1978. (For further details, see Annual Report for 1979.)

Local cooperation. Fully complied with.

Terminal facilities. See Port Series No. 37. Surveys are displayed at U.S. Army Corps of Engineers, Water Resources Support Center and Navigation Data Center.

Operations During FY. Maintenance, erosion control, hired labor: Nearshore hydrographic survey was conducted. Preliminary planning activities in support of the navigation project were performed by the Project Manager.

Maintenance contract. None

2. EVERETT HARBOR AND SNOHOMISH RIVER, WA

Location. From Port Gardner Bay, at northern end of Possession Sound, an arm of Puget Sound at Everett, in northwestern Washington; and Snohomish River for 6.3 miles upstream of mouth. (See NOAA Survey Chart 18444.)

Existing project. Training dike extending from a point opposite 23rd Street northward 12,550 feet to outlet of Snohomish River, with spur dike extending 400 feet to pier-head line from north end of main dike; spur dike extending 1,410 feet westward from Preston Point; removal of a section of training dike north of Snohomish River outlet; channel 150 to 425 feet wide and 15 feet deep from deep water in Port Gardner Bay to 14th Street dock; thence a settling basin 700 feet wide, 1,200 feet long, and 20 feet deep, thence a channel 150 feet wide and 8 feet deep upriver to head of Steamboat Slough, a total distance of about 6.3 miles; settling basin within upper channel reach about one mile long with a capacity of one million cubic yards and maintaining East Waterway to 30 feet deep. Plane of reference is

mean lower low water. Range between mean lower low water and mean higher high water is 11.1 feet. Extreme tidal range is an estimated 19 feet. Project was completed in April 1963. (For further details, see page 1683 of Annual Report for 1963. For details relating to previous projects, see page 704 of Annual Report for 1905, page 2005 of Annual Report for 1915, and page 1883 of Annual Report for 1938.)

Local cooperation. Fully complied with. Requirements are described in full on page 38-3 of Annual Report for FY 1981.

Terminal facilities. See Port Series No. 37. Surveys are displayed at U.S. Army Corps of Engineers, Water Resources Support Center, and Navigation Data Center.

Operations During FY. Maintenance, hired labor: hydrographic condition surveys and coordination for upstream settling basin maintenance dredging in FY08.

Maintenance contract. Hydraulic pipeline dredging of 75,000 cy at the downstream settling basin and river channel was completed February 20, 2007 at a cost of \$855,000. All material was placed at the Port-sponsored Jetty Island area to preserve salt marsh habitat.

3. FRIDAY HARBOR, WA

Location. Friday Harbor is located on the eastern shore of San Juan Island on the inland waters of northwestern Washington, about 28 nautical miles east of Victoria, British Columbia, and 60 nautical miles north of Seattle, Washington. San Juan Island is one of over 170 islands in the San Juan Archipelago. Friday Harbor is the San Juan Island county seat and a United States Customs Port of Entry. (See NOAA Survey Chart 18425.)

Existing project. Concrete floating breakwater (1,600 feet) to protect the existing port facilities and to allow the Port of Friday Harbor to provide 294 additional permanent moorage spaces and 44 additional transient spaces. Construction was completed in March 1984.

Local cooperation. Fully complied with requirements which are described in full on page 38-4 of Annual Report for 1981.

Operations During FY. Maintenance, hired labor: Routine coordination with the Port of Friday Harbor, U.S. Coast Guard, and navigation users. Port

SEATTLE, WA, DISTRICT

continues to maintain, electrical utilities, bullrails and moorage cleat hardware to best accommodate moorage demands and public access on the Federal breakwater.

Maintenance contract. None.

4. GRAYS HARBOR AND CHEHALIS RIVER, WA

Location. Grays Harbor is a coastal inlet at mouth of Chehalis River, in southwestern Washington, 45 miles north of entrance to the Columbia River. Chehalis River rises in southwestern part of Washington about 40 miles east of Pacific Ocean, flows generally northwesterly and empties into eastern part of Grays Harbor. (See NOAA Survey Chart 18502.)

Existing project: (including navigation improvements to date). Provides an entrance channel across the bar and through the entrance 600 to 1,000 feet wide and 38 to 46 feet deep, secured by a south jetty 13,734 feet long and a north jetty 17,200 feet long, and by annual maintenance dredging; maintenance of channel 36 feet deep and 350 feet wide from deep water in Grays Harbor 14 miles upstream to Port of Grays Harbor terminals at Cow Point; thence 32 feet deep and 200 feet wide, suitably widened at bends, to the head of deep draft navigation at Cosmopolis, a distance of 4.1 miles; a turning basin 36 feet deep, 900 feet wide, and 1,000 feet long opposite the Port of Grays Harbor terminals at Cow Point; a turning basin 30 feet deep, 550 feet wide, and 1,000 feet long near upstream end of 32-foot channel at Junction City; three breakwaters at, and maintenance of entrance channel to Westhaven Cove; protection of Point Chehalis for an exposed length of about 7,500 feet; and removal of 350-foot southwestern extension of the breakwater, replacing it with an 865-foot northeastern extension, and adding a 200-foot spur breakwater along the southerly entrance, constructed under authority of Section 107, P.L. 86-645. Construction cost for this feature is recorded in Table 29-C. Plane of reference is mean lower low water. Tidal range between mean lower low water and mean higher high water is 8.9 feet at Point Chehalis, 10.1 feet at Aberdeen, and 8.1 feet at Montesano. Extreme range is 17.5 feet at Point Chehalis, 17.8 feet at Aberdeen, and 23.8 feet at Montesano (river flood of 1935). (For details relating to previous projects, see pages 2002-03 of Annual Report for 1915 and page 1863 of Annual Report for 1938.)

Improved project. Authorized by Section 202 of the Water Resources Development Act of 1986. Phase I of project construction was started in 1990 and completed in 2000. Final fiscal requirements remain for Phase I, and coordination with Port of Grays Harbor continues. A second project phase to deepen the improved downstream channel to the 38-foot fully authorized depth is possible in the future if project economics and environmental considerations warrant and funding is available.

Local cooperation. Fully complied with. Requirements for improved project are described in full on page 29-4 of Annual Report for 2001.

Terminal facilities. See Port Series No. 35. Surveys are displayed at U.S. Army Corps of Engineers, Water Resources Support Center, and Navigation Data Center. The Port of Grays Harbor continues to improve operations at their new bulk agricultural commodity loading facility and market their other facilities for redevelopment including a biodeisel refinery.

Operations During FY. New work, hired labor: Coordinated with Port of Grays Harbor (local sponsor), resource agencies, Grays Harbor pilots and interested parties.

Maintenance, hired labor: Channel condition surveys were conducted throughout the year. The Corps hopper dredge Essayons dredged in South Reach,, Crossover, Point Chehalis channels, and performed test dredging on a potential entrance channel realignment removing 332,611 cy that were disposed at the Point Chehalis open water disposal site at a cost of \$978,629. The Corps hopper dredge Yaquina dredged the Point Chehalis channel reaches, removing 377,612 cy at a cost of \$1,435,362 with 140,406 cy of dredged materials being placed in Half Moon Bay and 237,206 cy at the Point Chehalis disposal site. NWS prepared plans and specifications for inner harbor maintenance dredging. Supervised contract work.

Maintenance contract. The FY 2006/07 clamshell-dredging contract for the maintenance of the Inner Harbor was completed at a cost of \$2,116,112. A dredged material total 418,564 cy were disposed into the South Jetty and Pt. Chehalis disposal sites.

5. LAKE CROCKETT, WA

Location. The basin (and harbor of refuge) is on the western shores of Whidbey Island, Island

REPORT OF THE SECRETARY OF THE ARMY ON CIVIL WORKS ACTIVITIES FOR FY 2007

County about 35 nautical miles north of Seattle, Washington. The lake lies parallel to Admiralty Bay and is separated from it by a narrow strip of gravel beach. (See NOAA Survey chart 18441.)

Existing project. Provides for a mooring basin (and harbor of refuge) next to Lake Crockett with an area of about six acres and 25 feet deep at mean lower low water, connected with Admiralty Bay by a channel of the same depth and 200 feet wide, protected by a breakwater; and navigation improvement by dredging, constructed under authority of Section 107, P.L. 86-645. Construction cost for this feature is recorded in Table 29-C (Keystone Harbor, Admiralty Inlet). The diurnal tidal range in Admiralty Bay is 8.4 feet, and the extreme range is about 16.0 feet. Project deepening and widening was completed in March 1993. For further details, see Annual Report for 1993. The project is located next to a state park and with the bounds of the Ebey's Landing National Historical Reserve.

Local cooperation. None required.

Terminal facilities. The Washington State Ferry System operates one publicly owned passenger and automobile ferry landing within the dredged basin is open for public use. The basin contains two publicly owned boat ramps open for public use. The ramps are adequate for recreational craft. The Washington State Ferry system is considering a Keystone-Port Townsend Terminus Improvement Project. The state is currently reviewing the feasibility of modifications to the existing ferry facilities. The improvement project addresses a need to accommodate larger ferries, with drafts 4-feet deeper than existing vessels, at the Keystone terminal when the current ferry is retired. Construction for ferry terminal improvements is scheduled to start in 2008.

Operations During FY. Maintenance, hired labor: Channel condition surveys were conducted during the year. Real Estate activities were also performed in support of the navigation project.

6. LAKE WASHINGTON SHIP CANAL, WA

Location. Entirely within city of Seattle and extends from Puget Sound through Shilshole Bay, Salmon Bay, Lake Union, Portage Bay, and Union Bay to deep water in Lake Washington. (See NOAA Survey Chart 18447.)

Existing project. Provides for a double lock and fixed dam from gated spillway and necessary accessory works, including fish ladder, at the Narrows at entrance to Salmon Bay, about 1.25 miles from deep water in Puget Sound; for a channel 34 feet deep and 300 feet wide from Puget Sound to Burlington Northern Railway bridge, about 5,500 feet, with a passing basin 34 feet deep and log basin 8 feet deep at turn below railway bridge; then 34 feet deep and 150 feet to 200 feet wide to locks, about 900 feet; and a guide pier 600 feet long; for revetment of canal banks between locks and Lake Union and between Lakes Union and Washington; and for a channel 30 feet deep with a width of 100 feet from locks to Lake Union, 200 feet thence to Portage Cut, 100 feet through Portage Cut, and thence 200 feet wide through Union Bay to Lake Washington. Section included in project is about 10 miles long. Plane of reference is mean lower low water. Extreme tidal range is 19.3 feet. Range between mean lower low water and mean higher high water is 11.3 feet, and between mean lower low water and extreme low water is 4.6 feet. Ordinary fluctuation in upper pool is 24 inches; extreme fluctuation has been 3.6 feet. Principal features of double lock and dam are set forth in Table 29-K. Project was completed in 1934. (For further details, see Annual Report for 1935. For details relating to previous projects, see page 2003 of Annual Report for 1915, and page 1880 of Annual Report for 1938.)

Local cooperation. Fully complied with.

Terminal facilities. See Port Series No. 36. Surveys are displayed at U.S. Army Corps of Engineers, Water Resources Support Center, and Navigation Data Center.

Operations During FY. Maintenance, hired labor: Locks were operated and maintained all year, conducting 14,655 lockings, passing 8,546 commercial vessels, 39,005 pleasure vessels, and 1.2 million tons of commerce. Adult salmon returning to spawn reported 69,271 sockeye 12,084 Coho and 31,631 Chinook passing through the locks and fish ladder. Project visitation exceeded 1.2 million visitors.

Maintenance contract. Dolphin Replacement contract nearing completion. Project scheduled completion 2nd Quarter FY08.

7. OLYMPIA HARBOR, WA

Location. Near southern end of Puget Sound at head of Budd Inlet, about 45 miles southwest of

SEATTLE, WA, DISTRICT

Tacoma, Washington. (See NOAA Survey Chart 18456.)

Existing project. Channel 30 feet deep in Budd Inlet to Port of Olympia marine terminal, 30 feet deep at mean lower low water and 500 feet wide, with a bend and channel to the turning basin adjacent to the marine terminal 30 feet deep, 3,350 feet long and 500 to 800 feet wide including the Port's Marine Terminal Berth width of 110 feet and 42 foot depth. Plane of reference is mean lower low water. Range between mean lower low water and mean higher high water is 14.4 feet. Extreme range is about 22.5 feet. (For further details see the Annual Reports for 1973 and 1981.)

Local cooperation. Fully complied with.

Terminal facilities. See Port Series No. 35. Surveys are displayed at U.S. Army Corps of Engineers, Water Resources Support Center, and Navigation Data Center.

Operations During FY. Maintenance, hired labor: Channel condition surveys were conducted. Maintained coordination with Port of Olympia, interested parties and navigation users regarding proposed clamshell maintenance dredging for the Federal channel and Port berth area. FY07 funded O&M clamshell dredging of clean sediments in the federal channel bend and minor widening area was advertised and awarded. Approximately 97,300 cubic yards of clean (suitable) sediments were dredging in November 2007 and placed in the Anderson Island open water site at a cost of \$649,050.

Maintenance contract. None.

8. NEAH BAY, WA

Location. On south side of the mouth of the Strait of Juan de Fuca, about six miles east of Cape Flattery and about 80 miles west of Port Angeles, Washington. (See NOAA Survey Charts 18480, 18484 and 18485.) The project is located at the Makah Indian Reservation in Clallam County.

Existing project. Provides for a rubble-mound breakwater about 8,000 feet long between Waadah Island and the westerly shore of the bay; reinforcement of existing rock revetment extending approximately 2,200 feet west from Baada Point, and about an 800-foot extension of the revetment westward. Tidal range between mean lower low water and mean higher high water is 8.0 feet (Epoch

1983-2001). Project was completed in July 1956. (For further details, see Annual Report for 1957.) Also provides for marina breakwater, fish gap and adjacent clamming beach, construction completed in 1997 under authority of Section 107, Public Law 86-645.

Local cooperation. Fully complied with.

Terminal facilities. There are six wharves at Neah Bay, including two owned by the United States which are used by the Coast Guard, and four privately owned wharves, three of which are open to general public use to accommodate small commercial fishing vessels. In addition to the wharves, there is a public commercial fishing marina for 200 boats and a facility for dumping and rafting logs. The marina serves a seasonal mooring for Washington Spill Response tug. Facilities are considered adequate for existing commerce.

Operations During FY. Maintenance, hired labor: Hydrographic surveys were conducted in the vicinity of the fish gap. A study is underway to review the design memorandum of 1979 and determine the stability of the existing 8,000-foot breakwater.

Maintenance contract. None.

9. PROJECT CONDITION SURVEYS

Hydrographic surveys and inspections to determine navigation conditions at boat basins, small navigation projects, and channels not funded on a project basis for the current fiscal year. Soundings and visual inspections in subject areas are conducted in order to evaluate shoaling conditions. Hydrographic charts are prepared and distributed. Other work performed includes preparation and updating of base maps, channel alignments, and other computations needed to accommodate changes in vertical or horizontal datums. Fiscal year 2007 costs were \$332,573.

SURVEYS CONDUCTED

Bellingham Harbor	Apr 2007
Ediz Hook	Mar 2007
Kenmore	Oct 2006
Lake Crockett	Nov 2006

10. PUGET SOUND AND ITS TRIBUTARY WATERS, WA

Location. Puget Sound is in the western part of Washington. Cities of Seattle, Tacoma, Olympia,

REPORT OF THE SECRETARY OF THE ARMY ON CIVIL WORKS ACTIVITIES FOR FY 2007

Everett, Bellingham, and many small towns are on its bays and inlets. (See NOAA Survey Charts 18440, 18441, and 18448).

Existing project. Maintenance of Puget Sound and its tributary waters by snagging and dredging; and removal, in cooperation with the U.S. Coast Guard and city of Seattle, of floating debris from the Seattle Harbor area. Work consists of collecting large pieces of drift, waterlogged pilings, logs and other debris considered hazardous to navigation from Puget Sound and Federally authorized channels. (For details relating to previous projects, see page 2003 of Annual Report for 1915 and page 1869 of Annual Report for 1938).

Local cooperation. None required. Cities of Seattle, Tacoma, Olympia, Everett and Bellingham and the State of Washington are cooperating in a program for control of floating debris in their harbors and setting up collection sites for the debris vessel.

Terminal facilities. Terminal facilities at numerous localities on Puget Sound and its tributary waters are, in general, considered adequate for existing commerce.

Operations During FY. Maintenance, hired labor: The debris vessel Puget operated continuously throughout Puget Sound and its tributary waters and removed approximately 2,443 tons of floating debris and hazards to navigation. Debris was off-loaded aboard barges at Lake Washington Ship Canal and disposed of by contract. Snagging operations were accomplished at Blaine Harbor, Bellingham Harbor, Swinomish Channel, Skagit Bay, Everett Harbor, Lake Washington Ship Canal, Lake Washington, Tacoma Harbor, Olympia Harbor, Duwamish River, and Elliott Bay. Puget participated with the Coast Guard and Navy in a spill clean-up response exercise in Everett Harbor in Aug 07. Puget also, provided assistance to local Harbor Police and Fire Departments in response to cars in the water, boating accidents and boat fires on numerous occasions.

Maintenance contract. Over 2,443 tons of harbor debris was disposed of at a cost of \$180,840 with 991.34 tons that went to the land fill and the remaining 1451.66 tons recycled at no cost. Contractor continues to recycle much of the debris, reducing the cost of disposal by contract. Remainder of debris is placed in a demolition landfill or recycled through other government agencies.

11. QUILLAYUTE RIVER, WA

Location. The river is formed by the confluence of the Soleduc and Bogachiel rivers, in northwestern Washington and flows westerly five miles to the Pacific Ocean at La Push, about 30 miles south of Cape Flattery. (See NOAA Survey Chart 18480.)

Existing project. Provides for: jetty 15 feet high on easterly side of river mouth and a dike eight feet high on westerly side, to stabilize entrance; channel 10 feet deep and 100 to 275 feet wide extending 2,800 feet upstream from deep water; basin 10 feet deep, 300 to 425 feet wide and 2,400 feet long; and maintenance of an ocean spit and training walls. Plane of reference is mean lower low water. Range between mean lower low water and mean higher high water at La Push is 8.7 feet (Epoch 1983-2001). Extreme tide range is about 15 feet. The spit is nourished with dredged material in conjunction with channel dredging. The spit was rehabilitated with quarry rock in 1974, 1979-1980 and in 1982. Also in 1982, armor rock was used to extend the spit 500-feet parallel to the channel. In 1995, the revetment on the downstream end of the ocean spit was extended 200 feet. In 1996, after the river breached the natural spit, the revetment on the ocean spit was extended approximately 1,700 feet to the north, and the boat basin training wall was raised from elevation +9.0 feet to elevation +16.0 feet, all under O&M authority and completed in February 1997. The channel and boat basin were last dredged in 2003.

Local cooperation. Fully complied with.

Terminal facilities. There is one dock owned by the Quileute Tribe at La Push, near the mouth of the Quillayute River. There is also a protected boat basin owned by the Quileute Tribe Port Authority which is used by fishing boats, pleasure craft and the U. S. Coast Guard, which has a separate pier.

Operations During FY. Maintenance, hired labor: Hydrographic condition surveys were conducted, additional condition survey conducted to capture any shoaling that may have occurred. Engineering, Design and Solicitation of the Dredging Contract were performed during FY 2007. A maintenance dredging contract was awarded in September 2007 and dredging was performed in October and November 2007 and repairs made to the training wall. Approximately 63,600 cubic yards of material were removed from the Federal navigation channel.

12. SEATTLE HARBOR, WA

Location. Harbor at Seattle, WA, includes all waterways within city limits. Chief anchorage basin is Elliott Bay, an arm of Puget Sound. (See NOAA Survey Chart 18450.)

Existing project. Maintenance of East and West Waterways, 34 feet deep and 750 feet wide for 6,500 and 5,200 feet, respectively, from pier-head line in Elliott Bay, the 30-foot by 200-foot-wide channel from West Waterway to 1st Avenue South Bridge, and the 20-foot by 150-foot-wide channel from 1st Avenue South Bridge to 8th Avenue; dredging Duwamish Waterway 150 feet by 15 feet from 8th Avenue to a point about 1.4 miles above 14th Avenue South Bridge, and turning basin 500 by 250 feet and 15 feet deep at the upper end of the waterway; maintenance of East Waterway between upper end of 750-foot section and Spokane Street, 34 feet deep, 700 feet long and 400 feet wide, and a turning basin, including head of East Waterway at junction of waterways south of Chicago, Milwaukee, St. Paul & Pacific Railroad bridge, to 30 feet deep, after these sections of waterway are dredged by local interests to full project dimensions. Total length of all waterways included in project is about 7.5 miles. Plane of reference is mean lower low water. Range between mean lower low water and mean higher high water is 11.3 feet. Extreme tidal range is 19.3 feet. Project was completed in 1931, excluding maintenance of East Waterway above the 750-foot section. (For further details, see Annual Report for 1932.)

Local cooperation. Fully complied with. Local sponsor has no maintenance responsibility.

Terminal facilities. See Port Series No. 36. Surveys are displayed at U.S. Army Corps of Engineers, Water Resources Support Center, Navigation Data Center.

Operations During FY. Maintenance, hired labor: Hydrographic condition surveys of the turning basin area and entire Duwamish waterway. Engineering, Design and preparation of Solicitation documents were performed during FY 2007 for clamshell dredging. The dredging contract was awarded in September of 2007 and the dredging was accomplished during December 2007 and January 2008. Approximately 160,000 cubic yards were removed from the Federal navigation channel.

13. SWINOMISH CHANNEL, WA

Location. An inland passage, 11 miles long, between Saratoga Passage and Padilla Bay, in northwestern part of Washington, about 60 miles north of Seattle. (See NOAA Survey Charts 18400, 18427 and 18421.)

Existing project. A channel 100 feet wide and 12 feet deep for 11 miles from deep water in Saratoga Passage to deep water in Padilla Bay, by dredging and dike construction where necessary; and removal of projecting rocky points of McGlenn and Fidalgo Islands obstructing navigation at "Hole-in-the-Wall". Plane of reference is mean lower low water. Range between mean lower low water and mean higher high water is 11.5 feet at south end of channel, 8.4 feet at north end, and 10 feet at La Conner. Extreme tidal range is about 19.5 feet at south end of channel and about 16 feet at north end. Project was completed in March 1965. (For further details, see Annual Report for 1965.)

Local cooperation. Fully complied with.

Terminal facilities. There are 18 wharves, docks, and piers on Swinomish Channel, all but 3 of which are privately owned. Of these, one is used for handling general cargo; five are used exclusively for moorage, unloading and servicing of fishing vessels; two are used for handling petroleum products; three facilities are used for log dumps; and two for handling non-metallic minerals. Three publicly owned facilities for launching; mooring, and servicing small craft are within the limits of the town of LaConner.

Operations During FY. Maintenance, hired labor: Maintained project coordination with Swinomish Tribal Community, Port of Skagit County, Port of Anacortes, U.S. Coast Guard, and navigation users. Channel condition surveys were conducted.

Maintenance contract. None, as Swinomish Channel is considered a low use, shallow-draft navigation project.

14. WILLAPA RIVER AND HARBOR AND NASELLE RIVER, WA

Location. Willapa Harbor consists of lower reaches of Willapa River and Bay, a coastal inlet of Pacific Ocean about 30 miles north of mouth of Columbia River in Washington. Willapa River rises about 30 miles east of harbor, flows generally

westerly, and empties into the bay. Naselle River enters the bay near its southerly end. (See NOAA Survey Chart 18504.)

Existing project. Provides for: channel over bar at mouth of Willapa Bay, 26 feet deep and at least 500 feet wide; channel 24 feet deep and 200 feet wide from deep water in Willapa Bay to foot of Ferry Street at South Bend, thence 300 feet wide to westerly end of narrows, thence 250 feet wide to forks of river at Raymond, including a cutoff channel 3,100 feet long at narrows and a closing dike at Mailboat Slough; channel 24 feet deep and 150 feet wide up south fork to deep basin above Cram Lumber Mill, and up north fork to 12th Street, with a turning basin 250 feet wide, 350 feet long, and 24 feet deep at latter point; channel 10 feet deep and 40 feet wide from deep water in Palix River to Bay Center dock, with widening at shoreward end to provide a small mooring basin; mooring basin 15 feet deep, 340 feet wide, and 540 feet long adjacent to port wharf at Tokeland; entrance channel at Nahcotta 10 feet deep and 200 feet wide, and mooring basin 10 feet deep, 500 feet wide, and 1,150 feet long, protected by a rubble-mound breakwater about 1,500 feet long; and removal of snags, piles, and other obstructions in navigable channel of Naselle River between Naselle and mouth. Project includes about 26 miles of channel from entrance through Willapa River forks, 2,800 feet of Palix River-Bay Center channel, and 9 miles of Naselle River upstream of U.S. Highway 101 Bridge. Plane of reference is mean lower low water. Tidal range between mean lower low water and mean higher high water is 8.9 feet at Toke Point, 9.9 feet at Raymond, 8.9 feet at Bay Center, and 10.8 feet near Naselle. Extreme range is 18 feet at Toke Point, 19.3 feet at Raymond, 16 feet at Bay Center, and 18 feet near Naselle. Project was completed in November 1958. (For further details, see Annual Report for 1959. For details relating to previous projects, see page 968 of Annual Report for 1910, page 2001 of Annual Report for 1915, and page 1861 of Annual Report for 1938.)

Local cooperation. Fully complied with.

Terminal facilities. There are 24 wharves on Willapa River and Harbor, including five in Willapa Bay, four in Bay Center, 12 in Raymond and South Bend, and one in Tokeland. Two of the wharves at Raymond and South Bend are suitable for use by ocean-going vessels. One of the wharves is publicly owned and operated as a general cargo terminal, and the other is located at a sawmill. Shallow-draft vessels use the other wharves, including three that are

publicly owned and operated. These facilities are considered adequate for existing commerce.

Operations During FY. Maintenance, hired labor: Continued condition surveys on the Willapa Harbor navigation features to report conditions to users and the U.S. Coast Guard. NWS performed routine coordination with the Port of Willapa Harbor and the Port of Peninsula. The Port of Willapa and Corps performed a joint sediment sample characterization at the Toke Point Marina and entrance channel. Assisted the Port of Willapa with their consideration of hydraulic pipeline dredging at Toke Point with flowlane disposal of dredged materials as a potential time and cost saving alternative to clamshell dredging.

Maintenance contract. None.

Beach Erosion Control project activities pursuant to Section 103, Public Law 874, 87th Congress, as amended (preauthorization).

Coordination Account	\$31,433
----------------------	----------

Shore Protection

15. SHOALWATER BAY SHORELINE EROSION, WA

Location. The Shoalwater Bay Indian Reservation is located on the north shore of the mouth of Willapa Bay, Pacific County, Washington, approximately 104 miles southwest of Seattle, WA and 28 miles north of the mouth of the Columbia River.

Existing project. In 2001, following a storm at extreme high tide in March 1999, the Corps constructed a 1,700-foot-long shoreline flood berm on the Shoalwater Bay Indian Reservation under the Corps' Flood Control & Coastal Emergency authority. In December 2007, an additional 500 feet of emergency shoreline flood berm was constructed by the Corps. A plan of improvement has been formulated to provide a long term solution to coastal erosion and related storm damage affecting the Shoalwater Bay Indian Reservation. Due to erosion of the barrier dune on Graveyard Spit, storm events at extreme high tide have caused the Shoalwater Bay Indian Tribe to lose much of its intertidal shellfish habitat in the North Cove embayment, and to experience upland flooding and damage due to storm-generated ocean waves. Restoration of the eroded barrier dune on Graveyard Spit has been identified as

SEATTLE, WA, DISTRICT

the most appropriate long-term solution to coastal erosion problems affecting the Shoalwater Reservation.

Local cooperation. The Shoalwater Bay Indian Tribe will provide lands, easements, rights-of-way, and dredged material disposal areas necessary for implementation of the project, in accordance with the project authorization contained in Section 545 of the Water Resources Development Act (WRDA) of 2000, as amended by Section 5153 of WRDA 2007.

Operations During FY. New work, hired labor: Completed draft decision document and environmental assessment and conducted public review and a public meeting. Responded to public review comments and revised reports. Submitted draft final decision document and environmental assessment to Corps headquarters for final policy compliance review. Continued close coordination with the Shoalwater Indian Bay Indian Tribe and local community.

New work contract. None.

Flood Control

16. COEUR D'ALENE RIVER (SOUTH FORK), WALLACE, ID

Location. Project is located along the left bank of the south fork of the Coeur d'Alene River in Wallace, Idaho.

Existing project. The retaining wall, which lines the riverbank, was collapsing in stages. Approximately 700 feet of wall was replaced with a mix of concrete and gabion walls. Project is functionally complete, with only closeout activities remaining.

Local cooperation. Under current cost sharing requirements, the local sponsor (city of Wallace) will provide 35 percent of project cost. A Project Cooperation Agreement (PCA) was signed on August 02, 2002.

Operations During FY. Hired labor: Closeout activities.

17. HOWARD A. HANSON DAM, WA

Location. Green River, in northwestern Washington, flows westerly for 40 miles to Auburn, thence northerly 32 miles to its mouth in Elliott Bay

at Seattle. Dam is at river mile 64; 6 miles southeast of Kanaskat, and 1 mile downstream from mouth of north fork. (See Geological Survey topographic sheet, "Cedar Lake Quadrangle, WA".)

Existing project. Rock-fill dam about 235 feet high, with gated spillway having a concrete weir at elevation 1,176 feet above mean sea level and top of gates at elevation 1,206, creating a reservoir with capacity of 106,000 acre-feet. Dam along crest is about 675 feet long. Project is designed to control flooding in Green River valley to alleviate agricultural and urban flood damage, and make possible further expansion of Seattle industrial area. Project was completed in June 1963. (For further details, see the Annual Report for 1963.) Under the dam safety assurance program, the reservoir outlet control tower and bridge were strengthened to withstand the maximum, credible earthquake. Work was completed in FY 1998. Year 2007 was the first year HHD stored additional water in the conservation pool elevation to supplement Tacoma water supply, which was included as betterment. Additional staffing will be brought on in 2008 to handle the increased workload due to AWS.

Local cooperation. Fully complied with.

Operations During FY. Recording daily hydrological data, regulating the river, dam inspections, and right bank monitoring, coordinating with other concerned agencies, for daily activities. Maintenance, hired labor: Operation continued all year. Routine maintenance was accomplished on roads, gages, debris booms, ditches, power line, hydrological equipment, ground water monitoring equipment, rolling support equipment, and other project features. Stilling basin inspection was not accomplished. Work continued on water quality and sediment surveys. Project provided major flood damage reduction benefits during the November 2006 flood. By storing flood waters, the river stage of the Green River near Auburn was limited to 63.6 feet. Without the dam, the river stage would have been 7.5 feet higher, at 71.1 feet.

Maintenance contract: None

18. INSPECTION OF COMPLETED FLOOD CONTROL PROJECTS

Inspections are made of Federally constructed local flood protection projects which are maintained by local interests and agencies responsible for their operation and maintenance are advised of any needed repairs. During the fiscal year, inspections were

made on Chehalis River at Aberdeen, Dungeness River at Dungeness, Green River at Tukwila and Kent, Lummi Shore at Bellingham, Okanogan River at Omak and Oroville, Sammamish River at Redmond, Shelton Creek at Shelton, Skykomish and Wallace Rivers at Startup, Swinomish Channel at LaConner, American Lake, Wynoochee Dam and Yakima River at Yakima in Washington State; Lightning Creek at Clark Fork, Placer Creek at Wallace, Coeur d'Alene River at Coeur d'Alene and St. Joe River at St. Maries in Idaho; and Clark Fork River at Missoula in Montana.

19. MUD MOUNTAIN DAM, WA

Location. On White River, principal tributary of Puyallup River, near Mud Mountain, 28 miles above its confluence with Puyallup River, and 38 miles above mouth of Puyallup River. Dam is 6 miles upstream and southeast of Enumclaw, in northwestern Washington, and 38 miles east of Tacoma. (See Geological Survey topographic sheet "Cedar Lake Quadrangle, Washington".)

Existing project (including dam safety assurance improvements to date). Rock-fill dam, 810 feet long at crest elevation, rises 432 feet above bedrock. Reservoir has storage capacity of about 106,000 acre-feet. Flood control outlet works are in right abutment and permit an authorized, controlled discharge of 17,600 cubic feet per second through two concrete-lined tunnels, with a maximum capacity discharge of 21,500 cfs. Uncontrolled discharge over the spillway is maximum capacity for 245,000 cubic feet per second. Project affords flood protection to White and Puyallup River valleys and protects Tacoma industrial district, in conjunction with Puyallup River project at Tacoma, against floods about 50 percent greater than maximum discharge of record. Original project was completed in June 1953. To date, the Corps has constructed two vista areas, a picnic area, a wading pool, and playground adjacent to the project office, and a 1,760-foot trail leading to the lower vista area. Installation of an approximately 400-foot-deep concrete cutoff wall in the core of the dam was completed in November 1990 under the major rehabilitation program. Under dam safety assurance, spillway walls were raised, the dam crest was heightened, river diversion facilities required for excavation for the new tower were completed, the 9-foot diameter and the 23-foot diameter tunnels were refurbished, and a new reservoir outlet tower was constructed. This construction was completed in 1995. Stabilization of 1245 Road, 9 Foot Tunnel Bypass Plug, and Intake Works Hydraulic System Rehabilitation were completed this year.

Local cooperation. None required.

Operations During FY. Maintenance, hired labor: Project features were operated all year. Maintenance was accomplished on dam facilities, intake structure, gages, debris booms, power lines, roads, ditches, hiking trails, vista observation deck, recreation area, and fish facilities. NWS continued to work jointly with Puget Sound Energy to maintain the Buckley Diversion Dam. Fish were transported from the fish collection facility to the upstream release point. To get an updated fish count by calendar year please access the Mud Mountain Dam website at http://www.nws.usace.army.mil/PublicMenu/Doc_list.cfm?sitename=MM&pagename=FISHCOUNTS. There were 84,702 project visitors. Early in November of 2006 Mud Mountain experienced the second highest pool of record at apx 1170'. Large amounts of woody debris were captured and managed by project staff. Two hundred habitat logs were taken by tribal and other government agencies. Seattle District's Emergency Management made repairs to basin access roads. Project provided significant flood damage reduction during November 2006 flood. By storing flood waters, the river stage of the Puyallup River at Puyallup was limited to 28.4 feet. Without the dam, the river stage would have exceeded 32 feet.

Maintenance, contract: None

Dam Safety Assurance. New work, hired labor: Study to identify problem areas with the new dam safety features is complete. New studies include additional tunnel armor, modified gate cylinders, new intake stop logs, and demolition of old intakes. Supervised construction work.

New work contract. Install reusable coffer dam, inspect 9 foot intake apron.

20. SCHEDULING FLOOD CONTROL RESERVOIR OPERATIONS

Flood control storage space was available in Hungry Horse Reservoir, MT, Flathead Lake, MT (controlled by Kerr Dam), Grand Coulee project, WA, Wynoochee Dam, WA, Upper Baker and Ross Reservoirs, WA. Scheduled reservoir operations were conducted with Puget Sound Energy on the Upper Baker project, with Seattle City Light on the Ross project, and with Tacoma Power on the Wynoochee project during the November 2006 flood event, and several smaller flood events in December and January. Serious flood damages in the lower basins were prevented or reduced through SRO of these

SEATTLE, WA, DISTRICT

reservoirs during these events. Issues relating to project operations were addressed. Regulation instructions were provided for flood control operations. Guidance forecasts were made during the flood control season, as required. Daily and/or hourly data were collected and tabulated as required to check compliance with operating criteria. Real-time forecast and river stage data were provided to Emergency Management office as needed and as requested for use in staging flood teams and equipment during several flood events. Coordination necessary in preparation or revision of reservoir regulation manuals was carried on during the year with agencies responsible for the operation of these projects. Fiscal year costs were \$382,252. Total costs to date have been \$9,125,422.

New work contract. None.

21. STILLAGUAMISH RIVER, WA

Location. Formed by confluence of its north and south forks at Arlington, in northwestern Washington, Stillaguamish River flows westerly 22 miles to Puget Sound, entering Port Susan through Hat Slough and South Pass, and Skagit Bay through West Pass. (See NOAA Survey Chart 18441, and Geological Survey Quadrangles Stanwood, Marysville, and Stillaguamish, WA.)

Existing project. Works to reduce bank erosion and channel changes on Stillaguamish River 15 miles between Arlington and head of Hat Slough, and on Cook Slough, 3 miles long, as follows: revetment at 26 places on river and Cook Slough; concrete weir (including a fishway) 275 feet long between steel sheet-pile piers at head of Cook Slough to limit flow through Slough; and two cutoff channels, each about 900 feet long, to eliminate sharp bends in Cook Slough. Tidal influence extends about 3 miles into improved section. Flood stages of 16 feet above low water at Cook Slough weir have been observed. Project was completed in July 1939. (For further details, see Annual Report for 1940.)

Local cooperation. None required.

Operations During FY. Maintenance, hired labor: Utilized in-house labor to supervise removal of brush from approximately half of the Segments along bank slopes.

Conducted preliminary study for repair of the damaged weir on Cook Slough. Findings indicate work is needed to prevent the possible failure of control weir which will impact flows in the mainstem

and Cook slough. Funding has been requested for construction for FY08.

22. TACOMA, PUYALLUP RIVER, WA

Location. Puyallup River has its source in glaciers on western slopes of Mount Rainier, flows northwesterly 50 miles, and empties into Commencement Bay, an arm of Puget Sound at Tacoma, WA. Work covered by this project is on Puyallup River, within city limits of Tacoma. (See NOAA Survey Chart 18453).

Existing project. A channel with a capacity of 50,000 cubic feet per second between East 11th Street Bridge and lower end of inter-county improvement, a distance of about 2.2 miles, by straightening channel, building levees, revetting channel and levees, and making necessary bridge changes. The 11th Street Bridge at lower end of project is 0.75 mile above mouth of Puyallup River. Diurnal tidal range at mouth of river is 11.8 feet and extreme range is 20 feet. Project was planned in conjunction with Mud Mountain Dam and affords protection against floods about 50 percent greater than maximum discharge of record. Project was completed in May 1950. (For further details, see Annual Report for 1950). A real estate design memorandum, approved by Office of the Chief of Engineers on October 2, 1985, changed the project boundary to allow the City of Tacoma to create a wetland adjacent to the project. This action resulted in the Corps acquiring approximately 2,450 linear feet of setback levee in fee simple. Maintenance funds to cover the increased length of the project have been provided by the Port of Tacoma for the project life. The Project Boundary was modified again on September 17, 2004 to include more wetland habitat on the left bank. The easement for the setback levee was conveyed to the Corps on November 28, 2005. Construction of an additional wetland by the Port of Tacoma on the right bank adjacent to Gog-Li-Hi-Ti 1 was initiated in the spring of 2007. This action resulted in the Corps acquiring approximately 2000 linear feet of setback levee.

Local cooperation. Fully complied with.

Operations During FY. Maintenance, hired labor: Utilized in-house labor to supervise removal of brush from the project along slopes of levee. Maintenance, contract: Awarded equipment rental contract to remove brush.

REPORT OF THE SECRETARY OF THE ARMY ON CIVIL WORKS ACTIVITIES FOR FY 2007

Flood Damage Reduction activities pursuant to Section 205, Public Law 858, 80th Congress, as amended (preauthorization).

See Table 29-L

Emergency Streambank & Shoreline Erosion activities pursuant to Section 14, Public Law 526, 79th Congress, as amended (preauthorization).

Coordination Account	\$3,259
Total FY Costs	\$3,259

Emergency flood control activities - repair, flood fighting, and rescue work (Public Law 99, 84th Congress, and antecedent legislation).

Total FY Costs	\$ 9,467,844

Multiple-Purpose Power Projects

23. ALBENI FALLS DAM, ID

Location. On Pend Oreille River about 25 miles west of Sandpoint, in northern Idaho, and 50 miles northeast of Spokane, Washington. Dam is 838 and 90 miles upstream from mouths of Columbia and Pend Oreille Rivers, respectively. (See Geological Survey topographic sheets, Sandpoint, ID, and Newport, WA.)

Existing project. Provides flood control, hydroelectric power, and related water uses on Pend Oreille River as a part of the multiple-purpose plan for development of Columbia River Basin, including recreation development. At the dam, an island and a low waterfall of about 7 feet formerly divided the river channel. Dam is a gated, gravity-structure spillway in left channel and a powerhouse having an installation of 42,600 kilowatts in right channel, creating a reservoir with a usable storage capacity of 1,153,000 acre-feet. Project was operational and essentially complete in December 1955, with

miscellaneous contracts completing by June 1957. (For further details, see Annual Report for 1957.) Recreational facilities for public use have been provided at Albeni Cove, Priest River, Riley Creek, Johnson Creek, Trestle Creek, Strongs Island, and Springy Point. (Strongs Island was closed in FY82 to reduce O&M costs.) (Refer to Albeni Falls Master Plan dated June 1981 for further planned development.)

Local cooperation. None required.

Operations During FY. Maintenance, hired labor: Reservoir was operated through its annual cycle of storage and release. Routine structural, mechanical, and electrical maintenance was performed on spillway, dam, powerhouse, and equipment. New equipment and instrumentation included auto start/stop generator controls, oil containment bulkhead, and hydraulic gate hoists. Existing analog generator protective relays were replaced with digital multi-function protective relays.

Maintenance contract. Contracts awarded and continuing include update project master plan, hazardous water signage, park maintenance, grounds maintenance, and replace power feeder to Visitors Center.

24. CHIEF JOSEPH DAM - RUFUS WOODS LAKE, WA

Location. On Columbia River in north central Washington, at river mile 545, just upstream from mouth of Foster Creek, 1.5 miles upstream from town of Bridgeport Washington. (Geological Survey topographic sheet, Okanogan, WA, shows general locality.)

Existing project. A concrete gravity structure, which consists of a 19-gate spillway and a 27-unit powerhouse. The powerhouse has sixteen 88,274 kilowatt and eleven 95,000 kilowatt generators with nameplate capacity of 2,457,384 kilowatts. The original 16 units were completed in 1962. Additional construction work was completed in 1994 and included a 10' pool raise and 11 additional units which went online 1977-1979. Recreation facilities were completed in 1972.

Local cooperation. None required.

Operations During FY. Total Project electrical generation for FY07 was 11,561,224 megawatt-hours (11,561,224,000 kilowatt-hours). This energy was marketed for \$635,867,320 in

SEATTLE, WA, DISTRICT

revenues (based on the Bonneville Power Administration's daily net market price for electrical energy). Approximately \$636 million in revenue produced on an annual operating budget of about \$18 million for a return of over \$35 for each \$1 of operations and maintenance (O&M) cost. Overall Unit availability was 93% and forced outage rate was 1.3%. O&M activities utilized hired labor and contract work to perform: routine structural, mechanical, and electrical maintenance on powerhouse, spillway, dam, power equipment, auxiliary systems, recreation grounds, and wildlife mitigation areas. The CJD maintenance program was ranked "industry top performer" in an independent performance benchmarking study. Non-routine maintenance activities included repairs to 10 of 19 spillway monolith joints and replacement of Log Boom midstream anchor cables. Log boom work was completed through a synergistic effort with Army Dive Teams, completing critical Project work while providing invaluable training for the Dive Teams. Excess generator circuit breaker parts, with replacement value of \$800k, were packaged and shipped to Haditha Dam in Iraq. This provided, for about \$30k and in a matter of weeks, electrical generation parts vital to the GWOT and Iraqi infrastructure reconstruction efforts, that would have taken nearly 1 year to procure through normal channels. Capital improvement work included: completed contract replacement of all 27 main generator circuit breakers; completed construction on 10 of 19 Gas Abatement spillway flow deflectors and successful deflector spill test (Gas Abatement FY07 execution = \$7.1M); contract for Units 1-16 turbine runner replacement was awarded to Alstom Hydro US Inc in May 2007 for \$165M (total including optional Units 1-4,15,16 and all optional work), turbine contractor is developing design and turbine model, with on-site turbine replacement work scheduled to begin 4th quarter FY09; developed plans and specs to repair Unit 21 damage from synchronizing failure.

Maintenance Contract. None

25. LIBBY DAM - LAKE KOOCANUSA, MT

Location. On Kootenai River in Lincoln County, Montana, about 17 miles upstream from Libby, and 219 miles upstream from confluence of Kootenai and Columbia Rivers. (See Geological Survey topographic sheet, Thompson Lakes, MT).

Existing project. Provides storage for local flood control protection in Montana and Idaho, main stem flood control in Lower Columbia River, and

hydroelectric power generation at site and at downstream plants through storage release. Project is operated as a unit of a comprehensive system for improvement of Columbia River basin for flood control, navigation, hydroelectric power, and other purposes. Lake Koocanusa is 90 miles long, backing water 42 miles into Canada and has a usable storage capacity of 4,965,000 acre-feet at 50 percent drawdown. Construction of dam was in accordance with a treaty between United States and Canada relating to international cooperation in water resource development of the Columbia River basin. Dam is a straight-axis concrete gravity overflow type, 420 feet high, 3,055 feet long, with normal full pool at elevation 2,459 feet above mean sea level. Powerhouse has an initial installed capacity of 480,000 kilowatts from four hydroelectric generating units; first power went on-line in 1975. A fifth generating unit (Libby Additional Units Project) was completed in 1984 with an additional capacity of 120,000 kilowatts. Fabrication of generators for units six through eight is completed and parts have been stored at the site. Project is completed with units one through five operational. Units six through eight have been reclassified inactive. The Libby Re-regulating Dam Project provided for construction of a re-regulating dam about 10 miles downstream of Libby Dam. Funds were allocated for a construction start in 1977; however, courts have found that Congress did not authorize construction of the dam. In FY 1982, all work was terminated due to court direction. The Libby Re-regulating Dam Power Units Project provided for installation of three hydroelectric generating units at the re-regulating dam with 78,900 kilowatt installed capacity. (For further details, see Annual Report for 1995).

Local cooperation. Fully complied with.

Operations During FY. Maintenance, hired labor: Reservoir was operated through its annual cycle of storage and release, with concurrent power production. Spring runoff in 2007, although significant, did not necessitate forced spill or result in significant flood fighting effort in areas downstream. Routine structural, mechanical, and electrical maintenance was performed on spillway, dam, powerhouse and equipment. Fish hatchery operation continued under contract with the State of Montana. The 2000 Biological Opinion on sturgeon was updated in FY06 with a large part being played by Libby Dam's staff biologist, who authored the flow plan. Release operations supported environmental goals for sturgeon recovery efforts.

REPORT OF THE SECRETARY OF THE ARMY ON CIVIL WORKS ACTIVITIES FOR FY 2007

Maintenance contract. Excitor replacement is currently scheduled to begin in fall of 2008. Project intends to begin installation of a microhydro plant at Murray Springs Fish Hatchery to recover the energy from the constant flow of 4500gpm coming from the hatchery raceways. Also plan to let a contract for transformer leakage on MN Transformer #2. Buffer zone at Murray Springs Fish Hatchery is nearly resolved with an appeal pending from plaintiff; Security upgrade is complete with some warranty work on cameras, lighting sensors, and automated card key system planned in 2008. Efforts continue on upgrades to O&M manuals that began in June 2007 by scanning in the old documents.

Environmental

26 CHIEF JOSEPH DAM DISSOLVED GAS ABATEMENT, WA

Location. On Columbia River in north central Washington, at river mile 545, just upstream from mouth of Foster Creek, 1.5 miles upstream from town of Bridgeport.

Existing project. The ecosystem restoration project would construct flow deflectors in all 19 bays of the spillway at Chief Joseph Dam to abate total dissolved gas levels in the Columbia River downstream of the dam. Scheduled completion date is 2009.

Local cooperation. None required.

Operations During FY. New work, hired labor: Construction phase activities included continuation of installation of the spillway deflectors. The multi-year contract includes the addition of spillway deflectors to all 19 spillway bays. Contract is approximately 65% complete.

New work contract. None.

27. CODIGA FARMS, TUKWILA, WA

Location. Project is located in Tukwila, Washington, in King County, approximately 10 miles south of Seattle along the Duwamish River.

Existing project. Restores tidal and riverine hydrology to the site in the form of an off-channel slough, estuarine marsh and riparian buffer. Construction was initiated in August 2003.

Local cooperation. Under current cost sharing requirements, the local sponsor (city of Tukwila and

Washington Department of Natural Resources) will provide 25 percent of project restoration, 50 percent of associated recreation, and 100 percent of hazardous waste issues. A Project Cooperation Agreement (PCA) was signed on December 17, 2002.

Operations During FY. Physical tasks to complete include installation of a permanent fence (currently there is only temporary construction fence), and park features; parking lot, trails, signage, picnic tables, etc. However, funds cannot be committed until cost-sharing and LERRD-crediting issues are resolved. The sponsor's land value is very low, thereby increasing their cash required, which they have not provided. The PDT will be working to resolve these issues, complete remaining construction, and close-out the project.

28. GREEN DUWAMISH RIVER ECOSYSTEM RESTORATION, WA

Location. The Green Duwamish River Basin encompasses over 450 square miles in northwest Washington State. This river starts high in the Cascade Mountains and ends in enters Elliott bay in Seattle.

Existing project. This program provides for ecosystem restoration in the Green Duwamish River Basin and includes 45 restoration projects throughout the entire river basin. The program was estimated to take 10 years to complete.

Local cooperation. King County was the primary sponsor for the Feasibility Study. This effort includes the financial support of 17 cities throughout the basin and King County and as well as help from the state and federal resource agencies and tribes.

Operations During FY. New work, hired labor. Construction of Meridian Valley Creek was completed. Construction of Lake Meridian Outlet Phase I was complete and Preparation of design for the Site 1 tidal marsh project and the Riverview Park habitat project continued.

New work contract. Construction was completed on The first Phase of Lake Meridian Outlet, with construction of a new lake outlet and 400 feet of stream restoration.

29. HOWARD A. HANSON DAM, WA

Location. Howard A. Hanson Dam is located on the Green River, in King County, about 35 miles southeast of Seattle in Western Washington State.

SEATTLE, WA, DISTRICT

Existing project. The project will add ecosystem restoration and municipal and industrial (M&I) water supply to the existing flood control project and will meet Endangered Species Act (ESA) requirements necessitated by the listing of the Puget Sound Chinook Salmon. Phase I construction will raise the existing flood control reservoir pool 20 feet (from elevation 1,147 feet to elevation 1,167 feet) to increase storage by 20,000 ac-ft for water supply use. Water will be stored in the spring for M&I use in the summer and fall with no changes to flood control capacity. The additional storage will not require structural changes to the existing dam. Minor right abutment seepage remedies were installed in the dam prior to initial M&I storage. Phase I will also include construction of a new full height fish passage facility and miscellaneous ESA and environmental restoration features (reconnection of side channels, gravel nourishment, planting of sedge meadows, and placement of large woody debris at multiple locations). Phase II construction will commence only with the concurrence of the resource agencies, the sponsor, and the Muckleshoot Tribe. It will consist of raising the pool another 10 feet (to elevation 1,177 feet) to store an additional 2,400 ac-ft of M&I water, plus 9,600 ac-ft of low flow augmentation water, for a combined project total of 32,000 additional ac-ft of storage. Scheduled completion date is 2016.

Local cooperation. Under current cost sharing requirements, the local sponsor (city of Tacoma) will provide a cost share based on separable project purpose estimated to be 15 percent of total project cost. A Project Cooperation Agreement (PCA) was signed on July 19, 2003.

Operations During FY. New work, hired labor: Continued S&A of the various current Fish Passage construction contracts. Continued development of design of future Fish Passage construction contracts. Prepared plans and specifications for fish habitat restoration and mitigation.

New work contract. Awarded various contracts for Fish Passage. Awarded contract for miscellaneous fish habitat restoration and mitigation and performed S&A of the contract after award. Awarded miscellaneous A-E design contracts for fish passage plans and specs.

30. PUGET SOUND AND ADJACENT WATERS, WA

Location. The Puget Sound and adjacent waters region encompasses over 15,000 square miles

in northwest Washington State and incorporates all waters in the Puget Sound drainage basin and the Strait of Juan de Fuca.

Existing project. This program provides for ecosystem restoration in the Puget Sound area and to expedite construction of critical restoration projects by developing an identification and prioritization process using existing locally provided information, conducting project implementation studies, and constructing specific projects. The program will require approximately 10 years.

Local cooperation. The program includes authorization to consult on restoration priorities with a variety of state, federal, local and non-profit organizations. In addition, each project implemented under the program authority will be cost shared with a local sponsor providing 50 percent of study costs and 35 percent of project cost after respective Cooperation Agreements are signed.

Operations During FY. New work, hired labor. The Assistant Secretary of the Army for Civil Works and the Office of Management and Budget determined that a feasibility report documenting the priority projects for the full authorization should be submitted for their approval to confirm consistency with Administration policies. Decision document were approved for two more selected projects, Skokomish Estuary Restoration and Lake Washington Gravel Nourishment. Washington State Department of Fish and Wildlife constructed Skokomish Estuary Restoration in 2007 using non-federal funds with the Skokomish Tribe, City of Tacoma, and Mason County. The Lake Washington Gravel Nourishment Project Cooperation Agreement was signed with the City of Seattle and constructed in the summer 2007. Decision documents are being prepared for additional projects with Cities of Bellingham and Burien; and the Tulalip Indian Tribe to aid recovery of endangered species, including bull trout and Chinook salmon.

The State of Washington enacted legislation authorizing a new state agency, The Puget Sound Partnership. A federal caucus, currently comprised of 10 federal agencies, is working with the new state agency to advance restoration actions within the basin. The program is consulting with the federal caucus to coordinate activities.

New work contract. none in 2006.

31. RURAL IDAHO

These projects are a joint effort of Walla Walla and Seattle Districts. The Seattle District projects follow:

Bonnors Ferry, ID

Location. Bonnors Ferry is located on US 95, at the intersection with the Kootenai River, approximately 30 miles north of Sandpoint, in northern Idaho.

Existing project. The purpose of this project is to purchase and install water meters and incidental piping for City of Bonnors Ferry service area in order to decrease the demand for a limited water supply.

Local cooperation. Under current cost-sharing requirements, the local sponsor (City of Bonnors Ferry) will provide 25 percent of design and construction cost.

Operations During FY. Purchasing of water meters was completed and partial installation was done. Phase 2 of construction is underway.

Smelterville, ID

Location. Smelterville is located on I-90 approximately 70- miles east of Spokane, WA.

Existing project. The purpose of this project is to provide engineering and design services in preparation for construction activities to repair the 50 year old treatment and waste water system to bring it up to state and federal standards while also protecting the cities water supply.

Local cooperation. Under current cost-sharing requirements, the local sponsor (City of Smelterville) will provide 25 percent of design and construction cost.

Operations During FY. Engineering and design is completed, Project Cooperation Agreement and Project Management Plan has been developed and signed. Construction was initiated in FY 2007 and is expected to wrap up in late 09.

32. RURAL MONTANA

These projects are a joint effort of Omaha and Seattle Districts. The Seattle District projects follow:

Drummond, MT

Location. Drummond is located adjacent to I-90 approximately 50 miles east of Missoula in Granite County, Montana.

Existing project. The purpose of this project is to design and construct an appropriate fix for Drummond's sewer lines by means of slip lining and/or pipe replacement to update the system to a safe and operable level.

Local cooperation. Under current cost-sharing requirements, the local sponsor (Town of Drummond) will provide 25 percent of design and construction cost.

Operations During FY. Construction was completed in FY 2007.

Butte, MT

Location. Butte is located in south-western Montana.

Existing project. The purpose of this project is to design and construct a system upgrade to the current wastewater treatment plant for the City and County of Butte-Silver Bow (BSB) that will meet state and federal standards. The upgrade improves the biological nutrient removal capability to 8 mgd.

Local cooperation. Under current cost-sharing requirements, the local sponsor City and County of Butte-Silver Bow (BSB) will provide 25 percent of design and construction cost.

Operations During FY. Engineering and design was completed in FY 2007. Will initiate implementation of design in FY 2008

Stevensville, MT

Location. The Town of Stevensville is located in the Bitterroot Valley in the northern portion of Ravalli County approximately 25 miles south of Missoula in western Montana. The Town is situated on the east side of the Bitterroot River and east of US Highway 93.

Existing project. Project will upgrade the existing deteriorated water supply system. The existing water supply system cannot meet the current peak demand and projected future Town growth daily water supply needs.

SEATTLE, WA, DISTRICT

Local cooperation. Under current cost-sharing requirements, the local sponsor (city of Stevensville) will provide 25 percent of design cost. A Project Cooperation Agreement (PCA) was signed in 2006.

Operations During FY. Engineering and design was completed in FY07 and the project is waiting funding for construction.

Big Fork, MT

Location. The City of Bigfork is located approximately 18 miles southeast of Kalispell, Montana on Hwy 35. The Ranch County Water/Sewer District is located a half mile east of Highway 35, one mile south of Bigfork in Flathead County. The homes in the area are located in the foothills alongside the lake.

Existing project.The purpose of this project is to design and construct a water system for the Ranch Water District located in Bigfork, Montana which will allow them to supply the city with a clean, safe water system and also provide fire protection.

Local cooperation. Under current cost-sharing requirements, the local sponsor (Ranch Water District) will provide 25 percent of design cost. A Project Cooperation Agreement (PCA) was signed for design and construction during 2006.

Operations During FY. Engineering and design work was competed and project construction was initiated in FY07. The project will complete additional phases of construction in FY 2008.

33. UNION SLOUGH, WA

Location. The proposed project is located on the left bank of Union Slough, Snohomish River, near Everett, WA.

Existing project. The restoration project has restored fish and wildlife habitat, which has been adversely affected by the past construction of the Everett Harbor and Snohomish River Navigation Project. It included the construction of a new 6,800-foot setback levee around the entire 93-acre site, construction of about 2,800 feet of fish access channels to interior locations, filling the borrow ditches behind the abandoned levee, and construction of three breaches and a 180-foot long bridge across each breach. The project is essentially complete, with some landscaping and scour repair to be completed in 2008.

Local cooperation. Under current cost sharing requirements, the local sponsor (city of Everett) will provide 25 percent of project cost. A Project Cooperation Agreement (PCA) was signed on May 16, 2003.

Operations During FY. Hired labor: landscaping and scour repair.

New work contract. None.

Environmental activities (Section 1135, Public Law 99-662, as amended; Section 206 Public Law 104-303).

See Table 29-M.

Aquatic Plant Control

34. Aquatic Plant Control

Location. Pend Oreille River near the town of Cusack, Washington

Existing project. This was a one year pilot study to study the effects of a new herbicide formulation (Renovate™ On Target Flake) on the invasive aquatic plant- Eurasian Water Milfoil. Environmental documents in order to permit the project were completed in June, a public meeting was held in July and the pilot application of the herbicide was conducted in August. There are two monitoring events scheduled to determine the effectiveness of the application planned.

Local cooperation. There was not to much local cooperation with the exception of the local weed control board. The company that produces the herbicide provided it free of charge. The project was funded completely from federal dollars under ERDCs Aquatic Weed Research Program.

Operations During FY. New work, hired labor: none.

New work contract. none

General Investigations

35. SURVEYS

Fiscal year costs were \$257,149 for flood damage prevention studies, \$571,186 for shoreline

REPORT OF THE SECRETARY OF THE ARMY ON CIVIL WORKS ACTIVITIES FOR FY 2007

protection studies, \$983,472 for special studies, \$29,245 for review of authorized projects, \$220,837 for miscellaneous activities, and \$126,000 for coordination with other agencies and non-Federal interests, a total of \$2,204,945. In addition, contributed funds were expended for the following: \$21,397 for review of authorized projects, \$27,058 for coordination with other agencies and non-Federal interests, a total of \$48,455.

36. COLLECTION AND STUDY OF BASIC DATA

The work programmed for collection and study of basic data covers international water studies, flood plain management services, and hydrologic studies. Work on international water studies included checking Kootenay Lake storage computations to determine compliance of Fortis BC with orders of International Joint Commission, and coordination with International Kootenay Lake and Osoyoos Lake Boards of Control in enforcement of International Joint Commission orders. Technical assistance was provided other Federal and non-Federal agencies and Indian tribes in flood hazard evaluation, flood reduction methods, and related services as requested. Fiscal year costs were \$37,517 for international water studies, \$87,697 for flood plain management services, and \$10,000 for hydrologic studies, a total of \$135,214.

37. PRECONSTRUCTION ENGINEERING AND DESIGN

Centralia, WA

The city of Centralia lies in west central Washington at the confluence of the Chehalis and Skookumchuck Rivers, about midway along the Chehalis River from its source in the Willapa Hills to its mouth at Aberdeen in Grays Harbor. Floods of record on Skookumchuck, Newaukum, and Chehalis Rivers occurred in February 1996.

The plan of improvement authorized in P.L. 99-662 would substantially reduce flooding in the Skookumchuck River valley for the 22 miles between Skookumchuck Dam and the river mouth, including a major portion of Centralia, and provide minor reductions along the Chehalis River downstream from Centralia for about 20 miles to Oakville. The improvement, as recommended in the feasibility report, consisted of structural modifications (flood control outlet tunnel and spillway gate), which would enable the existing, private water supply dam to provide flood control storage during winter months.

Preconstruction Engineering and Design (PED) was started in FY 1988 to refine the project design recommended in the feasibility report. In FY 1990, refinement of project design to a less costly, gated spillway sluice and reevaluation of hydrology, existing local levees and embankments, estimated flood damages, and potential flood reduction benefits were completed. Studies determined the Skookumchuck Dam modification no longer appeared economically justifiable and further work was suspended. In FY 1992 a wrap-up report presenting results of the technical analyses completed to date was provided to local governments.

Following the severe flooding in the Centralia-Chehalis area in 1996, there was a renewed public interest in flood damage reduction. Using state and local funding sources, Lewis County reviewed past study efforts and developed a revised flood damage reduction plan that would combine the authorized dam modification with over bank excavation and flow bypass measures. The revised project would provide substantial benefits to both Centralia and Chehalis and appeared to be economically justified. In July 1998, Lewis County requested resumption of the PED for the project with a view toward preparing a General Reevaluation Report and Environmental Impact Statement for an expanded project. Work resumed soon thereafter. A General Reevaluation Report (GRR) Final Environmental Impact Statement (FEIS) and Chiefs Report for the project were completed with the Chief's Report was signed on September 27, 2004. Pre-construction, Engineering and Design (PED) was initiated and the development of a Project Management Plan (PMP) and Design agreement was started in FY05 and due to lack of funding and identification of a non-federal sponsor it has extended into FY 07.

In late 2007 severe flooding occurred again, causing damages to the local communities and the closure of I-5 for 4 days, the main route between Seattle and Portland. The closure caused rerouting of traffic and loss of commerce. The State of Washington in cooperation with the local governments is currently working with the Corps to re-initiate the study, develop a current PMP and Design Agreement. Fiscal year FY07 costs were \$36,410. Total cost to date is \$8,085,919.

39. GENERAL REGULATORY FUNCTIONS

Permit Evaluation	\$4,178,570
Enforcement	231,969
Environmental Impact Statement	2,416

1. Includes \$418,209 appropriated and expended for previous projects. Excludes \$43,000 Coast Guard funds expended.
2. Includes \$5,869 for previous project and \$120,000 for Maintenance and Operation of Dams and Other Improvements of Navigable Waters, appropriated and expended.
3. Includes \$1,180,500 expended under Productive Employment Appropriation Act of 1983 (P.L.98-8).
4. Includes \$4,881,882 appropriated for former project, \$18,128,287 for current project which includes \$3,530,000 PED, \$124,945 for recreation facilities at completed project (Code 710), and \$113,134 for previous project. Excludes \$161,909 Navy funds and \$6,000 Coast Guard funds.
5. Includes \$4,881,882 expended for former project, \$18,119,430 for current project which includes \$3,530,000 PED, \$124,945 for recreation facilities at completed project (Code 710), and \$113,134 for previous project. Excludes \$161,909 Navy funds and \$6,000 Coast Guard funds.
6. Includes \$37,415 for previous projects and \$3,923,511 for Maintenance and Operation of Dams and Other Improvements of Navigable Waters, appropriated and expended. Excludes \$409,660 Emergency Relief funds and \$57,000 Public Works Administration funds expended.
7. Excludes \$111,000 Public Works Acceleration Act funds expended.
8. Excludes \$3,418,000 contributed by Port of Grays Harbor in fulfilling requirements of local cooperation.
9. Includes \$117,750 appropriated and expended for recreation facilities at completed project (Code 710).
10. Includes \$779,655 for recreation facilities at completed project (Code 710) and \$485,002 for previous projects, appropriated and expended. Excludes \$246,567 expended by State of Washington and \$742,071 expended by King County. Excludes \$192,516 Public Works Administration funds expended.
11. Includes \$1,631,195 (1916 to 1936) and \$338,163 subsequently appropriated and expended under Maintenance and Operation of Dams and Other Improvements of Navigable Waters.
12. Previous project.
13. Includes \$64,996 appropriated and expended for previous project.
14. Excludes Navy funds expended on dredging river channel in 1944 and Coast Guard funds expended for channel dredging in 1948 and 1949.
15. Includes \$3,349,600 appropriated and expended for East Waterway.
16. Includes \$2,262,975 contributed for East Waterway.
17. Includes \$2,188,536 expended for East Waterway.
18. Excludes \$1,000 Coast Guard funds expended.
19. Includes \$228,084 appropriated and expended for previous projects. Excludes \$40,000 Coast Guard funds and \$192,314 Emergency Relief funds expended.
20. Includes \$309,177 appropriated and expended for previous projects. Excludes \$78,532 Public Works Administration funds expended.
21. Includes \$6,597 expended for previous projects.
22. Includes \$37,048,061 appropriated and expended for original project.
23. Includes \$66,678 appropriated and expended under Maintenance and Operation of Dams and Other Improvements of Navigable Waters.
24. Includes \$2,000,000 contributed for original project.
25. Includes \$13,182,063 appropriated for original project, \$87,785 appropriated for recreation facilities at completed project (Code 710). Excludes \$26,000 Emergency Relief funds.
26. Includes \$13,182,063 expended for original project, \$87,785 expended for recreation facilities at completed project (Code 710). Excludes \$26,000 Emergency Relief funds expended.
27. Includes \$198,578 appropriated and expended under Maintenance and Operation of Dams and Other Improvements of Navigable Waters.

SEATTLE, WA, DISTRICT

28. Excludes \$281,000 Works Progress Administration funds and \$85,999 Emergency Relief funds expended.
29. Includes \$5,035 appropriated and expended for recreation facilities at completed project (Code 710).
30. Includes \$370,000 appropriated for current project (Riley Creek Recreation Area), \$30,769,614 for original project, and \$971,947 for recreation facilities at completed project (Code 710). Excludes \$136,736 Public Works Acceleration Act funds for recreation facilities at completed project (Code 710).
31. Includes \$207,799 expended for current project (Riley Creek Recreation Area), \$30,769,614 for original project, and \$971,947 for recreation facilities at completed project (Code 710). Excludes \$136,736 Public Works Acceleration Act funds expended for recreation facilities at completed project (Code 710).
32. Includes funds appropriated for project O&M (\$85,922,261), Special Recreation Use Fees (\$174,776), Maintenance and Operation of Dams and Other Improvements of Navigable Waters (\$1,875,446), BPA/COE Merged, CAT 390 (\$20,064,224) and BPA-4045 Large Capital Sub agreements, CAT 300 (\$2,633,164).
33. Includes funds expended for project O&M (\$85,896,005), Special Recreation Use Fees (\$174,776), Maintenance and Operation of Dams and Other Improvements of Navigable Waters (\$1,875,446), BPA/COE Merged, CAT 390 (\$18,485,286) and BPA-4045 Large Capital Sub agreements, CAT 300 (\$2,163,052).
34. Includes \$144,338,252 appropriated and expended for original project, \$395,855,000 for additional units, and \$147,983 for recreation facilities at completed project (Code 710). Excludes \$58,000 Public Works Acceleration Act funds for recreation facilities at completed project (Code 710).
35. Includes funds appropriated for project O&M (\$203,476,357), Maintenance and Operation of Dams and Other Improvements of Navigable Waters (\$774,561), BPA/COE Merged, CAT 390 (\$73,117,551), and BPA-4045 Large Capital Sub agreements, CAT 300 (\$22,419,992).
36. Includes funds expended for project O&M (\$200,320,554), Maintenance and Operation of Dams and Other Improvements of Navigable Waters (\$774,561), BPA/COE Merged, CAT 390 (\$70,508,655), and BPA-4045 Large Capital Sub agreements, CAT 300 (\$17,849,490).
37. Includes \$484,753,143 appropriated and expended for original project, \$42,221,634 for additional units, \$16,276,363 for re-regulating dam, and \$475,000 for power planning.
38. Includes funds appropriated for project O&M (\$93,484,278), Maintenance and Operation of Dams and Other Improvements of Navigable Waters (\$774,561), BPA/COE Merged, CAT 390 (\$35,962,264), and BPA-4045 Large Capital Sub agreements, CAT 300 (\$3,273,690).
39. Includes funds expended for project O&M (\$93,154,571), Maintenance and Operation of Dams and Other Improvements of Navigable Waters (\$774,561), BPA/COE Merged, CAT 390 (\$33,981,169), and BPA-4045 Large Capital Sub agreements, CAT 300 (\$2,980,592).
40. Excludes \$161,849 expended by Federal Aviation Agency, \$32,000 expended by Lincoln County- City of Libby Joint Airport Board, \$8,000 expended by Bonneville Power Administration, and \$379,555 expended by U.S. Forest Service.
41. Includes \$5,735,572 appropriated under Preconstruction Engineering and Design.
42. Includes \$5,733,801 expended under Preconstruction Engineering and Design.
43. Includes \$2,010,000 contributed under Preconstruction Engineering and Design.
44. Includes \$1,835,774 expended under Preconstruction Engineering and Design.

REPORT OF THE SECRETARY OF THE ARMY ON CIVIL WORKS ACTIVITIES FOR FY 2007

TABLE 29-B AUTHORIZING LEGISLATION

See Section in Text	Date Authorizing Act	Project and Work Authorized	Documents
1		EDIZ HOOK, WA	
	Mar. 7, 1974	Construction of 10,000 linear feet of rock revetment, together with initial beach replenishment and annual nourishment. Emergency interim measures necessary to prevent breaching of Ediz Hook prior to construction of authorized project.	H. Doc. 101, 93d cong., 1st Sess. P.L. 93-251
2		EVERETT HARBOR AND SNOHOMISH RIVER, WA	
	June 25, 1910	Training dike 10,500 feet long extending across bar at outlet of old river channel.	H. Doc. 1108, 60th Cong., 2d Sess.
	July 3, 1930	Raise 6,000 feet of training dike, extend spur dike, widen gap in dike as required, maintain East Waterway and channel to gap.	H. Doc. 377, 71st Cong., 2d Sess.
	June 20, 1938	Abandon project for Snohomish River and re-designate as Everett Harbor and Snohomish River. Provide settling basin near 14th Street.	H. Doc. 546, 75th Cong., 3d Sess.
	Sep. 3, 1954	Construct spur dike at Preston Point, remove training dike north of river outlet, enlarge channel to 14th Street, and deepen settling basin.	H. Doc. 569, 81st Cong., 2d Sess.
	July 14, 1960	Widen channel from settling basin to gap; extend channel to head of Steamboat Slough; and a settling basin within upper channel reach.	H. Doc. 348, 86th Cong., 2d Sess.
3		FRIDAY HARBOR, WA	
	July 14, 1960 as amended	Construction of 1,600 feet of concrete floating breakwater.	Sec. 107, P.L. 86-645 Authorized by Chief of Engineers July 9, 1981
4		GRAYS HARBOR AND CHEHALIS RIVER, WA	
	June 3, 1896	South jetty.	Annual Report, 1895, pp. 3517-3533
	Mar. 2, 1907	A north jetty 9,000 feet long.	Rivers and Harbors Committee Doc. 2, 59th Cong., 2d Sess.
	Mar. 2, 1907	The 18-foot channel.	H. Doc. 507, 59th Cong., 1st Sess.
	June 25, 1910	Extend north jetty 7,000 feet; length of south jetty fixed at 13,734 feet	Rivers and Harbors Committee Doc. 29, 61st Cong., 2d Sess.
	June 25, 1910	A 6-foot channel above Cosmopolis.	H. Doc. 1125, 60th Cong., 2d Sess.
	Aug. 8, 1917	Dredging in bar channel.	H. Doc. 1729, 64th Cong., 2d Sess.
	Jan. 21, 1927	Dredging in bar channel.	H. Doc. 582, 69th Cong., 2d Sess.
	Aug. 30, 1935	Reconstruct north and south jetties to an elevation of 16 feet above mean lower low water.	Rivers and Harbors Committee Doc. 2, 74th Cong., 1st Sess.
	Aug. 30, 1935	Maintain 26-foot channel below Aberdeen (as authorized by Public Works Administration Dec. 11, 1933) and combining projects for Grays Harbor and bar entrance and Grays Harbor, inner portion, and Chehalis River under a modified project for Grays Harbor and Chehalis River	H. Doc. 53, 73rd Cong., 1st Sess. Rivers and Harbors Committee Doc. 2, 74th Cong., 1st Sess.
	Dec. 22, 1944 as amended	Construction, operation, and maintenance of recreation facilities.	P.L. 78-534
	Mar. 2, 1945	Maintain 30-foot depth in channel from deep water in Grays Harbor to Port of Grays Harbor Commission terminal, which was deepened from 26 to 30 feet with Navy funds.	Report in Office, Chief of Engineers
	June 30, 1948	14-foot channel to Bay City; breakwater at Westhaven; and maintenance of Westhaven entrance channel.	H. Doc. 635, 80th Cong., 2d Sess.
	Sep. 3, 1954	Dredging and maintenance of a 30-foot channel and turning basin from Aberdeen to Cosmopolis.	H. Doc. 412, 83d Cong., 2d Sess.
	Sep. 3, 1954	Additional breakwater, 1,400 feet long, at Westhaven Cove.	H.Doc. 30, 84th Cong., 1st Sess.

SEATTLE, WA, DISTRICT

TABLE 29-B

AUTHORIZING LEGISLATION

See Section in Text	Date Authorizing Act	Project and Work Authorized	Documents
		GRAYS HARBOR AND CHEHALIS RIVER, WA (cont'd)	
	July 14, 1960 as amended	Westhaven Cove small boat basin.	Sec. 107, P.L. 86-645. Authorized by Chief of Engineers Feb. 7, 1979
	Nov. 17, 1986	Improve project features with accompanying fish mitigation.	P.L. 99-662
5		LAKE CROCKETT, WA	
	Mar. 2, 1945	Small-boat basin.	H. Doc. 303, 77th Cong., 1st Sess.
	Dec. 22, 1944 as amended	Construction, operation, and maintenance of recreation facilities.	P.L. 78-534
	July 14, 1960 as amended	Change authorized channel depth from -18 mean lower low water to -25 mean lower low water by dredging.	Sec. 197, P.L. 86-645 Authorized by Chief of Engineers Nov. 7, 1988
6		LAKE WASHINGTON SHIP CANAL, WA	
	June 25, 1910 Mar. 4, 1913	Provides for a double lock and fixed dam with gated spillway and necessary accessory works at entrance to Salmon Bay, dredging a channel from locks to deep water in Puget Sound, and excavation by local interests of a channel from locks into Lake Washington.	H. Doc. 953, 60th Cong., 1st Sess.
	Aug. 8, 1917	Dredging below locks and revetting canal banks.	H. Doc. 800, 64th Cong., 1st Sess.
	Sep. 22, 1922	Increased dimensions of channel between Puget Sound and locks and a 600-foot extension of lower guide pier.	H. Doc. 324, 67th Cong., 2d Sess.
	June 26, 1934	1 Operating and care of locks and dam provided for with funds from War Department appropriations for Rivers and Harbors.	
	Aug. 30, 1935	2 Enlarge channel between locks and Lake Washington.	H. Doc. 140, 72d Cong., 1st Sess.
	Dec. 22, 1944 as amended	Construction, operation, and maintenance of recreation facilities.	P.L. 78-534
	July 24, 1956	Government Locks to be known as Hiram M. Chittenden Locks.	P.L. 84-779
7		NEAH BAY, WA	
	June 20, 1938	Rubble stone breakwater.	Rivers and Harbors Committee Doc. 51, 75th Cong., 2d Sess.
	Sep. 3, 1954	Reinforcement of existing revetment.	H. Doc. 404, 83d Cong., 2d Sess.
8		OLYMPIA HARBOR, WA	
	Jan. 21, 1927	Channel 22 feet deep and 150 feet wide	H. Doc 244, 69 th Cong. 1 st Sess.
	Jul 3, 1930	Channels of 26-foot depth on east side of harbor.	Rivers and Harbor Committee Doc 5, 71 st Cong., 1 st Sess.
	Aug. 30, 1935	Elimination from project of 12-foot channel on east and west sides of harbor, and for a channel 30 feet deep and 300 feet wide between Budd Inlet and port terminal, with turning basin of same depth.	Rivers and Harbors Committee Doc. 21, 73 rd Cong., 2 nd Sess.
		Widen entrance to turning basin.	Doc 75, 74 th Cong., 2d Sess.
	Mar. 2, 1945	Entrance channel 500 feet wide to and including a turning basin 3,350 feet long and generally 960 feet wide, all at a depth of 30 feet at mean lower water	H.Doc 699, 76 th Con., 3d Sess
10		PUGET SOUND AND ITS TRIBUTARY WATERS, WA	
	July 13, 1892	Maintenance of the rivers tributary to Puget Sound by snagging and dredging, and removal of floating debris from Seattle Harbor.	Annual Report for 1893, page 3425

REPORT OF THE SECRETARY OF THE ARMY ON CIVIL WORKS ACTIVITIES FOR FY 2007

TABLE 29-B

AUTHORIZING LEGISLATION

See Section in Text	Date Authorizing Act	Project and Work Authorized	Documents
11		QUILLAYUTE RIVER, WA	
	July 3, 1930	Jetty (5 feet high) on easterly side of mouth, and a dike on westerly side, to stabilize entrance.	H. Doc. 125, 71st Cong., 1st Sess.
	Mar. 2, 1945	Maintenance dredging to provide a channel 6 feet deep and of suitable width from ocean to within river mouth.	H. Doc. 218, 78th Cong., 1st Sess.
	Sep. 3, 1954	3 Raising jetty to 15 feet; channel 10 by 100 feet, 2,000 feet long; moorage basin.	H. Doc. 579, 81st Cong., 2d Sess.
12		SEATTLE HARBOR, WA	
	Mar. 2, 1919	Maintenance of East and West Waterways 750 feet wide and 34 feet deep, and of Duwamish Waterway 20 feet deep and 150 feet wide as far south as Eighth Avenue South Bridge.	S. Doc. 313, 65th Cong., 3d Sess.
	Mar. 3, 1925 July 3, 1930	Enlargement of Duwamish Waterway.	H. Doc. 108, 68th Cong., 1st Sess. H. Doc. 126, 71st Cong., 2d Sess.
	Aug. 30, 1935	Maintenance of East Waterway between 750-foot section and Spokane Street, and turning basin at junction of East and Duwamish Waterways.	H. Doc. 211, 72d Cong., 1st Sess.
	Oct. 12, 1996	East Waterway channel deepening.	P.L. 104-303
13		SWINOMISH CHANNEL, WA	
	July 13, 1892	Channel 4 feet deep and 100 feet wide, and dike construction.	H. Doc. 31, 52d Cong., 1st Sess., and Annual Report for 1892, p. 2752
	Aug. 30, 1935	Enlargement of channel to present project dimensions.	S. Committee Print, 73d Cong., 1st Sess.
	Oct. 23, 1962	Removal of navigation hazards at "Hole-in-the-Wall".	H. Doc. 499, 87th Cong., 2d Sess.
14		WILLAPA RIVER AND HARBOR AND NASELLE RIVER, WA	
	July 27, 1916	Channel 24 feet deep, 200 feet wide in Willapa River, and 150 feet wide in the forks.	H. Doc. 706, 63d Cong., 2d Sess.
	Aug. 30, 1935	2 Maintenance of channel over bar to a depth of 26 feet and minimum width of 500 feet.	Rivers and Harbors Committee Doc. 41, 72d Cong., 1st Sess.
	Aug. 30, 1935	4 For cutoff channel at Narrows.	Rivers and Harbors Committee Doc. 37, 73d Cong., 2d Sess.
	Mar. 2, 1945	Channel from deep water in Palix River to Bay Center dock.	H. Doc. 481, 76th Cong., 2d Sess.
	Sep. 3, 1954	Widen Willapa River channel to 360 and 250 feet between South Bend and the forks; Tokeland and Nahcotta basins; and Naselle River clearance. Willapa River and Harbor re-designated as Willapa River and Harbor and Naselle River.	H. Doc. 425, 83d Cong., 2d Sess.
15		SHOALWATER BAY, TOKELAND, WA	
	Dec. 11, 2000	Coastal erosion reduction.	Sec. 545, WRDA 2000 P.L. 106-541
16		COEUR D'ALENE RIVER (SOUTH FORK), WALLACE, ID	
	Jul. 24, 1946	Replace approximately 700 feet of retaining wall.	Sec. 14, P.L. 79-526 Authorized by Chief of Engineers May 8, 2003
17		HOWARD A. HANSON DAM, WA	
	May 17, 1950	Eagle Gorge flood control dam on Green River.	H. Doc. 271, 81st Cong., 1st Sess.
	Aug. 6, 1958	Re-designation of project as Howard A. Hanson Dam.	P.L. 85-592

WALLA WALLA, WA, DISTRICT

This U.S. Army Corps of Engineers (Corps), Walla Walla District (District), consists of all Columbia River drainage and tributaries thereto between the head of McNary Reservoir (Lake Wallula) (river mile 345.4) and Umatilla Bridge (river mile 290.5) below McNary Lock and

Dam, except the Yakima River Basin above Van Giesen Street Bridge (river mile 8.4) near Richland, WA. The primary tributary drainage area is the Snake River that includes more than 107,000 square miles in six states: Washington, Oregon, Idaho, Wyoming, and small portions of Nevada and Utah.

Flood Control

1. COLUMBIA RIVER BASIN, LOCAL FLOOD PROTECTION PROJECTS

Location. Improvements included in this project are along the Columbia River and its tributaries.

Existing project. The Flood Control Act of 1950 approved a general comprehensive plan for the Columbia River Basin for flood control and other purposes based on plans in H. Doc. 531, 81st Congress, 2nd Session, and authorized \$75 million to be appropriated for partial accomplishment of certain projects. From that authorization, an amount (not to exceed \$15 million) was allotted for construction of local flood protection works throughout the Columbia River Basin, subject to conditions that all work undertaken pursuant to authorization would be economically justified prior to construction, and local cooperation specified in the Flood Control Act of 1936, as amended, should be required.

Local cooperation. Section 3, Flood Control Act of June 22, 1936, applies.

Operations during fiscal year (FY). No projects were de-authorized.

2. INSPECTION OF COMPLETED FLOOD CONTROL PROJECTS

Federal law requires local interests to maintain and operate completed local protection projects in accordance with regulations prescribed by the Secretary of the Army. Inspections were made to determine the extent of compliance and advise local interests, as necessary, of measures required to correct deficiencies.

The FY costs were \$112,483. Total costs through September 30, 2007, were \$3,439,653.

3. JACKSON HOLE, WY

Location. This project is located on the banks of the Snake River, Teton County, west of Jackson, WY.

Existing project. On the Snake River, approximately 23.5 miles of Federally-constructed levees consisting of the following: (1) On the right bank: a series of levees, off-set levees, and bank protection structures, all with full riprap protection from 10 miles upstream of the Jackson-

Wilson Bridge to 3.5 miles below the bridge for a total of 13.5 miles; and (2) On the left bank: a series of Federally-constructed levees and bank protection structures, all with full riprap protection, extending from 10 miles upstream of the Jackson-Wilson Bridge to 5 miles upstream. The project resumes 1.5 miles immediately upstream of the same bridge and continues to 3.5 miles below the bridge for a total of 10 miles. In addition, a series of Federal and non-Federally constructed levees, with a total length of approximately 5 miles, most having some or full riprap protection, are interspersed along both banks of the Snake River from Highway 26 Bridge to 4 miles downstream of the Jackson-Wilson Bridge.

The project also includes riprap-protected levees on the left and right banks of the Gros Ventre River. The left bank levee begins 1.5 miles west of Cattlemen's Bridge and extends 0.5 mile east of the same bridge. The right bank levee begins 0.5 mile west of Cattlemen's Bridge and extends 0.3 mile east of the same bridge.

The project is authorized by Public Law (PL) 81-516, Flood Control Act of 1950, for flood control protection by channel improvements consisting of channel rectification, levees, and revetments along the Snake River in the vicinity of Wilson, WY. The Water Resources Development Act of 1986, PL 99-662, authorized the Secretary of the Army to assume responsibility for operation and maintenance of the "Federal Levees" and additions and modifications thereto. It states, "the project for Jackson Hole . . . is modified to provide that the operation and maintenance of the project. . . shall be the responsibility of the Secretary: Provided, that the . . . sponsors shall pay the initial \$35,000 in cash or materials . . . plus inflation . . ."

The Water Resources Development Act of 1996 (PL 104-303) amended PL 99-662 by including in-kind services and adding ". . . the Secretary may enter into agreements with the non-Federal sponsor permitting the non-Federal sponsor to perform operation and maintenance for the project on a cost-reimbursable basis."

Local cooperation. Non-Federal sponsors pay the initial \$35,000 in cash or materials of any such costs expended in any 1 year, plus inflation as of the date enactment of the Water Resources Development Act of 1986.

Since 1978, \$130,614,000 [cumulative nominal dollars (\$)] in potential flood damages has been prevented by the levees.

WALLA WALLA, WA, DISTRICT

Operations during FY. Teton County, under their Local Cooperative Agreement, worked with the Corps performing levee maintenance. Surveys were completed for the ongoing Levee Capacity Study. The elevation of Imeson Road was lowered. The FY costs were \$585,089. (See table 30-A, Cost and Financial Statement.)

The Water Resources Development Act of 2000 (PL 106-541) authorized the Upper Snake River Restoration Project. Congress added new start funding to the FY 03 budget and also in FY 04. The project is located in and along a 22-mile stretch of the Upper Snake River near Jackson, WY, in Teton County. It is partially in and adjacent to Grand Teton National Park, the National Elk Refuge, and in close proximity to Yellowstone National Park. The project will restore fish and wildlife habitat that was lost as a result of construction, operation, and maintenance of levees constructed by Federal and non-Federal interests. Restoration measures include eco-fences, channel capacity excavation, spur dikes, anchored rootwads, rock grade control, secondary channels, off-channel, and channel stabilization pools. The project has a 14-year phased construction schedule and includes continuing construction, adaptive management, and monitoring to provide implementation flexibility. The rock grade structure, a separable element of site 9 completed in FY 05, performed as designed by protecting the island habitat during spring 2007 runoff conditions. There were no FY 07 Construction General costs. (See table 30-A, Cost and Financial Statement.)

4. LUCKY PEAK LAKE, ID

Location. This project is located on the Boise River in southwestern Idaho about 10 miles southeast of the city of Boise, ID. (See table 30-B for Authorizing Legislation of projects in the District.)

Existing project. The project includes a rolled earthfill dam about 250 feet above the streambed and 1,700 feet long at the crest, with a lake providing a total storage at an upper operating lake level of 306,000 acre-feet. The project provides for flood control, irrigation, and recreation.

Construction of the existing project was initiated in November 1949 and completed in June 1961. Since 1961, \$1,027,028,000 (cumulative nominal \$) in potential flood damages has been prevented by the project.

During a detailed study of outlet capacity and potential for adding hydropower to the existing project, a need for an auxiliary outlet became apparent. Construction of an auxiliary outlet was

authorized in the Water Resource Development Act of 1976. In FY 78, an *Interim Feasibility Report on Modification of Lucky Peak Dam and Lake* (power facilities) was submitted to the Board of Engineers for Rivers and Harbors and approved. States, agencies, and the Chief of Engineers commented on the report to the Secretary of the Army. The report was forwarded to the Office of Management and Budget in February 1982.

A license to construct and operate power facilities at the project was issued by the Federal Energy Regulatory Commission (FERC) (Project #2832) to the Boise Project Board of Control on June 10, 1980, and modified on October 9, 1980, and in 1982. Construction of the auxiliary outlet facility began in May 1984 and was completed in August 1986. Construction of modifications to the existing outlet tunnel and powerhouse excavation began in August 1986 and were completed January 1987. Powerhouse general contract construction began in April 1986. The project was completed and dedicated on October 7, 1988. Power on-line for all units was initiated on August 18, 1988. A Federally authorized second outlet was de-authorized in FY 90.

Recreation facilities at Lucky Peak Lake consist of 20 picnic/day-use areas, 4 boat launch ramps, and 3 swimming areas. The FY visitation to Lucky Peak Lake was 858,225.

Local cooperation. None required.

Operations during FY. Operation and Maintenance: Normal operation and maintenance, which included the dam structures and recreation areas, continued. The FY costs were \$1,737,494. (See table 30-A, Cost and Financial Statement.)

5. MILL CREEK, BENNINGTON LAKE, WA

Location. This project is located in and upstream from Walla Walla, WA, on Mill Creek, a tributary of the Walla Walla River. (See table 30-B for Authorizing Legislation of projects in the District.)

Existing project. The project includes an off-stream earthfill storage dam, about 125 feet above the streambed and 3,200 feet long at the crest, two concrete-lined outlet channels, an earthfill diversion dam, and diversion structures. The project provides for flood control and recreation. Authorizing legislation to provide a channel through the city of Walla Walla was added to the project in 1941. Recreation was added to the project purposes through the Federal Water Project Recreation Act of 1965.

REPORT OF THE SECRETARY OF THE ARMY ON CIVIL WORKS ACTIVITIES FOR FY 2007

Construction of the dam and appurtenant works was completed in 1942. Paving of the channel through the city of Walla Walla was completed in 1966. Since 1942, \$57,125,000 (cumulative nominal \$) in potential flood damages has been prevented by the combined storage and channel operation.

Rehabilitation of the existing project was initiated in FY 78 and completed in FY 79. The plan of rehabilitation included action to correct the seepage and internal erosion that has occurred during each subsequent filling of the reservoir. A cutoff wall was constructed but did not alleviate the seepage problem, thus requiring limited flood control use of the project. The seepage and internal erosion create a high vulnerability for dam failure.

Mill Creek/Bennington Lake offers visitors three day-use/picnic areas and one boat launch ramp. Visitation to Mill Creek/Bennington Lake for the FY was 264,461.

Local cooperation. None required.

Operations during FY. Operation and Maintenance: Normal operation and maintenance continued, which included regulation of water control structures and care of recreation areas. The FY costs were \$1,200,339. (See table 30-A, Cost and Financial Statement.)

6. SCHEDULING FLOOD CONTROL RESERVOIR OPERATIONS

Functional regulation of non-Corps projects is accomplished as authorized under Section 7, Flood Control Act of 1944, and coordinated with the Bureau of Reclamation for Jackson, Palisades, Ririe, Little Wood, Arrowrock, Anderson Ranch, and Malheur River Basin.

Flood control operations at Jackson Lake, Palisades, Ririe, Little Wood, Boise River Reservoirs, and the Malheur River Reservoirs are in accordance with formal agreements with the Bureau of Reclamation. Flood control regulation for Brownlee Reservoir was accomplished under flood control regulation provisions in the Federal Power Commission license to Idaho Power Company. The FY 07 costs associated with flood control operation of non-Corps and Corps-owned projects was \$438,407.

7. TRIBAL PARTNERSHIP PROGRAM

Location. The Shoshone Bannock Tribes of Fort Hall Reservation and the study area are located

just northwest of Pocatello, ID, in the southeastern corner of Idaho.

Existing project. Section 203 of the Water Resources Development Act of 2000, Tribal Partnership Program, authorized the Corps to undertake a reconnaissance phase study to determine if there is a Federal (Corps) interest in participating in a cost-shared feasibility phase study with the Shoshone Bannock Tribes of Fort Hall. This study is to determine if there is Federal interest in providing, collecting, and evaluating critical data and information relevant to protecting ecologically and culturally sensitive areas in the Fort Hall "Bottoms" and adjacent lands. It would evaluate alternatives that would restore lost environmental qualities of the original ecosystems; develop and analyze key risk reduction actions that would reduce the impacts of floods and flood damage in both developed tribal lands and culturally sensitive lands. The study would assess methods and alternatives that would improve water quality and quantity; identify areas on and directly adjacent to the reservation where erosion control would improve, protect, and enhance riparian/wetlands areas, total maximum daily loads, etc.; and develop comprehensive environmental and floodplain solutions for "natural" river corridor improvements to the Fort Hall "Bottoms" watershed and adjacent lands.

Local cooperation. The 905b study is 100 percent Federally funded. The Shoshone Bannock Tribes of Fort Hall have been participating in the development of this study.

Operations during FY. A draft report of the 905b study has been developed and is under internal review. The FY costs were \$22,524. Total costs through September 30, 2007, were \$88,525.

8. FLOOD CONTROL ACTIVITIES UNDER SPECIAL AUTHORIZATION

Flood control activities pursuant to Section 205, PL 858, 80th Congress, as amended: The FY costs were \$4,000 for Section 205 coordination. There were no new flood control activities.

Emergency flood control activities-repair, flood fighting, and rescue work (PL 99, 84th Congress, and antecedent legislation): There were no Federal costs this FY.

Emergency bank protection (Section 14, Flood Control Act of 1946, PL 526, 70th Congress): The FY costs were \$1,000 for Section 14 Coordination.

Snagging and clearing of navigable streams and tributaries in interest of flood control (Section 208, Flood Control Act of 1954, PL 780, 83rd Congress): The FY costs were \$3,690 for Section 208 coordination.

Multiple-Purpose Projects Including Power

9. COLUMBIA RIVER FISH MITIGATION PROGRAM (WALLA WALLA PROJECTS), OR, WA, AND ID

Location. This project is located at Ice Harbor, Lower Monumental, Little Goose, and Lower Granite Locks and Dams on the lower Snake River in the State of Washington and McNary Lock and Dam on the Columbia River in the states of Oregon and Washington. (See table 30-B for Authorizing Legislation of projects in the District.)

Existing project. The eight Corps hydroelectric projects on the Columbia and lower Snake Rivers have been identified as a major contributing factor in causing mortality to downstream migrating juvenile salmon and steelhead. Without adequate bypass facilities to guide these juvenile fish away from the power turbines at the dams, mortalities incurred through project passage severely impact the commercial, recreational, and Indian fisheries. The Corps has recognized the need to reduce juvenile fish mortality and has undertaken bypass measures that include mechanized fish bypass systems with barge and truck transportation. Spill as an additional bypass route over the spillways has been used to divert fish from entering turbine units, but it is a significant adverse economic factor due to lost power revenues. Congress passed, and the President signed, the FY 89 Energy and Water Development Appropriation Act (PL 100-371), which mandated the expenditure of funds for the design, testing, and construction of new or improved fish bypass facilities for the Columbia River fish mitigation projects. Completion of bypass and transportation facilities will significantly increase the survival of migrating downstream juvenile fish. The mitigation study will determine the overall scope of the fish mitigation facilities for these Columbia and

lower Snake River dams. The mitigation study project was added to the President's FY 91 budget.

The plan of improvement includes the following facilities: (1) Ice Harbor Lock and Dam (Ice Harbor): screens, new gantry crane, collection bypass facility, intake gate raise, spillway deflectors, surface bypass, and fish ladder temperature control; (2) Lower Monumental Lock and Dam (Lower Monumental): hold/load and collection bypass facility, screens, passive integrated transponder tag (PIT-Tag) facility, barge load facility modifications, barges, gate raise modifications, gantry crane, fish ladder temperature control, and surface bypass; (3) Little Goose Lock and Dam (Little Goose): screens, gantry crane modification, collection bypass facility, outfall pipe, fish ladder temperature control, fallout fences, gate raise, deck screen modifications, PIT-Tag facility, and surface bypass; (4) Lower Granite Lock and Dam (Lower Granite): juvenile fish facility, gantry crane, gate raise, outfall pipe, fish barges, screens, additional moorage facility, fish slot closures, juvenile fish facility improvements, barge exit modifications, deck screen modifications, fish ladder temperature control, surface bypass, PIT-Tag facility, and fallout fences; and (5) McNary Lock and Dam (McNary): gantry crane, screens, hold/load facility, gate raise modifications, tilted weirs fish ladder, maintenance facility, fish ladder exits, hold/load facility, adult/juvenile collection channel stoplogs, juvenile fish facility, surface bypass, and gantry crane modifications.

In response to the 1995 *Endangered Species Act, Section 7 Consultation Biological Opinion* issued by the National Marine Fisheries Service (NMFS), the District conducted a feasibility study (Lower Snake River Juvenile Salmon Migration Feasibility Study) to evaluate salmon migration problems on the lower Snake River. The objective of the study was to improve salmon migration conditions through the four Corps-operated dams and reservoirs on the lower Snake River. The study focused on how these dams could be changed to improve survival and recovery prospects for Snake River salmon stocks under the Endangered Species Act. The total completed cost of the study was \$31.1 million.

The District is currently managing a surface bypass and collection technology development effort that focuses on improving juvenile fish passage for endangered and threatened salmon migration past all Corps hydroelectric projects on the Columbia and lower Snake Rivers. It is an aggressive, nontraditional approach to prototype development that involves fast-track design, construction, testing, and evaluation.

REPORT OF THE SECRETARY OF THE ARMY ON CIVIL WORKS ACTIVITIES FOR FY 2007

The fully funded Federal project cost is estimated at \$682,700,000 for District projects.

Local cooperation. None required.

Operations during FY. The following improvements and studies were accomplished during FY 07:

- Awarded contract and completed construction of the McNary Temporary Spillway Weirs (TSWs). The TSWs are prototype surface passage structures that were constructed quickly and economically and deployed in the spring of 2007. They provide the ability to evaluate fish behavior through a surface passage route on the spillway. This information will aid designers in developing permanent surface passage alternatives at this project.
- Initiated studies to evaluate the effect of TSWs on approach, passage, and survival of juvenile salmon (run-of-river spring Chinook, steelhead, and fall Chinook) at McNary. Two spill operations in the spring and two spill levels in the summer were evaluated. Spill patterns were developed to optimize passage through the TSWs and provide a surface passage route to reduce migration delay through the forebay. Research methodologies during both the spring and summer spill season included acoustic telemetry and fixed aspect hydroacoustics for vertical passage distribution. Preseason post-construction testing of TSWs for injury included research using balloon tags for direct injury, sensor fish to characterize the passage route, and a protein biomarker to detect internal head injury.
- A study to examine fine scale juvenile fish movement near surface flow outlets was initiated at McNary. The research utilized simultaneous data collection with a Didson camera and an acoustic doppler current profiler (ADCP). This research is meant to provide criteria for use as design specifications for future surface flow outlet technology development.
- Initiated preliminary design and hydraulic modeling of surface passage alternatives for McNary. Alternatives being considered include surface passage outlets at the spillway, north concrete non-overflow, powerhouse, and south earthen non-overflow. Behavioral Guidance Structure (BGS) alternatives to guide fish to these surface passage outlets are also being considered.
- Continued the McNary forebay temperature evaluation to alleviate or minimize water temperature gradients that develop in the forebay during the summer months.
- Constructed a safety boom in the Ice Harbor forebay to alleviate safety concerns with recreational boaters in the proximity of the removable spillway weir (RSW).
- Third year, post-construction biological testing was conducted at Ice Harbor to evaluate efficiency of the RSW during both spring and summer operations.
- Continued construction of the Lower Monumental RSW. The RSW will be installed for spring operation by April 2008.
- Fish behavior, relative project- and route-specific survival, and spill efficiencies were estimated for juvenile salmon at Lower Monumental under the court negotiated spill operations for 2007. This work provides the fourth year of spring Chinook data, the second year of steelhead data, and the third year of fall Chinook data for the baseline data set, to which the new RSW performance will be compared. The spill pattern evaluated in both 2006 and 2007 was developed to promote passage through spillbay 8 where the RSW has been installed.
- The second year of a study was conducted to evaluate the relationship between hydraulic conditions and juvenile fall Chinook migration behavior during summer and early fall months in the Lower Monumental reservoir. Specific objectives focused on conditions that simulated holding behavior and re-initiation of migrations. A model is being developed for distinguishing residualization behavior from mortality for tagged fish not leaving the reservoir. This information provided

WALLA WALLA, WA, DISTRICT

further baseline data for comparing with post-construction RSW operations.

- Completed construction of the Lower Monumental juvenile PIT-Tag monitoring facilities on the main transportation flume. The new system, installed prior to the 2007 fish passage season, will improve detection of migrating PIT-Tagged juveniles.
- Completed design of the Little Goose juvenile PIT-Tag monitoring facilities on the main transportation flume, dewatering structure modifications, and juvenile outfall relocation. The new system will be installed prior to the 2009 fish passage season and will improve detection of migrating PIT-Tagged juveniles, mitigate for excessive vibrational forces causing stress in dewatering structure members, and improve survival at the outfall location respectively.
- Continued engineering design and hydraulic modeling for a surface passage alternative at Little Goose.
- Performed studies to provide baseline information on project- and route-specific survival at Little Goose in preparation for design, positioning, and installation of a surface passage structure. Survival of yearling Chinook, steelhead, and fall Chinook was evaluated under a tapered bulk spill operation.
- Completed the sixth-year prototype testing of a stand-alone RSW at Lower Granite for summer operations. The RSW performance was collected for the third consecutive year with respect to the passage of fall Chinook.
- Removed the prototype BGS at Lower Granite. The prototype BGS was a temporary structure intended to provide information on the performance of this and similar structures in guiding juvenile migrants away from the powerhouse turbines to a more benign surface passage route.
- Continued preliminary design for improvements to the Lower Granite juvenile bypass/holding and loading facilities. The existing facilities were the

first to be constructed on the Snake River and have many features that do not meet current criteria for the passage of juvenile salmon.

- Several mitigation analysis studies continued throughout FY 07, including the Turbine Survival Program Study. In 2007, turbine passage studies continued to investigate effects of rapid pressure changes on fish injury and survival and the contribution of high levels of dissolved gas typically found in the river to increased injury rates. The Turbine Survival Program estimated injury and survival rates of juvenile salmon passing unit 3 at Ice Harbor.
- Continued the system-wide spillway evaluation study to determine impacts of increased spill frequency and duration on Columbia and lower Snake River dams. These impacts are a result of voluntary spill operations that aid juvenile fish passage. In 2007, the study focused on identifying causal mechanisms for erosion and possible operational solutions.
- Continued studies evaluating impacts of avian predation on salmon smolts from the Columbia and Snake Rivers. This included monitoring the Caspian tern colony on Crescent Island, determining stock-specific predation rates on juvenile salmonids, surveying and monitoring for new or existing tern and cormorant colonies in the mid-Columbia River, and PIT-Tag recovery from avian islands. Research provided an estimate of relative magnitude of impacts among multiple avian predators in the mid-Columbia River.
- Conducted research on estuarine detection of juvenile salmon using paired PIT detection trawls. This research was to estimate salmon hydrosystem survival for determining annual performance of the hydrosystem. Increased late season monitoring to determine if sufficient PIT-Tagged fall Chinook were present to warrant future monitoring in the fall.
- Continued studies to answer key uncertainties regarding delayed mortality of juvenile salmon with different migration

histories. This included effects of disease load, disease susceptibility, changes in physiological dysfunctions, size selective predation, and alternate barge release locations.

- Researchers evaluated Pacific adult lamprey passage success through the adult fish ladders at McNary and Ice Harbor.
- Initiated efforts to develop a separator for juvenile lamprey. These efforts included work identifying behavioral reactions to light, current direction, and vertical/horizontal passage preference.

The FY costs were \$46,370,514. Total project costs are \$600,759,326. (See table 30-A, Cost and Financial Statement.)

10. DWORSHAK DAM AND RESERVOIR, ID

Location. The dam is on the North Fork of the Clearwater River, 1.9 miles above its junction with the Clearwater River, near Orofino, ID, and about 35 miles east of Lewiston, ID. (See table 30-B for Authorizing Legislation of projects in the District.)

Existing project. The project includes a dam, powerplant, public parks, and appurtenant facilities. The project provides for flood control, navigation, hydroelectric power generation, recreation, and area redevelopment. The reservoir has a normal operating range between the elevations of 1,600 and 1,445 mean sea level (msl). The reservoir has a gross storage capacity of 3,468,000 acre-feet (2 million acre-feet of which are effective for both local and regional flood control and for at-site and downstream power generation). In addition, the reservoir, which extends 59 miles into rugged and relatively inaccessible timberland, provides cost-effective transportation for moving marketable logs. The reservoir provides habitat for elk, deer, and other wildlife. The dam structure is about 3,287 feet long and about 717 feet above the streambed. Fish passage is not feasible due to the height of the dam. A hatchery has been built below the dam to assure continuance of anadromous fish runs. The powerhouse has two 90,000-kilowatt (kW) and one 220,000-kW generating units in operation for a capacity of 400,000 kW.

Provisions had been made for three additional 220,000-kW generating units for an ultimate installed capacity of 1,060,000 kW. A reconnaissance report justifying the feasibility and cost benefits for the

addition of a fourth 200,000-kW generating unit was completed in FY 78. However, environmental and economic studies on additional generating units were curtailed due to public opposition. Unit 4 is undeveloped. Units 5 and 6 were de-authorized in FY 90, and Unit 4 was de-authorized in FY 95. Principal project data are set forth in table 30-C.

Construction of the project began in July 1966. It was placed in operation in 1972 and completed in 1986. Since the project became operational in June 1972, it has prevented about \$2,836,000 (cumulative nominal \$) in potential flood damages. Power generation through September 2007 was 60.63 billion kW hours.

At Dworshak Reservoir, recreation facilities consist of 12 day-use/picnic areas, six camp areas, six boats launches, and two swim areas. The Dworshak Information Center provides a regional overview of the Corps' efforts in the Clearwater River Basin. Total visitation to Dworshak Reservoir for the FY was 119,278.

Local cooperation. None required.

Operations during FY. Operation and Maintenance: Management of wildlife habitat browse continued on project lands to provide winter browse for elk and deer. During the FY, 1.8 billion kW hours of electrical power was generated by the three generating units. The FY costs were \$10,301,229 (See table 30-A, Cost and Financial Statement.)

11. ICE HARBOR LOCK AND DAM, LAKE SACAJAWEA, WA

Location. This dam is located on the Snake River, 9.7 miles above the river mouth at the head of Lake Wallula (McNary Reservoir) and 12 miles east of Pasco, WA. (See table 30-B for Authorizing Legislation of projects in the District.)

Existing project. The project includes a dam, powerplant, navigation lock, two fish ladders, recreation areas, and appurtenant facilities. The project provides navigation, hydroelectric power generation, recreation, and incidental irrigation. The reservoir has a normal operating range between elevations 440 and 435 msl. Lake Sacajawea extends upstream about 31.9 miles and provides slack water to Lower Monumental. The dam structure is approximately 2,822 feet long and approximately 130 feet above the streambed. The fish passage facilities include two fish ladders. The powerhouse has three 90,000-kW units and three 111,000-kW

WALLA WALLA, WA, DISTRICT

generating units in operation for a capacity of 603,000 kW.

The spillway dam is 590 feet long, and the overflow crest at elevation 391 msl is surmounted by 10 tainter gates, 50 feet wide and 52.9 feet high, that provide the capacity to pass a design flood of 850,000 cubic feet per second (cfs). The deck is at elevation 453 msl and provides a service road and track for a gantry crane. The navigation lock is a single-lift type with clear plan dimensions of 86 by 675 feet and a 16-foot minimum depth over the sills. A navigation channel 250 feet wide, 14 feet deep, and 41.6 miles long is provided from the mouth of the Snake River to the dam and from the dam to Lower Monumental. Principal data are set forth in table 30-C.

Construction of the original project began in December 1955. It was placed in operation in 1961 and completed in 1971. Construction of the additional generating units was started in 1971 and completed in 1981. Power generation through September 2007 was 94.31 billion kW hours.

Recreation areas on Lake Sacajawea include 11 picnic/day-use sites, four camping areas, seven areas with boat launching, and four swimming areas. There are 32 miles of the Northwest Discovery Water Trail. The Ice Harbor Information Center provides a regional overview of the Corps' efforts in the Snake River Basin. Total visitation on Lake Sacajawea for the FY was 331,352.

Local cooperation. None required.

Operations during FY. Operation and Maintenance: During the FY, 1.5 billion kW hours of electrical power was generated by the six generating units. Traffic through the navigation lock consisted of grains, petroleum products, fertilizer, wood products, and miscellaneous cargo that amounted to 3,332,300 tons during calendar year 2007. The FY costs were \$9,256,732. (See table 30-A, Cost and Financial Statement.)

12. LITTLE GOOSE LOCK AND DAM, LAKE BRYAN, WA

Location. The dam is 70.3 miles above the mouth of the Snake River and at the head of Lake Herbert G. West (Lower Monumental Reservoir), about 40 miles northerly of Walla Walla, WA, and 50 miles westerly of Lewiston, ID. (See table 30-B for Authorizing Legislation of projects in the District.)

Existing project. The project includes a dam, powerplant, navigation lock, fish ladder, and appurtenant facilities. The project provides for navigation, hydroelectric power generation, recreation, and incidental irrigation. The reservoir has a normal operating range between elevations 638 and 633 msl. Lake Bryan extends upstream about 37.2 miles and provides slack water to Lower Granite. The dam structure is 2,655 feet long and approximately 165 feet above the streambed. Fish passage facilities include one ladder with entrances on both shores and a fish channel through the spillway, which connects to the powerhouse fish collection system and south shore ladder. The powerhouse has six 135,000-kW generating units in operation for a capacity of 810,000 kW. The spillway dam is 512 feet long, and the overflow crest at elevation 581 msl is surmounted by eight tainter gates, 50 feet wide and 60 feet high, that provide the capacity to pass a design flood of 850,000 cfs. The navigation lock is a single-lift type with clear plan dimensions of 86 by 668 feet and a 15-foot minimum depth over the sills. A navigation channel 250 feet wide, 14 feet deep, and 37.2 miles long is provided from the dam to Lower Granite. Relocations along the lake included 32 miles of Camas Prairie Railroad, 6.8 miles of county roads, 2.2 miles of state highways, and the Central Ferry Bridge. Principal project data are set forth in table 30-C.

Construction of the original project began in 1963. It was placed in operation in 1970 and completed in 1976. Construction of additional generating units started in 1974 and was completed in 1984. Power generation through September 2007 was 90.76 billion kW hours.

Lake Bryan provides seven day-use sites, five campgrounds, five boat-launching areas, and two swimming areas. There are 39 miles of the Northwest Discovery Water Trail. Total FY visitation to Lake Bryan was 194,708.

Local cooperation. None required.

Operations during FY. Operation and Maintenance: During the FY, 1.8 billion kW hours of electrical power was generated by the six generating units. Traffic through the navigation lock consisted of grains, petroleum products, fertilizer, wood products, and miscellaneous cargo that amounted to 2,739,800 tons during calendar year 2007. The FY costs were \$7,136,670. (See table 30-A, Cost and Financial Statement.)

**13. LOWER GRANITE LOCK AND DAM,
LOWER GRANITE LAKE, WA**

Location. This dam is at river mile 107.5 on the Snake River at the head of Lake Bryan (Little Goose Reservoir) and about 33 miles downstream from Lewiston, ID. (See table 30-B for Authorizing Legislation of projects in the District.)

Existing project. The project includes a dam, powerplant, navigation lock, fish ladder, appurtenant facilities, and includes approximately 8 miles of slack water levees along the Snake and Clearwater Rivers at Lewiston, ID. The project provides for slack water navigation, hydroelectric power generation, recreation, and incidental irrigation. The reservoir has a normal operating range between elevations 738 and 733 msl in Lewiston, ID, and Clarkston, WA. Lower Granite Lake extends upstream approximately 38 miles and provides slack water to the confluence of the Snake and Clearwater Rivers. The dam structure is approximately 3,200 feet long and approximately 146 feet above the streambed. Fish passage facilities include one ladder with entrances on both shores with a fish channel through the spillway that connects to the powerhouse fish collection system and south shore ladder. The powerhouse has six 135,000-kW generating units in operation for a capacity of 810,000 kW. The spillway dam is 512 feet long, and the overflow crest at elevation 681 msl is surmounted by eight tainter gates, 50 feet wide and 60 feet high, which provide the capacity to pass a design flood of 850,000 cfs. The navigation lock is single-lift type with clear plan dimensions of 86 by 674 feet and 15-foot minimum depth over the sills. A navigation channel 250 feet wide, 14 feet deep, and 39.3 miles long is provided from the dam to the confluence of the Snake and Clearwater Rivers. Principal data are set forth in table 30-C.

Construction of the original project started in July 1965. It was placed in operation in 1975 and completed in 1984. Construction of additional generating units was started in 1974 and completed in 1979. Power generation through September 2007 was 81.78 billion kW hours. Approximately \$25,418,000 (cumulative nominal \$) in potential flood damages has been prevented since the levees became functional.

Lower Granite Lake offers visitors 16 day-use/picnic sites, 6 sites with camping, 12 boat launch ramps, and 4 swimming areas. There are 45 miles of the Northwest Discovery Water Trail. Total recreation visitation to Lower Granite Lake for the FY was 1,386,700.

Local cooperation. None required.

Operations during FY. Operation and Maintenance: During the FY, 1.4 billion kW hours of electrical power was generated by the six generating units. Traffic through the navigation lock consisted of grains, petroleum products, fertilizer, wood products, and miscellaneous cargo that amounted to 1,624,900 tons during calendar year 2007. The FY costs were \$8,736,258. (See table 30-A, Cost and Financial Statement.)

Juvenile Fish Transportation Program. As the first collector dam on the Snake River, Lower Granite is a primary component of the Juvenile Fish Transportation Program. Transport began in the late 1960s as a research program on how to bypass juvenile salmon and steelhead around dams and reservoirs of the Corps' Columbia and Snake River dams. Transport became an operational program in 1981 with collection and transport from Lower Granite, Little Goose, and McNary. Transport was expanded in 1993 to include Lower Monumental. Development and improvement of collection and bypass systems continue with a new collection system completed at McNary in 1994; a new bypass system completed at Ice Harbor in 1996; and extended-length submersible bar screens installed at Lower Granite, Little Goose, and McNary in 1996 and 1997. In 2003, a new RSW was tested at Lower Granite. A second RSW was tested at Ice Harbor in 2005 (fish were not collected here for transport in 2006). A third RSW, delivered to Lower Monumental in October 2007, is expected to become operational prior to the 2008 fish passage season. During the 2007 season, 2 TSWs were tested in spillbays 20 and 22 at McNary.

The 2007 juvenile fish transport season was marked by well below normal river flows in the Snake River, and average river flows in the Columbia River. The three Snake River transport projects operated under regionally coordinated, court approved operations, including daily spill from April 3 through August 31, with transportation of juvenile fish collected. Spill at McNary took place from April 10 through August 31. During the court ordered spill period, emphasis was placed on a mix of fish transportation and in-river migration.

The start of juvenile fish transport operations were staggered and commenced at a later date at Snake River projects in 2007 to allow early season fish to migrate in river. This resulted in lower collection and transport numbers than in past years. Juvenile fish collection at Lower Granite was 3,201,658, as compared with 5,797,384 in 2006 and

WALLA WALLA, WA, DISTRICT

13,030,967 in 2005. A total of 679,205 fish were bypassed back to the river in 2007 and 2,516,948 were transported. At Little Goose, a total of 2,098,951 juvenile salmon and steelhead were collected in 2007, as compared to 7,253,631 collected in 2006. A total of 150,613 fish were bypassed back to the river in 2007, as compared to 964,141 fish in 2006. A total of 1,947,018 juvenile fish were transported from Little Goose in 2007. At Lower Monumental, 900,533 juvenile salmon and steelhead were collected, as compared to 2,314,392 in 2006. A total of 10,438 fish were bypassed from Lower Monumental in 2007, as compared to 74,659 in 2006. A total of 888,962 juvenile fish were transported from Lower Monumental in 2007.

At McNary, normal operations are to bypass fish in the spring until approximately mid-June when collection and transport of summer migrants begin. This was not the case in 2007, as TSW operations precluded the transport of fish by barge. No fish were transported until truck operations began August 18. A total of 4,303,284 juvenile salmon and steelhead were collected in 2007, as compared to 3,463,338 in 2006. Approximately 4,262,552 of the fish collected were bypassed back to the river to meet fishery agency requirements. A total of 35,933 juvenile fish were transported from McNary, notably lower than the 1,005,373 transported in 2006 and 2,927,613 transported in 2005.

A grand total of 10,504,426 juvenile salmon and steelhead were collected at all projects in 2007, compared to 18,828,745 in 2006. A total of 5,388,861 fish were transported in 2007, 51 percent of those collected, compared to 77 percent in 2006. Of the fish transported, 5,342,289 were transported by barge (99 percent) and 46,572 were trucked (less than 1 percent).

14. LOWER MONUMENTAL LOCK AND DAM, LAKE HERBERT G. WEST, WA

Location. This dam is on the Snake River at the head of Lake Sacajawea (Ice Harbor Reservoir), about 45 miles northeast of Pasco, WA, and 41.6 miles above the river mouth. (See table 30-B for Authorizing Legislation of projects in the District.)

Existing project. The project includes a dam, powerplant, navigation lock, two fish ladders, and appurtenant facilities. The project provides for navigation, hydroelectric power generation, recreation, and incidental irrigation. The reservoir has a normal operating range between elevations 540 and 537 msl. Lake Herbert G. West extends

upstream approximately 28.7 miles and provides slack water to Little Goose. The dam structure is approximately 3,791 feet long and approximately 135 feet above the streambed. The fish passage facilities include two fish ladders, one at each end of the dam. The powerhouse has six 135,000-kW generating units in operation for a capacity of 810,000 kW. The spillway dam is 572 feet long, and the overflow crest at elevation 483 msl is surmounted by eight tainter gates, 50 feet wide and 60 feet high, that provide capacity to pass a design flood of 850,000 cfs. The deck is at elevation 553 msl and provides a service road and track for a gantry crane. The navigation lock is a single-lift type with clear plan dimensions of 86 by 666 feet and a 15-foot minimum depth of the sills. A navigation channel 250 feet wide, 14 feet deep, and 28.1 miles long is provided from the dam to Little Goose. Relocations along the lake included railroads and highways. Principal data are set forth in table 30-C.

Construction of the original project started in June 1961. It was placed in operation in 1969 and completed in 1976. Construction of the additional generating units started in 1975 and was completed in 1981. Power generation through September 2007 was 105.70 billion kW hours.

Lake West offers seven day-use areas, five areas offering camping, five boat launch areas, and one designated swimming beach. There are 28 miles of the Northwest Discovery Trail. Total visitation on Lake West for the FY was 119,552.

Local cooperation. None required.

Operations during FY. Operation and Maintenance: During the FY, 1.7 billion kW hours of electrical power was generated by the six generating units. Traffic through the navigation lock consisted of grains, petroleum products, fertilizer, wood products, and miscellaneous cargo that amounted to 3,053,800 tons during calendar year 2007. The FY costs were \$8,061,341. (See table 30-A, Cost and Financial Statement.)

15. LOWER SNAKE RIVER FISH AND WILDLIFE COMPENSATION PLAN, WA, OR, AND ID

Location. This project is at various locations within the Columbia and Snake River drainages in the states of Idaho, Oregon, and Washington. (See table 30-B for Authorizing Legislation of projects in the District.)

Existing project. The project consists of a series of fish hatcheries, wildlife development areas, and purchase of off-site project lands for fishing and hunting access and further habitat development. The project will compensate for loss of wildlife habitat and anadromous and resident fisheries due to impacts from the construction of four multipurpose dams and reservoirs on the lower Snake River (Ice Harbor, Lower Monumental, Little Goose, and Lower Granite).

The real estate design memorandum and feature design memorandums on all hatcheries and satellites, the off-project wildlife lands, and the site selection report have all been approved. A final Environmental Impact Statement was filed with the Council on Environmental Quality on November 2, 1977. The Dworshak National Fish Hatchery Expansion, Irrigon, Hagerman, Lyons Ferry, Lookingglass, McCall, Sawtooth, Magic Valley, and Clearwater hatcheries (including their respective satellite facilities) are all in operation. Transfer actions were completed in FY 04 for Big Canyon and Pittsburg Landing. Captain John Rapids is scheduled to be completed by the end of FY 08. Fencing is complete at all wildlife development areas. Off-project land acquisition is 100-percent complete. Habitat development continues at many of these sites. A plan for woody riparian habitat development has been initiated to compensate for habitat losses resulting from the inundation of habitat. This will result in creation of new riparian habitat areas. The compensation project is contingent on appropriations and currently scheduled for completion in FY 18.

Estimated Federal cost for the project is \$261,000,000. The FY costs were \$534,336. Total project costs are \$237,312,107. (See table 30-A, Cost and Financial Statement)

Local Cooperation. None required.

16. McNARY LOCK AND DAM, LAKE WALLULA, OR AND WA

Location. This dam is on the Columbia River, 292 miles above the mouth, near Umatilla, OR, and 3 miles above the mouth of the Umatilla River. (See table 30-B for Authorizing Legislation of projects in the District.)

Existing project. The project includes a dam, powerplant, navigation lock, two fish ladders, appurtenant facilities, and a system of levees and pumping plants. The project provides for slack water navigation, hydroelectric power generation,

recreation, and incidental irrigation. The reservoir has a normal operating range between elevations 340 and 335 msl. Lake Wallula extends upstream approximately 64 miles and provides slack water to Ice Harbor. The dam structure is 7,365 feet long and approximately 183 feet above the streambed. Fish passage facilities include two fish ladders. The powerhouse has fourteen 70,000-kW generating units in operation for a capacity of 980,000 kW. The spillway dam is 1,310 feet long, and the overflow crest is at elevation 291 msl and surmounted by 22 vertical lift gates, 50 feet wide and 51 feet high, which provide the capacity to pass a design flood of 2.2 million cfs. The navigation lock is a single-lift type with clear plan dimensions of 86 by 683 feet and a 15-foot minimum depth over the sills. A navigation channel (250 feet wide, 14 feet deep, and 32 miles long) is provided from the dam to the mouth of the Snake River. Relocations along the lake included railroad bridges over the Columbia and Snake Rivers in order to eliminate hazards to navigation. Principal project data are set forth in table 30-C.

Construction began in May 1947. It was placed in operation in 1953 and was completed in 1982. Power generation through September 2007 was 334.15 billion kW hours.

Local cooperation. None required.

Operations during FY. Operation and Maintenance: During the FY, 5.4 billion kW hours of electrical power was generated by the 14 generating units. Traffic through the navigation lock consisted of grains, petroleum products, fertilizer, wood products, and miscellaneous cargo that amounted to 6,805,700 tons during calendar year 2007. The FY costs were \$15,729,025. (See table 30-A, Cost and Financial Statement.)

Recreation areas on Lake Wallula include 19 sites offering day use or picnicking, 4 campgrounds, 14 boat launching ramps, and 9 swimming areas. There are 45 miles of the Northwest Discovery Water Trail. The Pacific Salmon Visitor Information Center at McNary, which is staffed by park rangers, provides a regional overview of Corps efforts in salmon recovery issues. Total visitation on Lake Wallula for the FY was 4,025,959.

17. SNAKE RIVER DOWNSTREAM FROM JOHNSON BAR LANDING, OR, WA, AND ID

WALLA WALLA, WA, DISTRICT

Location. This project is on the Snake River, downstream from Johnson Bar Landing, at river mile 230. The Snake River, which is the largest tributary of the Columbia River, rises in Yellowstone National Park in western Wyoming, flows generally in a westerly direction for approximately 1,000 miles, and empties into the Columbia River, near Pasco, WA, 324 miles from the Pacific Ocean. (See table 30-B for Authorizing Legislation of projects in the District.)

Existing project. The River and Harbor Act of 1945 authorized construction of dams, as necessary, for power, incidental irrigation, and open channel improvements for purposes of providing slack water navigation and irrigation between the mouth of the Snake River and Lewiston, ID. That authorization modified previous authorizations only for the portion of improvement below Lewiston, ID. Acts of June 13, 1902, and August 30, 1935, as they pertain to open river improvement from Lewiston, ID, to Johnson Bar Landing, remain part of the existing project.

Improvements included in existing projects are Ice Harbor, Lake Sacajawea; Little Goose, Lake Bryan; Lower Granite, Lower Granite Lake; Lower Monumental, Lake Herbert G. West; and open-river improvement, Lewiston to Johnson Bar Landing. Each of the four locks and dams is described in an individual report, and cost and financial data for the entire project are shown on tables 30-A and D.

Ice Harbor, Little Goose, Lower Granite, and Lower Monumental are in full operation.

Local cooperation. None required.

Terminal facilities. On the Snake River from the mouth to Johnson Bar Landing, there are 18 privately-owned barge terminals in use for shipping grain, petroleum products, fertilizers, wood products, cement, and other general cargo. There are also 5 marinas and 28 small-boat launching ramps, all open to the public. The facilities serve slack water navigation to river mile 140, the site of Lewiston, ID. That slack water reaches the Lewiston, ID, and Clarkston, WA, area since the lake behind Lower Granite was filled in February 1975.

Operations during FY. See individual reports for Ice Harbor, Little Goose, Lower Granite, and Lower Monumental. On the Snake River from Lewiston, ID, to Johnson Bar Landing, reconnaissance and condition surveys were conducted and survey markers were maintained.

18. RURAL IDAHO, ID, ENVIRONMENTAL INFRASTRUCTURE AND RESOURCE PROTECTION AND DEVELOPMENT PROGRAM

Location. Projects are at various locations within the state of Idaho.

Existing project. The primary objective of this program is to provide design and construction assistance to non-Federal interests for carrying out water-related environmental infrastructure and resource protection and development projects. Projects may include wastewater treatment and related facilities, water supply and related facilities, environmental restoration, and surface water resource protection and development. Projects are authorized under Section 595 of the Water Resources Development Act of 1999, PL 106-53, as amended.

Local cooperation. Local sponsors are responsible for 25 percent of costs associated with the projects.

Operations during FY. The following improvements were accomplished in FY 07:

- Completed design and initiated construction for wastewater treatment plant improvements with the City of Emmett, ID.
- Continued sewer line improvements with the City of Burley, ID.
- Initiated construction of wastewater treatment plant improvements with the City of Rupert, ID.
- Initiated design for the Shelley Regional Wastewater Treatment and Collection System with the City of Shelley, ID.
- Completed design and initiated construction for the City of Donnelly, ID, sewer collection System infiltration and inflow repairs and surface water protection.

The FY 07 costs were \$1,738,028. (See table 30-A, Cost and Financial Statement.)

19. ENVIRONMENTAL ACTIVITIES UNDER SPECIAL AUTHORIZATION

Project modification for the improvement of the environment (Section 1135(b), PL 99-662, as

REPORT OF THE SECRETARY OF THE ARMY ON CIVIL WORKS ACTIVITIES FOR FY 2007

amended): The FY costs were \$89,023 for continuation of four environmental restoration projects and coordination funds including: (1) Coordination Account (\$5,000); (2) Walla Walla River, OR (\$25,031); (3) City of Richland Ecosystem Restoration (\$4,852); and (4) Bennington Lake Diversion Dam, WA (\$54,140). There were no new section 1135 projects.

Project modification for Aquatic Ecosystem Restoration (Section 206, PL 104-303, as amended): The FY costs were \$293,317 for continuation of six aquatic ecosystem restoration projects and coordination account, including: (1) Coordination Account (\$5,000); (2) Salmon River, ID (\$5,297); (3) Indian Creek Ecosystem Restoration, ID (\$48,571); (4) Camp Creek, OR (\$197,384); and (5) Paradise Creek, ID (\$37,065).

General Investigations

20. COLLECTION AND STUDY OF BASIC DATA

During the FY, flood hazard data for a number of locations in the District were collected and analyzed. Flood information was provided to several Federal agencies; the states of Idaho, Oregon, and Washington; various cities and counties in those states; and some private organizations.

Total cost of collection and study of basic data during the FY was \$153,555, which included: Flood Plain Management Services (\$16,000); Technical Services (\$39,760); Quick Responses (\$5,000); and Special Studies (\$92,794).

21. PRECONSTRUCTION, ENGINEERING, AND DESIGN

None.

22. SURVEYS

Little Wood River. Lack of sponsor.

The total FY 07 costs for surveys were \$746,713, including Boise River (\$349); special studies [Walla Walla River Watershed (\$549,390)]; miscellaneous activities [special investigations, FERC licensing activities, North American Waterfowl Management Plan, and Interagency Water Resource Development (\$105,066)]; coordination with other Federal agencies (\$8,766); and Planning Assistance to States (\$83,142).

HONOLULU ENGINEER DISTRICT

The civil works responsibilities of the Honolulu District encompass the State of Hawaii, the Territory of Guam, the Territory of American Samoa, and the Commonwealth of the Northern Mariana Islands. The

district is unique in that its area of responsibility is totally comprised of islands dispersed over an ocean environment exceeding 6 million square miles.

Navigation

1. KIKIAOLA SMALL BOAT HARBOR, KAUAI, HAWAII

Location. Kikiaola Harbor is located on the southwest coast of the island of Kauai, approximately 1 mile southeast of Kekaha and approximately 2 miles west of Waimea (See NOAA Chart 19386)

Existing project. The authorized project consists of removing a 150-foot long portion from an existing outer east stub breakwater; removing and reconstructing a 71-foot long inner east stub breakwater; modifying 245-foot long portion of the existing west breakwater; modifying 820-foot long portion of the existing east breakwater; dredging a new 725-foot long entrance channel to a depth of 11-feet and varying in width from 105 to 205-feet; and dredging a 320-foot long access channel to a 7-foot depth and varying in width from 70 to 105-feet.

Local cooperation. The Project Cooperation Agreement (PCA) was executed in August 2005. Requirements are described in full on page 31-2 of the Fiscal Year 2006 Annual Report.

Terminal facilities. There is an existing 1,280-foot long east breakwater with two short stub breakwaters; a 600-foot long west breakwater; a 225-foot long inner breakwater; a 150-foot long by 10-foot wide wooden wharf; a 50-foot long loading dock and adjacent launch ramp, all constructed by the State of Hawaii.

Operations during fiscal year. Work during the Fiscal Year included evaluating and incorporating cost savings measures, incorporating survey bench marks for compliance with HQUSACE guidelines, revising and finalizing plans and specifications and advertising and awarding the construction contract on 6 September 2007. Total costs incurred during the Fiscal Year were \$339,483.

2. MAALAEA HARBOR, MAUI, HAWAII

Location. Maalaea Bay is situated on the southwest coast of Maui, approximately 7 miles south of Wailuku, the county seat of Maui. (See NOAA Chart 19350)

Existing project. For a description of the existing project, see page 36-3 of the Fiscal Year 1989 Annual Report. (See Table 36-B for Authorizing Legislation)

Local cooperation. The Project Cooperation Agreement (PCA) is delayed due to concerns raised as a result of the Supplemental Environmental Impact Statement review.

Terminal facilities. There is an existing 1,000-foot long south breakwater, a 870-foot long east breakwater,

300-foot long wharf, 90-foot wide entrance channel, and a single lane launch ramp, all constructed by the State of Hawaii.

Operations during fiscal year. The local sponsor requested that the Project work be held in abeyance during the Fiscal Year. Total costs incurred during the Fiscal Year were \$578.

3. KAUMALAPAU HARBOR, LANAI, HAWAII

Location. The project is located on the southwestern coast of the Island of Lanai. (See NOAA Chart 19351)

Existing project. The project repaired the existing breakwater built in 1925 that was previously owned by private interests. The existing breakwater was repaired using 35-ton Core Loc concrete armor units. The length of the breakwater will be 320 feet long.

Local cooperation. The Project Cooperation Agreement (PCA) was executed in September 2003. Requirements are described in full on page 31-2 of the Fiscal Year 2003 Annual Report.

Terminal Facilities. A 200-foot long rubblemound breakwater with a crest elevation of about +10 feet protects a 400-foot long wharf which is operated and owned by the State of Hawaii Harbors Division.

Operations during fiscal year. Repair work on breakwater using 819 35-ton Core-loc units was physically completed on 8 June 2007. The dedication ceremony with the Congressional delegation in attendance was held on 7 July 2007. Total costs incurred during the Fiscal Year were \$6,943,369.

4. KAHULUI LIGHT DRAFT HARBOR, MAUI, HAWAII

Location. The Kahului Light Draft Harbor site is located within the Kahului Deep Draft Harbor on the northern coast of the Island of Maui. (See NOAA Chart 19342)

Existing project. The project includes removing an existing rock groin; constructing a 130-foot long rubblemound breakwater structure; dredging an entrance channel 1,030 feet long, 50 feet wide and 9.5 feet deep; and dredging a turning basin 100 feet long, 100 feet wide and 8.5 feet deep.

Local cooperation. The Project Cooperation Agreement (PCA) was executed in May 2003. Requirements are described in full on page 31-2 of the Fiscal Year 2004 Annual Report.

Terminal Facilities. A damaged rubblemound breakwater protects the harbor basin approximately 30 feet in length, with a crest elevation of about 8 feet. There is an existing single-lane boat launch ramp, a

wooden dock, and an entrance channel and turning basin dredged to a depth of minus 6.0 feet mean lower low water. All existing facilities were constructed by the State of Hawaii.

Operations during fiscal year. Contractor As-built drawings were finalized and the warranty inspection was accomplished during the Fiscal Year. Total costs incurred during the Fiscal Year were \$313,557.

5. RECONNAISSANCE AND CONDITION SURVEYS

Condition surveys were conducted by the Portland District at Barbers Point Harbor, Honolulu Harbor on the island of Oahu, HI; Kahului Deep Draft Harbor, Kahului Light Draft Harbor on the island of Maui, HI; Kaunakakai Harbor on the island of Molokai, HI; Nawiliwili Deep Draft Harbor, Nawiliwili Small Boat Harbor, and Port Allen Harbor on the island of Kauai, HI. Total costs to conduct the surveys were \$42,335. Costs for inspections of protective structures at navigation projects, management of Honolulu District's maintenance dredging program and comprehensive evaluation of project datum's at navigation projects totaled \$348,052 during the Fiscal Year. See Table 31-H for navigation inspections performed during the Fiscal Year.

6. INSPECTION OF COMPLETED FLOOD CONTROL AND BEACH EROSION CONTROL PROJECTS

Inspection of completed local flood protection projects is performed periodically in compliance with Section 208.10, of Title 33, Code of Federal Regulations, which contains regulations for operation and maintenance of local flood-protection works approved by the Secretary of the Army in accordance with authority in Section 3, Flood Control Act of June 22, 1936.

Costs to complete evaluation of existing I-wall structures at 2 flood damage reduction projects; the comprehensive evaluation of project datum and inspection costs for completed flood control and beach erosion control projects incurred during the Fiscal Year were \$183,998. See Table 31-I for inspections performed during the Fiscal Year.

7. NAVIGATION WORK UNDER SPECIAL AUTHORIZATION

Navigation activities pursuant to Section 107, Public Law 86-645, as amended (Preauthorization). See Table 31-J.

Beach Erosion Control

8. LAUNIUPOKO SHORELINE PROTECTION, MAUI, HAWAII

Location. The project is located on the western coast of the Island of Maui. The Island of Maui is located approximately 100 miles southeast of Honolulu, Hawaii. (See NOAA Chart 19348)

Existing project. The project construction consists of two reaches, totaling approximately 500 feet, of rubble mound revetments with a crest elevation of +12-feet (MLLW). The single layer revetment will be constructed of 1600-2500 pound armor stone, over a 2-foot thick underlayer of 50-150 pound stone.

Local cooperation. The Project Cooperation Agreement (PCA) was executed in January 2002. Requirements are described in full on Page 31-3 of the Fiscal Year 2002 Annual Report.

Operations during fiscal year. The construction contract for improvements was terminated for convenience by the Government on March 2005 due to significant differing site conditions. Preparation of permit applications continued during the Fiscal Year. Total costs incurred during the Fiscal Year were \$500.

9. BEACH EROSION WORK UNDER SPECIAL AUTHORIZATION

Emergency streambank and shoreline protection activities pursuant to Section 14, Public Law 79-526, as amended (Preauthorization). See Table 31-K.

Beach Erosion control activities pursuant to Section 103, Public Law 87-874, as amended (Preauthorization). See Table 31-L.

Flood Control

10. FLOOD CONTROL WORK UNDER SPECIAL AUTHORIZATION

Flood control activities pursuant to Section 205, Public Law 80-858, as amended (Preauthorization). See Table 31-M.

Project Modifications for Improvements of Environment pursuant to Section 1135, Public Law 99-662, as amended (Preauthorization). See Table 31-N.

Aquatic Ecosystem Restoration pursuant to Section 206, Public Law 104-303. (Preauthorization)

REPORT OF THE SECRETARY OF THE ARMY ON CIVIL WORKS ACTIVITIES FOR FY 2007

Fiscal Year costs were \$38,263 for Saipan Lagoon, CNMI; \$133,730 for Mokuhinia/Mokuula, Maui, HI; and \$4,310 for coordination with other agencies.

Emergency flood control activities pursuant to Public Law 84-99.

Federal cost during the Fiscal Year for Flood Control and Coastal Emergencies appropriation was \$1,409,997 of which \$504,570 was for disaster preparedness; and \$132,774 for emergency operations; \$771,776 for rehabilitation and field inspections.

General Investigations

11. SURVEYS

Fiscal Year costs were \$745,915 of which \$204,895 was for navigation studies; \$39,647 was for flood damage prevention studies; \$318,243 for special studies; \$151,214 for miscellaneous activities; and \$31,916 for coordination with other agencies. In addition, \$218,966 in non-Federal funds for coordination with other agencies; \$236,189 for cost-shared navigation studies; \$123,669 for cost-shared flood damage reduction studies and \$31,500 for cost-shared special studies.

12. COLLECTION AND STUDY OF BASIC DATA

Flood plain management services. The Flood Plain Management Services Program is authorized and implemented under Section 206, PL 86-645, 1960 Flood Control Act, as amended. Through technical

services and planning guidance, the program provides information on floods and flood related information to improve planning for the careful use of the nation's flood plains, thereby reducing the potential for losses to life and property from floods and wave actions. Non-Federal agencies are assisted with flood hazard evaluation and planning information for flood and coastal hazard areas without charge.

As of November 1991, Federal agencies and private entities were also offered these services on a cost recovery basis. This assistance is in the form of local flood plain regulations, National Flood Insurance Requirements, and Executive Order 11988 requirements for federal agencies. Such assistance may include flood information and timing, floodwater velocity, extent of flooding, duration of flooding, flood frequency and regulatory floodway limits.

Services accomplished during fiscal year. There were 384 site requests for technical services and planning assistance and publication responses. These services were requested and provided to Federal agencies, state and local government agencies, individuals, realtors, corporations, lending institutions, engineers, architects and other private parties. Costs for providing these services during the fiscal year were \$469,108.

Hydrologic Studies. Storm studies cost was \$12,034. Total costs for collection and study of basic data during the Fiscal Year were \$481,142.

TABLE 31–B AUTHORIZING LEGISLATION

See Section In Text	Date Authorizing Act	Project and Work Authorized	Documents
1.	Aug. 3, 1968	KIKIAOLA SMALL BOAT HARBOR, KAUAI, HAWAII A 700-foot long, 105 to 205-foot wide, and 11-foot deep entrance channel; a 320-foot long, 70 to 105-foot wide, and 7-foot deep access channel; modification of 220-foot portion of the existing west breakwater; and modification of 820-foot portion of the existing east breakwater; removal and reconstruction of an 85-foot long inner east breakwater; removal of a 150-foot long portion of the existing outer east stub breakwater.	Sec 101, PL 90–483 Cong., 2nd sess.
2.	Aug. 3, 1968	MAALAEA HARBOR, MAUI, HAWAII A 620-foot long extension of the south breakwater, a new 610-foot length, 150 to 180-foot width, 12 to 15-foot depth entrance channel, a 1.7 acre and 12-foot depth turning basin and a 720-foot length, 80-foot width and an 8-foot deep access channel.	Sec 101, PL 90–483 Cong., 2nd sess.
3.	Oct. 27, 2000	KAUMALAPAU HARBOR, LANAI, HAWAII Repair existing breakwater using 35-ton core loc concrete armor units. The length of the repaired breakwater will be 320 feet.	Sec 1(a), PL 106-377 Cong., 2 nd sess.
4.	Jul. 14, 1960 As amended	KAHULUI LIGHT DRAFT HARBOR, MAUI, HAWAII Removal of existing rock groin; a 130-foot long rubblemound breakwater structure; a 1,030-foot long, 50-foot wide and 9.5-foot deep entrance channel; and a 100-foot long, 100-foot wide, and 8.5-foot deep turning basin.	Sec 107, PL 86-645 Authorized by POD Sep. 4, 2002
8.	Jul. 24, 1946 As amended	LAUNIUPOKO SHORELINE PROTECTION, MAUI, HAWAII Two reaches of rubble mound revetment totaling 500 feet in length; the single layer revetment constructed of 1,600 to 2,500 pound armor stone, over a 2-foot underlayer of 50 to 150 pound stone.	Sec 14, PL 79–526 Authorized by POD Dec. 27, 2001

1. ANCHORAGE HARBOR, AK

Location. Anchorage is in south-central Alaska on the southeast shore of Knik Arm, north of Turnagain Arm near its junction with Cook Inlet. (See NOAA Charts 16660 and 16664.)

Existing project. Authorized by the Rivers and Harbors Act, 3 July 1958, as amended, provides for a deep water harbor by dredging to a depth of -35 MLLW. The existing project accommodates three dry cargo berths and two petroleum handling facilities. The Consolidated Appropriations Act, 2005, P.L. 108-447, modified the project authorization for the Port by directing the Secretary of the Army to deepen the to -45 feet mean lower low water (MLLW) for a length of 10,860 feet at the modified Port of Anchorage intermodal marine facility and continue Federal maintenance up to the face of the new dock. It is the main supply and distribution center for the south-central and interior areas and the two large military bases that lie within the Municipality of Anchorage. The Port of Anchorage is the largest cargo port in Alaska and was designated the nation's 13th strategic port in August of 2004. The tidal range between mean lower low water and mean higher high water is 29 feet with an extreme range of 41 feet. P.L. 108 - 447, Div C (EWDA) 2005), Sec 118 authorized deepening of the harbor to -45 MLLW at the modified Port of Anchorage intermodal marine facility.

Local cooperation. Fully complied with.

Accomplishments during fiscal year. Maintenance dredging was performed under the second year option of a 2-year RFP contract with Manson Construction. Dredging was conducted from June thru October with a total of 1,766,357 cubic yards removed FY 2007.

2. CHIGNIK HARBOR, AK

Location. The city of Chignik is located on the south side of the Alaska Peninsula about 450 miles southwest of Anchorage.

Existing project. The city of Chignik is situated on the south shore of Alaska Peninsula in Southwestern Alaska. It is an active and growing island port whose economy is heavily dependent on commercial fishing. The local fleet presently anchors in the ice free, but inadequately protected harbor or ties up at the exposed city dock. At present boats are subject to overcrowding and hazardous mooring conditions between fishing periods. The anchorage is exposed to all storms from the southeast clockwise to the northwest. The violent southeast

and northwest storms often damage and sometimes destroy boats by forcing them ashore or on the exposed rock reefs at low tides.

Local cooperation. Fully complied with.

Terminal facilities. The authorized project will provide a protected harbor, which will produce benefits in the form of reduced boat damage, increased fish harvest, and a harbor of refuge. The average annual navigation benefits attributable to the project are currently estimated at \$1,695,400. A construction contract was awarded on 20 August 2001 with West Construction for \$6,549,270. Construction contract was completed in FY 2005.

Accomplishments during fiscal year. Plans and specifications for the dredging contract were prepared and real estate acquired for the dredge disposal.

3. COOK INLET NAVIGATION, AK

Location. Southern flank of Knik Arm Shoal about 6 miles southwest of Anchorage, AK.

Existing project. Authorized by the 1996 Water Resources Development Act and amended in Public Law 105-245; provides for a 3,330 m long by 310 m wide by -11.5 m MLLW deep shipping channel into Knik Arm. Cook Inlet Navigation Channel provides all-tide access to the Port of Anchorage. The PCA was executed on 9 Jan 98. Construction contract was awarded on 2 Dec 98 and was completed in September 2000 for a combined Federal and Contributed Cost of \$10,507,100. A total of 1,459,543 cubic yards were removed in the two seasons of dredging by Manson Construction. The sponsor reimbursed the CORPS 10% of the project and the project is now fiscally complete. The Consolidated Appropriation Act, 2005, P.L. 108 - 447, Div C (EWDA 2005), Sec. 118 directed the Secretary to modify the channel to run the entire length of Fire Island and Port Woronzof Ranges, and to deepen it to -45 MLLW.

Local cooperation. Fully complied with.

Terminal facilities. This project reduces delays for the container ships that supply cargo for 80 percent of the Alaskan people.

Accomplishments during fiscal year. A hydrographic survey was completed to ensure navigational safety exists throughout the channel area. Reauthorization for deepening and lengthening the project and continuation of modeling studies was included in the FY05 Omnibus Bill (PL 108-447).

4. CORDOVA HARBOR, AK

Location. Cordova is located at the southeastern end of Prince William Sound in the Gulf of Alaska. The community was built on Orca Inlet, at the base of Eyak Mountain. It lies 52 air miles southeast of Valdez and 150 miles southeast of Anchorage.

Existing project. Authorized by the Rivers and Harbors Act, 30 August 1935 (R & H Committee Doc. 33, 73rd Congress, 2nd Session) as adopted, provides for a sheltered small boat harbor of 8.26 acres with a depth of -10 feet MLLW protected by north and south breakwaters of 1,100 feet and 1,400 feet respectively, with provision for a future expansion of 10.4 acres to -14 feet MLLW. The small boat basin is used as a base of operations for commercial fishing, and provides moorage for 852 boats. Approximately 650 boats and skiffs are based in the Cordova area. The Cordova canning season is the longest and most diversified in the state.

Local cooperation. Fully complied with.

Accomplishments during fiscal year. Planning for a maintenance dredging contract was initiated. A hydrographic survey was completed to confirm reports of shoaling in the entrance channel and turning basin. Chemical testing of dredged material found material unsuitable for the nearby in-water disposal site. The chemical testing found that approximately 3000 cubic yards of contaminated material will need to be disposed of into the city landfill, and 13,000 cubic yards of clean material is to be disposed in a nearby in-water site. The contract is to be awarded in FY 2008.

5. DILLINGHAM HARBOR, AK

Location. Dillingham Harbor is located at the head of Nushagak Bay, an arm of Bristol Bay, on the right bank of Nushagak River, just below its confluence with Wood River; about 470 miles northeast of Dutch Harbor and 300 miles southwest of Anchorage. (See NOAA/NOS Chart #16660.)

Existing project. The Rivers and Harbors Act of 1958 provides for a 650 to 800 foot wide X 700 foot long basin utilizing a 1100 foot long entrance channel to Nushagak Bay, the harbor provides half-tide access and all-tide moorage for over 320 commercial fishing vessels. The harbor is also used as an alternate landing area for lighterage vessels. Tidal range between mean lower low water and mean higher high water is 19.8 feet. Extreme range is 30 feet.

Local cooperation. Fully complied with.

Terminal facilities. There are four docks at the city of Dillingham; three privately owned, one owned by the city. Four publicly owned small boat floats located in the Harbor basin were installed in June 1982. They are removed before fall freezeup and replaced each spring.

Accomplishments during fiscal year. Annual maintenance dredging was carried out by Roy D. Garren, Inc. in June with the removal of 95,000 cubic yards using the second year of a 3-year RFP contract. A draft Dredged Material Management Plan was completed for internal District review that selects an in-water disposal site for the next 20 years of maintenance dredging operations. Because the base plan is in-water disposal and does not require cost sharing from non Federal interests, the report is reverting to a Preliminary Assessment that will include a new Environmental Assessment to be completed in FY 2008.

6. FALSE PASS, AK

Location. False Pass is a small community located on the east side of Unimak Island, which is the east end of the Aleutian Island chain in Southwest Alaska. False Pass is approximately 700 air miles from Anchorage.

Existing project . The feasibility study was initiated in 1999 and the project authorized in the Water and Resources Development Act of 2000 to accommodate a fleet of 88 vessels in a 5.2-acre basin protected by two rubble-mound breakwaters, 1,300 feet and 600 feet in length. The project requires dredging of the inner basin and the entrance channel. The PCA was executed on 4 May 2004.

Local cooperation. Fully complied with.

Accomplishments during fiscal year. A contract was awarded 11 July 2005 to Kelly Ryan for \$19,729,300 with work beginning in the summer of 2006. The contract completion was extended to January 2009.

7. HOMER HARBOR, AK

Location. In Kachemak Bay, on the Kenai Peninsula, 152 miles by water, southwest of Anchorage. The harbor site is near the extremity of Homer Spit, a narrow extension of land protruding southeasterly some 4.5 miles into the bay. (See NOAA/NOS Chart #16645.)

Existing Project. Authorized by the River and Harbors Acts of 1958 and 1964. The 50-acre project provides sheltered moorage for over 1,525 commercial fishing and recreational vessels. The project extends the fishing season an extra four months each year and is an integral part of

Homer's economy. Project depth varies from -10 feet (MLLW) in the west end of the harbor to -20 feet below (MLLW) in the entrance channel and the east end. The entrance channel is protected by a main rock breakwater 1,018 feet long and secondary rock breakwater 238 feet long. Tidal range between mean lower low and mean higher high water is 18.1 feet, with an extreme range of 30.4 feet. FY07 operations and maintenance costs for Homer Harbor were \$332,000.

Accomplishments during fiscal year. Annual maintenance dredging was carried out by Portable Hydraulic Dredging in September with the removal of approximately 5,000 cubic yards under the second year of a 2-year IFB contract. A draft Dredged Material Management Plan was prepared that identifies a new confined disposal facility on the north end of the existing harbor. Construction of the new facility is expected in 2009.

8. NINILCHIK HARBOR, AK

Location. Ninilchik Harbor is located at the mouth of Ninilchik River in Cook Inlet, at the village of Ninilchik. The community of Ninilchik, AK is about 40 miles upcoast from Homer and 112 miles southwest of Anchorage. (See NOAA/NOS Chart #16640.)

Existing project. This project is authorized by the Rivers and Harbors Act of 1958 for a basin 400 feet long by 150 feet wide and dredged to an elevation of 2 feet above mean lower low water. Also included was an approach channel 400 feet long and 50 feet wide dredged to an elevation of 9 feet above mean lower low water and protected by two rock jetties. The basin offers protected moorage with half-tide access for 32 vessels. The basin and channel also provide access for fishing boats to unload their catch and take on supplies. It is also an important harbor of refuge in the lower Cook Inlet region. Beach protection was accomplished in 1967 and 1969. The tide range between mean lower low water and mean higher high water is 19.1 feet, with an extreme range of 29.3 feet.

Local cooperation. Fully complied with.

Accomplishments during fiscal year. Annual maintenance dredging was carried out by Portable Hydraulic Dredging in May with the removal of approximately 9,000 cubic yards under the first year of a 2-year IFB contract.

9. NOME HARBOR, AK

Location. Nome Harbor is located at the mouth of the Snake River at the city of Nome, AK, on the northerly shore

of Norton Sound, an arm of the Bering Sea. It is a shallow open roadstead, 581 nautical miles north of Dutch Harbor and 545 air miles northwest of Anchorage. (See NOAA/NOS Chart #16206.)

Existing project. Authorized by the Rivers and Harbors Acts of 1917, 1935, and 1948. The original Federal navigation project, was constructed at 8 ft MLLW and consisted of a dogleg entrance channel 75 feet wide by 1550 feet long running from Norton Sound to a turning basin 250 feet wide by 600 feet long, located at the confluence of the Snake River with Dry and Bourbon Creeks. The entrance was flanked seaward by a 400 foot eastern jetty and a 240 foot western jetty and protected through its length by a wood sheet pile revetment on both sides. In the early 50s, the wood was refaced with steel sheet pile. This original project, except for the inner harbor sheet pile walls, and turning basin was approved for demolition by the Water Resources Development Act of 1999 based on the Chief of Engineers report dated 8 June 1999 and amended on 2 August 1999. A PCA was executed 28 May 2002 and on 30 September 2003 a \$35,878,300 contract was awarded to the Kiewitt-Manson JV for improvements consisting of a 3,025 foot attached rubblemound breakwater located east of the existing causeway and a 270 foot rubblemound spur extending out from the end of the causeway. In FY 2006, Kiewitt-Manson JV completed the spur breakwater, the main breakwater, all the dredging, the bridge, and filled the old entrance channel. The eastern waterfront is protected by a 3,350-foot long seawall that extends from the eastern jetty.

Local cooperation. Fully complied with.

Terminal facilities. In July 1984, the city of Nome received Department of Army authorization (permit) to construct a 3,600-foot gravel filled causeway. Construction of the causeway began in July 1985. Due to lack of funding, the length of the causeway was shortened to 2,700 feet. Construction was completed in May 1987.

Accomplishments during fiscal year. Annual maintenance dredging was carried out in the newly completed entrance channel in June with the removal of 30,000 cubic yards by Portable Hydraulic Dredging of Portland, Oregon under the first year of a 3-year IFB contract.

10. ST. PAUL HARBOR, AK

Location. St. Paul Island Harbor is located on the shore of Village Cove, the southern side of St. Paul Island, the largest and most populated island of the Pribilof group in the central southeast Bering Sea .

Existing project. Congress authorized improvements to the breakwater, the entrance channel, and the maneuvering area in WRDA of 1996. A small boat harbor was authorized in WRDA 1999. The construction contract for Phase I to build the three underwater reefs was awarded 19 March 1999 for \$10,411,000 and completed in August 2001. A severe scour at the toe of the main breakwater was identified in the spring of 2001. The Phase I contract was modified to repair the scour, but the contractor was able to complete a small portion of the repair at a cost of approximately \$8 million. The Phase II construction contract for dredging the harbor and completion of the scour repair was awarded to Kelly Ryan Construction on 27-June-2003 for \$26,279,960.

Local Cooperation. A Project Cooperation Agreement was executed on November 24, 1998. It was amended on September 29, 2006 to add the small boat harbor.

Accomplishments during fiscal year. Construction was completed September 2005. A small boat harbor was authorized in WRDA 99 and will be in a Phase III construction contract.

11. SAND POINT, AK

Location. Sand Point is a commercial fishing community on the Pacific coast off the southwestern Alaska Peninsula. Sand Point is about 570 air miles southwest of Anchorage and about midway between Kodiak and Dutch Harbor. The harbor provides close access to one of the State's most productive fishing areas. For the past few years, the population has been stable at around 1,000. The economy is based wholly on commercial fishing.

The harbor currently provides no permanent protected moorage for vessels larger than 80 feet. In recent years, the fleet operating in the Bering Sea/Aleutian Island area, made up primarily of vessels ranging from 80 to 160 feet, has grown significantly. Skippers fishing in the Sand Point area currently travel long distances to secure protected moorage.

Existing project. Project was authorized in WRDA 1999. The authorized harbor improvements at Sand Point consist of construction of a 570-foot and 370-foot breakwater from shore to form the basin and entrance channel of the new harbor. The crest height of the rubblemound breakwaters are to be +16 ft MLLW. The breakwaters are designed to withstand the forces of a 6.6 foot wave. The entrance channel is to be dredged to -18 ft MLLW, and 120 feet wide to allow one-way traffic of vessels 150 feet in length with a 34-foot beam and 10.5 foot draft. The mooring basin is to be dredged to a depth of -17 ft MLLW and would provide room for 37 vessels.

Local cooperation. PCA was executed 17 Nov 2004.

Accomplishments during the fiscal year. A construction contract was awarded to Western Marine Construction for \$10,905,240 to perform the work and was scheduled for completion in September 2006. The contractor completed the contract in FY 2007. Eider surveys will be conducted as mitigation annually until FY 2011.

12. SEWARD HARBOR, AK

Location. Seward, located on the Kenai Peninsula is about 125 miles south of Anchorage, Alaska by road. The town is located at the northern end of Resurrection Bay off the Gulf of Alaska and can be reached by air, sea, rail, and road. It lies at about 60 degrees 6 minutes N Latitude and 149 degrees 2 minutes W longitude.

Existing Project. The current harbor is filled to capacity with a waiting list of more than 330 boats. Expansion of the harbor was authorized in WRDA of 1999. The project expanded the existing harbor eastward to accommodate 339 additional vessels. Wave conditions within the harbor will require an extension of the outer breakwater to be built in a subsequent year.

Local cooperation. PCA was executed 13 Jun 2003.

Accomplishments during the fiscal year. The construction contract was completed in 2006. The contract provided a breakwater that is 215 feet short of requirement. Additional work is required.

13. SITKA HARBOR, AK

Location. The city of Sitka is located in southeastern Alaska, about 95 miles south-west of Juneau. It is situated on the western coast of 1,600 square mile Baranof Island. Sitka is about 20 miles from the open Pacific Ocean on the east side of Sitka Sound

Existing project. The project consists of three rubblemound breakwaters constructed across the northern end of the western anchorage, and inner harbor facility placed adjacent to Thomsen Harbor. This project created a large protected harbor in which moorage basins could be developed using minimal or no wave protection structures. The three breakwaters are 480 feet, 1,200 feet, and 320 feet long. Navigation openings in the breakwater 325 feet and 190 feet wide at the design depth, are located at natural channels where water depths are 50 to 55 feet at mean lower low water. Two gaps allow for vessel traffic separation, which may be particularly important when log rafts or barges are being towed through the western anchorage. The two breakwaters forming the southern opening overlap to

minimize ocean swell in Thomsen Harbor. The breakwaters are placed directly on the submerged rock reefs forming the northern boundary of western anchorage. The Channel Rock Breakwaters were physically completed in 1995. During construction 192,318 cubic yards of core rock, 65,330 cubic yards of secondary rock, 52,867 cubic yards of armor stone were placed. Construction was completed in June 1996. A study of the breakwater effect on the herring population was completed in 1998 and showed no ill effects on the fish population

Local cooperation. The Project Cooperation Agreement was executed 7 December 1993.

Accomplishments during the fiscal year. A project deficiency report is being prepared and additional modeling runs of an existing physical model was conducted.

14. WRANGELL HARBOR, AK

Location. Wrangell Harbor is located on the northwest side of Wrangell Island, 824 miles from Seattle and 160 miles from Juneau. (See U.S. Coast and Geodetic Survey Charts Nos. 8164, 8161, and 8201.)

Existing project. The project consists of a rubblemound breakwater 300 feet long to protect the southern portion of the outer harbor; a mooring basin 600 feet long, 400 feet wide, and 10 feet deep below mean lower low water within the protected area; an inner basin in the tide flat area east of Shakes Island, 325 feet wide and 550 feet long; a connecting channel 120 feet wide and approximately 530 feet long; a connecting channel 120 feet wide and approximately 530 feet long from the outer mooring basin all at a depth of 10 feet at mean lower low water; and construction of a rock mound breakwater 320 feet long on the reef north of Shakes Island. The range between mean lower low water and mean higher high water is 15.7 feet. The extreme tidal range is 26 feet. Heavy swells, dangerous to small fishing boats, are caused by the wind, which causes an additional rise of about one foot.

Construction of the breakwater north of Shakes Island was placed on inactive status as material to be used from the inner basin was unsuitable and the breakwater considered unnecessary for safe moorage of vessels. The cost of this portion was last revised in 1956 and estimated to be \$6,500. (See table 40-B for authorizing legislation.)

The Heritage Harbor was authorized to be built in the Cemetery Point site in WRDA 99 following the feasibility study that was initiated in FY 1997. This project will consist of two breakwaters and dredging an entrance channel and inner harbor area. The PCA was executed on 7-March-2003 and the

construction contract awarded to Kiewit Pacific Company on 11-July-2003 for \$13,841,550.

Local cooperation. The Project Cooperation Agreement was executed on 7 Mar 2003.

Terminal facilities. There are eight wharves and floats in Wrangell Harbor. Two privately owned wharves serving general cargo and passenger terminals, one of which includes a cold storage facility, are open for public use. The remaining wharves serve various industrial purposes. One of the floats is publicly owned and is open for public use for mooring and servicing of small craft, and two privately owned floats serve oil-handling facilities.

Accomplishments during fiscal year. We coordinated with the local sponsor on their proposed Water Resources Development Act language to convert the local inner harbor facilities to General Navigation Features.

Flood Control

15. BETHEL BANK STABILIZATION, AK

Location. Bethel, AK is located in southwestern Alaska on the north bank of the Kuskokwim River 400 miles west of Anchorage.

Existing project. The project consists of rock riprap toe protection installed on the unprotected riverbank and at locations where existing city construction bulkheads are threatened by erosion. This includes 4,000 feet of unprotected riverbank and 4,200 feet of previously installed bulkheads. The construction contract was awarded on 26 May 1995. Emergency erosion protection for the Bethel Cargo Dock and completed in September 1997. The Mission Road Bulkhead began in July 1995 and continued through FY 1995 due to accelerated erosion that accumulated after spring runoff. A FY 2001 Congressional Add authorized and directed the Corps to extend the existing project an additional 1,200 feet upstream. The total project cost was \$24,000,000 of which Bethel contributed \$6,000,000.

Location cooperation. A Project Cooperation Agreement was signed on 3 March 1994. An amendment was signed in December 2002 to extend the project 1,200 feet upstream.

Terminal facilities. The POL tank farm is situated at the downstream end of the project and the city's general cargo dock is at the upstream end of the project.

Accomplishments during fiscal year. Phase I of the project extension, placement of rip rap at the toe of the existing bulkhead, was completed in September 2007.

16. CHENA RIVER LAKES, AK

Location. Chena River Lakes is located in the vicinity of Fairbanks, AK, and encompassing the Tanana River, Chena River, Little Chena River, and their tributaries. (See USGS map Fairbanks, C1, D1, D2, and Big Delta D6.)

Local cooperation. Fully complied with.

Existing project. Moose Creek is located 17 miles east of Fairbanks with control works on the Chena River. The dam itself extends from a bluff one mile north of the Chena River and south past the control works for approximately seven miles to the Tanana River. The dam connects with a completed 22 mile levee system along the north boundary of the Tanana River to a point south and west of Fairbanks.

Accomplishments during fiscal year. The project celebrated its 27th anniversary of regulating the Chena River during the 2007 flood season. Peak flow at the Project occurred on August 8, 2007 with approximately 5,400 cubic feet per second passing through the dam, well below the operating threshold. There were no subsequent high water or debris events for the year. In September during a routine operational exercise of the dam gates, it was discovered that there had been substantial damage to one of the gate's support ear caused by a sheared latch pin assembly pin. The dam tender discovered the damage, diagnosed the problem and developed a repair strategy for repairing the damaged gate components. The repair was accomplished in short order and the dam remained operational throughout the repair process. Work also began to prepare the outlet works structure for the installation of remote cameras for use in operations, security, and future public use.

The Chena Project welcomed Sandi Zarfoss as the new administrative assistant in April. Senior Park Ranger, Tim Feavel, returned to duty in September after serving with his U.S. Army Reserve unit in Iraq for a year. LTC Feavel was the Base Engineer for Anaconda Camp. Two Project employees received firearms trainer certifications to serve as Alaska District bear awareness/safety training instructors. The fifth annual Paralyzed Veterans Association Moose Hunt conducted in September was a great success. Two of the three hunters were successful in taking a bull moose during the last hour of the last day of their hunt. Art Bartman of Bechtelsville, PA and Car Flemons of Somerville, AL enjoyed success. This was the first time that more than one moose was harvested in a year by the paralyzed hunters.

Project personnel worked cooperatively with the Alaska Department of Fish and Game to bring two highly publicized special events to the Chena Project, including a youth conservation camp and women's wilderness field camp hunter event.

The Project hosted its annual Snow Machine Rendezvous and Safety Day event, the Moose Creek Dam Salmon Watch and continued to promote and interpret Project missions at the Tanana Valley State Fair, local parades, and through formal dam tours.

17. DILLINGHAM EMERGENCY BANK STABILIZATION

Location. Dillingham is located 350 miles southwest of Anchorage, Alaska. The project is located along the southeastern edge of Dillingham adjacent to the Nushagak River. Erosion of the toe of the bluff in this area was endangering critical utilities and numerous buildings and homes. Erosion at the west entrance to the harbor is endangering the facilities and vessels.

Existing project. The authorized project consists of a 1,600-foot long steel sheet pile bulkhead along the toe of the bluff from the Dillingham City Cargo dock to Snag Point. An additional 600 feet of bulkhead with riprap revetment was constructed at the east side of the entrance to the harbor. The sheet pile wall was constructed to an elevation of 28 feet MLLW. Mitigation measures including emergency access ladders and eyebolts for anchoring set nets used for by subsistence fishermen are included in the project. Extension of the project to the west entrance to the harbor was directed in the FY 2001 Appropriation Conference Report.

Local cooperation. A Project Cooperation Agreement with the City of Dillingham Alaska was signed in January 1998 and will be amended to incorporate the project extension.

Terminal Facilities. Dillingham has a general cargo dock and a fuel facility adjacent to the authorized project.

Accomplishments during fiscal year. Designs for extending the wall are being evaluated. A decision document is being developed to identify the scope and cost of the extension prior to preparing a PCA.

18. GALENA EMERGENCY BANK STABILIZATION

Location. Galena is located on the north bank of the Yukon River, 45 miles east of Nulato and 270 air miles west of Fairbanks.

Existing project. The original project was authorized by Sec 116 of P.L. 99 – 190 (1985). It consists of a rock revetment along the Yukon River to protect the City of Galena from river erosion. In 1987, the Corps of Engineers constructed 1300 feet of riprap revetment protection along the river. However, bank erosion continued to threaten homes businesses upstream of the project. Section 1 (a) (2) of P.L. 106 – 337 Conference Report 106 – 988, directed the Corps to construct additional bank stabilization measures at Galena. Approximately 1600 feet of additional revetment was constructed upstream of the original project in 2005.

Local cooperation. The PCA for the original project was executed 28 April 1987. The PCA for the additional revetment protection was executed 6 Aug 2003.

Accomplishments during fiscal year. No activities this FY.

19. KAKE DAM

Location. The city of Kake is located in southeast Alaska on the northwest shore of Kupreanof Island and has a population of approximately 700 residents, about 95 percent of which are Alaska natives. It is a Tlingit village with a fishing, logging, and subsistence lifestyle.

Existing project. Project is to construct a replacement dam on Gunnuk Creek in Kake, AK to provide drinking water and hydroelectricity. The recommended plan calls for construction of a gravity concrete dam approx. 53 feet upstream from the previous dam, covering an area about 4,750 ft², and a spillway height of 23 feet.

Local cooperation. PCA was executed 3 September 2004. The project will be 100 percent federally funded with the Sponsor providing all of the necessary LERRD. The project will be turned over to the City of Kake for operation and maintenance after construction completion.

Accomplishments during fiscal year. A contract was awarded to Kiewit Pacific for \$7,219,050 on 28 January 2005.

Construction continued with the completion of the concrete work. The contract was completed April 2007. Design for miscellaneous stair work was ongoing in FY 2007.

20. TRIBAL PARTNERSHIP PROGRAM

Location: Studies to define erosion problems and solutions are authorized in the following communities: Kaktovik, Shishmaref, Bethel, Dillingham, Unalakleet, Kivalina, and Newtok, Alaska. A Statewide Baseline Erosion Study is also authorized to evaluate erosion.

Existing project: Authorized work includes four feasibility studies to study erosion at Kivalina, Shishmaref, Newtok, and Unalakleet, Alaska and three general studies, including a Cultural Resources and erosion near Kaktovik, the Statewide Baseline Study (Erosion), and a Data Gathering Study.

Local cooperation: The four feasibility studies have been approved under the cost sharing provisions of Section 117 of PL 108-447. Both the tribal government and the state-subdivision government have provided resolutions (often joint resolutions) supporting the project in each community with an active project.

Accomplishments during the fiscal year: Completed gathering of historical wind data for western Alaska storms and initiated wave modeling studies. Completed soils drilling effort at Newtok. Restarted the Statewide Baseline Study and funded it for the first quarter FY-09 Completion.

21. ALASKA COASTAL EROSION, AK

Location: Kaktovik, Barrow, Point Hope, Kivalina, Shishmaref, Unalakleet, Koyukuk, Bethel, and Newtok, Alaska are all eligible sites for this project.

Existing project: The existing approved projects consist of 3,150 lineal feet of rock revetment Shishmaref, Alaska, 1,500 lineal feet of rock revetment at Unalakleet, Alaska, and 3,300 lineal feet of rock revetment at Kivalina, Alaska. Decision documents are being developed for the remaining eligible sites.

Local cooperation: Project Cooperation Agreements have been signed with the City of Shishmaref, Alaska (17 July 2006), the City of Unalakleet, Alaska (22 January 2007), and the City of Kivalina (29 November 2007) under the provision of Section 117 of PL 108-447.

Accomplishments: During the fiscal year we completed the decision document for Kivalina and made progress on two other decision documents for Newtok and Koyukuk. Design and real estate acquisition for the initial construction phase at Shishmaref, and design documents for work at Unalakleet; award and initiation of construction for 625 feet of revetment at Shishmaref, Alaska. Due to weather, the construction contractor at Shishmaref was only able to place 450 feet of the contracted 625 feet of revetment.

Feasibility Studies: \$5,084 for Port Lions, \$28,161 for Valdez, \$143,859 for Barrow, \$235,308 for DeLong Mountain, and \$65,636 for PAS-Planning Assistance to States.

22. FLOOD CONTROL WORK UNDER SPECIAL AUTHORIZATION

Emergency flood control activities--repair, flood fighting, and rescue work (Public Law 99, 84th Congress, and antecedent legislation).

Federal costs for the fiscal year were \$1,072,537 for disaster preparedness, and field investigations. National Emergency Preparedness Program costs totaled \$15,000. Yakutat Hubbard Glacier – A Project Information Report was developed on the projected flood concerns at Yakutat caused by the continuing forward movement of Hubbard Glacier and the potential result of Russell Fiord releasing water into the Situk River. Funding to verify the hazard and define a technically feasible solution was received in the 4th Quarter of FY07. We expended \$830,000 to provide emergency erosion and flood relief to the City of Kivalina after their seawall failed in September 2006. The funds were expended procuring sand bags and super sacks, a bulldozer, a front-end loader, and an excavator. We also provided technical and design assistance for proposed protective wall which the City was eventually unable to fund.

23. INSPECTION OF COMPLETED FLOOD CONTROL PROJECTS

Inspections were made of the following flood control works: Bethel Bank Stabilization at Bethel; Deering Streambank Protection at Deering; Metlakatla Erosion Protection at Metlakatla; Homer Spit Revetments at Homer; Tanana River Levee at Fairbanks, Talkeetna River at Talkeetna; Lowell Creek at Seward; Klutina River at Copper Center; Skagway River at Skagway; Gold Creek at Juneau; and Emmonak Streambank Protection on the Yukon River at Emmonak. An inspection was made of the shore protection works at Nome. FY07 costs were \$48,315.

GENERAL INVESTIGATION

24. SURVEYS

Fiscal year costs were \$5,097,995 of which \$3,122,926 was for navigation studies, \$342,853 for flood damage prevention studies, \$681,548 for shoreline protection studies, \$537,779 for special studies, \$248,390 for ecosystem restoration studies, \$0 for watershed comprehensive studies, \$57,206 for miscellaneous studies, and \$107,293 for coordination studies with other agencies. In addition contributed funds in the amount of \$478,048 were expended for General Investigation's

25. COLLECTION AND STUDY OF BASIC DATA

Technical assistance, information, flood plain management guidance, and other flood plain management services have been provided to military and nonmilitary Federal agencies, local communities, state agencies, Architectural Engineering firms, lending institutions, and private individuals at a fiscal year cost of \$132,067.

Fiscal year costs for flood plain management services \$124,921, and Hydrologic Studies were \$7,146.

26. PRECONSTRUCTION ENGINEERING AND DESIGN

Fiscal year costs were \$775,559 of which \$232,436 for Akutan, \$32,616 for Haines Harbor, and \$419,735 for Unalaska, \$90,772 for Coffman Cove. In addition, contributed funds of \$4,117 were expended for Akutan, \$25,207 for Haines, and \$53,348 for Unalaska.

27. SPECIAL PROJECTS

Alaska Environmental – Coordination with multiple State and Federal agencies on design consideration has been provided to the City of Buckland on its water and sewer project. A proposal to integrate Alaska Erosion design and construction activities into the ongoing State led activities was well received. This work will start in FY08 pending agreements between the State and the District. FY07 costs were \$14,298 and \$10,183 in contributed funds.

28. GENERAL REGULATORY FUNCTIONS

Permit Evaluation	\$5,589,249
Enforcement	810,774
Compliance – Authorized Activities	<u>593,171</u>
Total Regulatory	\$6,993,194

See Section in Text	Date Authorizing Act	Project and Work Authorized	Documents
1.	Jul. 3, 1958 Oct. 22, 1976	ANCHORAGE HARBOR, AK Deep winter harbor, adjacent to docks, dredge to 35 feet below mean lower low water, protected by two jetties. ¹ Extension of project limits.	H.Doc. 34, 85th Cong., 1st Sess. ² P.L. 94-587
3.	Oct. 12, 1996	CHIGNIK HARBOR, AK Deepen the entrance channel to -30 feet. Enlarge and deepen the maneuvering basin to -29.0 feet with an area of 415 by 830 feet. Wave spending beach to +4 feet. Three offshore reefs each, 1,300 feet long, constructed to a depth of -12 feet. Wave energy channel 100 feet wide with bottom elevation of +2 feet.	P.L. 104-303, Water Resources Development Act of 1996. FY 1999 Congressional Add
3.	Oct. 12, 1996	COOK INLET NAVIGATION, AK Deepen the entrance channel to -30 feet. Enlarge and deepen the maneuvering basin to -29.0 feet with an area of 415 by 830 feet. Wave spending beach to +4 feet. Three offshore reefs each, 1,300 feet long, constructed to a depth of -12 feet. Wave energy channel 100 feet wide with bottom elevation of +2 feet.	Section 101(b)(2), Water Resources Development Act of 1996. Energy and Water Development Appropriations Act, 1999. P.L. 105-245.
4.	Aug 30, 1935 June 29, 1978	CORDOVA HARBOR The initial project included a sheltered small boat harbor of 8.26 acres with a depth of -10 feet MLLW protected by north and south breakwaters of 1,100 feet and 1,400 feet respectively, with provision for a future expansion of 10.4 acres to -14 feet MLLW. In 1981 the harbor was expanded to 20 acres by the removal of the 1,400 foot breakwater, the construction of a 2,000 foot breakwater, and an increased depth for the entrance and access channel to -16 feet MLLW.	Rivers and Harbors Act, 30 August 1935 (R & H Committee Doc. 33, 73rd Congress, 2nd Session) as adopted, River and Harbor Act of 14 July 1960, Section 107, P.L. 86-645
5.	Jul. 3, 1958	DILLINGHAM HARBOR, AK Basin 230,000 square feet in area with depth of 2 feet above MLLW along Scandinavian Creek, with entrance channel 1,100 feet long and 40 feet wide.	H. Doc. 390, 84th Cong., 2d Sess. ²
6.	Oct. 31, 2000	FALSE PASS HARBOR, AK Dredging of the inner basin and the entrance channel to accommodate a fleet of 88 vessels in a 5.2 acre basin protected by two rubble-mound breakwaters, 1,300 feet and 600 feet in length.	House Report 106-1020, Section 101 (b)(1) (2), Water Resources Development Act of 2000, 106 th Congress
7.	Jul. 2, 1958 Aug. 19, 1964	HOMER HARBOR, AK Basin 2.7 acres in area with depth of 12 feet below mean lower low water, and rock breakwater 1,260 feet long. Relocation and rehabilitation of project destroyed by March 27, 1964 earthquake, by construction of basin 10 acres in area with 12-foot depth over 2.75 acres and 15-foot depth over 7.25 acres protected by rock breakwaters, 1,018 feet and 238 feet long.	H.Doc. 34, 85th Cong., 1st Sess. ² P.L. 88-451
	Jul. 14, 1960	Increased width and depth of entrance channel and an enlarged staging area. Basin enlarged from 16.5 to 50 acres.	Section 107, P.L. 86-645 Authorized by Chief of Engineers, Nov. 13, 1981

ALASKA, AK, DISTRICT

8.	Jul. 3, 1958	NINILCHIK HARBOR, AK Basin 320 feet long by 150 feet wide with depth of 2 feet above mean lower low water, approach channel 400 feet long and 50 feet wide with depth of 9 feet above mean lower low water, protected by 410 foot jetty.	H.Doc. 34, 85th Cong., 1st Sess. ²
9.	Aug. 8, 1917 Aug. 30, 1935 Jun. 16, 1948 Aug 17, 1999	NOME HARBOR, AK Two jetties, easterly 335 feet and westerly 460 feet long re-vetment, channel and basin 200 feet wide and 250 feet long. Extension of the jetties and enlarging basin to 250 feet wide and 600 feet long. ³ Seawall New entrance to Nome Harbor; 3,025 feet-long breakwater; 270 feet-long causeway spur; 3,450 feet-long entrance channel with depth to 22 feet; sediment traps and causeway bridge.	H.Doc. 1932, 64th Cong., 1st Sess. ² H.Doc. 404, 71st Cong., 2d Sess., and Rivers and Harbors Committee Doc. 38, 73d Cong., 2d Sess. Reports of Chief of Engineers dated March 8, 1948 Report of Chief of Engineers as amended, dated August 2, 1999. Section 101 (a) (3), P.L. 106-53 Water Resource Development Act of 1999, 106th Cong.
10.	Nov. 17, 1986 Oct. 12, 1996 Aug 17, 1999	ST. PAUL HARBOR, AK Add 1,050 feet of breakwater at existing crest height, 37 below feet mean lower low water and 1,000 feet long with a crest height of 18 above mean lower low water. Deepen the entrance channel to -30 feet. Enlarge and deepen the maneuvering basin to -29.0 feet with an area of 415 by 830 feet. Wave spending beach to +4 feet. Three offshore reefs each, 1,300 feet long, constructed to a depth of -12 feet. Wave energy channel 100 feet wide with bottom elevation of +2 feet. Added small boat harbor with entrance channel and maneuvering area to -20MLLW and appropriate wave protection features.	Section 202, P.L. 99-662 Section 101(b)(3), P.L. 104-303 Water Resources Development Act of 1996. Section 302, P.L. 106-53 Water Resource Development Act of 1999, 106th Cong.
11.	Aug 17, 1999	SAND POINT HARBOR, AK Construct a mooring basin adjacent and south of the existing harbor. It incorporates the southern breakwater and causeway to the city dock by extending the existing breakwater.	Section 101 (a) (3), P.L. 106-53 Water Resource Development Act of 1999, 106th Cong.
12.	Aug 17, 1999	SEWARD HARBOR, AK Provide more moorage space. Project would accommodate 339 additional vessels.	Section 101 (a) (3), P.L. 106-53 Water Resource Development Act of 1999, 106th Cong.
13.	Oct 31, 1992	SITKA HARBOR, AK Boat harbor consisting of 3 rubblemound breakwaters.	Water Resources Development Act of 1992, H. Doc. 103-37, 103 rd Cong., 1 st Sess.

14.	Sep. 22, 1922 Aug. 30, 1935 Mar. 2, 1945 Aug 17, 1999	WRANGELL HARBOR, AK Breakwater 300 feet long to protect southern portion of harbor. Mooring basin 600 feet long, 400 feet wide, and 10 feet deep. Inner basin and connecting channel from the existing mooring basin, both 10 feet deep at mean lower low water, and breakwater 320 feet long on the reef north of Snakes Island. Project for navigation, Heritage Harbor, AK	H.Doc. 161, 67th Cong., 2d Sess. H.Doc. 202, 72nd Cong., 1st Sess. H.Doc. 284, 76th Cong., 1st Sess. Section 101 (a) (3), P.L. 106-53 Water Resource Development Act of 1999, 106th Cong.
15.	Nov. 17, 1986	BETHEL BANK STABILIZATION, AK Streambank protection by placing riprap along 8,500 feet of riverbank and replacing tiebacks of existing pipe pile wall.	Section 202, P.L. 99-662
16.	Aug. 13, 1968	CHENA RIVER LAKES, AK Provides for construction of a dam and floodway for the Chena River (17 miles east of Fairbanks) for a dam and reservoir on the Little Chena River, and for a 27 mile long levee system with interior drainage works on the north side of the Tanana River.	H. Doc. 148, 90th Cong., 2nd Sess. P.L. 90-483
17.	Dec. 19, 1985	DILLINGHAM EMERGENCY BANK STABILIZATION, AK Install 1,600 feet of steel sheetpile bulkhead along the toe of the bluff from the Dillingham city cargo dock to Snag Point. Extension of the sheet pile wall on the west end of the entrance channel to the small boat harbor and replacement of the existing wooden bulkhead at the city dock.	Sec. 116 P.L. 99-190 Section 1(a)(2) P.L. 106-377 Conference Report 106-988
19.	Dec. 19, 1985	GALENA EMERGENCY BANK STABILIZATION, AK The project protects approximately 1,800 LF by placing 28,000 cu. Yd. of armor rock, 288,000 sq. ft. filter fabric and 9,300 cu. yd. filter stone. A 3 ft thick layer of rip rap will extend from the top of the bank about elevation 123 ft. to elevation 90 ft.	Sec 116 P.L. 99-190
19.	Oct. 27, 2000	KAKE DAM, AK The project consists of a gravity concrete dam at Kake approximately 53 feet upstream from the previous dam, covering an area about 4,750 square feet, and a spillway height of 17.7 feet. It includes an intake structure, complete with fish screen and trash rack, and would house intake lines for the city and hatchery water supply.	EWDA FY2001 PL 106-377 Modified in EWDA FY2004

20.	Dec. 11, 2000 Dec. 01, 2004 Dec. 08, 2004	<p>TRIBAL PARTNERSHIP, AK</p> <p>The project includes performing an analysis of the costs associated with continued erosion of Bethel, Dillingham, Shishmaref, Kaktovik, Kivalina, Unalakleet, and Newtok, defining potential costs associated with moving the affected communities to new locations (including collocation with existing communities), and identifying the expected time line for a complete failure of the useable land associated with each community. In addition expedited environmental studies to document the impacts of this severe and continuing erosion are required at Shishmaref. Additional work added in 2004 year includes a BaselineErosion Study, ongoing feasibility type studies at four communities, and general studies of Cultural Sites at Kaktovik and western Alaska wave climate definition</p>	<p>Section 203 WRDA FY2000</p> <p>Section 112 EWDA FY2004</p> <p>Section 117, Division C, Consolidated Appropriations Act 2005, (PL 108-447).</p>
21.	Oct. 19, 2005	<p>ALASKA COASTAL EROSION</p> <p>This project includes developing a decision document for each of the nine named communities. After approval of the decision document, a design for the solution may be developed. With approval of the Office of the Secretary of the Army, a Project Cooperation Agreement may be signed with the sponsor and the solution implemented at full Federal cost.</p>	EWDA, FY2006, PL 109-103

<p>1. Purchase of dredge and deepwater jetties deauthorized November 6, 1977 under section 12, Public Law 93-251.</p> <p>2. Contains latest published map.</p>	<p>3. Extension of jetties classified "inactive".</p> <p>4. Little Chena Dam deauthorized in 1991.</p>

LOS ANGELES, CA, DISTRICT

This district (total area about 230,000 square miles) comprises those drainage basins tributary to the Pacific Ocean that are in California between the Mexican boundary and Cape San Martin (about 265 miles north of the entrance to the Los Angeles Harbor). The lower Colorado River

drainage basin (below Lee Ferry, AZ) which is southeastern California, southeastern Nevada, southwestern Utah, and all of Arizona, except the northeastern corner; that part of the Great Basin that is in southern Nevada and southeastern California; and the southern Arizona that drain southward into Mexico.

Navigation

1. CHANNEL ISLANDS HARBOR, CA

Location. On the coast of southern California about a mile northwest of Port Hueneme, 65 miles northwest of Los Angeles Harbor, and 345 miles south of San Francisco. (See Coast and Geodetic Survey Charts 5007 and 5202.)

Existing project. For details see page 33-2 of Annual Report for 1981.

Local cooperation. Fully complied with.

Terminal facilities. For details see page 33-2 of Annual Report for 1989.

Operations during fiscal year. The first cycle of a six year, three-cycle dredging contract was initiated in FY2007. The contract covers FY2007 through FY2011. Hydro survey and rock inspection was performed in FY2007. Total O&M, General expenditures were \$4,636,000. Project condition is good.

2. IMPERIAL BEACH, SILVER STRAND SHORELINE, CA

Location: Imperial Beach area is located in San Diego County on the southern end of the Silver Strand Peninsula, about 3.5 miles north of the United States-Mexico border.

Existing project. The authorized project is a beach fill project, providing storm damage protection and reduction, consisting of a system of five stone groins, the most northern groin at the north end of the existing seawall of the U. S. Naval Radio Station, and four other groins spaced at intervals of about 1,000 feet to a point 400 feet south of Coronado Avenue (now Imperial Beach Boulevard). A General Reevaluation Report was completed in FY 2002.

Local cooperation. City of Imperial Beach is the local sponsor.

Operations during fiscal year. Chief of Engineers Report was approved in December 2003 recommending an initial sand fill with periodic beach nourishment. The new recommended project received authorization for construction in WRDA 2007. Draft Plans & Specs. (90%) completed September 2005. Due to shortage of Fed funds, final P&S could not be finalized.

3. LOS ANGELES – LONG BEACH HARBORS, CA

Location. On the coast of southern California in San Pedro bay about 25 miles south of the city of Los Angeles, about 96 miles northwest of San Diego Harbor, and about 410 miles southeast of San Francisco Harbor.

Existing project. The project consists of four increments of dredging to be constructed in two stages - deepening the existing entrance channel for the Port of Los Angeles and providing new channels to existing and new port facilities. The dredge material will be used for fill to create Pier 400. Estimated cost (October 1998) for existing project is \$401,000,000 (includes an allowance for estimated inflation through the construction period), of which \$115,200,000 is Federal (\$114,900,000 Corps and \$300,000 U.S. Coast Guard) and \$285,800,000 is non-Federal.

Local cooperation. All items of local cooperation required under the terms of the previous authorizing acts have been fully complied with. See page 33-3 of Annual Report for 1981 for requirements under the terms of the 1976 Water Resources Development Act. The revised recommended project was changed due to the withdrawal of the Port of Long Beach on October 1, 1991. The Port of Los Angeles, the local sponsor, received credit, for advance work (Stage 1) performed per WRDA 1988. Project Cooperation Agreement executed March 18, 1997.

Terminal Facilities. Of the 82,553 feet of wharves in the Los Angeles Harbor, 75,729 feet are owned by the city and 6,824 feet are owned by private interests. The final report presented and recommended four project increments. Increment No. 2 would deepen the existing Los Angeles Harbor approach and entrance channels to Pier 300 to provide better access to dry bulk facilities. Increment No. 3 would further deepen the Los Angeles approach and entrance channel to Pier 300 and part of Pier 400, and deepen a south channel to provide access to the eastern side of Pier 400 and liquid bulk facilities. Increments No. 4 and 5 would extend Increment No. 3 of Los Angeles to provide access to container terminals that would be located on part of Pier 300 and Pier 400. The material obtained from the dredging was used to create new landfill within the port and shallow water habitat for the least tern.

Operations during fiscal year. Plans & specifications and the environmental assessment were completed for L.A. River Estuary dredging. Total O&M, General expenditures were \$520,904. Project condition is poor

4. LOS ANGELES HARBOR MAIN CHANNEL DEEPENING, CA

Location. The project area is located at the Port of Los Angeles on the coast of southern California in San Pedro Bay, approximately 25 miles south of downtown Los Angeles.

Existing project. The proposed project would dredge 6.6 million cubic yards of sediment from the Los Angeles Main Channel, West Basin, East Channel, East Basin, and Cerritos Channel with disposal at Southwest Slip, Cabrillo Shallow Water Habitat and pier 400. The plan would also create approximately 40 acres of additional terminal space at Pier 300.

Local cooperation. The Port of Los Angeles and the Corps of Engineers executed the Project Cooperation Agreement July 25, 2002.

Operations during fiscal year. Continuing preparation of SEIS for added disposal capacity and local sponsor requested activities no requiring disposal

5. MARINA DEL REY, CA

Location. Marina del Rey is located on Santa Monica Bay, 15 miles west of downtown Los Angeles, 29 miles northwest of Los Angeles Harbor and 390 miles southeast of San Francisco Bay.

Existing project. For details see page 33-3 of Annual Report for 1981. Existing Federal navigation project consists of two jetties a breakwater and navigation channels. Contaminated materials, causing costly maintenance and a potential threat to navigation, complicate a severe shoaling problem in the harbor.

Local cooperation. County of Los Angeles Department of Beaches and Harbors requested a new study, and expressed local support by letter dated August 5, 1992. Feasibility Cost Sharing Agreement signed February 21, 1997.

Terminal facilities. Marina del Rey is homeport to about 15 commercial fishing boats and 50 other transit boats with an annual fish catch valued at approximately \$10 million. There are about ten charter boat and five tour boat operations used by over 100,000 people each year and over 6,000 berths servicing recreational craft within the harbor. Eight yacht clubs call the marina homeport. The marina offers sailing instruction, boat rental, repair and storage, harbor tours, sport fishing, retail facilities, coffee shops, snack bars and fine restaurants. The U.S. Coast Guard has a cutter permanently assigned to the harbor.

Operations during fiscal year. Maintenance dredging was performed on the North Entrance. Total O&M, General expenditures were \$1,807,890. Project condition is fair

6. MORRO BAY HARBOR, CA

Location. On coast of southern California 110 miles south of Monterey Bay, 120 miles northwest of Santa Barbara

Harbor, and nearly midway between San Francisco and Los Angeles. (see Coast and Geodetic Survey Chart 5387).

Existing project. For details, see page 33-4 of Annual Report for 1980.

Local cooperation. Project Cooperation Agreement executed on April 7, 1995.

Terminal facilities. Facilities which are adequate for existing commerce, comprise 640 feet of existing piers and 150 feet of floating docks constructed by San Luis Obispo County; 263 feet of floating docks constructed by California Department of Parks and Recreation; 1,396 feet of floating docks constructed by the city of Morro Bay; 1,398 feet of privately-owned piers; and 5,435 feet of privately-owned floating docks.

Operations during the fiscal year. Annual maintenance dredging was performed by Corps dredge, Yaquina. Total O&M, General expenditures were \$1,123,756. Project condition is good.

7. NEWPORT BAY HARBOR, CA

Location. Forty miles southeast of Los Angeles.

Existing project. Provides rubblemound entrance jetties, 920-foot deep and 500-foot wide entrance channel and main channel, inner channels, a turning basin, and anchorage areas. Upper Newport is a shallow 800-acre marine estuary. Navigation project is maintained by Corps of Engineers. Pursuant to Section 841 and subject to Section 903(b) of WRDA 1986, the project for navigation for the harbor is modified to dredge and maintain a 250-foot wide channel in Upper Newport Bay to the boundary of Upper Newport Bay State Ecological Preserve to a depth of 15 feet.

Local cooperation. In a resolution dated August 20, 1996, Orange County Board of Supervisors indicated strong support of feasibility study and understanding of cost sharing requirements.

Operations during fiscal year A hydrographic survey of the harbor was conducted under the project name "Project Condition Surveys". Project condition is poor.

8. OCEANSIDE HARBOR, CA

REPORT OF THE SECRETARY OF THE ARMY ON CIVIL WORKS ACTIVITIES FOR FISCAL YEAR 2007

Location. On the coast of southern California at Oceanside, about 30 miles north of city of San Diego and 80 miles south of Los Angeles.

Existing project. For details, see page 33-4 of Annual Report for 1981.

Local cooperation. Fully complied with. Oceanside Small Harbor Craft District sent letter of support dated April 1985 and Letter of Intent in March 1989. Project Cooperation Agreement executed in January 1993.

Terminal Facilities. Berthing for 957 boats, single-tie slips, 38 double-tie slips and 136 side-ties, of which 54 are visitors' slips; 12 dry storage spaces at Oceanside Marine Center; a fuel dock; a boat hoist; a launching ramp, which can accommodate 4 launchings at the same time; parking for 1,732 cars; with temporary parking for about 141 boat trailers; a boat-repair facility; a pump-out facility; a Coast Guard cutter; restaurants; retail stores; yacht brokers; a hotel/motel; condominiums; and a sport-fishing facility. Navigation improvements include new dredging and biannual dredging of expanded entrance channel area.

Operations during fiscal year The first year of a three year annual maintenance dredging contract was performed. Total O&M, General expenditures were \$1,092,044. Project condition is good.

9. PORT HUENEME, CA

Location. On the coast of southern California about 65 miles northwest of Los Angeles and Long Beach Harbors, about one mile southeast of Channel Islands Harbor, immediately west of the city of Port Hueneme, four miles southwest of the city of Oxnard, and 10 miles southeast of the city of Ventura.

Existing Project. Authorized in 1970 for restudy of completed project. The harbor serves both military and commercial uses with port facilities consisting of terminals, wharves, and warehouses serving a wide variety of products. The existing Federal project consists of an approach channel, entrance channel, central basin, and two rubblemound jetties. The Navy has plans to utilize the harbor more extensively for vessel berthing and repair; effectively reducing maneuverability in the harbor. Harbor District would like to use deeper draft wood pulp carrier vessels and possibly tankers.

Local cooperation. Requirements are described in full on page 33-3 of Annual Report for 1976. The Oxnard Harbor District reviewed and agreed to sign the Feasibility Cost Sharing Agreement on January 3, 1996.

Operations during fiscal year. Coordination was performed with inter-agencies to develop the CADD site. Total O&M, General expenditures were \$141,818. Project

condition is fair.

10. PORT OF LONG BEACH (DEEPENING), CA

Location. On the coast of southern California along the Pacific Coast in San Pedro Bay about 20 miles south of downtown Los Angeles.

Existing Project. The recommended plan consists of deepening the approach channel to -76 MLLW, from breakwater seaward, a distance of about 2 miles to accommodate deep draft crude tankers. WRDA 1996 authorized project in accordance with the July 1996 Chief of Engineers Report. Dredging to -76 feet MLLW of the approach channel was completed in December 2000. Prior condition survey indicated that turning basin and navigation channel inside the harbor were not dredged by POLB to -76 feet. Anticipated cost to complete project is within project cost estimate. The estimated cost of the project (October 2006) is \$44,650,000.

Local cooperation. The Port of Long Beach is the local sponsor. The Project Cooperation Agreement was executed in July 1998.

Operation during the fiscal year. None.

11. REDONDO BEACH HARBOR (KING HARBOR), CA

Location. On the coast of southern California on the southern portion of Santa Monica Bay, about 17 miles southwest of Los Angeles.

Existing project. For details, see page 33-4 of Annual Report for 1981. WRDA of 1986 (H.R. 6) Conference Bill, Title VIII - Project Modification, Section 809 - King Harbor, Redondo Beach, CA, modifies the King Harbor Project in order to carry out maintenance dredging and for breakwater construction, and authorized the Secretary to restore the breakwater to a height of 22 feet and maintain breakwater at such height to provide greater protection from heavy wave action.

Local cooperation. City of Redondo Beach officials are in full support of the study and have indicated desire to construct improvements to reduce continued storm related damages.

Operations during fiscal year. Rockwork inspections were performed under the project "Project Condition Surveys". Project condition is good.

12. SAN DIEGO HARBOR, CA

Location. On the coast of southern California just north of the Mexican border, about 109 miles southeast of Los Angeles and Long Beach Harbors. (See Coast and Geodetic Survey Chart 5107).

Existing project. For details, see pages 33 and 34 of Annual Report for 1980.

Local cooperation. Requirements are described in full on pages 33 and 34 of Annual Report for 1980.

Terminal facilities. Consists of 45,070 feet of wharves, exclusive of Government-owned and 24,000 feet are privately owned. Government-owned wharves at North Island are restricted to military use only.

Operations during fiscal year. Hydrographic condition survey was performed under the project condition survey program. Project condition is fair.

13. SAN DIEGO RIVER AND MISSION BAY, CA

Location. The project is located at the mouth of the San Diego River about six miles northwest of the San Diego business district, San Diego County, California.

Existing project. For details, see page 33-3 of Annual Report for 1991. Authorized by the Flood Control Act of 1944, the existing project consists of a levee channel, entrance channel, main channel, altered railroad bridge, anchorage basins (West Anchorage and Quivira) and three jetties. Construction of a 1,200-foot-long weir restored design conveyance capacity at the mouth of the San Diego River. A sand plug in mouth of river reduced flood-carrying capability from 115,000 cfs to 35,000 cfs, equal to a 100-year flood. The temporary timber pile breakwater at Quivira Basin was replaced with a permanent rubble mound breakwater.

Local cooperation. The Project Cooperation Agreement was executed July 1996 with the city of San Diego.

Operations during fiscal year. Hydrographic condition survey of the federal navigation channel was performed under the project condition survey program. Total O&M, General expenditures were \$10,114. Project condition is fair.

14. SANTA BARBARA HARBOR, CA

Location. On the coast of southern California, 90 miles northwest of Los Angeles Harbor.

Existing project. For details on original, see page 33-4 Annual Report for 1983. For reevaluation details see WRDA, 1986. The recommended plan includes acquiring

a permanent dredge for the city and they will assume the operation and maintenance of the channel.

Local cooperation. See page 1015 of Annual Report for 1969, for items of local cooperation under 1962 authorized modification of existing project. The city reaffirmed its support on January 23, 2002.

Operations during fiscal year. Cycles 1 & 2 of an annual maintenance dredging contract was performed. Total O&M, General expenditures were \$1,084,338. Project condition is fair.

15. SANTA MONICA BREAKWATER, CA

Location. Santa Monica Breakwater is located seaward of the Santa Monica Pier, approximately 15 miles west of downtown Los Angeles. Existing breakwater is 2,000 feet long and lies 1,300 feet from the shoreline.

Existing project. The authorized project comprises reconstruction of 900 feet of the southern end of the existing breakwater to an elevation of +10 feet MLLW for storm damage prevention and constructing an offshore boulder-field for fish habitat. The local sponsor will provide 12 moorings and other boating support facilities to reestablish commercial boating opportunities. WRDA 1996 authorized the project. The estimated cost of the project is \$7,200,000 (Federal cost is \$4,700,000 which includes \$40,000 US Coast Guard; Non-Federal cost is \$2,500,000).

Local cooperation. City of Santa Monica, the local sponsor, indicated its support in July 1995 for the authorized project and its willingness and intent to execute the Project Cooperation Agreement.

Operations during fiscal year. None.

16. SURFSIDE, SUNSET AND NEWPORT BEACH, CA

Location. Project extends along Orange County coastline, 17 miles from San Gabriel River mouth down coast to Newport Bay Harbor entrance.

Existing project. Authorization Section 101 of Rivers and Harbors Act 1962. Modified by Chief of Engineers September 1963. Project is a periodic continuing construction project. Periodic beach nourishment with no time limit on Federal aid authorized by PL 87-874 as recommended by HD 602.

Local cooperation. State of California, Orange County, Cities of Newport and Huntington Beach, and Surfside

REPORT OF THE SECRETARY OF THE ARMY ON CIVIL WORKS ACTIVITIES FOR FISCAL YEAR 2007

Colony. Funding agreement with the State of California for Stage 11 was executed on August 9, 2001.

Operations during fiscal year. Continued design phase and additional environmental compliance. Borrow site investigation completed.

17. VENTURA HARBOR, CA

Location. Located 65 miles northwest of Los Angeles and six miles northwest of Channel Islands Harbor.

Existing project. For details, see page 33-5 of the Annual Report for 1981. Reevaluation under WRDA 1990 consists of modification to the existing harbor by constructing a separate South Beach groin, extending the offshore breakwater, adding a spur groin to the north jetty and detached breakwater, and deepening and extending the entrance channel and sand trap.

Local cooperation. Fully complied with.

Operations during fiscal year. Annual contract for maintenance dredging was performed. Rockwork inspections were conducted. Total O&M, General expenditures were \$2,243,493. Project Condition is fair.

18. NAVIGATION/BEACH EROSION CONTROL WORK UNDER SPECIAL AUTHORIZATION

Navigation activities pursuant to Section 107, Public Law 86-645.

Fiscal year cost for Section 107 were \$10,634 of which \$7,754 was for Port Hueneme, CA; and \$2,880 for the Coordination Account.

Beach erosion control activities pursuant to Section 103, Public Law 87-874 (preauthorization).

Fiscal year cost for Section 103 were \$38,267 of which \$8,930 was for Goleta Beach, CA; \$10,516 for Pismo Beach, CA; and \$18,821 for the Coordination Account.

Shoreline Erosion Control Development and Demo Program, Sec 227, PL 104-303

Fiscal year cost was \$1,425.

Flood Control

19. ALAMO DAM, AZ

Location. About 70 miles southeast of Kingman, Arizona on the Bill Williams River, Arizona a tributary of the Colorado

River.

Existing project. For details, see page 33-7 of Annual Report 1981.

Local cooperation. Fully complied with.

Operations during fiscal year. Routine operations and maintenance were performed. Total O&M, General obligations were \$1,551,616. Project condition is good.

20. CLIFTON, AZ

Location. Located on San Francisco River approximately 170 miles northeast of Tucson in Greenlee County, AZ.

Existing project. The project consists of both structural and nonstructural elements, including an earthfill levee about 3,000 feet long, with floodgates and floodwalls. Implementation will involve flood proofing of 11 businesses, flood plain evacuation plans, and recreation development. Estimated cost (October 1998) for existing project is \$24,100,000 (includes \$2,600,000 cash contribution and \$5,400,000 other costs). Construction of the levee and floodwall was completed August 1995 and turned over to sponsor December 1996. Completed non-structural relocation in December 1998.

Local cooperation. The State of Arizona, Division of Emergency Services, is the local sponsor. Project Cooperation Agreement executed on July 30, 1993.

Operations during fiscal year. None.

21. HANSEN DAM, LACDA, (RECREATION DEVELOPMENT), CA

Location. In the San Fernando Valley area of the city of Los Angeles about 20 miles northwest of downtown Los Angeles. Recreation lake and facilities lie within flood control basin boundaries.

Existing project. Original project authorized under Flood Control Act 1936, and modified by WRDA 1986, Section 847 Energy and Water Development Act 1992 (PL 102-104). Project consists of two phases. Phase 1 is the excavation of the lake, and rough grading of the roadways and building pad locations. Phase 2 is the construction of a 10.5-acre recreation lake, picnic facilities, access roads, parking lots, and landscaping.

Local cooperation. Project is 50/50 cost shared with the city of Los Angeles.

Operations during fiscal year Coordination with local interests regarding expansion of the existing recreational facilities was on-going throughout the year. Mitigation

planting was initiated. Total O&M, General expenditures were \$14,300.

22. HOLBROOK, AZ

Location. Located along the Little Colorado River in the City of Holbrook, AZ, about 150 miles northeast of Phoenix.

Existing project. The completed project will provide 100-year-flood protection to 696 residences and 205 commercial, industrial, and public buildings. Estimated cost (October 1996) for this project is \$14,600,000, of which \$11,000,000 is Federal and \$3,600,000 is non-Federal (includes \$1,935 cash contribution and \$1,665,000 other costs).

Local cooperation. The City of Holbrook signed the Project Cooperation Agreement, on August 24, 1993.

Operations during fiscal year. None.

23. LOS ANGELES COUNTY DRAINAGE AREA, CA

Location. Along Los Angeles and San Gabriel Rivers, Rio Hondo, and Compton Creek, CA.

Existing project. Project consists of channel improvement to lower Los Angeles, Rio Hondo Rivers, Compton Creek, and modification/replacement of as many as 25 bridges necessitated by the channel improvements. A map of the rehabilitation plan is in "General Design Memorandum, Los Angeles River Rehabilitation under the Major Rehabilitation Program," dated January 1984 and revised in March 1984. Estimated cost (September 2007) for existing project is \$210,700,000 of which \$158,000,000 is Federal and \$52,700,000 is non-Federal (includes \$46,200,000 cash contribution and \$6,500,000 other costs).

Local cooperation. In February 1992, the Los Angeles County Department of Public Works, the local sponsor, affirmed its support and willingness to financially participate in the construction of the project at a level consistent with the current cost-sharing policy for construction. The Project Cooperation Agreement was executed August 7, 1995.

Operations during fiscal year. Routine operations and maintenance activities were performed. Mountain Management and Periodic Inspections conducted, reports printed and distributed. Total O&M, General obligations were \$4,614,763. Project condition of Dams and Channels is good.

24. LOS ANGELES RIVER, SEPULVEDA TO ARROYO SECO, (RECREATION DEVELOPMENT), CA

Location. Upper Los Angeles River from Sepulveda Flood Control Basin (located 25 miles northwest of the city of Los Angeles) to the confluence of the Arroyo Seco channel, a distance of 20 miles.

Existing project. The Upper Los Angeles River consists primarily of a rectangular channel from the Sepulveda Basin to a point approximately four miles above the Arroyo Seco as a trapezoidal channel of the Arroyo Seco.

Local cooperation. Project is 50/50 cost shared with City of Los Angeles Department of Transportation.

Operations during fiscal year. None.

25. MOJAVE RIVER DAM, MOJAVE RIVER BASIN, CA

Location. On Mojave River at the Forks site, just downstream from the mouth of Deep Creek and about 14 miles upstream from Victorville, in Mojave River Basin, CA.

Existing project. For details, see page 33-8 of Annual Report for 1983.

Local cooperation. None required.

Operations during fiscal year. Routine operations and maintenance activities were performed. Total O&M, General expenditures were \$135,545. Project condition is good..

26. MURRIETA CREEK, CA

Location. The project area encompasses the Santa Margarita River in Riverside and San Diego Counties, California.

Existing project. The project is a multi-purpose flood control, environmental restoration and recreation project along 7.5 miles of Murrieta Creek. The major project features include channel widening and deepening; an environmental corridor along the length of the project; a multi-purpose detention basin; a wetland restoration area, a recreation park, and three bridge replacements. The project is divided into four phases.

Local cooperation. The Riverside County Flood Control and Water Conservation District and the Corps of Engineers executed the PCA in September, 2003.

Operations during fiscal year. Completed preliminary Plans and Specifications for Phase II construction.

27. NOGALES WASH, AZ

Location. At the Mexican Border, in extreme southern Arizona in central and northern portions of the city of Nogales, about 60 miles south of Tucson

Existing project. Current plan includes a flood warning system in Mexico and United States and a channel & levee construction at Chula Vista, Arizona.

Local cooperation. The Santa Cruz County Flood Control District and the Corps of Engineers executed the PCA in December 2005.

Operations during fiscal year. Award and initiate PH2 of construction

28. NORCO BLUFFS, SANTA ANA RIVER, CA

Location. Located approximately 40 miles southeast of Los Angeles, in the city of Norco, along a 3.75-mile stretch of the south bank of the Santa Ana River.

Existing Project. The project consists of a structural solution of revetted-buttress fill using existing and imported fill material one reach, a distance of one mile. The bluff stabilization protects a 65-foot-high bluff from further retreat into a residential neighborhood, which results when flood flows occur in the Santa Ana River. Estimated cost (September 2005) is \$15,000,000 of which \$11,250,000 is Federal and \$3,750,000 is non-Federal.

Local cooperation. Local sponsor, Riverside County Flood Control District. Project Cooperation Agreement executed in January 1999.

Operations during fiscal year. Miscellaneous repair and hydroseeding along the channel.

29. PAINTED ROCK DAM (GILA RIVER), AZ

Location. About 20 miles northwest of Gila Bend, and 120 miles southwest of Phoenix, Arizona.

Existing project. For details, see page 33-9 of Annual Report for 1981.

Local cooperation. Requirements are described in full on 33-9 of Annual Report for 1981.

Operations during fiscal year. Routine operations and maintenance activities were performed. Total O&M, General

expenditures were \$752,921. Project condition is good

30. PINE AND MATHEWS CANYONS DAMS, COLORADO RIVER BASIN, NV

Location. In Lincoln County, NV, about 100 miles north of Hoover Dam and about 17 and 20 miles, respectively, east of Caliente, NV.

Existing project. For details, see page 33-13 of Annual Report for 1981.

Local cooperation. Fully complied with.

Operations during fiscal year. Routine operation and maintenance activities were performed. Total O&M General expenditures were \$106,879. Project condition is good.

31. RILLITO RIVER, AZ

Location. The project is located in Tucson metropolitan area of Pima County, AZ.

Existing project. Plan of improvement includes: 1) an upstream equestrian staging area; 2) an upstream rest area; 3) a downstream rest area; 4) esthetic treatment planting; 5) construction of 16 pedestrian bridges; and 6) pending reauthorization to include extension of authorized project upstream along a portion of Tanque Verde Creek. Estimated cost (October 1998) for existing project is \$40,000,000 (includes an allowance for estimated inflation through the construction period), of which \$28,600,000 is Federal and \$11,400,000 is non-Federal. Flood control portion is \$34,215,468 and recreation is \$5,784,532.

Local cooperation. Pima County Transportation and Flood Control District submitted letters of assurance on February 24, 1986 and May 6, 1987. Project Cooperation Agreement (PCA) was executed in June 1994. Amendment to PCA for third increment was executed on September 16, 1998.

Operations during fiscal year. None.

32. RIO DE FLAG, FLAGSTAFF, AZ

Location. The project is located partly within the city of Flagstaff and entirely within Coconino County, Arizona.

Existing project. The recommended plan would reduce the potential for significant flood damages to residential, commercial, industrial, and historical structures in the City of Flagstaff, including Northern Arizona University, and the western portion of Flagstaff along Clay Avenue Wash. The plan consists of channel modifications, construction of a detention basin with capacity of about 295 acre-feet to reduce flood flows along the wash, construction of berms and

floodwalls in the Thorpe Park area, and the construction of recreation features.

Local cooperation. The City of Flagstaff and the Corps of Engineers executed the Project Cooperation Agreement in October 2004.

Operations during fiscal year. Complete & submit the Limited Reevaluation Report, Complete 60% Mainstem plans and specifications, initiate & construct the Clay Avenue Detention Basin.

33. SANTA ANA RIVER MAINSTEM, CA

Location. Along a 75-mile reach of the Santa Ana River in San Bernardino, Riverside, and Orange Counties, emptying into the Pacific Ocean between the cities of Newport Beach and Huntington Harbor, 50 miles south of Los Angeles, and 90 miles north of San Diego.

Existing project. For details, see page 33-9 of the Annual Report for 1987. Plan of improvement: Seven Oaks Dam, management of overflow area - Seven Oaks to Prado; raise Mill Creek Levee; additional storage at Prado; improvements along: Oak Street Drain/Riverside Co., Santiago Creek/Orange Co., San Timoteo Creek/San Bernardino Co., and Lower Santa Ana River; recreation development: mitigation and preservation. The estimated cost (October 2006) for existing project is \$1,765,000,000 (includes an allowance for estimated inflation through the construction period), of which \$1,166,000,000 is Federal and \$599,000,000 is non-Federal (includes \$95,000,000 cash contribution and \$504,000,000 other cost).

Local cooperation. Counties of San Bernardino, Riverside, and Orange. Local Cooperation Agreement was signed on December 14, 1989.

Operations during fiscal year. In FY07 we initiated construction of the Corona Housing and Sewage Treatment dikes, continued engineering and design of the remaining Prado Dam Phase II Dikes, Lower Santa Ana River Reach 9 Phase II, Santa Ana Regional Interceptor (SARI line) and environmental mitigation for Seven Oaks Dam. Continued construction on Prado Dam embankment and outlet works and Phase IV landscaping on the lower reaches of the Lower Santa Ana River reaches 5, 6, & 8, San Timoteo Landscaping and water quality study at Seven Oaks Dam.

34. SANTA ANA RIVER BASIN AND ORANGE COUNTY, CA

Location. On the Santa Ana River and tributaries and on other streams in Orange, Riverside, and San Bernardino Counties, CA.

Existing project. For details on units, see Annual Report for 1968.

Local cooperation. Fully complied with. Orange County Water District advocated an increase in water conservation at Prado Dam up to elevation 505 feet. Prado Basin includes significant riparian wetlands, including nesting areas of the endangered least Bell's vireo. The basin is currently under review as proposed critical habitat for the vireo.

Operations during fiscal year. Routine operations and maintenance activities were performed. The update to the Prado Dam Master Plan continued. Total O&M General expenditures were \$2,839,326. Project condition of Dams and Channels is good.

35. SANTA PAULA CREEK, CA

Location. Santa Paula Creek is a tributary of the Santa Clara River in the vicinity of the city of Santa Paula, Ventura County, about 16 miles from the ocean and approximately 60 miles northwest of downtown Los Angeles.

Existing project. Authorized by Flood Control Act of 1970, Public Law 91-611 (HD 443/80/1) and for details see Annual Report Fiscal Year 1991, page 33-10. Estimated cost (October 2000) for existing project is \$40,900,000, of which \$39,300,000 is Federal and \$1,600,000 is non-Federal (includes \$0 cash contribution and \$1,600,000 other costs).

Local cooperation. Ventura County Flood Control District. No authorization is required; therefore, the existing Section 221 Agreement is still binding and was amended in September 1996.

Operations during fiscal year. None.

36. SAN LUIS REY RIVER, CA

Location. Along the lower 7.2 miles of the San Luis Rey River, in and around the city of Oceanside, San Diego County, about 86 miles south of Los Angeles.

Existing project. A double levee, 5.4 miles long; stone protected channel with a soft bottom; 1,330 feet of parapet walls at the ocean on the north and south levees; six interior drainage ponds; and a five-mile bike trail. The Water Resources Development Act of 1996 reauthorized the project. Estimated cost (September, 2006) \$98,100,000 of which \$73,572,000 is Federal and \$24,528,000 is non-Federal (including \$6,280,000 cash contribution).

Local cooperation. Final Local Cooperation Agreement signed by city of Oceanside and Secretary of Army May 13, 1988.

Operations during fiscal year. Continued work on final approval of PADD and SEIS/EIR. Update Emergency Management Plan, conduct environmental minimization work, prepare draft O&M manual, and award contract to clear a portion of Phase I vegetation.

37. SEPULVEDA DAM, (RECREATION DEVELOPMENT), CA

Location. The project is located between the communities of Encino and Van Nuys and 15 miles northwest of Los Angeles.

Existing project. Flood Control Act 1936 and Public Law 77-387 1941, and 1989-1972. Primary project purpose is flood control. Subsequent Act of Congress authorized a secondary project purpose for park and recreation.

Local cooperation. Recreation project is 50/50 cost shared with the city of Los Angeles. Federal funds will complete Lake Balboa and park with comfort station, trails, fencing, irrigation, children's play area, revegetation and develop an additional wildlife area. The city will continue reclaimed water distribution and develop several park areas.

Operations during fiscal year. Project construction physically completed January 1999. Beilenson Park Extension project, completed in March 2005, included an asphalt turn-around road, sidewalk and parking stalls. Total O&M, General expenditures were \$0. Project condition is good.

38. SWEETWATER RIVER, CA

Location. The project empties into San Diego Bay in the city of Chula Vista and National City and unincorporated San Diego County, four miles south of the city of San Diego, and eight miles north of the Mexican Border.

Existing project. Construction of 3.2 miles of channel improvements along the Sweetwater River from Interstate 805 to San Diego Bay, in combination with State Route 54 and Interstate 5 construction; and construction of two railroad bridges and 188 acres of preservation and mitigation land.

Local cooperation. San Diego County signed 221 Agreement in December 1984.

Operations during fiscal year. None.

39. TROPICANA AND FLAMINGO WASHES, NV

Location. The project area is located west of and through urbanized Las Vegas community along both Tropicana and Flamingo Washes in southern Nevada.

Existing project. The recommended plan will provide urban flood reduction, erosion control and wildlife enhancement for portions of Las Vegas and the surrounding areas to the west and southwest, including the rapidly developing alluvial fan immediately west of Las Vegas. The plan recommends construction of three debris basins, three detention basins, modifications to two existing detention basins, 28 miles of channels connecting these project elements, 43 miles of lateral collectors, environmental mitigation, and recreation facilities. The estimated cost for the existing project is \$350,200,000 (includes an allowance for estimated inflation), of which \$259,100,000 is Federal and \$91,100,000 is non-Federal (includes \$28,500,000 cash contribution and \$62,600,000 other costs).

Local cooperation. The Clark County Regional Flood Control District and the Department of Public Works are the local sponsors for flood control. The Clark County Recreation Department is the potential local sponsor for the recreation feature. The Project Cooperation Agreement (PCA) was executed on February 7, 1995. The Section 211 PCA was executed December 17, 1999. Clark County was reimbursed \$13.5 million for Section 211 work.

Operations during fiscal year. Completed the F4 Basin/Channel and Flamingo Detention Basin features, continued work on technical documents, conducted technical review and audit of Section 211 work and reconciliation of financial records.

40. TUCSON DIVERSION CHANNEL (RECREATION DEVELOPMENT), AZ

Location. The Tucson Detention Basin and Diversion Channel are located in southeast Arizona. The project area initiates within the basin and proceeds approximately five miles downstream until it meets Interstate 19.

Existing project. The recreational development consists of a bicycle and hiking trail; four rest areas at the basin's inlet and outlet areas, near the intersection of Park Avenue and Ajo Way, across the street from Wakefield Middle School and near Interstate 19, where the project ends; four channel under crossing areas at Ajo Way (near the basin's outlet), Interstate 10; Kino Parkway; and Benson Highway; a restroom facility and five to seven car parking area located near the end of the project area; lighting at rest areas; benches; pedestrian bridges; and landscaping. The flood control channel maintains a 30-40 foot width, with a average 30-foot right-of-way on each side of the channel. The trail system is primarily located along the north bank of the channel.

Local cooperation. Pima County is the local sponsor.

Operations during fiscal year. None.

41. TUCSON DRAINAGE AREA, AZ

Location. Project is located along Tucson Arroyo/Arroyo Chico watershed, within the Tucson city limits in Arizona.

Existing project. Both the reconnaissance report and the feasibility study identified the Tucson Arroyo/Arroyo Chico watershed area (approximately 11.4 square miles) as the major drainage channel within downtown Tucson. The recommended plan has two main features consisting of two detention basin complexes - one on Arroyo Chico in the headwaters of the drainage area (referred to as Randolph Golf Course Detention Basin Complex), and one on Tucson Arroyo/Arroyo Chico in the approximate center of the watershed (referred to as Park Avenue Detention Basin Complex). The local sponsor completed the Randolph Golf Course Detention Basin Complex in May 1996 using Section 104 credit consideration.

Local cooperation. Pima County Flood Control District and the Corps of Engineers executed the Design Agreement on May 3, 1999. The PCA signed April 2006.

Operations during fiscal year. Awarded and initiate construction contract for TUSD basin utilizing the continuing contract clause.

42. WHITLOW RANCH DAM, QUEEN CREEK, AZ

Location. Fifty miles southeast of Phoenix, AZ in Pinal County, on Queen Creek, Arizona a tributary of Gila River, about 10 miles west of Superior, Arizona.

Existing project. For details see page 33-10 of Annual Report 1981. Project element earthfill Dam, circular conduit outlet 1982. works and reservoir.

Local cooperation. Fully complied with.

Operations during fiscal year. Routine operations and maintenance activities were performed. Total O&M, General expenditures were \$193,663. Project condition is good.

43. INSPECTION OF COMPLETED FLOOD CONTROL PROJECTS

Inspection of completed local flood control projects consisting of the following: 375 miles of channels, six dams, and appurtenances, and 23 debris basins. Permit reviews were conducted. See Table 33I. Expenditures for: Arizona – \$98,274, California - \$1,011,498 and Nevada – \$40,011. Total O&M, General expenditures were: \$1,149,783

44. SCHEDULING FLOOD CONTROL RESERVOIR OPERATIONS

In accordance with Section VII, Flood Control Act of 1944,

studies of reservoir operations for flood control were conducted; and preparation of regulations for the use of storage allocated for flood control was continued. The flood control structures were Hoover, Twitchell, and Tat Momolikot Dams. Expenditures for: Arizona - \$43,742, California - \$203,156. Total O&M, General expenditures were \$246,898.

45. FLOOD CONTROL WORK UNDER SPECIAL AUTHORIZATION

Flood Control Activities Pursuant to Section 205 of the 1948 Flood Control Act, Public Law 858, 80th Congress, as Amended.

Fiscal year cost for Section 205 was \$325,014. See Table 33-J for list of projects.

Navigation activities pursuant to Section 107, Public Law 86-645.

Fiscal year cost for Section 107 were \$10,634 of which \$7,754 was for Port Hueneme, CA; and \$2,880 for the Coordination Account.

Beach erosion control activities pursuant to Section 103, Public Law 87-874 (preauthorization).

Fiscal year cost for Section 103 were \$38,267 of which \$8,930 was for Goleta Beach, CA; \$10,516 for Pismo Beach, CA; and \$18,821 for the Coordination Account.

Shoreline Erosion Control Development and Demo Program, Sec 227, PL 104-303

Fiscal year cost was \$1,425.

46. EMERGENCY RESPONSE ACTIVITIES - FLOOD CONTROL AND COASTAL EMERGENCIES

Emergency Flood Control Activities - repair, flood fighting, and rescue work (Public Law 99, 84th Cong., and antecedent legislation).

A. Disaster: This program encompasses all the activities associated with preparedness, which includes preparation of plans and policy documents, exercises, training, coordination with outside agencies and governments, maintaining supplies and equipment, and overall readiness.

B. Operational Program Areas: Fiscal Year cost for disaster preparedness was \$591,528; emergency operations cost was \$548,205; rehabilitation cost \$134,230.

Environmental Improvements

47. CAMBRIA SEAWATER DESALINATION, CA

Location: The project area is located in San Luis Obispo County, California approximately 230 miles north of Los Angeles, CA.

Existing project. The Cambria Community Services District (CCSD) plans to build a desalination plant to ensure adequate water supply. Their current water sources are wells in shallow aquifers and are unable to provide a reliable water source, particularly during dry weather. The proposed work includes design refinement, permitting and Environmental Impact Statement/Environmental Impact Report and construction.

Local Cooperation. Cambria Community Services District.

Operations during fiscal year. Project was not included in the President's budget.

48. CITY OF SANTA CLARITA (PERCHLORATE), CA

Location. The project is located within the Santa Clarita Valley in the northern part of Los Angeles County, CA.

Existing project. The main objective of the study is to evaluate the existing aquifer conditions of the Santa Clarita Valley Saugus area and develop alternatives for long-term solutions to restoring the perchlorate impacted aquifer to drinking water quality. Goals of the study include identification of perchlorate sources, definition the nature and extent of contamination, aquifer characterization, evaluation of alternative well sites, groundwater modeling, and evaluation of long-term treatment technology solutions.

Operations during fiscal year. Refine study area aquifer characterization, continue groundwater sampling program.

49. HARBOR-SOUTH BAY WATER RECYCLING, CA

Location. The project area is located in the South Bay area of Los Angeles County, CA encompassing cities of Los Angeles, Compton, Carson, Gardena, Inglewood, Hawthorne, Torrance, Redondo Beach, Palos Verdes, Rolling Hills, and Ranch Verde Estates.

Existing project. The project is part of the West Basin Municipal Water District's recycled water distribution system expansion, which will serve recycled wastewater to numerous local cities. The project will include the design and construction of over 30 miles of recycled water pipeline and distribution facilities. The project features are classified into 12 laterals and associated distribution/operational facilities to be designed and constructed.

Local cooperation. The local sponsor is the West Basin Municipal Water District.

Operations during fiscal year. Continue construction, 3M/completion of Madrona Lateral, complete design of Lateral 10, Lateral 10 Construction Contract award Sep 06, and initiate design of Lateral 6B.

50. NORTH VALLEY REGIONAL WATER INFRASTRUCTURE, CA

Location. The project is located in the city of Lancaster, about 50 miles northeast of Los Angeles, in Los Angeles County.

Existing project. The project will provide critically needed water facilities to the northern sector of the Antelope Valley region. The project will include design and construction of approximately 8.5 miles of 36-inch diameter water main and related facilities to serve this part of the city.

Operations during fiscal year. None.

51. RIO SALADO PHOENIX & TEMPE REACHES, AZ

Location. Phoenix Reach is located along 5 miles of the Salt River, from Interstate 10 Bridge to 19th Avenue in Phoenix, AZ. The project area for Tempe Reach is located along 1.3 miles of Indian Bend Wash, from McKellips Road downstream to confluence with Salt River, and two separate reaches of the Salt River upstream & downstream of Tempe Town Lake, in Tempe, Arizona.

Existing project. The two sites, for Tempe and Phoenix, have been identified with a Federal interest in environmental restoration involving riparian habitat restoration, water quality improvement and recreation that is incidental or complimentary to the primary project purpose.

Local cooperation. The city of Phoenix and the Corps of Engineers executed the Project Cooperation Agreement June 4, 2001. The city of Tempe and The Corps of Engineers executed the Project Cooperation Agreement in March 2003.

Operations during fiscal year. Phoenix Reach: Award and initiate Phase 3. Tempe Reach: Completed construction on Phase 2 and compete Phase 3 design.

52. RURAL NEVADA, NV

Location. Rural Nevada project includes Boulder City, Mesquite, Moapa, Virgin Valley Water District, Tonopah, and Goldfield, Nevada. Boulder City is located approximately 25

miles southeast of the city of Las Vegas, Nevada. Mesquite and Virgin Valley are located approximately 70 miles northeast of the city of Las Vegas, Nevada. The city of Moapa is located approximately 35 miles northeast of the city of Las Vegas, Nevada. Tonopah is located approximately 210 miles northwest of Las Vegas, Nevada. Goldfield is located approximately 180 miles northwest of Las Vegas, Nevada.

Existing project. Boulder City project is focused on renovation of three existing pump stations and several miles of force main in Hemanway Valley. This project will protect against accidental discharge of untreated wastewater into the watershed of Lake Mead National Recreation Area and Lake Mead. The Mesquite project is focused on development of a multi-purpose water resource project, to include flood control, retention facilities, water supply, environmental restoration, and sediment control. Phase 1 will include the construction of a wastewater tertiary treatment system to enhance the existing system and include the design work on phases 2 and 3. Phase 2 will include the construction of detention facilities at Pulsipher wash. Phase 3 will include the construction of retention facilities at Abbott Wash. The Moapa project consists of design and construction of monitoring wells to determine the potential of this area to supplement current water supply. The design and construction of an inter-connect pipeline to the neighboring Coyote Springs Wash Basin is being considered with the total scope of the Project. Virgin Valley Water District project is focused on providing arsenic treatment for 5 potable water wells, design and construction of 12" water line and three treatment plants. Tonopah project is focused on design and construction of a wastewater treatment facility and a wastewater collection system. Goldfield project is focused on design and construction of utility sewer collection system.

Local cooperation. The sponsors for these projects are city of Boulder City, Nevada, the city of Mesquite, Nevada, Moapa Valley Water District, Nevada, Virgin Valley Water District, Nevada, Town of Tonopah, Nevada, and Esmeralda County, Nevada.

Operations during fiscal year: City of Mesquite: Reimbursed sponsor 75% for costs for continued construction work on Pulsipher Water Retention and Reuse Facilities. Reimbursed sponsor 75% of continued design costs on Phase 3 Abbot Water Retention and Reuse Facility, including other design work on each of the three authorized projects. City of Boulder City: Reimbursed sponsor 75% for costs to continue construction of phase I project. Virgin Valley Water District: Reimbursed sponsor 75% for costs of design for arsenic removal and treatment system. Town of Tonopah: Reimbursed sponsor 75% for costs of design for the wastewater treatment and wastewater collection system. Esmeralda County: Reimbursed sponsor 75% for costs of design for the utility sewer collection system.

53. SOUTH PERRIS, CA

Location. The project is located in Perris, Riverside County, California.

Existing project. The project involves the design and construction of a reverse osmosis desalination plant, wells, pipelines and brine management pipelines required for the phased implementation of the Perris Basins Desalination Program. This program would provide a reliable potable water supply and preserve existing groundwater resources.

Local cooperation. Local Sponsor, Eastern Municipal Water District, EMWD, signed a designed agreement on September 3, 2003. The Project Cooperation Agreement has not yet started.

Operations during fiscal year. Draft Plans and Specifications for desalination plant have been completed.

54. TRES RIOS, AZ

Location. Project is located within the Phoenix metropolitan area of Maricopa County and includes a seven-mile reach of the Salt and Gila Rivers beginning at 83rd Avenue and continuing downstream to the confluence with the Agua Fria River.

Existing project. The feasibility report was completed in April 2000. The recommended plan will address flood control protection and the use of treated effluent from a regional wastewater treatment facility to restore and sustain fish and wildlife habitat. The benefits of environmental restoration would be the potential for 1,200 acres of riparian and wetland habitats to be restored. Since 1978, the study area has been subjected to five floods in excess of 100,000 cubic feet per second.

Local cooperation. A Project Cooperation Agreement was executed with the city of Phoenix and the Sub-Regional Operating Group in April 2004.

Operations during fiscal year. Complete Flood Control Levee Phase 1A, complete design & initiate construction for Phase 1B of Levee and complete design on Phase 1C Flood control Levee & Wetlands.

55. UPPER NEWPORT BAY HARBOR, CA

Location. The authorized restoration project is located about 40 miles southeast of Los Angeles and covers the upper bay ecological reserve.

Existing project. The project includes dredging the access

REPORT OF THE SECRETARY OF THE ARMY ON CIVIL WORKS ACTIVITIES FOR FISCAL YEAR 2007

channels and two sediment basins toward providing restoration measures to the degraded habitat areas and re-establishing wetland and wildlife habitat areas.

Local cooperation. Orange County State of California Fish and Game.

Operations during fiscal year. Continue construction of base contract and Options 1 and 2.

56. OTHER WORK UNDER SPECIAL AUTHORITY

Modifications to Structures and Operations of Constructed Corps Projects to Improve the Quality of the Environment, Pursuant to Section 1135 of the 1986 Water Resources Development Act, Public Law 662, 99th Congress, as amended.

Fiscal year cost for Section 1135 were \$2,746,419. See Table 33-K for list of projects.

Aquatic Ecosystem Restoration Pursuant to Section 206 of Water Resources Development Act of 1996, Public Law 303, 104th Congress, as amended.

Fiscal year cost for Section 206 were \$337,998. See Table 33-L for list of projects.

General Investigations

57. SURVEYS

Total Fiscal Year costs were \$7,628,360 of which \$0 for navigation studies; \$182,586 was for flood damage prevention studies; \$1,222,998 was for shoreline protection studies; \$6,009,999 was for special studies; \$100,573 was for Miscellaneous Activities; and \$112,204 for Cooperation with Other Water Agencies and Non-Federal Interests.

58. COLLECTION AND STUDY OF BASIC DATA

Fiscal Year costs totaling \$86,957 were associated with the following tasks under the Flood Plain Management Services \$56,879 and \$30,078 for hydrologic studies.

59. PRECONSTRUCTION ENGINEERING AND DESIGN

Fiscal Year expenditures were \$701,296 of which \$612,566 was for projects not yet authorized for construction and \$88,730 was for fully authorized projects.

SANTA BARBARA STREAMS, LOWER

MISSION CREEK, CA

Location. Located in Santa Barbara County about 100 miles northwest of Los Angeles, CA.

Existing project. The recommended plan includes a combination of channel improvements and bridge replacements designed to increase channel capacity and to provide approximately 20 year protection to the surrounding area.

Local cooperation. The city of Santa Barbara and the Santa Barbara County Flood Control and Water Conservation District, the local sponsors, expressed support for the project in September 2000.

Operations during fiscal year. None.

WHITEWATER RIVER BASIN, CA

Location. Project is located in Coachella Valley, and runs along cities of Palm Springs, Rancho Mirage, Palm Desert, Thousand Palms, Desert Hot Springs and other communities.

Existing project. The Feasibility study was completed in Oct 2000. Alternative 6 recommended project consists of constructing four levees to provide protection for the southern portion of the alluvial fan. The current design would replace the downstream levee with incised channel.

Local cooperation. Coachella Valley Water District and the Corps of Engineers executed the Design Agreement Aug 2001.

Operations during fiscal year. Completed draft DDR and awarded contract to finalize the DDR and prepare plans and specifications.

VA SHLY-AY AKIMEL, SALT RIVER, AZ

Location. Project area is located along approx 14 miles of the Salt River on the Salt River Pima-Maricopa Indian community between Ganite Reef Dam and Price Drive Bridge, in Maricopa County, Arizona.

Existing project. The Project includes reshaping of the river channel to provide a low-flow channel & terraces, construction of new draining channels, irrigation diversions & pipelines, a groundwater well to water vegetation, a grade central structure at Gilbert Road, a Recreation plan consisting of trails.

Local cooperation. Salt River Pima-Maricopa Indian Community, the City of Mesa and the Corps of Engineers signed the Design Agreement Sept 2006.

Operations during fiscal year. Continue work on 1st set of

AUTHORIZING LEGISLATION

See Section in Text	Date of Authorizing Act	Project and Work Authorized	Documents
1.	Sep 3,1954	CHANNEL ISLANDS HARBOR, CA Harbor for light-draft vessels and shore protection works.	H.Doc.362, 83d Cong., 2d sess.
2.	Jul 3, 1958	IMPERIAL BEACH, CA Beach erosion control.	River and Harbor Act, Sec 101; PL 85-500 IAW H.Doc.399, 84 th Cong., 2d sess.
3.	June 3, 1988	LOS ANGELES AND LONG BEACH HARBORS, CA A breakwater 8,500 feet long, east of Point Fermin.	S.Doc.18, 55th Cong., 1st sess.
	June 25,1896	Extend said breakwater to shore, making a total length of 11,152 feet from Point Fermin.	H.Doc. 969, 60th Cong., 1st sess.
	July 25, 1912	Dredge Los Angeles outer harbor west of entrance channel.	Rivers and Harbors Committee Doc.8, 62d Cong., 2d sess.
	Aug. 8, 1917	For silt-diversion works.	Rivers and Harbors Committee Doc.9, 64th Cong.,2d sess.
	Sep. 22, 1922	Triangular area approach to Los Angeles inner harbor entrance channel.	H.Doc. 1013, 66th Cong.,3d sess.
	Mar 3, 1925	Dredge Los Angeles Harbor main channel and entrance 35 feet deep and 1,000 feet wide; dredge inner harbor turning basin 35 feet deep; and reclamation of Reservation Point.	H. Doc.349, 68th Cong., 1st sess.
	July 3, 1930	A detached breakwater 12,500 feet long in prolongation of existing breakwater (authorized by act of 1896). Widen fairway on east side of entrance to Los Angeles inner harbor; dredge a channel 35 feet deep and 400 feet wide in Cerritos channel from U.S. station 406 to Long Beach turning basin; entrance channel to Long Beach Harbor 35 feet deep and 500 feet wide; and maintenance of the Long Beach breakwater south of outer end pier A. This act provides that in no case shall dredging be done within 50 feet of established pierhead lines of existing piers and wharves.	Rivers and Harbors Committee Doc.33, 71st Cong., 2d sess. S.Doc.130, 71st Con.,2d sess.
	Aug 30, 1935	Dredge 1,000-foot wide entrance channel to Los Angeles outer harbor to 40-foot depth and a turning basin 3,500 feet long and 1,500 feet wide to same depth; and enlarge entrance to inner harbor by dredging to 35-foot depth a triangular area at its junction with turning basin.	S.Committee print, 74th Cong., 1st sess.
	Oct 17, 1940	Dredge to a depth of 40 feet area A and B adjacent to 40-foot-depth entrance channel; construct and maintain a rubble mound breakwater of composite type 21,000 feet long in eastward therefrom to Belmont pier; maintenance dredging of A and B, and at mouth of Los Angeles River diversion channel; all subject to such modifications as in discretion of the Chief of Engineers may be advisable to meet requirements of the Navy.	H.Doc.843, 76th Cong., 3d sess
	Sep 3, 1954	Dredge to a depth of 35 feet in West Basin as a modification of existing project. This act provides that the Secretary of the Army is authorized to reimburse local interests for work they have done upon this project prior to July 1, 1953, at actual cost to local interests so far as same shall be approved by Chief of Engineers and found to have been done in accordance with the project hereby adopted and that such reimbursement shall be subject to appropriations applicable thereto or funds available therefore and shall not take precedence over other pending projects of higher priority for harbor improvements; and that such payments shall not exceed \$500,000.	H. Doc. 161, 83d Cong., 1st Sess

SAN FRANCISCO, CA, DISTRICT

This district comprises the Klamath River Basin in southern Oregon and portions of northern and western California consisting of drainage basins tributary to the Pacific Ocean from the Oregon-California State line on

the north to Cape San Martin, CA, on the south except for basins tributary to the San Francisco Bay system which lie east of the Benecia-Martinez Bridge.

Navigation

1. CRESCENT CITY HARBOR, CA

Location. The project is located in Crescent City, Del Norte County approximately 350 miles north of San Francisco and 17 miles south of the Oregon border.

Existing project. There are three existing Federally maintained navigation channels at Crescent City Harbor. The Entrance Channel begins at the outer breakwater and is -20 feet MLLW (Mean Lower Low Water), 2,600 feet long, and 320 to 200 feet wide. The Entrance Channel connects to the Inner Harbor Basin, which is 1,500 feet long and extends from the Entrance Channel along the lee side of the inner breakwater. The Inner Harbor Basin is authorized to -

REPORT OF THE SECRETARY OF THE ARMY ON CIVIL WORKS ACTIVITIES FOR FY 2007

20 feet MLLW, but since 1993 has been maintained at -15 feet MLLW due to economic justification.

The new access channel extends 1,200 feet from the Inner Harbor Basin to the entrance of the Small Boat Basin, and varies in width from 140 feet to 210 feet with a channel depth of -14 feet MLLW.

Local cooperation. The local sponsor is the Crescent City Harbor District. The Project Cooperation Agreement was signed in June 2000 and satisfied the requirements of the Water Resources Development Act of 1986, as amended, PL 99-662. The agreement includes the following requirements: 1) provide lands, easements, rights-of-way, and dredged material disposal areas; 2) pay 10 percent of the costs of new construction; and 3) pay an additional 10 percent plus interest of the project costs allocated to general navigation features within a period of 30 years following completion of construction.

Terminal facilities. The Harbor contains a commercial small boat basin with 240 permanent berths and temporary moorings for approximately 20 vessels, a 250 slip recreational mooring facility, two fish processing plants with docks, a main dock, a marine repair facility, a U.S. Coast Guard dock, and other auxiliary commercial and recreational facilities.

Operations during fiscal year. New Work: Construction completed in November 2000. Maintenance: None.

2. HUMBOLDT HARBOR, CA

Location. The project is located in Humboldt Bay, about 280 miles north of San Francisco.

Existing project. Adopted by Acts of March 3, 1881, July 5, 1884, August 5, 1886, July 3, 1892, March 3, 1889, June 25, 1910, July 3, 1930, August 30, 1935, August 26, 1937, July 16, 1952, and August 1968. The project consists of: 1) a Bar and Entrance Channel -48 feet deep, tapering from a width of 1,600 feet at seaward mile 0.9 to 500 feet at seaward mile 0.2 and then 500 feet wide to mile 0.8; 2) a North Bay Channel -38 feet deep and 400 feet wide between mile 0.75 and mile 4.29; 3) an Outer Eureka Channel 35 feet deep and 400 feet wide between mile 4.29 and mile 5.0; 4) an Inner Eureka Channel between mile 5.0 and mile 6.30 which is 26 feet deep and 400 feet wide; 5) a Samoa Channel -38 feet deep and 400 feet wide between mile 4.29 and mile 5.84; 6) a Turning Basin beyond mile 5.84 at the upper end of the Samoa Channel which is -38 feet deep and 1,000 feet wide by 1,000 feet long; 7) an Anchorage Area 35

feet deep and 1,200 feet wide by 1,200 feet long in the North Bay between the Entrance Channel and Gunther Island (the anchorage area is not maintained); 8) a Fields Landing Channel 26 feet deep and 300 feet wide and a turning basin at mile 3.16 which is 600 feet wide and 800 feet long; and 9) Arcata Channel located in the extreme North Bay (18 feet deep and 150 feet wide) is no longer used for commercial navigation and has not been maintained since 1931.

The Water Resources Development Act of 1996 authorized deepening the Bar and Entrance Channel to a depth of -48 MLLW; deepening the North Bay Channel, Samoa Channel, and Samoa Turning Basin to a depth of -38 feet MLLW; widening the north side of the Entrance Channel an additional 200 to 275 feet; moving the southern edge of the Entrance Channel away from the South Jetty and to the north by 100 feet; and widening and realigning the entrance to the Samoa Turning Basin. Project cost is \$16,689,000 of which \$12,099,000 is Federal cost (includes \$200,000 Coast Guard cost) and \$4,590,000 is non-Federal cost (includes \$1,680,000 non-Federal reimbursements).

Local cooperation. The local sponsor is the Humboldt Bay Harbor, Recreation and Conservation District. The Project Cooperation Agreement was signed in March 1999 and satisfied the requirements of the Water Resources Development Act of 1986, as amended, PL 99-662. The agreement includes the following requirements: 1) provide lands, easements, rights-of-way, and dredged material disposal areas; 2) pay 25 percent of the costs of construction; and 3) pay an additional 10 percent plus interest of the project costs allocated to deep draft navigation within a period of 30 years following completion of construction.

Terminal facilities. The harbor serves six deep water breakbulk terminals with storage space for 120,000,000 FBM of logs/lumber and 100,000 MT of woodchips and warehouse space for 1,000,000 FBM of lumber and 51,000 MT of woodpulp and particle board.

Operations during fiscal year. New Work: Construction completed in April 2000. Maintenance: Normal O&M dredging was performed with the Essayons and Yaquina. A combined total of 1,271,216 cubic yards were removed at a cost of \$4,262,861.75. All dredged material was deposited in the permanently designated, Government-furnished, Humboldt Open Ocean Disposal Site (HOODS).

3. OAKLAND HARBOR, CA

Location. Oakland Harbor is located in the City of Oakland, California, on the eastern shore of central San Francisco Bay immediately south of the San Francisco-Oakland Bay Bridge.

Existing project. Adopted by Acts of June 23, 1874, June 25, 1910, September 22, 1922, January 21, 1927, April 28, 1928, July 3, 1930, March 2, 1945 and October 23, 1962. The project was completed February 1975, except for deepening the tidal canal to -35 feet from Fortman Basin to Park Street, and to -25 feet above Park Street which was deauthorized November 1977. Reconstruction of the Fruitvale Avenue Highway Bridge was completed in December 1973 and turned over to local interests for operation and maintenance. The project was again authorized to deepen to -42 feet in WRDA 1986 and was completed in July 1998. This project consisted of entrance channel to Oakland Outer Harbor, project consists of entrance channel to Oakland Outer Harbor, -42 feet deep, accessed from San Francisco Bay and 800 feet wide across the shoal southeast of Yerba Buena Island, narrowing to 600 feet at Oakland Mole; thence, a channel and turning basin -42 feet deep and from 600 to 950 feet wide in outer harbor to the Army Base. Project also provides entrance channel to Oakland Inner Harbor, -42 feet deep and 600 feet wide to Howard Terminal and 35 feet deep to west end of Government Island, with additional widening to within 75 feet of the pierhead line in front of Grove and Market Street (formerly municipal) piers and along the south side of the channel from Harrison Street eastward to harbor line point 119 in Brooklyn Basin; a channel 35 feet deep and 500 feet wide through Brooklyn Basin; for a triangular area 35 feet deep about 2,700 feet long and maximum width of 300 feet at western end of Brooklyn Basin; a channel along north side of Brooklyn Basin which is 35 feet deep and 300 feet wide for 1,300 feet, thence 25 feet deep and 300 feet wide for 3,700 feet to a turning basin at east end of Brooklyn Basin which is 35 feet deep, 500 feet wide, and 1,200 feet long; a channel in the tidal canal 35 feet deep and 275 feet wide from Brooklyn Basin to Park Street, thence 18 feet deep to San Leandro Bay; a total channel length of 8-1/2 miles from San Francisco Bay to San Leandro Bay. Project also includes parallel rubble mound jetties at entrance to inner harbor, north jetty 9,500 feet long and south jetty 12,000 feet long; three highway bridges across the tidal canal, two of which (at Park Street and High Street) have been replaced by local interests and the Fruitvale Avenue Highway Bridge, constructed by the Federal Government, has been transferred to Alameda County. The Federal Government also constructed the Fruitvale Railroad Bridge in 1951. The County of Alameda operates and maintains the railroad bridge; however, it is still owned by the Federal Government. The Federal Government continues to

reimburse the County for the cost of operating and maintaining the railroad bridge.

Oakland Harbor is the 2nd largest port on the West Coast and the fifth largest container port in the nation. Traffic is primarily container ships. Ports around the world are increasing channel depths and expanding throughput capacity to compete for the next generation of deep-draft container ships. The Port has again partnered with the Federal government and is currently deepen the federal channels of the Oakland Harbor and Port-maintained berths to depths of 50' below MLLW as authorized in WRDA 1999. In constructing this project, the Port expects to dredge up to 12.8 million cubic yards of sediment, which will require reuse and disposal. If the Port does not get down to -50', shipping companies will bypass the Port of Oakland. This will hurt not just the Port of Oakland, but the overall Bay Area economy as well. The recommended/ Locally Preferred Plan has a benefit-cost-ratio greater than 8 to 1. The estimated construction cost is \$421 million, including \$48 million of local service facilities (LSF) (berth rehabilitation & deepening). Dredged material will be placed at the San Francisco Deep Ocean Disposal Site (SF-DODS), Middle Harbor Enhancement Area (MHEA), Oakland (FISCO), Hamilton Wetlands Restoration site, and the Montezuma Wetland restoration site.. Water Resources Development Act (WRDA) of 1999 authorized this project.

Local cooperation. A draft Project Cooperation Agreement satisfying the requirements of the Water Resources Development Act of 1986, PL 99-662 was sent to Corps Headquarters for review and approval in early Feb 2001. Final PCA was executed on 24 May 2001. The agreement includes the following requirements: (1) provide lands, easements, rights-of-way, and dredged material disposal areas; (2) pay 25 percent of the costs allocated to deep draft navigation during construction to a depth in excess of 20 feet but not in excess of 45'; (3) pay 50% of the costs allocated to deep draft navigation during construction in excess of 45'; and (4) pay additional 10 percent plus interests of the costs allocated to deep draft navigation within a period of 30 years following completion of construction. Deepening to 42' MLLW was completed in July 1998. The Port of Oakland completed a feasibility study to deepen Oakland Harbor to -50' MLLW at 100% Port cost under the authority of Section 203 of WRDA 86 and will be credited 50% of the cost of the study during construction. Project was authorized in WRDA 99 with an estimated project cost is \$284 million with an average annual navigation benefit of \$178 million. Construction began in October 2001 with a demolition contract for the Inner Harbor Turning Basin (IHTB). The IHTB Phases I and II were completed in 2003 and 2006, respectively. Both the inner and outer harbors were deepened to a depth of -46 feet which was completed in July 2006. The next phase of

REPORT OF THE SECRETARY OF THE ARMY ON CIVIL WORKS ACTIVITIES FOR FY 2007

dredging to a depth in excess of -50 feet began in January 2006, with the outer harbor to be completed in August 2008/ The MHEA containment structure was completed in February 2006 and the MHEA bulk fill was completed in July 2007.

Terminal facilities. The port occupies 19 miles of waterfront on the eastern shore of San Francisco Bay. There are 665 acres of marine terminal facilities, 20 deepwater berths and 35 container cranes, including 29 of the Post-Panamax type. On-dock covered storage space exceeds 600,000 square feet. Two major railroads, Burlington Northern-Santa Fe and Union Pacific serve the port.

Operations during fiscal year. New Work: the ongoing -50 feet deepening project continued work in the outer harbor and will begin deepening the inner harbor in June 2008. Maintenance: The Contractor removed 242,000 cubic yards from the Inner Harbor at a cost of \$5,256,000 (this included both maintenance and deepening material). The contractor removed approximately 100,000 cubic yards of shoaling in the Outer Harbor at a cost of \$1,500,000. The Middle Harbor Enhancement Area (MHEA) and the designated ocean disposal site (SFDODS) were utilized for material disposal. Operation of the Fruitvale Avenue Railroad Bridge and Miller-Sweeney Highway Bridge cost \$185,000; maintenance of the Fruitvale Avenue Railroad Bridge cost \$70,000. The Corps does not fund maintenance for the highway bridge. Other activities accomplished in FY 07 included monitoring of the SFDODS and Sonoma baylands disposal sites, management and disposal activities related to the Inner Harbor Tidal Canal, and support for the Dredged Material Management Plan (DMMP) and LTMS.

4. RICHMOND HARBOR, CA

Location. Richmond Harbor is located in central San Francisco Bay, in Contra Costa County in the City of Richmond.

Existing project. The existing navigation channel extends from deep water in San Francisco Bay into the Port of Richmond. The Southampton Shoal Channel and Long Wharf Maneuvering Area, at the entrance to the harbor channels are maintained to -45 feet MLLW. The Entrance Channel, Potrero Reach Channel, Potrero Sharp Turn, Inner Harbor and about half of the Santa Fe Channel, to -38 feet and the remainder of the Santa Fe Channel from the Lauritzen Channel confluence to -30 feet. The width of the navigation channel is 600 feet for most of its length to Point Richmond with one maneuvering area: in front of the Long Wharf. At Potrero Reach, the 500 foot width flares to about

600 feet at Point Potrero with a turn at the point, 1,200 feet wide and 38 feet deep. Thence, the channel continues into the Inner Harbor at a width of 850 feet in a northerly direction to the entrance of the Santa Fe Channel. The Santa Fe Channel extends northwesterly at a width of 200 feet into the upper basin terminus. A turning basin is provided at Point Richmond, and a rubble-mound training wall extending 10,000 feet westerly from Brooks Island is also provided in the Potrero Reach. For details, see page 1977 of Annual Report for 1915 and page 1646 of Annual Report for 1938.

Improvements consisted of a construction plan involving four and one-half miles of channel between Richmond Long Wharf and the Santa Fe Channel. The project deepened the existing -35-foot channels to -38 feet, and provided a turning basin of 1,200 feet near Point Potrero. Approximately 2,200,000 cubic yards of sediment were dredged and transported to aquatic and upland disposal sites. Construction was completed in August 1998.

The project cost was \$40,000,000 of which \$28,300,000 was Federal cost (includes \$130,000 Coast Guard costs) and \$11,700,000 is non-Federal cost (includes \$1,310,000 non-Federal reimbursements).

The existing project was authorized on October 27, 1965. Previous projects were authorized by Acts adopted in 1917, 1930, 1935, 1938, 1945 and 1954. The proposed improvements are authorized by the Water Resources Development Act of 1986, PL 99-662.

Local cooperation. In accordance with the cost sharing and financing concepts reflected in the Water Resources Development Act of 1986, the local sponsor complied with the following requirements: (1) pay 10 percent of the costs to 20 feet below mean lower low water and 25 percent of costs between 20 and 45 feet below mean lower low water and (2) reimburse an additional 10 percent with interest of the costs allocated to general navigation facility of the project within a period of 30 years following completion of construction; and (3) provide all lands, easements, rights-of-way, relocation and dredged material disposal areas necessary for the projects. The value of lands, easements, rights-of-way and dredge disposal areas can be credited toward the payment required under item (2) above.

Terminal activities. The Port of Richmond encompasses nine privately-owned terminals and seven terminals owned by the Port.

Operations during fiscal year. New Work: Construction project completed in May 1998. Maintenance: Operations and Maintenance dredging of Richmond Inner and Outer Harbor was performed by the U.S. Hopper dredge

SAN FRANCISCO, CA, DISTRICT

“Essayons.” The Essayons removed a total of 132,000 cubic yards of shoal material from the Inner 62,000 cubic yards and Outer Harbor 70,000 cubic yards, at a total cost of \$1,024,545 (Note - the dredging volume quantities were uncharacteristically low in FY 05). The FY 05 Operations and Maintenance dredging was completed in June 2005. Disposal was at the Alcatraz in-bay Disposal Site, SF-11.

5. SACRAMENTO RIVER DEEP WATER SHIP CHANNEL, CA

Location. The project is located on the Sacramento River, between Collinsville and the Port of Sacramento, a distance of approximately 43 miles, in the counties of Sacramento, Contract Costa, Solano and Yolo, CA.

Existing project. Existing waterways are inadequate to efficiently accommodate vessels currently using the channel. Because of the depth restriction, only 20% of the world’s fleet can currently load to full design depth. Once deepened, the Port of Sacramento will be able to accommodate 70% of the world’s fleet at full design draft. The project plan is to deepen the existing 30 feet Sacramento River Deep Water Ship Channel from N.Y. Slough to the Port of Sacramento, a distance of about 43 miles, to 35 feet, and widen the channel as necessary. The project provides for establishment of wetland habitat and upland habitat to mitigate for such losses. Current project estimate is \$57,340,000 and is comprised of Federal cost (Corps) of \$27,980,000; Federal cost (Coast Guard-for navigation aids) of \$300,000 and non-Federal cost of \$29,060,000.

Local cooperation. A Local Cooperation Agreement (LCA) was signed with the local sponsor, the Port of Sacramento, in June 1986. A modification to the LCA, necessitated by the Water Resources Development Act of 1986, was executed in December 1988. The local sponsor will provide lands, easements, rights of way and dredged material disposal areas; modify or relocate buildings, utilities, roads, bridges (except railroad bridges) and other facilities, where necessary in the construction of the project; and pay 25 percent of the costs allocated to deep draft navigation during construction.

Terminal facilities. All main wharves at Sacramento have rail connections. Three facilities are owned by the City of Sacramento and the rest are privately owned; all are privately operated. For full description, see “Port and Terminal Facilities at the Ports of Sacramento, Stockton, Pittsburg and Antioch, Calif., 1986”. Deepwater terminal facilities are comprised of wharves, piers, administration and storage buildings and belt railroad facilities. The

majority of these facilities are owned and operated by the Sacramento-Yolo Port District and the rest are privately owned and operated. The facilities are considered adequate for existing commerce.

Historical summary. Funds to initiate pre-construction planning were appropriated in fiscal year 1982. Project construction was authorized by the Supplemental Appropriations Act of 1985 and modified by the WRDA 1986. The General Design Memorandum was approved and the Record of Decision was signed in May 1987. The modified LCA was executed in December 1988. The first construction contract for deepening was awarded in February 1989 and completed in July 1990. A second construction contract was awarded in September 1990 and completed in August 1991. Construction from River Mile 43 to River Mile 35 has been completed. In fiscal year 1992, the sponsor requested suspension of the project due to their inability to meet their cost share requirements. Congressional direction (Conference Report 105-749, dated September 25, 1998), prompted by the sponsor’s renewed interest in completing the project, the Corps began to develop a study plan to prepare a Limited Reevaluation Report (LRR). In June 2002, the project was transferred from the Sacramento District to the San Francisco District in order to capitalize on the regional dredging expertise. Existing channel designs were refined, a material sampling and testing plan was developed, available dredge material disposal sites were evaluated, and the environmental documentation revised to address changes in habitat and species impact. In 2005, the sponsor requested suspension of the project due to their inability to meet the cost share agreements.

Operations during fiscal year. The Port of Sacramento has recently entered into an agreement with the Port of Oakland to jointly operate the Port. While this Operational Plan is being implemented, and until the sponsor can again financially participate in the continuation of the study, there will be minimal work performed to advance the study. Once the sponsor is able to participate, the Limited Reevaluation Report will be finalized and the Supplemental Environmental Impact Statement/Report will be prepared.

6. SAN FRANCISCO BAY TO STOCKTON, CA (JOHN F. BALDWIN AND STOCKTON SHIP CHANNELS)

Location. The project consists of the navigational channel system, initiating at the San Francisco Bay, and extending over 50 miles to the Port of Stockton.

Existing project. The existing project was adopted by 1965 River and Harbor Act (H. Doc. 208, 89th Cong., 1st sess., contains latest published map). The project consists of deepening the San Francisco Bar to 55 feet; constructing a new channel in upper San Francisco Bay through Richmond to 45 feet; deepening the Pinole Shoal Channel in San Pablo Bay to 45 feet (currently 35 feet); deepen the Suisun Bay Channel to 45 feet to Chipps Island (currently 35 feet); and deepen the Stockton Deep Water Ship Channel to 35 feet to the Port of Stockton. Several attempts have been made since the initial construction to deepen portions of the channel system; however, environmental opposition to potential impact to water quality as a result of the deeper channel has halted any attempt to construct the authorized project.

Local cooperation. The Port of Stockton and Contra Costa County Water Agency are the non-Federal sponsors in support of deepening the entire project. A resolution by the Committee on Public Works and Transportation of the United States House of Representatives, September 24, 1992, requested a review of the report of the Chief of Engineers to determine whether modifications of the recommendations are advisable at the present time for navigation and other purposes from Carquinez Strait to Stockton. The Energy and Water Development Appropriation Act of 1998 included an appropriation of \$100,000 for the Corps of Engineers to initiate a reconnaissance study of deepening the Port of Stockton's main ship channel to 40'. The Sacramento District (SPK) prepared the reconnaissance report in September 1998, which indicated a Federal interest in deepening the project. In June 2002, the project was transferred from the Sacramento District to the San Francisco District in order to capitalize on the regional dredging expertise. A General Reevaluation Report (GRR) was initiated in July 2002, under the existing 1965 construction authority.

Terminal facilities. See Port Series No. 30, revised 1991, No. 31, revised 1991, and No. 32, revised 1986, titled respectively: "The Ports of San Francisco, Redwood City, and Humboldt Bay, Calif."; "The Ports of Oakland, Alameda, Richmond, and the Ports on Carquinez Strait, Calif."; and "The Ports of Sacramento, Stockton, Pittsburg, and Antioch, Calif." Facilities are considered adequate for existing commerce and will be adequate for future commerce upon completion of new terminal facilities.

Operations during fiscal year. After a positive initial assessment of the project economics and environmental impacts associated with a potential channel deepening to 40 feet, the GRR was initiated in July 2004 to determine an optimal depth to deepen the existing 35-foot navigational channel system from the San Francisco Bay to the Port of Stockton. Aerial and hydrographic surveys of the project limits were conducted to develop a Digital Terrain Model (DTM) in which to evaluate levee conditions, capacity of disposal sites, and limitations to channel realignment. Water quality models are being run to assess the potential impact a deeper channel may have on salinity intrusion and dissolved oxygen content within the channel. Additional water quality issues are being addressed with the Central Valley Regional Water Quality Control Board in hopes of identifying achievable testing protocol for dredge material disposal. Final GRR and Supplemental Environmental Impact Statement/ Report are scheduled for April 2009.

7. SONOMA BAYLANDS WETLANDS DEMONSTRATION PROJECT, CA

Location. The Sonoma Baylands site is located in Sonoma County, CA, approximately 25 miles north of San Francisco near the mouth of the Petaluma River, on the northern shoreline of San Pablo Bay.

Existing project. Authorized by Water Resources Development Act of 1992. The project includes restoration of tidal wetlands on 348 acres of diked lands, including construction of 11,645 feet of replacement levee around the landward periphery of the site, fifteen internal peninsulas for wave protection, three weirs for the discharge of dredged material supernatant, and modification of three existing high voltage electrical towers. Project included placement of 207,000 cubic yards of maintenance-dredged material from the Petaluma River navigation channel in a pilot project area and placement of 1.7 million cubic yards of suitable dredged material from the Oakland Harbor deepening projects on the remainder of the site. Placement of material was completed on November 6, 1995.

The project cost is \$8,900,000, of which \$6,675,000 is Federal cost and \$2,225,000 is non-Federal cost. Oakland deepening to -42' MLLW was completed in July 1998.

Local cooperation. The California State Coastal Conservancy signed a Project Cooperation Agreement on May 6, 1994 satisfying the requirements of the Water Resources Development Act of 1992, PL 102-580 and signed an amendment on December 9, 1994 to include the

SAN FRANCISCO, CA, DISTRICT

placement of Oakland Harbor dredged material. The local sponsor must comply with the following requirements: (1) provide lands, easement, and right of ways; (2) modify or relocate utilities, roads, bridges (except railroad bridges) and other facilities, where necessary in the construction of the project; (pay 25 percent of the total project cost in accordance with Section 106 of the Water Resources Development Act of 1992. The local sponsor has also agreed to make all required payments concurrently with project construction.

Terminal facilities. N/A

Operations during fiscal year. The project was restored to tidal action on October 25, 1996. Monitoring of the project is continuing. Project was turned over to California Coastal Conservancy in August 1998 for operation, maintenance, repair, replacement, and rehabilitation of the functional portion of the project.

8. SAN FRANCISCO BAY-DELTA MODEL STRUCTURE, CA

Location. The model, including a Class A regional visitor center, is located in Sausalito, CA, adjacent to San Francisco Bay about two miles north of the Golden Gate Bridge.

Existing project. The San Francisco Bay/Delta Model, which covers 17 miles of the Pacific Ocean beyond the Golden Gate, all of San Francisco Bay proper, San Pablo Bay, Suisun Bay, and all of the Sacramento-San Joaquin Delta east of Suisun Bay to the cities of Sacramento on the northeast and Stockton and Tracy on the south, was constructed in a rehabilitated warehouse at Sausalito, CA, as a part of the San Francisco Bay and Tributaries, CA, Study authorized by the River and Harbor Act of May 17, 1950 (PL 81- 516, Section 110). The model was authorized as an operation and maintenance project in the Water Resources Development Act of 1974 (PL 93-251, Section 8). The model successfully reproduces to the proper scale the rise and fall of the tide, flow and currents of water, salinity intrusion, and trends in disposition of sediments. It is a useful tool to examine forces existing in the bay and estuarine system and to predict results of proposed changes.

Local cooperation. None required.

Operations during fiscal year. Maintenance: Operations and maintenance of the model continues.

Historical summary. Original model construction was initiated 1956 and completed 1957. The addition of the Sacramento-San Joaquin Delta to the original model was initiated 1966 and completed 1969. Annual visitation to the

model averages between 140,000 to 150,000 people. The central exhibits were completed in December 1981. Extensive exhibit upgrade for the Visitor Center and development of Cooperative Association completed September 30, 1989. An active volunteer program exists at the Visitor Center providing approximately 150 hours of effort monthly. The hydraulic engineering department closed 4 January 2000. The Visitor Center operations continue to offer public information-educational services via programs, exhibits, and special events. The Visitor Center is currently developing new interpretive and exhibit plans.

Total cost of regional visitor exhibits and model as of September 30, 2007, was \$47,584,364 of which \$23,867,376 was for the regional visitor center, \$1,395,117 for exhibits, and \$22,321,871 for maintenance.

9. SAN FRANCISCO BAY LONG TERM MANAGEMENT STRATEGY (LTMS), CA

Location. The San Francisco Bay Long-Term Management Strategy (LTMS) for dredged material disposal covers deep and shallow draft navigation channels of the San Francisco Bay region including Central San Francisco Bay, South Bay, San Pablo Bay and Suisun Bay environs.

Existing project. The San Francisco Bay region has an annual disposal requirement of approximately 2.4 million cubic yards (mcy) to maintain navigation channels. The Bay also has a new civil works requirement of approximately 19 mcy. In January 1990, the Army Corps of Engineers, the Environmental Protection Agency, Region IX, the San Francisco Bay Regional Water Quality Control Board and the San Francisco Bay Conservation and Development Commission convened with approximately thirty interested agencies and organizations with concerns regarding dredged material disposal in San Francisco Bay. These four agencies have the responsibility for regulation of the waters of the US and California for disposal of dredged material.

The four agencies and the concerned navigation interests formed the LTMS to develop technically feasible, economically prudent, and environmentally acceptable long range solutions to the dredging and disposal needs for the San Francisco Bay region over the next fifty years. In determining acceptable dredged material disposal locations, the LTMS is evaluating a broad array of potential ocean, in-Bay and non-aquatic beneficial uses disposal alternatives.

Local cooperation. Pursuant to their regulatory responsibilities, the Division Commander of the South Pacific Division, Corps of Engineers; the Regional

REPORT OF THE SECRETARY OF THE ARMY ON CIVIL WORKS ACTIVITIES FOR FY 2007

Administrator of the Environmental Protection Agency, Region IX; the Chair of the San Francisco Bay Regional Water Quality Control Board and the Chair of the San Francisco Bay Conservation and Development Commission agreed to jointly undertake the development and implementation of a Long Term Management Strategy (LTMS) for dredging and disposal of dredged materials from the region. Based on the outputs from the LTMS, the Regional Water Quality Control Board (RWQCB) and the Bay Conservation and Development Commission (BCDC) will consider modifications to the dredging elements of their respective Basin and Bay Plans for San Francisco Bay.

Regulatory Streamlining: Besides identifying implementable disposal options, the LTMS will: (1) develop coordinated regional disposal policies between federal and state agencies; (2) provide a required decision-making framework for dredging and disposal projects; (3) streamline existing permit and testing procedures; and (4) provide a long term site monitoring apparatus and feedback mechanism.

Operations during fiscal year. In 1994, the Environmental Protection Agency (EPA) designated a deep ocean disposal site. In 1996, the Corps, EPA, and the State of California implemented a joint agency Dredged Material Management Office (DMMO) for dredging permit processing.

The Final LTMS EIS was finalized in October 1998 and the Record of Decision was signed in July 1999. The EIS identified Alternative 3 as the preferred alternative which would limit future dredged material disposal to 20% in the San Francisco Bay, 40% in the ocean, and 40% for upland beneficial reuse. ROD initiated implementation for Federal agencies.

In December 2001, the South Pacific Division Commander, EPA's Region IX Administrator, Chairmen of the San Francisco Bay Regional Water Quality Control Board, Chairwoman of the San Francisco Bay Conservation and Development Commission and the Executive Committee of the State Water Resources Control Board, as the members of the LTMS Executive Committee, approved the final LTMS Management Plan, directing implementation of the program. Adoption of the management plan will require amending the Bay and Basin Plans. BCDC amended the San Francisco Bay Plan in December 2000 and the RWQCB amended the San Francisco Basin Plan in June 2001.

In general, the first phase of implementation will focus on the completion of the Corps Regional Dredge Material Management Plan for San Francisco Bay, with a

future project-by-project analysis for "practicability" in terms of fiscal and environmental impacts that would then be assembled as a regional composite EIS. This effort was initiated in October 2001. Activities in FY 07 consisted of: continuing the methyl mercury study effort to delineate means and formation of methyl mercury at the Hamilton Wetlands Restoration Project (HWRP) site; continuing development of the Regional Dredge Material Management Plan; development of a detailed work plan to assess science data needs for all sensitive fish species for which there are environmental dredging windows in San Francisco Bay; continuing the salmon smolt distribution study in the Bay; development of a programmatic Essential Fish Habitat (EFH) report for use by the resource agencies; development of the DMMO sediment database.

10. RECONNAISSANCE AND CONDITION SURVEYS

Reconnaissance and condition surveys of channels dredged in Fiscal Year 2007 and jetty structures were conducted on the following projects: Berkeley Breakwater, Bodega Bay, Bullshead Channel, Crescent City Harbor; Islais Creek, Larkspur Ferry; Mare Island Strait, Moss Landing, Northship Channel, Napa River; Noyo River; NY Slough, Petaluma River; Pillar Point; Pinole Shoal; Redwood City; Richardson Bay, Richmond Harbor; San Bruno Shoal, San Leandro Breakwater, San Rafael, and Suisun Slough; all in California. Fiscal year costs were \$775,388.

11. NAVIGATION WORK UNDER SPECIAL AUTHORIZATION

Navigation activities pursuant to Section 107, Public Law 86-645 (preauthorization).

SAN FRANCISCO, CA, DISTRICT

Fiscal Year total costs were \$587,537 of which \$3,949 for Coordination Account and \$583,588 was for Oyster Point Harbor, CA.

Mitigation of shore damages activities pursuant to Section 111, Public Law 90-483 (preauthorization).

None.

12. BEACH EROSION CONTROL WORK UNDER SPECIAL AUTHORIZATION

Beach erosion control activities pursuant to Section 103, Public Law 87-874 (preauthorization).

None.

Shoreline Erosion Control Development & Demo PGM activities pursuant to Section 227, Public Law 104-303 (preauthorization).

Fiscal year total costs were \$0.

Flood Control

13. CORTE MADERA CREEK, CA

Location. Creek and tributaries drain an area of 28 square miles in Marin County, CA, and flow into west side of San Francisco Bay about 9 miles north of Golden Gate.

Existing Project. Provided for about 11 miles of channel improvements, including realignment, enlargement, levees, riprap, rectangular concrete sections, interior drainage facilities, bridge relocations, and debris removal on Corte Madera Creek and lower reaches of its tributaries, and a continuous channel rights-of-way to deep water in San Francisco Bay reserved to assure channel outlet in the event of future tideland reclamation. Water Resources Development Act of 1986 modified existing project to set upper limit of construction at Sir Francis Drake Boulevard, Portion of project upstream of Sir Francis Drake Boulevard previously classified inactive was modified on November 17, 1986 to eliminate any channel modification. Current project has 3 miles of channel enlargement and levees, about 1.8 miles of rectangular concrete channel improvements, and 450,000 cubic yards of redredging on lower Corte Madera Creek.

Local Cooperation. Local interests must provide lands and rights-of-way, including suitable areas for

disposal of waste material, modify or relocate all bridges and utilities necessary for construction and maintenance; hold and save the United States free from damages due to the construction works; maintain and operate the project after completion in accordance with the regulations prescribed by the Secretary of the Army, and prevent encroachment on flood channels that would result in decreasing the effectiveness of project for flood control; adjust all claims regarding water rights that might be affected by the project; and contribute in cash 1.5 percent of Federal construction cost of Ross Valley units 1-4 and tidal areas. Marin County Flood Control and Water Conservation District previously furnished resolution of local assurances dated March 29, 1966, March 28, 1967, August 15, 1967, and July 8, 1969, and Marin County Board of Supervisors reaffirmed by letter dated September 28, 1978. Project was authorized by the State of California by 1965 Statute, Chapter 1388. Board of Supervisors of Marin County Flood Control and Water Conservation District furnished assurances of willingness and ability to meet requirements for portion of project below Sir Francis Drake Boulevard.

On December 13, 1983, Marin County Board of Supervisors reconfirmed assurances of local cooperation because a Superior Court judgment ordered that county to take all steps required by law to complete channel downstream of Sir Francis Drake Boulevard (Unit 4) and maintain entire project as agreed. A Local Cooperation Agreement for redredging the lower reach of Corte Madera Creek was executed on June 29, 1985. Marin County also provided support for Ross Valley Unit 4 by resolution on March 24, 1987 and by the resolution on September 13, 1988.

The Marin county board of supervisors passed Resolution 96-26 on February 1, 1996 to support a complete the remaining portion of the project to the 40-year level of protection. The General Reevaluation Report (GRR) was initiated in February 1999. As long as the originally authorized project remains the recommended project, the 1966 authorized cost sharing and financing requirements will be applicable. A community-based Design Advisory Committee has been created with representatives from Ross, Kentfield, Corte Madera, and Larkspur to provide community input on the conceptual plan. The conceptual plan is based on the Marin County Board of Supervisors' Design Guidelines for a consensus plan which was approved in 1996.

The GRR will be developed in two phases. Phase I developed alternatives based on the design guidelines and determined that the project benefits exceed the costs. Design and construction of Unit 4 and attendant features in the downstream units will be determined by the GRR. The communities of Corte Madera, Larkspur, Kentfield, and

REPORT OF THE SECRETARY OF THE ARMY ON CIVIL WORKS ACTIVITIES FOR FY 2007

Ross reviewed the alternatives screening conference report summarizing Phase I during 2000. The non-Federal sponsor, Marin County Flood Control District 9, collected community resolutions passed in 2000 and 2001, and in April 2001 made a consolidated recommendation on the locally preferred plan. The Town of Ross reviewed Corps analyses of impacts of the recommended plan and changed their endorsement in 2003, which was followed by a new consolidated recommendation in May 2003. Using a NOAA Fisheries grant, a local group employed biologists and engineers to develop a more detailed concept design for Unit 4 that allows both fish passage and flood flows. Phase II will complete the GRR and environmental documentation.

Operations during fiscal year. New Work: The flood control project has been built in separate units. The current project focuses on the design and construction of unit 4 with modifications to units 2 and 3. Unit 4 includes a natural flood control channel and a sedimentation basin located at the town of Ross.

NOAA Fisheries provided a grant to a local group to proposed fish passage improvements. The Corps provided geotechnical information as part of the "local share: required to secure the grant. The design took longer than expected, and the recommended concept design (with detail) was provided after the end of the fiscal year, some funding intended to review to locally developed concept design was carried over.

A flood on New Years Eve, 31 December 2005, through New Years Day left the channel upstream of the Corps project, both in the Unit 4 area of this project and in the towns higher in the valley removed from the project by the 1986 WRDA. The County and towns established a Ross Valley Watershed study: the Corps provides information and coordinates with the study group.

Historical summary. Project responsibility was transferred to Sacramento District on April 1, 1982. The Marin County Board of Supervisors passed Resolution 96-26 on February 1, 1996 to support a 40-year project. Project responsibility was transferred back to San Francisco District on October 1, 1996.

Project is about 77 percent complete, not including the portion removed from the project upstream of Sir Francis Drake Boulevard. Work remaining: Design construction of the remaining 800 feet of channel downstream of Sir Francis Drake Boulevard and Ross Creek and minor improvements to the 2,200 feet of channel already constructed below Ross.

The portion of Corte Madera Creek upstream of intersection of Sir Francis Drake Boulevard and Corte Madera Creek in Ross, near the city of San Anselmo, was classified inactive

on July 11, 1984, due to lack of local support, and removed from the project by WRDA 1986.

A Local Cooperation Agreement for redredging lower reach of Corte Madera Creek was executed June 29, 1985. Construction on Lower Corte Madera Creek Channel was completed and transferred to Marin County Flood Control and Water Conservation District by letter of May 28, 1987; San Francisco District monitors maintenance and operation of the project. The project was transferred from Sacramento District in October 1996. Design process began in the San Francisco District to complete Unit 4.

14. LLAGAS CREEK, CA

Location. The Llagas Creek Flood Control Project is located in southern Santa Clara County, California, in the vicinity of the communities of Morgan Hill, San Martin, and Gilroy.

Existing project. Llagas Creek is a conduit to the Pajaro River and the Monterey Bay for a 104-square mile watershed around Morgan Hill and Gilroy. The creek system is especially prone to flooding, having recorded floods in 1937, 1955, 1962, 1963, 1969, 1982, and in 1997. Primarily, the project consists of channel improvements and a diversion channel providing a 100-year level of protection to urban areas and 10-year protection to agricultural areas.

The Llagas Creek Flood Control Project is separated into 14 reaches. Of these, the Natural Resources Conservation Service (NRCS) completed Reaches 1, 2, 3, 9, 10, 11, 12 and 13 and prepared preliminary designs for the remaining reaches (1967). The Water Resources and Development Act (WRDA) of 1999 authorized the U.S. Army Corps of Engineers to complete the remaining reaches of the project "substantially in accordance with the NRCS plans".

The total project cost is \$95,000,000 of which \$58,000,000 is Federal cost and \$37,000,000 is non-Federal cost.

Local cooperation. Per the original NRCS authority, the project sponsor, Santa Clara Valley Water District is required to pay the cost of the lands only. The City of Morgan Hill remains an active stakeholder.

Operations during fiscal year. A supplemental Environmental Impact Statement (EIS) is necessary due to the changes in the environmental habitat within these reaches, overall watershed use, and Federal and State law. Preliminary designs of the remaining reaches have been

SAN FRANCISCO, CA, DISTRICT

prepared and the supplemental EIS/R has been initiated. In March of 2005, as requested by the “project pause”, the Corps updated the Remaining Benefit to Remaining Cost Ratio (RBRCR) for the project. As a result this project is no longer economically justified because the remaining benefit to cost ratio is 0.23. Completion of final designs and the supplemental EIS is on hold, pending further authorization. The without project hydrology and hydraulics was finalized, and the project cost estimate was updated.

15. PETALUMA RIVER, CA

Location. The Petaluma River Basin is situated in the Sonoma and Marin Counties, California, on the northwestern shore of San Pablo Bay. The project site extends upstream approximately 500 feet from Lynch Creek to the spur line Railroad Bridge located approximately 600 feet downstream of the Lakeville Street Bridge.

Existing project. The project was re-authorized under Section 112 of the Water Resources Development Act of 2000. The scope of the project consists of constructing the U-shaped channel, an earthen trapezoidal channel including the channel excavation and widening, the two hundred (200) feet concrete constriction weir, an approximately one – mile – long sheet pile flood / retaining wall along both sides of the main channel, two (2) storm drain pump stations, twelve (12) storm drain outlet structures in various locations of the channel, two (2) large mitigation areas including planting in the embankment slope throughout the project site, two hundred (200) feet long transition channel work, replacing two (2) vehicular bridges and two (2) railroad bridges, with one (1) new mainline railroad bridge and one industrial spur line and demolishing the existing railroad wood trestle.

Present estimated cost of the project is \$41,460,000 of which \$26,949,000 is Federal cost and \$14,511,000 is non-Federal cost.

Local cooperation. The project was executed based on the original Petaluma River Project Cooperation Agreement in July 1996 under the Continuing Authorities Program, Section 205 – Small Flood Control Projects. The project costs have exceeded the Continuing Authorities Program cost limits and were specifically authorized in WRDA 2000, Section 112. Further, Congressional direction in the House Report 106-693 accompanying the Energy and Water Development Appropriations Bill 2001 provides guidance to the Corps to utilize the available federal funds to continue project construction.

Operations during fiscal year. New work: The

construction of Contract #1 for the U-shaped channel portion was completed in December 1998. The construction of the Payran Bridge was completed under the local sponsor’s contract in 1996 and 1998, respectively. The construction contract #2 for the trapezoidal channel was awarded in May 1999. The features of work in contract #2 completed in September 2000 included the floodwall\retaining wall in both sides of the channel, the channel widening and excavation, the constriction weir, the flood control features including the two (2) Storm Drain Pump Stations and the storm drain outlets and the mitigation planting throughout the project site. Contract #2 was completed in May 2001. The remainder of the work to be completed, including the resolution of problems with the Holmberg mitigation site will be included in Contract #3. The mainline Railroad Bridge, one of the two railroad bridges under construction by the local sponsor’s contract, was completed early April 2001. Contract #3 for the Channel Transition completed in April 2002, Contract #4 for the mainline railroad approach, including the demolition of the existing railroad wood trestle was completed in February 2005. Contract 5A, channel excavation under the Payran and Lakeville bridges and installation of emergency generator at the Payran Pump Station was completed in May 03. Contract 5B, slide repair to trapezoidal channel was completed in September 2003. Design, Independent Technical Review (ITR) and Biddability Constructability Operation Environmental (BCOE) of Industrial Spur Line and Sheet Pile Wall were completed in FY05. Project completion currently suspended due to lack of funds. Two unanticipated events occurred in FY 2006 which will necessitate the project exceeding its 902 limit, an embankment failure occurred which must be repaired and HQ USACE mandated that all flood walls meeting certain criteria must be inspected as a result of lessons learned post Katrina. Seeking reauthorization in WRDA 2007. Maintenance: Operations and maintenance of Petaluma River Channel including engineering and design. Condition survey was performed in February 2002. Operations and maintenance dredging of the Petaluma River Channel was completed in October 2003. Condition survey of river channel performed in June 2007. No dredging of the river performed due to funds received being inadequate to award dredging contract.

16. RUSSIAN RIVER BASIN, CA

Location. Russian River rises in Coast Range in northwestern California, flows southerly for 87 miles, and then turns westerly to flow for 23 miles to Pacific Ocean at Jenner, 60 miles northwest of San Francisco, CA. (For general location see Geological Survey map for California.)

Existing project. Active authorized project provides for construction of a dam on East Fork of Russian River at Coyote Valley to a height of 160 feet; a dam on Dry Creek

REPORT OF THE SECRETARY OF THE ARMY ON CIVIL WORKS ACTIVITIES FOR FY 2007

at Warm Springs to a height of 319 feet; and channel stabilization works on Russian River between mouth and mile 98, on lower reaches of several tributaries, and on Dry Creek downstream from dam. Project also provides for expansion of fish hatchery capacity at Dry Creek, Warm Springs, to compensate for fish losses on Russian River attributed to operation of Coyote Dam component of project.

Coyote Valley Dam (Lake Mendocino), completed in 1959, and Warm Springs Dam (Lake Sonoma), completed in 1983, are operated and maintained by the United States with fisheries facilities operated and maintained under contract to the California Department of Fish and Game. (See tables 34-I and 34-J for latest approved estimated costs).

Local cooperation. Fully complied with for Coyote Valley Dam and channel improvements accomplished to date. For the Dry Creek portion, local interests are required by the authorizing act to comply with the usual a., b., c. requirements for channel improvements and, in addition, prevent any encroachment in the channel of Dry Creek which would interfere with proper functioning of the channel improvement works; adjust all claims concerning water rights arising from the construction and operation of the improvements, including acquisition of water rights needed for preservation of fish and wildlife resources affected by the project; and reimburse the United States in accordance with the Water Supply Act of 1958, as amended, for that part of the joint-use construction cost, (30.2 percent currently estimated at \$103,760,000) and an ultimate 32.5 percent of the annual operation, maintenance, and replacement joint-use costs allocated to municipal and industrial water supply. The estimated annual cost to local interests for maintenance of channel improvement works is \$80,000. Sonoma County Water Agency (formerly Sonoma County Flood Control and Water Conservation District) provided assurances of willingness and ability to meet requirements by Resolutions No. DR 00793-1, September 25, 1961, No. DR 4770-1, December 17, 1962 and No. DR 45759, August 5, 1974, for Dry Creek (Warm Springs) Lake and Channel. By letter dated March 7, 1967, Sonoma County Flood Control and Water Conservation District further indicated their interest in optimization of the Dry Creek (Warm Springs) damsite to provide additional water supply storage. Reimbursement to the United States for Dry Creek (Warm Springs) Lake and Channel costs allocated to 212,000 acre-feet of water supply storage is specified in a water supply contract with the local sponsor approved in October 1982. Local interests have expended approximately \$1,000,000 to provide partial flood protection in project area and have constructed facilities at an approximate cost of \$20,000,000 to distribute water from the completed Coyote Valley reservoir.

Operations and results during fiscal year. New work: Replaced control tower derrick and hoist gearbox housing for operating stop log gate. Coyote Valley Dam: Replaced SST toilets with new vault toilets and ordered two more CXT prefabricated restrooms for FY 04. Other work included modifying existing sewer system to reduce the number of confined space entry areas, completing wooden water tanks with steel at Kyen & Bushay campgrounds and Overlook day-use area; repaving roads at Overlook, Mendocino Drive Road, and Southboat Ramp Parking lot; and repairing the emergency slide gate in the control tower. New playground equipment was installed in the Cha-Ka-Ka Campground. Installed vibrating wire piezometers for on going right abutment groundwater study. Crest alignment survey started to be completed in FY-08. Dry Creek (Warm Springs) Lake and Channel: Engineering activities continued. Major work includes initiating a new Coho salmon recovery program which included adding new rearing facilities for the endangered Coho. Installation of the Critical Project Security Program improvements was completed in July 2005. Maintenance: Coyote Valley Dam: Operation and maintenance continued. Structures were maintained in serviceable condition. Runoff of East Fork Russian River at Coyote Dam was normal for the year. Maximum storage of 76,004 acre-feet occurred on February 27, 2007. Maximum hourly inflow to reservoir was 2,555 cubic feet per second on December 27, 2006. Maximum release of 997 cubic feet per second occurred on February 27, 2007. Dry Creek (Warm Springs) Lake and Channel: Operation and maintenance continued. Structures were maintained in serviceable condition. Runoff of Dry Creek at Warm Springs Dam was normal for the year. Maximum storage of 247,769 acre-feet occurred February 28, 2007. Maximum hourly inflow to reservoir was 8,382 cubic feet per second on February 10, 2007. Maximum release of 1,016 cubic feet per second occurred March 2, 2007.

Historical summary. Entire project, exclusive of recreation facilities at completed project (Lake Mendocino), is about 99 percent complete. Coyote Valley Dam, initiated November 1958, was completed April 1959 (cost \$17,550,000, of which \$11,952,000 was Federal; and \$5,598,000 contributed). Work, including removal of slides resulting from storms in 1958, was completed April 1959. Bank stabilization work on Russian River near Geyserville was completed in 1957 and channel improvements in remaining reaches on Russian River and East Fork of Russian River were completed in 1974 (cost \$2,483,900). Dam safety assurance studies were initiated at Coyote Dam in fiscal year 1984.

Warm Spring construction completion include fish hatchery in December 1980, project overlook in May 1981, reservoir clearing in July 1981, downstream stabilization

SAN FRANCISCO, CA, DISTRICT

sills in October 1981, dam closure in October 1982, spillway repair at Warm Springs Dam in September 1985, boat launching facilities, Phase I, in September 1985, Rockpile Road Upgrade, Yorty Creek Beach, and remedial work at Liberty Glen camping area in September 1990, fish hatchery expansion in September 1992, final control tower grouting, dam access road repair, spillway stabilization, fish hatchery emergency water supply in September 1993, and Liberty Glen wastewater system and contaminated soil remediation. Initial filing of Warm Springs' reservoir was commenced on November 1, 1984. Responsibility for construction was transferred to Sacramento District in October 1983.

In April 1982, recreation and resource management responsibility for the two projects was transferred to the Sacramento District. Responsibility for civil works operation & maintenance functions for the two projects was transferred back to San Francisco district October 1, 1996.

17. UPPER GUADALUPE RIVER, CA

The Upper Guadalupe River Project area is located in the City of San Jose, Santa Clara County, California. The reach of the river proposed for improvement begins at interstate Highway 280 at the edge of downtown San Jose and extends south for about 6.2 miles.

The feasibility study evaluated a variety of non-structural and structural plans of improvement for flood protection in the Upper Guadalupe basin. The final feasibility study report and Environmental Impact Statement/Report was submitted to South Pacific Division on January 30, 1998. This report recommended Federal participation in a project providing a 50-year level of flood protection. The locally preferred plan provides a 100-year level of protection. The Division Engineer's Public Notice was issued on February 27, 1998 and a Chief of Engineer's Report was signed August 19, 1998. The project has been authorized for construction in the 1999 Water Resources Development Act.

The Design Agreement for the follow-on Pre-construction Engineering and Design (PED) phase was signed on February 25, 1999. PED was initiated in April 1999. PED was completed May 2007. PCA signed 23 July 2007.

A Final Limited Re-evaluation Report (LRR) was submitted to the ASA (CW) office for approval on May 27, 2005. The report identifies a NED plan that provides 50-year level of protection but is fully mitigated for environmental impacts and endangered species. The LRR recommends the implementation of the LPP as the authorized plan and recommends an exemption by the ASA (CW) for full Federal participation. The total project cost is \$238 million.

Operations during fiscal year. Activities include completion of 100% design of the Reach 10B plans, completion of the LRR, and participation in the Guadalupe Watershed Integration Working Group (GWIWG). Water Certification under the CWA issued for the LPP plan.

18. INSPECTION OF COMPLETED FLOOD CONTROL PROJECTS

Section 3, Flood Control Act of June 22, 1936, as amended and supplemented, included a requirement that local interests maintain and operate completed flood control works in accordance with regulations prescribed by the Secretary of War. Inspections made throughout the year to determine effectiveness of operation and maintenance by local interests of completed local protection projects and works constructed under emergency and special authorities of Sections 205 and 208 of the 1948 Flood Control Act, Section 14 of the 1946 Flood Control Act, and Public Law 99, 84th Congress. In addition, encroachments to Federal Projects such as new bridges, etc. must be reviewed and approved prior to construction by the local sponsor, as well as in compliance with the Clean Water Act permit and endangered species concerns regarding their operations and maintenance activities. Fiscal year cost was \$671,549. Total cost to September 30, 2007 was \$5,325,011. See Table 34-H for inspections made this fiscal year.

19. FLOOD CONTROL WORK UNDER SPECIAL AUTHORIZATION

Flood Control activities pursuant to Section 205, Public Law 858, 80th Congress, as amended (preauthorization).

Fiscal year costs were \$555,682 for flood control studies of which \$9,877 were for Coordination Account; \$31,630 for San Pedro Creek, Pacifica, CA; \$11,063 for Las Gallinas Creek; \$-28,747 for Coyote Creek at Rock Springs; and \$531,860 for White Slough.

Emergency flood control activities-repair, flood fighting and rescue work (Public Law 99, 84th Congress, and antecedent legislation).

Fiscal year cost incurred for emergency flood control activities were \$917,537 of which \$479,945 were for the Disaster Preparedness Program; \$0 for Emergency Operations; \$437,592 for Rehabilitation Inspection Program.

Emergency bank protection (Section 14, 1946 Flood Control Act, Public Law 526, 79th Congress).

None.

20. SCHEDULING FLOOD CONTROL RESERVOIR OPERATIONS

In accordance with sec. 7, Flood Control Act of 1944, summaries of monthly reservoir operations at Del Valle, CA were prepared. No water control manual revisions were completed due to environmental issues. Corps personnel provided advice as requested during flood control operations at the reservoir. Fiscal year cost was \$63,999.

21. MISCELLANEOUS WORK UNDER SPECIAL AUTHORIZATION

Project Modification for Improvement of Environment (Section 1135, PL 99-662).

Fiscal year total costs were \$0.

Aquatic Ecosystem Restoration (Section 206, PL 104-303).

Fiscal year total costs were \$748,611 of which \$5,144 were for Coordination Account; \$7,569 for American Canyon Creek, CA; \$1,544 for Arroyo Las Positas; \$160 for Santa Clara Valley Aquatic Restoration, CA; \$363,320 for Salt River Restoration, CA; \$99,846 for Upper York Creed Dam Removal, CA; and \$271,030 for St. Helen-Napa River Restoration, CA.

Environmental Improvement

22. HAMILTON AIRFIELD WETLANDS RESTORATION, CA

Location. The Hamilton Wetland Restoration project is located at the former Hamilton Army Airfield south of the city of Novato, California.

Existing project. The project calls for restoration of approximately 1,000 acres of habitat that includes coastal salt marsh, seasonal wetlands, tidal channels and intertidal habitats. The project will provide habitat for endangered species such as Chinook salmon, California clapper rail, brown pelican, California black rail and salt marsh harvest

mouse. The wetlands will also support shorebirds and waterfowl migrating along the Pacific Flyway. The wetlands and associated habitats that will be restored are especially valuable due to the scarcity and declining amount of this habitat type in California and the dependence of listed threatened and endangered species on this unique resource.

More than 10 million cubic yards of dredged material is needed for the project. About 2.5 million cubic yards of material will come from the Port of Oakland's -50-foot harbor deepening project. The remaining seven and a half million cubic yards of material will come, primarily, from other local and federal operation and maintenance projects around San Francisco Bay. Dredged material will be tested to ensure that it is suitable for wetlands construction.

Use of the material for wetlands restoration also avoids the necessity of disposing of it elsewhere in the bay or in the ocean, consequently wasting a resource that can be better used for habitat restoration. This concept is part of the Long Term Management Strategy for the disposal of material dredged from San Francisco Bay. This strategy was created in partnership with federal and state agencies, navigation interests, fishermen, environmental organizations and the general public in 1990, to develop long-term solutions and policies for dredged material disposal that favor reuse. The project will be built using a phased approach that coincides with the availability of real estate parcels and dredged material. Initial geotechnical investigations to characterize soil properties began in late October 2001, as part of the Pre-construction Engineering and Design Phase of the project.

The project is currently building levees to bound the wetlands that will be created by increasing the internal elevation of the site with dredge material. Subsequent phases of the project will develop seasonal and tidal Wetland features including the final removal of all buildings in the wetland area, as well as further site preparation. The first major contract to increase the elevation within the site has been awarded and will utilize a dedicated loader to pump dredged material from an off-shore platform to the restoration site. Internal berms and levees will be constructed on the airfield parcel to contain the slurried sediment. Once all the sediment has been placed on the site and the residual water drained from the site, the bayward levee will be breached and the waters of San Francisco Bay will be allowed once again to flow across the land.

The project cost is \$65,190,000 of which \$48,900,000 is Federal cost and \$16,290,000 is non-Federal cost (includes \$5,200,000 Port of Oakland costs according to Oakland Project Cooperation Agreement).

SAN FRANCISCO, CA, DISTRICT

The existing project was authorized in the Water Resources Development Act of 1999. Public Law 106-53 authorizes the Secretary of the Army to implement an ecosystem and wetland restoration project at the Hamilton Army Airfield and adjacent properties, City of Novato, Marin County, California.

Local cooperation. In accordance with the cost sharing and financing concepts reflected in the Water Resources Development Act of 1986, the local sponsor must comply with the following requirements: (1) pay 25 percent of the total project cost and (2) provide all lands and easements, rights-of-way, and relocations necessary for the project. The value of lands, easements, rights-of-way, and relocations can be credited toward the payment required under item (1) above.

Operations during fiscal year. The HWRP will be constructing several levees and internal berm structure to support the delivery of Oakland material and federal O&M material. In addition the Oakland Deepening project will be constructing the Hydraulic and associated pipeline to provide the facilities for pumping and placing material into the HWRP site.

23. SAN RAMON VALLEY RECYCLED WATER, CA

Location. The project is located in the San Ramon Valley, Contra Costa and Alameda Counties, approximately 25 miles east of San Francisco, California.

Existing project. The project runs from Danville south to Dublin. The project will include design and construction of 8 pump stations, 8 storage reservoirs, and 135 miles of pipeline. The total project cost is \$150,000,000 of which \$15,000,000 is Federal cost and \$135,000,000 is non-Federal cost. The district is currently involved in the design of one pump station and 6,500 feet of pipeline. The current project estimate for this design is \$1,701,600 and is comprised of Federal cost (Corps) of \$1,288,700 and non-Federal cost of \$412,900. The existing project was authorized in the Water Resources Development Act of 1999, Section 502, b (42).

Local cooperation. A Design Agreement was signed with the local sponsor, East Bay Municipal Utilities District, in November 2002.

Operations during fiscal year. Investigations were conducted in FY 2003 to identify property that could be purchased by the sponsor as a site for the pump station. A

contract was awarded in August 2003 for the preliminary design of the pump station. The Preliminary Design was completed in September 2004.

General Investigations

24. SURVEYS

Fiscal year costs for surveys were \$3,184,3665 of which \$398 were for navigation studies; \$1,996,465 for Flood Damage Prevention; \$112,977 for Shoreline Protection Studies; \$993,346 for Special Studies; \$38,030 for Watershed Comprehensive Studies; \$27,517 for Miscellaneous Activities; and \$15,634 for Coordination Studies with Other Agencies.

25. COLLECTION AND STUDY OF BASIC DATA

Fiscal year total costs of \$69,586 were incurred, of which \$49,540 was for Flood Plain Management Service Program and, \$20,046 for Hydrologic Studies.

26. PRECONSTRUCTION ENGINEERING AND DESIGN

LLAGAS CREEK, CA

See Llagas Creek under Flood Control on pg 34-10 for project location and description. PED activities during the fiscal year include initiating geotechnical study for final design.

NOYO RIVER AND HARBOR, CA

Noyo River rises in the Coast Range, flows westerly, and empties into Noyo Harbor. Noyo Harbor is a cove on the California Coast about 87 miles south of Humboldt Bay and 135 miles northwest of San Francisco. The 1962 Rivers and Harbors Act, modified by the 1976 Water Resources Development Act, authorized up to two breakwaters as necessary to provide protection. The 1976 Water Resources Development Act, as modified by the Water Resources Development Act of 1986, authorized construction of additional channel improvements. Recommended plans of improvement for the breakwater and channel improvement were previously considered as a single project. Due to significant differences in the time required for planning and construction, each part is now reported separately.

REPORT OF THE SECRETARY OF THE ARMY ON CIVIL WORKS ACTIVITIES FOR FY 2007

The plan of improvement for Noyo River and Harbor (Breakwater), CA provides for one detached offshore 400-foot breakwater aligned in a north-south direction along the southern portion of Noyo Cove, west of the entrance channel in Noyo Harbor. The plan also provides for a 60-foot wide channel, 7 feet deep, for a distance of about 3,000 feet upstream from the end of the existing Federal project to the Dolphin Isle Marina. The June 1995 draft General Design Memorandum (GDM) estimated the breakwater cost at \$23,312,000 of which \$18,712,000 is Federal cost and \$4,600,000 is non-Federal cost. Subsequent to the draft GDM, the Conference Report on H.R. 1905, Energy and Water Development Appropriation Act of 1996 directs the Corps to investigate the viability of a pre-fabricated steel structure in lieu of a rubble mound breakwater, including modeling. A special report, which documented this evaluation, was completed in January 1997.

A meeting with the Local Sponsor, PG&E and the City of Fort Bragg was held 5 February 1997 to discuss the Corps' findings. Integrating wave power generation to the breakwater does not decrease the Sponsor's annualized cost because the Sponsor is required to pay all costs associated with power generation. Two letters from the Noyo Harbor District, dated 26 February 1997, requested the Corps finalize the GDM and discontinue study of integrating wave power generation into the breakwater. Due to sponsor's inability to fulfill its cost-sharing requirements, preparation of a final GDM was terminated.

PAJARO RIVER AT WATSONVILLE, CA

The Pajaro River is the dividing line between Santa Cruz and Monterey County located approximately 100 miles south of San Francisco on Monterey Bay. Flooding in the city of Watsonville, the town of Pajaro, and surrounding agricultural lands prompted a re-examination of flood damage prevention in the Pajaro basin.

The project provides for modification of the existing levee system built by the Corps in 1949 and includes 2.5 miles of flood control levees and/or floodwalls on Salsipuedes Creek and Corralitos Creek, tributaries of the Pajaro River, as well as pump systems located outside of existing levees on the Pajaro River. The tributaries are located 6 miles from the river mouth. Since the only alternative with Federal interest was within the existing 1966 Rivers and Harbor Act construction authority, the reconnaissance study was certified in August 1994 with the recommendation to proceed directly to a General Re-evaluation Report (GRR) on raising levees along a portion of Corralitos and Salsipuedes Creeks. Flooding along the main stem of the Pajaro River in January and March 1995

caused in excess of \$65,000,000 in damages. Additional damages were incurred during the floods of January 1997 and February 1998. The main-stem was, therefore, incorporated into the ongoing GRR for the creeks.

The Corps has identified NED plans for both the main-stem and the creeks. The non-Federal sponsors, the counties of Santa Cruz and Monterey, have carried out a public consensus building process to develop locally preferred plan (LPP) which is acceptable to both agricultural and environmental interest. The Corps of Engineers supports this process by providing technical expertise and, when the process concludes, will incorporate the LPP with the NED as the recommended plan that will go forward into detailed design in the GRR. Contingent on funding, the GRR would be completed in FY 09 and construction could begin in the summer of FY 10.

SAN RAFAEL CANAL, CA

San Rafael Canal, also known as San Rafael Creek, is located on the northwestern shoreline of San Francisco Bay in the city of San Rafael, about 17 miles north of the city of San Francisco. The Canal is a shallow-draft, mainly light commercial and recreational, channel consisting of two distinct sections, the Inner Canal channel and the Across-the-Flats channel. San Rafael's central business district and dense residential areas surround the Inner Canal section while the Across-the-Flats portion traverses San Francisco Bay to reach deepwater.

A study was authorized by a resolution adopted by the Committee on Public Works and Transportation of the United States House of Representatives on August 8, 1984, Section 142 of the Water Resources Development Act (WRDA) of 1976 (Public Law 94-587), as subsequently amended in Section 705 of WRDA of 1986 (Public Law 99-662) to examine alternatives to prevent damage caused by storm and tidal flooding in the central San Rafael area. The project was authorized for construction in Section 101 of WRDA of 1996.

The Feasibility Study recommended the South Floodwall Plan. This plan consists of approximately 9,500 linear feet of floodwall constructed along the south bank of the canal and 1,600 feet of sheet-pile floodwall along the crest of the Bayfront levee on the east side of the canal ways tract. The South Floodwall Plan has a benefit-to-cost ratio of 2.0 to 1. The estimated project cost is \$32,200,000 of which \$20,930,000 is Federal cost and \$11,270,000 is non-Federal cost. Preconstruction Engineering and Design was initiated in October 1992. The Corps proposed a

SAN FRANCISCO, CA, DISTRICT

continuous floodwall design to replace the South Floodwall Plan, which was estimated to save between \$11.6 to \$14.1 million compared to the South Floodwall Plan, as recommended in the Feasibility Study. A letter was sent to the City of San Rafael in December 1996 requested Sponsor's agreement with the Corps proposal to finalize the project design based on the continuous floodwall concept. A District Engineer letter to the Mayor, City of San Rafael, dated 25 September 1997, informed the City that the project has been placed in a suspended status.

Operations during fiscal year. The operations and maintenance schedule provides for a 4-year maintenance dredging cycle for the Inner Canal channel and a 7-year cycle for the Across-the-Flats channel. Depths are -6 feet Mean Lower Low Water (MLLW) and -8 feet MLLW

respectively. Maintenance dredging of the Inner Canal portion had been scheduled for FY 02 but was delayed to October 2002 because the dredge material was discovered to be unsuitable for aquatic disposal. An upland site, Winter Island, was later identified near Antioch, California. Cost sharing is in accordance with the Water Resources Development Act of 1996. Dredging of the Inner Canal was completed in April 2003. Quantities removed during this latest cycle were 78,000 cy; of which 44,500 cy was disposed in-by while 33,500 cy was disposed upland at Winter Island.

SACRAMENTO, CA DISTRICT

This district comprises basins of Suisun Bay and San Joaquin and Sacramento Rivers in California; Goose Lake in Oregon; basins of the Great Salt Lake and Sevier Lake in Utah; an intervening portion of Great Basin in northern Nevada, northern California, and

southeastern Idaho; and the upper Colorado River basin, which is in southwestern Wyoming, eastern Utah, northeastern Arizona and western Colorado west of the Continental Divide.

Navigation

1. SACRAMENTO RIVER, CA

Location Rises in Trinity Mountains in north-central California, flows generally southerly about 374 miles and empties into Suisun Bay, an arm of San Francisco Bay, at Collinsville, CA. (See Geological Survey topographic map of Sacramento Valley, CA.)

Previous projects For details see page 1985 of Annual Report for 1915 and page 1708 of Annual Report for 1938.

Existing project For description of Sacramento Deep Water Ship Channel, see Annual Report for 1969. Total first cost for completed portion was \$43,932,558 (\$39,560,558 Federal (Corps), \$300,000 (Coast Guard), and \$4,072,000 non-Federal for lands and damages, including relocations) and excludes local interests cost \$10,741,000 (June 1963) for 30-foot deep connecting canal basic terminal facilities required under terms of project authorization. Project also provided for a shallow-draft channel 10 feet deep at mean lower low water 150 to 200 feet bottom width, from Suisun Bay to Sacramento, CA, 60 miles; a depth of 6 feet at low water between Sacramento and Colusa, 85 miles; a depth of 5 feet at low water between Colusa and Chico Landing, 50 miles; and such depths as practicable between Chico Landing and Red Bluff, 53 miles, a total distance of 248 miles. However, shallow-draft channel feature Colusa to Red Bluff (including Colusa to Chico Landing, 50 miles and Chico Landing to Red Bluff, 53 miles) was deauthorized by 1986 Water Resources Development Act on November 17, 1986 (Public Law 99-662). (See table 35-H on tidal and flood conditions prevailing.)

Local cooperation Fully complied with for deep water ship channel project. None required on shallow-draft feature.

Terminal facilities Piers, wharves, and docks at Port of Sacramento for shallow-draft navigation are open-pile structures with timber decks, some of which are designed to meet extreme high waters of flood stages. All main wharves at Sacramento have rail connections. Three of above facilities are owned by city of Sacramento and remainder by private interests; all are privately operated. For full description see "Port and Terminal Facilities at the Ports of Sacramento, Stockton, Pittsburg and Antioch, Calif., 1986." Deep water terminal facilities comprise wharves and piers, administration and storage buildings, and belt railroad facilities. Majority of these facilities are owned and operated

by Sacramento-Yolo Port District; remainder are privately owned and operated. Facilities are considered adequate for existing commerce.

Operations during fiscal year New work, Deep Water Ship Channel: See San Francisco District Report. Maintenance: Shallow Draft Channel: Maintenance and operation activities continued. Deep Water Ship Channel: Maintenance and operation activities continued.

Historical summary Construction of 7-foot shallow-draft channel below Sacramento was initiated in September 1899 and completed in 1904. Modified 10-foot shallow-draft channel up to Sacramento was initiated in FY 1928 and completed in 1931. Shallow-draft channel above Sacramento was begun in April 1946 but new work was discontinued with about 48 percent complete. In February 1974, remaining work for shallow-draft portion of project, provision of a 5-foot depth between Colusa and Chico Landing (50 miles), was reclassified as "deferred." Channel is navigable all year; however, there is no regular navigation above Colusa, 145 miles above river mouth. On November 17, 1986, remaining shallow-draft feature, Colusa to Red Bluff (including Colusa to Chico Landing, 50 miles and Chico Landing to Red Bluff, 53 miles) was deauthorized by 1986 Water Resources Development Act (Public Law 99-662). Construction of 30-foot deep water ship channel was initiated in July 1949; improvement dredging by continuing contracts resulted in provision of an operational facility for oceangoing vessels during June 1963. Bascule bridge was completed in April 1960, barge lock in August 1961, barge canal in November 1961, and entire deep water ship channel in June 1970. WRDA FY 2000 deauthorized the lock, Bascule Bridge, and a portion of the barge canal. The exchange concept was approved July 2004 and executed August 2006, transferring the Government owned assets to the City of West Sacramento and the Port of Sacramento.

2. SACRAMENTO RIVER DEEP WATER SHIP CHANNEL, CA

See San Francisco District for description of existing project. Sacramento district is responsible for operations and maintenance only.

Operations during fiscal year Completed the study plan and continued project coordination. Dredging was initiated and completed at a contract cost of \$1,585,874.

3. SAN FRANCISCO BAY TO

STOCKTON, CA (JOHN F. BALDWIN AND STOCKTON SHIP CHANNELS)

Reported on by the San Francisco District. Refer to Report of the Secretary of the Army on Civil Works Activities for FY 1995.

4. SAN JOAQUIN RIVER, CA

Location Rises in east central California and flows westerly and northwesterly about 340 miles to its confluence with Sacramento River at head of Suisun Bay, 48 miles northeast of San Francisco. Deep water channel in San Joaquin River extends 41 miles from its mouth in Suisun Bay at Pittsburg to city of Stockton. Waterborne access to city provided by Stockton Channel, an artificial cut extending about 2 miles into city. (See Coast and Geodetic Survey Sheet 5527.)

Existing project For description of completed improvement, modifications, and authorizing acts, see Annual Report for 1967. (See table 35-I for total cost of new work for project completed in May 1960.)

Projects units (1950 modification) reclassified and excluded from project cost are set forth in table 35-J.

Modification of existing project is included as one unit of San Francisco Bay to Stockton, CA, (John F. Baldwin and Stockton Ship Channels) project, authorized by 1965 River and Harbor Act (H. Doc. 209, 89th Cong., 1st sess.); this modification is reported in detail under Sacramento District, improvement No. 3 and San Francisco District, Improvement No. 3.

Local cooperation Fully complied with for completed portion of project; for details of required cash contributions on completed, inactive and deferred portions of project; see Existing project paragraph, Annual Report for 1967.

Terminal facilities For description of harbor facilities at Port of Stockton, CA, see Port Series 32, "The Ports of Sacramento, Stockton, Pittsburgh and Antioch, Calif.," revised 1986. Downstream from Stockton, traffic is accommodated by bank landings and sheds except at Antioch and near Pittsburgh, where there are wharves for shallow- and deep-draft vessels. Terminal transfer facilities at public ocean terminal of Port of Stockton are adequate for present and immediate future.

Operations and results during fiscal year. Maintenance: Condition studies and miscellaneous inspections and reports were accomplished by hired

labor. Dredging was initiated at a contract cost of \$3,184,424. (Repair or restoration of wavewash protection is required by legislation authorized by Improvement No. 3.)

Historical summary Active portion of existing project was completed in May 1960. Construction of project was initiated in December 1877.

Flood Control

5. AMERICAN RIVER WATERSHED CA, (Common Features)

Location The project is located in Placer, El Dorado, Sutter and Sacramento Counties on the North, Middle and South Forks of the American River and along the lower American River and Sacramento Rivers.

Existing project Recent evaluations indicate that the level of flood protection along much of the American River and in the Natomas area is less than the 100-year level. The project consists of levee improvements including a slurry wall along 21 miles of the lower American River, levee modifications along 12 miles of the Sacramento River, telemetered gages above Folsom Dam, improving the flood warning system for the lower American River, installing a closure structure at Mayhew Drain, 3 miles of levee modifications along lower American River, and levee modifications along 10 miles of the Natomas Cross Canal. Cost estimate (October 2005) is \$ 260,200,000 (includes an allowance for estimated inflation through the construction period), of which \$195,400,000 is Federal cost and \$64,700,000 is non-Federal cost (which includes \$49,300,000 cash contribution).

Local cooperation In accordance with cost sharing requirements specified in Water Resources Development Act (WRDA) of 1986, local interests are required to provide lands, easements, rights-of-way, and borrow and excavated or dredged material disposal areas; modify or relocate utilities, roads, bridges (except railroad bridges), and other facilities, and pay 20 percent of the costs allocated to flood control to bring the total non-Federal share of flood control costs to 25 percent, and bear all costs of operation, maintenance, repair, rehabilitation and replacement of flood control facilities. The non-Federal sponsor has also agreed to make all required payments concurrently with project construction. Project cooperation agreement (PCA) was signed July 13, 1998.

Operations and results during fiscal year. Completed design and began construction of Pocket Reach critical sites to address seepage issues. Completed design and began construction on Pioneer Reservoir berm and relief wells. Continued design and environmental compliance for levee raise and slurry wall improvements at the Mayhew Site. Continued investigations for the Natomas General Reevaluation Report. Executed two PCA amendments.

Historical summary A Supplemental Information Report (SIR) for the American River was completed in March 1996. The report included three candidate plans to reduce the risk of flooding to Sacramento. None of the three plans was recommended for construction but elements common to all plans were recommended and authorized for construction in WRDA 1996. These features would function with whatever plan was ultimately authorized for the American River. Sec. 366 of WRDA 99 authorized additional levee improvements as part of the overall project. EWDA of 2004 increased the authorized cost to current level of \$212,000,000

6. AMERICAN RIVER WATERSHED, CA (Folsom Dam Modifications)

Location Folsom Dam and Reservoir, located on the American River, is about 29 miles upstream of the City of Sacramento, California. The American River watershed drains about 2,100 square miles northeast of Sacramento and includes portions of Placer, El Dorado, and Sacramento Counties. Runoff from this basin flows through Folsom Reservoir and passes through Sacramento to the confluence with the Sacramento River.

Existing project The existing Folsom Dam has an objective release of 115,000 cubic feet per second (cfs) during flood operations. However, the existing eight outlets limit releases to about 36,000 cfs until approximately one half of the reservoir's flood control space is filled. At this level, the pool elevation is sufficient for spillways to release the full 115,000 cfs. The project consists of a 3500-foot long auxiliary spillway including an approach channel, control structure, spillway chute, and stilling basin. This feature will increase the discharge capacity to pass the Probable Maximum Flood and, in conjunction with the main dam outlet gates, up to 160,000 cfs during controlled flood operations. With the increased release capacity, it will be possible to make significant release in advance of a flood event.

This "advance release" would allow the reservoir storage level to be reduced, thus creating additional space to store incoming flood volume. Cost estimate is \$683,000,000 of which \$444,000,000 (65%) is Federal cost and \$239,000,000 (35%) is non-Federal cost.

Local cooperation The State of California Central Valley Flood Protection Board and the Sacramento Area Flood Control Agency (SAFCA) are the non-Federal sponsors. The Project Cooperation Agreement (PCA) was executed in March 2004. The non-Federal sponsor is financially capable and willing to contribute the non-Federal share. State of California legislation (AB 1147), enacted 31 August 2000, authorizes the State Reclamation Board to participate in the project to modify Folsom Dam adopted and authorized by Congress in Section 101 (a) (6) of WRDA 99.

Operations and results during fiscal year. Completed the Post Authorization Change (PAC) /Engineering Documentation Report (EDR) that describes the auxiliary spillway plan and revised the project cost estimate. Continued detailed design efforts.

Historical summary The American River Watershed Feasibility Report was completed in December 1991. The Supplemental Information Report, completed in March 1996, identified three candidate plans which would help reduce the flood risk facing Sacramento: modifying Folsom Dam and increasing the dedicated flood space; modifying Folsom Dam and the downstream system to allow increased objective releases; and constructing a detention dam upstream of Folsom Dam. In June 1996, the Chief of Engineers deferred a decision on a comprehensive flood control plan, but recommended that features common to all three plans be authorized as the first component of a comprehensive plan. These elements are being constructed within the American River Watershed (Common Features) Project. SAFCA prepared the Folsom Dam Modification Report New Outlets Plan dated March 1998 (SAFCA Outlet Report), which identified proposed changes to the Folsom Modification Plan described in the 1996 Supplemental Information Report. The 1996 Supplemental Information Report as modified by the SAFCA Outlet Report was the basis for the project authorized under WRDA 1999. Funds used to initiate pre-construction engineering and design of the Folsom Modifications was allocated in Fiscal Year 2000 under the American River Watershed Project. Funds to initiate construction were appropriated in Fiscal Year 2001.

The LRR was approved in January 2004 and serves as the document to support the PCA. The PAC/EDR approved in August 2007 serves as the basis to amend the existing PCA.

7. AMERICAN RIVER WATERSHED, CA (Folsom Dam Raise)

Location Folsom Dam and Reservoir, located on the American River, is about 29 miles upstream of the City of Sacramento, California. The American River watershed drains about 2,100 square miles northeast of Sacramento and includes portions of Placer, El Dorado, and Sacramento Counties. Runoff from this basin flows through Folsom Reservoir and passes through Sacramento to the confluence with the Sacramento River.

Existing project The Folsom Dam Raise is the final component of the overall American River Watershed project, which includes the Common Features project and the Folsom Dam Modifications project. Although the Common Features and Dam Modifications projects will significantly reduce the risk of flooding along the American River, raising Folsom Dam, will provide an additional increment of flood risk reduction. The authorized project to raise Folsom Dam includes raising the main dam, raising the related dikes and auxiliary dam, modifications to the temperature shutters, construction of a bridge downstream of Folsom Dam, and ecosystem restoration projects. The project features consist of: raising the concrete section of the dam, raising the earth embankments on each side of the dam, adding larger spillway gates, extending the spillway stilling basin and sidewalls approximately 60 feet, and raising the Mormon Island auxiliary dam and eight dikes approximately 35 feet. These improvements will add 95,000 acre-feet of floodwater storage capacity to the lake's current 977,000 acre-foot capacity. In addition, new spillway gates will be constructed, two ecosystem restoration sites will be constructed at Woodlake and Bushy Lake, and a bridge will be constructed downstream of Folsom Dam. Cost estimate is \$290,700,000 of which \$195,700,000 is Federal and \$95,000,000 is non-Federal.

Local Cooperation The California State Central Valley Flood Protection Board, the Sacramento Area Flood Control Agency (SAFCA), and the City of Folsom are the non-Federal sponsors. The Project Cooperation Agreement (PCA) for the bridge was executed in November 2006.

Operations and results during the fiscal year
Completed the Post Authorization Change (PAC)/Engineering Documentation Report (EDR) that describes the design refinements to the Dam Raise project; continued design integration with the Folsom modifications project to ensure optimum performance and to identify any construction opportunities (spoils disposal, haul routes, staging areas, etc.) between the two projects. Initiated the bridge construction.

Historical Summary The Feasibility Report for the American River Watershed Investigation was completed in December 1991 and the Division Engineer's Report was issued in February 1992. Funds were appropriated in FY 1992 to initiate preconstruction engineering and design (PED) for the combined American River Watershed and Sacramento Metropolitan studies. The two projects were separated when WRDA 92 authorized the American River Watershed Project independently of the West Sacramento Project (Sacramento Metropolitan). Sec. 566 of WRDA 99 directed additional flood control studies for: (a) increasing surcharge flood control storage at Folsom Dam and Reservoir, and (b) increased flood protection through levee modifications on the American and Sacramento Rivers, and directed the Corps to submit a report to Congress by March 2000 documenting results of the studies. The interim report, completed in January 2000, provided additional information on two flood damage reduction plans: The Folsom Enlargement Plan and the Modified Stepped Release Plan. A result of the public scoping process was the addition of the Folsom Dam advance releases in anticipation of high flood flows as a flood control alternative, and the inclusion of ecosystem restoration as a project purpose. The Long Term Study (Feasibility Report) for the American River Watershed was completed in February 2002. The Chief's Report, dated 5 November 2002, was followed by the Division Engineer's Public Notice issued on 22 March 2003. Funds to initiate construction were appropriated in FY 2004. The Folsom Dam Raise project was authorized for construction by the Energy and Water Development Appropriations Act, 2004 at a total cost of \$257,300,000.

8. AMERICAN RIVER WATERSHED, CA (Natomas Reimbursement)

Location The project is located in the metropolitan area of Sacramento, California. The 1991 Feasibility Report identified a project including

levee improvements around the perimeter of the Natomas Basin, a 300-acre detention area in North Natomas, and recreation trails.

Existing project The local sponsor, SAFCA, has constructed Natomas flood control features. The Natomas Federal Plan dated Mar 99 identified portions of the project eligible for reimbursement under the Memorandum of Agreement (MOA) signed Sep 99. Based on the MOA and the Federal Plan, initial reimbursement of \$15M for Phase I was made to SAFCA Sep 99. The subsequent payments have since been made - \$1.115M in September 03 and \$510K in June 05. Estimated final reimbursement for Phase I of \$4.1M is unscheduled. .

Local cooperation SAFCA is seeking reimbursement for construction of local project features in addition to that eligible under Natomas Federal Plan . The current MOA allows for reimbursement to SAFCA for the Federal share of the plan identified in the Natomas Federal Plan dated March 1999. The SAFCA flood control project (North Area Local Project, or NALP) was larger in scope than the plan in the Natomas Federal Plan. ASA (CW) agreed, by letter to SAFCA dated 13 Sep 99, that the Corps would reevaluate our conclusions on what part of SAFCA's NALP could be considered for reimbursement consistent with the authorization.

Historical summary The Defense Appropriations Act for FY 1993 authorized construction of the Natomas flood control project (including recreation features), as defined in the feasibility report. The Act also authorized the sponsor to construct and receive reimbursement for the Federal share of project costs.

9. BUCHANAN DAM-H.V. EASTMAN LAKE, CHOWCHILLA RIVER, CA

Location On Chowchilla River about 36 miles above its mouth and about 16 miles northeast of city of Chowchilla, CA. (See Geological Survey quadrangles for area.)

Existing project Provides for construction of a 205-foot high rockfill dam to create a reservoir with gross storage capacity of 150,000 acre-feet for flood control, irrigation, recreation, and fish and wildlife. In conjunction with dam, project plan provides for about 12 miles of downstream levee and channel construction on Ash Slough to accommodate a project design flow of 5,000 cubic feet per second within slough and 7 miles of levee and channel improvement on Berenda Slough. Operation and maintenance of dam and reservoir is the

responsibility of the Federal Government. Total first cost for existing project is \$28,919,597, of which \$27,369,597 is Federal cost, including \$4,580,000 for basic recreation facilities, and \$1,550,000 non-Federal costs for lands and damages, including relocations for downstream levee and channel improvements. Local interests have contracted with the Bureau of Reclamation for irrigation service. For future non-Federal reimbursement, see Local cooperation paragraph. Local interests have also, over a period of years expended about \$500,000 for construction of low levees and clearing downstream channels to provide some local flood protection in project area. This work is inadequate during major floods. Existing project was adopted by 1962 Flood Control Act (S. Doc. 98, 87th Cong., 2d sess., contains latest published map). Lake formed by Buchanan Dam on Chowchilla River was designated "H.V. Eastman Lake" by Public Law 93-217.

Local cooperation Fully complied with.

Operations and results during fiscal year. New work: None. Maintenance: Maintenance and operation activities were continued. Runoff of Chowchilla River above Buchanan Dam was above normal for the year. Maximum storage of 93,501 acre-feet occurred June 10, 2006. Maximum hourly inflow to reservoir was 10,251 cubic feet per second on October 1 2006. Maximum release of 1,490 cubic feet per second on February 26, 2006. Maximum release of 847 cubic feet per second on July 18, 2007. During the year, a total of 81,260 acre-feet of water was released for irrigation and other purposes. Releases for flood control purposes totaled 0 acre-feet.

Historical summary Construction began in July 1971 and was completed in May 1979. Construction of Buchanan and Hidden dam and appurtenances was combined under one contract. Project was completed in September 1983, except for installation of piezometers (now deferred indefinitely). Dam closure was in March 1975; dam was completed in January 1976. Reservoir clearing and boundary marking were completed May 1975. Bifurcation structure was completed in February 1976. Channel improvement, Ash and Berenda Sloughs, was completed in March 1976. Recreation areas: Phase I was completed in January 1976; Phase II was completed in February 1978. Residences, administration building, and visitors center contract was completed in May 1978. Landscaping was completed in May 1979 and erosion control was completed in April 1979. A resources interpretive display and road relocation were completed in FY 1982. Dam safety assurance studies were initiated in FY 1981. Solar heating was installed

at Chowchilla recreation area in FY 1984. A hydrilla eradication (spraying) program was initiated in FY 1989. Final land audit was approved on December 3, 1985.

10. CACHE CREEK BASIN, CA (Cache Creek Settling Basin)

Location At the mouth of Cache Creek in Yolo County where it enters the Yolo Bypass about 2 miles east of city of Woodland and about 15 miles northwest of city of Sacramento, CA.

Existing project Provides for raising the perimeter levees of the existing settling basin an average of 12 feet, extending the levees upstream to County Road 102 to provide 50-year sediment storage capacity, enlarging and reconstructing the cobble weir, and degrading existing training levees and rebuilding them adjacent to western perimeter levee to provide 50 years of sediment storage capacity (340 acre-feet annually.). Estimated cost (October 2005) for existing project is \$27,000,000 (includes an allowance for estimated inflation through the construction period), of which \$16,900,000 is Federal and \$10,100,000 is non-Federal (which includes \$1,350,000 cash contribution). For future non-Federal reimbursement, see Local cooperation paragraph. Existing project was adopted by Water Resources Development Act of 1986, Public Law 99-662, November 17, 1986 (HD 98-134, 98th Cong., 1st Sess., contains published map.) Project as authorized included development of a national wildlife refuge within the settling basin; however, the Department of the Army determined that such refuge would be more appropriately funded and developed by the U.S. Fish and Wildlife Service. Refuge feature was reclassified to deferred category on April 11, 1988.

Local cooperation Local interests are required to provide lands, easements, rights-of-way, and dredged material disposal areas; modify or relocate buildings, utilities, roads, bridges (except railroad bridges) and other facilities where necessary in construction of the project; pay 5 percent of cost allocated to flood control, and bear all costs of operation, maintenance and replacement of flood control facilities. Local interests have agreed to make all required payments concurrently with project construction. Local Cooperation Agreement was executed March 12, 1990.

Operations and results during fiscal year. Continued review of LERRDs..

Historical summary Local Cooperation Agreement was executed March 12, 1990. Cache Creek Settling Basin enlargement (multicomponent) construction contract was awarded August 5, 1991, completed in September 1993, and work was transferred to local interests for operation and maintenance on December 2, 1993.

11. CALAVERAS RIVER AND LITTLEJOHN CREEK AND TRIBUTARIES, INCLUDING NEW HOGAN LAKE AND FARMINGTON DAM, CA

Location Streams comprising Calaveras River and Littlejohn Creek groups rise in Sierra Nevada and its foothills, flow easterly across flatlands of San Joaquin Valley and empty into San Joaquin River directly, or through various sloughs, in vicinity of Stockton, CA. Littlejohn Creek is in Calaveras, Stanislaus, and San Joaquin Counties. The three principal stream systems of the group are, from south to north, Lone Tree Creek, Littlejohn Creek, and Duck Creek. Calaveras River group is in Calaveras and San Joaquin Counties. The two principal streams of the groups are, from south to north, Calaveras River and Bear Creek. (See Geological Survey Valley Springs quadrangle for New Hogan reservoir area and Trigo and Bachelor Valley quadrangles for Farmington reservoir area.)

Existing project For description of completed improvements consisting of Farmington Dam, New Hogan Lake, and Bear Creek levee and channel improvement, and authorizing act, see Annual Report for 1967. (a) Farmington: Total first cost (July 1955) for project was \$3,995,684, of which \$3,676,384 was Federal and \$319,300 non-Federal for lands and damages including relocations. (b) New Hogan: Federal cost for project is \$15,906,150, including \$543,514 for basic recreation facilities. For future non-Federal reimbursement, see Local cooperation paragraph. Federal cost for recreation facilities funded from Code 710 appropriations is \$897,742. (c) Bear Creek: Project cost is \$6,485,734, of which \$3,242,867 is Federal, including reimbursement (\$488,096) to local interests of one-half of excess local interest cost of lands, rights-of-way, and relocations over estimated Federal construction cost in accordance with section 3, Public Law 738, 74th Congress. Non-Federal cost included in above amount is \$3,242,867 for relocations and lands and damages, exclusive of above Federal reimbursement.

Local cooperation Fully complied with. New

Hogan: Local interests must pay portion of first cost and annual operation and maintenance costs allocated to conservation functions of project. These costs are estimated at 36.2 percent of first cost and 38 percent of annual costs. In addition, local interests contributed land, the (July 1964) market value of which was \$556,000. For years 1961 through 1970, an interim contract between the Bureau of Reclamation and local water users provided for storage and payment of irrigation water; a long-term contract between that agency and local water users was executed August 25, 1970. Local interests paid \$5,540,991 through December 31, 2003. A concessionaire at New Hogan Marina provided public use facilities in accordance with lease agreement with the Secretary of the Army at an estimated cost to date of \$234,000.

Operations and results during fiscal year. New work: New Hogan Lake, regular funds: None. Code 710 funds: None. Bear Creek, San Joaquin County: None. Maintenance: Farmington Dam Maintenance and operation activities continued; structures were maintained in serviceable condition. During rain flood season, maximum flow of Duck Creek Diversion was 83 cubic feet per second on February 27, 2007. Maximum flow of Littlejohn Creek at Farmington was 239 cubic feet per second on February 28, 2007. Maximum flow of Duck Creek near Farmington was 680 cubic feet per second on February 12, 2007. Maximum storage in reservoir was 930 acre-feet on February 28, 2007, and maximum estimated inflow to reservoir was 1,881 cubic feet per second on April 24, 2007. Maximum release of 723 cubic feet per second on February 22, 2007. During the year, 21,710 acre-feet was released for flood control. Release for irrigation purposes amounted to 0 acre-feet. New Hogan Lake Maintenance and operation activities continued. Structures were maintained in serviceable condition. Runoff of Calaveras River above New Hogan was above normal for the year. Maximum storage of 192,911 acre-feet occurred October 1, 2006. Maximum hourly inflow to reservoir was 5,688 cubic feet per second on February 26, 2007. During the year, 102,280 acre-feet was released for irrigation and other purposes. Release for flood control purposes amounted to 4,740 acre-feet.

Historical summary Farmington Dam: Construction of Farmington project was initiated in July 1949 and completed for beneficial flood control operation in 1952. Duck Creek channel improvement was completed in November 1951; and channel improvement on south Littlejohn Creek was completed in May 1955. There are no recreation

facilities or public-use areas. All work completed. Dam safety assurance studies were initiated in FY 1982. New Hogan Lake: Construction was initiated May 1960, main dam closure November 1963, project completed for operational use in June 1964, and all work completed October 1973. Recreation facilities have been provided from Code 710 appropriations. See page measurement weir constructed in June 1980. Dam safety assurance studies were initiated in FY 1980. Bear Creek, San Joaquin County: Construction began in June 1963 and was completed in June 1967.

Final cash contribution was made to local interests December 23, 1970. Solar heating was installed at recreation facilities in FY 1984. A cultural resources survey was completed in FY 1984.

12. COLORADO RIVER AT GRAND JUNCTION, CO

Location On north bank of Colorado River from 9th Street west to the Denver Rio Grande Western Railroad Bridge at city of Grand Junction, CO, in Mesa County.

Existing project: See Annual Report for 2004.

13. CORTE MADERA CREEK, CA

Reported on by San Francisco District. Refer to Report of the Secretary of the Army on Civil Works Activities for FY 1996.

14. COYOTE CREEK, CA (Known As Coyote And Berryessa Creeks)

For details on Coyote portion of project, see FY05 Annual Report, page 35-10.

Location The Berryessa Creek watershed is located in Santa Clara County, California, south of San Francisco Bay. Berryessa Creek is a tributary to the Coyote Creek system, which flows into the southernmost end of San Francisco Bay. Berryessa Creek flows west out of the Diablo Range and into the residential neighborhoods of San Jose and Milpitas, finally turning north through industrial portions of Milpitas before joining Lower Penitencia Creek, and then into Coyote Creek.

Existing project The results of the ongoing general reevaluation report (Berryessa component only) to date recommend the use of set back levees. This design is being developed in coordination with resource agencies to provide a more environmentally

sustainable project.

Local Cooperation The Santa Clara Valley Water District, the local sponsor, signed the Reevaluation Cost Sharing Agreement in June 2001.

Historical Summary The recommended project includes offset levees and an overflow channel on Coyote Creek, and two sedimentation basins, concrete lined trapezoidal channel and off-set levees on Berryessa Creek. Provisions are also included for fish and wildlife mitigation for both Coyote and Berryessa Creeks. Severe flooding has occurred on both Coyote and Berryessa Creeks in recent years, the most recent being January-March 1983, in which Coyote Creek flooding caused over \$6.0 million worth of damages. The January 1997 flood was the highest recorded flow on Coyote Creek since completion of Anderson Dam in 1950. Although some flooding occurred upstream on Coyote Creek, flooding was averted in the project reach due to completion of the Coyote Creek project element in 1996, which provided for a 100-year level of protection.

The latest economic and cost analysis in the Berryessa Creek Draft General Design Memorandum dated November 1993 resulted in a benefit-cost ratio of less than unity. Determination of the downstream channel capacity is required in order for a decision to be made on how to proceed with this project element. Sponsor is working toward determining downstream channel conditions. Additionally, the Berryessa Creek element is a specifically named project under Section 211 of WRDA 1996, which provides for credit reimbursement to non-Federal interests for construction of flood control projects. Sponsor elects not to pursue the Berryessa Creek element under Sec. 211 of WRDA 96; therefore the Corps has been asked and has resumed a study of the Berryessa Creek Element under an expedited schedule. A General Reevaluation Report is being prepared for the Berryessa Creek Element.

15. FAIRFIELD VICINITY STREAMS, CA

Location On five streams in vicinity of cities of Fairfield and Suisun, Solano County, CA.

Existing project See Annual Report for 1996, p35-8.

16. GUADALUPE RIVER, CA

Location On Guadalupe River in downtown area of city of San Jose, Santa Clara County, CA.

Existing project Authorized plan provides for widening and deepening one or more sides of Guadalupe River for 2.5 miles from Interstate Highway 280 to Interstate Highway 880 in downtown San Jose, CA, and channel modifications with provisions for fish and wildlife mitigation, as necessary. Non-Federal sponsor must pay 100 percent of incremental construction cost of locally preferred plan. Project is an integral component of a much larger regional park plan being undertaken by the San Jose Redevelopment Agency.

Estimated cost (October 2006) is \$265,400,000 (which includes an allowance for estimated inflation through the construction period) of which \$148,900,000 is Federal and \$113,100,000 is non-Federal including \$116,500,000 reimbursement, see Local cooperation paragraph. Existing project was adopted by Water Resources Development Act of 1986, Energy and Water Development Appropriation Act of 1990 which directed the Secretary of the Army to construct the project notwithstanding Sec. 902 of the Water Resources Development Act of 1986 regarding project cost limitations, and Energy and Water Development Appropriations Act of 1992 which directed the Secretary of the Army to modify and construct the project in accordance with the January 1991 GDM; it is consistent with the Guadalupe River Park plan requested by the local sponsor and with cost sharing policy.

A General Reevaluation Report (GRR) has been prepared to address impacts to endangered species and water quality. In lieu of widening the natural channel for Reach 3, a bypass channel was recommended to minimize the effects on water quality, endangered species and riparian vegetation. The originally authorized plan could not fully mitigate these impacts. Updated benefits and added costs for required mitigation, lands and relocation were documented in the GRR approved in November 2001. Based on findings of the GRR, Section 106 of the Energy and Water Development Appropriations Act for 2002 re-authorized the project at a total cost of \$226,800,000.

Local cooperation Local interests, through a public body legally authorized and financially capable, must give assurances they will furnish lands, easements, rights-of-way, and dredged material disposal areas, which are partially offset by a credit

(\$5,701,000) allowed for prior work (Sec. 104, Water Resources Development Act of 1986); credit was approved by the Assistant Secretary of the Army; modify or relocate buildings, utilities, roads, bridges (except railroad bridges), and other facilities, where necessary in the construction of the project; pay 5 percent of the costs allocated to flood control; and bear all costs of operation, maintenance, and replacement of flood control facilities. Federal reimbursement will be made to non-Federal sponsor for one-half of non-Federal costs allocated to flood control in excess of Federal costs. Local interests have agreed to make all required payments concurrently with project construction.

On June 2, 1989, the local sponsor, the Santa Clara Valley Water District, expressed intent to provide all needed cost sharing funds. On September 21, 1990, the San Jose Redevelopment Agency requested modification of project to include recreation facilities and confirmed that they intend to participate as local sponsor for recreation. Local Cooperation Agreements for both flood control and recreation were executed March 30, 1992.

Operations and results during fiscal year Awarded Coleman Avenue abutment construction contract September 2007.

Historical summary Final General Design Memorandum (GDM) reflecting locally preferred plan, was approved by the Assistant Secretary of the Army on March 26, 1992, with comments. Revision of GDM to address comments was completed in July 1993. Local Cooperation Agreements for both flood control and recreation were executed March 30, 1992. Construction contract No. 1 for channel improvement (Highway 880 to Hedding Street) was awarded August 10, 1992; and was essentially completed and transferred to local interests for maintenance and operation on August 11, 1994. Construction contract No. 2 (Hedding Street to Coleman Avenue) was awarded July 8, 1994, and was essentially completed and transferred to local interests for maintenance and operation on October 25, 1996. Contract 3A, Phase I was completed Oct 2005. Awarded infill planting contract August 2006.

17. HIDDEN DAM-HENSLEY LAKE, FRESNO RIVER, CA

Location On Fresno River about 50 miles above its mouth and about 15 miles northeast of Madera, CA (See Geological Survey quadrangles for area.)

Existing project Provides for construction of a 163-foot high earthfill dam to create a reservoir with gross storage capacity of 90,000 acre-feet for flood control, irrigation, recreation and other purposes. In conjunction with the dam, the project provides for about 13 miles of downstream levee and channel improvements on Fresno River immediately upstream of Chowchilla Canal crossing to accommodate project design flow of 5,000 cubic feet per second. Operation and maintenance of dam and reservoir is the responsibility of the Federal Government. Total first cost for existing project is \$31,785,426, of which \$30,555,426 is Federal cost, including \$3,564,168 for basic recreation facilities, and estimated \$1,230,000 non-Federal cost for lands and damages including relocations for downstream levee and channel improvements. Local interests have contracted with the Bureau of Reclamation for irrigation service. For future non-Federal reimbursement, see Local cooperation paragraph. Local interests have also, over a period of years, expended about \$300,000 for construction of low levees and clearing downstream channels to provide some local flood protection in the project area. This work is inadequate during major floods. Existing project was adopted by 1962 Flood Control Act (S. Doc. 37, 87th Cong., 1st sess., contains latest published map). Lake created by Hidden Reservoir project on Fresno River was designated "Hensley Lake" by Public Law 93-603. The project is currently fully able to provide the benefits for which it was designed and constructed. Hidden Dam has been classified as a Dam Safety Action Class Level II Dam (Urgent), where failure initiation is foreseen. There is risk to life and property, primarily in Madera, CA. The spillway capacity is unknown, as is the potential for seismic deformation. The dam has an existing seepage concern. Work to be performed includes initiating Phase I of the Dam Safety Assurance Program (DSAP) seepage, seismic and hydrologic studies. Investigation to be initiated in FY08 will be funded under construction general.

Local cooperation Fully complied with.

Operations and results during fiscal year. New work. None. Maintenance: Maintenance and operation activities were continued. Runoff of Fresno River below Hidden Dam was below normal for the year. Maximum storage of 56,124 acre-feet occurred on October 1, 2006. Maximum hourly inflow to the reservoir was 1,319 cfs on February 22, 2007. Maximum release of 225 cfs on November 16, 2007. During the year, 58,700 acre-feet was released for irrigation and other purposes and no amount was released for flood control.

Historical summary Construction began in July 1971 and was completed in January 1979. Dam closure was in March 1975; dam was completed November 1975. Instrumentation was completed in January 1976. Downstream channel improvement, Fresno River, was completed April 1976. Recreation areas: Phase I was completed in March 1976; Phase II was completed in June 1978. Residences, administration building, grounds, and utilities contract was completed in February 1978. Landscaping was completed in December 1978 and erosion control was completed in January 1979. Project was completed in September 1980. Final land audit was approved February 5, 1980. Dam safety assurance studies were initiated in FY 1980. Piezometer installation was completed in September 1982. Solar heating was installed at County relinquished all administration of recreation and development and maintenance of public use areas at the recreation areas in FY 1984.

18. ISABELLA LAKE, KERN RIVER, CA

Location About 35 miles northeast of city of Bakersfield, CA, near confluence of north and south forks of Kern River; auxiliary dam is about one-half mile east of main dam. (See Geological Survey quadrangles of area.) In 1991, Isabella Lake and 16,000 acres of surrounding land was transferred to the Forest Service in exchange for about 2,500 acres of Forest Service land near Pine Flat Lake.

Existing project For description of completed improvement and authorizing act, see Annual Report for 1967. Federal cost for new work is \$22,027,452. For future non-Federal Local cooperation and Licenses paragraphs. Federal cost funded from Code 710 appropriations is \$2,199,085. Operation and maintenance of dam and reservoir is Federal responsibility. The project is currently unable to provide the benefits for which it was designed and constructed. Isabella Dam has been classified as a Dam Safety Action Class Level I Dam (Urgent and Compelling), where the dam is critically near failure and there is an extremely high life risk. There is risk to life and property, primarily in Lake Isabella and Bakersfield, CA. The spillway capacity is inadequate, and there is a known seismic and seepage hazard that could cause deformation of the structures. Work performed includes initiating Phase I of the Dam Safety Assurance Program (DSAP) seepage, seismic and hydrologic studies. Investigations initiated were

REPORT OF THE SECRETARY OF THE ARMY ON CIVIL WORKS ACTIVITIES FOR FY 2007

funded both under O&M funds and construction general

Local cooperation California officially adopted project by chapter 1514 of statutes of 1945, State of California. Local interests, represented by North Kern, Buena Vista, and Tulare Lake Basin Water Storage Districts and La Hacienda Water District, were required to reimburse the Federal Government the portion of first cost and annual operation and maintenance costs allocated to irrigation functions of project. These costs, based on a cost allocation study completed in December 1955, are \$4,573,000 of first cost and 21.7 percent of annual operation and maintenance cost. For the years 1956 through 1964, an interim contract between the Bureau of Reclamation and local water users provided for storage and payment of irrigation water. Under provisions of this interim contract, local interests paid \$1,936,229 through December 31, 1964. A long-term contract between the Bureau and local water users was executed October 23, 1964. Balance due on allocated first cost of \$4,573,000 was paid by the water users on March 31, 1965. Kern County assumed administration of recreation and development and maintenance of public use areas at project in accordance with a 25-year license February 15, 1955. The agreement with Kern County provided for joint operation and development by the Corps and Kern County including permits granted to concessionaires by the county to provide certain services. As of September 30, 1971, Kern project. A State law permitting the Department of Boating and Waterways (known as the Department of Navigation and Ocean Development prior to January 1979) to participate in inland water development with Federal agencies was signed by the Governor on August 11, 1972. Isabella Lake and surrounding land, 16,000 acres around the lake currently being used for park and recreation purposes, was turned over to the Forest Service by the Corps on May 15, 1991, in exchange for approximately 2,500 acres of Forest Service recreation land near Pine Flat Lake. This was accomplished by using a memorandum of understanding (MOU) between the Secretary of the Army and the Secretary of Agriculture (Forest Service). The MOU requires an exchange of land between departments. Three Corps maintenance employees, under supervision of the Success Lake park manager, will stay at Isabella to operate the dam for flood control and water conservation purposes. Authority for new concessionaire operating permits to be issued, as well as those previously granted by the Corps, will be transferred to the Forest Service.

Total cost to date of present recreation facilities

developed by the county and the marina concessionaires is about \$965,000; \$235,000 of this was a grant from the California Wildlife Conservation Board and about \$534,000 is investment by marina concessionaires.

Licenses. In accordance with Federal Power Commission Docket No. E-6578, issued April 1, 1963, payment of \$377,426 was made to the Federal Government by Pacific Gas and Electric Co. (\$108,352) and Southern California Edison Co. (\$269,074) for headwater benefits to downstream existing plants from Isabella Dam to cover benefits from April 15, 1954, to December 31, 1962. Between 1962 and 1982, the power companies have in the aggregate made annual payments of \$44,650 for headwater benefits. That amount was to be paid each year until changes in operation, development, or costs indicated some modification to be advisable. Federal Power Commission Docket No. E-6578 was revised by Docket No. HB07-75-4-000 (order issued July 11, 1983 under 24 FERC, paragraph 62052) which modified cumulative use charges after 1974, effective retroactively. Such charges will now vary each year. An adjustment (years 1974 through 1984) was included in 1984 payment of \$244,790. The 1985 payment was \$52,747; 1986 payment was \$51,905. No payment was received in 1987. The 1988 payment was \$58,187. No payment was received in 1989. Two payments (\$60,894 and \$55,443) were received in 1990; \$60,983 was received in 1991; \$65,975 in October 1991 (FY 1992) \$77,577 in October 1992 (FY 1993), and \$62,231 in October 1993 (FY 1994). Cumulative use charges collected by the Federal Power Commission (known as the Federal Energy Regulatory Commission since January 9, 1978) and returned to the U. S. Treasury through period ending September 30, 1995, amounted to \$2,150,458.

Operations and results during fiscal year. New work, regular funds: Studies are currently underway to evaluate seismic stability and identify seepage problems. Code 710 funds: None. Maintenance: Maintenance and operation continued. Runoff of Kern River above Isabella Dam was below normal. Maximum storage of 243,416 acre-feet occurred on May 24, 2007. Maximum hourly inflow to the reservoir was 8,835 cfs on February 11, 2007. Maximum release of 1,593 cfs on July 12, 2007. During the year, 357,510 acre-feet was released for irrigation and other purposes and no amount was released for flood control.

Historical summary Construction began in March 1948 and was completed in June 1968. Main

dam, Borel Canal outlet works and appurtenances, and auxiliary dam were completed in April 1953. Storage impoundment began December 1952. Piezometer was installed in August 1982. Project is operating to provide flood protection and irrigation benefits for which it was designed. Recreation facilities were provided by Code 710 funds. Dam safety assurance studies were initiated in FY 1979. A cultural resources survey was completed in FY 1984. On May 15, 1991, Isabella Lake and surrounding land, 16,000 acres around the lake currently being used for park and recreational purposes, was turned over to the Forest Service by the Corps in exchange for approximately 2,500 acres of Forest Service recreation land near Pine Flat Lake. A memorandum of understanding (MOU) between the Secretary of the Army and the Secretary of Agriculture (Forest Service) was used. The MOU requires an exchange of land between departments. Three Corps maintenance employees, under supervision of the Success Lake park manager, are located at Isabella to operate the dam for flood control and water conservation purposes.

19. KAWEAH AND TULE RIVERS, INCLUDING TERMINUS DAM AND SUCCESS LAKE, CA

Location Terminus Dam is on Kaweah River about 20 miles east of Visalia, CA. Success Lake is on Tule River about 5 miles east of Porterville, CA. (See Geological Survey quadrangles of area.) The current Construction work is located within the Tulare Lake Basin in the southeastern portion of the San Joaquin Valley between the cities of Fresno and Bakersfield, CA.

Existing project Terminus Dam: For description of completed improvement and authorizing act, see Annual Report for 1975. Federal cost of new work is \$19,302,957, including \$242,605 for basic recreation facilities and excluding spreading works constructed by local interests at an estimated (July 1957) cost of about \$750,000. Spreading works portion of project has been deauthorized. The 90-day Congressional project review period, required by sec. 12, Public Law 93-251, as amended, ended August 5, 1977, and resulted in deauthorization of that portion of project. Federal cost of recreation facilities funded from Code 710 appropriations is \$700,004. Success Lake: For description of completion improvement and authorizing act, see Annual Report for 1975. Federal cost of new work for Success Lake is \$14,247,221, including \$253,697 for basic recreation facilities. Federal cost of recreation facilities funded from Code

710 appropriations is \$747,048. For future non-Federal reimbursements, see Local cooperation paragraph. Operation and maintenance of reservoirs is Federal responsibility.

Lake Kaweah/Terminus Dam was completed in 1962, and has provided limited flood protection to Visalia and other rapidly developing urban areas along the Kaweah River. The project plan is to enlarge Lake Kaweah by 42,600 acre-feet by raising the spillway 21 feet to provide additional flood control and water conservation space. Current total project cost is estimated to be \$57,410,000, with a Federal share of \$33,700,000 and a non-Federal share of \$23,710,000, including \$19,328,000 of LERRDs.

Local cooperation California officially adopted projects by chapter 1514 of statutes of 1945, State of California. Local interests for Terminus Dam are represented by Kaweah Delta Water Conservation District. Local interests for Success Lake are considered to be represented by the Vandalia, Porterville, and Lower Tule River Irrigation Districts, the Tulare Lake Basin Water Storage District, and Pioneer Water Co., which represent over 90 percent of irrigated land and water-right holders along Tule River below damsite. Local interests must reimburse the Federal Government the portion of first cost and annual operation and maintenance costs allocated to irrigation functions of projects. These costs are estimated at 14.1 percent of first and annual costs for Terminus and 9.5 percent of first and annual costs for Success. Local interests for Terminus stated they will continue to operate and maintain spreading works and downstream channel systems to provide required capacity for disposal of floodwaters. Local interests for Success stated they will continue to maintain downstream channel systems to provide required capacity for disposal of floodwaters. Repayment contracts between the Bureau of Reclamation and local water users for irrigation supply from Terminus and Success reservoirs were executed January 11, 1965, and April 30, 1965, respectively. Reservoirs are being operated for irrigation storage as well as flood control and incidental recreation use. Tulare County acquired water for recreation pools at the projects. Local interests paid the following total amounts for irrigation services from the reservoirs through December 31, 2003: Terminus, \$2,686,711 and Success, \$1,338,408. Tulare County was granted a 25-year license for planning, development, and management of public recreation areas at Success, July 10, 1960, and at Terminus, June 5, 1961. Basic public-use facilities constructed by Corps at the Success reservoir were transferred to jurisdiction of Tulare County on January 18, 1962; facilities at

REPORT OF THE SECRETARY OF THE ARMY ON CIVIL WORKS ACTIVITIES FOR FY 2007

Terminus were transferred June 20, 1962. In March 1967, an amendment to the license agreements was approved by the Assistant Secretary of the Army. Under these amended licenses, Tulare County retained administration of only specified land areas and operation and maintenance of recreation facilities in these areas. In addition, they continued their program of water safety, boat inspection, and law enforcement at both reservoirs. The Corps took over the administration of the remainder of the project land areas and the operation and maintenance of recreation facilities in these areas. Calif. Department of Fish and Game expended funds to improve fishery resources of the Terminus reservoir. As of April 1, 1972, Tulare County relinquished all planning, development, and management of public recreation areas at Terminus Dam. Tulare County by expenditure of county funds and by a lease to a marina concessionaire has aided in the development of recreation facilities at an estimated cost of \$199,000. Calif. Department of Fish and Game expended funds in conjunction with Tulare Sportsman's Council and developed a habitat for upland game birds at Success Lake. As of April 1, 1972, Tulare County relinquished all planning, development, and management of public recreation areas at Success Lake, except for the Bartlett Park recreation area. Tulare County has aided in development of recreation facilities. Total cost to date of present recreation facilities developed by the county (\$360,000) and the marina concessionaires (\$373,000) is about \$733,000.

PCA for spillway enlargement was signed 9 Feb 2001. Project is cost shared 75% Fed/25% NF, with a minimum NF cash payment of 5% for the flood damage reduction portion of the project. Non-Federal sponsor if required to pay 35% of all costs allocated to agricultural water supply.

Operations and results during fiscal year. New work: Terminus Dam, regular funds: None. Code 710 funds: None

Success Lake, regular funds: None. Code 710 funds: None.

Kaweah. Continued design on Lemon Hill Erosion site. Continued mitigation work with maintenance of the endangered species and the riparian areas.

Maintenance: Terminus Dam: Maintenance and operation continued. Structures were maintained in serviceable condition. Runoff of Kaweah River above Terminus Dam was below normal for the year. Maximum storage of 131,926 acre-feet occurred on

June 5, 2007. Maximum hourly inflow to the reservoir on April 25, 2007 was about 6,507 cubic feet per second. Maximum outflow of 1,578 cubic feet per second occurred July 5, 2007. Irrigation and spreading releases totaled 143,690 acre-feet. Releases for flood control totaled 14,250 acre-feet. Success Lake: Maintenance and operation continued. Structures were maintained in serviceable condition. Runoff of Tule River above Success Dam was below normal during the year. Maximum storage of 34,147 acre-feet occurred on May 28, 2007. Maximum hourly inflow to the reservoir was 753 cubic feet per second on July 13, 2007, and maximum outflow of 2970 feet per second occurred on June 20, 2007. Irrigation and spreading releases amounted to 38,600 acre-feet. Releases for flood control amounted to 0 acre-feet.

Historical summary Terminus Dam: Construction of project began in July 1957 and was completed in June 1968. Final land audit was approved on April 20, 1987. Construction of main dam and appurtenances, initiated in February 1959, was completed in June 1962. Dam has been operating since November 1961 to provide flood protection for which it was designed; conservation impoundment was commenced May 1962. Appurtenances are in good condition. Recreation facilities were provided by Code 710 funds. Dam safety assurance studies were initiated in FY 1979 and completed in FY 1989. Piezometer installation and a cultural resources survey were completed in FY 1984. Success Lake: Construction of project began in November 1956, was completed in June 1968, and final audit of historical land record was approved December 17, 1979. Construction of main dam and appurtenances, initiated in October 1958, was completed in May 1961. Dam has been operating since October 1960 to provide flood protection for which it was designed; conservation impoundment was commenced March 1962. Recreation facilities were survey was completed in FY 1984.

WRDA 1996 authorized enlargement of Terminus Reservoir, Kaweah River, CA for flood control and water supply subject to Chief's Report. PED was initiated in Sep 96 and completed in Sep 2000. Construction funds were appropriated in FY2000. PCA was signed 9 Feb 2001. Spillway Excavation was completed, April 2002, Lemon Hill Bank Protection was completed Fed 2003, Relocation of Recreation Facilities was completed Apr 2004, Auxiliary Dam Berm and seepage collection system was completed May 2004, an the Best Western Dike was completed May 2005

20. LITTLE DELL LAKE, UT

For project description, see FY05 Annual Report, pg 35-15.

Operations and results during fiscal year. Continued review and crediting of LERRDS.

Historical summary A Local Cooperation Agreement (Sec. 221) was executed June 10, 1986. Construction was initiated in April 1988. Construction of core trench and test fill was completed in February 1989. Main dam and appurtenances contract was awarded May 12, 1989 and completed in September 1993. Project was transferred to the local sponsor for maintenance and operation on March 26, 1993. Dam was dedicated on August 5, 1993.

21. MARTIS CREEK LAKE, MARTIS CREEK, NV AND CA

Location Reservoir is on Martis Creek a tributary of Truckee River, near Truckee, CA; intermittent channel improvements are on Truckee River in Reno, NV. (See Geological Survey quadrangles for areas.)

Existing project For description of completed improvement and authorizing act, see Annual Report for 1975. Federal cost for project was \$8,503,789 including \$289,506 for basic recreation facilities. Federal cost of recreation facilities funded from Code 710 appropriations was \$1,200. Construction of recreation facilities under Code 710 was determined to be infeasible. Operation and maintenance of reservoir is Federal responsibility. The project is currently unable to provide the benefits for which it was designed and constructed. Martis Creek Dam has been classified as a Dam Safety Action Class Level I Dam (Urgent and Compelling), where the dam is critically near failure and there is an extremely high life risk. There is risk to life and property, primarily in the Reno-Sparks Metro Area Nevada. The spillway capacity is inadequate, and there is a known seismic and seepage hazard that could cause deformation of the structures. Work performed includes initiating Ph I of the Dam Safety Assurance Program (DSAP) seepage, seismic and hydrologic studies. Investigations initiated were funded both under O&M funds and construction general.

Local cooperation Fully complied with.

Operations and results during fiscal year. New work: None. Maintenance: Maintenance and operation of project, including recreation facilities,

was continued. Structures were maintained in serviceable condition. Runoff above Martis Creek Dam was below normal Maximum storage of 843 acre-feet occurred on February 11, 2007. Maximum hourly inflow to the reservoir was 92 cfs on February 10, 2007. Maximum release of 47 cfs on June 9, 2007. During the year, 7,920 acre-feet was released for irrigation and other purposes and no amount was released for flood control.

Historical summary Project construction began in August 1967; dam closure was in October 1971; dam completed in August 1972; basic recreation facilities were completed in December 1972; and project was completed in June 1974. Recreation facilities under Code 710 funding were considered infeasible. Dam safety assurance studies were initiated in FY 1981.

22. MERCED COUNTY STREAMS, CA

Location In vicinity of city of Merced, CA, on streams draining from Mariposa County foothills of the Sierra Nevada into Merced County. Streams lie easterly of and drain into the San Joaquin River between Chowchilla River on the south and Merced River on the north. Drainage area represents about 1,000 square miles; nearly 700 square miles of foothills and mountains in Mariposa County and about 300 square miles of flood plain in Merced County. (See Geological Survey quadrangles for area.)

Existing project Project is a modification of Merced County Stream Group, Calif., Improvement No. 18, authorized by 1944 Flood Control Act (H. Doc. 473, 78th Cong., 2d sess.) and completed in FY 1957. Existing project provides for enlargement of four existing reservoirs Bums, Bear, Owens, and Mariposa, providing a total capacity of 117,900 acre-feet for multipurpose storage; channel improvements in reaches of Bear, Black Rascal, and Deadman Creeks, thereby tying the existing project channels into the USFWS grasslands and into Eastside Bypass of San Joaquin River flood control system. Bear, Bums, and Owens projects would provide flood control only; Castle and Bums projects, flood control and recreation; Marguerite project, flood control and irrigation; and Mariposa project, all three purposes. Existing project was adopted by 1970 Flood Control Act.

Current plan of improvement would defer enlargement of existing Mariposa reservoir and the

irrigation function associated with the latter two facilities, enlargement of existing Owens reservoir and about 32 miles of levee and channel improvement on Owens, Mariposa, and Deadman-Dutchman Creeks. Estimated total project cost (October 1996) is \$132,700,000 (includes an allowance for estimated inflation through the construction period), of which \$91,800,000 is Federal and \$40,900,000 is non-Federal (which includes a \$6,855,000 cash contribution).

Local cooperation Local interests are required to provide lands, easements, and rights-of-way and dredged material disposal areas; modify or relocate buildings, utilities, roads, and other facilities, where necessary in the construction of the project; pay one-half of the separable and joint costs allocated to recreation, presently estimated at \$282,000, of which \$240,000 is a cash contribution and \$42,000 is for lands; and bear all costs of operation, maintenance, and replacement of flood control facilities. Total non-Federal share of Castle Dam first cost is \$5,230,000 and includes cash contribution of \$595,000.

The California Reclamation Board and the City of Merced are the local sponsors of the authorized project. The Reclamation Board will serve as sole sponsor for the Castle Dam Unit. Merced County Board of Supervisors reaffirmed their support for the project by letter of April 4, 1986. City of Merced by letter of March 13, 1986, reaffirmed its support for and intent to furnish assurances for recreation aspects of the project. California Reclamation Board reaffirmed its support for total project by letter of April 9, 1986. A Local Cooperation Agreement (Sec. 221) was executed for Castle Dam Unit on June 27, 1986. State of California legislation (AB3369) was enacted on September 14, 1986 which enabled the Reclamation Board to financially participate in the project. A new Local Cooperation Agreement (LCA) was signed by the Assistant Secretary of the Army November 30, 1988, in accordance with the Water Resources Development Act of 1986. The California Reclamation Board, the Merced County Board of Supervisors and the city of Merced have indicated support for balance of the project by letters of intent dated August 29, 1991 and August 20, 1991, respectively. This support was again reaffirmed in letters of support as provided by the California Reclamation Board on January 9, 1996.

Operations and results during fiscal year. Continued work on the General Reevaluation Report. Runoff above Martis Creek Dam was above normal for the year. Maximum storage of 843 acre-feet occurred on February 11, 2007. Maximum inflow to

the reservoir was 92 cubic feet per second on February 10, 2007 and maximum outflow of 47 cubic feet per second occurred on June 9, 2007. During the year 7,920 acre-feet was released for irrigation purposes. Releases for flood control amounted to 0 acre-feet.

Historical summary Castle Dam multicomponent construction contract was awarded February 26, 1991, and construction was completed in March 1993. Castle Dam check structure contract was initiated in April 1993 and completed in January 1994. Castle Dam was transferred to the sponsor on April 12, 1995, and accepted by the sponsor in FY 2000. GRR for Haystack Dam portion was initiated in 2001.

23. MERCED COUNTY STREAM GROUP, CA

Location Reservoirs and channel improvements are on Bear, Burns, Mariposa, and Owens Creeks, in foothills of Sierra Nevada about 15 to 20 miles east of city of Merced, CA. (See Geological Survey Haystack Mountain quadrangle for Burns and Indian Gulch quadrangle for Bear, Owens, and Mariposa areas.)

Existing project For description of completed improvements and authorizing act, see Annual Report for 1962. Improvements consist of reservoirs at Mariposa, Owens, Burns and Bear Creeks and diversions from Black Rascal Creek to Bear Creek and from Creek to Mariposa Creek. Total first cost for project was \$3,899,259, of which \$2,751,259 was Federal and \$1,148,000 non-Federal for lands including relocations and channel improvement.

Local cooperation Fully complied with.

Operations and results during fiscal year. Maintenance: Ordinary maintenance and operation of the four completed reservoirs continued. Structures were maintained in a serviceable condition. Runoff from drainage areas below Merced County stream group reservoirs was below normal for the year. See Table 35-K for maximum inflow storage and outflow for the projects. Outflows were less than channel capacity in the project streams.

Historical summary Construction was initiated March 1948, with construction of Mariposa project, which was completed in November 1948. Construction of Owens project, initiated in March, was completed in October 1949; Burns project, initiated in July 1949, was completed in January

SACRAMENTO, CA DISTRICT

1950; and Bear project initiated in April, was completed in December 1954. Black Rascal and Owens Creek diversion channels and stream-gaging stations were completed in April 1956. Local interests completed channel enlargement and restoration of channel capacities of Miles, Bums, Owens, and Mariposa Creeks in 1956 at their expense. Improvement of Bear Creek and Black Rascal Slough, below their confluence, was deferred pending possible improvements downstream, outside limits of project.

24. NAPA RIVER, CA

Location The project is located in the city and county of Napa, California. The Napa River drainage basin, comprising 426 square miles, is just north of San Pablo Bay and approximately 40 miles northeast of San Francisco, California.

Existing project A major portion of the presently developed area of the city is located in a high flood hazard area and is subject to flooding. The project consists of modifications to provide the project area with 100-year level of flood protection from Napa River and Napa Creek. Channel modifications include overbank excavation, vertical walls, floodwalls, levees, bridge modifications, pumping stations and flowage easements. The project also includes recreation trails and incidental ecosystem restoration. Current total project cost estimate is \$310,700,000 and is to be cost shared 75% Federal and 25% local sponsor.

Local cooperation In March 1998, the Napa County electorate passed "Measure A" to fund the non-Federal share of the project. In February 2000, Napa County Flood Control and Water Conservation District, the local sponsor, signed a Project Cooperation Agreement for the project. The sponsor will furnish lands, easements, rights of way and borrow and excavated or dredged material disposal areas; modify or relocate utilities, roads, bridges (except railroad bridges) and other facilities where necessary for the construction of the project; provide 5 percent of the costs allocated to flood control and bear all costs of operation, maintenance, repair, rehabilitation and replacement for flood control facilities; and pay one-half of the separable costs allocated to recreation (except recreational navigation) and bear all costs of operation, maintenance, repair, rehabilitation and replacement or recreation facilities.

Operations during fiscal year. Continued contract 2 West (Hatt to First) and completed work

on NSD excavation and Duden excavation contracts. Contract 2 West (Hatt to First Street) will be completed in 2nd quarter FY08. In addition, planning and design will continue on Contract 3 (Napa Valley Wine Train Rail Road Relocation and Oxbow/Bypass design efforts) and Contract 4 (Napa Creek design effort).

Historical summary The project was authorized by the Flood Control Act of 1965 for flood control and recreation and was modified by the Flood Control Act of 1976 to include modifications to Napa Creek. The project was placed in inactive status in 1978. Following severe flooding in February 1986, the sponsor requested reactivation of the project. Funds to resume pre-construction engineering and design (PED) were appropriated in fiscal year 1989. A revised Final SGDM was completed in October 1998 and approved in May 1999. The ROD for the revised SEIS/EIR was issued in June 1999. The PED phase of the project was completed in fiscal year 2000 at a total cost of \$15,587,000. Project was approved as new start construction for fiscal year 2000. Construction Contract 1A, estimated at \$2,550,000, was completed in October 2000. Demolition contract was completed in October 2002 and Phase 1 HTRW Remediation was completed in December 2002 and Phase 2 remediation was completed February 2004. Contract 1B was completed in May 2004. Planning, engineering and design, construction management and non-Federal lands certification efforts continue.

25. PAJARO RIVER, CA

Location In the Uvas-Carnadero and Llagas Creeks watersheds of the upper Pajaro River Basin in south Santa Clara County in vicinity of the city of Gilroy about 75 miles south of San Francisco, CA.

Existing project See Annual Report for 1996, pg. 35-15.

Local cooperation Fully complied with. Local Cooperation Agreement (LCA) for flood control was executed with the Santa Clara Valley Water District on June 25, 1987, and LCA for recreation was executed with the City of Gilroy on July 27, 1987.

Operations and results during fiscal year. The project is fiscally completed.

Historical summary Responsibility for remaining portions of advance engineering and design, plans and specifications, and construction was transferred to Sacramento District in April 1982. Construction

began in October 1987. Construction for the first contract (levee work and bike path upstream of Thomas Road Bridge), second contract (levee work and hiking trails), and third and final contract (landscaping) has been transferred to local interests for operation and maintenance. Total reimbursement of \$5,583,369 has been made to the local sponsor.

26. PINE FLAT LAKE AND KINGS RIVER, CA

Location Reservoir is on Kings River, about 25 miles east of Fresno, CA, and channel improvements are on Kings River downstream from Lemoore weir, about 25 miles south of Fresno. (See Geological Survey quadrangles of area.) Project also includes 2,500 acres of Forest Service recreation land near Pine Flat Lake.

Existing project Improvement is a unit in comprehensive plan for flood control and other related purposes for Sacramento-San Joaquin Basins. Project consists of a 429-foot high concrete gravity darn, including a gated overflow section with a maximum discharge capacity of 391,000 cubic feet per second, creating a reservoir with gross storage capacity of 1 million acre-feet, for flood control, irrigation, and related purposes. Outlet provisions for future power development are included in dam, but Federal construction of power-generating facilities is not authorized. Improvement also includes levee and channel work on Kings River and its tributaries on valley floor about 25 miles south of Fresno. Channel improvement work will enlarge channel capacities and regulate flows in lower branches of the Kings River. There are nine public-use and recreation areas: One maintained by the Corps, four by the Forest Service, three jointly by the Corps and concession, and one by Fresno County. Also, five boat access-only areas are maintained by the Corps on the south side of the reservoir. Project cost is \$42,072,330, of which \$41,502,330 is Federal (including \$13,700 for basic recreation facilities) and \$570,000 non-Federal for rights-of-way for downstream channel improvements. For future non-Federal reimbursement, see Local cooperation paragraph. Federal cost of recreation facilities for Pine Flat Lake, funded from Code 710 appropriations is \$1,595,100 exclusive of recreation facilities previously provided at a cost of \$13,700. In addition, Federal cost of recreation facilities for Pine Flat Lake, funded from Public Works Acceleration Executive Act of 1962 appropriations, was \$239,235 (July 1963). Operation and maintenance of dam and reservoir is Federal responsibility. Existing project

was adopted by 1944 Flood Control Act (H. Doc. 630, 76th Cong., 3d sess., contains latest published map).

Local cooperation Local interests must reimburse the Federal Government for first costs allocated to irrigation functions of reservoir portion of project in accordance with reclamation law. Under provision of War Department Civil Appropriations Act of 1947, the Secretary of War, with concurrence of the Secretary of the Interior, determined allocation of cost to irrigation should be set at an amount not to exceed \$14,250,000. In addition, local interests must pay 37.4 percent of annual maintenance, operation, and replacement costs of dam and reservoir allocated to irrigation function. Repayment contracts between the Bureau of Reclamation and the local water users for the irrigation use of the reservoir were executed December 23, 1963. The Bureau is administering the contracts in accordance with reclamation law as amended by the Reclamation Reform Act of October 12, 1982. That act generally exempts the limitations under the early reclamation laws as being applicable to projects constructed by the Corps with two exceptions; however, all existing contracts to share construction and maintenance costs remain in effect. Prior to execution of the final contracts, the Bureau provided conservation water to local interests under an interim contract. Irrigation interests paid \$15,154,593 for irrigation services through December 31, 2003. With respect to the downstream channel improvements, sec. 3, Flood Control Act of June 22, 1936, applies. King River Conservation District represents local interests; assurances were accepted November 20, 1959. Local interests have furnished all requirements for construction rights-of-way for construction of channel improvements required to date. Three concessionaires each at Lakeridge Marina (Deer Creek), Pine Flat Marina and Trimmer Marina provided public-use facilities in accordance with lease agreements with the Secretary of the Army. Estimated cost to date of facilities installed by these concessionaires is \$1,727,000. Fresno County developed public-use facilities on an 85-acre tract immediately downstream from dam for picnicking, camping, swimming, and playground activities, at an estimated cost of \$476,000 under provisions of a license agreement. The U.S. Forest Service developed and operates a picnic area at the upper end of reservoir. Cost of site development is about \$37,500. Installation of a hydroelectric power plant, located at the downstream toe of the Corps Pine Flat Dam, was completed in January 1984 by Kings River Conservation District. Project consists of an outdoor-type powerhouse containing three generating units with capacities of 55 megawatts each for a total of

SACRAMENTO, CA DISTRICT

165 megawatts. Conservation District would make use of the three existing 13.5-foot diameter penstocks that were installed in Pine Flat Dam when constructed in 1954.

Licenses. License No. 1988, effective April 1, 1955, was issued by Federal Power Commission to Pacific Gas and Electric Co. for hydroelectric power development of North Fork Kings River by the company upstream from the Pine Flat reservoir. Under interim Contract No. DA-04-167-eng-1182 with the Department of the Army, Pacific Gas and Electric Co. paid for storage of power water in the Pine Flat reservoir May 15, 1954, through March 31, 1955. Current Contract No. DA-04-167-eng-1328 with the Department of the Army provides for storage of power water at the rate of 0.1375 per acre-foot; the contract covers April 1, 1955, through March 31, 2005. By an agreement of January 1972, supplementing the December 1954 contract, Pacific Gas and Electric Co. transferred ownership of most of its Kings River system water to the Kings River Water Association. Accordingly, no further significant storage service to Pacific Gas and Electric Co. by the reservoir at Pine Flat is anticipated. Total payment under these contracts through June 30, 1972, (last year of payment), amounts to \$2,478,798; these funds were paid to Sacramento District and deposited for return to the Treasury. License No. 2741, effective September 25, 1979, was issued by the Federal Energy Regulatory Commission to the Kings River Conservation District for hydropower development at the downstream toe of the Corps Pine Flat Dam. Payment to the Department of the Army for construction and installation of the penstocks in the amount of \$1,044,685 was made to Sacramento District and deposited for return to the Treasury in November 1985.

Operations and results during fiscal year. New work, regular funds: None. Code 710 funds: None. Maintenance: Maintenance and operation activities continued. Structures were maintained in serviceable condition. Runoff of Kings River above Pine Flat Dam was above below for the year. Maximum storage of 698,816 acre-feet occurred on May 24, 2007. Maximum hourly inflow to the reservoir was 6,958 cubic feet per second on May 13, 2007, and maximum outflow of 1,573 cubic feet per second occurred on July 12, 2007. During the year, 1,004,940 acre-feet was released for irrigation and spreading. Release for flood control amounted to 0 acre-feet.

Historical summary Construction began in April 1947 and project, including channel improvement, was completed in September 1977. Main dam was

initiated in January 1950, completed in June 1954, and has been operating since February 1954 to provide flood protection for which it was designed. Total of 35.2 miles of new and reconstructed levees and 13.2 miles of channel clearing have been transferred to the Kings River Conservation District for maintenance. Recreation facilities for various recreation areas under Code 710 appropriation are complete. Completed preliminary design and cost estimates for Pine Flat fish barrier were reviewed by the State, but the State was unable to provide necessary assurances of local cooperation. Dam safety assurance studies were initiated in FY 1982. A cultural resources survey was completed in FY 1984. On May 15, 1991, Pine Flat Lake acquired additional acreage as part of a memorandum of understanding (MOU) between the Secretary of the Army and Secretary of Agriculture (Forest Service). The Corps exchanged Isabella Lake and the 16,000 acres around that lake currently being used for park and recreational purposes for approximately 2,500 acres of Forest Service recreation land near Pine Flat Lake.

27. REDBANK AND FANCHER CREEKS, CA

Project complete. See FY05 Annual Report, page 35-20 for details

28. REGIONAL CONJUNCTIVE USE, CA

See Sacramento Area, CA, pg 35-29

29. RUSSIAN RIVER BASIN, CA

Reported on by the San Francisco District.

30. SACRAMENTO RIVER AND TRIBUTARIES, CA, FROM COLLINSVILLE TO SHASTA DAM

Location Rises in Trinity Mountains in north-central California, flows generally southerly about 6 miles and empties into Suisun Bay, an arm of San Francisco Bay at Collinsville, CA. Works covered by this improvement are on Sacramento River and tributaries from Collinsville to Shasta Dam, about mile 312. Drainage area above Rio Vista is 26,500 square miles (See Geological Survey quadrangles of area for Sacramento River and Upper Butte Basin; Flournoy and Fruto quadrangles for Black Butte Lake; and Tuscan Buttes, Tehama, Redding, and Hooker quadrangles for Table Mountain Lake.)

Existing project Improvement of Sacramento River and tributaries, from Collinsville to Shasta Dam was authorized as a unit of a comprehensive plan for flood control and other related purposes in Sacramento River Basin. (a) Sacramento River and major and minor tributaries, for flood control purposes: Enlargement of existing levees on Sacramento River between vicinity of Moulton weir and Ord Bend; construction of new levees from present levee terminus to vicinity of Chico Landing; construction of a weir near Chico Landing, extension of Moulton weir, and construction of a bypass through Upper Butte Basin; construction of new levees in Lower Butte Basin; enlargement of existing levees in Sutter, Tisdale, Sacramento, and Yolo Bypasses; and levee construction and/or channel enlargement on following minor tributaries of Sacramento River: Antelope Creek; Chico and Mud Creeks and Sandy Gulch; Butte and Little Chico Creeks; Cherokee Canal; Elder Creek; Deer Creek (Tehama County); Thomes Creek; and Willow Creek. Improvement provides for about 155 miles of channel improvement and about 294 miles of levees with an average height of 12 feet and a freeboard of 3 feet. Improvement also provides for revetment as required for protection of bypass levee slopes against erosion. Total first cost for project is \$18,300,000 (October 1988), of which \$11,900,000 is Federal, and \$6,400,000 non-Federal for lands and damages, including relocations. (See table 35-N on project units classified and excluded from cost estimate.) (b) Sacramento River, Chico Landing to Red Bluff, CA: An extension of the existing Sacramento River Flood Control project which provides for construction of bank protection works and minor channel improvements as required on Sacramento River between Chico Landing and Red Bluff for flood control purposes. Estimated first cost (October 1987) for project work in Tehama, Butte, and Glenn Counties is \$31,000,000, of which \$25,700,000 is Federal cost and \$5,300,000 non-Federal cost for lands and damages including relocations and cash contribution of \$3,435,000. (c) Sacramento River, CA, Bank Protection Project: Includes initial phase covering 430,000 lineal feet of bank protection and a second phase covering 405,000 lineal feet of bank protection under a long range program of bank protection, erosion control works, and setback levees at critical locations within limits of authorized or existing levees included in the Sacramento River Flood Control project to protect integrity of levee system for flood control purposes. Total estimated (October 2005) first cost for project is \$496,545,000, (includes an allowance for estimated inflation through the construction period) of which \$365,823,000 is Federal and \$130,722,000 non-

Federal including lands and damages of \$20,306,000 and required cash contribution of \$108,616,000. There remains approximately 23,500 lineal feet of bank protection under second phase authority. (d) Authorization also provided for Black Butte Lake. For description of completed project see Annual Report for 1975. Federal first cost for project is \$14,508,820, including \$475,507 for basic recreation facilities. For future non-Federal reimbursement, see Local cooperation paragraph. Federal cost for recreation facilities funded from Code 710 appropriations is \$1,000,162. A concessionaire at Black Butte Marina provided public use facilities in accordance with lease agreement with the Secretary of the Army at an estimated cost to date of \$87,000. (e) Authorization also provided for construction of Table Mountain (Iron Canyon) project, an earthfill dam on Sacramento River about 3 miles north of Red Bluff, CA. For details, see Annual Report for 1978.

Local cooperation (a) Sacramento River and major and minor tributaries: Sec. 3, Flood Control Act of June 22, 1936, applies. Fully complied with for all work completed or under contract, and local interests indicated they will be able to fulfill requirements for remaining work as scheduled. Levee construction (107 miles) total requirement for the "active" project has been completed, transferred to, and accepted by the State. (b) Sacramento River, Chico Landing to Red Bluff: Sec. 3, Flood Control Act of June 22, 1936, applies; local interests must also assume responsibility for flood plain zoning. Fully complied with for portions completed in Tehama, Butte, and Glenn Counties; completed work, bank protection at 36 sites, was transferred to and accepted by the State. (c) Sacramento River Bank Protection Project: Sec. 3, Flood Control Act of June 22, 1936, applies. Water Resources Development Act of 1986 also applies. Cost sharing percentages vary according to timeframe work was accomplished. For ongoing work, local interests must contribute an amount in cash that, when added to the cost of lands easement, rights-of-way and utility modifications, equal one-quarter of each unit of remedial work. In addition, for reaches where local interests request bank stabilization in lieu of more feasible levee setbacks, local interests will contribute costs over and above costs of setbacks, and provide local contribution. Due to Governor's declaration of an emergency situation, the State has advanced \$32,000,000 in FY06 to accelerate work on levees in the Sacramento area. (d) Black Butte Lake: None required for construction. Local interests must pay the portion of first cost and annual operation and maintenance costs allocated to the conservation functions of the project; these costs are estimated at

SACRAMENTO, CA DISTRICT

39.9 percent of first cost and 40.2 percent of annual costs. From March 2, 1960, to October 22, 1970, contract between the Bureau of Reclamation and the State of California provided for repayment of irrigation storage costs; Bureau administered contract in accordance with reclamation law. Local interests paid a total of \$77,205 for irrigation services during this period. Public Law 502, 91st Cong., 2d sess., October 23, 1970, provided that Black Butte project be financially integrated with the Central Valley project, coordinated operationally with other Central Valley project storage units by the Bureau under the Secretary of the Interior, and that dam and reservoir at Black Butte be physically operated and maintained by the Corps in a manner compatible with recreational use of the reservoir.

Operations and results during fiscal year. New work: (a) Sacramento River and major and minor tributaries None. (b) Sacramento River, Chico Landing to Red Bluff. None. (c) Sacramento River Bank Protection Project has completed 11 critical erosion sites from Sacramento River RM 26.9 through RM 123.5 (NOTE: planting establishment maintenance contracts will continue for 3 additional years, however). Fiscal costs associated with these contracts were approximately \$61M. (d) Black Butte Lake, regular funds: None. Code 710 funds: None. Maintenance: Maintenance and operation activities continued. Structures were maintained in serviceable condition. Runoff above Black Butte Dam was below normal for the year. Maximum storage of 78,119 acre-feet occurred April 2, 2007. Maximum hourly inflow to Black Butte reservoir was 7,136 cubic feet per second on February 10, 2007, and maximum outflow of 762 cubic feet per second occurred on January 9, 2007. During the year, 44,390 acre-feet was released for flood control and 134,840 acre-feet was released for irrigation and other purposes. (e) Table Mountain (Iron Canyon) Lake: None.

Historical summary (a) Sacramento River and major and minor tributaries (active portions): Construction was initiated in May 1949 on Deer Creek and Butte Creek units; Cherokee Canal, Elder Creek, Chico and Mud Creeks, and Sandy Gulch units have been completed. Active portion of this improvement is about 99 percent complete. Work remaining is bypass levee revetment as required, which will accomplish under Sacramento River Bank Protection project. (b) Sacramento River, Chico Landing to Red Bluff: Active portion of project, bank protection in Tehama County, was initiated in June 1963 and completed in March 1964. Project was reopened in June 1968 to place additional necessary bank protection. Work at 36 sites was completed in

Tehama, Butte, and Glenn Counties as of September 1985 and transferred to State for maintenance. Bank protection on Sacramento River, Tehama County one site, mile 215, (Unit 5), was completed November 1982, two sites, mile 209.5 and mile 217.5, (Unit 6), were completed in November 1983, and four sites, 241.0, 237.9, 237.7, and 237.5 (Unit 7) were completed in February 1985.(c) Sacramento River Bank Protection Project: First phase (pre-Separable Element 38B and second phase (SE 38B-SE42) have 767,000 linear feet complete. The remaining linear feet, commensurate with the LCA amendments 1 and 2 and identified as SE 40,41,42 and 43 have approximately 34,900 linear feet remaining. LCAs were executed for SE 41 in August 1988, for SE38B, 40 and 42 in December 1988 and for first phase mitigation in June 1990. Contract LAR 1A1, Site 3 was awarded in August 1996 and completed in December 1996. Contract LAR 1A2, Site 3 (River Park) was awarded in June 1997 and completed in February 1998. Steamboat Slough contract was awarded in September 1997 and completed in November 1997. Contract LAR 1A3, Site (River Park) was awarded in November 1997 and completed in May 1999. Contract for LAR1B, Sites 1, 2, and 4 was awarded July 1998 and completed in December 1999. Contract LAR 2, Site 5, Phase 1 was awarded in January 1999 and completed in March 1999. Contract LAR 2, Site 5, Phase 2 was awarded on August and completed in December 1999. Contract 41D, RD108 was awarded August 2000 and completed in December 2001. Contract 40E, River mile 149 was awarded September 2001 and completed November 2002. A site reconnaissance was performed in 2003. In 2004 we began the construction on RM 56.7. During construction the discovery of erosion "caves" and slope instability necessitated extensive additional design work on RM 56.7. Additionally, the identification of 24 critical erosion sites lead to the State of California declaring a state of emergency on many of the Sac Bank levees. The State accelerated funding in FY06 to expedite repairs on these levees, and also concurrently undertook repair actions on their own. In FY07, the Corp began design and construction of 14 sites. (d) Black Butte Lake: Construction began in March 1960 and project is complete. Final land acquisition was completed in December 1966. Construction of main dam was initiated in June 1960 and completed in December 1963. Dam has been operating since November 1962 to provide the flood protection for which it was designed. Final cost allocation approved May 3, 1977. Dam safety assurance studies were initiated in FY 1980 and completed in FY 1986. Piezometer installation and slope for protection at dam were completed in FY 1983. A cultural

resources survey was completed in FY 1984. (e) Table Mountain (Iron Canyon) Lake: Project unit deauthorized as of August 5, 1977.

31. SAN LORENZO, CA

Location Project is located within the city limits of Santa Cruz, CA, in Santa Cruz County, about 70 miles south of city of San Francisco and includes the lower 2.5 miles of San Lorenzo River which terminates at the Pacific Ocean.

Existing project Flood control features of the authorized project consist of construction of 13,000 l.f. of levee embankment raise or floodwalls on top of various portions of the existing project levees on both sides of San Lorenzo River from the Southern Pacific Railroad bridge to Highway 1. Habitat restoration measures include re-vegetating the land-side slopes of the levees. The maximum flood of record occurred in 1955 which inundated 410 acres and caused damages of approximately \$7.6 million. Project was authorized by the Water Resources Development Act of 1996 for flood control and habitat restoration purposes. Streambank erosion control was added to the project under the Water Resources Development Act of 1999. Cost estimate (October 2005) is \$34,500,000 (includes an allowance for estimated inflation through the construction period), of which \$25,260,000 is Federal cost and \$9,240,000 is non-Federal cost.

Local cooperation Local interests are required to provide lands, easements, rights-of-way, and dredged material disposal areas; modify or relocate utilities, roads, bridges (except railroad bridges), and other facilities where necessary in construction of project; pay 22 percent of cost allocated to flood control to bring the total non-Federal share of costs to 25 percent, as determined under Section 103(m) of the Water Resources Development Act of 1986 to reflect the non-Federal sponsor's ability to pay as reduced for credit allowed based on prior work (\$534,000 authorized under Section 215 of the Flood Control Act of 1968); pay 24 percent of the costs allocated to fish and wildlife habitat restoration to bring the total non-Federal share of habitat restoration costs to 25 percent, as determined under Section 103 (m) of the Water Resources Development Act of 1986 to reflect the non-Federal sponsor's ability to pay as reduced for credit allowed based on prior work (\$32,000 authorized under Section 215 of the Flood Control Act of 1968), and bear all costs of operations, maintenance, repair, rehabilitation, and replacement of fish and wildlife facilities. Pay 35 percent of the

costs allocated to stream bank erosion control, and bear all costs of operation, maintenance, repair, rehabilitation and replacement of stream bank erosion control features of the project, and bear all costs of operation, maintenance, repair, rehabilitation, and replacement. Local sponsor, City of Santa Cruz, expressed their continued support for project by letter dated October 8, 1997. The Project Cooperation Agreement (PCA) for flood control was executed October 15, 1998. Streambank erosion control requires an amendment to the PCA. A limited Re-evaluation Report was completed October 2003. The amendment to the PCA was executed in March 2004.

Operations and results during fiscal year. FY06 funds were used to continue plans and specs for the remaining dredging.

Historical summary A flood control project, consisting of levee and channel improvements, was completed in 1959 by the Corps of Engineers. The project was to provide a standard project flood level of protection (about a 200-year event). Since that time, excessive sediment deposition in the streambed has reduced the flood carrying capacity of the existing project. Sediment accumulation and the resultant peak flows during a flood event in January 1982 caused the river to flow near design capacity, even though the storm had a recurrence level of only approximately 25-years. As a result of the flood threat, the City of Santa Cruz and the Corps of Engineers initiated a feasibility study of the San Lorenzo River with the signing of a final Feasibility Cost Sharing Agreement (FCSA) on August 18, 1989. Chief's Report was signed June 30, 1994. Preconstruction engineering and design phase was initiated in March 1994 and completed at a cost of \$934,000. Streambank erosion control required an amendment to the PCA. A Limited Re-evaluation Report was completed in FY 2003.

32. SOUTH SACRAMENTO COUNTY STREAMS, CA

Location The project is located in the southeastern portion of Sacramento County, CA. The project consists of the Morrison Creek Stream Group Basin, approximately 180 square miles in size.

Existing project The flood control features of the project consist of raising and extending the ring levee around the Sacramento Regional Water Treatment Plant; raising the Beach Stone Lakes and Morrison Creek levees; installing floodwalls, using sheet pile, on Morrison, Elder, Florin and Unionhouse Creeks,

and retrofitting bridges to lower the risk of failure due to flooding. Recreation features include a bicycle and pedestrian trail. Restoration of ecosystem at five sites would increase water quality to open water environments and enhance and expand wetlands, riparian vegetation, grasslands, and woodlands. Significant flooding occurred in 1952, 1955, 1962, 1963, 1967, 1969, 1973, 1982, 1995, and 1997. In January 1995, intense rainfall resulted in record flows on Morrison Creek near or exceeding the 1 in 100 annual event. Significant development has occurred in the upper basin, which is increasing the runoff and potential for flooding. The levees currently provide less than a 100-year level of protection. The selected plan would provide a high level of protection (1 in 500 annual event) to all areas of the basin. Cost estimate (October 2005) is \$92,000,000 (includes an allowance for estimated inflation through the construction period), of which \$ 59,500,000 is Federal cost and \$ 32,500,000 is non-Federal cost.

Local cooperation Local interests are required to provide lands, easements, rights-of-way, and borrow, excavated or dredged material disposal areas; modify or relocate utilities, roads, bridges (except railroad bridges), and other facilities where necessary for the construction of the project; pay 21 percent of the costs allocated to flood control and environmental restoration to bring the total non-Federal share to 35 percent for flood control and environmental restoration as reduced for credit allowed based on prior work (\$7.2m as authorized under Section 104 of WRDA 86), and bear all costs of operation, maintenance, repair, rehabilitation and replacement of recreation facilities.

Operations and results during fiscal year. A contract for construction of the ecosystem restoration portion of the project was awarded in December 03 and is currently ongoing. The first construction contract was completed in January 2006. Contract 1B was awarded July 2006 and will be completed in 2008. Contract 1B2 was awarded September 2007.

Historical summary Construction General funds were appropriated in FY 2002 by Congressional aid. PED agreement was executed May 1998. The Chief's Report was signed October 1998. Ecosystem restoration construction contract awarded Dec 2003. The Division Commander approved the completed Limited Reevaluation Report in February 05. The PCA was executed in May 05 and the initial construction contract for the project was awarded June 05.

33. STOCKTON METROPOLITAN AREA REIMBURSEMENT, CA

Location The primary project area is in the city of Stockton, California, approximately 40 miles south of Sacramento and 85 miles east of San Francisco. The approximately 200 square mile area extends from Bear Creek on the north, Mormon Slough on the south, the confluence with the Sacramento/San Joaquin Delta on the west and Jack Tone Road on the east.

Existing project Project will reimburse the sponsor for locally constructed improvements made to the existing levee system along the Bear Creek System and the Calaveras River System. After flooding in northern CA in 1986, FEMA initiated a flood zone restudy of the Stockton area. Draft Flood Insurance Rate Maps were released delineating a larger 100-year flood plain than previously recorded, affecting approximately 251,000 residents. Section 211 crediting report concluded that the San Joaquin Area Flood Control Agency's improvements to the Lower Mosher Slough area, with a non-Federal cost of \$4.3 million, are not eligible for reimbursement. In addition, improvements to approximately 12,000 feet of the Upper Calaveras River Levee System with a non-Federal cost of \$3.28 million, 3,300 feet of Upper Mosher Creek with a non-Federal cost of \$812,000 and permitting costs of \$773,000 were determined to be ineligible for reimbursement. These areas did not meet the Corps of Engineers minimum flow criteria for participation in urban flood control projects.

Local cooperation San Joaquin Area Flood Control Agency (SJAFCA)

Operations and results during fiscal year. FY 2007 reimbursement of \$1,051M brought the total reimbursement to date to \$22,524M.

Historical summary SJAFCA, the local sponsor, completed the construction of a flood control project in March 1999 at 100% local cost. SJAFCA, under authority of WRDA of 1996, Sec 211 (i), entered into a FCSA w/Corps to study the credit/reimbursement of local project costs. Draft 211 report completed Nov 99; HQ reviewed and sent to ASA (CW) Sep 00; ASA sent to OMB Jan 01; OMB sent to ASA Feb 01. ASA approved the report Jul 01. MOA was signed 2 Mar 02. The first reimbursement of \$7M was made Mar 02, with a total of \$22.524M reimbursed to date.

34. SUCCESS RIVER, CA DSAP

Location. Success Dam and Reservoir are located on the Tule River within Tulare Lake Basin about 5 miles east and upstream of the town of Porterville, Tulare County, and about 60 miles north of Bakersfield, CA.

Existing Project. Tule River drains about 390 square miles into Success Lake, flowing from the lake through Porterville, and continuing 25 miles through agricultural areas. Construction of the dam was completed in May 1961. Recent studies concluded that a Maximum Credible Earthquake would cause extensive loss of strength, slope instability and deformation over a section of the embankment. Similar damage levels may also result from lesser earthquake events. The Dam Safety Assurance Program Evaluation Report recommends remediation to prevent a catastrophic failure of the dam resulting in loss of life and damages estimated at \$941M.

Local Cooperation. The local sponsor is the Tule River Association.

Operations and results during fiscal year: Design, testing and analysis efforts continued.

Historical Summary. The Success Dam, Success Lake, Tule River, California Dam Safety Assurance Program (DSAP) Evaluation Report dated Apr 1998 was resubmitted for review and approval 1 Feb 99; approved 7 May 99. Engineering and Design was initiated in FY 99 with O&M funding. The Success Dam, Success Lake, Tule River, California Dam Safety Assurance Program (DSAP) Evaluation Report dated Apr 1998 was approved 7 May 99. Funds were appropriated for a new construction start in FY 00. Design will be completed FY 10. Foundation explorations determined an RCC dam was not a viable alternative, therefore, an earthen dam has been selected. For safety reasons, the reservoir level will be lowered until the new dam is completed, resulting in negative impacts to the area.

35. TULE RIVER, CA

Location. The project area is located within the 12,500 square-mile Tulare Lake Basin located in the southeast portion of the San Joaquin Valley.

Existing Project. Tule River drains about 390

square miles into Success Lake and flows from the lake on to the valley through the city of Porterville, 5 miles downstream, and continues another 25 miles through agricultural areas, culminating in Tulare Lakebed. Serious flood problems occur in the Tule River Basin generally as a result of inadequate channel capacities. The authorized project is to raise the gross pool elevation of Success Lake for flood control and irrigation water supply by raising the spillway 10 feet and widening the spillway from the existing 200 feet to 365 feet.

Local Cooperation. The Project Cooperation Agreement (PCA) was executed June 2003 with the State of California Reclamation Board and the Lower Tule River Irrigations District. Project is cost shared 65% Federal and 35% Non-Federal.

Operations and results during FY: None.

Historical Summary. Flooding occurred in 1966 and 1983. 1983 flood damages downstream in the Tulare Lakebed were extremely severe and widespread; damages attributed to the Tule River were approx \$8 million @ 2000 price levels. The first construction contract to extend the upper level boat ramp and parking area at the Tule Recreation Area was completed in January 2004. Due to remediation work at Success Dam associated with seismic deficiencies, the Non-Federal Sponsors have requested that work on the project be postponed in FY05 through FY07.

36. UPPER JORDAN RIVER, UT

Location Project is located in Salt Lake County, Utah just south of Salt Lake City corporate limit.

Existing project The project includes construction of a flood control diversion and sediment control structure on Mill Creek, a 1.4 mile underground conduit from the diversion structure to a detention basin, and construction of a 100 acre foot Hillview Detention Basin. The project will divert flood flows from Mill Creek to the detention basin and ultimately into Big Cottonwood Creek. The project will provide 100 year flood protection on Mill Creek above State Street.

Local cooperation Local interests are required to provide lands, easements, rights of way, and borrow and excavated or dredged material disposal areas. Modify or relocate utilities, roads, bridges (except railroad bridges), and other facilities where necessary in the construction of the project. Pay 6 percent of the costs allocated to flood control and bear all costs of

SACRAMENTO, CA DISTRICT

operation, maintenance, repair, rehabilitation and replacement of flood control facilities. The non-Federal sponsor has also agreed to make all required payments concurrently with project construction. Salt Lake County will act as the local sponsor for the project. A Project Cooperation Agreement is pending completion of a limited reevaluation report (LRR) and required funding.

Operations and results during fiscal year: None.

Historical summary A feasibility report was completed in 1987 and PED was completed in December 1994. Funds were added in FY 1997 to initiate construction. There has been a long history of flooding which is most commonly associated with snowmelt. The most recent flooding occurred in 1982, 1983, and 1984. A General Design Memorandum (GDM) was approved in December 1994. A project Authorization Change (PAC) report was submitted in January 1996 to obtain Congressional reauthorization on a Section 902 (WRDA 86) new cost limit. The project was reauthorized in WRDA 96.

37. WALNUT CREEK, CA

Location Project is on Walnut Creek and lower reaches of its principal tributaries, Pacheco, Grayson, San Ramon, Las Trampas, Galindo, and Pine Creeks in Contra Costa County, CA. Improvement will extend from Suisun Bay to head of project about 1 mile above southern limits of city of Walnut Creek. City of Walnut Creek is about 10 miles south of Suisun Bay. (See Geological Survey quadrangles for area.)

Existing project Comprises extension of existing levees, construction of new levees and concrete channels, channel rectification and enlargement, and utilization of improvements constructed or planned by local interests. Improvements include about 18 miles of channel improvement, two reinforced-concrete drop structures, two stilling basins, and 10 miles of levees. Cost estimate (October 2005) is \$103,630,000 (includes an allowance for estimated inflation through the construction period), of which \$75,660,000 is Federal cost and \$27,970,000 is non-Federal cost (includes \$19,360,000 for lands and damages and relocations except railroad facilities, and \$5,840,000 required cash contribution for land enhancement benefits provided by the project). Local interests have expended about \$3 million for flood control in the project area during the period 1955-

1965, including the concrete conduits constructed through the city of Walnut Creek at an estimated cost of \$1,000,000 considered a pre-project condition to be incorporated in the Corps project. In addition, local developers have made channel improvements for Upper Pine Creek valued at \$5,050,000. The cost thereof is not included in above costs of local cooperation. Improvement adopted by 1960 Flood Control Act (H. Doc. 76, 86th Cong., 1st sess., contains latest published map).

Local cooperation Section 3, Flood Control Act of June 22, 1936, applies, except that relocation of railroad facilities is a Federal responsibility. In addition, local interests must make a cash contribution to the United States, in amount of 7.4 percent of cost of construction for land enhancement benefits provided by project. Cash contribution is estimated (October 1992) at \$5,840,000. Local interests are represented by Contra Costa County Flood Control and Water Conservation District; formal assurances, including evidence of financial and legal ability to fulfill requirement for the cash contribution, were accepted by the Sacramento District Engineer on November 15, 1963. The Flood Control District furnished all rights-of-way required to date and indicated that it will furnish all requirements as needed for future construction. The Flood Control District arranged for highway bridge modifications and utility relocations before start of work by the Corps contractor

Operations and results during fiscal year. Work on the general re-evaluation report continued in FY07.

Historical summary Construction was initiated June 1964; project is about 98 percent complete. Total of 17.7 miles of channel improvement, 9.2 miles of levee construction, part of channel improvement landscaping, Drop Structures No. 1 and 2 and construction under San Ramon Bypass Contract No. 1, Contract No. 2 and Contract No. 3 and Upper Pine Creek Channel contract have been transferred to local interests for operation and maintenance. Due to difficulties with Contract No. 1 part of the contract work was completed under Contract No. IA with a different contractor. A contract for remedial work on San Ramon Bypass Contract No. 2 channel cover was completed in August 1993. The 9-acre mitigation contract was completed in June 1993. Work remaining consists of completion of erosion control mitigation (8-acre Construction responsibility was transferred from San Francisco District on April 1, 1982.

38. WEST SACRAMENTO, CA

Location Project is located in West Sacramento, Yolo County, in north-central California.

Existing project Project consists of raising 4.9 miles of levees up to 5.0 feet along the Sacramento and Yolo Bypasses; constructing 0.9 miles of slurry cut-off wall approximately 50 feet deep at the waterside toe along the east levee of the Yolo Bypass extending into the south levee of the Sacramento Bypass; constructing concrete wing walls with stop logs at the Union Pacific Railroad; constructing a concrete wing wall and flow cut-off wall on each side of Interstate 80; and developing approximately 40 acres of mitigation lands for riparian and upland habitat loss. Project was authorized by the Water Resources Development Act (WRDA) of 1992. Project was reauthorized by the Energy and Water Development Appropriations Act, 1999 (P.L. 105-245) Estimated cost (October 2005) is \$32,800,000 with a Federal cost of \$24,600,000 and a non-Federal cost of \$8,200,000 which includes a cash contribution.

Local cooperation Local interests are required to provide lands, easements, rights-of-way, and dredged material disposal areas; modify or relocate utilities, roads, bridges (except railroad bridges), and other facilities where necessary in construction of project; pay 14 percent of cost allocated to flood control to bring the total non-Federal share of costs to 25 percent, and bear all costs of operation, maintenance, repair, rehabilitation, and replacement of flood control facilities. The non-Federal sponsor has also agreed to make all required payments concurrently with project construction. A Project Cooperation Agreement (PCA) with the local sponsor, the California State Reclamation Board, was executed in May 1996.

Operations and results during fiscal year. Mitigation monitoring continued.

Historical summary Funds were appropriated in FY 1992 to initiate preconstruction engineering and design (PED) for the combined American River Watershed and Sacramento Metropolitan studies. The two projects were separated when WRDA 92 authorized the West Sacramento Project (Sacramento Metropolitan) independently of the American River Watershed Project. Funds to initiate construction for the West Sacramento Project were appropriated in FY 1995. Design Memorandum was approved in

March 1996. PED was completed at a cost of \$1,847,000. First construction contract in the amount of \$5,217,225 was awarded June 19, 1998. Second construction contract was awarded September 30, 1999 and completed December 2001. First slump repair contract awarded September 2002 and completed November 2003. Second slump repair contract was completed November 2004.

39. WILDCAT AND SAN PABLO CREEKS, CA

Reported on by the San Francisco District.

40. INSPECTION OF COMPLETED FLOOD CONTROL PROJECTS

Approved regulations for operation and maintenance of flood control works, part 208, title 33, Code of Federal Regulations, provide for inspection of completed projects transferred to local interests for operation and maintenance to determine status of project and insure compliance with regulations. During fiscal year, inspections were made of: Completed units of Fairfield Vicinity Streams; completed units of Sacramento River and major and minor tributaries; completed units of Sacramento River, Chico Landing to Red Bluff; completed units of Sacramento River flood control project, Kings River Channel Improvement (Pine Flat Lake project), and Walnut Creek project; American River levees; Merced County Stream group; Middle Creek (Lake County); Chester, North Fork Feather River; levee and channel improvements on Chowchilla River (Buchanan project) and Fresno River (Hidden project); Duck Creek diversion, Green Valley Creek, Littlejohn Creek, Mormon Slough, Bear Creek, Kern River-California Aqueduct Interne, and North Fork, Pit River at Alturas, all in California; Truckee River, CA and NV; completed units of lower San Joaquin River and tributaries, CA; completed units of Red Bank and Fancher Creeks including Big Dry Creek Dam and diversion, and Fancher Dam and Redbank, Alluvial Drain and Pup Creek detention basins, CA; Reese River, Battle Mountain, NV; Sevier River, Redmond and vicinity, Jordan River, Big Wash near Milford, and Kays Creek, all in Utah; various emergency flood control works under authority of Sec. 208, Flood Control Act of June 30, 1948, and September 3, 1954; Public Law 99, June 28, 1955, and antecedent legislation; and Sec. 14 of Flood Control Act of July 24, 1946. Maintenance inspections conducted indicate that existing agreements and regulations are being complied with on completed flood control works. Continuing effort

is required to improve maintenance practices and active steps are being taken by responsible State and local agencies to achieve desired results. Local agencies were advised, as necessary, of measures required to maintain these projects in accordance with standards prescribed by regulations. Total cost of inspections for fiscal year was \$747,426.

41. FLOOD CONTROL WORK UNDER SPECIAL AUTHORIZATION

Flood control activities pursuant to sec. 205, Public Law 858, 80th Congress, as amended (Preauthorization).

Federal cost for fiscal year was \$168,683. See Table P for list of studies.

Emergency flood control activities-repair, flood fighting, and rescue work (Public Law 99, 84th Cong., and antecedent legislation).

Federal cost for fiscal year was \$2,634,980. \$609,249 was for disaster preparedness. \$19,282 for Emergency Operations. \$2,006,454 for Rehabilitation and Inspection, \$0 for Advance Measures.

Emergency bank protection (Sec. 14, 1946 Flood Control Act, Public Law 526, 79th Cong.).

Federal cost for fiscal year was \$68,186. See Table T for list of studies.

Flood insurance activities (Sec. 1301-1377, 1968 Housing and Urban Development Act, Public Law 90-448 as amended).

In coordination with flood control activities, four flood insurance studies were continued. Inter-Agency Agreements EMW-96-1A-0294, EMW-96-1A-0195-FEMA, EMW-96-1A-0195, and EMW-97-1A-0140, at a fiscal year cost of \$126,300 under Federal Emergency Management Agency reimbursable order.

42. SCHEDULING FLOOD CONTROL RESERVOIR OPERATIONS

In accordance with sec. 7, Flood Control Act of 1944, summaries of monthly reservoir operations at Big Dry Creek, Boca, Comanche, Del Valle, Folsom, Friant (Millerton Lake), Indian Valley, Los Banos Detention, New Bullards Bar, New Don Pedro, New Exchequer (Lake McClure), New Melones, Oroville, Prosser, Shasta, and Stampede, CA; East Canyon, Echo, Jordanelle, Little Dell, Lost Creek, Pineview,

Red Fleet, Starvation, and Wanship, UT; and Blue Mesa, Lemon, Paonia, Ridgway, and Vallecito, CO, were prepared. No water control manual revisions were completed due to environmental issues. Corps personnel provided advice Sec. 7 as requested during flood control operations at all c. 7 reservoirs. Fiscal year cost was \$2,274,319.

Environmental Improvement

43. DAVIS LAKE WATER TREATMENT PLANT, CA

Location The project is located in Plumas County, California.

Existing Project The project consists of the construction of a new 1.5 MGD water treatment plant at Lake Davis. The Corps will participate in design and construction assistance through procurement of private services.

Local Cooperation Local Sponsor is Plumas County Flood Control Agency.

Operation and results during fiscal year Began coordination with sponsor. Initiate Construction of the 1.5 Mod WTP.

Historical Summary The City of Portola is in immediate and near-term need of a reliable supply of domestic water for their community. The original Lake Davis Water Treatment Plant is closed because of a State of California, Fish and Game attempt to eradicate a predator fish. That effort damaged the original Lake Davis Water Treatment facilities. The State then constructed two wells for the City for their domestic use. However, the wells are now found to have high levels of arsenic and consequently will be closed by January 2009. The Corps will review sponsor design and construct a new 1.5MGD water treatment plant at Lake Davis in spring 2008.

44. PLACER COUNTY

Location The project is located in Placer County, California.

Existing Project This program would identify opportunities to improve efficiency and use of existing water supplies through water and wastewater projects, programs, and infrastructure. Project cooperation agreements would be executed to

provide design and construction assistance.

Local Cooperation Local sponsor is Placer County

Operations and results during fiscal year Began coordination and negotiation of PCA with sponsor.

Historical Summary Placer County participated in a Water Forum to provide a safe and reliable water supply while preserving the fishery, wildlife, and recreational values of the lower American River. Regional efforts have developed a master plan including conservation and recycling measures to meet water needs while protecting environmental and aesthetic resources. This program would identify opportunities to improve efficiency and use of existing water supplies through wastewater projects, programs and infrastructure. Project cooperation agreements will be executed to provide design, construction or reimbursement assistance.

45. RAMS — RESTORATION OF ABANDONED MINES

Location Presently, there are 94 funded sites and 88 potential sites located in eleven states in the Western Region. The states are Nevada, California, Colorado, Montana, New Mexico, Arizona, Minnesota, Alaska, Utah, Hawaii and Idaho.

Existing project RAMS was authorized in Sec. 560 of WRDA 1999 to provide assistance to non-Fed and nonprofit entities to develop, manage, and maintain a database of conventional and innovative, cost effective technologies for reclamation of abandoned & inactive non-coal mine sites. Consolidated Appropriations Act, 2001 (P.L. 106-554) provided \$5M of previously appropriated funds may be used for this activity. EWDA 2004 (P.L. 108-357) increased authorized amount to \$7.5M. Restoration of Abandoned Mine Sites (RAMS) is a region of four Division's Program established by the Corps in 1999. The participating Divisions are Southwest, South Pacific, Pacific Ocean and Northwest. Technical, planning and design assistance have been scoped within available funds. Funds are also being used to continue program management and support the technology database. WRDA 2007 increased the total project cost to \$20 million.

Local cooperation Authorized in Section 560 of WRDA 99 for technical, planning and design assistance. Work at mines located on Federal property is 100% Federal expense. Mines on non-Federal property are cost shared 50/50.

Historical summary In Dec 98 a MOU was

signed w/NWD, POD, SPD. PMP signed Aug 01 w/SPD & NWD. To date, \$6,744,000 has been allocated to RAMS Program of which \$6,204,000 was allocated to the Sacramento District.

46. RURAL NEVADA, SECTION 595, NV

Location. Rural Nevada (the counties of Lincoln, White Pine, Nye, Eureka, Elko, Humboldt, Pershing, Churchill, Storey, Lyon, Carson, Douglas, Mineral, Esmeralda, and Lander, Nevada; the position of Clarke County, Nevada, that are located outside the cities of Las Vegas, North Las Vegas, and Henderson and the unincorporated portion of the county in Las Vegas Valley.

Existing project. WRDA 1999, SEC. 595 authority provides for design and construction assistance for water-related environmental infrastructure and resource protection and development projects in Rural Nevada for water supply and related facilities; wastewater treatment and related facilities; environmental restoration; and surface water resource protection and development. Projects are to be cost shared 75% Federal and 25% non-Federal; the total program is limited to \$150 million. The Federal share may be in the form of grants or reimbursements of projects costs; the Corps currently manages the program funds using reimbursements. At the close of FY 2006, 16 Project Cooperation Agreements (PCAs) have been signed for a total federal cost of \$72.4 million. Total federal expenditures are \$46.4 million. WRDA 2007 increased the total program limit to \$150 million.

47. RURAL UTAH, SECTION 595, UT

Location. Rural Utah (All counties and cities with the exception of Salt Lake, Davis, Utah, and Weber Counties and St George City in Washington County).

Existing project WRDA 1999, Section 595 as amended provides funding assistance for the design and construction of water supply, wastewater treatment, environmental restoration, and surface water protection projects. Projects are to be cost shared 75% Federal and 25% Non-Federal with the total program limit set at \$25 million. The Federal share may be in the form of grants or reimbursements; the Corps currently manages the program funds using reimbursements. A total of 12 Project Cooperation Agreements have been signed, totaling \$9.6M.

48. SACRAMENTO AREA, CA

(Previously reported as Regional Conjunctive Use, CA)

Location. The project is located in Placer and El Dorado Counties and the San Juan Water District, California.

Existing Project. This region participated in a Water Forum to provide a safe and reliable water supply while preserving the fishery, wildlife, and recreational values of the lower American River. Regional efforts have developed a master plan including conservation and recycling measures to meet water needs while protecting environmental and aesthetic resources. The project would identify water conservation and recycling opportunities, identify opportunities to improve the efficiency and use of existing water supplies through water and wastewater projects, programs, and infrastructures. Cost-sharing agreements would be executed to provide technical, design and construction assistance.

Local Cooperation. Project Cooperation Agreements executed for Placer County Water Agency, San Juan Water District, Regional Water Authority, City of Roseville, City of Auburn, and El Dorado Irrigation District.

Historical Summary. Placer County Water Agency meter installation to commenced March 2005. San Juan Water District hydraulic design started October 2004 and construction April 2008. Regional Water Authority study contract being awarded January 2005. City of Roseville water meters purchased and delivered October 2004. City of Auburn, Lincoln Creek restoration project scheduled to be completed in November 2007.

49. STOCKTON, FARMINGTON RECHARGE, CA

Location The project area includes Stockton metropolitan & surrounding rural areas.

Existing project Groundwater is San Joaquin County's primary water source. Levels have dropped as much as 100 ft. the past 40 years & saline intrusion from the San Joaquin/Sacramento Delta worsens. A significant threat to the San Joaquin County economy exists if saline intrusion continues. Problems involve groundwater overdraft & resulting saline intrusion in the San Joaquin County area. The Corps/SEWD technical investigation concluded the

aquifer is overdrafted and that a saline front is moving toward the aquifer. Field flooding within the recharge corridor was found to be the most cost effective method to recharge and reverse saline intrusion.

Local cooperation Stockton East Water District (SEWD)

Operations and results during fiscal year. No funds were appropriated for this project in FY2007.

Historical summary Section 502 of the WRDA 1999 (amended Section 219 of WRDA 1992) authorized construction of a ground water recharge and conjunctive use project WRDA 1999 Section 502, Environmental Infrastructure, authorized the Corps to provide technical, planning, design and construction assistance to SEWD associated with groundwater recharge and conjunctive use projects in the SEWD, CA. The conjunctive use study completed in Dec 97 concluded that modifications to Farmington Dam could not provide sufficient replacement water supplies to fully meet the groundwater overdraft problem. In addition, it did not appear to be in the Federal interest at the time, to transfer Farmington Dam to either SEWD or another local entity. With these findings, a feasibility study was initiated to investigate multi-purpose groundwater recharge and wetland habitat features and resources. Construction funds were added in FY 02 to execute a PCA in February 2003, implement a groundwater recharge site selection process and initiate construction.

50. TAHOE BASIN RESTORATION

Location The project area is the 500 square mile Lake Tahoe Basin watershed in the Sierra Nevada mountains straddling the border of Nevada and California.

Existing Project The principal purpose of this authority is to provide planning, design, and construction assistance to non-Federal entities in the implementation of projects included in the Environmental Improvement Program.

Local Cooperation The local sponsor for the Risk Analysis study and Mill Creek Restoration is the Incline Village General Improvement District. Local sponsor for five agreement CAIS Management, Angor Restoration, Lake Forest Restoration, Blackwood Creek Restoration and Upper Truckee Restoration is the state of CA.

Operations and results during the fiscal year
Continued coordination with non-Federal sponsors.

Historical Summary Lake Tahoe is designated in the Clean Water Act as an Outstanding National Resource Water due to startling clarity and unique alpine environment. Habitats have been substantially altered through development and construction activities resulting in significant losses in water quality and ecosystem diversity. Restoration of this national treasure is being accomplished through the Environmental Improvement Program, a broadly supported \$2.5 billion local, state, Federal, and private funded 20 year effort.

51. TRIBAL PARTNERSHIP, CALIFORNIA AND NEVADA

Location. The 500 square mile study area is the Lake Tahoe Basin watershed in the Sierra Nevada Mountains straddling the border of California and Nevada. The basin is approximately 100 miles northeast of Sacramento, California and 50 miles southwest of Reno, Nevada.

Existing Project. The Lake Tahoe Basin is land traditionally occupied by the Washoe Tribe. Habitats and pre-Columbian conditions have been substantially altered through construction and development activities. While an extensive physical watershed restoration effort funded by private local, state and Federal entities is currently underway, little attention has been paid to cultural watershed restoration outside of individual project mitigation. The principal purpose of this study is to initiate a watershed style report detailing specific prioritized activities that contribute to cultural restoration.

Local Cooperation. Local interests, Washoe Tribe of California and Nevada, who lobbied for this appropriation strongly desire a Tahoe Basin cultural resource restoration effort.

Historical Summary. Reconnaissance failed to identify viable project.

52. OTHER WORK UNDER SPECIAL AUTHORITY

Aquatic Ecosystem Restoration activities pursuant to sec 206, Public Law 303,104th Congress.

Fiscal Year 2007 Federal costs were \$150,891.

See Table Q for list of studies.

Project Modification to Improve Projects Section 1135, Water Resource Development Act of 1986, Public Law 99-662)

Fiscal Year 2007 costs were \$76,562. See Table R for list of studies.

Multiple-Purpose Projects including Power

53. NEW MELONES LAKE, CA

Location On Stanislaus River about three-quarters mile downstream from existing Melones Dam and about 35 miles northeast of city of Modesto. (See Geological Survey quadrangles of the area.)

Existing project Provides for construction of (a) an earth and rockfill dam about 625 feet high to create a reservoir with gross storage capacity of about 2,400,000 acre-feet for flood control, irrigation, power, general recreation, fish and wildlife, and other purposes, and (b) a power plant below the dam with an installed capacity of 300,000 kilowatts. Upon completion of construction of dam and power plant by the Corps, the project became an integral part of Central Valley project and is being operated and maintained by the Secretary of the Interior pursuant to Federal reclamation laws, except that the flood control operation of the project shall be in accordance with rules and regulations prescribed by the Secretary of the Army. Maintenance of Stanislaus River channel from Goodwin Dam to San Joaquin River to a capacity of at least 8,000 cubic feet per second will also be Corps responsibility. Estimated (October 1996 price level) Federal cost is \$402,000,000. For future non-Federal reimbursement, see Local cooperation paragraph. In addition, local interests expended \$300,000 for levees along lower reaches of Stanislaus River. Existing project was adopted by 1962 Flood Control Act (H. Doc. 453, 87th Cong., 2d sess., contains latest published map). This act modified original authorization adopted by 1944 Flood Control Act. (H. Flood Control Committee Doc. 2, 78th Cong., 2d sess., contains latest published map.) The 1944 Flood Control act established \$8 million monetary limitation for partial accomplishment of project. Further monetary authorizations of \$2.5 million, \$5 million, \$13 million, \$2 million, \$17 million, \$18 million, \$44 million, \$83 million, \$46 million, \$6 million, and \$61 million were provided for this project by Public Laws 235 and 780, 83d Cong., and 85-500, 90-17, 90-483, 91-282, 92-222, 93-251, 94-397, 95-104, and 95-189, making a total monetary authorization of \$305,500,000

SACRAMENTO, CA DISTRICT

available for the basin plan comprising Lower San Joaquin River and tributaries, including Tuolumne and Stanislaus Rivers, CA. Since FY 1979, appropriations have not been subject to the river basin monetary limitation.

Local cooperation Based on approved preliminary cost allocation studies (July 1965) local interests will be required to pay 35.2 percent of first cost and 12.7 percent of annual operation and maintenance costs allocated to irrigation. In addition, 31.1 percent of first cost and 62.5 percent of annual cost would be allocated to power. Local interests must also maintain existing private levees along Stanislaus River from Goodwin Dam to San Joaquin River and prevent encroachment on channel and floodway between levees to preserve safe carrying capacity throughout the reach of at least 8,000 cubic feet per second. Recovery of costs allocated to irrigation and power will be the responsibility of the Bureau of Reclamation. Reimbursement of costs will be in accordance with Bureau policies and procedures for the Central Valley project. State of California officially adopted project by chapter 918 of statutes of 1963, and by chapter 1438 of those statutes authorized State Reclamation Board to furnish required assurances. The Board, by letter dated December 13, 1963, stated it would furnish required assurances when formally requested to do so. Assurances were requested by letter of December 30, 1977. On October 2, 1979, the Board reaffirmed its intent to furnish the required assurances. On January 6, 1983, the Board provided formal assurances of local cooperation.

Operations and results during fiscal year. New work: Project close-out and flowage easement acquisition along the Lower Stanislaus River were continued. Maintenance: Maintenance and operation activities continued on Lower Stanislaus River.

Historical summary Construction was initiated in August 1966. Main dam contract which was awarded in March 1974 has been completed; dam dedication ceremonies were held July 14, 1979. Cultural resources preservation, water intake facilities, flood control and irrigation tailrace modification, reservoir area clearing, Tuttletown Phase I recreation area, Oakdale recreation, Glory Hole Phase I and Phase II recreation area, and operations access road contracts have all been completed. Glory Hole minimal recreation facilities contract has been completed. Boundary fencing, Lower Stanislaus Phase I and Phase II minimal recreation facilities, Lower Stanislaus Corporation Yard, and Lower Stanislaus Administration Building contracts have been completed. Tuttletown minimal recreation facilities,

McHenry recreation area, Tuttletown wastewater treatment, Knights Ferry recreation area, Knights Ferry Covered Bridge, Glory Hole recreation area sanitary system, Two-Mile Bar recreation, administration building, and Glory Hole recreation area force main contracts have been completed. Parrotts Ferry Bridge modification, (Nov, 93), Widening Highway 49 Intersection, (Aug, 94); Tuttletown Recreation Campgrounds, and Tuttletown and Glory Hole Improvement (Jan 94) have been completed. Remaining recreation facilities were unscheduled pending development of cost sharing agreements and/or specific Congressional appropriation of funds. A Memorandum of Understanding between the Department of the Interior and the Department of the Army transferring the New Melones dam and reservoir from the Corps of Engineers to the Bureau of Reclamation was executed on November 20, 1979. Agreement provides that the Corps complete land acquisition actions and retain budgeting, design, and construction responsibility for reservoir clearing and recreation development; completion of cultural resources mitigation in project area was vested in the Department of the Interior. The California State Water Resources Control Board's Decision 1422 of April 1973 established conditions which impacted on the planned filling and operation of the project by the Department of the Interior. As a result, the Department of Interior brought suit against the State of California claiming State limitations on project operation were contrary to Congressional intent and authority. The case was heard before the U.S. District Court in Fresno, CA, and in early March 1981, a Federal judge ruled that the Federal Government could fill the New Melones reservoir for purpose of generating electrical power, but not for agricultural or other purposes. Both the Government and the California State Resources Control Board appealed this decision to the 9th Circuit Court of Appeals in San Francisco, CA.

On December 20, 1982, the Court upheld all 25 requirements placed on the Federal Government by the State Water Resources Control Board. The decision reversed the lower court's decision to permit filling of the reservoir for generating electrical power. The Bureau of Reclamation subsequently filed for a permit from the State Water Resources Control Board to fill the reservoir. Permit was approved. The Bureau had originally started generating power on a limited basis on July 1, 1979; however, after the filling of the reservoir in spring of 1983, full power generating benefits have been attained.

General Investigations

54. SURVEYS

See Table 35-S.

55. COLLECTION AND STUDY OF BASIC DATA

Technical assistance was performed for other Federal agencies as well as non-Federal agencies in connection with Flood Plain Management Services Program at fiscal year Federal costs of \$39,646. No Flood Plain Information Studies were prepared after FY 1980.

Fiscal year costs for hydrologic studies were \$6,618.

56. RESEARCH AND DEVELOPMENT

The Hydrologic Engineering Center was designated as a separate Field Operating Agency as of January 1, 1979, in accordance with OCE permanent orders 1-1, January 10, 1979. In the reorganization of CEIWR, beginning in FY 2001 appropriations and costs will be reported in CEIWR's database not Sacramento District. Sacramento District will continue to provide advisory and administrative support services to HEC as specified in local support agreement DACW05-79-A-0038 of March 1979.

57. PRECONSTRUCTION ENGINEERING AND DESIGN

HAMILTON CITY, CA

The project area is in Glenn County along the west bank of the Sacramento River about 10 miles west of Chico and 85 miles north of Sacramento. The project area includes Hamilton City and the surrounding rural area. The boundaries are the Sacramento River to the east, the Glenn Colusa Canal to the west and extends about two miles north and six miles south of Hamilton City. The project area lies just north of the existing Sacramento River Flood Control Project levees and within the area of extent of the Chico Landing to Red Bluff bank protection project. The feasibility study was accomplished as part of the Sacramento and San Joaquin River Basins Comprehensive Study with the non-Federal sponsor

as the Reclamation Board of California. The project includes construction of 6.8 miles of setback levee to provide a more reliable form of flood protection to the community and surrounding area, degradation of the existing "J" levee to allow for reconnection of the river to the floodplain, and restoration of about 1,500 acres of native habitat between the new setback levee and the Sacramento River. The levee would perform at 3 distinct levels of protection that are associated with three different average levee heights: from north to south, four and two-fifths mile of levee averaging 7.5 feet would provide a 90 percent confidence of passing a 75-year event; 1,000 feet of levee averaging 6 feet in height would provide a 90 percent confidence of passing a 35-year event; and 1.6 miles of levee averaging 3 feet in height would provide a 90 percent confidence of passing an 11-year event.

Current Preconstruction Engineering and Design phase cost is estimated to be \$3,359,000.

MIDDLE CREEK, CA

Middle Creek is located in Lake County, approximately 80 miles north of San Francisco. It is the main tributary that flows into Clear Lake, the largest natural lake entirely within the borders of California. Prior to channelization of Middle Creek by the Corps in 1958 and by others, flows spread out over a wide floodplain upstream of Clear Lake. This area was a significant wetland that provided natural biologic values including waterfowl habitat, water quality through filtering and trapping of sediments, and natural flood attenuation. The Middle Creek Ecosystem Restoration Project will develop a plan to restore the natural functions of the Middle Creek/Clear Lake ecosystem.

Current Preconstruction Engineering and Design phase cost is estimated to be \$3,200,000.

TAHOE BASIN, CA & NV

Study area is in the Lake Tahoe Basin watershed in the Sierra Nevada Mountains, in both California and Nevada, approximately 100 miles northeast of Sacramento, CA and 50 miles southwest of Reno, NV, and covers an area of over 500 square miles. Lake Tahoe is a valuable environmental resource which provides the foundation for nearly all of the economic development in the Tahoe Basin. Habitats have been substantially altered through construction activities resulting in significant losses in water quality and ecosystem diversity. The principal purposes of this study are to examine implementing activities to improve environmental quality at Lake

SACRAMENTO, CA DISTRICT

Tahoe, especially water quality, wetlands habitat and other environmental restoration opportunities.

The final Tahoe Framework Study, initiated in FY02, was transmitted to HQ in 2006 where it is in review before being sent to the ASA(CW). PED initiated in FY04 (Congressional Add) and is scheduled for completion in FY08. PED is very active with significant local participation, with initial products complete and next products in progress.

Current Preconstruction Engineering and Design phase cost is \$3,685,000.

TRUCKEE MEADOWS, NV

The project is located along the Truckee River from the Nevada - California Stateline through the metropolitan areas of Reno and Sparks in Washoe County, downstream to Pyramid Lake, NV. The project will provide flood protection from the Truckee River to the cities of Reno, Sparks, the Truckee Meadows, Rainbow Bend, Painted Rock and Wadsworth while re-connecting the floodplain, removing exotic species and restoring the riparian forest along the Truckee River.

The Truckee Meadows project was authorized for construction in the Water Resources Development Act (WRDA) of 1988 based on a 1985 Feasibility Report. During pre-construction, engineering and design (PED), a re-evaluation of project benefits and costs determined that the project, as then formulated, was no longer feasible due primarily to significant increases in land costs. In 1991 the project was deferred. In 1996, Congress appropriated funding for the Corps to prepare a General Reevaluation Report and evaluate the potential of ecosystem restoration. A re-analysis was completed in a reconnaissance study completed in August 1997. The Corps reactivated the PED phase of the project in March 1998 with the first step to conduct a General Reevaluation Report and Environmental Impact Statement (GRR/EIS). At the request of the local sponsors, a Community Coalition process was initiated in April 2000 to assist in the formulation and selection of project alternatives.

Numerous studies have been completed that relate to environmental restoration, water use, hydrology, hydraulics, flooding, and urban development within the Truckee Meadows area and the Truckee River watershed. Downtown Reno is hydraulically separate from the rest of the downstream project. Six alternatives were proposed for this area, that included variations on bridges and floodwall placement and

had estimated costs between \$30 and \$50M. The economic analysis on damages associated with the 100-yr floodplain indicate there are not enough damages to warrant a federal project in this reach therefore, the Corps is proposing only non-structural remedies like enhancing the Reno Flood Warning System as part of the combined NED/NER plan. The City of Reno has made great progress to reduce flood impacts since the 1997 flood by removing structures out of the 100-yr floodplain, floodproofing new buildings along the river, placing a white water course near Arlington which lowered surface water levels and utilizing a Reno Flood Warning System.

The NED plan for the Truckee Meadows downtown reach consists of removal and replacement of three bridges (Sierra, Virginia, and Lake) with clearspan bridges that will not impede passage of the 100 year event. Even with bridge replacement, there will still be overbank flooding in the downtown reach; however, the damages are not significant enough to justify additional flood control features such as floodwalls. The Locally Preferred Plan (LPP) includes replacement of two bridges (Sierra and Lake) with clearspan and modification to the historic Virginia Street Bridge. Modifications at Virginia Street include the installation of two bypass channels (box culverts) on both sides of the bridge. The hydraulic effectiveness of the bypass channels must be confirmed before the LPP will definitively included these modification.

Flood damage reduction features for the Meadows reach, downstream of the Reno Sparks commercial area, included flood water detention in the Meadows area, benching over several miles alongside the Truckee River for improved conveyance and ecosystem restoration. Levees and floodwalls are proposed for the north bank and for selected areas in the Meadows regions where subdivisions require protection. Several bridges in the Meadows reach (McCarran and Rock) will be modified with new channels.

Riparian restoration at 8 locations in the downstream reaches is proposed. The federal plan and the LPP are identical for ecosystem restoration. Other proposals for downstream restoration include removal of Numana Dam and safer fish passage structures at six to eight irrigation ditch diversion channels.

Estimated preconstruction planning cost is \$30,200,000, at 100% Federal expense.

YUBA RIVER, CA

The Yuba River lies between the Feather and American Rivers in northern California. The study is located in Sutter and Yuba Counties approximately 50 miles north of Sacramento. The principal urban centers within the study area include Marysville, Yuba City, Linda and Olivehurst.

Recommended project, which lies downstream of Daguerre Point and goldfields, would include levee improvements including installation of slurry walls, constructing landside berms, toe drains, and levee raising along the Yuba and Feather Rivers. Area has experienced 7 major floods. Despite modifications for flood protection over past years, the area is still vulnerable to catastrophic flooding as demonstrated by floods of February 1986 and January 1997. Damages were estimated at \$95 million and \$82.4 million, respectively.

Section 104 - Sponsor has been approved to proceed with advance work in conjunction with the Marysville Yuba City project to assure at least a 200-year level of flood protection is obtained. In October 1996, ASA(CW) approved the advance work for possible Section 104 credit/reimbursement. Current milestones for the project include: DE Notice - April 1998; Chief's Report - Nov 1998; PED Agreement — June 2000. Project authorized for construction WRDA 1999. GRR being prepared to modify project features due to underseepage issues. Completion is currently unscheduled.

1. Includes the following amounts for new work: Regular Funds: Previous project, \$185,198; existing project, \$585,436 for shallow-draft and \$39,650,558 for deep-draft.

2. Includes the following funds for maintenance: Regular Funds: Previous project, \$553,720; existing project, \$18,248,432 for shallow-draft and \$43,739,526 for deep-draft; and deferred maintenance funds, \$70,000 for shallow-draft.

3. Includes \$85,000 contributed funds, other, from Sacramento-Yolo Port District for clearing and grubbing on dredged material deposit areas to be used on ship channel maintenance dredging work.

4. Includes Sacramento District costs only.

5. Contributed funds, other, from State of California for design and construction of downstream channel improvements on Ash and Berenda Sloughs below Buchanan Dam.

6. Includes \$724,000 contributed funds, other, from State of California for relocation activities including demolition or salvage of various pipes and facilities, construction of ramps, turnouts, pipe gates and bank protection at Cache Creek Settling Basin.

7. Includes \$676,755 contributed funds, other, costs for relocation activities for State of California.

8. Includes code 710 funds and costs for recreation facilities at New Hogan lake: total to date \$897,742.

9. For miscellaneous construction under local cooperation requirements, primarily for Bear Creek, San Joaquin County; includes \$108,056 as related to Duck and Littlejohn Creeks channel improvements as part of Farmington Dam project unit.

10. Includes \$99,000 special recreation use fees and costs at New Hogan Lake, and \$826,600 maintenance and operation of dam funds and costs (96X5125) at New Hogan Lake beginning in FY 1988.

11. Includes \$393,195 contributed funds, other from California Department of Boating and Waterways for design and construction of boat launching and related facilities, and \$30,000 for design and construction of a boarding float at North Shore recreation area at New Hogan Lake.

12. Includes \$101,700 contributed funds, other, and costs from Calaveras County Water District for New Hogan hydropower studies.

13. Includes \$6,999,725 San Francisco District construction funds and costs for Corte Madera Creek.

14. \$8,695 contributed funds transferred to Sacramento District in FY 1983. Includes \$97,400 San Francisco District required contributed funds and costs.

15. Contributed funds, other, and costs, from Mahn County including \$536,921 for miscellaneous bridge and road relocations and \$267,840 for additional expenses for disposal sites at Corte Madera Creek.

16. Includes funds for Berryessa GRR.

17. Includes \$3,643,000 contributed funds, other, from the State of California for relocation (automotive type bridge) at Laurel Creek Diversion near Fairfield, \$113,000 from City of Fairfield for

TABLE 35-A (Cont'd) COST AND FINANCIAL STATEMENT

Phase III contract for channel development on Laurel Creek, and \$23,000 from City of Suisun for Phase IIA contract for widening of Railroad Avenue

18. Includes \$3,638,022 contributed funds, other costs for relocations at Laurel Creek Diversion, \$19,537 contributed funds, other costs for Phase III contract, and \$112,939 for Phase IIA contract.

19. Includes contributed funds, other: \$2,905,630 for recreation betterment, \$2,195,591 for NED relocation and \$70,000 for incremental relocations at Guadalupe River.

20. Includes contributed funds, other costs: \$2,624,578 for recreation betterment, \$1,496,809 for NED relocations and \$0 for incremental relocations at Guadalupe River, and \$1,175,848 for flood control betterments.

21. Contributed funds, other from the State of California for miscellaneous design and construction at Hidden Dam.

22. Includes \$2,199,085 code 710 funds and costs for recreation facilities at Isabella lake and \$224,000 Code 713 funds and costs for improvement at Tillie Creek and Live Oak campgrounds.

23. Includes \$407,640 special recreation use fees and costs at Isabella Lake.

24. Includes \$131,900 maintenance and operation of dam funds and costs (96X5125) at Isabella Lake beginning in FY 1985.

25. Includes \$438,000 contributed funds, other, from California Department of Boating and Waterways for design and construction of boat launching and related facilities at Old Isabella Road and Isabella Peninsula and \$337,500 for Isabella Dam hydropower studies.

26. Includes \$438,000 contributed funds, other, costs for boat launching and related facilities at Old Isabella Road and Isabella Peninsula, and \$309,808 costs for Isabella Dam hydropower studies.

27. Includes code 710 funds and costs for recreation facilities: Success Lake: Total to date \$747,048. Terminus Dam: Total to date: \$704,000.

28. Includes \$165,000 special recreation use fees and costs at Success Lake.

29. Includes contributed funds, other, from State of California Department of Boating and Waterways and costs for acquisition of a boarding float at Success Lake, \$30,000 and at Terminus Dam, \$12,420.

30. Includes contributed funds, other, from Kaweah River Power Authority, Visalia, California for Terminus Dam hydropower studies, \$423,000; and from DITT, Inc., Paris, France, for Success Lake hydropower studies, \$168,000.

31. Includes contributed funds, other, costs for Terminus Dam hydropower studies, \$422,697, and for Success Lake hydropower studies, \$167,579.

32. Includes \$4,300,147 contributed funds, other from the Metropolitan Water District of Salt Lake City for relocation of State Highway 65 at Little Dell Lake.

33. Includes \$4,300,147 contributed funds, other, costs for relocation of State Highway 65 at Little Dell Lake.
