

Annual Report
Fiscal Year 2007
**Of the Secretary of the Army
On Civil Works Activities
(1 October 2006 – 30 September 2007)**

DEPARTMENT OF THE ARMY
OFFICE OF THE ASSISTANT SECRETARY
CIVIL WORKS
108 ARMY PENTAGON
WASHINGTON DC 20310-0108

AUG 22 2008

Honorable Richard B. Cheney
President of the Senate
Washington, D.C. 20510-0010

Dear Mr. President:

I am submitting the Annual Report on Civil Works Activities for Fiscal Year 2007, in accordance with Section 8 of the Rivers and Harbors Act of 1888 and Section 925(b) of the Water Resources Development Act of 1986.

This field report contains narrative summaries and statistics on water resources development projects of the Army Corps of Engineers where there has been activity between October 1, 2006, and September 30, 2007.

Very truly yours,

A handwritten signature in cursive script that reads "John Paul Woodley, Jr.".

John Paul Woodley, Jr.
Assistant Secretary of the Army
(Civil Works)

DEPARTMENT OF THE ARMY
OFFICE OF THE ASSISTANT SECRETARY
CIVIL WORKS
108 ARMY PENTAGON
WASHINGTON DC 20310-0108

AUG 22 2008

Honorable Nancy Pelosi
Speaker of the House of Representatives
Washington, D.C. 20515-6501

Dear Madam Speaker:

I am submitting the Annual Report on Civil Works Activities for Fiscal Year 2007, in accordance with Section 8 of the Rivers and Harbors Act of 1888 and Section 925(b) of the Water Resources Development Act of 1986.

This field report contains narrative summaries and statistics on water resources development projects of the Army Corps of Engineers where there has been activity between October 1, 2006, and September 30, 2007.

Very truly yours,

A handwritten signature in cursive script that reads "John Paul Woodley, Jr.".

John Paul Woodley, Jr.
Assistant Secretary of the Army
(Civil Works)

I-1

NEW ENGLAND DISTRICT

The New England District comprises all of New England except western Vermont and small portions of Massachusetts and Connecticut along their western boundaries, and includes small portions of southeastern New York. These areas are all embraced in the drainage basins tributary to Long Island Sound and the Atlantic Ocean east of the New York-Connecticut State line. The District also includes Fishers Island, NY.

Navigation

1. AUNT LYDIA'S COVE, CHATHAM, MA

Location. Aunt Lydia's Cove is located in Chatham Harbor, Chatham, Massachusetts. The cove is located on the "elbow" of Cape Cod approximately 90 miles southeast of Boston, Massachusetts. (See National Ocean Service Coast Survey Chart 13248.)

Existing project. Provides for an entrance channel 8 feet deep and 100 feet wide for a length of 900 feet and a 9.5-acre anchorage also to a depth of 8 feet. Project was completed in June 1995. (See Table 1-B for Act authorizing the existing project.)

Local cooperation. Fully complied with for completed work.

Terminal facilities. The Chatham Municipal Fish Pier is the only terminal facility in Aunt Lydia's Cove. Initially constructed in 1945, the pier is used to offload catch, access boats, load supplies and perform some repairs. Two independent fish companies lease space at the pier's main packing facility where fish are offloaded, packed in ice and shipped to various distributors. The pier provides diesel fuel, gasoline, parking, and restroom facilities. Transient and recreational boaters use the pier for loading, offloading, and refueling. This facility is adequate for existing commerce.

Operations during fiscal year. Maintenance: Dredging of the Federal channel was performed by the Government-owned dredge CURRITUCK from June 12, 2007 to July 1, 2007. About 44,010 cubic yards of sand were removed and placed in two near shore disposal areas; one southeast of the dredging area and outside the outer bar, and the other off Andrews Harding Beach. Plant rental cost was \$224,800. Hired labor costs included \$17,927 for performing and plotting pre- and after-dredge surveys, and \$6,636 for preparation of an Environmental Assessment.

2. BLOCK ISLAND HARBOR OF REFUGE, RI

Location. The Block Island Harbor of Refuge is located on the east side of Block Island, about 13 miles southwest from Point Judith Harbor, Rhode Island, and about 25 miles southeasterly from Stonington Harbor, Connecticut. (See National Ocean Service Coast Survey Charts 13215 and 13217.)

Existing project. Provides for two rubble-mound breakwaters inclosing an area of about 800 square feet, the east breakwater extending northerly about 1,950 feet from

the shore and the west breakwater extending northeasterly about 1,100 feet; a "T" shaped stone jetty, 140 feet long and 100 feet wide, located about 600 feet southeast of the east breakwater; masonry walls in the southeast corner of the inner harbor inclosing an area of about 300 square feet designated as the basin; and steel sheet pile bulkhead, 225 feet long, constructed on the east side of the 15-foot basin. The project includes a 15-foot entrance channel, anchorage and basin area. The project was completed in 1916 except for dredging of two 15-foot anchorages in the outer harbor west of the entrance channel, which were deauthorized in November 1986. (See Table 1-B for Acts authorizing the existing project.)

Local cooperation. Fully complied with for completed work.

Terminal facilities. The Harbor of Refuge on Block Island contains the ferry terminal receiving goods and passengers from Point Judith, Rhode Island and subsequently serves as the only subsistence harbor for the island. There is a small feet of commercial and charter fishing vessels berthed in this harbor as well. This harbor serves as a Harbor of Refuge for vessels navigating Block Island Sound during severe storms.

Operations during fiscal year. Maintenance: Initiated environmental coordination and preparation of contract plans and specifications to repair the steel sheet pile bulkhead and wharf located along the east side of the 15-foot basin. Hired labor costs included \$14,806 for developing plans and specifications, \$5,538 for environmental coordination in preparation for an Environmental Assessment, and \$22,872 for project coordination and management.

3. BOSTON HARBOR, MA

Location. Boston Harbor includes all expanse of tidewater lying within a line from Point Allerton to Point Shirley and extending from that line westward to the mainland. This comprises an area of about 47 square miles, exclusive of the islands. (See National Ocean Service Coast Survey Charts 13270 and 13272.)

Existing project. Completed work at Boston Harbor, adopted in 1825 and supplemented by enactments through 1958, provides for the improvement of the harbor proper and its approaches - Fort Point Channel, Reserved Channel, Chelsea River and Weir River. For a more detailed description see page 3 of the Annual Report for 1974. These improvements were completed in May 1966 with the construction of the Chelsea River 35-foot channel and maneuvering basin. New work involves deepening the

Mystic River and Reserved Channels from 35 to 40 feet and the Chelsea River Channel from 35 to 38 feet; widening and deepening to 40 feet the Inner Confluence Area which provides access to the Mystic and Chelsea River Channels; and widening at the entrance to the Reserved Channel. The proposed project would increase the navigational efficiency and safety of harbor operations and reduce tidal delays for larger vessels. New work was completed in December 2001. (See Table 1-B for Acts authorizing the existing project.)

Local cooperation. Fully complied with for completed work. A Project Cooperation Agreement was signed on May 29, 2007 between the Corps and the Massachusetts Port Authority for cost sharing the construction of the first confined aquatic disposal (CAD) cell necessary for project maintenance. Consistent with the cost sharing and financing concepts reflected in the Water Resources Development Act of 1986, the non-Federal sponsor must pay 10 percent of the cost to construct any new dredged material disposal facilities necessary for project maintenance, and to reimburse an additional 10 percent of the cost to construct dredged material disposal facilities (partially offset by a credit allowed for the value of lands, easements, rights-of-way, and relocations) within a period of 30 years following completion of construction.

Terminal facilities. There are 156 wharves and piers in the harbor, not including Mystic, Weymouth-Fore, and Town Rivers, which are reported elsewhere. Of the terminals, 28 are publicly owned, 13 are open to public use, 73 have mechanical-handling facilities, and 70 have railroad connections. Facilities are considered adequate for existing commerce. For a full description of channel facilities in Chelsea River, refer to House Document 350, 87th Congress, 2nd session. (See Port Series No. 3, Part 2, Port of Boston, MA dated 1967.)

Operations during fiscal year. New work: Preliminary lands, easements, rights-of-way, and utility relocations (LERR) costs have been identified; however, the sponsor has asked to delay finalizing LERR costs until the Keyspan gas line can be removed and those costs included in the final cost sharing. An Administrative Consent Order was executed on August 15, 2006 between Keyspan Energy and Massachusetts Department of Environmental Protection. In accordance with this agreement, the earliest the gas line can be removed is May 1, 2008. An option for removal of the Keyspan gas line is included in the contract awarded September 28, 2007 for maintenance dredging of the Inner Harbor.

Maintenance: A contract for removal of rock areas from the Federal project was awarded on March 15, 2007. Work began in late September 2007 and was about 10 percent complete at FY end with contractor earnings of \$104,377. Other costs associated with the rock contract included

\$49,671 for supervision and administration, \$133,751 for surveys, \$32,310 for engineering during construction and \$23,000 for the silent inspector. Costs of \$138,208 were incurred for work to complete preparation of a Decision Document, supplemental Environmental Impact Statement, and plans and specifications for maintenance dredging of the Inner Harbor. Proposed maintenance involves the removal of about 1.7 million cubic yards of silt material from the Main Ship Channel, the upper Reserved Channel, a portion of the Mystic River, the approach channel to the Navy Dry Dock and a section of the Chelsea River immediately below and up through the Chelsea Street Bridge. A contract for maintenance dredging of the Inner Harbor was awarded on September 28, 2007 to Great Lakes Dredge and Dock Company. Work had not begun by FY end.

4. BRIDGEPORT HARBOR, CT

Location. Bridgeport Harbor is located on the north shore of Long Island Sound, about 51 miles east of New York City. (See National Ocean Service Coast Survey Chart 12369.)

Existing project. For a description of the completed improvements see the Annual Report for 1968. (See Table 1-B for Acts authorizing the existing project.)

Local cooperation. Fully complied with for completed work. There is no reasonable prospect that required cooperation will be forthcoming from local interests for the breakwaters at Black Rock Harbor and the Burr and Cedar Creek anchorages. For further details see the Annual Report for 1968.

Terminal facilities. There are 35 waterfront facilities serving the port of Bridgeport. Three wharves are owned by the City of Bridgeport. (See Port and Terminal Facilities of Southern New England No. 4, revised in 1952.) Facilities are adequate for existing commerce.

Operations during fiscal year. Maintenance: Work continued on preparation of a Dredged Material Management Plan (DMMP) for proposed maintenance dredging of Bridgeport Harbor. The DMMP will identify and evaluate suitable placement alternatives for dredged material from the Federal project. Costs of \$89,948 were incurred this FY for field investigations that included borings and probes, geophysical surveys and vibrocore efforts to determine the feasibility of constructing a confined aquatic disposal cell for placement of unsuitable material. Chemical analysis was performed on samples to determine the interface between maintenance and parent material. Costs of \$80,500 were incurred to perform condition surveys of the project.

5. BULLOCKS POINT COVE, RI

Location. Bullocks Point Cove is located along the east shore of the Providence River about three-quarters of a mile above the head of Narragansett Bay and 4.5 miles south of Providence Harbor. The lower one-half mile of the cove, covering approximately 100 acres, is separated from the Providence River by a small peninsula extending southeasterly from the mainland to Bullocks Point. (See National Ocean Service Coast Survey Chart 13224.)

Existing project. For a description of the existing project see the Annual Report for 1974. Construction of the project was completed in May 1959. Dike and jetty construction was initiated in June 1958 and completed in September 1958. Improvement dredging of the 8-foot channel, 6-foot anchorage and 6-foot turning basin was initiated in January 1959 and completed in May 1959. (See Table 1-B for Act authorizing the existing project.)

Local cooperation. Fully complied with for completed work.

Terminal facilities. There are three boatyards and one marina that offer supply, repair and service facilities to the general public. These private interests offer cove moorings, berthing areas and spaces for land storage during winter months. Additional moorings are available for the general public in the anchorage areas controlled and supervised by the harbormaster. A public landing ramp was constructed in the Cove for use by the general public as a condition of local cooperation in conjunction with project authorization.

Operations during fiscal year. Maintenance: Work consisted of investigations in anticipation of maintenance dredging. Hired labor costs included \$985 to complete preparation of an Environmental Assessment, \$44,318 for preparation of plans and specifications and \$4,020 to complete work on the Decision Document.

6. CAPE COD CANAL, MA

Location. This waterway is a sea level canal; extending from the head of Buzzards Bay, Massachusetts, easterly to a point on Cape Cod Bay about 15 miles southeast of Plymouth Harbor, Massachusetts. (See National Ocean Service Coast Survey Charts 13236 and 13246.)

Existing project. For a description of existing project see the Annual Report for 1975. Navigational improvements were completed in April 1963, with completion of the East Boat Basin extension. Initial recreational development consists of public use facilities at various locations, which were completed in February 1965. Improvements to public use facilities at the East Boat Basin were completed in May

1974. Constructions of public use facilities at Bourne Scenic Park were completed in May 1976. Two high-level highway bridges and a vertical-lift railroad bridge cross Cape Cod Canal. Major rehabilitation of the Bourne Highway Bridge was completed in December 1965 and major rehabilitation of the Sagamore Highway Bridge was completed in 1980. Minor rehabilitation of the stone breakwater was completed in October 1963. Major rehabilitation of the vertical-lift railroad bridge was completed in November 2004. (See Table 1-B for Acts authorizing the existing project.)

Local cooperation. Fully complied with for completed work. Local interests must also bear 50 percent of future recreational development in accordance with the 1965 Federal Water Project Recreation Act.

Terminal facilities. There are seven terminals on the canal, of which three are privately owned. Four are used for receipt and freezing of fish and two are used for receipt and storage of oil. The seventh terminal is the State pier, which is owned by the Commonwealth of Massachusetts, and is located on the north bank of the canal at Bourne Neck. Terminals are adequate for existing commerce.

Operations during fiscal year. Maintenance: The cost of operation and maintenance work at the Cape Cod Canal totaled \$7,975,580. Operation and maintenance work included \$5,089,475 for navigation and \$1,680,653 for recreational facilities. Other costs included \$51,989 for general real estate activities, \$433,901 for periodic inspections, \$169,250 for engineering and design, \$110,864 for environmental compliance and \$44,583 for supervision and inspection of contracts including those described below. A contract to repair docks and mooring dolphins was awarded on September 8, 2000. Work began in late September 2000 and was completed in February 2002. Contractor had no earnings this FY and final payment is still pending. A contract for concrete and pavement repairs on the Bourne and Sagamore Highway Bridges was awarded on September 27, 1999. Work began in October 1999 and was about 90 percent complete at FY end. Contractor earnings total \$2,640,239, none of which was earned this FY. Final contract payment is still pending. A contract for sandblasting and painting the Bourne Highway Bridge was awarded on September 20, 2003. Work began in April 2004 and was completed in December 2006. Final contract amount was \$8,476,139, of which \$394,865 was earned this FY. A contract to repair the canal banks was awarded on July 30, 2007. Work had not begun by FY end. A purchase order for emergency deck repairs on the Sagamore Highway Bridge was awarded on September 21, 2007. Work had not begun by FY end.

7. CARVERS HARBOR, VINALHAVEN, ME

Location. Carvers Harbor is located at the southeastern end of Vinalhaven Island, at the mouth of Penobscot Bay, about 15 miles east of Rockland, Maine. (See National Ocean Service Coast Survey Chart 13305.)

Existing project. The project provides for a 16-foot anchorage of about 23 acres; two 10-foot anchorage areas totaling about 7 acres located along the south side of the harbor, a 10-foot anchorage of about 3-acres located adjacent to the main waterfront along the north side of the harbor and a 6-foot access channel and turning basin at the inner end of the harbor. The project was completed in May 1964. (See Table 1-B for Acts authorizing the existing project.)

Local cooperation. Fully complied with for completed work.

Terminal facilities. The area depends on ferry service which carries cargo, automobiles and passengers to and from Rockland, Maine. This service is run by the Maine Port Authority out of a terminal located along the west side of the inner harbor. A large fleet of lobster fishermen and numerous transient recreational boats operate out of Carvers Harbor. There are 23 wharves in the harbor, four of which have marine railways. Two wharves are publicly owned and open to the public. These facilities are adequate for existing commerce.

Operations during fiscal year. Maintenance: Work consisted of investigations in anticipation of maintenance dredging. Hired labor costs included \$12,000 for environmental coordination and project management, and \$73,000 for sampling and testing of materials proposed to be dredged.

8. CLINTON HARBOR, CT

Location. Clinton Harbor is located along the north shore of Long Island Sound, about 10 miles west of the mouth of the Connecticut River and about 20 miles east of New Haven Harbor, Connecticut. (See National Ocean Service Coast Survey Charts 12374 and 12354.)

Existing project. The project includes a channel 8 feet deep at mean low water from Long Island Sound to the upper end of the wharves at Clinton Harbor, and an anchorage area of the same depth opposite the wharves. The project also provides for the maintenance of a stone dike closing a breach in the sandy peninsula which separates the

river from the outer harbor. Project was completed in 1950. (See Table 1-B for Acts authorizing the existing project.)

Local cooperation. Fully complied with for completed work.

Terminal facilities. There are several small private wharves, some of which are open to the public. These facilities are adequate for existing commerce.

Operations during fiscal year. Maintenance: Work consisted of investigations in anticipation of maintenance dredging. Hired labor costs included \$12,000 for project management and environmental coordination, and \$32,000 for initial development of plans and specifications.

9. COCHECO RIVER, NH

Location. The Cochecho River is located about 9 miles northwest of Portsmouth, New Hampshire. (See National Ocean Service Coast Survey Chart 13285.)

Existing project. Provides for a 7-foot tidewater channel 60 to 75 feet wide (7.5 feet deep and 30 feet wide in rock), extending from the confluence of the Cochecho and Piscataqua Rivers to the head of navigation in Dover, New Hampshire. Work was completed in 1906. (See Table 1-B for Acts authorizing the existing project.)

Local cooperation. Fully complied with for completed work. The City of Dover constructed the Dredged Material Disposal Facility (DMDF) necessary for maintenance of the project at an estimated cost of \$3,900,000. A Memorandum of Agreement was signed with the City of Dover on July 19, 2004 for payment of a tipping fee for use of the City's DMDF. The fee will be based on 80 percent of the City's cost to construct that portion of the facility used for disposal of material dredged from the Federal navigation project.

Terminal facilities. The channel is used primarily by recreational craft based at a marina located near the head of the waterway.

Operations during fiscal year. Maintenance: In coordination with project stakeholders, it was agreed to maintain the remainder of the Federal channel to a depth of 6 feet instead of the authorized 7 feet. The reduced depth would adequately serve all current and potential future users of the channel. A contract in the amount of \$2,183,935 for continuation of maintenance dredging of the Federal project was awarded on August 3, 2006. Work under this contract began on November 15, 2006, the start of the allowable dredging window, and continued through March 15, 2007. Approximately 16,800 cubic yards of material (including contaminated sediments and rock) was removed from the Federal channel. Additional contract costs in the amount of

NEW ENGLAND DISTRICT

\$108,778 were incurred to settle a contract claim associated with an earlier dredging contract. Hired labor costs associated with maintenance dredging included \$149,968 for construction supervision and inspection, \$15,180 for contract administration including settlement of the contract claim, \$76,630 for surveys, \$795 for travel, and \$39,843 for project coordination and management. A total of \$300,000 was paid to the City of Dover for use of their disposal facility.

10. CONNECTICUT RIVER BELOW HARTFORD, CT

Location. The Connecticut River has its source at Connecticut Lake in northern New Hampshire, then flows southerly about 380 miles to Long Island Sound. Navigation extends about 52 miles upstream from the mouth of the river in Saybrook to Hartford, Connecticut. (See National Ocean Service Coast Survey Charts 12375, 12377 and 12378.)

Existing project. For a description of the existing project and authorizing legislation, see the Annual Report for 1995.

Local cooperation. Fully complied with for completed work.

Terminal facilities. Along both the Connecticut and Eightmile Rivers there are two to three wharves at each riverside town, one or more of which are open to public use. Facilities are adequate for existing commerce.

Operations during fiscal year. Maintenance: Hired labor costs of \$8,760 were incurred to update project documents in association with proposed maintenance dredging of North Cove. Project maintenance was not performed this FY because of insufficient funds.

11. GREEN HARBOR, MA

Location. Green Harbor is located within the town of Marshfield on the west side of Massachusetts Bay, about 30 miles southeast of Boston, Massachusetts, and 9 miles north of Plymouth Harbor, Massachusetts. (See National Ocean Service Coast Survey Chart 13253.)

Existing project. For a description of the existing project see the Annual Report for 1995. Construction was completed in October 1969. (See Table 1-B for Acts authorizing the existing project.)

Local cooperation. Fully complied with for completed work.

Terminal facilities. The major terminal facility is the Town Pier in the village of Brant Rock. The facility is an earth-filled bulkhead with landing and parking area about 290 feet wide, extending 210 feet into harbor. A marina service is south of the Town Pier; and a facility for recreational craft has been developed on the south side of the harbor near the head of navigation.

Operations during fiscal year. Maintenance: A contract for maintenance dredging of the 8-foot and 6-foot deep, 100-foot wide entrance channel portion of the Federal project was awarded to Burnham Associates on March 16, 2007. Work began on April 25, 2007 and was completed on June 6, 2007. Approximately 35,697 cubic yards of sand and cobbles were mechanically removed and placed at the previously used near-shore disposal site located off Green Harbor Beach. The final adjusted contract amount was \$759,056. Hired labor costs included \$45,127 for surveys, \$34,463 for plans and specifications, \$17,571 for project management and coordination for preparation of an Environmental Assessment and \$41,444 for contract administration.

12. MERRIMACK RIVER, MA

Location. The Merrimack River originates at the confluence of the Pemigewasset and Winnepesaukee Rivers in Franklin, New Hampshire. The river flows southerly through Concord, Manchester and Nashua, New Hampshire; then northeasterly through Lowell, Lawrence and Haverhill, Massachusetts; and enters the Atlantic Ocean at Newburyport Harbor, about 35 miles northeast of Boston, Massachusetts. (See National Ocean Service Coast Survey Chart 13274.)

Existing project. The project provides for channel 7 feet deep and 150 feet wide extending upstream a distance of about 16.5 miles from the Newburyport Highway Bridge at the head of Newburyport Harbor to the railroad bridge in Haverhill. The project was completed in 1907. (See Table 1-B for Act authorizing the existing project.)

Local cooperation. Fully complied with for completed work.

Terminal facilities. Recreational boat facilities are located along the lower river, primarily in the communities of Amesbury and Newburyport, Massachusetts.

Operations during fiscal year. Maintenance: Hired labor costs of \$25,000 were incurred to continue preparation of an Environmental Assessment and coordination of proposed maintenance dredging with resource agencies. A Federally endangered species, the short nosed sturgeon, is found in the

river. Funds of \$53,000 were used to conduct sampling and testing of materials proposed to be dredged and placed upland at the City of Haverhill's landfill.

13. NARRAGUAGUS RIVER, ME

Location. The Narraguagus River originates in Eagle Lake and flows southeasterly for about 49 miles to Narraguagus Bay and the Atlantic Ocean. (See National Ocean Service Coast Survey Chart 13324.)

Existing project. The project provides for a channel 11 feet deep and 150 feet wide from deep water in Narraguagus Bay to Wyman, then 9 feet deep and 100 feet wide to Milbridge, and then 6 feet deep and 100 feet wide to the landing downstream from the Route 1A Highway Bridge. The project includes three 6-foot anchorage areas adjacent to the 6-foot channel in Milbridge, two 9-foot anchorages and an 11-foot anchorage adjacent to the 11-foot channel between Wyman and Jordan Pier, and a 6-foot turning basin near the landing in Milbridge. (See Table 1-B for Act authorizing the existing project.)

Local cooperation. Fully complied with for completed work.

Terminal facilities. There are four major wharves along the Narraguagus River. One is on the east bank, a short distance downstream of the Route 1A Highway Bridge, two are on the west bank in Milbridge, and the fourth is near the mouth of the river at Wyman. The upper and lower piers are municipally owned. The others are privately owned. All are in fair condition. Facilities are adequate for existing commerce.

Operations during fiscal year. Maintenance: A base bid contract for maintenance dredging was awarded on September 1, 2006 to Prock Marine Contractors of Rockland, Maine. Work began on November 1, 2006 and was completed on January 10, 2007. A total of 76,841 cubic yards of material was mechanically dredged from the 6 and 9-foot channels, the 6-foot turning basin, the 6-foot northwest anchorage, the 9-foot east anchorage and the 9-foot west anchorage. Dredged material was disposed of in Narraguagus Bay, about six miles away. The final contact amount was \$1,499,789 with the final payment being made in March 2007. The allowable dredge window extends from November 1 to April 15. Hired labor costs associated with maintenance dredging were \$84,293 for pre-, progress-, and after-dredge surveys, quantities, and plotting; \$86,138 for construction administration and supervision including travel; \$8,489 for project coordination and management; and \$5,171 for contract processing.

14. NEW BEDFORD AND FAIRHAVEN HARBOR, MA

Location. New Bedford Harbor is a tidal estuary located on the western side of Buzzards Bay, about 27 miles northwesterly from the harbor at Vineyard Haven, Massachusetts and about 37 miles east of Point Judith Harbor, Rhode Island. (See National Ocean Service Coast Survey Chart 13232.)

Existing project. The project provides for a channel 30 feet deep and 350 feet wide from deep water in Buzzards Bay to just above the New Bedford-Fairhaven Bridge, nearly 5 miles, with increased widths for anchorage and maneuvering purposes in the area northwest of Palmer Island and above the bridge; a channel 25 feet deep and 200 to 250 feet wide along the New Bedford wharf front near the bridge, about 0.2 miles; a channel 15 feet deep and 150 to 400 feet wide from Pierce and Kilburn Wharf to the Old South Wharf, then 10 feet deep and 150 feet wide to a point 1,000 feet south of the old causeway pier, about 0.7 miles; and for the maintenance of the 25-foot anchorage area east of the channel north of Palmer Island. The project was completed in 1939. (See Table 1-B for Acts authorizing the existing project.)

Local cooperation. Fully complied with for completed work

Terminal facilities. There are 31 wharves in the harbor with a total berthing space of about 19,000 feet. Seven are publicly owned, five have railroad connections and seven have mechanical handling facilities. These facilities are considered adequate for existing commerce.

Operations during fiscal year. Maintenance: Project condition surveys were conducted at a cost of \$92,500.

15. NORWALK HARBOR, CT

Location. Norwalk Harbor is located on the north shore of Long Island Sound, about 10 miles east of New York City. (See National Ocean Service Coast Survey Chart 12368.)

Existing project. For a description of the existing project and authorizing legislation, see the Annual Report for 1973. The project was completed in 1950.

Local cooperation. Fully complied with for completed work. A Project Cooperation Agreement was signed on June 28, 2005 between the Corps and the City of Norwalk for cost sharing the construction of confined aquatic disposal (CAD) cells necessary for project maintenance. Consistent with the cost sharing and financing concepts reflected in the

Water Resources Development Act of 1986, the non-Federal sponsor must pay 10 percent of the cost to construct any new dredged material disposal facilities necessary for project maintenance, and to reimburse an additional 10 percent of the cost to construct dredged material disposal facilities within a period of 30 years following completion of construction.

Operations during fiscal year. Maintenance: A contract for maintenance dredging of Norwalk Harbor was awarded on September 20, 2005 to Jay Cashman Incorporated of Quincy, Massachusetts. Work was completed on February 28, 2006. Final contract payment was made in December 2006. Final contract amount was \$3,911,681. Hired labor costs associated with contract close-out were \$403 for construction administration, \$3,631 for project coordination and management, (which also includes costs associated with the next proposed phase of maintenance dredging), and \$531 for contract processing.

16. PAWTUXET COVE, RI

Location. Pawtuxet Cove is located in the city of Warwick, Rhode Island along the west shore of the Providence River at the mouth of the Pawtuxet River. (See National Ocean Service Coast Survey Chart 13224.)

Existing project. The project consists of a channel, 6 feet deep and 100 feet wide, extending from deep water in the Providence River to the head of Pawtuxet Cove. The project also includes a 6-foot turning basin near the upper end of the cove, a 6-foot anchorage area of about 14 acres located south of the entrance channel, and a sheltering dike 2,200 feet long constructed along the east side of the anchorage. The project was completed in April 1966. (See Table 1-B for Act authorizing the existing project.)

Local cooperation. The City of Warwick has not fulfilled all assurances of local cooperation. The city has yet to provide two public landings. An amendment to the Providence River Project Cooperation Agreement was signed on August 3, 2005 between the Corps and the Governor of Rhode Island for cost sharing the construction of confined aquatic disposal (CAD) cells necessary for maintenance of Pawtuxet Cove. The State of Rhode Island is required to provide all lands, easements, rights-of-way and relocations (LERR) necessary for project maintenance; pay 10 percent, during construction, of the total cost to construct those portions of the CAD cells used for the disposal of material dredged from Pawtuxet Cove; and reimburse an additional 10 percent of the total cost to construct those portions of the CAD cells used for the disposal of material dredged from Pawtuxet Cove, partially offset by a credit allowed for the value of LERR, within the 30-year period following completion of construction.

Terminal facilities. There are several wharves, two boat yards and one marina in the cove.

Operations during fiscal year. Maintenance: Initiated efforts to determine actual cost of CAD cell construction for cost-sharing purposes.

17. POINT JUDITH POND AND HARBOR OF REFUGE, RI

Location. Point Judith marks the southwestern entrance to Narragansett Bay. The harbor lies in a shallow bight west of the point, about 14 miles southwest of Newport Harbor, Rhode Island, and 33 miles east of New London Harbor, Connecticut. Point Judith Pond is a shallow salt pond, lying inland of the beach, with a length north and south of about four miles. A small artificial opening through the beach and sand dunes connects this pond to the ocean. (See National Ocean Surveys Charts 13218 and 13219.)

Previous project. For details see Annual Report for 1948.

Existing project. See the Annual Report for 1977 for a description of the existing project and list of authorizing legislation. All work for the project authorized prior to 1949 was completed in 1950. Breakwaters were completed in 1914 and dredging of shoals in project area was done in 1921. The main and east shore arm breakwaters had deteriorated and required restoration to project design. Reconstruction of the east arm breakwater and main breakwater dock facilities were completed in 1962. Rehabilitation required for remainder of breakwater restoration was completed in October 1963. The extension of the 15-foot channel was completed in April 1977.

Local cooperation. Fully complied with for completed work.

Terminal facilities. Facilities consist of one town wharf of steel sheet pile bulkhead construction, which comprises the southern and eastern limits of the basin. Total docking space amounts to 500 feet. No mechanical handling facilities are available. The wharf is owned by the town and is open to the public. The State of Rhode Island maintains two piers, one in Galilee and one in Jerusalem, each having about 500 feet of berthing space. A facility comprising a bulkhead with 15 finger piers provides berthing space of about 4,000 linear feet. This facility is used for receipt of fish and fish products. Mechanical handling facilities, including fish pumps, are available for discharge of cargo. In addition, there are approximately ten small privately owned wharves used in the fishing business and passenger traffic. Facilities are adequate for existing commerce.

Operations during fiscal year. Maintenance: A contract for maintenance dredging of the 15-foot entrance channel and east and west branch channels, as well as the 10-foot anchorage, and the 6-foot channel extending up Point Judith Pond, was awarded on October 11, 2006. Work began in December 2006 and was completed in March 2007. Contract dredging costs associated with this project amounted to \$939,713, with final contract payment still pending at FY end. Hired labor costs associated with the maintenance dredging consisted of \$61,013 for surveys, \$64,642 for construction supervision and inspection, \$6,493 for contract administration, \$2,625 for travel and \$21,236 for project coordination and management.

18. PORTLAND HARBOR, ME

Location. Portland Harbor is located on the southwestern coast of Maine, about 100 miles northeast of Boston, Massachusetts. (See National Ocean Service Coast Survey Chart 13292.)

Existing project. For a description of the existing project and authorizing legislation, see the Annual Report for 1978. The project was completed in 1966, except for ledge removal that was completed in 1968.

Local cooperation. Fully complied with for completed work.

Terminal facilities. There are 37 waterfront facilities, seven of these facilities are publicly owned; the U.S. Government owns four, the State of Maine owns two, and the City of South Portland owns one. Mechanical-handling facilities are available at 24 wharves and railroad connections have been made to 27 wharves. The facilities are adequate for existing commerce.

Operations during fiscal year. Maintenance: Hired labor costs associated with proposed maintenance dredging of the 35-foot channel were \$7,336 for environmental coordination and \$1,340 for project management.

19. PROVIDENCE RIVER AND HARBOR, RI

Location. The Providence River originates in Providence, Rhode Island at the junction of two small streams, the Woonasquatucket and Moshassuck Rivers. It then flows southerly about a mile to the head of Providence Harbor at Fox Point where it is joined by the Seekonk River and continues southerly another 8 miles to Narragansett Bay. (See National Ocean Service Coast Survey Charts 13224 and 13225.)

Existing project. Provides for a channel 16.8 miles long and 40 feet deep, generally 600 feet wide from deep water in Narragansett Bay just south of Prudence Island Light to the turn below Field Point at Providence, thence up to 1,700 feet wide to Fox Point. The existing 40-foot channel was completed in January 1976. Dredging of a 30-foot channel, 150 feet wide from the upper end of the existing project to India Point at the mouth of the Seekonk River was deauthorized in November 1986. (See Table 1-B for Acts authorizing the existing project.)

Local cooperation. Fully complied with for completed work. A Project Cooperation Agreement was signed on November 26, 2002 between the Corps and the Governor of Rhode Island for cost sharing the construction of confined aquatic disposal (CAD) cells necessary for project maintenance. The State of Rhode Island is required to provide all lands, easements, rights-of-way and relocations (LERR) necessary for project maintenance; pay 25 percent, during construction, of the total cost to construct those portions of the CAD cells used for the disposal of material dredged from the Federal navigation project; and reimburse an additional 10 percent of the total cost to construct those portions of the CAD cells used for the disposal of material dredged from the Federal navigation project, partially offset by a credit allowed for the value of LERR, within the 30-year period following completion of construction.

Terminal facilities. There are 27 water terminal facilities serving the port of Providence, Rhode Island. Three-fourths of all facilities have railway connections. The City of Providence owns four of these facilities and the State of Rhode Island owns two others. Facilities are adequate for existing commerce.

Operations during fiscal year. Maintenance: A contract for removal of rock areas from the Federal project was awarded on March 15, 2007 to RDA Construction. Work was initiated on June 20, 2007 and completed on September 7, 2007. The contractor removed 464 cubic yards of rock. Contract payments totaled \$478,894 this FY. Final contract payment was still pending at FY end. Hired labor costs associated with the rock removal contract included \$15,930 to complete preparation of plans and specifications, \$1,967 to complete the Environmental Assessment, \$92,997 for construction supervision and administration, \$182,700 for surveys and \$2,825 for project management and coordination. Funds of \$2,010 were used to prepare a summary report for the overall Providence River dredging project.

20. SALEM HARBOR, MA

Location. Salem Harbor is located on the north shore of Massachusetts Bay, about 12 miles north of the entrance to

NEW ENGLAND DISTRICT

Boston Harbor, Massachusetts. (See National Ocean Service Coast Survey Charts 13275 and 13276.)

Existing project. Provides for a channel 32 feet deep and generally 300 feet wide, widened to 400 feet at bends and at the inner end, extending about 1.5 miles from deep water in the outer harbor to a point about 1,500 feet from Salem Terminal wharf, where it joins locally dredged approach channel of same depth leading to wharf. Project also provides for a channel 10 feet deep in South River, 300 feet wide and gradually narrowing to 50 feet wide at the upstream end of Pickering Wharf, and for a branch channel on the east side of Derby Wharf, 8 feet deep, 100 feet wide, and about 700 feet long, which widens into a basin of the same depth, 500 feet long and 200 feet wide. Existing project was completed in November 1967. (See Table 1-B for Acts authorizing the existing project.)

Local cooperation. Fully complied with for completed work.

Terminal facilities. The extensively developed waterfront of Salem Harbor and the South River is about 1 mile in extent and includes 9 wharves owned by private interests. The Salem Terminal is the largest of these and serves the New England Power Company's generating station. It is also the principal terminal for receipt and distribution of coal and petroleum products in Salem and tributary area. The Navy uses one of the two wharves owned by the National Park Service as a training center. Nine other wharves in the harbor are outside of the extensively developed area.

Operations during fiscal year. Maintenance: A contract for maintenance dredging of the Federal project was awarded to Great Lakes on October 11, 2006. Work began in late November 2006 and was completed in January 2007 with contractor earnings of \$1,982,320. Final contract payment was still pending at FY end. A total of 160,000 cubic yards of material was dredged and disposed of at the Massachusetts Bay Disposal Site. Work included \$123,214 for construction supervision and administration, \$11,800 for surveys, \$10,000 for the silent inspector, and \$67,615 for project management.

21. WESTPORT RIVER, MA

Location. The Town of Westport is located in Bristol County in southeastern Massachusetts along the Rhode Island state line, about 30 miles southeast of Providence, Rhode Island. The Westport River flows through the Town of Westport and empties into the Atlantic Ocean just west of Horseneck Beach. (See National Ocean Service Coast Survey Chart 13228.)

Previous projects. The previous project provides for the removal of obstructions in the East and West Branches of the Westport River to a depth of 7 feet. For additional details see the Annual Report of 1942.

Existing project. The existing project provides for an entrance channel, 9 feet deep and 150 to 200 feet wide, extending from deep water in the Atlantic Ocean up the Westport River a distance of about 9,700 feet to Westport Harbor. (See Table 1-B for Acts authorizing the project.)

Local cooperation. A Project Cooperation Agreement was signed on August 30, 2007 between the Corps and the Massachusetts Department of Conservation and Recreation. The project sponsor must provide all lands, easements, rights-of-way, and perform all relocations determined by the Government to be necessary for project construction; provide 10 percent of total General Navigation Feature (GNF) costs during construction; reimburse an additional 10 percent of total GNF costs within a period not to exceed 30 years following completion of construction (partially offset by a credit allowed for the value of lands, easements, rights-of-way, and relocations); and shall operate and maintain the local service facilities in a manner compatible with the authorized purposes of the project.

Terminal facilities. Facilities located around the harbor include the Westport Town pier and docks, a marina, two yacht clubs and a boat yard. The harbor also contains three boat launch ramps and smaller boating facilities. During the summer boating season, the harbor contains about 1,300 recreational vessels which are docked evenly at slips and moorings. The harbor has a full-time commercial fishing fleet of about 36 vessels. Facilities are considered adequate for present harbor activities.

Operations during fiscal year. New Work: A fully funded contract for improvement and maintenance dredging of Westport River was awarded on September 29, 2007. Work had not begun by FY end.

22. WEYMOUTH-FORE AND TOWN RIVER, MA

Location. The project is located along the southeastern limit of Boston Harbor. (See National Ocean Service Coast Survey Chart 13270.)

Existing project. The project provides for a 35-foot channel extending from deep water in Nantasket Roads through Hingham Bay and up the Weymouth Fore River to about 3,000 feet upstream of the Fore River Bridge. The 35-foot channel also extends up the Town River from its confluence with the Weymouth Fore River to the head of Town River Bay. The project also includes a 35-foot turning basin in Town River Bay, a 35-foot turning and

maneuvering basin at the confluence of the two rivers and King Cove, an 8-foot anchorage area in Town River Bay, a 15-foot channel extending from the turning basin in Town River Bay to just below the Quincy Electric Light and Power substation, and a 6-foot channel extending from the 35-foot channel in Weymouth Fore River 8,000 feet upstream to the Quincy Avenue Bridge. The project was completed in July 1983. (See Table 1-B for Acts authorizing the existing project.)

Local cooperation. Fully complied with for completed work.

Terminal facilities. Weymouth-Fore River has nine wharves all grouped near the head of Federal improvements. Construction consists mainly of pile and timber piers extending from timber or concrete bulkheads. There are 6,092 feet of berthing space available. Six of the wharves have railroad connections and seven mechanical handling facilities. Five of the wharves are used in connection with a large shipyard, two with oil terminals, one with an electric generating plant, one with a large soap manufacturing plant and two with yacht clubs. On the south bank of the Town River are 9 wharves, 4 of which are used for boat building and repair work, 3 are used for receipt of petroleum products and one for receiving scrap materials. On the north bank of the river is a yacht building and repair yard. There are no publicly owned wharves. Facilities are considered adequate for the present needs of commerce.

Operations during fiscal year. Maintenance: A contract for maintenance dredging of the 35-foot deep Fore River Channel was awarded to Jay Cashman Incorporated on May 16, 2006. Work began on November 15, 2006 and was completed on March 16, 2007. A total of 313,151 cubic yards of material was removed and placed at the Massachusetts Bay Disposal Site. Final contract amount was \$4,321,482. Hired labor costs included \$121,562 for surveys, \$5,353 for environmental coordination, \$80,994 for construction supervision and administration, \$1,494 for project management and \$1,767 for contract administration.

23. NAVIGATION WORK UNDER SPECIAL AUTHORIZATION

Navigation activities pursuant to Section 107, Public Law 86-645, as amended (preauthorization).

(See Table 1-I)

Mitigation of damages caused by Federal navigation projects pursuant to Section 111, Public Law 90-483 as amended (preauthorization).

(See Table 1-J)

Beach Erosion Control

24. SEABROOK HARBOR, NH

Location. The town of Seabrook is located along the coast of New Hampshire on the state border with Massachusetts. Seabrook Harbor is located at the mouth of the Blackwater River just south of Hampton Harbor. The two harbors share a common inlet to the ocean.

Existing project. The natural channel at the mouth of the Blackwater River changed course breaching the protective sandbar lying between the river and developed harbor areas to the east, causing erosion along residential and commercial shoreline property and loss of ecologically and commercially valuable tidal flats and their shellfish resources. The project involved dredging the Blackwater River to restore its natural outlet course, along with filling of the breach, shoreline protection and restoration of tidal flats. Sheet pile bulkheads were placed at each end of the breach and filled with dredged material. Each bulkhead consists of two parallel vinyl sheet-pile walls driven 16 feet apart and joined by steel ties and whalers. The double walls were needed to provide structural stability during filling of the breach. The east and west walls are 560 and 960 feet long, respectively, with a total of 62,300 square feet of sheet piling. Stone filled mats were placed along the toe of the sheet pile walls at each terminus point and along adjacent properties to protect against further erosion. Wood pilings were driven along each wall to warn navigation traffic. Construction of the project was completed in April 2005. (See Table 1-B for Act authorizing the existing project.)

Local cooperation. A Memorandum of Agreement was signed on May 27, 2004 between the Corps and the Pease Development Authority, a New Hampshire state agency. The project sponsor must provide all lands, easements, rights-of-way, including suitable borrow and dredged material disposal areas, and perform all relocations determined by the Government to be necessary for project construction; and assume responsibility for all operation, maintenance, repair and rehabilitation of the project after completion.

Operations during fiscal year. New work: Funds to complete as-built drawings were not received. Further efforts are on hold.

25. INSPECTION OF COMPLETED BEACH EROSION CONTROL PROJECTS

No beach inspections were conducted in FY 2007.

26. BEACH EROSION CONTROL WORK UNDER SPECIAL AUTHORIZATION

Beach erosion control activities pursuant to Section 103, Public Law 87-874, as amended (preauthorization).

(See Table 1-K)

Flood Control

27. BLACKSTONE RIVER BASIN, MA AND RI

Works covered by this plan include a dam and reservoir on the West River and local protection works at three sites along the Blackstone River. The Flood Control Act of 1944 authorized the plan for construction of a reservoir on the West River and local protection works at Worcester, Massachusetts, and Woonsocket and Pawtucket, Rhode Island, substantially in accordance with House Document 624, 78th Congress, 2nd session. The Flood Control Act of 1960 authorized a local flood protection project at lower Woonsocket, Rhode Island, substantially in accordance with Senate Document 87, 85th Congress, 2nd Session. A nonstructural local protection project was authorized in 1982 for the Belmont Park section of Warwick, Rhode Island, along the Pawtuxet River. Stream bank protection projects on the Blackstone River in Millbury, Massachusetts, and on the Clear River in Burrillville, Rhode Island, were authorized in 1985. (See Table 1-R for projects comprising the authorized plan.)

27A. WEST HILL DAM, MA

Location. West Hill Dam is located on the West River in Massachusetts, about three miles above its confluence with Blackstone River and 2.5 miles northeast of Uxbridge, Massachusetts. (See Geological Survey maps Blackstone, MA and RI, Milford, MA, and Grafton, MA.)

Existing project. For a description of the completed improvements and authorizing legislation see the Annual Report for 1975. Construction of the dam and appurtenant structures was initiated in June 1959 and completed in June 1961. Construction of recreational facilities was completed in June 1967. Major rehabilitation of the dam was completed in July 2003.

Local cooperation. Section 3, Flood Control Act of 1944 applies.

Operations during fiscal year. Maintenance: Ordinary operation and maintenance activities were conducted.

28. CHARLES RIVER (NATURAL VALLEY STORAGE AREAS), MA

Location. The Charles River extends inland from Boston Harbor southwesterly toward the Massachusetts-Rhode Island border and is some 80 miles long with a watershed covering 307 square miles.

Existing project. For a description of the existing project and authorizing legislation, see the Annual Report for 1995. Land acquisition was completed in 1990.

Local cooperation. Local interests are required to prevent modifications or alteration of existing roadways, utilities, bridges, culverts, and any other improvements that might affect the drainage characteristics of the natural storage areas; adopt and enforce regulations to restrict development of flood plain lands; and operate and maintain the existing dams along the Charles River. Local assurances were provided by the Commonwealth of Massachusetts.

Operations during fiscal year. Maintenance: Hired labor costs for ordinary maintenance activities, project surveillance and inspection, and land use administration were \$308,525.

29. CONNECTICUT RIVER BASIN, VT, NH, MA AND CT

The Flood Control Act of 1936, as amended by Act of May 25, 1937, authorized construction of ten reservoirs on tributaries of Connecticut River in accordance with plans in House Document 412, 74th Congress, 2nd session, as the same may be revised upon further investigation of 1936 flood. Flood Control Act of 1938 approved a general comprehensive plan for control of floods and other purposes in Connecticut River Valley, as set forth in House Document 455, 75th Congress, 2nd session, and authorized \$11,524,000 for construction of local flood protection projects in the plan. Act of October 15, 1940, modified Act of June 18, 1938, to provide additional protection at East Hartford, CT, as set forth in House Document 653, 76th Congress, 3rd session. Act of August 18, 1941, modified comprehensive plan approved in 1938 to include improvements recommended in House Document 653, 76th Congress, 3rd session, and House Document 724, 76th Congress, 3rd session, with such further modifications as may be found justifiable in discretion of Secretary of the Army and Chief of Engineers. Latter Act also authorized to be appropriated additional \$6 million for local protection works and \$10 million for reservoirs. Act of October 26, 1942, further modified plan by including construction of Gully Brook conduit at Hartford, CT. Flood Control Act of 1944 authorized expenditure of \$30 million in addition to previous authorization for comprehensive plan approved in

1938 and modified plan by directing specific consideration of an alternative plan of Vermont State Water Conservation Board instead of Williamsville Reservoir in West River Basin, VT; directing consultation with affected States during course of investigations and transmission of proposal and plans to each affected State for written views and recommendations for reservoir projects heretofore authorized for construction at Cambridgeport, Ludlow, South Tunbridge, and Gaysville, and resubmission of projects or modifications for construction of Sugar Hill site. Flood Control Act of 1950 modified project for flood control at Hartford, CT, authorized by Flood Control Act of 1938, as amended to include Folly Brook dike and conduit. Flood Control Act of 1954 modified plan for flood control in Connecticut River Basin to provide for construction of a reservoir on Otter Brook at South Keene, NH, in lieu of any reservoir or reservoirs heretofore authorized. This Act further modified plan for West River Basin of Connecticut River in Vermont to consist of three reservoirs at Ball Mountain, The Island, and Townshend sites, in lieu of plan of eight reservoirs authorized in Flood Control Act of 1944. Flood Control Act of 1958 modified plan for flood control in Connecticut River Basin to include construction of Littleville Reservoir on Middle Branch of Westfield River, MA, and Mad River Reservoir on Mad River, above Winsted, CT. Flood Control Act of 1960 included authorization in Connecticut River Basin of plan for flood protection on Chicopee River, MA, substantially in accordance with House Document 434, 86th Congress; plan for flood protection on Westfield River, MA, substantially in accordance with Senate Document 109, 86th Congress; plan for flood control and related purposes on Farmington River, Connecticut, substantially in accordance with House Document 443, 86th Congress. Flood Control Act of 1968 included authorization in Connecticut River Basin of plan for construction of Beaver Brook Reservoir, on Beaver Brook in Keene, NH, substantially in accordance with Senate Document 60, 90th Congress; and plan for protection on Park River, Connecticut, substantially in accordance with Senate Document 43, 90th Congress. Flood Control Act of 1970 deauthorized the construction of a reservoir at Claremont, NH. The Water Resources Development Act of 1976 deauthorized the construction of Gaysville Lake, VT project. Flood control projects at Cambridgeport Lake, Brockway Lake, Victory Lake, South Tunbridge Lake, Ludlow Lake and The Island Lake, Vermont; Honey Hill Lake, West Canaan Lake, and the Alternative to Sugar Hill Reservoir, NH, were deauthorized in August 1977 in accordance with Section 12 of the Water Resources Development Act of 1974. The authorization for Beaver Brook Lake, NH project expired in April 1978 due to lack of local cooperation. Local protection projects at Gardner, MA, West Springfield, MA, Hartford, VT, Wethersfield, CT, and Keene, NH authorized and constructed in accordance with Section 205 of 1948 Flood Control Act. Emergency stream bank erosion control projects at

Brownsville, VT; Conway, MA; Huntington, MA; Charlestown, NH; North Stratford, NH; Colchester, CT; Middletown, CT; Milford, CT; Simsbury, CT; and two projects in Leominster, MA authorized in accordance with Section 14 of the 1946 Flood Control Act were completed. The Water Resources Development Act of 1986 modified the comprehensive plan for the control of flood-waters in the Connecticut River Basin, Vermont, New Hampshire, Massachusetts, and Connecticut, authorized by Section 5 of the Act of June 22, 1936 (49 Stat. 1572) by authorizing the design, construction, operation, and maintenance of facilities at Townshend Dam, West River, VT to enable upstream migrant adult Atlantic salmon to bypass that dam and Ball Mountain Dam, VT, and to provide at both Townshend and Ball Mountain Dams facilities as necessary for the downstream passage of juvenile Atlantic salmon. This work was completed in February 1993. (See Table 1-S at end of chapter for reservoirs and local protection works for Connecticut River Basin.)

29A. BALL MOUNTAIN LAKE, VT

Location. The Dam is on West River, 29 miles above its junction with Connecticut River at Brattleboro, Vermont. It is two miles north of Jamaica, VT. (See Geological Survey map for Londonderry, VT.)

Existing project. For a description of the completed improvements and authorizing legislation see the Annual Report for 1994. Construction of the dam and appurtenant works was initiated in May 1957 and completed in November 1961. Cost of work was \$10,448,000 for construction and \$350,000 for lands and damages, a total of \$10,798,000. Construction of recreation facilities was initiated in June 1975 and completed in June 1977. Fish passage facility work began in June 1992 and was completed in February 1993. The project is a unit of comprehensive plan for flood control and other purposes in Connecticut River Basin.

Local cooperation. Section 2, Flood Control Act of 1938 applies.

Operations during fiscal year. Maintenance: Ordinary operation and maintenance activities were conducted.

29B. BARRE FALLS DAM, MA

Location. The Dam is on Ware River in the Town of Barre, Massachusetts, 31.9 miles above confluence of Ware and Swift Rivers. It is 13 miles northwest of Worcester, MA. (See Geological Survey maps for Barre, MA and Wachusett Mountain, MA.)

Existing project. For a description of the completed improvements and authorizing legislation see the Annual

NEW ENGLAND DISTRICT

Report for 1975. Construction of the dam and appurtenant works was initiated in May 1956 and completed in May 1958.

Local cooperation. Section 2, Flood Control Act of 1938 applies.

Operations during fiscal year. Maintenance: Ordinary operation and maintenance activities were conducted. A contract to demolish the former lab building was awarded on July 26, 2007. Work began in August 2007 and was about 50 percent complete at FY end with contractor earnings of \$162,000.

29C. BIRCH HILL DAM, MA

Location. Dam is on Millers River, 27.3 miles above its junction with the Connecticut River. It is 1.3 miles east of South Royalston, Massachusetts and 7.5 miles northwest of Gardner, MA. (See Geological Survey maps for Royalston and Winchendon, MA-NH and Templeton, MA.)

Existing project. For a description of the completed improvements and authorizing legislation see the Annual Report for 1975. Construction of the dam and appurtenant works was initiated in June 1940 and completed in February 1942.

Local cooperation. Section 2, Flood Control Act of 1938 applies. Local interests have contributed \$32,000 as their required 50 percent cost sharing of recreational development in accordance with 1965 Federal Water Project Recreation Act.

Operations during fiscal year. Maintenance: Ordinary operation and maintenance activities.

29D. COLEBROOK RIVER LAKE, CT

Location. Colebrook River Dam is located in the Town of Colebrook, Litchfield County, Connecticut, on the West Branch of the Farmington River about 3.9 miles upstream from its confluence with the Still River at Riverton, Connecticut, and about 1.5 miles upstream from Goodwin (Hogback) Dam. (See Geological Survey map for Winsted, CT.)

Existing project. For a description of the completed improvements and authorizing legislation see the Annual Report for 1975. Construction of the dam and appurtenant works was initiated in May 1965 and completed in June 1969. Construction of recreation facilities was initiated in August 1969 and completed in June 1970.

Local cooperation. A water supply contract was signed by the Hartford Connecticut Metropolitan Water District. Repayment is being made in accordance with provisions of the 1958 Water Supply Act.

Operations during fiscal year. Maintenance: Ordinary operation and maintenance activities were conducted.

29E. CONANT BROOK DAM, MA

Location. Site is in south central part of Massachusetts in Town of Monson. Dam site, across Conant Brook, is about two miles southeast of the community of Monson, MA. (See Geological Survey map for Monson, MA.)

Existing project. For a description of the completed improvements and authorizing legislation see the Annual Report for 1975. Construction of the dam, highway relocations, and appurtenant works was initiated in June 1964 and completed in December 1966.

Local cooperation. Section 2, Flood Control Act of 1938 applies.

Operations during fiscal year. Maintenance: Ordinary operation and maintenance activities were conducted.

29F. KNIGHTVILLE DAM, MA

Location. Dam is on Westfield River, 27.5 miles above its confluence with Connecticut River. It is four miles north of the Town of Huntington, Massachusetts, and about 12 miles west of the City of Northampton, MA. (See Geological Survey map for Westhampton, MA.)

Existing project. For a description of the completed improvements and authorizing legislation see the Annual Report for 1975. Construction of the dam and appurtenant works was initiated in August 1939 and completed in December 1941.

Local cooperation. Section 2, Flood Control Act of 1938 applies.

Operations during fiscal year. Maintenance: Ordinary operation and maintenance activities were conducted.

29G. LITTLEVILLE LAKE, MA

Location. Dam is on Middle Branch of Westfield River, one mile above its confluence with main stem of Westfield River and 25.2 miles above confluence of Westfield River with Connecticut River, in the Town of Chester, Massachusetts. (See Geological Survey map for Chester, MA.)

Existing project. For a description of the completed improvements and authorizing legislation see the Annual Report for 1975. Construction of the dam and appurtenant works was initiated under a multi-component contract in June 1962 and completed in September 1965.

Local cooperation. Section 2, Flood Control Act of June 28, 1938, and Title III, Water Supply Act of 1958 apply and were fully complied with.

Operations during fiscal year. Maintenance: Ordinary operation and maintenance activities were conducted. A contract to purchase new polyethylene log booms was awarded on July 30, 2007. The new log booms were received in September 2007 and the final contract amount was \$122,615.

29H. NORTH HARTLAND LAKE, VT

Location. Dam is on Ottauquechee River, 1.5 miles above its junction with Connecticut River, and one-mile northwest of North Hartland, Vermont. Reservoir extends upstream 5.5 miles. (See Geological Survey map for Hanover NH-VT.)

Existing project. For a description of completed improvements and authorizing legislation see the Annual Report for 1975. Construction of the dam was initiated in June 1958 and completed in June 1961.

Local cooperation. Section 2, Flood Control Act of 1938 applies.

Operations during fiscal year. Maintenance: Ordinary operation and maintenance activities were conducted. A contract to pave portions of the access road was awarded on September 26, 2007. Work had not begun by FY end.

29I. NORTH SPRINGFIELD LAKE, VT

Location. North Springfield Dam is located in the Town of Springfield, Vermont, on the Black River, about 8.7 miles above its junction with the Connecticut River, and about three miles northwest of Springfield, Vermont. (See Geological Survey maps for Ludlow, Vermont, and Claremont, New Hampshire.)

Existing project. For a description of completed improvements and authorizing legislation see the Annual Report for 1975. Construction of the dam was initiated in May 1958 and completed in November 1960.

Local cooperation. Section 2, Flood Control Act of 1938 applies.

Operations during fiscal year. Maintenance: Ordinary operation and maintenance activities were conducted.

29J. OTTER BROOK LAKE, NH

Location. Otter Brook Dam is located on Otter Brook, about 2.4 miles upstream from its junction with the Branch, which flows about 2.5 miles to the Ashuelot River at Keene, New Hampshire. (See Geological Survey maps for Keene, NH-VT, and Monadnock, NH.)

Existing project. For a description of the completed improvements and authorizing legislation see the Annual Report for 1975. Construction of the dam and appurtenant works was initiated in September 1956 and completed in August 1958. Major rehabilitation involving construction of a new concrete weir using mechanical fuseplugs was completed in June 2006.

Local cooperation. Section 2, Flood Control Act of 1938 applies.

Operations during fiscal year. New work: A contract for construction of a new concrete weir using mechanical fuseplugs designed to fail prior to exceeding discharge capacity was awarded on May 11, 2005. Work began in July 2005 and was completed in June 2006. Final contract amount was \$1,543,782, of which \$7,500 was earned this FY for completion of as-built drawings.

Maintenance: Ordinary operation and maintenance activities were conducted.

29K. PARTRIDGE BROOK, WESTMORELAND, NH

Location. The project is located along the east bank of the Connecticut River at its confluence with Partridge Brook in the Town of Westmoreland, New Hampshire. The Cheshire County municipal wastewater treatment lagoon is located adjacent to the erosion site.

Existing project. The project provides for the construction of approximately 180 linear feet of concrete block and stone slope protection along the east bank of the Connecticut River, and 160 linear feet of steel sheeting along the south bank of Partridge Brook adjacent to the municipal wastewater treatment lagoon. The project will prevent further undermining and possible collapse of the lagoon embankment. (See Table 1-B for Act authorizing the existing project.)

Local cooperation. A Project Cooperation Agreement was signed on May 16, 2007 between the Corps and the County of Cheshire, New Hampshire. The project sponsor must provide all lands, easements, rights-of-way, including

suitable borrow and dredged material disposal areas, and perform all relocations determined by the Government to be necessary for project construction. The project sponsor must also pay a minimum cash contribution of 5 percent of total project costs during construction; pay an additional cash contribution during construction so that the total contribution including lands equals 35 percent of total project costs; assume all costs in excess of the Federal statutory cost limitation of \$1,000,000; and bear all costs for maintenance and repair of the project after completion.

Operations during fiscal year. New work: A contract for construction of emergency stream bank protection measures was awarded on July 6, 2007. Work began in August 2007 and was about 75 percent complete at FY end with contractor earnings of \$500,995.

29L. SALMON RIVER, HADDAM AND EAST HADDAM, CT

Location. The Salmon River is located in south central Connecticut. The river originates in the town of Hebron and flows southwesterly about 20 miles to its confluence with the Connecticut River. Leesville Dam is located on the Salmon River about 4 miles upstream from the Connecticut River along the town line between Haddam and East Haddam, Connecticut.

Existing project. The project involves construction of a pier-type ice control structure across the Salmon River about 200 feet upstream of Leesville Dam. The structure would retain ice breakup and reduce downstream flooding. (See Table 1-B for Act authorizing the existing project.)

Local cooperation. A Project Cooperation Agreement was signed on February 18, 2005 between the Corps and the Connecticut Department of Environmental Protection. The sponsor must provide all lands, easements, rights-of-way, including suitable borrow and dredged material disposal areas, and perform all relocations determined by the Government to be necessary for construction of the project; pay a cash contribution in the amount necessary to bring the non-Federal share of project costs to 35 percent; assume all costs in excess of the Federal statutory limitation of \$7,000,000; and bear all operation, maintenance and repair costs of the project after completion.

Operations during fiscal year. New work: A contract to construct an ice control structure was awarded on July 6, 2005. Work began in August 2005 and was about 95 percent complete at FY end. Contractor earnings total \$1,818,232, of which \$1,007,989 was earned this FY. Work is scheduled to be completed in June 2008.

29M. SURRY MOUNTAIN LAKE, NH

Location. Dam is on Ashuelot River, 34.6 miles above its junction with Connecticut River and five miles north of Keene, New Hampshire. (See Geological Survey maps for Keene and Bellows Falls, NH-VT.)

Existing project. For a description of the completed improvements and authorizing legislation see the Annual Report for 1975. Construction of the dam and appurtenant works was initiated in August 1939 and completed in June 1942. Additional recreational facilities were completed in September 1969 and 1980.

Local cooperation. Section 2, Flood Control Act of 1938 applies.

Operations during fiscal year. Maintenance: Ordinary operation and maintenance activities were conducted.

29N. TOWNSHEND LAKE, VT

Location. Townshend Lake Dam is located on the West River, about 19.1 miles above its junction with the Connecticut River at Brattleboro, Vermont, and about two miles west of Townshend, Vermont. The reservoir extends upstream about four miles. (See Geological Survey maps for Saxtons River, VT, and Londonderry, VT.)

Existing project. For a description of completed improvements and authorizing legislation see the Annual Report for 1994. Townshend Lake Reservoir is operated as a unit of a coordinated system for flood control in Connecticut River Basin. Construction of the dam and appurtenant works was initiated in November 1958 and completed in June 1961. Additional recreational facilities were completed in October 1969 and September 1971. Fish passage facility work began in June 1992 and was completed in February 1993.

Local cooperation. Section 2, Flood Control Act of 1938 applies.

Operations during fiscal year. Maintenance: Ordinary operation and maintenance activities were conducted.

29O. TULLY LAKE, MA

Location. Tully Lake Dam is located on the East Branch of Tully River, about 3.9 miles above its junction with the Millers River. The dam lies about one mile north of Fryville, Massachusetts, and 3.5 miles north of Athol, MA. (See Geological Survey map for Royalston, MA-NH.)

Existing project. For a description of the completed improvements and authorizing legislation see the Annual Report for 1975. Construction of the dam was initiated in March 1947 and completed in September 1949.

Local cooperation. Section 2, Flood Control Act of 1938 applies. Local interests must also bear 50 percent of future recreational development, in accordance with 1965 Federal Water Project Recreational Act.

Operations during fiscal year. Maintenance: Ordinary operation and maintenance activities were conducted.

29P. UNION VILLAGE DAM, VT

Location. Union Village Dam is located on the Ompompanosuc River, about four miles above its junction with the Connecticut River. The dam lies about one-fourth mile north of Union Village, Vermont, and 11 miles north of White River Junction, Vermont. (See Geological Survey maps for Strafford, VT and Mount Cube, NH-VT.)

Existing project. For a description of the completed improvements and authorizing legislation see the Annual Report for 1975. Construction of the dam was initiated in March 1947 and completed in June 1950.

Local Cooperation. Section 2, Flood Control Act of 1938 applies.

Operations during fiscal year. Maintenance: Ordinary operation and maintenance activities were conducted.

30. FOX POINT BARRIER, RI

Location. The Fox Point Barrier is located on the Providence River at Fox Point, in the City of Providence, Rhode Island.

Existing project. For description of completed project see the Annual Report for 1974. Construction of the barrier was completed in January 1966. The Water Resources Development Act of 1999 directs the Secretary to undertake necessary repairs to the barrier as identified in the Condition Survey and Technical Assessment dated April 1998, with Supplemental dated August 1998. Necessary repairs include overhauling pumps, replacing tainter gate roller chains, cleaning and painting tainter gates and repairing lower guide bearing diffuser cracks. (See Table 1-B for Acts authorizing the existing project.)

Local cooperation. Fully complied with for completed work. A Project Cooperation Agreement was signed on April 8, 2002 between the Corps and the City of Providence. The City must provide 35 percent of eligible repair costs and assume all costs in excess of Federal appropriations.

Operations during fiscal year. Major rehabilitation: The City of Providence initiated repair work in January 1998. Work completed to date includes rehabilitation of the 5 pumps, canal gates, emergency gates and taintor gate chains. Reimbursements by the Corps to the City of Providence for eligible repair work total \$2,104,791, including \$61,479 this FY. Remaining work includes miscellaneous concrete repairs, replacing the pumping station roof, painting the taintor gates and replacing the electrical mechanical system.

31. HOLMES BAY, WHITING, ME

Location. The Town of Whiting is located in eastern Maine about 10 miles south of the Canadian border. The project site is located along Cutler Road (Route 191), which connects the coastal Towns of Machiasport, Whiting and Cutler, Maine.

Existing project. Provides for the construction of approximately 500 linear feet of stone slope protection along the shoreline of Holmes Bay adjacent to Cutler Road (Route 191). The project will prevent further undermining and possible collapse of Cutler Road. (See Table 1-B for Act authorizing the existing project.)

Local cooperation. A Project Cooperation Agreement was signed September 26, 2007 between the Corps and the Maine Department of Transportation. The project sponsor must provide all lands, easements, rights-of-way, including suitable borrow and dredged material disposal areas, and perform all relocations determined by the Government to be necessary for project construction. The project sponsor must also pay a minimum cash contribution of 5 percent of total project costs during construction; pay an additional cash contribution during construction so that the total contribution including lands equals 35 percent of total project costs; assume all costs in excess of the Federal statutory cost limitation of \$1,000,000; and bear all costs for maintenance and repair of the project after completion.

Operations during fiscal year. New Work: The Decision Document was approved by North Atlantic Division on August 3, 2007.

32. HOUSATONIC RIVER BASIN, CT AND MA

Seven flood control reservoirs on tributaries of the Naugatuck River, principal tributary of the Housatonic River, and three local protection projects have been specifically authorized as part of an overall plan for flood control in the Housatonic River Basin. The Naugatuck and Housatonic Rivers converge 12 miles above mouth of Housatonic River. A project for emergency snagging and clearing of the Blackberry River, a tributary of the

NEW ENGLAND DISTRICT

Housatonic River, was authorized under authority contained in Section 208 of the 1954 Flood Control Act. Emergency stream bank protection projects at: Alford, Green River, MA; Hoosic River, Williamstown, MA; Sheffield, MA; Salisbury, CT; and Squantz Pond, Fairfield, CT were authorized under authority provided by Section 14 of the 1946 Flood Control Act. Projects for local flood protection for: West Branch, Torrington, CT; East Branch, Torrington, CT; Mad River, Waterbury (Woodtick Area), CT; Pittsfield, MA; and Waterbury-Watertown, CT, were authorized under authority provided by Section 205 of the 1948 Flood Control Act. (See Table 1-T at end of chapter on dams, reservoirs, and local protection projects for Housatonic River Basin.)

32A. BLACK ROCK LAKE, CT

Location. Dam site is on Branch Brook, about two miles upstream from its confluence with Naugatuck River, in the Towns of Thomaston and Watertown, Connecticut. (See Geological Survey map for Thomaston, CT.)

Existing project. For a description of the completed improvements and authorizing legislation see the Annual Report for 1975. Road relocation was completed in November 1967. Construction of the dam and appurtenant works was initiated in July 1967 and completed in July 1971.

Local cooperation. Section 2, Flood Control Act of 1938 applies. State legislation requires local interests to establish encroachment lines downstream of dam to permit efficient reservoir operation.

Operations during fiscal year. Maintenance: Ordinary operation and maintenance activities were conducted

32B. HANCOCK BROOK LAKE, CT

Location. Dam is on Hancock Brook, in the Town of Plymouth, Connecticut, about 3.4 miles above its confluence with Naugatuck River. (See Geological Survey map for Waterbury, CT.)

Existing project. For a description of the completed improvements and authorizing legislation see the Annual Report for 1975. Construction of the dam and appurtenant structures was initiated in July 1963 and completed in August 1966.

Local cooperation. Section 2, Flood Control Act of 1938 applies. State legislation requires local interests to establish encroachment lines downstream of dam to permit efficient reservoir operation.

Operations during fiscal year. Maintenance: Ordinary operation and maintenance activities were conducted. A

contract for miscellaneous concrete repairs was awarded on May 23, 2006. Work began in July 2006 and was completed in December 2006. Contractor earnings total \$362,844, of which \$226,480 was earned this FY. Final contract payment was still pending at FY end.

32C. HOP BROOK LAKE, CT

Location. Dam site is on Hop Brook, in city of Waterbury and towns of Middlebury and Naugatuck, Connecticut, about 1.4 miles upstream of confluence of Naugatuck River and Hop Brook. (See Geological Survey map for Waterbury, CT.)

Existing project. For a description of the completed improvements and authorizing legislation see the Annual Report for 1975. Construction of the dam and appurtenant structures was initiated in December 1965 and completed in December 1968. Construction of a public use facility was completed in November 1973. Construction of an additional restroom was completed in 1980.

Local cooperation. Section 2, Flood Control Act of 1938 applies. State legislation requires local interests to establish encroachment lines downstream of dam to permit efficient reservoir operation.

Operations during fiscal year. Maintenance: Ordinary operation and maintenance activities were conducted.

32D. NORTHFIELD BROOK LAKE, CT

Location. Dam is on Northfield Brook, about 1.3 miles upstream from its confluence with Naugatuck River, in town of Thomaston, Connecticut. (See Geological Survey map for Thomaston, CT.)

Existing project. For a description of the completed improvements and authorizing legislation see the Annual Report for 1975. Construction of dam and appurtenances was initiated in May 1963 and completed in October 1965. Construction of recreation facilities was initiated in November 1966 and completed in August 1967.

Local cooperation. Section 2, Flood Control Act of 1938 applies. State legislation requires local interests to establish encroachment lines downstream of dam to permit efficient reservoir operation.

Operations during fiscal year. Maintenance: Ordinary operation and maintenance activities were conducted.

32E. THOMASTON DAM, CT

Location. On Naugatuck River, about 30.4 miles above its junction with Housatonic River, and about 1.6 miles north

of Thomaston, Connecticut. Reservoir extends upstream about 6.4 miles. (See Geological Survey map for Thomaston, CT.)

Existing project. For a description of the completed improvements and authorizing legislation see the Annual Report for 1975. Construction of the dam and appurtenant works was initiated in May 1958 and completed in November 1960.

Local cooperation. Section 3, Flood Control Act of 1944 applies.

Operations during fiscal year. Maintenance: Ordinary operation and maintenance activities were conducted.

33. MERRIMACK RIVER BASIN, NH AND MA

Works covered by comprehensive plan are on Merrimack River and its tributaries in New Hampshire and Massachusetts. Flood Control Act of 1936 authorized construction of a system of flood control reservoirs in Merrimack River Basin for reduction of flood heights in Merrimack Valley. Flood Control Act of 1938 approved general comprehensive plan for flood control and other purposes as approved by Chief of Engineers pursuant to preliminary examinations and surveys authorized by Act of June 22, 1936, and modified project to provide in addition to construction of a system of flood control reservoirs, related flood control works which may be found justified by the Chief of Engineers. All operations pertaining to flood control in Merrimack River Basin are now carried on under and reported under projects for individual units of comprehensive plan referred to above. No further expenditures are contemplated under general project for flood control in Merrimack River Basin. For final cost and financial summary, see The Annual Report for 1946.

A comprehensive plan for development of water resources of the North Nashua River Basin, a principal tributary of the Merrimack River, was authorized by 1966 Flood Control Act substantially in accordance with Senate Document 113, 89th Congress. Plan provides for construction of coordinated system of four reservoirs and three local protection projects for flood protection, water supply, recreation and allied purposes. Water Resources Development Act of 1986 deauthorized two of the reservoirs and one of the local protection projects.

The 1966 Flood Control Act also authorized construction of Saxonville local protection project substantially in accordance with Senate Document 61, 89th Congress. Emergency stream bank protection projects at Amesbury, Massachusetts, two in Leominster, MA and two in Lancaster, MA were authorized under authority provided by

Section 14 of the 1946 Flood Control Act. (See Table 1-U at end of chapter for reservoirs and related flood control works for Merrimack River Basin.)

33A. BLACKWATER DAM, NH

Location. Dam is on Blackwater River, 8.2 miles above confluence with Contoocook River, and 118.8 miles above mouth of Merrimack River. It is in the town of Webster, New Hampshire, just above village of Swetts Mills, NH, 18 miles by highway northwest of Concord, NH. (See Geological Survey maps for Penacook and Mount Kearsarge, NH.)

Existing project. For a description of the completed improvements and authorizing legislation see the Annual Report for 1975. Project is complete except for construction of public facilities. Construction of the dam and appurtenant works was initiated in May 1940 and completed in November 1941.

Local cooperation. Section 2, Flood Control Act of 1938 applies.

Operations during fiscal year. Maintenance: Ordinary operation and maintenance activities were conducted.

33B. EDWARD MACDOWELL LAKE, NH

Location. Edward MacDowell Dam is located on Nubanusit Brook, a tributary of the Contoocook River, about one-half mile upstream from the village of West Peterborough, New Hampshire, and about 14 miles east of Keene, New Hampshire. (See Geological Survey map for Peterborough and Monadnock, NH.)

Existing project. For a description of the completed improvements and authorizing legislation see the Annual Report for 1975. Construction of the dam and appurtenant works was initiated in March 1948 and completed in March 1950.

Local cooperation. Section 2, Flood Control Act of 1938 applies.

Operations during fiscal year. Maintenance: Ordinary operation and maintenance activities were conducted.

33C. FRANKLIN FALLS DAM, NH

Location. Franklin Falls Dam is located on the Pemigewasset River, a main tributary of the Merrimack River, about 2.5 miles upstream of Franklin, New Hampshire. (See Geological Survey maps for Penacook and Holderness, NH.)

NEW ENGLAND DISTRICT

Existing project. For a description of the completed improvements and authorizing legislation see the Annual Report for 1975. Construction of the dam and appurtenant works was initiated in November 1939 and completed in October 1943.

Local cooperation. Section 2, Flood Control Act of 1938 applies.

Operations during fiscal year. Maintenance: Ordinary operation and maintenance activities were conducted.

33D. HOPKINTON-EVERETT LAKES, NH

Location. Hopkinton Dam is on Contoocook River, 17.3 miles above its junction with Merrimack River and about one-half mile upstream from village of West Hopkinton, New Hampshire. Everett Dam is on Piscataquog River, 16 miles above its junction with Merrimack River, and about 1.3 miles southeast of village of East Weare, NH. Two interconnecting canals were provided to enable the two reservoir areas to function as one. (See Geological Survey map for Hillsboro, NH, and Concord, NH.)

Existing project. For a description of the completed improvements and authorizing legislation see the Annual Report for 1975. Construction of two dams and appurtenant works was initiated in November 1959 and completed in December 1962. Construction of recreation facilities was initiated in November 1974 and completed in September 1975.

Local cooperation. Section 2, Flood Control Act of 1938 applies. Local interests must also bear 50 percent of future recreational development in accordance with 1965 Federal Water Project Recreation Act.

Operations during fiscal year. Maintenance: Ordinary operation and maintenance activities were conducted.

34. NEW BEDFORD, FAIRHAVEN AND ACUSHNET, MA

Location. Main harbor barrier is across New Bedford and Fairhaven Harbor in vicinity of Palmer Island. Supplemental dikes and walls are provided in Clark Cove area of New Bedford and Fairhaven. (See Geological survey maps for New Bedford North, New Bedford South, Marion, and Sciticut Neck, MA and National Ocean Service Coast Survey Charts 13230, 13070 and 13218.)

Existing project. For a description of the completed improvements and authorizing legislation see the Annual Report for 1975. Construction of the barrier and appurtenances was initiated in October 1962 and completed

in January 1966. Construction of the pumping station was initiated in October 1962 and completed in June 1964.

Local cooperation. Fully complied with for completed work.

Operations during fiscal year. Maintenance: The cost to operation and maintain the New Bedford Hurricane Barrier totaled \$383,248. Hired labor costs included \$171,448 for operation and maintenance, \$87,193 for design of electrical control and roof repairs, \$34,433 for security protection measures, \$53,979 for periodic inspection and \$11,999 for Reservoir Control Center support. Costs incurred for utilities and maintenance work totaled \$24,196.

35. PLEASANT POINT, PERRY, ME

Location. The Town of Perry is located in Washington County along the coast of northeastern Maine about 126 miles east of Bangor, Maine and 20 miles south of Calais, Maine.

Existing project. Provides for the construction of approximately 800 linear feet of stone slope protection along an eroding section of shoreline on Pleasant Point. Project was completed in June 1987. (See Table 1-B for Act authorizing the existing project.)

Local cooperation. Fully complied with for completed work. For a description of items of local cooperation see the Annual Report for 1987.

Operations during fiscal year. New work: Inspection of the project revealed that some of the stone slope protection has been displaced. The rate of displacement is greater than expected because much of the stone used in construction of the project was not in accordance with specifications in terms of weight and configuration. A draft Construction Deficiency Report was prepared and was still under review at FY end.

36. ROUGHANS POINT, REVERE, MA

Location. The city of Revere is a coastal community located in Suffolk County about five miles northeast of Boston, Massachusetts. Roughans Point is a low-lying, ocean front neighborhood of Revere. The area has 55 acres and about 300 structures, mostly residential homes.

Existing project. Project consists of 3,125 feet of stone revetment to dissipate incoming waves, prevent overtopping and stabilize existing facilities along the shoreline. The revetment extends from a point about 250 feet south of Eliot Circle southerly to a point 200 feet south of the intersection of Winthrop Parkway and Leverett Avenue. The project

also provides for "backwater" protection by raising the ground elevation one-foot at the intersection of Bennington Street and State Road and installing a sluice gate on the 42-inch drain from the Roughans area to Sales Creek. Interior drainage improvements consist of a new intake structure at the existing pump station and a new gravity drain with a sluice gate. Project was completed in November 2001. (See Table 1-B for Act authorizing the existing project.)

Local cooperation. A Project Cooperation Agreement was signed April 25, 1997 between the Corps and the Commonwealth of Massachusetts Department of Environmental Management. The project sponsor must provide without cost to the United States all lands, easements, rights-of-way, and relocations necessary for construction of the structural elements of the project, including ponding areas, borrow areas, and disposal areas for excavated material; hold and save the United States free from damages due to construction, operation, and maintenance of the project, not including damages due to the fault or negligence of the United States or its contractors; bear all costs of operation, maintenance and replacements; pay an amount in cash to bring the total non-Federal share to 35 percent of project costs allocated to storm damage reduction.

Operations during fiscal year. New work: The project was officially turned over to the City of Revere and Massachusetts Department of Conservation and Recreation for operation and maintenance by letter dated September 28, 2005. The City of Revere requested additional credit for lands, easements, rights-of-way, and relocations (LERR) by letter dated October 20, 2005. This letter also requested an update of the Federal Emergency Management Agency (FEMA) flood insurance maps. The additional LERR credit was approved by letter dated December 6, 2005. A draft application and updated flood maps were provided the city in February 2006. The city submitted the application to FEMA in March 2006 and the revised rate map for Revere became effective on September 20, 2007. Final project close-out was initiated.

37. STAMFORD, CT

Location. The Stamford Hurricane Barrier is located in Fairfield County on the north shore of Long Island Sound, about 30 miles east of New York City and 20 miles southwest of Bridgeport, Connecticut. (See Geological Survey map for Stamford, CT.)

Existing project. For a description of the completed improvements and authorizing legislation, see the Annual Report for 1974. Project was completed in 1969. Local interests still owe a substantial amount based on claims

settlements, including interest payment under the Contract Disputes Act.

Local cooperation. Fully complied with for completed work.

Operations during fiscal year. Maintenance: Ordinary operation and maintenance activities were conducted.

38. THAMES RIVER BASIN, CT, RI, AND MA

Works covered by this plan are a series of dams and reservoirs on tributaries of Thames River in Massachusetts and Connecticut, within a radius of 45 miles from Norwich, CT, and a channel enlargement on Shetucket River where it discharges into Thames River at Norwich. Flood Control Act of August 18, 1941, approved plan for a system of reservoirs and channel improvements in Thames River Basin in accordance with House Document 885, 76th Congress, 3rd session, and authorized \$6 million for initiation and partial accomplishment of project. Flood Control Act of December 22, 1944, authorized completion of approved plan. Flood Control Act of July 14, 1960, authorized project for West Thompson Reservoir, substantially as recommended in Senate Document 41, 86th Congress, 2nd session. Local flood protection project for West River, New Haven, CT was authorized under authority provided by Section 205 of the 1948 Flood Control Act. (See Table 1-V on reservoirs and local protection projects, Thames River Basin, for projects comprising approved plan.)

38A. BUFFUMVILLE LAKE, MA

Location. Dam is on Little River, 1.3 miles above its junction with French River, and eight miles northeast of Southbridge, MA. Reservoir extends upstream about 1.7 miles northerly and 1.9 miles southerly. (See Geological Survey maps for Webster, MA and CT, and Leicester, MA.)

Existing project. For a description of the completed improvements and authorizing legislation see the Annual Report for 1975. Construction of the dam and appurtenant works was initiated in September 1956 and completed in June 1958.

Local cooperation. Section 2, Flood Control Act of 1938 applies.

Operations during fiscal year. Maintenance: Ordinary operation and maintenance activities were conducted.

38B. EAST BRIMFIELD LAKE, MA

Location. Dam is on Quinebaug River, 64.5 miles above its confluence with Shetucket River, and one-mile southwest

NEW ENGLAND DISTRICT

of the village of Fiskdale, Massachusetts. (See Geological Survey maps for Whales, MA and CT, Southbridge, MA and CT, East Brookfield, MA, and Warren, MA.)

Existing project. For a description of the completed improvements and authorizing legislation see Annual Report for 1975. Construction of the dam and appurtenant works was initiated in May 1958 and completed in June 1960.

Local cooperation. Section 2, Flood Control Act of 1938 applies.

Operations during fiscal year. Maintenance: Ordinary operation and maintenance activities were conducted.

38C. HODGES VILLAGE DAM, MA

Location. Dam is on French River, 15 miles above its confluence with Quinebaug River, at Hodges Village in the Town of Oxford, Massachusetts, about five miles north of Webster, MA. (See Geological Survey maps for Webster, MA, and CT, Leicester, MA, Worcester South, MA, and Oxford, MA.)

Existing project. For a description of the completed improvements and authorizing legislation see the Annual Report for 1975. Construction of the dam and appurtenant works, initiated in March 1958, was completed in December 1959. Major rehabilitation of the dam was initiated in October 1997 and completed in July 2000.

Local cooperation. Section 2, Flood Control Act of 1938 applies.

Operations during fiscal year. Maintenance: Ordinary operation and maintenance activities were conducted.

38D. MANSFIELD HOLLOW LAKE, CT

Location. Dam is at Mansfield Hollow, Connecticut, on Natchaug River, 5.3 miles above its confluence with Willimantic River. It is four miles northeast of the City of Willimantic, CT. (See Geological Survey maps for Spring Hill and Willimantic, CT.)

Existing project. For a description of the completed improvements and authorizing legislation see the Annual Report for 1975. Construction of dam, initiated in 1949, was completed in May 1952.

Local cooperation. Section 2, Flood Control Act of 1938 applies.

Operations during fiscal year. Maintenance: Ordinary operation and maintenance activities were conducted.

38E. WEST THOMPSON LAKE, CT

Location. Dam is on Quinebaug River, in the Town of Thompson, Connecticut. Site is in the village of West Thompson, two miles upstream from the City of Putnam, CT. (See Geological Survey map, for Putnam, CT.)

Existing project. For a description of the completed improvements and authorizing legislation see the Annual Report for 1975. Construction of dam, road relocation, and appurtenances was initiated in August 1963 and completed in October 1965. Initial phase of recreation facilities was completed in May 1976.

Local cooperation. Section 2, Flood Control Act of 1938 applies.

Operations during fiscal year. Maintenance: Ordinary operation and maintenance activities were conducted.

38F. WESTVILLE LAKE, MA

Location. Dam is on Quinebaug River, 56.7 miles above its confluence with Shetucket River, in the Towns of Sturbridge and Southbridge, Massachusetts, and 1.3 miles west of center of Southbridge. (See Geological Survey maps for Southbridge, MA and RI, and East Brookfield, MA.)

Existing project. For a description of the completed improvements and authorizing legislation see the Annual Report for 1975. Construction of the dam and appurtenant works was initiated in April 1960 and completed in August 1962.

Local cooperation. Section 2, Flood Control Act of 1938 applies.

Operations during fiscal year. Maintenance: Ordinary operation and maintenance activities were conducted.

39. TOWN BROOK, QUINCY AND BRAINTREE, MA

Location. The project is located in the City of Quincy and the Town of Braintree on the south side of Massachusetts Bay, along the eastern shore of Massachusetts, seven miles south of Boston in Norfolk County. The watershed is approximately 4.5 square miles.

Existing project. Project provides for the construction of a 12-foot diameter, 4,060-foot long, concrete lined tunnel in bedrock approximately 140 to 180 feet below ground, intake and outlet structures, and improvements to the Town River downstream of the outlet shaft. The tunnel and its appurtenances will be supplemented by reconstruction of the

Old Quincy Reservoir Dam, located at the headwaters of Town Brook. Reconstruction work includes a new spillway and outlet structure. The project includes \$6,100,000 in approved credit for compatible work that has been accomplished by the project sponsor. Dam safety measures at Old Quincy Dam, which are estimated at \$9,000,000, are a non-Federal responsibility. Construction of the project was completed under three separate contracts. Town River improvements were completed in December 1994, the tunnel was completed in January 1997, and reconstruction of Old Quincy Reservoir Dam was completed in December 2002. (See Table 1-B for Act authorizing the existing project.)

Local cooperation. A Local Cooperation Agreement (LCA) was signed on July 7, 1992 between the Corps and the Metropolitan District Commission (MDC). The MDC is required to provide all lands, easements, and rights-of-way; pay all cost for dam safety measures at Old Quincy Dam to insure its structural integrity; pay a cash contribution for the costs allocated to flood control so that the total contribution of local interests is equal to 25 percent of costs allocated to flood control; and bear all costs of operation, maintenance, and replacements. In addition, local interests must do the following: prescribe and enforce regulations to prevent encroachment on both the improvements and unimproved channels, and manage all project-related channels to preserve capacities for local drainage as well as for project functions.

Operations during fiscal year. New work: Continued efforts to financially close-out the project.

40. VERMONT DAMS REMEDIATION, VT

Location. The ten dams to be evaluated are located throughout the State of Vermont.

Existing project. Authorizes the Corps to evaluate the structural integrity of ten priority dams in the State of Vermont and to carry out measures to modify, repair, restore or remove dams determined to pose an imminent and substantial risk to public safety. (See Table 1-B for Act authorizing the existing project.)

Local cooperation. A Design Agreement was signed on November 4, 2002 between the Corps and the State of Vermont Department of Environmental Conservation, Agency of Natural Resources. The non-Federal sponsor must contribute 35 percent of the cost for design of dam remediation work.

Operations during fiscal year. New work: Costs were apportioned between the Federal and non-Federal accounts in accordance with the design agreement. Further design

efforts are on hold pending authorization of additional priority dams.

41. INSPECTION OF COMPLETED FLOOD CONTROL PROJECTS

New policy guidance was issued in FY 2007 on the priority and use of Inspection of Completed Works funds. Priority I and II activities involved continued evaluation of projects with I-Wall construction, and notification of sponsors with projects that received an unacceptable, poor or fair rating during the last inspection. Project sponsors that received these ratings were allowed a one-year maintenance deficiency correction period (MDCP). Projects that are not corrected during the MDCP would no longer be eligible for Public Law 84-99 rehabilitation assistance and may no longer provide a reliable level of protection against flooding. New England District had the following ten projects in the MDCP during FY 2007:

East Hartford, CT – Active in PL84-99. Sponsor requested an 18-month extension to the MDCP from ASA(CW). The Sponsor is moving into final design and approval of the selected correction plan.

Torrington, East and West Branches, CT – Active in PL84-99. However, an update provided by the sponsor revealed a significant schedule shift because of funding constraints and corrective work cannot be completed by the January 31, 2008 deadline. In addition, no new completion date was proposed for the correction of the deficiencies. Project is being moved to inactive in PL84-99. The sponsor anticipates clearing vegetation around outfalls and drainage structures to better assess extend of corrective measures.

Waterbury-Watertown, CT – Active in PL84-99. The Sponsor has remedied pipe penetrations and intake structures along floodwalls with appropriate closure measures. The Connecticut Department of Environmental Protection, City of Waterbury and Town of Watertown are negotiating the Memorandum of Understanding for closure of the railroad structure.

Springfield, MA – Active in PL 84-99. Sponsor has corrected majority of deficiencies. The few remaining items will be performed next spring after the potential for flooding has passed. Remaining work includes removal of tree stumps, minor re-grading and loam and seeding. Approximately 200 linear feet of floodwall north of Broad Street that had been removed by an adjacent development has been replaced. A thorough inspection of the project is on-going as part of the certification process.

West Springfield, MA – Active in PL84-99. The Sponsor has corrected the deficiencies identified. Some minor re-grading and loam and seeding will occur in the spring. A

NEW ENGLAND DISTRICT

thorough inspection of the project is on-going as part of the certification process.

Chicopee, MA – Active in PL84-99. Sponsor has indicated that corrective measures cannot be completed by the January 31, 2008 deadline. Project is being moved to inactive in Public Law 84-99. Sponsor is moving forward and plans to issue a bid package for corrective measures.

Lowell, MA - Inactive in PL 84-99 as of 7 May 2007. Sponsor is working to correct deficiencies. Vegetation has been removed along floodwalls and borings are being performed along the Beaver Brook area. The Beaver Brook Pump Station was demolished, which needs to be redesigned and reconstructed. Sponsor anticipates construction of the new station by the spring of 2009.

Canton, MA - Inactive in PL 84-99 as of 7 May 2007. Sponsor has not taken any actions on remedying the deficiencies since May 2007.

Woonsocket, RI - Inactive in PL 84-99 as of 27 April 2007. Sponsor has not taken any actions on remedying the deficiencies since May 2007.

Lincoln, NH – Inactive in PL84-99 as of 7 May 2007. Sponsor has not taken any actions on remedying the deficiencies since May 2007.

A total of \$397,240 was expended in FY 2007 on Priority I and II activities and for inspection of the Roughans Point Local Protection Project in Revere, Massachusetts.

42. FLOOD CONTROL RESERVOIR OPERATIONS

A coordinated system of flood control dams, all of which have flood control as primary storage available with recreation and/or water supply as secondary storage in most of the projects, has been established in five major flood producing basins in New England. During periods of flood flows, regulation of reservoirs is fully coordinated within each basin dependent upon its location in the watershed, its available storage capacity and origin of the flood. In addition to flood control releases; water supply, flow augmentation and hydropower releases were made from selected reservoirs. Winter pools are maintained at many projects to submerge the flood control gates and keep them from freezing.

During FY 2007, one major runoff event occurred from April 15 to 18, 2007, which impacted all five river basins. During this event, 3 to 6 inches of rain fell within the Connecticut, Thames, Blackstone, Merrimack, and Naugatuck River Basins. Cumulative damages prevented during this event by Corps dams and local flood protection

projects was approximately \$528 million, of which \$369 million was attributed to Corps dams and \$159 million to local flood protection projects.

CONNECTICUT RIVER BASIN

Regulation for canoe and kayak activities occurred during FY 2007 at Knightville in March and April; Otter Brook in March, April and May; Birch Hill, Littleville and Tully in April; Surry Mountain in April and May; and Ball Mountain and Townshend in April and September. The Hartford MDC controlled releases for hydropower from Colebrook Lake during non-flood periods of FY 2007.

MERRIMACK RIVER BASIN

The scheduled releases at Blackwater Dam for canoe races in April 2007 were cancelled because of ongoing flood operations.

THAMES RIVER BASIN

Regulation for canoe and kayak activities occurred during April 2007 at East Brimfield. Small releases were also supplied from East Brimfield for low flow augmentation to the American Optical Company during the summer months.

43. HURRICANE BARRIER OPERATIONS

Five hurricane barriers are situated along the southern coast of New England, protecting coastal communities from tidal flooding associated with hurricanes and severe coastal storms. The Corps operates the navigational elements of the Stamford, Connecticut and the New Bedford/Fairhaven, Massachusetts's barriers. The local communities operate the hurricane barriers at Fox Point, Rhode Island; Pawcatuck, Connecticut; and New London, Connecticut. A brief resume of operations for the FY follows:

STAMFORD BARRIER. In FY 2007, the barrier gates at Stamford were operated on 18 occasions during coastal storms. Total damages prevented were \$815,000.

NEW BEDFORD BARRIER. The New Bedford Barrier was operated on 16 different occasions during FY 2007, resulting in a total of \$902,000 in damages prevented.

FOX POINT HURRICANE BARRIER. The Fox Point Hurricane Barrier was not operated during FY 2007, as tides did not reach damaging levels.

PAWCATUCK HURRICANE BARRIER. In FY 2007 the Pawcatuck Hurricane Barrier was operated during the April 2007 Nor'easter, resulting in \$62,500 in damages prevented.

NEW LONDON HURRICANE BARRIER. The New London Hurricane Barrier was operated during the April 2007 Nor'easter. Total damages prevented were \$43,800.

44. FLOOD CONTROL WORK UNDER SPECIAL AUTHORIZATION

Flood control activities pursuant to Section 205. Public Law 80-858, as amended (preauthorization).

(See Table 1-L)

Snagging and clearing activities pursuant to Section 208 of the 1954 Flood Control Act.

(None)

Emergency Bank Protection activities pursuant to Section 14 of the 1946 Flood Control Act (preauthorization).

(See Table 1-M)

Emergency flood control activities--repair, flood fighting, and rescue work (Public Law 99, 84th Cong., and antecedent legislation.)

Federal costs for FY 2007 for disaster preparedness and emergency operations were as follows:

Disaster Preparedness Program	\$ 309,492
Emergency Operations	50,983
Rehabilitation and Inspection Program	
Cocheco River, Farmington, NH	21,827
Norwalk River, Norwalk, CT	23,282
Prospect Beach, West Haven, CT	<u>26,837</u>
Total Flood Control & Coastal Emergencies	\$ 432,421

Environmental

45. ALLIN'S COVE, BARRINGTON, RI

Location. Allin's Cove is a 21 acre coastal embayment located in the Town of Barrington, Rhode Island along the east side of the Providence River just south of Bullocks Point Cove. In 1959, the Corps of Engineers used the mouth of Allin's Cove as a dredged material disposal site during improvement dredging of Bullocks Point Cove.

Existing project. The project provides for the excavation of dredged material, realignment of the inlet and construction of two sand spits to restore approximately 3.6 acres of salt marsh and protect an additional 0.7 acres of salt marsh at the mouth of the cove. The project also stabilizes the shoreline along Byway Road. Restoration work was completed in May 2006. (See Table 1-B for Act authorizing the existing project.)

Local cooperation. A Project Cooperation Agreement was signed on March 8, 2004 between the Corps and the Rhode Island Coastal Resources Management Council. The project sponsor must provide all lands, easements, rights-of-way, including suitable borrow and dredged material disposal areas, and perform all relocations determined by the Government to be necessary for project construction; pay a cash contribution in the amount necessary to bring the non-Federal share of study and project costs including lands to 25 percent; and bear all operation, maintenance and repair costs of the project after completion.

Operations during fiscal year. New work: A contract to restore Allin's Cove was awarded on July 27, 2005. Work began in October 2005 and was substantially complete in May 2006. Contractor returned in the spring of 2007 to reseed upland areas as grass growth did not meet performance evaluation criteria. Contractor earnings total \$747,880, of which \$10,500 was earned this FY. Final contract payment was still pending at FY end. Project includes a 3-year monitoring program which was initiated in July 2006 and continued through the FY.

46. LEBANON, NH

Location. The City of Lebanon is located in west central New Hampshire along the Connecticut River and state border with Vermont.

Existing project. Environmental infrastructure project, consisting of twelve functional portions, to eliminate combined sanitary waste and storm water systems. Phase I was completed in November 2002. Phase II was completed in September 2004. Phase III was completed in September 2007. (See Table 1-B for Acts authorizing the existing project.)

Local cooperation. A Project Cooperation Agreement was signed on June 24, 2002 between the Corps and the City of Lebanon, New Hampshire. The sponsor must provide 25 percent of total project costs.

Operations during fiscal year. New work: A contract for construction of functional portion three of the project was awarded on February 28, 2005. Work began in May 2005 and was completed in September 2007. Contractor earnings total \$4,435,531, of which \$745,107 was earned this FY. Final contract payment was still pending at FY end.

47. LONSDALE DRIVE-IN, LINCOLN, RI

Location. The project is located along the Blackstone River in the Town of Lincoln, Rhode Island, about 5 miles north of Providence, Rhode Island. The site is within the Blackstone River Valley National Heritage Corridor

Existing project. Restoration measures involve the demolition and removal of movie screens, concession stand and associated structures; removal of asphalt and gravel base; excavation of about 7 acres of the site to create emergent marsh and open water habitat; seeding the remaining 7 acres of the site with a mix of perennial grasses native to New England to create grassland habitat; and planting a variety of trees and shrubs to provide shelter and nesting habitat for songbirds. The project includes a 3-year monitoring period to ensure establishment of uplands and wetlands vegetation. Restoration work was completed in August 2003. (See Table 1-B for Act authorizing the existing project.)

Local cooperation. For a description of local cooperation see Annual Report for 2006.

Operations during fiscal year. New work: Project was financially closed. Excess contributed funds of \$33,156 were transferred to the Town Pond Project at the request of the sponsor.

48. NASHAWANNUCK POND, EASTHAMPTON, MA

Location. Nashawannuck Pond is located in the City of Easthampton, in west central Massachusetts. The pond has an area of about 31 acres and is located in the downtown section of Easthampton.

Existing project. The project provides for dredging about 8 acres of Nashawannuck Pond to a maximum depth of 12 feet to restore open water habitat. Work would include the disposal of approximately 54,000 cubic yards of dredged material at an upland site owned by the city. Dredging would be prohibited from a 50-foot buffer zone around the perimeter of the pond to protect shallow submerged aquatic vegetation and waterfowl habitat. (See Table 1-B for Act authorizing the existing project.)

Local cooperation. A Project Cooperation Agreement was signed on September 25, 2007 between the Corps and the City of Easthampton, Massachusetts. The project sponsor must provide all lands, easements, rights-of-way, including suitable borrow and dredged material disposal areas, and perform all relocations determined by the Government to be necessary for project construction; pay a cash contribution in the amount necessary to bring the non-Federal share of study and project costs including lands to 35 percent; and bear all operation, maintenance and repair costs of the project after completion.

Operations during fiscal year. New work: Project design was completed and the Decision Document was approved by North Atlantic Division on August 29, 2007.

49. NASHUA, NH

Location. The City of Nashua is located in south central New Hampshire along the state border with Massachusetts.

Existing project. Provide assistance to the City of Nashua for design and construction of a limited sewerage and storm drainage system separation project, in conjunction with improvements to increase the holding capacity of the collection system that feeds the Nashua Wastewater Treatment Facility. (See Table 1-B for Act authorizing the existing project.)

Local cooperation. Formal assurances have not been requested yet. The sponsor must provide 25 percent of total project costs.

Operations during fiscal year. New work: Efforts to complete the Environmental Assessment and to negotiate a Project Cooperation Agreement with the sponsor were suspended because of funding constraints.

50. NINIGRET AND CROSS MILLS PONDS, CHARLESTOWN, RI

Location. The Town of Charlestown is located along the south coast of Rhode Island in Washington County. The specific areas of restoration are located in and adjacent to the breachway in Ninigret Pond and at the junction of Cross Mills Pond with an unnamed outlet stream that discharges into Ninigret Pond.

Existing project. Project involves dredging about 40 acres of tidal shoal area in Ninigret Pond and planting eelgrass to restore aquatic habitat. Eelgrass will be transplanted to dredged areas by removing plugs from nearby healthy donor beds or through direct seeding techniques. A 3.5-acre sediment basin would be dredged to prevent future shoaling of restored aquatic habitat. The project also includes construction of a concrete lined bypass channel with two fish ladders from Ninigret Pond to Cross Mills Pond. Restoring the migratory pathway of herring and other anadromous species to Cross Mills Pond will allow passage to about 20 acres of spawning habitat. (See Table 1-B for Act authorizing the existing project.)

Local cooperation. A Project Cooperation Agreement was signed on May 28, 2003 between the Corps and the State of Rhode Island, Coastal Resources Management Council. The project sponsor must provide all lands, easements, rights-of-way, including suitable borrow and dredged material disposal areas, and perform all relocations determined by the Government to be necessary for project construction; pay a cash contribution in the amount necessary to bring the non-Federal share of study and project

costs including lands to 35 percent; and bear all operation, maintenance and repair costs of the project after completion.

Operations during fiscal year. New work: Dredging to restore about 25 acres of tidal shoal area was completed in April 2006. Eelgrass restoration of this area was initiated under a purchase order signed July 18, 2006. Mechanical eelgrass seeding began in August 2006 and was completed in January 2007. Final contract amount was \$63,850, of which \$10,350 was earned this FY. Further eelgrass restoration efforts may be limited as observations have shown significant natural succession of eelgrass in dredged areas. A contract to dredge the remaining 15 acres of tidal shoal area to be restored was awarded on August 6, 2007. Work under this contract had not begun by FY end.

51. SAGAMORE MARSH, CAPE COD CANAL, MA

Location. Sagamore Marsh is located in southeastern Massachusetts in the Towns of Bourne and Sandwich, approximately 50 miles southeast of Boston, Massachusetts. The marsh lies on the north side of the Cape Cod Canal, near the canal's east end.

Existing project. Provides for enlarging culverts beneath Scussett Beach and Cape Cod Canal Service Roads, installing sluice gates and excavating channels to increase tidal flows. Tidal flushing of Sagamore Marsh was restricted in the 1930s when the Cape Cod Canal was widened. Restoration of about 50 acres of salt marsh and estuarine habitat was completed in August 2002. (See Table 1-B for Act authorizing the existing project.)

Local cooperation. For a description of local cooperation see Annual Report for 2006.

Operations during fiscal year. New work: Ecosystem restoration work was completed in August 2002. The project includes five years of monitoring, which began in FY 2003. Project monitoring revealed that the sluice gates cannot be fully opened without affecting protected salamander habitat. The operation and maintenance manual was revised to limit sluice gate operations. The final year of project monitoring was completed and efforts were initiated to financially close out the project.

52. TOWN POND (BOYD'S MARSH), PORTSMOUTH, RI

Location. Town Pond is located along the south shore of Mount Hope Bay in Portsmouth, Rhode Island. In 1950 and 1951, the Corps of Engineers used this pond as a dredged material disposal site during construction of the deep draft navigation project at Fall River Harbor, Massachusetts.

Existing project. Provides for the excavation of dredged material to improve tidal flushing and encourage growth of salt marsh vegetation. Work will restore approximately 20 acres of degraded salt marsh and provide significant increase in habitat for both nesting and migratory birds, as well as estuarine fish and wildlife. (See Table 1-B for Act authorizing the existing project.)

Local cooperation. A Project Cooperation Agreement was signed on August 23, 2004 between the Corps and the State of Rhode Island and Providence Plantations. The project sponsor must provide all lands, easements, rights-of-way, including suitable borrow and dredged material disposal areas, and perform all relocations determined by the Government to be necessary for project construction; pay a cash contribution in the amount necessary to bring the non-Federal share of study and project costs including lands to 25 percent; and bear all operation, maintenance and repair costs of the project after completion.

Operations during fiscal year. New work: A contract to restore Town Pond was awarded on July 25, 2005. Work began in September 2005 and was about 90 percent complete at FY end. Contracting earnings total \$4,039,309, of which \$2,217,829 was earned this FY. The project began functioning on September 21, 2007 as tidal flows were allowed to enter the marsh. Several minor work items remain and physical completion is scheduled for November 2007.

53. ENVIRONMENTAL RESTORATION WORK UNDER SPECIAL AUTHORIZATION

Project modifications for the improvement of the environment pursuant to Section 1135, Public Law 99-662, as amended (preauthorization).

(See Table 1-N)

Aquatic ecosystem restoration activities pursuant to Section 206, Public Law 99-662, as amended (preauthorization).

(See Table 1 - O)

Beneficial use of dredged material activities pursuant to Section 204, Public Law 102-580, as amended (preauthorization).

(See Table 1 - P)

NEW ENGLAND DISTRICT

Estuary habitat restoration activities pursuant to the Estuary Restoration Act of 2000, Public Law 106-47, (preauthorization).

(See Table 1 - Q)

General Investigations

54. SURVEYS

Costs for the FY for surveys from regular funds were \$959,485, of which \$441,248 was for three navigation studies; \$22,147 for four ecosystem restoration studies; \$81,732 for one comprehensive study; \$289,689 for five special studies under the Planning Assistance to the States program; and \$124,669 for coordination studies.

55. COLLECTION AND STUDY OF BASIC DATA

The District Engineer is the U.S. member on the Saint Croix River Board of Control. Annual site visits are made of conditions on the Saint Croix River and basic hydrologic information is compiled. A report of operations and development in the basin was prepared in cooperation with Canadian counterparts. The Board's efforts have been expanded in recent years to improve exchange of watershed information between countries and to monitor the ecological health of the watershed's aquatic ecosystem. Total costs for the FY were \$50,362. Total costs to September 30, 2007 are \$825,504.

The Gulf of Maine Council on the Marine Environment was established in 1989 under an agreement signed by the Governors of Maine, New Hampshire and Massachusetts, and the Premiers of Nova Scotia and New Brunswick. The Council was tasked under this agreement to develop consistent policies, initiatives and programs designed to protect and conserve the shared natural resources of the Gulf of Maine. In April 1993, the Council requested the New England District Engineer to participate in this international program as an "observer" to the Council. In this capacity, the District Engineer is expected to attend Council meetings and support their initiatives to the extent possible. In addition to the District Engineer's direct participation, a representative of the Corps is a member of the Working Group to the Council, which implements directives of the Council. The Corps representative on the Working Group is assisting the Habitat Sub-Group to establish policies, set priorities and identify lead agencies for implementing habitat restoration projects in the Gulf of Maine. This effort includes investigating potential habitat restoration sites eligible for Corps participation under Sections 1135 and 206, and for coordination of input from other Federal agencies. Total costs for the FY were \$4,988. Total costs to September 30, 2007 are \$142,985.

Flood plain management studies comprise compilation and dissemination, upon requests by responsible local interests, of information on floods and potential flood damages. Studies identify areas subject to inundation by floods of various magnitudes and frequencies, and provide general criteria for guidance in the conservation and limited use of these areas, along with engineering advice in planning to ameliorate the flood hazard. Total costs for the FY were \$68,585. Total costs to September 30, 2007 are \$11,443,879.

The April 1987 flood was one of the largest of recent times in New England, resulting in spillway discharge at six Corps flood control reservoirs. Hydrologic analysis of this flood event is needed for future planning and design studies, as well as reservoir operation. FY 2007 funds were used to continue hydrologic analysis of the 1987 flood within the Merrimack River Basin. Total costs for the FY were \$1,975. Total costs to September 30, 2007 are \$161,944.

56. PLANNING, ENGINEERING AND DESIGN

(None.)

57. PRECONSTRUCTION ENGINEERING AND DESIGN

Pre-construction Engineering and Design costs were \$707,065 to continue design efforts on the Muddy River flood control and ecosystem restoration project in Boston and Brookline, Massachusetts. Work included completion of 50 percent project design and review.

Regulatory Program

58. REGULATORY PROGRAM

Permit Evaluation	\$ 5,806,277
Enforcement	191,849
Compliance	<u>175,268</u>
Total Regulatory Program	\$ 6,173,394

Formally Utilized Sites Remedial Action Program (FUSRAP)

59. COMBUSTION ENGINEERING, WINDSOR, CT

Location. The Town of Windsor is located in north-central Connecticut about 10 miles north of Hartford, Connecticut. The Combustion Engineering (CE) site is a 600-acre area located along the Farmington River in Windsor, Connecticut.

Existing project. CE, under contract to the Atomic Energy Commission (AEC), fabricated nuclear fuel assemblies using highly enriched uranium (HEU) from 1958 to 1961. CE also conducted licensed commercial nuclear activities on the site from the early 1960's to 1993. Although the commercial nuclear fuel fabrication ceased in 1993, CE is still licensed by the Nuclear Regulatory Commission (NRC) for commercial nuclear activities and the facility is still operating today. HEU is the primary radiological contaminant of concern at the site.

Local cooperation. Not applicable.

Operations during fiscal year. New work: Costs of \$227,014 were incurred for continued work on the feasibility study.

60. SHPACK LANDFILL, NORTON AND ATTLEBORO, MA

Location. The Towns of Norton and Attleboro are located in southeastern Massachusetts about 25 miles southwest of Boston, Massachusetts. Shpack Landfill is located along the town boundary line with about 5.5 acres in Norton and 2.5 acres in Attleboro.

Existing project. The Shpack site is an 8-acre abandoned domestic and industrial landfill, which operated from 1946 to 1965. Radioactive contamination is believed to have come from Metals and Controls Incorporated, now Texas Instruments, which had used the landfill to dispose of trash and other materials from 1957 to 1965. The General Plate Division of Metals and Controls Incorporated began to fabricate enriched uranium foils at their Attleboro plant in 1952. In 1959 it merged with Texas instruments, which continued the operations until 1981, using enriched and natural uranium for the fabrication of nuclear fuel for the U.S. Navy and commercial customers. The site was listed on the National Priority List (NPL) in 1986, primarily to address other contaminants on site.

Local cooperation. Not applicable.

Operations during fiscal year. New work: A task order for remedial action was issued to Conti Environmental and Infrastructure Incorporated on 18 August 2005. The contractor began remedial action in September 2005 and was forced to stop work in August 2006 because of funding constraints. The contractor resumed work in June 2007 and was about 40 percent complete at FY end. Contractor earnings total \$8,961,096, of which \$2,077,184 was earned this FY. Costs totaled \$2,527,060 during FY 2007.

TABLE 1-B AUTHORIZING LEGISLATION

Acts	Work Authorized	Documents
July 14, 1960 as amended	AUNT LYDIA'S COVE, CHATHAM, MA (See Section 1 of Text.) Entrance channel 100 feet wide by 900 feet long and 9.5 acre anchorage area, both 8 feet deep.	P.L. 86-645, Section 107. Authorized by the Chief of Engineers August 31, 1994.
July 11, 1870	BLOCK ISLAND HARBOR OF REFUGE, RI (See Section 2 of Text.) Main breakwater.	Annual report 1868, p. 785 and S. Misc. Doc. 81, 40 th Cong., 2 nd sess.
August 2, 1882 August 5, 1886	Repairs to basin walls and cliff protection east of harbor. Breakwater enclosing inner harbor.	S. Ex. Doc.26, 47 th Cong., 1 st sess. S. Doc. 27, 48 th Cong., 2 nd sess. and Annual Report 1885, p. 610
June 3, 1896 July 25, 1912	Raising crest of main breakwater and making it sand tight. Rebuilding basin walls and present project dimensions of dredged area.	H. Doc. 83, 54 th Cong., 1 st sess. H. Doc. 828, 60 th Cong., 1 st sess.
November 17, 1986	Deauthorizes two 15-foot anchorages in the outer harbor authorized by the River and Harbor Act of 1912. Inner Harbor.	Section 1002, P.L. 99-662.
March 2, 1825 June 14, 1880	BOSTON HARBOR, MA (See Section 3 of Text.) Preservation of islands and seawalls. Weir River (Nantucket Beach Channel) 9.5 ft. deep. 100 ft. wide to Steamboat Wharf at Nantasket.	Annual Report, 1881, p. 518
August 5, 1886	Fort Point Channel. ¹	H. Ex. Doc. 206,48 th Cong., 2 nd sess., Annual Report, 1885, p. 543.
September 19, 1890	Weir River (Nantucket Beach Channel) 9.5 ft. deep. 150 ft. wide to Steamboat Wharf at Nantasket.	Annual Report, 1890, p. 503
July 25, 1892	Weir River (Nantucket Beach Channel) from mouth of Weir River to Steamboat Wharf at Nantasket Beach 12 ft. deep, 150 ft. wide. Channel 15 feet deep from Long Island to Nixes Mate Shoal (Nixes Mate to Nubble Channel).	Annual Report, 1893, p. 769
July 13, 1892 June 3, 1896	Channel 27 feet from Nantasket Roads to President Roads. Dredge Chelsea River Channel to 18 feet.	Annual Report, 1893, p. 766 H. Ex. Doc. No. 162,53 rd Cong., 3 rd sess., Annual Report, 1895, p. 648
March 3, 1899	For 30-foot channel from sea to President Roads through Broad Sound by less direct route than 35 and 40-foot channels.	H. Doc. 133, 55 th Cong., 2 nd sess. Annual Report, 1898, p. 886.
June 13, 1902	For 35-foot channel from sea to Boston Naval Shipyard. Chelsea and Charles River Bridges. Elimination from project of removal of Finns Ledge at outer entrance.	H. Doc. 119, 56 th Cong., 2 nd sess. Annual Report, 1901, p. 1096 Authorized by Chief of Engineers. March 11, 1913.
July 25, 1912 August 8, 1917 August 30, 1935 ³	Dredge Chelsea River channel 25 ft. Depth of 40 feet (45 feet in rock) in Broad Sound Channel. Present project dimensions of channel from President Roads to Commonwealth pier No. 1, East Boston and anchorage area north side of President Roads.	H. Doc. 272, 62 nd Cong., 2 nd sess. ² H. Doc. 931, 63 rd Cong., 2 nd sess. ² H. Doc. 244, 72 nd Cong., 1 st sess. ²
Do.	Present project dimensions of that part of approach channel to U.S. Navy dry-dock No.3 at South Boston between Main Ship Channel and U.S. harbor line.	Rivers and Harbors Committee Doc. 29, 74 th Cong., 1st sess. ²
August 26, 1937	Chelsea River, channel 30 feet deep.	Rivers and Harbors Committee Doc. 24, 75 th Cong., 1 st sess. ²
October 17, 1940 September 7, 1940	Reserved channel 30 feet deep. Abandons seaplane channel authorized in 1940 River and Harbor Act (H.Doc.262,76th Cong., 1st sess.)	H. Doc. 225, 76 th Cong., 1 st sess. ² Public Law 420,78 th Cong.
March 2, 1945	Extension of 40-foot channel.	H. Doc. 733, 79 th Cong., 2 nd sess.

TABLE 1-B (Continued) AUTHORIZING LEGISLATION

Acts	Work Authorized	Documents
July 24, 1946	Extension of President Roads anchorage.	H. Doc. 244, 80 th Cong., 1 st sess. ²
July 3, 1958	Reserved channel 35 feet deep, 430 feet wide, extending one	H. Doc. 349, 84 th Cong., 2 nd sess. ²
October 23, 1962	Chelsea River Channel and Maneuvering Basin 35 feet deep.	H. Doc. 350, 87 th Cong., 2 nd sess. ²
January 1, 1990	Deauthorizes 1945 Act.	Federal Register Volume 55, No. 194, October 5, 1990.
November 28, 1990	Deepen Mystic River and Reserved Channels to 40 feet; Chelsea River Channel to 38 feet; widen and deepen Inner Confluence Area to 40 feet; mark Presidents Roads Channel and expand Presidents Roads Anchorage from 353 to 420 acres.	Section 101, Public Law 101-640.
October 31, 1992	Deauthorizes portion of the 35-foot channel in Boston Inner Harbor lying easterly of the Charlestown waterfront authorized in 1902 River and Harbor Act.	Section 116(2), P.L. 102-580
October 12, 1996	Deauthorizes portion of the 35-foot Chelsea River Channel authorized in the 1962 Act.	Section 364(12), P.L. 104-303
October 12, 1996	Deauthorizes portion of the 40-foot Reserved Channel authorized in the 1990 Act.	Section 364(16), P.L. 104-303
BRIDGEPORT HARBOR, CT (See Section 4 of Text.)		
July 4, 1836	Fayerweather Island seawall.	
March 3, 1899	Shore protection of Fayerweather Island.	Annual Report, 1899, page 1173
March 2, 1907	West breakwater and present project dimensions of east breakwater.	H. Docs. 275 and 521, 59 th Cong., 2 nd sess.
March 2, 1919	Present project depths of 18-and 12-foot anchorage basins.	H. Doc. 898, 63 rd Cong., 2 nd sess.
July 3, 1930	25-foot entrance channel, 25-foot anchorage and an 18-foot channel through Johnsons River, present project dimensions of channels through Poquonock River, Yellow Mill Pond, Black Rock Harbor and Cedar Creek.	H. Doc. 281, 71 st Cong., 2 nd sess.
August 26, 1937	25-foot channel through main harbor, and present Project location and extent of 18- and 12-foot anchorage basins.	H. Doc. 232, 75 th Cong., 1 st sess.
March 2, 1945	30-foot channel; elimination of 12-foot anchorage.	H. Doc. 819, 76 th Cong., 3 rd sess.
July 24, 1946	30-foot turning basin and 15- and 9-foot channels in Johnsons River	H. Doc. 680, 79 th Cong., 2 nd sess. ⁴
July 3, 1958	Present depth and extent of main channel, and turning Basin south and southeast of Cilco Terminal; Black Rock Harbor breakwater; Burr and Cedar Creek anchorage. Upper Johnsons River anchorage; lower Johnsons River anchorage.	H. Doc. 136, 85 th Cong.
November 2, 1979	Deauthorizes the removal of rock in Yellow Mill Pond authorized in the 1930 Act.	H. Doc. 157, 96 th Cong., 1 st sess.
November 17, 1986	Deauthorizes construction of two rubble-mound breakwaters at the entrance to Black Rock Harbor and dredging a 28-acre anchorage 6 feet deep in Burr and Cedar Creeks at the head of Black Rock Harbor authorized In the 1958 Act.	Sec, 1002, P. L. 99-662
October 12, 1996	Deauthorizes two-acre anchorage area at the head of the Johnsons River authorized in the 1958 Act, and portion of the Johnsons River navigation channel authorized in the 1946 Act.	Section 364 (2) (A) & (B), P.L. 104-303
August 17, 1999	Deauthorizes a 2.4-acre anchorage area, 9 feet deep , and an adjacent 0.6-acre anchorage area, 6 feet deep, located on the west side of the Johnsons River authorized in the 1958 Act.	Section 365 (a) (1), P.L. 106-53

NEW ENGLAND DISTRICT

TABLE 1-B (Continued) AUTHORIZING LEGISLATION

Acts	Work Authorized	Documents
September 3, 1954	BULLOCKS POINT COVE, RI (See Section 5 of Text.) Provides for an 8-foot channel, 6-foot turning basin, 6-foot anchorage, and breakwater.	H. Doc. 242, 83 rd Cong., 2 nd sess.
January 21, 1927 (Section 2)	CAPE COD CANAL, MA (See Section 6 of Text.) Purchase canal from Boston, Cape Cod & New York Canal Co., in accordance with contract dated July 29, 1921, executed by that company.	H. Doc. 139, 67 th Cong., 2 nd sess.
Included in Public Works Administration program, September 6, 1933	Construct three bridges and widen canal to 250 feet.	H. Doc. 795, 71 st Cong., 3 rd sess.
June 26, 1934 (Permanent Appropriations Repeal Act)	Operation and care of works of improvement provided for the funds from War Department appropriations for rivers and harbors.	Do.
Included in Public Works Administration program, April 29, 1935	Construct a mooring basin.	Do.
Included in Emergency Relief Program, May 28, 1935.	Dredging and bank protection.	Do.
August 30, 1935	Existing project for main canal adopted.	Rivers and Harbor Committee Doc. 15, 74 th Cong., 1 st sess.
March 2, 1945 July 3, 1958	Channel and turning basin 15-foot deep in Onset Bay. Extend East Boat Basin for an area of about 4.3 acres to a depth of eight feet.	H. Doc. 431, 77 th Cong., 1 st sess. H. Doc. 168, 85 th Cong., 1 st sess.
August 17, 1999	Authorizes Secretary to pay up to \$300,000 for alternate transportation during rehabilitation of the Railroad Bridge.	Section 536, P.L. 106-53.
June 3, 1896 March 4, 1913 October 23, 1962	CARVERS HARBOR, VINALHAVEN, ME (See Section 7 of Text.) Provides for 16-foot anchorage area. Provides for two 10-foot anchorage areas along south side of harbor. Provides for 10-foot anchorage area adjacent to main waterfront and 6-foot access channel.	H. Doc. 624, 62 nd Cong., 2 nd sess. S. Doc. 118, 87 th Cong., 2 nd sess.
August 17, 1999	Deauthorizes a portion of the 16-foot anchorage area authorized by the River and Harbor Act of 1896.	Section 365 (a) (6), P.L. 106-53
August 2, 1882 March 2, 1945 August 17, 1999	CLINTON HARBOR, CT (See Section 8 of Text.) Maintenance of a stone dike closing a breach of sandy peninsula which separates river from outer harbor. 8-foot channel and anchorage Deauthorizes the upstream portion of project authorized by the River and Harbor Act of 1945.	S. Ex. Doc. 84, 47 th Cong., 1 st sess. H. Doc. 240, 76 th Cong., 1 st sess. Section 365 (a) (2), P.L. 106-53
September 19, 1890	COCHECO RIVER, NH (See Section 9 of Text.) Provides for a 3-mile long tidewater channel 7 feet deep and 60 to 70 feet wide.	H. Doc. 74, 51 st Cong. 1 st sess.
October 12, 1996	Deauthorizes portion of 1890 Act and directs maintenance dredging of the remaining project.	Section 365(18), P.L. 104-303
July 14, 1960 as amended	GREEN HARBOR, MA (See Section 11 of Text.) Channel six feet deep, 100 feet wide from deep water to head of navigation; anchorage near town pier; sealing, rebuilding in part and extension of existing west jetty.	Section 107, P.L. 86-645 Authorized by the Chief of Engineers December 15, 1965.

TABLE 1-B (Continued) AUTHORIZING LEGISLATION

Acts	Work Authorized	Documents
August 17, 1999	Deauthorizes portion of the 6-foot channel and turning basin, and re-designates portion of 6-foot channel as an anchorage area.	Section 365 (a)(11) & (d), P.L. 106-53.
March 3, 1899	MERRIMACK RIVER, MA (See Section 12 of Text.) Channel 7 feet deep and 150 feet wide extending from deep water in Newburyport Harbor to the railroad bridge in Haverhill, along with removal of a sand bar at the mouth of the river and rock removal in Merrimack.	River and Harbor Act of 1899.
October 23, 1962	NARRAGUAGUS RIVER, ME (See Section 13 of Text.) Channel 11 feet deep and 150 feet wide from deep water to Wyman, thence 9 feet deep and 100 feet wide to Milbridge with widening opposite Milbridge for an anchorage, and thence 6 feet deep and 100 feet wide to proposed town landing with widening near landing for an anchorage.	H. Doc. 530, 87 th Cong., 2 nd sess.
March 2, 1907	NEW BEDFORD AND FAIRHAVEN HARBOR, MA (See Section 14 of Text.) The 25-foot anchorage area north of Palmer Island	H. Doc. 271, 59 th Cong., 2 nd sess.
March 3, 1909	Extension of the 25-foot channel along New Bedford wharf front.	Specified in act.
July 25, 1912	The 18-foot channel in Acushnet River to Belleville (project feature was abandoned by Congress in 1955).	H. Doc. 442, 62 nd Cong., 2 nd sess.
July 3, 1930	The 30-foot channel, anchorage, and maneuvering area (channel limited to width of 350 feet).	H. Doc. 348, 71 st Cong., 2 nd sess.
August 30, 1935	Present project dimensions of the anchorage area north of Palmer Island and maintenance of the 25-foot anchorage. Elimination from the project of the prior authorization for enlarging and deepening the maneuvering area 30-feet deep east of the harbor channel.	Rivers and Harbors Committee Doc. 16, 74 th Cong., 1 st sess.
August 26, 1937	The 15-foot and 10-foot channels along Fairhaven wharf.	Rivers and Harbors Committee Doc. 25, 75 th Cong., 1 st sess.
November 17, 1986	Deauthorizes the 18-foot channel in Acushnet River to Bellville authorized in the 1912 Act.	Section 1002, P. L. 99-662.
August 17, 1999	Deauthorizes portion of the 25-foot spur channel leading to the west of Fish Island authorized in the 1909 Act, and portion of the 30-foot maneuvering area authorized in the 1930 Act.	Section 365 (a) (10), P. L. 99-662.
October 23, 1962	PAWTUXET COVE, RI (See Section 16 of Text.) Channel 6 feet deep and 100 feet wide extending from deep water in the Providence River to the head of Pawtuxet Cove, 6-foot turning basin, 6-foot anchorage area, and 2,200-foot long sheltering dike.	H. Doc. 236, 87 th Cong., 1 st sess.
August 26, 1937	PROVIDENCE RIVER AND HARBOR, RI (See Section 19 of Text.) Channel 35 feet deep from deep water in Narragansett Bay to Fox Point.	H. Doc. 173, 75 th Cong., 1 st sess.
October 27, 1965	Deepen 35-foot channel to 40 feet, and provide a 30-foot channel from the upper end of the existing project to India Point at the mouth of the Seekonk River. (The India Point channel was deauthorized in November 1986.)	S. Doc. 93, 88 th Cong., 2 nd sess.
November 17, 1986	Deauthorizes uncompleted portions of the 1965 Act consisting of the India Point channel.	Section 1002, P. L. 99-662.
March 3, 1873	SALEM HARBOR, MA (See Section 20 of Text.) Channel 8 feet deep and 300 feet wide at entrance to South River, and construction of a seawall and breakwater for the protection of Long Point.	S. Ex. Doc. 25, 42 nd Cong., 3 rd sess.
September 19, 1890	Extends channel 6 to 8 feet deep and 50 to 150 feet wide up South River.	H. Ex. Doc. 28, 51 st Cong., 1 st sess.

NEW ENGLAND DISTRICT

TABLE 1-B (Continued) AUTHORIZING LEGISLATION

Acts	Work Authorized	Documents
March 3, 1905	Channel 10 feet deep and 200 to 300 feet wide at entrance to South River.	H. Doc. 303, 58 th Cong., 2 nd sess.
July 3, 1930	Main Ship Channel 25 feet deep and 300 feet wide, and removal of shoal near Abbot Rock Beacon.	H. Doc. 112, 70 th Cong., 1 st sess.
March 2, 1945	Main Ship Channel 30 feet deep.	H. Doc. 701, 76 th Cong., 3 rd sess.
July 3, 1958	Main Ship Channel 32 feet deep and 300 to 400 feet wide and South River Channel 8 to 10 feet deep and 50 to 300 feet wide.	H. Doc. 31, 85 th Cong., 1 st sess.
November 17, 1986	Deauthorizes uncompleted portions of the 1945 Act consisting of extending the 10-foot channel in the South River.	Section 1002, P. L. 99-662.
July 9, 1995	Deauthorizes uncompleted portions of the 1905 Act.	Federal Register Vol. 61, No. 244
WESTPORT RIVER, MA (See Section 21 of Text.)		
August 5, 1886	Provides for removal of obstructions in the east and west channels to a depth of 7 feet and construction of wooden jetties.	Annual Report, 1885, p.
September 19, 1890	Provides for the construction of a 150 foot-long jetty.	Annual Report, 1890, p.
June 20, 1938	Provides for an entrance channel 12 feet deep, 200 feet wide and 1,200 feet long; an inner channel 9 feet deep, 100 feet wide and 8,500 feet long; and a training dike.	
January 1, 1990	Deauthorizes 1938 Act.	Federal Register Volume 55, No. 194, October 5, 1990.
July 14, 1960	Provides for an entrance channel 9 feet deep and 150 to 200 feet wide extending from deep water in the Atlantic Ocean up the Westport River 9,700 feet to Westport Harbor.	P.L. 86-645, Section 107. Authorized by the Chief of Engineers June 19, 2007.
WEYMOUTH-FORE AND TOWN RIVER, MA		
(See Section 22 of Text.)		
October 27, 1965	Combines Weymouth-Fore and Town Rivers into single project and modifies construction of 35-foot channel and anchorage.	H. Doc. 247, 88 th Cong., 2 nd sess.
October 12, 1996	Deauthorizes portions of the 15 and 35-foot channels near the southern limit of the project authorized in the 1965 Act.	Section 364 (17) (A) & (B), P.L. 104-303.
SEABROOK HARBOR, NH (See Section 24 of Text.)		
October 12, 1996	Construct shoreline erosion control and demonstration project involving dredging of the Blackwater River and closure of breach.	Section 227(e) P.L. 104-303. Authorized by the Chief of Engineers May 10, 2004.
PARTRIDGE BROOK, WESTMORELAND, NH		
(See Section 29K of Text.)		
July 24, 1946, as amended	Construct 180 linear feet of stone slope protection along the east bank of the Connecticut River and 160 linear feet of steel sheeting along the south bank of Partridge Brook adjacent to the municipal wastewater treatment lagoon.	Section 14, P.L. 79-526. Authorized by the Chief of Engineers May 9, 2007
SALMON RIVER, HADDAM AND EAST HADDAM, CT		
(See Section 29L of Text.)		
June 30, 1948, as amended	Construct a pier-type ice control structure across the Salmon River about 200 feet upstream of Leesville Dam to retain ice breakup and reduce downstream flooding.	Section 205, P.L. 80-858. Authorized by the Chief of Engineers September 9, 2004.
FOX POINT BARRIER, RI (See Section 30 of Text.)		
July 3, 1958	Construction of concrete hurricane barrier across Providence River at Fox Point in the City of Providence.	H. Doc. 230, 85 th Cong., 1st Sess.
August 17, 1999	Directs Secretary to undertake repairs of the barrier as identified in Condition Survey and Technical Assessment dated April 1998, with Supplemental dated August 1998.	Section 352, P.L. 106-53

TABLE 1-B (Continued) AUTHORIZING LEGISLATION

Acts	Work Authorized	Documents
July 24, 1946, as amended	HOLMES BAY, WHITING, ME (See Section 31 of Text.) Construct 500 linear feet of stone slope protection along the shoreline of Holmes Bay adjacent to Cutler Road (Route 191).	Section 14, P.L. 79-526. Authorized by the Chief of Engineers August 6, 2007
July 24, 1946, as amended	PLEASANT POINT, PERRY, ME (See Section 35 of Text.) Construct 800 linear feet of stone slope protection along the shoreline of Pleasant Point.	Section 14, P.L. 79-526. Authorized by the Chief of Engineers July 31, 1986
November 17, 1986	ROUGHANS POINT, REVERE, MA (See Section 36 of Text.) Stabilize existing facilities along the shore with a 4,080-foot long armor stone revetment. Construct earth berm one-foot high and 200 feet long on existing median strip between Bennington Street and State Road.	Section 401, P.L. 99-662.
November 17, 1986	TOWN BROOK, QUINCY AND BRAINTREE, MA (See Section 39 of Text.) Construct 12-foot diameter, 4,060-foot long, concrete lined tunnel in bedrock about 140 to 180 feet below ground; channel improvements downstream of the tunnel outlet; and reconstruction of Old Quincy Reservoir Dam located at the headwaters of Town Brook.	H. Doc. 39, 99 th Cong., 1 st sess.
December 11, 2000	VERMONT DAMS REMEDIATION, VT (See Section 40 of Text.) Evaluate the structural integrity of ten priority dams in Vermont and carry out measures to modify, repair, restore or remove if the dam poses an imminent and substantial risk to public safety.	Section 543, P.L. 106-541
November 17, 1986	ALLIN'S COVE, BARRINGTON, RI (See Section 45 of Text.) Restoration of 3.6 acres and protection of 0.7 acres of salt marsh by excavating material, realigning the inlet of the cove and constructing two sand spits.	Section 1135, P.L. 99-662. Authorized by the Chief of Engineers June 10, 2004.
August 17, 1999	LEBANON, NH (See Section 46 of Text.) Amends Section 219 of the Water Resources Development Act of 1992 to include a combined sewer overflow project in Lebanon, New Hampshire.	Section 502, P.L. 106-53.
November 12, 2001	Non-Federal interests shall receive credit toward the non-Federal share of the cost of the project for work performed before the date of execution of the project cooperation agreement, if the Secretary determines the work is integral to the project.	Title I, P.L. 107-66
October 12, 1996	LONSDALE DRIVE-IN, LINCOLN, RI (See Section 47 of Text.) Restoration of 7 acres of open water and 7 acres of upland habitat by demolishing and excavating former drive-in.	Section 206, P. L. 104-303, Authorized by the Chief of Engineers May 3, 2002.
October 12, 1996	NASHAWANNUCK POND, EASTHAMPTON, MA (See Section 48 of Text.) Restoration of 8 acres of open water by removal of approximately 54,000 cubic yards of accumulated sediments.	Section 206, P. L. 104-303, Authorized by the Chief of Engineers August 29, 2007.
August 17, 1999	NASHUA, NH (See Section 49 of Text.) Amends Section 219 of the Water Resources Development Act of 1992 to include a combined sewer overflow project in Nashua, New Hampshire.	Section 502, P.L. 106-53.

NEW ENGLAND DISTRICT

TABLE 1-B (Continued) AUTHORIZING LEGISLATION

Acts	Work Authorized	Documents
October 12, 1996	<p>NINIGRET AND CROSS MILLS PONDS, CHARLESTOWN, RI (See Section 50 of Text.) Dredging 40 acres of tidal shoal area and planting eelgrass, dredging 3.5-acre sediment basin and construction of fish passage facilities at Ninigret Pond and Cross Mills Pond dams.</p>	<p>Section 206, P. L. 104-303, Authorized by the Chief of Engineers September 4, 2002.</p>
November 17, 1986	<p>SAGAMORE MARSH, CAPE COD CANAL, MA (See Section 51 of Text.) Restoration of 50 acres of salt marsh by installing larger culverts beneath Scussett Beach and Cape Cod Canal Service Roads and excavating channels.</p>	<p>Section 1135, P.L. 99-662. Authorized by the Chief of Engineers September 5, 1996.</p>
November 17, 1986	<p>TOWN POND (BOYD'S MARSH), PORTSMOUTH, RI (See Section 52 of Text.) Restoration of 20 acres of salt marsh by excavating material to create channels and improve tidal flushing.</p>	<p>Section 1135, P.L. 99-662. Authorized by the Chief of Engineers May 17, 2002.</p>

¹ A portion has been abandoned pursuant to P.L. 624, December 31, 1970.

² Contains latest published maps. See also Annual Report, 1911, p. 1178 (seawalls and Nixes Mate Channel) and Annual Report, 1903, p. 770 (Fort Point Channel.)

³ Authorized in part by Public Works Administration, Sept. 6, 1933.

⁴ Contains latest maps.

TABLE 1-C (Continued) OTHER AUTHORIZED NAVIGATION PROJECTS

Projects are complete unless otherwise noted.

¹ Complete except for inactive portion.

² Inactive.

³ Abandonment recommended in H. Doc. 467, 69th Congress, 1st session.

⁴ No commerce reported.

⁵ Portion or project authorized by Chief of Engineers (Public Law 86-645, Sec. 107).

⁶ Authorized by the Chief of Engineers (Public Law 86-645, Sec. 107).

⁷ Construction of a public landing by local interests has not been completed.

⁸ Excludes \$5,000 Contributed Funds.

⁹ Excludes \$37,200 Contributed Funds, Other.

¹⁰ Excludes \$582,188 Contributed Funds, Other.

¹¹ Excludes \$114,327 expended for rehabilitation; breakwater repaired in 1962.

¹² Excludes \$173,425 Contributed Funds, Other.

¹³ Excludes \$211,649 expended for minor rehabilitation; jetty repaired in 1963.

¹⁴ Public landing at Black Cove has not been constructed.

¹⁵ Costs to local interests for berth improvements are estimated to be \$60,000.

¹⁶ Excludes \$81,548 Contributed Funds, Other.

¹⁷ Abandonment recommended in H. Doc. 411, 64th Congress, 1st session, and in River and Harbor Committee Doc. 3, 65th Congress, 1st session.

¹⁸ Excludes \$1,415,524 expended for major rehabilitation and \$80,357 Contributed Funds, Other.

¹⁹ Under State maintenance.

²⁰ Excludes \$10,000 Contributed Funds, Other.

²¹ Lack of local sponsor. (Project authorized by Section 361 of WRDA 1992.)

²² Excludes \$17,495 non-project cost for removal of mooring chains, of which the project sponsor still owes \$12,198.

²³ Excludes \$10,000 Contributed Funds.

²⁴ Excludes \$129,757 expended for minor rehabilitation work.

²⁵ Excludes about \$225,000 expended by local interest in terminal and transfer facilities.

²⁶ Excludes \$65,000 consisting of \$13,000 for public wharf and \$52,000 for additional construction.

²⁷ Excludes \$571,401 Contributed Funds.

²⁸ Excludes \$20,000 Contributed Funds, Other.

²⁹ Excludes \$18,000 Contributed Funds, Other.

³⁰ Excludes \$476,782 Contributed Funds, Other.

³¹ Excludes \$83,476 Contributed Funds, Other.

³² Excludes \$50,000 Contributed Funds.

³³ Includes \$290,877 National Industrial Recovery Funds and \$59,207 Public Works Funds.

³⁴ Excludes \$96,730 expended by the Town of Saugus for divers to assist in the location and removal of channel obstructions and \$132,559 contributed funds other.

³⁵ Excludes \$104,550 for LERRD and \$5,000 credit for the value of scrape metal, and includes \$87,886 expended by the City of Providence for asbestos removal.

³⁶ Excludes \$417,757 Contributed Funds, Other for dredging municipal berthing areas.

³⁷ Excludes \$5,000 Contributed Funds, Other.

³⁸ Excludes \$894,475 expended for major rehabilitation.

³⁹ Excludes \$400 Contributed Funds.

⁴⁰ Excludes \$37,714 Emergency Relief Funds.

TABLE 1-W (Continued) RECONNAISSANCE AND CONDITION SURVEYS

Dredged Material Management Program

Major activities for FY 2007 were (1) Monitoring surveys at the Massachusetts Bay, New London, and Portland disposal sites and at the historic Brenton Reef disposal site; (2) drafting of three major technical synthesis reports and (3) maintenance, replacement, and repositioning of disposal site buoys. Eight monitoring study reports were completed and distributed to the public and regional resource agencies. Contract costs for monitoring efforts totaled \$466,000. Labor costs of \$317,000 were incurred for program management, sampling and testing, and environmental analysis.

Innovative Treatment of Dredged Material from Long Island Sound

This purpose of this project is to conduct a demonstration effort of various innovative treatment processes for dredged material. A portion of the maintenance material that needs to be periodically removed from the channels and anchorages of Federal navigation projects is unsuitable for ocean disposal. Upland placement and construction of confined aquatic disposal cells are two of the methods used for disposal of unsuitable material, both of which are extremely costly. Innovative treatment may be possible so that the “treated dredged material” may be re-used in a beneficial manner, which would reduce disposal/placement costs. Labor costs of \$8,788 were incurred to develop a scope of work for Phase I efforts along with performance and storage requirements to be used by project participants. Funds were provided to the Brookhaven National Laboratory to initiate Phase I of the demonstration project in FY 2008.

Long Island Sound

Costs of \$2,452 were incurred to review and archive project files.

Long Island Sound Regional Dredged Material Management Plan (DMMP)

A US Environmental Protection Agency (EPA) final rule making in June 2005, designated open-water disposal sites in central and western Long Island Sound. During FY 2007, negotiations were continued between the Federal Government and the States of Connecticut and New York for preparation of a regional DMMP for Long Island Sound. Costs of \$47,889 were incurred to complete a Project Management Plan and to participate in formation of a State/Federal Regional Dredging Team for Long Island Sound. This team will be tasked to review projects proposing open water disposal in the Sound, consistent with EPA’s final rule designating the Central Western Long Island Sound Disposal Sites.

Connecticut River Flood Control Dams, Vermont

The Corps of Engineers operates and maintains five flood damage reduction reservoirs in the Connecticut River Basin in Vermont. These dams are part of a comprehensive system of reservoirs and local protection projects constructed to control floodwaters and reduce flood damages within the basin. Efforts were initiated in FY 2005 to evaluate various structural modifications to the five dams to determine the most effective method of providing fish passage and to better regulate the flow and temperature of releases to mitigate downstream impacts on aquatic habitat and fisheries. Costs of \$75,208 were incurred this FY to prepare a draft and subsequent final Evaluation Report. Review comments submitted by the Vermont Agency of Natural Resources and the U.S. Fish and wildlife Service were addressed and/or incorporated into the final report.

NEW YORK, NY DISTRICT

This District comprises western Vermont, small portions of western Massachusetts and Connecticut, eastern New York including Long Island, and northeastern New Jersey, embraced in the drainage basins tributary to Lake Champlain and St. Lawrence River system east thereof and to the Atlantic Ocean from New York – Connecticut State Line to, but not including Manasquan Inlet, NJ. In addition it exercises jurisdiction over matters pertaining to improvement of Great Lakes to Hudson River waterway. Under the direction of the Secretary of Army, the District Engineer, as Supervisor of New York Harbor, also exercises jurisdiction under the laws enacted for the preservation of the tidal waters of New York Harbor, its adjacent or tributary waters, and the waters of Long Island Sound.

Navigation

1. AQUATIC PLANT CONTROL

Location. Navigable waters, tributary streams, connecting channels, and other allied waters in New York District.

Existing Project. Provides for control and progressive eradication of water chestnut, Eurasian water milfoil, and other obnoxious aquatic plant growths from the navigable waters, tributary streams, connecting channels, and other allied waters of the United States, in the combined interest of navigation, flood control, drainage, agriculture, fish and wildlife conservation, public health and related purposes, including continued research for development of the most effective and economic control measures. (See Table 2-B for Authorizing Legislation.)

Local cooperation. Local interests were required to provide 30 percent of the cost of the program except as modified by 1962 River and Harbor Act and agree to hold the United States free from damages. The Water Resources Development Act of 1986 changed the local responsibility from 30% to 50%. In FY 87 the States involved in the program were permitted to keep the cost sharing at 30% by order of the Secretary of the Army. Starting FY 88, Local sponsors contributed 50% of the costs. The FY 2007 APC Project Cooperation Agreement was executed in May 2007.

Operations and results during period. The purpose of the control program, started in FY 1982, is for the removal of nuisance aquatic plants in the Lake Champlain Basin, Vermont. Recent work continued the removal of water chestnut and Eurasian milfoil from portions of the basin.

Condition as of September 30. Reconnaissance report covering the aquatic plant problems of the North Atlantic Division areas was complete in August 1967. The General Design Memorandum for this program was completed in March 1982 by the State of Vermont. The total Federal cost of this control program to date is \$5,174,005 in FY 2007, the New York District did cost-share a FY 2003 program with the State of Vermont, as Federal funds were available. In October 1991, Waterways Experiment Station was directed to conduct a multi-year study which would identify and test potential biocontrol agents of water chestnuts. No successful biocontrol agents of water chestnut were identified. FY 2007 funds in the amount of \$400,000 were used by New York District to continue the Aquatic Plant Control Program with the State of Vermont.

2. ARTHUR KILL CHANNEL, HOWLAND HOOK MARINE TERMINAL, NY & NJ

Location. The project includes the Arthur Kill Channel from its confluence with the Kill Van Kull and Newark Bay Channels westerly for about 2.2 miles to the New York Container Terminal (NYCT) in Staten Island, NY, and thence southwesterly for about 1.1 miles to the Conoco Phillips (Tosco) Oil Refining Company and GATX facilities in NJ and NY, respectively. (See National Ocean Survey Chart 12333.)

Existing Project. Deepening the existing 35 foot Arthur Kill Channel to 41 feet MLW from its confluence with the Kill Van Kull and Newark Bay Channels to the New York Container Terminal in Staten Island, New York and to 40 feet MLW from New York Container Terminal to the Conoco Phillips (Tosco) Oil Refining Company and GATX facilities in NJ and NY, respectively. Also included are selected widenings and realignments of the channel, as well as the removal of the U.S. dike north of Shooters Island. Project also provides for mitigation consisting of restoration and enhancement of approximately 23 acres of intertidal salt marsh. The current estimate of the total project cost at Oct.06 P.L.S is \$247,030,000 of which the Federal cost is estimated at \$142,500,000 and the non-Federal cost is estimated at \$47,500,000, for a total cost of \$190,000,000 for the cost shared project general navigation features, plus other non-Federal costs estimated at \$57,030,000 for berth dredging, bulkhead renovations and utility relocations.

Local Cooperation. The Port Authority of New York and New Jersey is the non-Federal sponsor for the project, A Project Cooperation Agreement (PCA) for the project was executed on 25 July 2002.

Terminal Facilities. See Port Series No.5

Operations and results during period, and conditions as of Sept. 30. The existing Arthur Kill Channel has a channel depth of 35 feet MLW. The current project will deepen the channel from its confluence with the Kill Van Kull and Newark Bay Channels to New York Container Terminal to 41 feet MLW, and from New York Container Terminal to the Conoco Phillips (Tosco) Oil Refining Company and GATX facilities to 40 feet MLW. The first construction contract was awarded on 9 May 2003, and work was initiated on 20 July 2003. The cost of the construction contract, including the base bid and options, is approximately \$43,500,000. Approximately 651,000 cubic yards of upland material and 587,000 cys of HARS/rock

material was dredged for the first contract. The first contract was completed on 24 February 2006. The second construction contract was awarded on 29 December 2004, and work was initiated on 22 March 2005. The cost of the second contract, including the base bid and options, is approximately \$74,800,000. Approximately 629,000 cubic yards of upland material and 1,327,000 cys of HARS/rock material was dredged for the second contract. The second contract was completed on 5 January 2007. With the completion of the second contract, the 41-foot MLW deepening portion of the project from the confluence of the Arthur Kill Channel with the Kill Van Kull and Newark Bay Channels to the New York Container Terminal has been completed.

Two mitigation contracts, consisting of restoration and enhancement of approximately 23 acres of intertidal salt marsh, were accepted as substantially complete in 2007.

3. BROWN'S CREEK, NY

Location. The waterway is located in the Town of Islip, just north of Great South Bay, Long Island, New York.

Existing project. The channel is 6 feet contour in Great South Bay to a point 250 feet upstream from inshore end of jetties and thence four feet deep 100 ft wide to the head of navigation.

Two stone jetties at the entrance, the east jetty 448 feet long and the west jetty 700 feet long (Note: East and west jetties originally authorized to be 1,400 feet and 1,600 feet, respectively. Incompleted portions of both jetties were deauthorized on Aug 5, 1977).

Terminal facilities. Recreational vessels, including barrier to the Fire Island National Seashore, and some commercial fishing vessels load off-load at the docks. Primary commodities such as fuel oil, sand and gravel, and iron and steel scrap.

Local cooperation. The Town of Islip must provide easements and right of way.

Operations and results during the period. Approximately 19,975 cubic yards of material was dredged from the federal navigation channel and the Town of Islip marina and docking facility during FY 2005, and placed at the Brown's Creek disposal site Town of Islip and the County of Suffolk. Operations and Maintenance funds in the amount of \$702,000 were used to accomplish the work.

In FY 06, \$50,594.73 was used for project closeout and continued monitoring of the site. In FY 07, \$2,016 was expended for environmental coordination and placement site visits.

Condition as of September 30. The project has been fiscally and physically closed out. A special post-placement condition in the Water Quality Certificate describes a sand cap to be placed at the disposal site. The NYSDEC agreed to follow up in coordination with the NYD on additional monitoring site visits have been performed by the NYD. on the Town of Islip. requirement an after-dredge survey was performed by the NYD.

4. BUTTERMILK CHANNEL NY.

Location. Connects deep water in Upper Bay, New York Harbor, southwest of Governors Island, with deep water in East River northeast of Governors Island, and, with Bay Ridge and Red Hook Channels, forms an easterly channel along Brooklyn waterfront from Narrows to East River. It lies between Governors and Borough of Brooklyn, New York City. (See Coastal and Geodactic Survey Charts 12334 and 12335), New York District.

Previous Projects. For details see page 205, Annual Report for 1932.

Existing project. A channel 1,000 feet wide, 40 feet deep at mean low water for the width of existing 500-foot width of existing channel. Suitable widening at junctions with East River and Anchorage Channel to 35 feet and with Red Hook Channel to 40 feet deep and for an additional widening with Anchorage and Red Hook Channel to provide a minimum clear channel width of 2,100 feet deep to 35 feet deep. Section included in project is 2.25 miles long, mean tidal range 4.4 feet: mean range of spring tides, 5.3 feet, irregular fluctuations due to wind and atmospheric pressure vary from 3.8 feet mean low water up to 5.2 feet mean high water, new work completed projected cost \$4,093,951, exclusive of amounts expended on previous projects.(See Table 2-b for Authorizing Legislation.)

Terminal facilities. See Port Series No. 5, revised 1978.

Local cooperation. None required.

Operations and results during the period. Dredging was performed between 19 June and 23 July of 2005 for removal of all material except ledge rock lying above the plane of 35 feet below MLW with 2 feet allowable overdepth, and 40 feet below MLW with 2 feet allowable overdepth, from specified areas of Buttermilk Channel placement of the dredged material at the Historic Area Remediation Site (HARS). Approximately 57,745 cubic yard of material was dredged from Buttermilk Channel. Operations and maintenance funds in the amount of \$1,594,814 were expended on this project during FY 2005. In FY 2006, the project was closed out using \$37,000 funds. No appropriation was received in FY 07.FY 08

funds will be used to sample test for possible HARS placement.

Condition as of September 30. Work under existing project commenced October 1903 and was completed March 1965. Easterly 500-foot width of channel, from the Anchorage Channel to East River, was completed to a 40-foot depth in May 1935. Westerly 500-foot channel, including widening the junction with East River was completed to a 35-foot depth in July 1961. Widening the junction with Anchorage and Red Hook Channels was completed in March 1965. Total cost of existing project to September 30, 1982 was \$8,971,475, \$122,051 public works funds and \$971,900 regular funds, a total of \$4,093,051 for the new work and \$4,877,524 for maintenance.

5. EAST CHESTER CREEK NY.

Location. This creek also known as Hutchinson River, is a small tidal stream emptying into East Chester Bay, an indentation in north shore of Long Island Sound immediately north of Throgs Neck, 12 miles southwest of Connecticut State line and 21 miles by water northeast of the Battery, New York City. (See Coast and Geodactic Survey Chart 12366)

Previous Projects. For details see Annual Report for 1915, 1929, 1938 and 1949, pages 1761, 167, 163, and 208, respectively.

Existing project. A channel 8 feet deep at mean low water and generally 150 feet wide from Long Island Sound through East Chester Bay to a point 700 feet below Boston Post Road Bridge, and thence 70 feet wide 300 feet past Fulton Avenue Bridge; a passing basin south of Boston Post Road Bridge; widening channel at Boston Post Road Bridge and construction of a check dam at head of navigation. Section included in project is 5 miles. Mean tidal range, 7.3 feet in the estuary; mean range of spring tides, 8.6 feet irregular fluctuations due to wind and atmospheric pressure vary from 3.9 feet below mean low water up to 8.1 feet above mean high water. (Table 2-B for Authorizing Legislation.)

Note: The 10-foot project has been deauthorized. The 8-foot project, with same widths as above, authorized in 1930, remains as the existing project.

Terminal facilities. See Port Series No. 5, revised 1965, Vol. 2, Part 2.

Local cooperation. River and Harbor Act of May 17, 1950, provides that local interests furnish lands, rights of way, and suitable areas for disposal of dredged material during construction and future maintenance, and hold the United States free from damages. City of New York has complied with requirements. Assurances are yet

to be received from other local interests concerned with improvement.

Operations and results during the period. Preliminary engineering and design for East Chester Creek, NY was conducted including and specification survey during this period to determine the critical areas to be dredged. The creek was last dredged in 1989. The total cost of the E&D effort was \$163,075.

Condition as of September 30. No work has been accomplished under the existing project. Work under the 1930 project was completed in August 1941.

6. EAST RIVER, NY

Location. A tidal strait about 16 miles long and 600 to 4,000 feet wide, connecting Hudson River and the Upper Bay at the Battery, New York City, with Long Island Sound at Throgs Neck, New York City, and separating Long Island from Manhattan Island and the mainland. (See National Ocean Survey Chart 12335, 12339, and 12366.)

Previous Project. For details see page 210 of Annual Report for 1932.

Existing Project. Channels of following dimensions (depths refer to mean low water): From deep water in Upper New York Bay to Wallabout Channel, 40 feet deep and 1,000 feet wide: from Wallabout Channel to Throgs Neck, 35 feet deep, with widths varying from about 550 to 1,000 feet according to locality: east of F.D. Roosevelt Island up to English Place (43d Dr.), Long Island City, 30 feet deep and varying in width from 500 to 900 feet, with widening in approach from main channel: between South Brother and Berrian Island, 20 feet and 300 feet wide, with widening in approach from main channel: from East River channel to Astoria waterfront, a flared 0.31 mile entrance channel 1,600 to 400 feet wide, a 0.64 mile channel 400 feet wide, and a turning basin 1,000 feet wide and 1,600 feet long, all 37 feet deep in rock and 35 feet in soft material (South Brother Island Channel): removal of Coenties Reef to a depth of 40 feet, also removal of following rocks and reefs lying outside of limiting lines of main channels to give access to wharves: Along Brooklyn shore, Brooklyn Bridge to Manhattan Bridge (Fulton Ferry Reef), to a depth of 25 feet: Jay Street Reef, 25 feet; Corlears Reef, 35 feet; Shell Reef, 25 feet; Horns Hook, 40 feet; Rhinelander Reef, 26 feet; and reef off Oak Point, 30 feet; and construction of a dike in Pot Cove in Hell Gate. Section included in improvement is about 17.8 miles long. Mean range of tide varies according to locality from 4 feet at North Third Street, Brooklyn, and 4.4 feet at the Battery to 4.9 feet at Halletts Point, 6.3 feet at Port Morris, and 7.1 feet at eastern entrance at Throgs Neck; mean range of

spring tides 4.8,5.3,5.9,7.6 and 8.5 feet respectively; irregular fluctuations due to wind and atmospheric pressure vary according to locality from 3.8 feet below mean low water at the Battery, 2.4 feet at North Third Street, Brooklyn, and 3.8 feet at Throgs Neck up to about 5.2 feet above mean high water at the Battery and 8.4 feet above mean high water at Throgs Neck; extreme fluctuations do not seriously affect navigations.

Local Cooperation. Resolutions of 1970 require local interests to furnish lands, easements and rights-of-way for construction and maintenance; hold the United States free from damages; provide and maintain depths in berthing areas and local access channels serving the terminals commensurate with project depth; provide upon transfer to the United States, a depth in the existing South Brother Island Channel and turning basin of not less than 30 feet; and establish regulations prohibiting discharge of untreated sewage, garbage, and other pollutants in the waters of the harbor, which shall be in accordance with regulations of Federal State and local authorities responsible for pollution control. Assurances of local cooperation were furnished by the Port Authority of New York and New Jersey under the date of April 9,1974.

Terminal Facilities. See Port Series No. 5. revised 1999.

Operations and results during the period. Dredging with placement at the Historic Area Remediation Site (HARS) has been completed in the South Brother Island Channel to a depth of 32 feet. Lack of funding resulted in removal of 140,000 cy of a total of 250,000 cy shoaled Operations and maintenance funds in the amount of \$1,763,356 was expended during FY 2007.

Conditions as of September 30. Work under existing project was commenced June 1916 and was essentially completed. Construction of dike at Pot Cove in Hell Gate and a part widening near pierhead line in Jay Street Reef are considered unnecessary for the needs of current navigation.

7. EAST ROCKAWAY INLET, NY

Location. On the south shore of Long Island between main body of island and western end of Long Beach. It is 10 miles east of Rockaway Inlet and about 27 miles by water south and east from the Battery, New York City. (See National Ocean Survey Chart 12353.)

Existing Project. A channel 12 feet deep at mean low water and 250 feet wide from 12 foot contour in Long Beach Channel protected by a jetty. Mean tidal range, 4.3 feet: mean range of spring tides. 5.2 feet above mean high

water. New work for completed project cost \$603,969, including \$100,000 contributed funds. (See Table 2-B for Authorization Legislation.)

Local Cooperation. Complied with

Terminal Facilities. There are numerous terminals in Oceanside, Island Park, Long Beach, and East Rockaway, including oil terminals. Other terminals are repair and mooring docks with mechanical handling facilities. There are public wharves at East Rockaway and Woodmere. Waterfront on north side of Long Beach has bulkheaded. Facilities are considered adequate for existing commerce. Sprague Energy is a major supplier of home heating oil to surrounding region, including to Key Span Power Plant, the LIRR, and to homes and businesses in Queens, Nassau, and Suffolk Counties.

Operations and results during the period. In FY 06, approximately \$126,000 was used to initiate E&D for FY 07 dredging of East Rockaway Inlet .In FY 07, \$3,204,569 was used to dredge approximately 220,000 cys of sand with placement on Rockaway Beach 27th to 37th streets.

Conditions as of September 30. During FY2006 \$158,272 in operations and maintenance funds were expended to prepare plans & for the future dredging of the federal navigation channel with beach placement of the material.

8. FIRE ISLAND TO JONES INLET, NY

Location. On south shore of Long Island, about 50 miles by water south and east of Battery, New York City. Fire Island Inlet is the main entrance into Great South Bay from the Atlantic Ocean. (See National Ocean Survey Chart 12352.)

Existing Project. A jetty at Fire Island Inlet extending generally southwest and south for 5,000 feet from high ground on Democrat Point at the west end of Fire Island and a channel 14 feet deep and 450 feet wide along the northern edge of the Inlet's shoaling area connecting the ocean to the deep water in the Inlet. Mean tidal ranges at the ocean and inlet ends of Democrat Point are 4.1 feet and 2.4 feet respectively. Irregular fluctuations due to wind and atmospheric pressure vary from 2.5 feet below mean low water up to 6.2 feet above mean high water on the ocean side. (See Table 2-B for Authorizing Legislation.)

Local Cooperation. Requires cost sharing and lands, easements and rights-of-way.

Terminal Facilities. Great South Bay has extensive public and private facilities for mooring and servicing

recreational boats. Much of this traffic uses the inlet during the boating season and some traffic (Coast Guard craft and party head fishing boats) continues throughout the year.

Operations and results during the period. Engineering and Design for the next scheduled nourishment cycle in FY 2007. The maintenance dredging and beach nourishment project involves the dredging of Fire Island Inlet Channel and deposition basin with placement of sand as nourishment along the designated feeder beach (Gilgo). Environmental coordination for periodic maintenance dredging of the federal navigation project was performed. Operations and maintenance funds in the amount of \$344,995.98 was expended on this project during FY 2007.

Condition as of September 30. The jetty completed in 1941 surpassed its capacity as a sand entrapping agent in a little over a decade. Since then, extensive sand bars and shoals continued to form west of the jetty and in the inlet throat. Hydraulic dredging in the inlet was undertaken in 1959 and again in 1969 under a combined beach erosion control and navigation authorization (1958 Act). Since then 3 more hydraulic dredging operations were conducted starting 1973 and completed in 1977 under provision of the 1962 Act (See Table 2B). Maintenance dredging using a small hopper dredges has also been done from time to time. Due to local concerns about inlet dredging and consequent erosion at Oak Beach maintenance had been deferred since 1979 which allowed the complete shoaling of the authorized project channel. To facilitate the navigation in this period the existing natural channel was dredged in FY 1985 and in FY 1987. In FY 1987 sand was deposited offshore of Gilgo Beach by hopper dredge using operations and maintenance funds. O&M funds were also used during FY 1987 and 1988 to make repairs to the inner portion of the jetty. In March 1988 the District recommended to plan to maintain a realigned channel in the vicinity of the natural channel to a depth of 14 feet (plus 2 feet of allowable overdepth) and a width of 450 feet. The plan also recommended placement of the dredged material along Gilgo Beach for shore protection purposes. The recommended plan was approved by the Assistant Secretary of the Army for Civil Works on 2 August 1988. Since FY 1990, the realigned channel was dredged to project depth every two years with placement of material along Gilgo Beach for shore protection purpose. The project was last dredged in March 2004.

9. FLUSHING BAY & CREEK, NY

Location. On the north shore of Long Island, the project channel flows from Flushing Bay of Queens, NY and merges with East River near LaGuardia Airport.

Existing Project. A bay channel with a depth of 15 feet for a width of 300 feet, from deep water in the East River to the maneuvering area, a distance of 1.8 miles; a creek channel with a depth of 15 feet, for a width of 200 feet to Northern Boulevard Bridge from which point, the decreases uniformly to 170 feet at a point 50 feet downstream of the Van Wyck Expressway Bridge, a distance of 1.1 miles; a branch channel with a depth of 15 feet for a width of 200 feet, from the bay channel to the maneuvering area, a distance of about 0.1 miles; an irregularly shaped maneuvering area 15 feet deep except the approach to the west side of the municipal boat basin which remains at 12 feet; an anchorage basin about 100 feet by 1,800 feet encompassing about 84 acres with a depth of 6 feet; and riprap revetment of 1,400 feet extension of earth dike.

Local Cooperation. Fully Complied with in that local interests have dredged berthing spaces and have provided waterfront terminals, parking facilities, and municipal boat basin. Projects included enlarged marina facilities, filling of marginal areas, bank protection, promenades, and additional parking facilities.. Construction of the World's Fair complex and the Municipal Stadium, adjacent to the bay, was completed in 1964. Additionally, local interests must furnish all lands, easements and rights-of-way required for construction and subsequent maintenance of the project; hold the United States free from damages; provide without costs to the United States adequate approach channels and berths and modify existing facilities; accomplish without costs to the United States removal or relocation of pipelines, cable or other utilities; provide and maintain necessary mooring facilities and utilities for recreational boating; regulate the use, growth and free development of the waterway facilities with the understanding that said facilities will be open to all on equal terms. Local interests are not required to provide spoil-disposal areas because at the time of authorization, it was determined that it is least costly to use clamshell dredge with disposal in Long Island Sound.

Terminal Facilities. See Port Series No. 5. revised 1999.

Operations and results during the period. During FY 07 \$64,082 of operations and maintenance funds were preliminary E&D expended for the possible future dredging of 40,000 to 250,000 cubic yards of material from the project.

Condition as of September 30. Work under the existing project commenced in April of 1963 and is 100 percent complete. Project channel was completed in March of 1964.

10. GLEN COVE, NY

Location. A narrow tidal inlet extending eastwardly about 1 mile from east side of Hempstead Harbor on the north shore of Long Island, 26 miles northeast of the Battery, New York City. (See National Ocean Survey Chart 12366).

Existing Project. Provides for a channel 100 feet wide and 8 feet deep at mean low from deep water in Hempstead Harbor about 1 mile to the head of navigation at city of Glen Cove. Mean tidal range, 7.5 feet; mean range of spring tides, 8.7 feet; irregular fluctuations due to wind and barometric pressure vary from 3.6 feet below mean low water up to 8.4 feet above mean high water. New work for completed project cost \$29,760, exclusive of \$29,774 expended from contributed funds. Widening to 100 feet the upper 1,630 feet of channel where it crosses to foregoing description and cost estimate. Existing project adopted by 1925 River and Harbor Act (H. Doc.207, 68th Cong., 1st sess.). Latest published map is in project document.

Local cooperation. River and Harbor Act of March 3, 1925 provides that local interests pay one-half of first cost of the work, provided rights-of-way, spoil disposal areas, and bulkheads, and give assurances that adequate terminals will be built. Complied with as to contribution of one-half of first cost of work done to date, ceding of rights-of-way, provision of disposal areas, and the construction of terminals. Pending construction of bulkheads by local interests along southerly section of channel in the upper 1,600 feet of the improvement, a channel of less than project width has been evacuated. In a letter dated February 4, 1948, the Commissioner, Department of Public Works, City of Glen Cove, was notified of the conditions affecting the remaining work. There is no indication as to when compliance with these conditions may be expected.

Terminal Facilities. There are 1,875 feet of bulkheads along northerly side of waterway. Terminals are adequate for present needs and there is ample waterfront, both public and private, for additional terminals as needs arise.

Operations and results during the period. The entire channel was maintained in FY 2007 as part of an EPA Superfund project. Funding for the maintenance and "hot spot" dredging was provided by the US EPA and the City of Glen Cove. The maintenance dredging was performed by WRS Infrastructure. The work under the contract included dredging with upland placement in a diked disposal area of approximately 22,500 cubic yards of material awarded Options within the contract included the removal of an additional 4,700 cubic yards of material, the removal of debris from the channel and the dredging of 900 cubic yards of "hot spot" material (material that exceeds the

background radiological readings). The total contract award with all options is \$2,419,800. Construction management of the project is being performed by the COE for EPA.

Conditions as of September 30. Maintenance dredging was completed during FY2007.

11. GREAT SOUTH BAY, NY

Location. The waterway is located in Great South Bay, Long Island, New York where the 19-mile channel extends from Robert Moses Bridge Island Inlet to the head of navigation of Patchogue River, between Fire Island National Seashore and Long Island

Existing projects. The channel is 10 feet wide from Fire Island Inlet to the Central Basin in Great South Bay opposite Patchogue River, thence 100 feet wide to mile 18.9 in the Patchogue River with a turning basin at the upper end at a depth of 11 feet, thence 8 feet deep to the upstream limit of the project.

Local cooperation. As authorized in the Rivers and Harbors Act of 13 June 1902, and modified in 1970, local interests provide dewatering/disposal areas.

Terminal facilities. This waterway is an integral and essential component of the sheltered water route along the Atlantic Coast. There is considerable US Coast Guard, commercial and charter fishing and National Park Service ferry traffic on this waterway. During peak seasons there is extensive use of this project by pleasure craft.

Operations and results during period. Continuing engineering and design work (E&D) was performed during this period, including substantial environmental coordination and developing plans and specifications for the Patchogue River portion of this channel. Total operations and maintenance funds in the amount of \$142,000 were expended for this work during FY 2006. No federal appropriation was available in FY 07. Non-Federal funds provided by Village of Patchogue were used to dredge approximately 30,000 cys from the mouth of the river.

Conditions as of September 30. Shoaling continues in Patchogue River of the Great South Bay which was last dredged in 1969. Preliminary approaches to dredging portions of the river were discussed, should limited funds become available in the out-years. In the Patchogue River, additional shoaling has caused maneuvering difficulty in the River. In 1969, approximately 60,000 cubic yards were dredged and disposed at an upland site.

12. HUDSON RIVER, NY

Location. Originates in Adirondack Mountains, about 250 miles in a direct line and 315 miles along its course from the Battery, New York City, and flows generally southerly into New York Bay-Section under improvement extends from New York City about 156 miles to Waterford. (See National Ocean Survey Charts 12335, 12341, 12343, 12347, 12348, and 14786.)

Previous project. For details see Annual Reports for 1915 and 1938, pages 164 and 226, respectively.

Existing projects. A channel 600 feet wide from New York City to Kingston, and thence 400 feet wide to Albany, with widening at bends, a turning basin 700 feet wide and 1,200 feet long at Albany, and 2 anchorages, 1 near Hudson and 1 near Stuyvesant, each 400 feet wide and an average length of 2,400 feet; all with depth of 32 feet in soft material and 34 feet in rock to 2,200 feet south of the Mall Bridge; thence 27 feet deep and 400 feet wide to 900 feet south of Mall Bridge, thence 14 feet deep at lower low water and generally 400 feet wide to Federal lock at Troy; and thence of same depth and 200 feet wide to southern limit of State barge canal at Waterford; and removal of State dam at Troy and construction of a lock and dam about 2.5 miles below Waterford. Channel is to be formed by dredging and rock excavation, and maintained by dredging and constructing new and raising and repairing old, longitudinal dikes, built partly under previous projects and partly by the State of NY.

In the tidal section below the Federal dam at Troy, the assumed lowest low water plane downstream to Albany is 3 feet below mean sea level. Mean tidal range is about 5 feet below the dam and about 4.9 feet at Albany. The normal pool level above the dam from Troy to Waterford is 14.3 feet above mean sea level, with the mean range of pool level in seasons of moderate rains being 2.2 feet. (See Table 2-C for features of lock and dam included in existing project.) New work for completed project cost \$39,050,019 exclusive of amounts of expended on previous projects. Widening to form harbors at Albany and Troy, NY, to 12 feet deep at a cost of \$522,000 (1954) and completion of 27 foot channel at Albany at a cost of \$642,000 (1957) was placed in deferred for restudy category, and has since been deauthorized. All three features of work are excluded from foregoing description of existing project and cost estimate. Construction of mooring facilities has been authorized (See Table 2-B for Authorizing Legislation.)

Local cooperation. Complied with except that local interests must furnish suitable soil disposal areas for future maintenance as required.

Terminal facilities. See Port Series No.6

Operations and results during period. Operations and maintenance funds in the amount of \$185,822 were expended during FY 2007 to perform sampling and testing, environmental coordination, engineering and design, preparation of plans and specifications and initiation of maintenance dredging of the Coeymans and Kingston reaches of the Hudson River Federation Navigation channel. A contract in the amount of \$2,391,424 was awarded to Coleman Construction Company, Inc. on August 17, 2007 to dredge approximately 55,000 cubic yards of material from the Hudson River Channel. Maintenance dredging work is scheduled to be completed during the first quarter of FY 2008.

Government plant and hired labor were employed through the fiscal year performing project condition surveys at a total cost including supervision and administration of \$329,415 during FY 2007.

Government plant and hired labor were employed through the fiscal year performing removal of snags and other obstructions that constituted a potential hazard to navigation at a total cost including supervision and administration, of \$329,553 during FY 2007.

Government plant and hired labor were employed through the fiscal year performing operation and maintenance of the Troy Lock and Dam. Total funds in the amount of \$1,090,563 were expended during FY 2007 for operation and maintenance of the Troy Lock and Dam and associated buildings and grounds including supervision and administration.

Condition as of September 30. Work under existing project began in July 1910 and was substantially completed in November 1965. New lock and dam at Troy, removal of dam at Troy and construction of 15,545 linear feet of dikes also are complete. In reconstruction of old dikes 39,676 linear feet are raised to adopted crest height. Channel from New York City to Albany is complete to a depth of 32 feet except for the 1,500 linear foot section at the northern end of the 32 foot project which has never been dredged to project depth. Channel from Albany to Waterford is complete to a depth of 14 feet.

13. HUDSON RIVER AT ATHENS, NY

Location. Athens, New York is along the west bank of the Hudson River approximately 116 miles above the Battery, New York City and approximately 29 miles downstream of Albany, New York. (See Geological Survey, Hudson North, NY quadrangle).

Existing project. No constructed project has ever been done in Athens. The main Hudson River navigation channel runs along the east bank of the Hudson River, Hudson, New York opposite Middle Ground Flats. The proposed project for Athens consists of the design and construction of a 300 foot wide channel to a depth of 24 feet (mean low water) extending from the existing Federal in the vicinity of the Hudson City Light to the north dock at Union Street in Athens. The project was authorized in Section 110 of the September 1996 Energy and Water Appropriations Act. Preliminary surveys, geologic, and sediment chemical tests have been carried out. A preliminary channel alignment has been prepared with accompanying dredge quantities. The preliminary cost is \$21,500,000 with additional cost needed for improvements at the existing terminal docks. The Design Agreement and Project Management Plan have been completed and were approved to by the non-Federal sponsor, Green County Industrial Development Agency.

Local cooperation. No organization has been identified that is either qualified or interested in acting as the construction phase non-Federal sponsor.

Operation and results during the period, and condition as of Sept. 30. Preliminary engineering and design studies have been completed.

14. HUDSON RIVER CHANNEL, NY&NJ

Location. Hudson River empties into Upper Bay of New York Harbor at the Battery, New York City. Section included under this title extends from deep water in the Upper New York Bay about 14.5 miles to just north of Harlem River (Spuyten Duyvil Creek)

Previous project. For details see Annual Reports for 1915 and 1938, pages 1765 and 213, respectively.

Existing projects. A channel 48 feet deep and 2,000 feet wide, suitably widened at bends from West 59th Street, Manhattan, to West 40th Street, thence 45 feet deep of same width of river extending from northline of 59th Street to south side of Little Basin, and thence a channel of same depth to deep water in Upper New York Bay of Ellis Island, substantially as shown on maps in H.Doc.309, 72nd Cong., 1st sess. subject to provision that no dredging be done under project within 50 feet of pierhead lines; a channel 750 feet wide and 30 feet deep along Weehawken-Edgewater waterfront, removal of an obstruction north of mouth of Spuyten Duyvil Creek to a depth surrounding river bottom. Channel included in project is about 11 miles long. Plane of reference is mean low water. Mean tidal range at the Battery, 4.4 feet, and West 129th Street, 4.1 feet; mean range of spring tides, 5.3 and 4.9 feet respectively; irregular

fluctuations due to wind and atmospheric pressure vary from 3.8 feet below mean low water at the Battery up to 6.2 feet above mean high water and at West 129th Street from 3.6 feet below mean low up to 5.3 feet above mean high water. (See Table 2-B from Authorizing Legislation).

Local cooperation. None required

Operations and results during period. A contract for the removal of material above the plane of 40.0 feet below mean low water, plus 2 feet allowable overdepth in specified areas of Hudson River Channel was prepared and advertised for the removal of 90,000 cubic yards of dredged material with upland disposal. Operations and maintenance funds in the amount of \$434,861 were expended during FY 2007

Condition as of September 30. Work under existing project commenced April 1913 and completed September 1952. Widening and Deepening Weehawken-Edgewater Channel to project dimensions was completed in August 1937. Widening 40-foot channel for full width of river from Ellis Island to West 59th Street, Manhattan, was completed in March 1939. Widening 48-foot project to full project width of 2,000 feet from West 40th Street to West 59th Street was completed in November 1950. Deepening 45-foot channel for a width of 2,000 feet Upper Bay to West 40th Street was completed to project dimensions in September 1952.

15. JAMAICA BAY, NY

Location. Inside south shore of Long Island, the entrance being about 17 miles by water south and east of the Battery, New York City. (See National Ocean Survey Chart No.12350).

Previous projects. For details see page 1770 of Annual Report for 1915, and page 185 of Annual Report for 1938

Existing Project. Provides for an interior channel extending from vicinity of Marine Parkway Bridge along west and north shores of the bay, 18 feet deep at mean low water and 300 feet wide to Mill Basin, with a swinging basin, 1,000 feet wide and 1,000 feet long at the point – thence 12 feet deep and 200 feet wide to Fresh Creek Basin; and interior channel extending from the same locality along south shore to Head of Bay, 15 feet deep and 200 feet wide, a channel in Mott Basin, 15 feet deep and 200 feet wide extending from the channel along the south shore, 3,000 feet to junction of the two branches, thence 200 feet in north branch (Inwood Creek) and 3,200 feet in south branch; and an entrance channel connecting the two

interior channels with deep water in Atlantic Ocean, of suitable hydraulic dimensions to maintain present tidal prism in the bay, but not less than 18 feet deep and 500 feet wide from opposite Barren Island to Rockaway Point, Thence enlarging to not less than 20 feet deep and 1,000 feet wide to the sea, protected by one riprap jetty. Length of section included in project is 19.7 miles. Mean tidal range, 4.9 feet at Barren Island, and 5.1 feet at Head of Bay; mean range of spring tides, 5.9 and 6.1 feet, respectively; irregular fluctuations due to wind and atmospheric pressure vary from 4 feet below mean low water to 4.9 feet above mean high water.

Cost for new work for completed project is \$4,466,421 (July 1961), excluding amounts expended on previous projects.

Local cooperation. River and Harbor Act of 1945 provides that in lieu of conditions heretofore prescribed local interest furnish suitable areas for disposal of dredge materials for new work and subsequent maintenance, and hold the United States free from damages. City of New York was notified of conditions of local cooperation in letter dated January 15, 1946. In letter dated February 7, 1946, the Mayor of New York advised disposal areas are available and necessary document holding the United States free from claims for damages" would be executed.

River and Harbor Act of 1950 provides local interests furnish lands, easements, rights-of-way, and suitable areas for disposal of dredged material during construction and subsequent maintenance, hold the United States free from damages and perform all necessary alterations to existing terminals and bulkheads, and dredge adequate approaches thereto. These conditions have been fulfilled.

Terminal facilities. See Port Series No.5.

Operations and results during the period. In FY 06, funds in the amount of \$125,000.54 were used to initiate Engineering & Design work for the future dredging of the Federal Channel. In FY 07, \$199,780 was expended to complete environmental coordination and NEPA requirements and Plans and Specifications to bring the project to advertisement.

Conditions as of September 30. Fiscal closeout of the FY 2005 dredging has been finalized.

16. JONES INLET, NY

Location. The project is located in the Town of Hempstead, Nassau County, NY between Atlantic Ocean and Hempstead, Bay. It extends from outside of the jetty to the Loop Causeway Bridge over Long Creek.

Existing project. The project provides for an east jetty and a channel 12' deep 250' wide from deep water in Atlantic Ocean to the Loop Causeway Bridge. The length of the section is 2.3 miles. The mean range of tide is 3.9 feet, mean range of spring tides is 4.7 feet, irregular fluctuations due to wind and barometric pressure vary from 3.9 feet below mean low water up to 11.6 feet above mean high water.

Local cooperation. Fully complied with except that local interests are to pay 35% of the difference of the cost for placement of dredged material from the inlet on the beach if that is not the least cost placement site.

Terminal facilities. No terminals suitable for commercial purposes have been established. There are small piers used for mooring and landing purposes. Approximately 11 commercial boatyards are located in channel adjacent to Jones Inlet. The terminals are considered adequate for present needs.

Operations and results during period, and condition as of Sept. 30. Total operations and maintenance funds in the amount of \$280,000 were expended for engineering and design activities during FY 05 to perform a bathymetric survey and initiate environmental coordination and plans and specifications for the future maintenance dredging of Jones Inlet. In FY 07, \$68,041 in federal funds was used to perform a survey & continue environmental coordination for the eventual FY 08 maintenance dredging spend placement with non-Federal funds contributed by the NYSDEC.

Conditions as of September 30. Federal funds were not provided in FY 06. The project continues to shoal. Additional updated beach profiles, bathymetric survey, cost shared agreement and environmental coordination will be needed to advance the project in preparation for possible out-year dredging..

17. KILL VAN KULL – NEWARK BAYCHANNEL, NJ & NY

Location. The project includes Kill Van Kull connecting upper New York Bay with Newark Bay, and channels in lower Newark Bay serving Port Newark and Elizabeth Marine Terminal. These terminals are located on the west shore of Newark Bay. (See national Ocean Survey Chart 12333.)

Existing project. Deepening the existing Kill Van Kull channel and channels in lower Newark Bay, including turning and maneuvering areas, as well as deepening the Elizabeth and Port Newark channels. The deepening to be done from the existing 35 foot depth incrementally to 40 feet and then 45 feet. The Federal cost of construction is estimated at \$582,500,000 with an additional \$436,600,000 to be contributed by local interests.

Local cooperation. The Port Authority of New York and New Jersey, the local cooperating agency, has entered into a local cooperation agreement with the Government which was executed on 30 May 1986. A supplemental agreement was executed on 21 May 1987, for Phase I. A project cooperating agreement was entered into on 30 January 1999 for Phase II (40 feet to 45 feet) and a new project cooperating agreement on 28 May 2004..

Terminal facilities. See Port Series No. 5, Vol. 2.

Operations and results during period, and condition as of Sept. 30. Stage 1, channel deepening to 40 feet in seven contracts was completed. Stage II, channel deepening to 45 feet eight contracts was completed in November 2004. Financial completion is awaiting resolution of two claims in areas 8 and 6. Contract 4A was awarded in April 1991 and was completed in Sept. 1995. Contract No. 5 was awarded in May 1988 and is complete. Contract 4C was awarded in Sept. 1994 and was completed in July 1995. Stage 2, channel deepening to 45 feet has commenced with start of work on a Limited Re-evaluation Report, which was approved Oct., 1997. First construction contract for Area 2 was awarded 16 March 1999, May.1999 and was completed September 2000. The second construction control for Area 1 was awarded 4 Aug. 1999 and completed July 2001. The third construction contract for Area 4A was awarded 28 Feb. 2000 and was completed Feb. 2002. The fourth construction control for Area 7 was awarded 12 March 2001 and was completed August 2002. Area 5 was awarded December 2001 and scheduled to be completed August 2004. The sixth contract for Area 3 was awarded August 2001 and was completed October 2002. The seventh contract Area 6 was awarded July 2002 and has a completion date of September 2003. The eight contract Area 8 was awarded on May 2003 and was completed in November 2004.

18. LAKE MONTAUK HARBOR, NY

Location. On east end of Long Island, about 3 miles by land west of Montauk Point and 125 miles by water east of New York City. It is land-locked on the east sides and is connected to the north with Block Island sound by an artificial inlet.

Existing projects. A channel 12 feet deep, at MLW and 150 feet wide, extending from the 12 foot contour in Block Island Sound to the same depth in the existing yacht basin east of Star Island; a boat basin 10 feet deep, 400 feet wide and 900 feet long, located northwest of Star Island; repair and extension shoreward of the east and west jetties; and additional sport fishing facilities on top of both jetties. Length is Approximately 0.7 miles.

Local cooperation. The Rivers and Harbors Act of 2 March 1945, House Document No. 369, 76th Congress, 1st Session provides that local interests must furnish, free of cost to the United States all lands,, easements, rights of way and spoil-disposal areas for the initial work and subsequent maintenance as required and hold and save the United States free from damages due to the construction works and subsequent maintenance. Local cooperation has been complied with.

Terminal facilities. A yacht club, marina, a United States Coast Guard Station.

Operations and results during period. Total operations and maintenance funds in the amount of \$41,701.11 for environmental coordination for future maintenance dredging at Lake Montauk Harbor. No federal funds were available in FY 07.

Conditions as of September 30. There has been additional shoaling in the federal channel and advance maintenance deposition basin. A Condition Survey was performed in FY 2006, & FY 2007 an updated specification survey will be performed in FY 2008.

19. LONG ISLAND INTRACOASTAL WATERWAY, NY

Location. A 33.6 mile long tidal channel opposite Patchogue to the south end of the Shinnecock Canal in the Town of Southampton.

Existing projects. A channel 6 feet deep, 100 feet wide from the Federally improved channel in Great South Bay opposite Patchogue, to the south end of the Shinnecock Canal. Length is about 33.6 mile.

Local cooperation. Fully complied with except that local interests are required to furnish suitable dredged material Placement areas for maintenance

Terminal facilities. No terminals suitable for commercial purposed have been eastab. There are many commercial boatyards along the length of the A yacht club, marina, a United States Coast Guard Station. Intracoastal Waterway

as well as two US Coast Guard Stations from which search and rescue missions are launched. The terminals are considered adequate for present needs.

Operations and results during period, and condition as of Sept. 30. The dredging was last completed in March 2003 and approximately 46,000 cubic yards of material was removed. The material was placed on East Inlet Island. This year the disposal area required some management. Total operations and maintenance funds in the amount of \$145,688 was expended in FY 07.

Condition as of September 30. Work under the existing project was commenced in October of 1939 and was completed in September of 1940.

20. MORICHES INLET, NY

Location. On the south shore of Long Island, about 80 miles by water east of the Battery, New York City. It is an opening through the narrow sandy barrier beach on the south shore of Long Island which separates the Atlantic Ocean from a series of interconnected bays. (See National Ocean Survey Chart 12352).

Existing project. Provides for a channel, 10 feet deep at mean low water and 200 feet wide extending from that depth in the Atlantic Ocean to Moriches Bay, a distance of 0.7 miles; thence a channel 6 feet deep and 100 feet wide to the Long Island Intracoastal Waterway, a distance of 1.1 miles; rehabilitation of the existing jetties and revetments. Recent provisions include an outer channels deposition basin, a west jetty scour blanket, and habitat enhancement for shore birds. Estimate of cost of work is \$13,050,000 (October 1988 P.L.) including \$50,000 from Coast Guard and \$4,550,000 to be contributed by local interests. (See Table 2-B for Authorizing Legislation).

Local cooperation. In accordance with the project authorization, local interests are required to furnish all easements, rights-of-way including relocations that are necessary for improvements at an overall 35% cost sharing basis. The annual Operations and Maintenance cost has recently increased to an estimated \$3,000,000 of which the local share is 50% or \$1,500,000 per year. An agreement of Local Cooperation was executed on 30 June 1986. The New York State Department of Environmental Conservation is the local sponsor.

Terminal facilities. Several yacht clubs, boatyards, and public wharfs and landings and numerous private landings are located in Moriches Bay. There are boat basins open to the public. The facilities existing in the bay are considered adequate for present and probable future needs under

present conditions of Moriches Inlet. There is room for expansion should future activity warrant.

Operations and results during period, and condition as of Sept. 30. Maintenance dredging of the Inlet was last completed February 04 and was completed 24 February 04 250,250 cys of material was removed from the inlet and placed along the shoreline west of the Jetty. A condition survey was performed March 2007. The results are reported in a controlling depth report published on the New York District's web page. Approximately \$18,868 in funds were expended in FY 07.

Condition as of September 30. Maintenance last dredging was last performed during February 2004.

21. NEW YORK HARBOR AND ADJACENT CHANNELS, (PORT JERSEY CHANNEL), NJ

Location. The Port Jersey Channel is the navigation channel located in the Upper Bay of New York Harbor. The Channel runs from its confluence with Anchorage Channel to its head of navigation in Jersey City/Bayonne, where Global Terminal & Container Services, LLC. provides berthing facilities for container commerce within the Port of New York and New Jersey.

Existing Project. The Federal Port Jersey Channel Project will deepen, widen and straighten widen the existing (non-Federal) Port Jersey Channel. The authorized project provides for deepening the existing 35 to 38 foot deep channel and adjacent 12' deep water to a depth of 41 feet deep below mean low water and generally 450 feet wide with suitable bends to extend from deep water in the Anchorage Channel in the Upper Bay of New York Harbor, westward approximately 12,000 feet along the southern boundary of the Port Jersey peninsula, to the head of navigation in Jersey City/Bayonne, New Jersey. The Federal cost of construction is estimated at \$79,178,000 with an additional \$26,392,000 to be contributed by the primary non-Federal sponsor, the State of New Jersey Department of Transportation.

Local Cooperation. The State of New Jersey Department of Transportation is the primary non-Federal sponsor for the Port Jersey Channel Project. The Port Authority of New York and New Jersey also serves as a limited project sponsor for the single purpose of providing indemnification to the Federal government for the project.

Operations and results during period, and conditions as of September 30. On October 23, 2000, the Record of

Decision for the Project was signed. On March 28, 2001, the Assistant Secretary of the Army for Civil Works submitted the Chief of Engineers report formally to Congress. The State of New Jersey and the Port Authority executed a Project Cooperation Agreement (PCA) with the Government on July 23, 2002. The first and second construction contracts were constructed from 2002 to 2005, creating a partially useable Federal Channel. The PCA was modified on July 11, 2007 to facilitate the consolidated construction of the 41 foot to 50 foot Port Jersey Channel deepening. The third Port Jersey construction contract was awarded on October 19, 2007 and is being performed via a DA permit issued to the State of New Jersey, DOT. Constructed by the Corps, it will complete the realigned 41 foot cost-shared Port Jersey Channel and advance construction of the 50 foot Port Jersey Channel segment of the NY/NJ Harbor Deepening Project A fourth and final Port Jersey Channel contract is planned for 2009 with 100% State funding. It is needed to complete the 50 foot channel construction over the Passaic Valley Sewerage Commission outfall utility tunnel..

22. NEW YORK AND NEW JERSEY CHANNELS

Location. Extends from deep water northwest of Sandy Hook, through Lower New York Bay to the and Raritan Bay, to Perth Amboy, and thence through Arthur Kill Lower Newark Bay and Kill Van Kull to deep water in the Upper New York Bay. This is approximately along boundary line between States of New York and New Jersey. (See National Ocean Survey Charts 12333, 12331 and 12327.)

Previous projects. For details, see 1963 Annual Report, pages 184 and 185.

Existing project. A channel through Lower New York Bay, Raritan Bay Arthur Kill, Lower Newark Bay, Kill Van Kull to Upper New York Bay and Raritan Bay and in Arthur Kill to a point 1,000 feet north of Smith Creek, widened to 800 feet in vicinity of Seguine Point and Wards Point, respectively, thence 500 wide to a point 1,000 feet south of Piles Creek; thence 500 to 600 feet wide and passing, north Of Shooters Island and protected by a dike to it's northern side to junction of channel Newark Bay; thence 800 feet wide through Kill Van Kull to Constable Hook; thence 1,000 feet wide for a point near the intersection with the channel along New Jersey pierhead line; thence 1400 feet wide through Kill Van Kull to Upper New York Bay; with an anchorage 38 feet deep to accommodate five vessels south of Perth Amboy, all with suitable easing bends and junctions. Section included in project is 30.8 miles long. In addition, construction of a dike north of Shooters Island and two secondary channels

30 feet deep and 400 feet wide, one south of Shooters Island and the other in Raritan Bay connecting with Raritan River, were completed under previous projects and maintained under existing project. A triangular area at the eastern end of the 30 foot channel south of Shooters Island was deepened to 35 feet in order to provide additional widening in vicinity of Bergen Point and is included in the Newark Bay project. All depths refer to plane of mean low water. Mean range of tides varies between 4.7 and 5.1 feet; mean range of spring tides 5.7 to 6.3 feet; irregular fluctuations due to wind and atmospheric pressure vary from 3.9 feet below mean high water. Anchorage as Sandy Hook and cutoff at junction of Main Ship Channel are deferred for restudy and excluded from foregoing description and cost estimate. (See Table 2-B for Authorizing Legislation.)

Local cooperation. Fully complied with except for the middle section of Arthur Kill where local interest must furnish soil disposal areas for maintenance.

Terminal facilities. See Port Series No.5, revised 1988, Vol.2.

Operations and results during the period. Operations and maintenance funds in the amount of \$7,413,118 were expended on this project in FY O5 for dredging and placement of approximately 103,100 cys of material from the Raritan Bay Reach of the NY & NJ Channels. In FY 2006, O&M funds in the amount of \$5,379,255 were used to dredge 82,500 cys with upland placement of the material, and to initiate E&D for the FY 07 continued maintenance dredging of Arthur Kill Reach.. In FY 07, \$5,618,035 was used to dredge approximately 54,510 cys from Arthur Kill Reach with placement upland at Fresh Kills. In addition, preliminary E&D was performed for FY 08 Dredging of Arthur Kill Reach and Signic/WARD Pt revisited.

Condition as of September 30. This project is physically and fiscally closedout.

23. NEW YORK HARBOR-COLLECTION AND REMOVAL OF DRIFT

Location. Applies to Lower and Upper Bays, New York Harbor; East River, Harlem River, Lower Hudson River Channel, New York, NY and New Jersey Channels, Newark Bay, NJ, Passaic and Hackensack Rivers, NJ, Raritan and Sandy Hook Bays, NJ, Jamaica Bay, NY, the Western Portion of Long Island Sound, and their tributaries.

Existing project. Provides for collection, removal and disposal of drift, derelict vessels, deteriorated shore structures and debris along shores of New York Harbor and tributary waters, and for the repair of certain other in-use

piers, wharves and shore structures. Work authorized before WRDA of 1974 was restricted solely to removal of drift from waterway and was funded as maintenance activity. Resolutions of the Committee on Public Works of the U.S. Senate and U.S. House of Representatives, as embodied in the Water Resources Development Act of 1974 (Public Law 93-251), 93rd Congress, HR 10203, adopted March 7, 1974, provided for the following in Section 91: The New York Harbor Collection and Removal of Drift Project is hereby modified in accordance with the recommendations contained in "Survey Report on Review of Project, New York Harbor Collection and Removal of Drift," dated June 1968, revised March 1969 and April 1971, on file in the Office, Chief of Engineers. The Survey Report recommended that the existing project be modified to provide, in addition to the existing activities, for the removal and disposal of derelict vessels, deteriorated shore structures and debris along shores of New York Harbor and tributary waters. Subsequent to passage of the Water Resources Development Act of 1974, a General Design Memorandum -Phase I(Plan Formulation) was prepared for the New York Harbor Collection and Removal of Drift Project. This report, dated December 1975, also recommended that the existing project be modified to provide for the collection and removal of sources of drift in New York Harbor and tributary waters, and further recommended that the work be accomplished incrementally. The Water Resources Development Act of 1990 modified the Water Resources Development Act of 1974(WDRA 1974) to authorize the Secretary to collect and remove floating material whenever the Secretary is collecting and removing debris which is an obstruction to navigation, and to continue engineering and design for the remaining unconstructed reaches. It also prohibited the burning of wood collected in carrying out the project on ocean waters, by December 31, 1993. The current estimate of first cost is \$292,000,000 (October 1997 P.L.) which includes \$135,000,000 for Federal removal of drift, derelict vessels, deteriorated shore structures and debris, and \$68,000,000, cash contribution from local interests for non-Federal removals, plus \$89,000,000 to be contributed from local interests for repair of deteriorated shore structures in use. (See Table 2-B for Authorizing Legislation.)

Local cooperation. Local cooperation conditions provide that local interests must furnish all lands, easements and rights-of-way required for the improvement; hold the United States free from damages; enact and enforce local legislation to prevent creation of sources of drift, contribute in cash one third of the first cost of the Federal drift removal work, and make necessary repairs to deteriorated structures in use so as to eliminate them as a source of drift. These conditions are subject to approval by the Secretary of the Army and the President, as stipulated in Section 113 of the authorizing law, Public Law 91-611.

Operations and results (New work-cumulative to date). A total of five Liberty State Park contracts have been completed at a cost of \$10,321,112. East River-Manhattan Waterfront contract was completed at a cost of \$1,477,806. A contract for the removal of pier 17 and 18 on the East River was completed at a cost of \$219,604. The City of Elizabeth contract was completed at a cost of \$791,656. The Stapleton, Staten Island contract was completed at a cost of \$2,910,400. A contract for the city of Hoboken was completed at a cost of \$2,123,404. Work along the Jersey City South waterfront was completed at the cost of \$979,580. Contract Number One at Weehawken to Edgewater was completed at a cost of \$1,697,487. The Brooklyn Reach One contract was completed at a cost of \$5,057,920. Work was completed on the Weehawken to Edgewater Contract No. 2 at a cost of \$8,490,000, and Jersey City North Contract No. 2 at a cost of \$1,800,000. The Bayonne One contract has been completed at a cost of \$735,800. Hoboken Pier B was completed at a cost of \$973,590, and Jersey City North 1 was completed at a cost of \$2,358,000. Weehawken-Edgewater Contract 2A was completed at a cost of \$4,550,000. The Brooklyn 2A Reach removal contract was completed in October 1999 at a cost of \$4,878,022. The Passaic River, Newark, Kearney and Passaic, NJ Reach was completed in May 1999 at a cost of \$109,907.

Maintenance. U.S. Debris Boats Driftmaster, Gelberman and Hayward and auxiliary plant were assigned the task of removing and disposing of floating debris that is a hazard to navigation. Removal and disposal of 461,755 cubic feet (3,607.5 cords) of floating debris consisting mainly of driftwood, ranging in size from small blocks to large timbers, including pilings, pieces of wreckage, derelict vessels and sections of deteriorated pier structure was accomplished at a cost of \$5,273,119 during FY 2007.

Conditions as of September 30. For work authorized by Water Resources Development Act, removal of drift sources has been completed in New Jersey at Liberty State Park, the City of Elizabeth, Hoboken, and parts of Jersey City, Bayonne, Weehawken to Edgewater, and Passaic River in Newark, Kearney and Passaic. The New York City work has been completed along the Manhattan side of the East River (South Street Seaport), along part of the Brooklyn waterfront, and at Stapleton, Staten Island.

24. NEW YORK HARBOR-ENTRANCE CHANNELS AND ANCHORAGE AREA

Location. In Upper and Lower Bays, New York Harbor is 330 miles southwest by water of Boston Harbor, Mass., and 165 miles northwest of entrance to Delaware Bay, NJ. The Upper Bay extends about 5.5 miles southerly from

junction of Hudson and East River opposite the Battery, New York City to the Narrows. The Lower Bay extends about 9 miles from the Narrows to the sea.. (See National Ocean Survey charts 12334,12335 and 12349.)

Existing project. Ambrose Channel 45 feet deep and 2,000 feet wide, extending about 10.2 miles from sea to deep water in the Lower bay; Anchorage Channel, and extension of Ambrose Channel, with same depth and width, in the Upper bay opposite anchorage grounds, about 5.7 miles long; and southerly entrance channel. Sandy Hook Channel (East Section) 35 feet deep and generally 800 feet wide extending 3.4 miles from 35 foot ocean contour to Bayside Channel along an alignment generally west of the South Channel; and elimination from authorized project of that portion of Bayside-Gedney Channel east of junction with new southerly entrance Gedney Channel east of junction with new southerly entrance channel; for bayside Channel 35 deep and 800 feet wide, extending about 5.3 miles from Bayside Channel to deep water in Lower Bay; a channel along New Jersey pierhead line connecting Kill Van Kull with deep water in anchorage Channel, south of Liberty Island anchorage. 20 feet deep fro 500 feet wide with sidening at bends to 800 feet and bout 3 miles long; anchorage in vicinity of Liberty (Bedloes) Island (about 160 acres in extent) 20 feet deep; and for removal of craven shoal to 30 feet deep; for a channel 16 feet deep, 200 feet wide, and about 2.3 miles long, extending from bell buoy 23 to Hoffman and Swinburne Island; for an anchorage area in Red Hooks Flats to depths of 45, 40 and 35 feet and an anchorage area in Gravesand Bay to 47 feet deep. Project depths refer to mean low water. mean tidal range is 4.7 at Fort Hamilton; mean range of spring tides, 5.7 feet; irregular fluctuations due to wind and atmospheric pressure vary from 3.9 feet below mean low water up to 6.2 feet above mean high water. Dredged Material Management Plan.

Location cooperation Fully complied with .Port Authority , States of New York and New Jersey, New York City

Terminal facilities. Port of New York and New Jersey

Operations and results during the period. Monitoring and management of dredged material ocean placement sites as required by Federal and State regulations and interagency agreements are ongoing. The district continues to work with EPA Region II to develop criteria and defensible testing protocols for both upland disposal of contaminated dredged material and for dredged material used as remediation material at the Historic Area Remediation Site (HARS). Oversee all sampling, testing and review these results for all material proposed for ocean disposal as well as monitoring the effects of the HARS from projects deemed suitable for the HARS. Total

operations and maintenance funds in the amount of \$2,054,271 were expended for this work during FY 2006.

Condition as of September 30. Work under existing projects began in 1885 and is 100 percent complete. Main Ship and Bayside- Gedney Channels were completed to 30 feet deep in February 1891. Deepening of Bayside-Gedney Channel to 35 feet for a width of 800 feet was completed in June 1939. Ambrose Channel was completed to 40 feet deep for a width of 2,000 feet in April 1914 and substantially completed to 45 feet for a width of 2,000 feet in 1951. Relocation of Anchorage Channel was completed to 40 feet deep in October 1932. Center 800 feet was dredged to 45 feet in June 1947 and westerly 600 foot strip in April 1948. Easterly 600 foot strip was substantially completed in June 1953. Channel between Staten Island and Hoffman and Swinburne Islands was completed in December 1920 up to within 300 feet of southerly limits of the project. Channel along New Jersey peirhead line from Kill Van Kull to Anchorage Channel was completed in March 1939. Widening at bends nearly southerly and northerly ends authorized in 1948 was completed to depths of 45 and 35 feet in October 1976. Anchorage Channel was relocated to the westward in 1982. Red Hook Flats Anchorage was accordingly increased in area. No dredging was required. Liberty (Bedloes) Island anchorage was completed to 20 feet in Oct. 1944. Sandy Hook Channel (east section) was Gravesend Bay was completed to 47 Foot depth in November 1977. FY 2005 DMMP Implementation Report and Final PEIS to be released in CY 2006. The HARS has received between 4 to 6 million cubic yards of material from Federal and private dredging projects within the N.Y. region.

25. NEW YORK AND NEW JERSEY HARBOR, NY & NJ

Location. Extends from deep water northwest of Sandy Hook, through Lower New York Bay to the Verrazano Bridge, then splits northeast along the Brooklyn waterfront, north in the Upper New York Bay to Port Jersey, and west along the Kill Van Kull and portions of the Newark Bay and Arthur Kill Channels. (See National Ocean Survey Charts 12333, 12331 and 12327.)

Previous projects. See New York and New Jersey Channels, Newark Bay Channels, Bay Ridge Channel.

Existing project. The plan requires deepening the entire 10.6 nautical miles of Ambrose Channel extending from deep water in the Atlantic Ocean to the Narrows to a depth of 53ft MLW and 2,000 feet wide. The Anchorage Channel will be dredged to 50ft MLW for 19,000 feet from Narrows to the point 1,000 feet north of the junction with Port Jersey Channel at a width of 2,000 feet. The Port Jersey Channel

is to be deepened to 52ft MLW in the rock or otherwise hard material and maintained at a depth of 50ft MLW. The channel will be deepened for a distance of 10,000 feet from this juncture with Anchorage Channel. Through the berthing areas at the Global Marine Terminal and the former MOTBY. Kill Van Kull is to be deepened to 52ft MLW in the rock or otherwise hard material and maintained at a depth of 50ft MLW, extending from its juncture with Anchorage Channel to its juncture with the Newark Bay Channel near Bergen Point, and will be 800 foot wide. The Newark Bay Channels are comprised of the Main Channel (South, Middle and North Reaches) plus numerous access channels (South Elizabeth Channel, Elizabeth Channel, Elizabeth Pierhead Channel, Port Newark Pierhead Channel and Port Newark Channel). The main Port Newark Channel will be dredged from its juncture with the Kill Van Kull near Bergen Point to a point located 1,500 feet north of the Elizabeth Channel. The channel will extend north of the Elizabeth Channel to aid vessels in turning and backing into berth.. The 14,000 LF of improvement proposed for the main Newark Bay Channel will not change the present width, which varies from 2,200 feet at its northern terminus 800 feet near Bergen Point. Similarly, the 8,800 foot long Elizabeth Channel will also remain at its present width, which varies from 500 to 800 feet, and its present alignment. The 2,700 long South Elizabeth Channel will be significantly widened from its present 290 feet to 500 feet. Each of the aforementioned channels will be dredged to 52 ft MLW in rock or otherwise hard material and maintained at 50 ft MLW. The Arthur Kill Channel will be deepened from its juncture with the Kill Van Kull near Bergen Point to the Howland Hook Marine Terminal. This 2.4 nautical mile segment of channel will be dredged to a depth of 52 ft MLW in rock or otherwise hard material and maintained at 50 ft MLW. The existing channel varies in width from 500 feet to 800 feet, but will be widened to 800 feet as part of the 41 ft MLW project. This width will be maintained for this project. The nearly 3 nautical mile long Bay Ridge Channel will be improved and maintained to a depth of 50 ft MLW. The proposed channel will parallel the eastern side of current channel at a width of 600 feet, reduced from the current width of 1,200 to 1,750 feet. A proposed turning basin, with a diameter of 1,600 feet, is to be located at the north end of the channel.

Local cooperation. Fully complied with Design Phase. The Project Cooperation Agreement was executed on 28 May 2004.

Terminal facilities. See Port Series No.5, revised 1999

Operations and results during the period. Under the provisions of Section 101,WRDA 2000, the Port Authority of New York and New Jersey has undertaken the deepening of a portion of the project located near Bergen Point to its

authorized depth. This area is primarily rock which will be placed at artificial fishing reefs. The work on the S-KVK-2 contract reach was completed, resulting in a 50 ft channel from the mid-part of the Kill Van Kull and Newark Bay channels project through the Bergen Point Reach. Dredging continued on the S-AM-1 Contract Area, deepening the western side of the Ambrose Channel to 53 Ft. Contracts for the S-AN-1a and S-NB-1 contract areas were awarded.

Condition as of September 30. Work remains on all portions of the project, except as noted above. The first construction contract for the 50' foot project in the Kill Van Kull was S-KVK-2 was AWARDED March 11, 2005 and has a scheduled completion of March,2007. The second construction contract (S-AM-1) in Ambrose Channel was awarded September 28,2005 and has a scheduled contract completion of November 2007.

26. NEWARK BAY, HACKENSACK AND PASSAIC RIVERS, NJ

Location. Newark Bay is an estuary about 1.25 miles wide and 6 miles long extending southerly from confluence of Hackensack and Passaic Rivers to New York and New Jersey Channels. Hackensack River rises near Haverstraw, Rockland County, NY and flows about 45 miles into Newark Bay. Passaic River rises in highlands of northeastern New Jersey and flows about 80 miles into Newark Bay. (See National Ocean Survey Charts 12333 and 12337)

Previous projects. For details, see 1926 Annual Report, pages 265 and 266; and Annual Reports for 1929, 1938, 1954, and 1976, pages 301, 244, 124, and 2-11 respectively.

Existing project. A main channel 700 feet wide to the branch channel to Port Newark, thence 500 feet wide to a turning basin 1,300 feet long and 900 feet wide at the junction of the Hackensack and Passaic River channels, length about 4.7 miles; a maneuvering area south of the removed Central Railroad of New Jersey Bridge 2,200 feet long and 300 feet wide with depths of 38 feet in the south half and 35 feet in the north half; a combined bend cutoff and maneuvering area at the south side of the junction with Elizabeth branch channel; and widening bends at the Kill Van Kull and Port Newark Bay Channels.(Authorized depth 40 feet except as noted above) including a triangular area east of Shooters Island with a depth of 40 feet.

At Port Newark-A branch channel 500 feet wide, leading to an inshore channel 400 feet wide 1.6 miles (adopted 1945). Authorized depth 40 feet in soft material; a pierhead channel 200 feet wide along the east bulkhead between Port

Newark and Elizabeth branch channels; between 4,100 feet). Authorized depth 35 feet (adopted 1962).

At Elizabeth Marine Terminal-A branch channel 500 feet wide, length about 1.4 miles; a pierhead channel along the east bulkhead 290 feet wide, length about 2,600 feet, southern approach area just above former Central Railroad of New Jersey Bridge enlarged for turning and maneuvering, with a maximum length of about 2,700 feet and width (between the pierhead channel and Newark Bay channel) of about 800 feet. Authorized depth 45 feet (adopted 1962).

Local Cooperation. Rivers and Harbor Act of 1954 provides local interests, furnish lands, right-of-way, the suitable disposal areas for initial construction and future maintenance; provide depths commensurate with channel depth in approaches and berths at terminals of companies which would use improvement; and hold the United States free from damages. Rivers and Harbor Act of 1962, provides that local interests must provide lands, easements and rights-of-way for maintenance and construction, hold the United States free from damages, provide and maintain adequate public terminal and transfer facilities, and accomplish without cost to the United States, removal or relocation of pipelines, cable and other utilities. Assurances were furnished by Port of New York Authority and accepted June 12, 1964. Local cooperation required by previous modifications is fully complied with.

Terminal facilities. See Port Series No.5, revised 1999, Vol.2.

Operations and results during the period. Operations and maintenance funds in the amount of \$5,264,290 were expended during FY 2007 for dredging of critical shoals in the Port Newark Branch and Port Newark Pierhead Reaches of the federal navigation channel.

Condition as of September 30. Work under the active portion of the original portion of the original project began June 1976 and is 100 percent complete. Approximately 600,000 cubic yards of maintenance material remain in the Port Newark Branch and Pierhead Channels. Work remaining to complete existing original project consists of deepening the Hackensack River channel to depths of 32 feet and 15 feet, except as noted above.

27. RARITAN RIVER, NJ

Location. Rises in northern-central part of New Jersey and flows generally southeasterly into Raritan Basin, between Perth Amboy and South Amboy, about 24 miles by water south of the Battery, New York City. (See National Ocean Surveys Chart 12332)

Previous Projects. For Details see Annual Reports for 1915, 1918, and 1938 pages 1777, 359 and 259 respectively

Existing Projects. A channel 25 feet deep and 300 feet wide extending 5.8 miles from turn in New York and New Jersey Channels near Great Beds Light to Government wharf on Main Channel, widened to 600 feet for 1,000 feet of long opposite to form a turning basin of same depth; thence a channel 150 feet deep and 200 feet wide 3 miles to Washington Canal, thence 10 feet deep in soft material, 11 feet deep in rock, and generally 100 feet wide with widening at bends 5 miles to site of former D&R Canal entrance at New Brunswick, and a South Channel 25 feet deep and 300 feet wide 0.8 mile from junction with Main Channel at Keasby to upper limit of Titanium Pigment Co. property; ; thence 15 feet deep and 150 feet wide 0/4 miles to dock of Middlesex County Sewerage Authority; thence 10 feet deep and 150 feet wide 2 miles to a point 1,300 feet below upper junction with Main Channel at Crab Island. Plane of reference is mean low water. Mean range of tides is 5.1 feet at mouth of river and is 5.6 feet at New Brunswick; mean range of spring tides, 6.1 and 6.6 feet respectively. Irregular fluctuations due to winds and atmospheric pressure vary from 3.6 feet below mean low water up to 6.9 feet above mean high water. New work for completed portion of project, consisting of channels described above cost \$1,237,000, exclusive of amounts expended on previous projects, including \$66,000 contributed by local interests. Dredging South Channel to 10 feet deep and 150 feet wide for 1,300 feet to upper junction with Main Channel at Crab Island is inactive and excluded from foregoing description and cost estimate. (See Table 2-B for Authorizing Legislation

Local Cooperation. Complied with except local interests. Must furnish spoil-disposal areas for maintenance to 25-foot channel from New York & Long Branch Railroad bridge to junction of Main and South Channels, and is South Channel to Titanium Pigment Co. Property. Rivers and Harbor Act of 1962, provides local interests furnish spoil-disposal areas and necessary retaining dikes, bulkheads and embankments therefore, required for maintenance of improvement, and hold the United States free from damages.

Terminal Facilities. See Port Series No., 5, revised 1988, Vol.2.

Operations and results during period. Operations and maintenance funds in the amount of \$230,579 were expended on this project in FY 2006 for engineering and design activities related to the proposed FY 07 maintenance dredging of the Raritan River federal navigation channel. This included HARS testing of mile 0.0-2.0, environmental coordination and the preparation of plans and specifications for contract award. In FY 07, \$184,557 were expended to

continue environmental coordination and ready the project for advertisement in FY 08 construction.

Condition as of September 30. Project plans and specifications are being updated. A specification survey is scheduled, and coordination continues for an available disposal site.

28. RARITAN RIVER, TO ARTHUR KILL CUTOFF CHANNEL,NJ

Location. Channel is in western portion of Raritan Bay, off Perth Amboy and about 23 miles by water southwest of the Battery, New York City. (Chart 12331)

Existing Projects. A channel 1 mile long, 20 feet deep and at mean low water, and 800 feet wide, connecting Raritan River channel with southern end of Arthur Kill Channel, New York and New Jersey Channels project. Mean tidal range, 5.1 feet; mean range of spring tides, 6.1 feet; irregular fluctuations due to wind and barometric pressure vary from 3.6 feet below mean low water up to 6.9 feet above mean high water. New work completed project cost \$810,500. (See Table 2-B for Authorizing Legislation.)

Local Cooperation. None required.

Terminal Facilities. See Port Series No., 5, revised 1988, Vol.2.

Operations and results during period. Approximately 72,000 c.y. of material was removed by Corps' Hopper Dredge "McFarland" during FY 91, to restore project dimensions in Raritan River to Arthur Kill Cut-Off Channel, at a project cost of \$699,173. A review of current conditions and use were performed in FY 07 with \$7,189.

Condition as of September 30. Existing project was completed in 1935.

29. SANDY HOOK BAY AT LEONARDO, NJ

Location. This bay, 17 miles south of the Battery, New York City, is the southern portion of Lower New York Bay, west of adjoining Sandy Hook, NJ. Leonardo is on south shore of Sandy Hook Bay about 4 miles west of Sandy Hook and 1.4 miles west of Atlantic Highlands anchorage.

Existing Projects. Provides for a channel 8 feet deep at mean low water and 150 feet wide extending from 8-foot contour in Sandy Hook Bay to entrance of small-boat harbor, about 2,500 feet. Mean tidal range, 4.7 feet; mean-range of spring tides, 5.7 feet; irregular fluctuations due to

wind and barometric pressure vary from about 4 feet below mean low water to about 10.75 feet above mean low water.

New work for completed project cost \$56,470. Existing Project was adopted by 1950 River and Harbor Act(H.Doc.No.108,81stCong.,1st sess.). For latest published map see project document.

Local cooperation. Fully complied with except that local interest must furnish spoil-disposal areas for maintenance.

Terminal Facilities. The harbor, publicly operated and capable of berthing 80 vessels, is L-shaped with one side running north and south 790 feet and the other side running east and west 185 feet. A public landing is available on equal terms to all.

Operations and results during the period. Maintenance dredging of the Leonardo Channel at Sandy Hook Bay, NJ was last performed in 1996.with the removal of 60,000 c.y. material. Operations and maintenance funds in the amount of \$135,119 were expended during FY 2006 for E&D including sediment sampling and chemical testing. In FY 07, funds in the amount of \$48,736 were used to continue environmental coordination possible future dredging of the channel.

Condition as of September 30. Work under existing project commenced on September 23, 1957 and was completed November 17, 1957.

30. SHARK RIVER, NJ

Location. Shark River Channel begins at Shark River Inlet that connects with the Atlantic Ocean at a point 20 miles south of Sandy Hook, NJ. The channel extends 1.7 miles south east of the Inlet.

Existing project. A channel 18 feet deep, 150 feet wide; thence 12 feet deep and 100 feet wide to Rt. 35 bridge; 8 feet deep and 100 feet wide to the Boat Basin, anchorage area 7.3 acres.

Local cooperation. Fully complied with except that local interests are required to furnish suitable dredged material placement areas for maintenance.

Terminal Facilities. No terminals suitable for commercial purposed have been established. Approximately four commercial boatyards are located in Shark River. The terminals are considered adequate for present needs.

Operations and results during period. Total operations and maintenance funds in the amount of

\$132,988 were expended for preliminary engineering and design activities for the periodic maintenance dredging of the Shark River during FY 2007 and dredging the ocean bar shoal and channel entrance with the government dredge.

Conditions as of September 30. Work under the existing project was commenced in June of 1947 and completed in October of 1947.

31. SHINNECOCK INLET, NY

Location. On the south shore of Long Island, 95 miles east of the Battery, New York City. It is an opening through the sandy barrier beach, connecting Shinnecock Bay with Atlantic Ocean (See National Ocean Survey Chart 12352).

Existing Projects. Provides for a channel 10 feet deep (mlw) and 200 feet wide, thence extending through the inlet to Shinnecock Bay for a distance of about 0.7 mile thence a channel 6 feet deep and 100 feet wide to the Long Island Intracoastal Waterway, a distance of about 1 mile; and desposition basin surrounding the outer channel to a depth of 20 feet, rehabilitation of the existing jetties and revetments. Estimate of cost for work is \$22,300,000 (October 91 P.L.) of which the Federal share is \$16,900,000 and non-Federal share is \$5,400,000.

Local cooperation. The navigation improvement will accrue both recreational and commercial benefits which result in a first cost allocation of 69 percent Federal and 31 percent non-Federal. The authorizing document also requires that local authorities; provide without cost to the United States, all lands easements, right-of-way, and suitable disposal areas for the initial work and for subsequent maintenance, when and as required; hold and save the United States free from damages. Due to the construction and maintenance of the project; maintain and operate the works after completion in accordance with regulations prescribed by the Secretary of the Army; provide and maintain suitable terminal facilities when and as required for the accommodation of vessels that would navigate the inlet and adjacent bays, open to all on equal terms maintain, for the duration of the economic life of the project, continued public ownership of the publicly owned shores, and their administration for public use, and continue availability for public use of the privately owned shores upon which a portion of the Federal share of the costs is based. A Local Cooperation Agreement for the dredging element of the project was executed with the

New York State Department of Environmental Conservation on 7 June 90.

Terminal Facilities. Shinnecock Bay, and adjacent ocean area, constitute an important marine fishery. The public fishing facility includes three docks, one of which, stores and market the catch for the fishermen.

Operations and results during the period. A continuing for rehabilitation/revetment of the Western Jetty at Shinnecock Inlet was awarded on 20 June 2001 to for \$3,599,565. Newborn Construction has completed 1200 feet of repairs to the jetty, initiated work on another 70 feet of the jetty, and removed the sheet piles driven by the previous contractor in the inlet. Work was completed by April 04. Maintenance dredging of the channel and disposition basin was completed in March 2004 with the removal of 302,590 cy .Preliminary E&D was performed for the next maintenance cycle. Operations and maintenance funds in the amount of \$12,005 were expended during FY 2006.

Condition as of September 30. Work under existing project commenced on September 23,1957 and was completed on 1836 and was completed November 17,,1957.

32. SHREWSBURY RIVER, NJ

Location. Mainly a large tidal basin in eastern part of New Jersey, the outlet being at the southeastern end of Sandy Hook.(see National Ocean Survey Chart 12324).

Previous project. For details see Annual Reports for 1915 ,1918 and 1938, pages 1778,373, and 267, respectively.

Existing project. A channel 12 feet deep and 300 feet wide, following westerly shore, from deep water in Sandy Hook Bay 2.2 miles to a point 500 feet south of former location of railroad bridge at Highlands; then 9 feet deep and generally 150 feet wide, suitably widened at bends and turns, in south branch of river 6.8 miles to Branchport Avenue Bridge in city of Long Branch; and a channel in north branch (Navesink R.) 6 feet and 150 feet wide 6.1 miles from junction to Red Bank.Plane of reference is mean low water. Mean range of tide at Highlands, 3.8 feet; at Seabright, 1.7 feet; at Branchport, 1.7 feet; and at Red Bank, 3 feet. Mean range of spring tides is 4.7, 2.1,2.2, and 3.6 feet respectively, irregular fluctuations due to wind and atmospheric pressure vary from 1.9 feet below mean low water up to 6.5 feet above mean high water. (See Table 2-B for Authorization Legislation).

Local cooperation. River and Harbor Act of 1950 provides local interests furnish lands, rights-of-way, and spoil –disposal areas for construction and future maintenance; hold the United States free from damages; provide and maintain a suitable public wharf on each of the creeks to be improved, which shall be open to all on equal terms; remove Locust Avenue bridge over Claypit Creek; and make cash contributions of \$25,000, \$33,000 and \$27,500 Claypit, Oceanport, and Little Silver Creeks, respectively. Provided that further construction of any unit of proposed improvement may be undertaken independently of the other units when the required local cooperation has been provided. These conditions have not been fulfilled. Requirements under prior acts have been fully complied with.

Terminal Facilities. There are numerous terminals along the waterway. Some of which are open to the public. In addition, many private pleasure boat landings have been constructed by owners of riverfront property. None of the terminals has directed rail connections. Facilities considered adequate for existing commerce.

Operations and results during period. The most recent contract for the removal of all material except ledge rock lying above the planes., of 6’ below mean low water with 2’ allowable overdepth in each specified area of Shrewsbury River-North branch, New Jersey was awarded 25 August 1997 to Disch Construction, with the disposal of the dredged material at the upland site shown on contract drawing No. 396, sheet 5 of 5. This contract was previously awarded to S&A Contracting, Inc. and was scheduled for completion in June of FY 1996. The contract was terminated due to default on 29 August 1996. Dredging was completed on 16 December 1997, removing 37,470 cubic yards of material. Operations and maintenance funds in the amount of \$11,941 was the actual expense during FY 1997; however the contract was \$808,665..

Conditions as of September 30. In FY 06, Engineering and Design (E&D) work was performed at a cost of \$339,256 to prepare the project for the future possible dredging and placement of the material. Groin site analysis was performed for the entire Shrewsbury and Navesink Rivers, with the results coordinated with the NJDEP. Placement sites for the material have been discussed and will be prioritized when additional funds become available to complete Plans & Specs for possible future dredging. In FY 07, \$36,034 were used to continue environmental coordination and placement site determination.

33. SUPERVISOR OF NEW YORK HARBOR (PREVENTION OF OBSTRUCTION AND INJURIOUS DEPOSITS)

The District Engineer, New York District, was designated Supervisor of New York Harbor under the provisions of the River and Harbor Act of June 29, 1888 (33 U.S.C. 441-451), as amended July 12, 1952. Under this Act, the Supervisor of New York Harbor is charged with the mission of preventing the deposit of obstructive and injurious materials in New York Harbor and its adjacent and tributary waters, including Long Island Sound. The River and Harbor Act of August 18, 1894 (33 U.S.C. 452) makes it unlawful for any person or persons to engage in fishing or dredging for shellfish in any of the channels leading to and from New York Harbor, or to interfere in any way with the safe navigation of deep draft traffic; the River and Harbor Act of March 3, 1899 (33 U.S.C. 403, 407, 409) prohibits obstructions to navigable waters such as unauthorized structures, unauthorized fill, deposit of refuse, and willful or negligent abandonment of vessels. Other laws relating to the supervision of New York Harbor and its tributary water are the Clean Water Act, the Marine Protection, Research and Sanctuaries Act of 1972, the Coastal Zone Management Act of 1969, the Fish and Wildlife Act of 1956, the Federal Power Act of 1920, the National Historic Preservation Act of 1966, the Endangered Species Act of 1973, the Deepwater Port Act of 1972, the Wild and Scenic Rivers Act and the Land and Water Conservation Fund Act.

Direct supervision of the waters under the jurisdiction of the New York District is accomplished by means of a patrol vessel whose scope of duty includes surveillance of the water front for unauthorized construction or fill, surveillance of tows enroute to dumping grounds in Atlantic Ocean to ensure that material is not illegally deposited in the waters of New York Harbor, and investigation of wrecks and abandoned vessels. The inspectors duties include inspection of authorized construction, fill or excavation in waterways, including wetland areas, to ensure that work is performed in accordance with the Corps permit, as well as investigation of unauthorized construction activities. The inspectors also patrol all waterways in their respective area and inform the public of the Corps’ role and jurisdiction as well as provide assistance in the preparation of permit application, (See Table 2-E at end of chapter).

34. RECONNAISSAANCE AND CONDITION SURVEYS (See Table 2-F at end of chapter)

35. OTHER AUTHORIZED NAVIGATION PROJECTS (See Table 2-G at end of chapter)

36. NAVIGATION WORK UNDER SPECIAL AUTHORIZATION

Navigation Activities pursuant of Section 107, Public Law 645, 86th Congress as amended (Pre-Authorization). (See Table 2-N at end of chapter)

Beach Erosion Control

37. ATLANTIC COAST OF LONG ISLAND JONES INLET TO EAST ROCKAWAY INLET LONG BEACH ISLAND, NY

Location. Atlantic Coast of Long Island, in Nassau County, New York, between Jones Inlet and East Rockaway Inlet.

Existing project. The project feasibility study was conducted pursuant to a resolution by the Committee on Public Works and Transportation of the U.S. House of Representatives that was adopted October 1, 1986. Project construction was authorized by the Water Resources Development Act of 1996. The total Federal cost of the project is \$299,000,000 and total non-Federal cost is \$161,000,000. The authorized plan provides for storm damage protection for 7 miles of public shoreline against a 100 year storm event. Protection is provided by constructing a 110 foot wide protective beach berm at an elevation of 10 feet above sea level backed by a 25 foot wide dune system at an elevation 15 feet above sea level. The project also includes the rehabilitation of 16 existing groins and the construction of four new groins at the eastern end of the island. In addition, the project includes periodic nourishment of the restored beaches on a 5 year cycle for a period of 50 year following initial construction.

Local cooperation. The local sponsor is the New York State Department of Environmental Conservation, who funded 50 percent of the cost of the feasibility study. The Project Cooperation Agreement has not yet been negotiated, but the customary provisions are that local interests will provide, without cost to the United States, all lands, easements, and rights-of-way, including borrow areas, necessary for construction of the project, fund 35% of the total project cost, assure continued conditions of public ownership and use of the shore, maintain public use facilities open and available to all on equal terms, and maintain all improvements after completion of construction in accordance with Federal regulations for the economic life of the project.

Operations and results during the period and condition as of September 30. The Feasibility Report with Draft Environmental Impact Statement (EIS) was

completed in February 1995. The Pre-construction, Engineering and Design (PED) phase was completed in September 1997. The final EIS was released for public comment in May 1998 and the record of decision was signed in December 1998. Congress added \$2 million in FY 1998 and 7.5 million in FY 1999 to continue the design of the project and initiate construction. The local sponsors requested that the Corps of Engineers reanalyze the area between the proposed new groins and existing groin field in the City of Long Beach before starting construction. A study was conducted which utilized new modeling techniques that were unavailable during the feasibility study to finalize the groin field design. The final report summarizing the findings of the study was completed in March 2000. A reevaluation report that incorporates the design modifications made since the completion of the feasibility study was completed in 2006 and provided the basis for the City of Long Beach to decline participation in the recommended project. The reevaluation report is being revised to reflect this change to consider protection for the eastern end of the barrier island.. The reevaluation report will be used as a basis for the PCA. The plans and specifications will be prepared in 2009 if Federal funds are available.

38. EAST ROCKAWAY INLET TO ROCKAWAY INLET & JAMAICA BAY, NY

Location. Atlantic Coast of New York City, between East Rockaway and Rockaway Inlets, and the lands within and surrounding Jamaica Bay. The coastal area (about 10 miles long) is a peninsula in Queens County separating the ocean and the bay. (See National Ocean Survey Charts 12327, 12350 and 12326).

Existing project. The projects consists of nourishing 100 foot wide beach at an elevation of 10 feet above mean low water from Beach 149th Street to 19th Street. Initial beach replenishment (5 contracts) previously took place between 1979 and 1988. Construction of a stone groin at Beach 149th St. was completed in September 1982. A Section 934 Report approved in February 1994, recommended continued nourishment over a nine year period. The total Federal participation includes first cost and periodic beach nourishment, the total estimated at \$63,700,000 (Oct. 1996 P.L.) and non-Federal costs of \$45,900,000. The Section 934 Report also recommended a reformulation study to evaluate alternative methods of providing storm damage protection to the Rockaway area.

Local cooperation. Local interests have agreed to provide lands and rights-of-ways including borrow area: bear a portion of the total cost as a cash contribution; hold the United States freed from damages; maintain, during

economic life of a project, continued public ownership and use of non-Federal publicly-owned shores upon which Federal participation in beach protection is based; maintain and operate all works after completion, control water pollution to the extent necessary to safeguard the health of bathers. The project cooperation agreement for additional renourishment over the nine year period was executed on 25 May 1995.

Operations and results during period and condition as of September 30. A final Environmental Impact Statement was filed with the Council of Environmental Quality on April 16, 1971. Initial beach restoration was completed in FY 1977. Contract for first increment of periodic nourishment was completed in August, 1982. Contract for construction of a stone groin at Beach 149th street was completed in September, 1982. Periodic nourishment contracts Nos. 3, 4, and 5 were completed between 1978 and 1988. Contract NO.6 was completed in 1997. The contract included beachfill placement of approximately 3 million cubic yards of sand from Beach 19th to Beach 149th Street. Contract No.7 was completed by Weeks Marine Inc. in February 2001. The contract included beachfill placement of approximately 1.01 million cubic yards of sand from beach 119 to beach 66th street and beach 40th to beach 19th street. Contract No. 8 was awarded to Weeks Marine Inc. on September 29, 2003. The contract includes beachfill placement of 1.06 million cy of sand between Beach 26th and Beach 108th Streets. . Contract No. 8 was completed in 2004. A Design Agreement between the Corps and NYSDEC was executed on May 13, 2003 for a Reformulation Study. FY 08 funds are being utilized to work on the study.

39. FIRE ISLAND INLET TO MONTAUK POINT, NY

Location. That portion of Atlantic Coast of Long Island in Suffolk County extending from Fire Island Inlet easterly to Montauk Point, NY about 83 miles long. This frontage comprises about 70 percent of total ocean frontage of Long Island. Fire Island Inlet is about 50 miles by water east of the Battery, New York. (See Coast and Geodetic Charts 13209, 12354 and 12353.)

Existing project. Provides for Federal participation in improvement to prevent beach erosion and hurricane damages by; widening beaches along developed areas between Kismet and Mecox Bay, to a minimum, width 100 feet at elevation 14 feet above mean sea level; raising dunes to an elevation of 20 feet above mean sea level from Fire Island Inlet to Hither Hills State Park, at Montauk and opposite Lake Montauk Harbor; planting grass on dunes; constructing gated interior drainage structures at Mecox Bay, Sagaponack Lake, and Georgica Pond; constructing

up to 50 groins, if needed; and Federal participation in cost of beach nourishment.

Local cooperation. The New York State Department of Environmental Conservation is the local cooperating agency. The State agreed to provide necessary land, rights-of-way and borrow areas, and furnish 30 percent of the project costs for the Interim Project along the Moriches Inlet to Shinnecock Inlet reach of the authorized project. The State has also agreed to be the local sponsor for the comprehensive reformulation study of the authorized project and for interim project immediately west of Shinnecock Inlet.

Project history. On July 30, 1963, the State reflecting the desires of Suffolk County, requested the inclusion of a minimum of 13 groins in initial construction of Moriches-Shinnecock reach. Chief of Engineers concurred in inclusion of up to 13 groins. Assurances were executed by Superintendent of Public Works, State of New York, on August 14, and accepted by the District Engineer August 20, 1963. On February 5, 1964, the State requested consideration of a plan, as proposed by Suffolk County, for initial construction of 13 groins of which 11 would be in the Moriches-Shinnecock reach, and 2 in the Southampton-Beach Hampton reach vicinity of Georgica Pond, and that sandfill and dune construction be withheld for the present except for 1 mile on each side of Shinnecock Inlet. On February 27, 1964, the Chief of Engineers accepted the proposals, in part, and supplemental assurances were executed by State of New York on April 20, 1964, and accepted by District Engineer April 27, 1964, as follows: the State of New York now elects to proceed with authorized combined beach erosion control and hurricane protection project for South Shore of Long Island; that Superintendent of Public Works hereby reaffirms his assurance of August 14, 1963, relative to complete project; that State of New York, as cooperating agency, will now agree that artificial fills will be added when and to extent found necessary by the Chief of Engineers, but not earlier than 3 years after completion of groins unless both the State of New York and the Chief of Engineers mutually agree to an earlier placement; that the superintendent agrees for State of New York to contribute the full amount of any increase in Federal costs resulting from the separate construction of the groins and subsequent fill; and that the State agree that construction of the two groins in the Georgica Pond area will depend on a favorable finding, following a study by the Chief of Engineers. Study was completed July 31, 1964, recommending construction, and approved by the Chief of Engineers on September 22, 1964. By letter dated November 5, 1964, the New York State Department of Public Works confirmed that title to all properties and interests in properties necessary for constructing the 11 grains was fully vested in Suffolk County.

REPORT OF THE SECRETARY OF THE ARMY ON CIVIL WORKS ACTIVITIES FOR FY 2007

By letter dated December 7, 1964, the Department stated that the county had obtained easements or fee title for the parcels necessary for constructing the two groins. New York State Department of Public Works furnished \$884,600 and \$830,330 required contributed funds October 30, 1964, and September 7, 1965, respectively, for construction of 11 groins in Moriches-Shinnecock reach and \$439,900 on January 22, 1965, for construction of 2 groins in Georgica Pond area of the Southampton-Beach Hampton reach. The completed 2 groins and 11 groins were accepted by the New York State Department of Public Works for maintenance on May 11, 1966 and April 10, 1967 respectively. On March 22, 1965, the State Recommended that planning priority be in the order; Southampton-Beach Hampton (Drainage structures first); Shinnecock Inlet-Southampton; Beach Hampton-Montauk Point; and Fire Island-Moriches Inlet. Planning on the drainage structures was initiated but was suspended, based on; meeting of October 28, 1965 with Georgica Pond Association and the Preservation Society of East End wherein concern was indicated regarding the effects of the proposed drainage structure on ecology, salinity, pond level and aesthetic values; meeting with the Congressional representative, State legislators, Federal agencies and local officials held on May 26, 1966; and resolution of the Suffolk County Board of Supervisors adopted June 13, 1966 requesting advancement of the planning of the Fire Island-Moriches Inlet reach (Fire Island National Seashore). On June 16, 1967, the New York State Department of Public Works requested the following works undertaken as immediate priority items; in Moriches-Shinnecock reach, beach and dune fill at 11 groins, beach and dune fill east of the 11 groins; in Southampton-Beach Hampton reach (at East Hampton), construction of two additional groins, and the outlet structure at Georgica Pond. On March 18, 1968 the Suffolk County Board of Supervisors adopted a resolution supporting construction of 4 groin in Reach 2 (Moriches-Shinnecock) and 2 groins in Reach 4 (Southampton-Beach Hampton). On April 22, 1968 the Board adopted a more inclusive resolution authorizing participation in beach erosion and hurricane protection for the Moriches-Shinnecock reach and in the Georgica Pond area of the Southampton-Beach Hampton reach.

On December 24, 1968, the Commissioner of the New York State Conservation Department executed the second supplement to the assurances of local cooperation, which was accepted by the District Engineer on January 24, 1969. The reaffirmed previous assurances contained provisions for constructing for additional groins in an area extending 6,000 feet west from the most westerly groin in the existing levee-groin field in the Moriches Inlet to Shinnecock Inlet Reach, and for placing beach and dune fill in this area to the full design cross section as defined in the authorized

project report. A General Design Memo completed in 1980 recommended placement of sand fill in the existing 11 groin field and along 9,500 feet of shore to the west.

Condition as of September 30. Engineering and design began November 1962 and the project construction commenced in January 1965. Two groins in Reach 4; Southampton Beach Hampton, Section 3, were initiated in March, and completed in September 1964, at a total cost of \$720,950 of which \$382,109 were incurred against required contributed funds. Eleven groins in Reach 2: Moriches-Shinnecock, Section 2, were initiated in January 1965, and completed in October 1966 at a total cost of \$2,845,656 of which \$1,370,191 were incurred against required contributed funds. Initial beach fill placement for 750,000 cubic yards in Reach 2. Section 1A was completed on May 23, 1969. On August 4, 1969 work started on 4 groins and sandfill in Reach 2, section 1A and was completed November 14, 1970. 3,083 tons of stone and 1,111,000 cubic yards of sand was placed. Total cost for all Section 1A was \$3,663,455 including \$1,791,428 in required contributed funds. Funds in the amount of \$70,000 were allotted on April 14, 1977 for initiation of the Phase 1 study in Reach 1, Fire Island Inlet to Moriches Inlet. The Final Environmental Impact Statement was filed with Environmental Protection Agency on January 28, 1978. On March 7, 1978, the Department of the Interior, supported by the other environmental resource agencies referred the Environmental Impact Statement to Council on Environmental Quality as unacceptable. On June 6, 1978 the Council agreed and recommended project reformulation. Public meetings were held in October 1979 to delineate the scope and level of effort needed to reformulate the project. A final scoping session was held January 17, 1980 and agreement was reached between the Federal agencies although New York State had strong objections. A plan of study was completed in July 1980. However, because of New York State's inability to financially participate in construction at Westhampton Beach, reformulation was postponed.

Two breaches (new inlets) occurred in the vulnerable Westhampton area during periods of storm tides, one in Jan. 1980, just east of the Moriches Inlet, and the most recent in Dec. 1992, at the eastern end of Moriches Bay. Both breaches were filled in by contract, the last one completed in Sept. 1993, at a cost of \$7 million.

In April 1993, the State provided a letter of intent to participate in an interim project for the Moriches Inlet to Shinnecock Inlet Reach. Based on this agreement in 1993 on a conceptual plan for the most critically eroded reach of the authorized project between Moriches and Shinnecock Inlets, the Westhampton Interim Project, the Reformulation Study was reinitiated.

A construction contract for the Westhampton Interim Project was awarded in May 1996 to Great Lakes Dredge & Dock Company in the amount of \$16 million. The contract was substantially completed in December 1997 and included beach placement of 4 million cubic yards of sand, dune creation, fencing and grass planting, groin modifications and construction of public dune walkovers. The first renourishment was completed in February 2001; the second in March 2005; each at a cost of approximately \$5 million. Renourishment is scheduled to continue as needed until 2027. In January 1996, a Breach Contingency Plan was approved, which provides a mechanism for rapid response to breaches along the barrier island, within the authorized project.

The Reformulation Study, which has been consistently funded since 1993, is currently underway. Data has been collected including beach profile surveys and aerial topography maps of the entire 83-mile long shoreline. Scoping for the preparation of an Environmental Impact Statement has been conducted. A draft EIS is scheduled to be completed in November 2009.

Due to the lack of non-Federal support, efforts on the Fire Island interim project have been deferred. Construction of an interim project West of Shinnecock Inlet was completed in March 2005 at a cost of \$5.5 million. Renourishment is scheduled to continue as needed until 2011, along with project monitoring in accordance with the New York State permit.

40. RARITAN BAY AND SANDY HOOK BAY, NJ

Location. Situated at the southern end of Lower New York bay between the Raritan River and Sandy Hook, in Middlesex and Monmouth Counties, NJ Shoreline area is typified by small developing communities built upon and near salt and freshwater marshes. The study area is largely located in low elevation regions with numerous small creeks providing drainage. Low-lying residential and commercial structures in the area are experiencing flooding caused by coastal storm inundation. Problem has progressively worsened due to loss of protective beaches and increased urbanization in the area with structures susceptible to flooding from rainfall and coastal storm surges, erosion and wave attack, combined with restrictions to channel flow in the tidal creek.

Existing project. Existing Federal project was authorized by the Flood Control Act of 12 October 1962 as a dual purpose Beach Erosion Control and Hurricane Protection Project in accordance with House Document No.464, 86th Congress, Second session. This project provided for beach fill, groins, and levees for various

sections of the study area. The constructed project consists of segmented sections of beach fill and levees surrounding the communities at Old Bridge Township and Keanburg and East Keanburg. A study was authorized by a resolution of the Committee on Public Works and Transportation, U.S. House of Representatives, adopted August 1, 1990. The study seeks to determine the advisability to the recommendations in the authorizing report for Raritan Bay and Sandy Hook Bay, Section 506 of WRDA 1996 authorized periodic nourishment, if determined necessary, for a period of 50 years from initiation of construction of the period of 50 years from initiation of construction of the project, in accordance with section 156 of WRDA 1976 and Section 934 of WRDA 1986.

Local cooperation. The non-Federal sponsor, NJDEP, is currently cost sharing a number of Raritan Bay and Sandy Hook Bay, NJ feasibility studies with USACE: Port Monmouth, Union Beach, and Cliffwood Beach. The non-Federal sponsor would also be required to cost share in feasibility studies for the communities of Leonardo, Highlands and Keyport in order for them to proceed. (The non-Federal sponsor also operates and maintains the existing, constructed project).

Operation and results during period, and condition as of Sept. 30. Construction of the authorized project for Old Bridge Township was initiated in 1965 and completed in 1966. Construction of the shoreline portion of the authorized project for Keansburg and East Keansburg was initiated in 1968 and completed in 1969. Construction of the closure portion (levees, closure gate and pumping station) of the authorized project for Keansburg and East Keansburg was initiated in 1970 and completed in 1973. Cliffwood Beach and Union Beach were the only portions of the authorized project that were not constructed. After construction of the closure work all of the completed works were formally turned over to the State of New Jersey in 1974.

A reconnaissance study was completed in March 1993. Subsequently, a feasibility study for Port Monmouth was initiated in February 1994, and for Union Beach and Cliffwood Beach in April 1997. In FY 2002, the final feasibility report and EIS for Port Monmouth were issued. Feasibility study activities for Union Beach and Leonardo continued. The feasibility study for Cliffwood Beach was completed by the project was not recommended for continued Federal involvement. The pre-feasibility activities for Highlands were finalized in preparation for a scheduled FY 2001 FCSA execution. Pre-feasibility activities continued for Keyport. A design agreement was executed with the NJDEP for the Raritan 934 (Keansberg, East Keansberg, Old Bridge) reevaluation study in November 1999. The study was initiated in January 2000. This reevaluation report will serve as a basis for extension

of periodic nourishment for the constructed portions of the existing project for Keansberg East Keansburg and Old Bridge Township .The draft Reevaluation Report was released for public review December 2007, prior to submission to HQ. This report determined that the benefit to cost ratio for the Laurence Harbor portion of the project is not economically justified.

41. ROCKAWAY INLET TO NORTON POINT (CONEY ISLAND AREA), NY

Location. Atlantic Coast of New York City, in Brooklyn (Kings County), approximately nine miles south of the Battery, New York City.

Authorized project. Authorized by the Water Resources Development Act of 1986. The authorized plan provides for beach erosion control by restoring the Coney Island public beach up to 250 feet beyond its historic shoreline; the extension of the westerly terminal groin; construction of a terminal groin at the easterly end of the restored beach, and a fillet of beachfill from the terminal groin at W. 37th Street extending approximately 2300 feet into the community of Sea Gate. The authorized plan also provides for restoration of the beach by periodic beach nourishment. The project was modified by the Intermodal Surface Transportation and Efficiency Act (ISTEA) of 1991 to include the relocation of existing comfort and lifeguard stations at full Federal expense. The total Federal cost of the project is \$105,800,000 and non-Federal cost is \$53,200,000. The project was further modified by Section 329 of WRDA 2000, which authorized the construction of T-groins west of the West 37th Street groin.

Local cooperation. The local sponsor is the NY State Department of Environmental Conservation. In accordance with the provisions of the Project Cooperation Agreement, the sponsor will; provide without cost to the United States all lands easements, and rights-of-way including borrow areas necessary for construction of the project, hold and save the United States free from claims for damages which may result from the construction works and subsequent maintenance of the project: provide a cash contribution toward the total first cost; assure that water pollution that would affect the health of bathers will not be permitted; assure continued conditions of public ownership and use of the shore upon which the amount of Federal participation is based, during the economic life of the project; maintain public use facilities open and available to all on equal terms and maintain all improvements after completion in accordance with regulations prescribed by the Secretary of the Army, including periodic nourishment during the economic life of the project as may be required to serve the intended purpose, subject to Federal participation in the cost of periodic nourishment for the economic project life.

Operations and results during period, and condition as of September 30. Initial construction of the beach and the West 37th Street jetty was completed in January 1995. The design of the comfort and lifeguard stations was completed in 1996. A Limited Re-Evaluation report that includes an environmental assessment was completed in September 2004. The report recommended the construction of T- groins as a solution to these beach erosion and sand accumulation problems within Sea Gate. Construction of the T-groins is expected to begin in the fall of 2008.

42. SANDY HOOK TO BARNEGAT INLET, NJ

Location. The northern portion of the Atlantic coast of New Jersey extending from Sandy Hook southerly to Barnegat Inlet-length about 48 miles. Erosion has seriously reduced the width of most beaches in the study area with consequent exposure of the shore to storm damage. Because of this erosion of the shore the area does not provide sufficient recreational beaches for the proper accommodation of the present and prospective tributary population.

SECTION I – SEA BRIGHT TO OCEAN TOWNSHIP, NJ

Location. That portion of the Atlantic coast of New Jersey in Monmouth County extending from Sea bright southerly to Ocean Township – length about 12 miles. Sea Bright is about 30 miles by water south of the Battery, New York City.

Authorized project. The Water Resources Development Act of 1988 (PL 100-670) authorized a plan substantially in accordance with the plan recommended in the General Design Memorandum for the project dated May, 1988. In general the plan provides for beach erosion control along approximately 12 miles of coastline, extending from Sea Bright southward to Ocean Township, New Jersey, by artificial placement of sand to widen the beach berm to 100 feet at an elevation of 10 feet above mean low water with an additional 2 foot high berm cap to provide an extra increment of protection from overtopping. The project also provides for the notching of 15 existing stone groins, and periodic nourishment throughout the 50 year economic life of the project. Existing storm outfall pipes are extended beyond the new , wider beach. Total estimated Federal cost for Section 1 is \$461,200,000. Total estimated non-Federal cost for all requirements of local cooperation is \$248,400,000.

Local cooperation. Includes reconstruction of sea wall at Sea Bright and all lands easements, rights-of-way and drainage outfall extensions.

Operations and results during period and condition as of September 30. The Local Cooperation Agreement for Section I was executed with the State of New Jersey on July 30, 1992. Work under Contract 1A (Monmouth Beach) was completed in November 1995. Work under contract 1B (Sea Bright) was completed in October 1996. Construction on Contract 2 (Long Branch) began in May 1997 and was completed in September 1999. Plans and specifications for Contract 3 (Deal) are near completion but contract award is delayed indefinitely due to local real estate and funding issues. The first renourishment contract for Sea Bright and Monmouth Beach was awarded in August 2001. Sand placement commenced in Sea Bright in May 2002 and was completed in November 2002. Renourishment contract 2 (Long Branch) is scheduled for fall 2008.

SECTION II – ASBURY PARK TO MANASQUAN, NJ

Location. That portion of the Atlantic coast of New Jersey in Monmouth County extending from Asbury Park southerly to Manasquan – length about 9 miles.

Authorized project. Provides for Federal participation in the restoration and protection of the shore from Asbury Park to Manasquan by artificial placement of sand to widen the beach berm to a minimum width of 100 feet at an elevation of 10 feet above mean low water with a 2 foot high berm cap. The project provides for the notching of 20 existing stone groins and periodic nourishment for a period of 50 years from construction. Existing outfall pipes are extended beyond the new wider beach. Total estimated Federal cost is \$457,600,000. Total estimated non-Federal costs for all requirements of local cooperation is \$246,400,000.

Operations and results during period and condition as of September 30. The local cooperation agreement for Section II was executed with the State of New Jersey on August 20, 1996. The contract for the Southern Reach (Belmar to Manasquan) was awarded in March 1997. Construction began in June 1997 and was completed in August 1999. The award of the Northern Reach (Asbury Park to Avon-by-the-Sea) contract was in June 1999. Beachfill placement commenced in July 1999 and was completed in December 1999. Work on the groin notching and outfall extensions was completed in January 2001.

43. OTHER AUTHORIZED BEACH EROSION CONTROL PROJECTS

(See Table 2-H at end of chapter)

44. BEACH EROSION CONTROL WORK UNDER SPECIAL AUTHORIZATION

Beach Erosion Control activities pursuant to Section 103 Publ. Law 826, 84th Congress as amended (See Table 2-O at end of chapter).

Flood Control

45. THE HACKENSACK MEADOWLANDS AREA, NJ

Location. The project location is the Hackensack Meadowlands River Basin in Bergen and Hudson Counties, New Jersey.

Existing project. The program was authorized by Section 324 of the Water Resources Development Act of 1992. It was amended by Section 550 of the Water Resources Development Act of 1996 and Section 5105 of the Water Resources Development Act of 2007. The program was initially authorized for Federal funding of \$5,000,000 which was recently amended to \$20,000,000. The objective of the program is to provide design and construction assistance for the development of the Environmental Improvement Program within the Hackensack Meadowlands District of New Jersey. The intent of the program is both flood control and ecological restoration. support of their Environmental Improvement Program. This has included evaluating tide gate improvements to control flooding in the Berry's Creek drainage basins and Route 7 Belleville Turnpike, enhancement and acquisition of wetlands, the development and implementation of a system to provide for water quality monitoring and wetland control in the Hackensack Meadowlands District. A hydraulic modeling study of the Hackensack River is underway evaluating a number of NJMC identified alternatives will be performed. It will also examine a proposed alternates to reduce flooding on Route 7 in coordination with NJMC and NJDOT.. The Corps of Engineers Engineer Research and Development Center is performing the modeling study.

Local cooperation. The non-Federal sponsor is the New Jersey Meadowlands Commission (NJMC).

Operations and results during the period and condition as of September 30. The General Management Plan, which outlines the management process for implementing the program, was completed in October 1998. A total of \$2.5 million was appropriated for the program in FY 1996. The design agreement was executed between the Corps of Engineers and the NJMC in March 2000. The parent model and four child models have been

completed and updated to reflect recent structural changes to the system. Alternative stimulation studies have begun at a number of sites in the NJMC District where flooding problems routinely occur. Also, FY 2007 funds were utilized to collect field data on several sites to advance proposed restoration improvements on the sites. FY 2008 funding is also being used to further the analysis of potential flood reduction measures at a number of sites in the NJMC District, design of the preferred measures, and further data collection at various wetland sites identified for potential environmental restoration.

46. JOSEPH G. MINISH PASSAIC RIVER WATERFRONT AND HISTORIC AREA, NJ

Location. The project area is located along the west bank of the Passaic River between Bridge and Brill Streets in the City of Newark, New Jersey. This reach of the Passaic River is eroded, deteriorated and environmentally degraded due to past heavy commercial and industrial use and flooding. The most recent flooding occurred in December 1992. In light of the renewal of the commercial downtown area of Newark near the Passaic River, the project area is viewed as an environmental resource to be restored.

Authorized project. The project was authorized in the Water Resources Development Act (WRDA) of 1990 (Public Law 101-640) as an element of the Passaic River Flood Damage Reduction Project on November 28, 1999, modified in the Water Resources Development Act of 1992 (Public Law 102-580) by extending the project area, and further modified in the Water Resources Development Act of 1996 (Public Law 104-303).

The project has three phases. The first phase will provide 6,000 feet of new bulkhead, 3,200 feet of restored riverbank and wetlands. The second phase adds a 9,200 foot waterfront walkway and the third phase adds park facilities, plazas and landscaping. Links to the Arts Center, Riverbank Park, and other sites will also be provided. The project will reduce the flooding and erosion and provide environmental restoration, recreation and economic development benefits. The cost of the first phase is \$37,300,000, adding the second phase increases the cost to \$60,000,000 and the third phase brings the total project cost to \$78,800,000. The sponsor of the first phase is the New Jersey Department of Environmental Protection and cost sharing is set a 75% Federal and 25% non-Federal. The State may reduce its share through credit provisions in WRDA 1992. The credit consists of the value of lands in the basin that the State puts into wetlands bank.

Local cooperation. Project will be operated and maintained by sponsor as each portion is completed.

Operations and results during period and condition as of September 30. Construction on the first phase started in September 1999 and 1,700 feet of new bulkhead is complete. Construction of the bulkhead from Central Street to Penn Station was completed in March 2003. Construction of the steel bulkhead from Jersey Street to Jackson Street was initiated in November 2005 and completed in June 2006. Additional appropriations will be required to complete the first phase. Interest is also being expressed by the city of Newark to sponsor the second and third phases. Design of the walkway and the project cooperation agreement is being prepared. Contract 4A, concrete bulkhead cap, storm drainage outfalls and upland grading and planning was awarded January 2008 with the work to be performed in 2008.

47. NEW YORK CITY WATERSHED ENVIRONMENTAL ASSISTANCE PROGRAM, NY

Location. The project location is the New York City Watershed, which is located within the following counties in New York State: Delaware, Greene, Schoharie, Ulster, Sullivan, Westchester, Putnam and Dutchess.

Existing project. The program was authorized by Section 552 of the Water Resources Development Act (WRDA) of 1996 and amended in WRDA 1999. The program was authorized for \$42,500,000 in Federal funds. The objective of the program is to provide design and construction assistance for water-related environmental infrastructure and resource protection and development projects in the New York City Watershed, including projects for water supply, storage, treatment and distribution facilities and surface water resource protection and development. Forty projects have been certified by the New York State Department of Environmental Conservation (NYSDEC) and recommended for implementation. The types of projects include stream restoration, installation of sanitary sewer lines, stormwater studies, pathogen monitoring, planning and implementation of agricultural non-point source pollution reduction and watershed protection training.

Local cooperation. The non-Federal sponsor for the program is the NYSDEC. The projects will be accomplished by the local sponsors, the New York City Department of Environmental Protection, municipalities and counties.

Operations and results during the period and condition as of September 30. The General Management Plan, which outlines the management process for implementing the program, was completed in September 1998. \$18.4 million has been appropriated for the program has been appropriated for the program in FY 1997 through 2008. An additional \$7.2 million was reprogrammed in FY 05 for projects in Greene and Delaware Counties. The request for proposals, under which the proposed projects were submitted, evaluated and certified for implementation, was completed in February 1999. A total of 37 Project Cooperation Agreements have been executed to date of which 22 projects have been completed, and work is in progress for 15 projects. Discussion is on with NYSEC to select new projects for the NYC Watershed Program.

48. PASSAIC RIVER BASIN, NJ & NY

Location. The Passaic Basin, comprising 787 square miles in northeastern New Jersey and 148 square miles in southern New York State, is located

in the greater New York City Metropolitan area. The Passaic River Basin is roughly elliptical in shape 26 miles long and 56 miles wide – and contains portions of Bergen, Essex, Morris, Passaic, Hudson, Somerset, Sussex and Union Counties in New Jersey. The Basin also includes parts of Orange and Rockland Counties in New York.

Previous projects. Three Federal flood control projects have been completed by the Corps of Engineers in the Passaic River Basin. A \$67,400 de-snagging, debris removal, and channel restoration project was completed in 1951 along Beaver Brook and the Pequannock Township Ditch, tributaries of the Pompton River in Pequannock Township, NJ.

Along the Pompton River, a channel clearing project including shoal removal and channel restoration was implemented in the two mile reach from the Delaware, Lackawanna and Western Railroad Bridge to the Erie Railroad (Greenwood Lake Branch) Bridge. This work, in Pequannock Township, Wayne Township and Lincoln Park Borough, NJ, was completed in 1954 at a cost of \$50,000.

A \$1.5 million basin-wide project to improve the Flood Warning and Preparedness System was completed in 1988. The project was implemented by the Corps of Engineers in conjunction with the National Weather Service and U.S. geological Survey, The State of New Jersey is the non-Federal sponsor of the project.

Project history. U.S. Army Corps of Engineers involvement in Passaic River planning was first authorized in the Flood Control Acts of 1936. Since then reports

recommending plans of action were issued in 1939, 1948, 1962, 1972, and 1973. None of these plans were implemented because they did not receive widespread public support. In 1976, Congress authorized a Phase I Advanced Engineering and Design Study in Section 101(a) of the Water Resources Development Act of 1976. Congressional Guidance on the conduct of the study was provided in House Report 94-1702. Local protection plans were completed for tributary flood damage areas along the Ramapo and Mahwah Rivers at Mahwah, NJ, and Suffern, NY, Molly Ann's Brook at Haledon, Prospect Park and Paterson, NJ, the Ramapo River at Oakland, NJ, and the Lower Saddle River in Bergen County, NJ. These projects were authorized in the Water Resources Development Act of 1986. Construction began on the Molly Ann's Brook project in 1995. The Ramapo River at Oakland project received construction funds in Fiscal year 1995 and was reauthorized in WRDA 1996 and in the Energy and Water Development Appropriate Act of 2001.

In April 1984, the Passaic Basin experienced flooding estimated to be the worst in 40 years. In June 1984, the State of New Jersey selected a dual inlet diversion tunnel plan as the preferred Basin-wide alternative for detailed plan formulation. The Phase I General Design Memorandum and draft Environmental Impact Statement, (EIS), recommending the Pompton River/Passaic Dual Inlet Tunnel Diversion Plan, were completed during FY 1998. The final EIS was filed with EPA in December 1988.

Section 101(a) 18 of the Water Resources Development Act (WRDA) 1990 (PL 101-640), as modified by section 102(p) of WRDA '92 (PL 102-580) authorizes construction of the Passaic River Flood Protection Project for the Passaic River Basin which will address both environmental and engineering objectives of the Act. The Passaic River Flood Protection Project combines diversion tunnels, levees, flood walls channel modification, and natural flood storage to provide flood protection to about 35 towns in the Passaic River Basin.

Pre-construction, Engineering and Design for the Passaic River Flood Protection Project was initiated in FY 1989. A draft General Design Memorandum and Supplemental Environmental Impact Statement with accompanying project cost estimate, and update of buy-out plans were prepared. The draft report was completed in Sept. 1995.

The final report was completed in July 1996 with the State's decision to implement various separable clients as described below. Engineering and design for the Joseph G. Minish, Passaic River Waterfront Part and Historic Area project element, consisting of environmental and streambank restoration measures in the city of Newark was completed in May 1996.

Condition as of September 30. Construction has been completed on Molly Ann's Brook and on the Ramapo River at Oakland. Construction is continuing on Joseph G. Minish Passaic River and Waterfront Park and Preservation of the Natural Storage Areas. The purchases of the national flood storage areas is underway. The Saddle River, Harrison Levee Project, Mahwah River projects, and Passaic River Floodway Buyout are in the design phase.

49. PRESERVATION OF NATURAL FLOOD STORAGE – PASSAIC RIVER FLOOD DAMAGE REDUCTION REPORT, NJ

Location. Flooding has long been a problem in the Passaic River Basin. Since colonial times, floods have claimed lives and damaged property. The most severe flood, the "flood of record", occurred in 1903, and more recent floods in 1968, 1971, 1972, 1973, two in 1975, 1984 and 1992 were sufficiently devastating to warrant Federal Disaster declarations. The flood of 1984 resulted in the loss of three lives and caused \$493 million in damages (October 1994 dollars).

Authorized project. The U.S. Army Corps of Engineers has been working on plans to reduce flooding in the basin since 1936, but no plan has yet been implemented. Congress authorized a new study of the Passaic River Basin for the State of New Jersey in the Water Resources Development Act (WRDA) of 1976 (Public Law 94-587) which led to a plan authorized in WRDA 1990 and modified in WRDA 1992. The project includes several elements (see separate fact sheet on Passaic River). The element described herein is the Preservation of Natural Flood Storage Areas which the State has asked to Corps to implement. The Preservation element includes the acquisition of 5,350 acres of natural storage areas. 5,200 acres of which are wetlands and could conceivably be developed, worsening existing flood problems. The State of New Jersey has an agreement with the Corps to continue to protect 6,300 floodway acres, thus avoiding any secondary development. About 9,500 acres of the Central Basin are already protected as designated parkland, bringing the total of natural storage areas that would be permanently protected with the project to 21,000 acres. The Preservation element will prevent flood damages from becoming worse. It will not reduce flooding in the Passaic River Basin. The cost sharing is set a 75% Federal and 25% State. The State may reduce its share by applying credits included in the authorization.

Local cooperation. Project lands will be operated and maintained by non-Federal sponsors as each parcel is acquired.

Operations and results during period and condition as of September 30. The General Design Memorandum for the element was completed in July 1996 and the State has requested that the Corps proceed with its implementation. Project Cooperation Agreement was signed in 1999. Purchases started in spring 2000 and continue. 3100 acres have been acquired to date. Total estimated Federal cost is \$20,400,000. Total non-Federal costs for all requirements of local cooperation is \$1,700,000.

50. RAMAPO RIVER AT MAHWAH, NEW JERSEY & SUFFERN, NY

Location. Flooding has occurred frequently on the Ramapo River, with flood events in 1968, 1971, 1973, 1977, 1979, 1980, 1983, 1984, 1987, 1996, and 1999. The 1977 and 1984 floods were the most severe causing extensive damages to the project area. Tropical Storm Floyd in September 1999 also cause significant damage.

Authorized project. The Ramapo River and Mahwah Rivers Flood Control Project is authorized for construction under the Water Resources Development Act (WRDA) of 1986 (Public Law 99-662). The authorized project involves the construction of features for flood protection along the Ramapo and Mahwah Rivers in Mahwah, NJ and Suffern, NY. The authorized plan for flood damage reduction includes channel modification to approximately 13,000 feet of the Ramapo River, Mahwah River, and Masonic Brook. The modifications would include the widening and deepening of the channels, sheet pile walls, and bridge modifications. The project will provide protection to residential, commercial, and industrial developments in Suffern and in Mahwah.

Local Cooperation. The non-Federal sponsors, New York and New Jersey will sign a project design agreement summer 2008. Assuming a favorable project is recommended and implemented, a construction project cooperation agreement would be executed and upon completion of construction the project would be turned over to the non-Federal sponsors for operation and maintenance. The sponsors will also provide all lands required for the project.

Condition as of September 30. The project design memorandum was completed and approved in September 1987. Plans and specifications were substantially complete in 1990. Construction funds were appropriated, but work was never initiated due to the lack of project cooperation agreements. After the flooding in 1999, the involved States, counties, and towns expressed interest in resuming the project. Letters of support from New York and New Jersey documented the interest and requested an update of

the project to determine whether further interest is warranted. A project management plan has been developed. We will proceed with the updated design when the project design is executed.

51. RAMAPO RIVER AT OAKLAND, NJ

Location. The project involves the construction of features for flood protection along the Ramapo River from Pompton Lake in Wayne Township and the Borough of Pompton Lakes, upstream through the Borough of Oakland to West Oakland Avenue, a distance of 3.3 miles.

The principal problem along the Ramapo River is flooding caused by backwater effect produced by the Pompton Lake Dam, the hydraulic construction produced by bridges crossing the river, and insufficient channel capacity. Flooding has occurred frequently, with the most recent events in 1968, 1970, 1971, 1973, 1977, 1978, 1979, 1980, 1983, 1984, 1987, 1993 and as September 1999 from Tropical Storm Floyd.

Authorized project. The Ramapo River was studied as part of the Passaic River Basin Phase I Advanced Engineering and Design Study which was authorized by the Water Resources Development Act of 1976 (Public Law 94-587, October 22, 1976). Congressional guidance for the for the conduct of the study is included in House of Representatives report 94-1702. The study was authorized for construction under the Water Resources Development Act (WRDA) of 1986 (Public Law 99-62) and reauthorized in WRDA 1996 (PL 104-303). The sponsor is the New Jersey Department of Environmental Protection. The authorized plan for flood damage reduction along the study area includes channel modification of 5,800 feet of the Ramapo River. The authorized plan also calls for the installation of flood control gates at the existing Pompton Lake Dam. Mitigation for the environmental impacts of the plan includes the creation of a five acre wetland in Potash Lake. The recommended plan would provide a consistent 40 year level of protection to the project area. The plan has an estimated cost of \$21,600,000. The cost is shared by the Federal Government (75%) and the State (25%). The State share includes the cost for all lands easements, and right-of-way as well as a cash contribution. The State share may be reduced through the use of credits available for Passaic River Basin projects\

Local cooperation. The completed project is operated and maintained by the project sponsor the New Jersey Department of Environmental Protection..

Operations and results during period and condition as of September 30. Engineering and design commenced in October 1987. The final general Design Memorandum

was completed in May 1994 and approved in July 1994. Permits were issued in January 1999. The Project Cooperation Agreement was executed in April 1999. The overall project including a channel modification, wetland creation and the installation of the flood control gates is complete.

52. RARITAN RIVER BASIN GREEN BROOK SUB-BASIN, NJ

Location. The Green Brook Basin lies in central New Jersey within the counties of Somerset, Middlesex and Union and is one of the major tributaries in the Raritan River Basin. The Green Brook, which originates in the Watchung Mountains, has a 65 square mile watershed. The bell shaped basin widens markedly as Green Brook flows southwesterly to its mouth at the Raritan River.

Project History. The Green Brook Flood Control Project is the result of efforts over the past three decades by the U.S. Army Corps of Engineers, other Federal agencies, state and local agencies, civic organizations and the general public. In 1968, a reconnaissance investigation was conducted, under the Corps of Engineers Continuing Authority Program for small projects, for Ambrose, Bound and Bonygutt Brooks. The resulting report recommended further study all three locations. Detailed project reports concluded that individual flood protection projects were not economically feasible at any of the locations. Subsequently, record floods occurred in 1971 and again in 1973, causing catastrophic damage throughout the basin. As a result of the devastating events, the need for basin-wide studies of the entire Green Brook Basin was apparent. The Corps of Engineers, North Atlantic Division (NAD) issued the *Feasibility Report for Flood Control, Green Brook Sub-Basin*, dated August 1980. The plan recommended in this report consisted of a system of levees and floodwalls to provide protection against a 150 year flood in the lower portion of the Green Brook Basin only. A more comprehensive, basin-wide solution would have also extended 150 year protection to the upper and Stony Brook portions of the basin. The Board of Engineers for Rivers and Harbors (BERH) reviewed the NAD report and issued its report on 16 March 1981, in which they endorsed all plan formulation decisions in the 1980 Feasibility Report. However, the BERH also stated the "the recommended 150 year level of protection is inadequate for this highly urbanized floodplain". To avoid catastrophic consequences of levee overtopping, the BERH recommended protection to 500 year level. The Chief of Engineers Report dated 4 September 1981. In February 1984, the Secretary of the Army expressed the administration's views in his letter transmitting the report to Congress in which he recommended that the August 1980 report should be authorized.

The Water Resources Act of 1986 authorized construction of a project, providing protection in all three portions of the Green Brook Basin. Section 401a of the Water Resources Development Act (WRDA) 1986 authorized construction of the Green Brook Flood Control Project for the Green Brook Sub-basin, which will address both environmental and engineering objectives of the Act. The Green Brook Flood Control Project combines levees, floodwalls, channel modification, flood proofing, and natural flood storage to provide flood protection to about 13 municipalities in the Green Brook Sub-basin

On the basis of this authorization, funds were budgeted and appropriated for preconstruction engineering and design. Surveying, mapping and other studies necessary to provide the basis for actual construction commenced toward the end of 1986. However, delays were incurred due to conflict between the needs and desires of the non-Federal sponsor and national economic development which affected the quest for a comprehensible implementable plan. In January 1994, a general reevaluation study was initiated. Unfortunately, the area was hit with another record storm in September 1996 causing more damages, the draft General Reevaluation Report was issued in December 1996 and opened for public comment for the period between January 7 and March 7, 1997. As a result comments expressed with significant concerns over the flood protection plan proposed for the upper portion of the basin, the Corps and the NJDEP agree to defer action on the flood protection plan for the upper portion of the basin. The Final General Reevaluation Report and Supplemental Environmental Impact Statement was approved in May 1997 with the support of the New Jersey Department of Environmental Protection (NJDEP) who is the non-Federal sponsor for the project. In FY 1998, an Upper Basin Task Force (UBTF) was formulated to develop potential plan alternatives to the upper basin. The UBTF released their final report on November 12, 1998. In September 1999, again the area saw another record storm which not only caused catastrophic damage but resulted in 3 deaths. The Corps of Engineers, New York District released a Project Study Plan (PSP) to determine the feasibility of the alternatives discussed in the UBTF report in June 2000.

Pre-construction Engineering and Design for the Green Brook Flood Control Project was initiated in FY 1997 and the Project Cooperation Agreement

(PCA) between the NJDEP and the Federal Government was executed on June 24, 1999.

Condition as of September 30. Construction of the East Main Street Bridge FINDERENE Farm Wetland Mitigation, Segment T Segment U and Segment R-1, levee system, and the buyout and demolition of 19 homes is

complete. A Construction contract for the Talmadge Bridge Replacement is ongoing along with engineering and design of the R-2, levee system..

53. INSPECTION OF COMPLETED FLOOD CONTROL PROJECTS

Inspections of the following completed flood control works and beach erosion and hurricane protection projects were performed to determine the extent of compliance by local interests with operation and maintenance requirements.

New England Inspection Date:

Adams, MA – Hoosic River	Sep. 07
Bennington, VT – Roaring Branch, Walloomsac River	Sep. 07
East Barre Dam, VT – Jail Branch Winooski River	Sep. 07
Montpelier Dam, VT – Winooski River	Sep. 07
North Adams, MA – Hoosic River	Sep. 07
Pemberwick Byram River, CT	Sep. 07
Richford, VT – Missiquoi River	Sep. 07
Waterbury Dam, VT – Little River	Sep. 07
Wrightsville Dam, VT – North Branch Winooski River	Sep 07

NY – NJ Areas

*E. Rockaway Inlet to Rockaway Inlet	Sep07
Elizabeth, NJ – Elizabeth River	Sep07

Some NY Projects	

*Beach Erosion & Hurricane Protection
Projects NI
(NI= Not Inspected FY 2007)

purchased supplies and equipment to maintain its' flood fight and response capability.

Under emergency operations, the New York District conducted field investigations, provided technical assistance and sandbags to local and county government in response to flooding events.

In response to Presidential disaster declarations under P.L. 93-288 the New York District received mission assignment from the Federal Emergency Management Agency (FEMA) for Temporary Housing, ESF#3, AND Debris Management during Hurricane Isabel in September 2003.

52. OTHER AUTHORIZED FLOOD CONTROL PROJECT

(See Table 2-1 at end of chapter.)

53. FLOOD CONTROL WORK UNDER SPECIAL AUTHORIZATION

Flood Control activities pursuant to Section 205, Public Law 858, 80th Cong. As amended Pre-authorization. (See Table 2-P at end of chapter)

Chapter 1 Natural Disaster and Emergency Flood Control Activities. Pursuant to Public Law 84-99 and antecedent legislation provides for disaster preparedness, emergency operation, rehabilitation, advance measures, emergency water, and drought assistance.

Under disaster preparedness, the New York district initiated revisions to emergency response plans to include lessons learned from previous disasters, attended meetings and seminars dealing with emergency response planning and

General Investigations

54 SURVEYS

(See Table 2-J at end of chapter.)

55. COLLECTION AND STUDY OF BASIC DATA

Costs for the period of \$143,839 for flood plain management services are set forth in Table 2-L at the end of chapter.

56. DEAUTHORIZED PROJECTS

Projects having all, or inactive or uncompleted portions de-authorized by Congressional Action pursuant to Water Resources Development Acts
(See Table 2-M at end of chapter)

¹ Of which \$12,500 is for North Atlantic Division Accounts.

² Of which \$12,127 is for North Atlantic Division Accounts.

³ Excludes \$90,190 for new work expended from contributed funds. Additional NY State Funds were \$200,000 in 1990, \$581,000 in 1991, \$611,574 in 1996, \$2,093,194 in 1997, \$1,280,000 in 2000, \$1,468,734 in 2001, \$3,654,000 in 2002 and in 2003 \$292,959.

⁴ Includes \$5,112,694 for new work for previous project.

⁵ Includes \$238,350 for new work expended from public works funds and \$311,461 emergency relief funds. Excludes \$81,373 expended from contributed funds.

⁶ Excludes \$454,273 expended between August 18, 1915 and June 30, 1935, for operation and care of lock and dam at Troy, NY, under permanent indefinite appropriation. Excludes \$23,735 reimbursement for repairs to Troy Lock.

⁷ Includes \$346,797 for maintenance for previous project.

⁸ Includes \$107,991,000 from contributed funds.

⁹ Includes \$115,000 for new work for previous projects.

¹⁰ Includes \$2,491,206 expended to date for construction of land-based overfire air pit incinerator (\$1,493,393 in maintenance funds and \$997,813 in O & M funds.) and \$116,500 applied to removing wrecks authorized by acts prior to adoption of existing projects.

¹¹ Includes \$174,940,633 from contributed funds.

¹² Includes \$12,070,000 from contributed funds.

¹³ Includes \$17,179,750 from contributed funds.

¹⁴ Includes \$538,000 from contributed funds.

¹⁵ Includes \$12,792,100 from contributed funds.

¹⁶ Includes \$54,476,000 from contributed funds

¹⁷ Includes \$487,500 from contributed funds.

¹⁸ Includes \$4,272,500 contributed funds.

¹⁹ Includes \$27,918,420 from contributed fund

²⁰ Includes \$350,000 from contributed fund

TABLE 2-B AUTHORIZATION LEGISLATION

Acts	Work Authorized	Documents
River and Harbor Act of 1959	AQUATIC PLANT CONTROL (See Section 1 of Text) Control and progressive eradication of obnoxious Aquatic Plant growths	H. Doc. 37 85th Cong. 1st sess.
Section 104 and Harbor Act of 1958	Provided that all research and planning cost to be borne fully by the United States.	
Section 302 River and Harbor Act of 1965	Modified project to include control of waterchestnut	
River and Harbor 23 June 1874	ARTHUR KILL CHANNEL, HOWLAND HOOK, MARINE TERMINAL, NY & NJ (See Section 2 OF TEXT) Original Project for a “channel between Staten Island and New Jersey “; 150 feet wide, 16 feet deep	Report of the Chief of Engineers 1873, S. x.52 42 nd Cong., 3 rd Session
River and Harbor 14 August 1876	Indicated that improvements recommended in 1873 and actually commenced in 1874 were no longer necessary and that a Channel 11 feet deep and 500 feet wide would serve tows and sailing vessels most expeditiously	Report of the Chief of Engineers 1876, H. 44 44th Cong., 1 st Session
River and Harbor 13 June 1902	Recommended a channel between New York and New Jersey passing south of Shooters Island , 21 feet deep and 300 feet wide width would be 400 feet.	H.D. 393, 56 th Cong., 1 st session
River and Harbor 25 June 1910	Authorized a channel north of Shooters Island 1 mile long , 300 feet wide, 16 feet deep.	H.D. 337, 59 th , Cong., 2 nd sess
River and Harbor 22 September 1922	The original project for “ New York and New Jersey “ provided for a channel 400 feet wide and 30 feet deep	H.K. 653, 66 th Cong. 2nd Session
River and Harbor 30 August 1935	Provided for present project depth of 35 feet and channel 600 -800 feet wide.	H.K. 133, 74 th Cong. 1 st Session
None	Feasibility study for the rehabilitation of the dike north of Shooters Island initiated 1960.	District Engineers April 1964
River and Harbor 27 October 1965	Provided for widening and deepening entrance to Kill Van Kill at Robbin’s Reef at a 35 foot depth.	H.D. 108, 89 th Cong., 1 st session
None	Investigation into the effects of the removal of Shooters Island And shore modifications on tides, currents, and shoaling in the Kill Van Kull channels. Study noted no detrimental effects.	Waterways Experiment . Station U.S. Army Corps., Dec 1967
None	Investigation into widening and deepening NY and NJ Channels in response to House Committee on Public Works Resolutions 30 March 1995, and 27 June 1956 resulted in negative reports.	District Engineer, NY 9/21/73

REPORT OF THE SECRETARY OF THE ARMY ON CIVIL WORKS ACTIVITIES FOR FY 2007

TABLE 2-B (Continued) AUTHORIZATION LEGISLATION

Acts	Work Authorized	Documents
28 May 1975	Investigation into the feasibility of deepening the triangular area Just east of Shooters Island to 35 feet MLW. Initiated in 1974. Built in 1976.	District Engineer, NY H.D. 494,89 th Cong, 2 nd session
None	Investigation into the impacts caused by the removal of Shooters Island; noted a lack of economic justification and significant potential environmental impacts. Chief of Engineers recommended 6 August 1979 that no Federal funds be provided.	District Engineer, Feb 1979
None	Investigation into widening and deepening Kill Van Kull and Newark Bay in response to House Committee on Public Works Revolution Dated 14 June 1972 . Currently under review by the Office of Management and Budget.	District Engineer, NY July 1980
House Committee On Public Works Arthur Kill Channel, Howland Hook Terminal Resolution 9 May 1979	Review the reports of the Chief of Engineers on NY and NJ Channel contained in H.D.133,74 th Cong., 1 st Sess., and and Transportation 1 st Cong. To determine the feasibility of deepening and easing the bends of NY and NJ Channels from deep water in Upper Harbor westward to Howland Hook Marine Terminal, Howland Hook, Staten Island, NY, and creating a turning basin to serve that facility; all to accommodate Deeper draft and otherwise larger ongoing general cargo and container vessels	Final Feasibility Report H.D. 108,89 th Cong., NY and NJ March 1986
Water Resources Development Act Of 1986 (PL99-662) Sec.202(b)	AK Channel deepening to 41 feet to Howland Hook Terminal, and to 40 feet to Exxon Bayway Gulfport facilities, as per the project for navigation , Report of BERH dated 31 March 1986.	
Water Resources Development Act Of 1996 (PL 1014-303) Sec.303(b)(11)	Modified WRDA 86 to authorize AK Channel deepening to a depth of not to exceed 45 feet , at cost \$83,000,000.	Final Limited Reevaluation Report , Arthur Kill Channel, Howland Hook Marine Terminal,NY&NJ Dec 1997.
Water Resources Development Act Of 1999 (PL106-53) Sec.338	Modified WRDA 86 and WRDA 96 to authorize AK Channel deepening at a total cost of \$315,700,000.	Addendum to Final Limited Reevaluation Report ,Arthur Kill Howland Hook Marine Terminal,NY&NJ May 2001.
Sept. 19,1890	BROWN'S CREEK,NY (See Section 3 of Text) 6 foot channel for 1,850 feet and 4 feet for 1,350 feet and 2 jetties	H.Ex Doc.22, ,51st Cong. 2 nd sess.

Navigation:

1. BARNEGAT INLET, NJ

Location: On the east coast of New Jersey about 50 miles south of Sandy Hook, between Island Beach on the north and Long Beach Island on the south (See U.S. Coast and Geodetic Chart Nos. 825 and 1216). This inlet is the main entrance to Barnegat Bay, largest of the bays on New Jersey coast, which are separated from the ocean by narrow barrier beaches.

Previous Project: None

Existing Project: The existing project, adopted as HD 73-19 in 1935 and modified as HD 74-85 in 1937 and HD 79-358 in 1946, provides for a channel eight feet deep through the inlet and ten feet deep through the outer bar, protected by two converging stone jetties and a channel of suitable hydraulic characteristics extending in a westerly direction from the gorge in the inlet to Oyster Creek channel and through the latter channel to deep water in the bay. The project was modified in 1946 to provide for the maintenance of a channel eight feet deep and 200 feet wide to connect Barnegat Light Harbor with the main inlet channel. The project length is about 4.5 miles. (For details see page 203, Annual Report 1964).

The Supplemental Appropriation Act of 1985 contained language stating that the existing project has not worked as projected and, in fact has created a hazard to navigation. As a result, the following administratively approved modifications were constructed as design deficiency correction measures: a new south jetty 4,270 feet in length along an alignment generally parallel to the existing north jetty, extending from the old groin located near the Barnegat Lighthouse to the tip of the existing south jetty; a navigation channel 300 feet wide to a depth of 10 feet below mean low water from the outer bar in the Atlantic Ocean to the north end of the existing sand dike in Barnegat Bay; remove the shoal located between the north jetty and the proposed navigation channel; jetty sport fishing facilities on the new jetty. All dredged material from initial construction was placed on the shores of Barnegat Light between the existing and new south jetties, and is being stabilized by vegetation and sand fence. Dredged material from maintenance operations are placed on the down drift beaches, the area between the existing and new south jetties, or in other locations as determined by a shoreline monitoring program. The existing bulkhead on the interior of the North Jetty was failing and land was eroding causing

additional shoaling in the Inlet resulting in an increased cost for maintenance dredging. The erosion was also impacting State Environment Lands.

Local Cooperation: Fully complied with a local cooperation agreement for the approved modification was executed on 19 May 1986 and a modification to the local cooperation agreement was executed on 20 March 1987.

Terminal Facilities: There are four docks or terminals in inner harbor at Barnegat Light that furnish adequate facilities for present commerce of locality.

Operation During Fiscal Year: Maintenance: Condition surveys were accomplished. Dredging was performed by the U.S. Government Dredge Currutuck who removed a total of 95,120 cubic yards of material at a total cost of \$252,000.

2. COLD SPRING INLET, NJ

Location: In Cape May County, Southern New Jersey, about 3 miles east of Cape May City and about 16 miles northeast of Delaware breakwater. Inlet connects Cape May Harbor and New Jersey Intracoastal Waterway with the Atlantic Ocean and is about 1 mile long. (See Coast and Geodetic Survey Charts 234, 827 and 1219).

Existing Project: An entrance channel 25 feet deep and 400 feet wide, protected by two parallel jetties, and extending from the 25-foot depth curve in the Atlantic Ocean to a line 500 feet harbor ward of a line joining the inner ends of the jetties, thence 20 feet deep and 300 feet wide to deep water in Cape May Harbor. The total length of the section included in the project is about 2.25 miles. Extreme tidal range, due to ocean storms, is about 11 feet. Project was completed in 1942. (For details see page 238, Annual Report for 1962. See Table 3-B at end of chapter for Acts authorizing existing project. See Table 3-A at end of chapter for total cost for existing project to Sept. 30, 2007).

Local Cooperation: Complied with Act of 1907, except work of deepening and enlarging inner harbor that is 80 percent complete.

Terminal Facilities: See page 238 Annual Report for 1962.

Operations During Fiscal Year: Maintenance: Condition surveys were accomplished. In December 2006 the inlet was used as a borrow area for a portion of an ongoing beach nourishment project. Upon completion of removing approximately 120,000 cubic yards of

PHILADELPHIA, PA DISTRICT

material at a total cost of \$250,000, the inlet was an authorized project depth of 25 feet.

3. DELAWARE RIVER BETWEEN PHILADELPHIA AND TRENTON, PA & NJ

Location: Rises in southeastern New York, flows generally southerly 367 miles, forming boundary line between New York and New Jersey on the east and Pennsylvania and Delaware on the west, and empties into Delaware Bay. (See U.S. COAST and Geodetic Survey Charts 1218, 280, 294, 295, and 296).

Previous Project: For details see page 1778 of annual report for 1915, page 311 of Annual Report for 1924, page 220 of Annual Report for 1934, and page 296, Annual Report for 1938.

Existing Project: A channel from Allegheny Avenue, Philadelphia, 23.5 miles to upper end of Newbold Island, 40 feet deep and 400 feet wide, with suitable widening of bends, including relocation of channel at Delair Railroad bridge, and reconstruction of bridge, thence 5.5 miles to upper end of Trenton Marine Terminal, 35 feet deep and 300 feet wide, with a turning basin 800 feet wide and 1,700 feet long at the terminal; and maintenance of a channel 12 feet deep and 300 feet wide from upper end of 34-foot channel to Penn Central railroad Bridge at Trenton, dredged under a previous project. Project also provides for an auxiliary channel 20 feet deep and 200 feet wide east of Burlington Island, extending easterly from main channel to upper end of U.S. Pipe and Foundry Company's property at East Burlington, with a turning basin 450 feet wide at upper end; for initial excavation, only, of a cross channel 8 feet deep and 200 feet wide through artificial island opposite Delanco, NJ, and for construction of such bank protection works as may be necessary. Section included in project is about 30.5 miles long, excluding auxiliary channel east of Burlington Island, which is 1.4 miles long, and cross channel opposite Delanco. Lower end is about 55 miles above river mouth at Liston Point and about 105 miles above Harbor of Refuge at mouth of Delaware Bay. Freshets, which occur usually during February and March, attain a height of 9 to 20 feet above mean low water in the vicinity of Trenton. Navigation is occasionally suspended during a portion of winter months due to ice. Existing project is 90 percent complete. A 40-foot channel under the 1954 modification from Allegheny Avenue to upper end of Newbold Island was completed April 1964. Work remaining is dredging from

upper end of Newbold Island to Trenton Marine Terminal and widening turning basin at terminal that is in deferred category. (See Table 3-B at end of chapter for Acts authorizing existing project. See Table 3-A at end of chapter for total cost for existing project to Sept. 30, 2007).

Local Cooperation: Modification authorized by 1954 River and Harbor Act provides local interests must provide suitable terminal facilities, furnish lands and rights-of-way for construction and future maintenance, and hold the United States free from damages. Local interest complied with requirements, except city of Trenton has not provided suitable terminal facilities.

Terminal Facilities: There are 21 piers, wharves, and docks from Allegheny Avenue, Philadelphia, PA to Trenton, NJ facilities are considered adequate for existing commerce. (For details see Port Series No. 8 (revised 1966-Corps of Engineers).

Operations During Fiscal Year: Maintenance: Work included channel examination surveys and emergency maintenance dredging of selected sections of the 40 foot channel, 25-foot channel, and the Fairless Turning Basin portion of the project impacted by the major storm/flood event of June 2006. The emergency dredging contract was performed by Norfolk Dredging Company from 23 September 2006 to 3 November 2006. The total shoaling removed was 695,887 cubic yards of material at a cost of \$3,552,871.

4. DELAWARE RIVER MAIN CHANNEL DEEPENING, NJ, PA & DE

Location: The project area is located within the Delaware Estuary and borders Pennsylvania, New Jersey and Delaware. It extends over 100 miles of the Delaware River from Philadelphia Harbor, Pa. and Beckett Street Terminal in Camden, NJ to the mouth of the Delaware Bay.

Existing Project: Delaware River Federal Navigation Channel (Philadelphia to the Sea Project) completed in 1942. The project calls for modifying the existing Delaware River Federal Navigation (Philadelphia to the Sea Project) channel from 40 to 45 feet below Mean Low Water (MLW) with an allowable dredging over depth following the existing channel alignment from Delaware Bay to Philadelphia Harbor and the Beckett Street Terminal, Camden New Jersey, a distance of about 102.5 miles. The channel width (same as the existing 40-foot

project) would range from 400 feet in Philadelphia Harbor to 800 feet from Philadelphia Naval Business Center to Bombay Hook and then 1,000 feet in Delaware Bay. The plan includes appropriate bend widening as well as provision of a two-space anchorage for safety purposes to a depth of 45 feet at Marcus Hook. Dredged material would be placed in confined upland disposal areas and for beneficial uses in Delaware Bay.

The improved channel will have a significant impact in allowing more efficient vessel loading, reducing the lightering requirements of crude oil tankers in the lower Delaware Bay, and attracting larger, more efficient container and dry bulk vessels. It is estimated that the proposed deepening will result in annual transportation savings of \$24.1 million. Project estimate cost (October 2007) is Federal, \$202,980,000, which includes \$380,000 of Coast Guard contributions. Non-Federal costs are \$80,700,000. (See Table 3-B at end of chapter for Acts authorizing existing project. See Table 3-A at end of chapter for total cost for existing project to Sept. 30, 2007).

Local Cooperation: Project Cooperation Agreement (PCA) to be coordinated with the project sponsor.

Operations During Fiscal Year: New Work: Continued coordination associated with the State of Delaware Permit and coordination with the State of New Jersey concerning Federal Coastal Zone Determination (CZM).

5. DELAWARE RIVER, VICINTY OF CAMDEN, NJ (PHILADELPHIA TO CAMDEN)

Location: Camden, NJ on east bank of Delaware River is directly opposite the City of Philadelphia, PA. It is about 51 miles above mouth of the river an about 101 miles above Harbor of Refuge at the mouth of Delaware Bay. (See U.S. Coast Guard and Geodetic Survey Charts Nos. 295 and 280).

Previous Project: Adopted by River and Harbor Act of June 25, 1910. No work was done on this project for further details, see page 321, Annual Report for 1932.

Existing Project: The existing project which is a modification to the Delaware River from Philadelphia to the Sea project was adopted as House Document No. 63-1120 in 1919 and modified by House Document No. 70-111 in 1930 and House Document No. 77-353 in 1945. Dredging to project depth of 37 feet in front of the Camden Marine Terminal was completed in March 1988.

It also provides for dredging in Camden to Newton Creek, with the depth increased to 40 feet in front of the Beckett Street Marine Terminal. These depths extend from the ship channel in Delaware River to a line parallel with and 50 feet distant from the established pier head line. The project length is about four miles. Projects depths are well maintained in 40 foot depth section of channel. (See Table 3-B at end of chapter for Acts authorizing existing project. See Table 3-A at end of chapter for total costs for existing project to September 30, 2007).

Local Cooperation: Fully complies with.

Terminal Facilities: See page 228, Annual Report 1962.

Operations During Fiscal Year: Maintenance: Work included project condition surveys.

6. DELAWARE RIVER, PHILADELPHIA TO THE SEA

Location: See U.S. COAST and Geodetic Survey Charts 1218, 394, 295, and 280.

Previous Project: For details see page 1779 of Annual Report for 1915, and page 299, Annual Report for 1938.

Existing Project: Provides for a channel from deep water in Delaware Bay to a point in the bay, near Ship John Light, 40 feet deep and 1,000 feet wide; thence to Philadelphia Naval Base, 40 feet deep and 800 feet wide, with 1,200-foot width at Bulkhead Bar and 1,000-foot width at other bends; thence to Allegheny Avenue, Philadelphia, PA, 40 feet deep and 500 feet wide through Horseshoe Bend and 40 feet deep and 400 feet wide through Philadelphia Harbor, along west side of channel; and for anchorages at Reedy Point, Deepwater Point, Marcus Hook, and Mantua Creek, each 40 feet deep and 2,300 feet wide with respective length of 8,000, 5,200, 12,650, and 11,500 feet; anchorage at Gloucester 30 feet deep and about 3,500 feet long. Project also provides for construction of dikes and training works for regulation and control of tidal flow; for maintenance of an area on north side of channel opposite Philadelphia Naval Base between Shipway 3 and Schuylkill River to 40 feet deep and width of 150 feet on Mifflin Range and 200 feet on West Horseshoe Range; and for maintenance of any areas dredged by local interests to 35 feet deep between channel and a line 100 feet channelward of pierhead line between Point House wharf and Philadelphia Naval Base, when in opinion of Chief of Engineers such areas are so

PHILADELPHIA, PA DISTRICT

located as to be of benefit to generate navigation. Section included in project is about 96.5 miles long. All depths refer to plane of mean lower low water. Under influence of heavy and long-continued winds extreme tidal range is about 14 feet. Normal maximum velocity of tidal currents in the dredged channel varies between 2 and 3.5 miles per hour. Storm tides may increase maximum to as much as 4.5 miles per hour. Estimated cost for new work is \$71,630,000 (July 1972) exclusive of amounts expended on previous projects. Channel to 37 feet deep and 500 feet wide through Horseshoe Bend and 37 feet deep and 60 feet wide through Philadelphia Harbor along east side of channel and Port Richmond anchorage to 37 feet deep, except for that portion of channel which forms a part of 40 feet deep and 400 feet wide channel portion is to be restudied and excluded from foregoing cost estimate. Estimated cost (July 1960) of this portion of project is \$2,951,000. Existing project, excluding work deferred for restudy, is about 66 percent complete. The 40-foot channel from Naval Base to the sea was completed in 1942. Dredging Naval Base to Allegheny Avenue to 40 feet deep was completed in 1962. Enlarging anchorage at Marcus Hook was completed in 1967. Work remaining is to construct new anchorages at Reedy Point and Deepwater Point, and enlarge Mantua Creek anchorage, channel dredging from 35 to 37 feet deep over a width of 500 feet through Horseshoe Bend and about 600 feet through Philadelphia Harbor, and deepening Port Richmond Anchorage to 37 feet, all of which have been deferred for restudy. (See Table 3-B at end of chapter for Acts authorizing existing project. See Table 3-A at end of chapter for total costs for existing project to Sept. 30, 2007).

Local Cooperation: Requirements under 1938 River and Harbor Act for maintaining channel and anchorage in Philadelphia Harbor annually by cities of Philadelphia and Camden were removed (see 1962 Annual Report for details).

Terminal Facilities: There are 217 piers, wharves, and docks between Allegheny Avenue, Philadelphia and the sea, 135 on the waterfront of Philadelphia, Camden, and Gloucester, and 82 below Philadelphia. Facilities are considered adequate for existing commerce. (For further details see Port Series Nos. 7, revised 1967, and 8, revised 1966-Corps of Engineers).

Operations During Fiscal Year: Maintenance: Normal operation and routine maintenance of the project continued, which included Channel Examination Surveys, Environmental Monitoring, Groundwater Monitoring, Disposal Area Management, Maintenance Dredging, Real Estate, Safety Inspections, Project Coordination, Leased

Equipment, Disposal Area Maintenance and Construction, also Environmental Review Guide for Operations. There was also maintenance dredging by Norfolk Dredging Company, removing a total of 2,125,000 cubic yards of material at a total cost of \$4,500,000. Work also included dredging by the U.S. Government Dredge McFarland, which removed spot shoals throughout the river, removing a total of 623,320 cubic yards of material at a cost of \$5,755,000.

7. INLAND WATERWAY FROM DELAWARE RIVER TO CHESAPEAKE BAY, DE & MD

Location: The Waterway begins at Reedy Point on Delaware River, about 41 miles below Philadelphia, PA, and passes through the sea level Chesapeake and Delaware Canal, a distance of 14 miles, to Back Creek, at Chesapeake City, MD. It then passes for 5 miles down Back Creek, thence 9 miles down Elk River to Chesapeake Bay and thence 18 miles down Chesapeake Bay to a point near Pooles Island. A branch channel connects Delaware River at Delaware City, DE, with main channel at a point about 1.5 miles west of Reedy Point. (See U.S. COAST and Geodetic Survey Charts 294, 1226, 570, and 572).

Previous Project: For details see Annual Report for 1934, page 242, and Annual Report for 1938, page 312.

Existing Project: A channel 35 feet deep and 450 feet wide from Delaware River through Elk River and Chesapeake Bay to water of natural 35-foot depth in Chesapeake Bay including a cutoff at Norfolk Southern Railroad crossing, and having a maximum radius of curvature of 7,000 feet at bends; a high-level, fixed railroad bridge with vertical clearance of 135 feet and horizontal clearance of 600 feet at the railroad crossing over the cutoff (economic study of railroad crossing requested by Office of Management and Budget resulted in construction of a single track vertical lift bridge in lieu of a high-level fixed railroad bridge); high-level fixed highway bridges over canal at Reedy Point, St. Georges, Summit, and Chesapeake City; a bascule drawbridge across Delaware City Branch Channel; extension of entrance jetties at Reedy Point; and anchorage in Elk River, 35 feet deep and 1,200 feet wide, with an average length of 3,700 feet; enlargement of anchorage and mooring basin in Back Creek to afford an area about 400 feet wide, 1000 feet long, and 12 feet deep; dredging Delaware City Branch Channel to 8 feet deep and 50 feet wide, and deepening existing basin to same depth; revetment of banks of canal as required between

Delaware and Elk Rivers, and on banks of Delaware City Branch Channel east of Fifth Street Bridge; and construction of bulkheads. Total of section included in project, excluding Delaware City Branch Channel, which is about 2 miles long, is about 46 miles. All depths refer to plane of low water in Delaware River. Extreme tidal range is from 6.3 feet above mean high water to 3 feet below mean low water.

High-level fixed highway bridges were completed at St. Georges (4-lane) in 1942; at Chesapeake City (2-lane) in 1949; at Summit (4-lane) in 1960; and at Reedy Point (2-lane) in 1969. Relocation of Penn Central Railroad Bridge (now owned by Norfolk Southern Railroad) was completed December 21, 1965. Enlargement to 35 feet deep and 450 feet wide was completed in the third quarter of FY 1975 with the exception of the anchorage at Elk River. Removing the old Penn Central railroad bridge was completed on January 21, 1972. Deepening of the Delaware City Branch Channel from 6 to 8 feet from a point 400 feet east of Fifth Street Bridge to its junction with the canal has been deferred for study.

Original cost of canal including purchase was \$10,709,755; estimated cost of new work for modifications of 1935 and 1954 are Federal cost \$166,000,000 (October 1992). This portion is deauthorized. Major Rehabilitation of St. Georges and Summit Bridges was completed in fiscal year 1991 at an approximate Federal cost of \$20,868,000 (90 price level). Portion of project comprising completion of Delaware City Branch Channel from a point 400 feet east of Fifth Street Bridge to its junction with canal is to be restudied and excluded from foregoing estimate. (See Table 3-B at end of chapter for Acts authorizing existing project. See Table 3-A at end of chapter for total costs for existing project to Sept. 30, 2007).

Local Cooperation: River and Harbor Act of 1954 provided that local interests furnish lands and rights-of-way required for bridges. Assurances accepted and approved February 16, 1955. Requirements for Summit and Reedy Point Bridges have been met.

Terminal Facilities: Ample mooring facilities at eastern and western ends of canal and bulkheads at Delaware City and St. Georges were constructed by the United States. A small-boat harbor was provided and a wharf constructed at Chesapeake City. Facilities are considered adequate for existing commerce.

Operations During Fiscal Year: Maintenance: Normal operation and routine maintenance of the project continued, which included Real Estate Coordination, Channel Examination Surveys, Instrumentation Reading,

Groundwater Monitoring, Maintenance of SR-1, Summit Bridge Inspection, Operation and Maintenance of Bridges, Reedy Point Bridge Inspection, Maintenance of Buildings, Grounds and Utilities, Groundwater monitoring, Disposal Area Coordination, Banks and Disposal Area Maintenance, Safety Inspections, Project Office Administration, Maintenance Dredging, Bridge Program Management Support, Monitor Disposal Area Sites, Dispatching, Lead Remediation Effort – St. Georges Bridge, Night Lighting. There was also maintenance dredging by the Norfolk Dredging Company, removing a total of 729,000 cubic yards of material at a total cost of \$6,077,994.

8. INLAND WATERWAY REHOBOTH BAY TO DELAWARE BAY, DE

Location: A tidal canal in southeasterly part of Sussex County, DE. It extends 12 miles northward from Rehoboth Bay through high land west of town of Rehoboth to Gordon Lake; thence down Lewes River to its junction with Broadkill River near its mouth. An entrance to the waterway from Delaware Bay is about 4 miles above Cape Henlopen. (See U.S. Coast and Geodetic Survey Charts 379, 1218, and 1219).

Previous project: A canal along a slightly different route formed a part of projected waterway from Chincoteague Bay, Va. to Delaware Bay, begun in 1886 and abandoned in 1905.

Existing project: This provides for an entrance channel near Lewes 10 feet deep and 200 feet wide protected by two parallel jetties 500 feet apart; thence a channel 10 feet deep and 100 feet wide to South Street Bridge at Lewes, and a basin of the same depth 1,200 feet long and up to 375 feet in width at the latter point; thence a channel 6 feet deep and 100 feet wide (40 feet wide through Deep Cut near Rehoboth Bay) to Rehoboth Bay; a channel 6 feet deep and 100 feet wide from the entrance to Broadkill River; two parallel rubble jetties 725 feet long at the Rehoboth Bay entrance; and the construction of the one highway bridge and one railroad Bridge to Rehoboth. The total length of the section included in the project is about 12 miles.

The extension of the jetties at the Delaware Bay entrance is considered to be inactive and is excluded from the foregoing cost. The cost of the portion was last revised in 1960 and was estimated to be \$816,000. Existing project is about 70 percent complete. For details on completed work see page 241 of Annual Report for 1963. Work remaining, extension of existing jetties at

PHILADELPHIA, PA DISTRICT

Delaware Bay entrance, is considered inactive. The Sheet Pile Jetty at the Delaware Bay entrance was removed during Fiscal Year 1987. (See Table 3-B at end of chapter for Acts authorizing existing project. See Table 3-A at end of chapter for total costs for existing project to Sept. 30, 2007).

Local cooperation: Complied with except local interest must furnish suitable terminal facilities and necessary spoil-disposal areas.

Terminal facilities: See page 228, Annual Report 1962.

Operations during fiscal year: Maintenance: Work included a real estate inspection of all government out grants for use of Federal property as well as all lands the government holds an interest in, be it by fee or easement right, from Savannah Ave. Bridge to Rehoboth Bay. Also, a channel examination of the Federal channel from Roosevelt Inlet to Savannah Ave. Bridge was performed by our in-house survey force. Condition surveys were performed.

9. MANASQUAN RIVER, NJ

Location: This small stream flows in eastern part of New Jersey, rises near Freehold, flows easterly and empties into the Atlantic Ocean, about 26 miles south of Sandy Hook. (See U.S. Coast and Geodetic Survey Chart No. 795).

Previous Projects: For details see Annual Report for 1909, page 186, and Annual Report for 1938, page 269.

Existing Project: A channel 14 feet deep and 250 feet wide, protected by jetties and other works, extending from the Atlantic Ocean to inner end of north jetty, thence 12 feet deep and 300 feet wide to within 700 feet of New York and Long Branch Railroad bridge, thence of same depth and narrowing to 100 feet wide to within 300 feet of bridge; for a widening on northerly side of channel of 200 feet for 3,150 feet and 8 feet deep on south side of channel and for a 27.5-acre anchorage to 12 feet deep about 0.5 miles west of Route 35 highway bridge. Section included in project is about 1.5 miles long. Mean tidal range is 3.7 feet at inner end of inlet and 4 feet at ocean end; mean range of spring tides, 4.4 and 4.8 feet, respectively, irregular fluctuations due to wind and barometric pressure vary from 2.7 feet below to 7.5 feet above mean low water at inner end of inlet. Project, excluding 10-and 12-foot anchorages, cost \$518,243.

Estimated cost (1958) for 10 and 12-foot anchorages portion of project considered inactive is \$504,000. Restoration of bulkheads completed 16 August 1965 at a cost of \$117,807. Existing project was completed in June 1963. Dredging 19-acre anchorage south of channel and 27.5-acre anchorage west of highway bridge is in the inactive category. (See Table 3-B at end of chapter for Acts authorizing existing project. See Table 3-A at end of chapter for total costs for existing project to Sept. 30, 2007).

Local Cooperation: River and Harbor Act of 1945 provides that local interests must furnish lands and rights-of-way for construction and future maintenance and hold the United States free from damages. The locals have complied with all assurances to date.

Terminal Facilities: Five landings with a total wharf age of 700 feet used by commercial fishermen, and 7 landings and boat basins for pleasure craft. Existing facilities are considered adequate for present requirements.

Operations During Fiscal Year: Maintenance: Condition Surveys were accomplished. There was also maintenance dredging done, removing a total of 62,000 cubic yards of material at a total cost of \$255,200.

10. MISPELLON RIVER, DE

Location: Rises in Kent County and Sussex Counties, DE, flows northeasterly 15 miles along the boundary line between the two counties and empties into Delaware Bay about 16 miles above Cape Henlopen. (See Coast and geodetic Survey Chart 1218).

Previous Project: For details see page 1786, Annual Report for 1915, page 448 of Annual Report for 1918, and page 327 of Annual Report for 1938.

Existing Project: Project is about 31 percent complete. Four cutoffs for 6-foot channel were completed in 1923; 6-foot channel from Delaware Bay to Milford in 1924; and jetties at the mouth in 1939. Work remaining is dredging channel to 9-foot depth, 80 feet wide in Delaware Bay to the mouth, thence 60 feet wide to Milford with the provision of three cutoffs to eliminate bends, and a turning basin at Milford. Controlling depths at mean low water, in October 1964 from Delaware Bay to mouth 7.1 feet, and thence to fixed highway bridge at Report 1957, (See Table 3-B at end of chapter for Acts authorizing existing project. See Table 3-A end of chapter for total costs for existing project to Sept. 30,

2007).

Local Cooperation: Assurances required by 1954 River and Harbor Act has not been furnished. For details see page 243, Annual Report for 1957. Prior requirements fully complied with.

Terminal Facilities: For details see page 244, Annual Report for 1957.

Operations During Fiscal Year: Maintenance: Condition surveys of the stone revetment and the Federal navigation channel were performed. Work included channel examination surveys and plans and specifications.

11. MURDERKILL RIVER, DE

Location: Rises in Kent County, DE, flows northeasterly 19 miles through county, and empties into Delaware Bay about 25 miles above Cape Henlopen. (See U.S. Coast and Geodetic Survey Chart no. 1218).

Existing Project: Provides for a channel 7 feet deep at mean low water, 150 feet wide in Delaware Bay to mouth, and thence 80 feet wide to Frederica, 7.5 miles above mouth. Total length of section included in project is about 8.5 miles. Extreme tidal range is from about 1 foot below mean low water to about 2 feet above mean high water.

Estimated cost for new work revised in 1954 is \$38,000. Portion comprising widening channel to project width throughout its length is to be restudied and excluded from foregoing cost estimate. Estimated cost of this portion last revised in 1954 was \$86,000. Project was authorized by River and Harbor Act of July 13, 1892 (H. Ex. Doc. 21, 52d Cong., 1st Sess. See page 981 Annual Report for 1892). Latest published map is in House Document 1058, 62d Congress 3rd Session.

Existing project about 30 percent complete, including revision to be restudied. Channel 7 feet deep and 60 feet wide was completed in 1911. Work remaining is widening the channel to project width. (See Table 3-B at end of chapter for Acts authorizing existing project. See Table 3-A at end of chapter for total costs for existing project to Sept. 30, 2007).

Local Cooperation: None required.

Terminal Facilities: There are a number of light timber wharves on both sides of river near mouth and two wharves at Frederica, all privately owned. Facilities are considered adequate for existing commerce.

Operations During Fiscal Year: Maintenance: Work included project condition surveys and channel examination surveys and plans and specifications.

12. NAVIGATION WORK UNDER SPECIAL AUTHORIZATION

Navigation activities pursuant to Section 107, Public Law 86-645.

Name of Project	Cost to Sept. 30, 2007
------------------------	-------------------------------

Construction

Wills Hole Thorofare, Pt. Pleasant, NJ	\$43,793
---	----------

13. NEW JERSEY INTRACOASTAL WATERWAY

Location: A sea level inland water route approximately parallel with New Jersey coast, extends from Atlantic Ocean at Manasquan Inlet, about 26 miles south of Sandy Hook, NJ to Delaware Bay about 3 miles above Cape May Point. Waterway extends through inlet and up Manasquan River about 2 miles; thence by Point Pleasant Canal through high ground for 2 miles to head of Barnegat Bay. It then passes through a series of bays, lagoons, and thoroughfares along New Jersey coast to Cape May Harbor; thence across Cape May County to Delaware Bay through a land cut by way of New England Creek basin. (See U.S. COAST and Geodetic Survey Charts, 234, 795, 825, 826, 827, 1216, 1217, 1218, and 1219).

Existing Project: This provides for a channel 12 feet deep at mean low water and generally 100 feet wide, extending from the Atlantic Ocean at Manasquan Inlet, NJ to Delaware Bay above Cape May, NJ, by the further improvement of Manasquan River and Inlet, NJ, and the present New Jersey Intracoastal Waterway, and by the construction of a canal of similar dimensions from Cape May Harbor to Delaware Bay via the New England Creek basin, with adequate jetties at the Delaware Bay entrance. The total length of the project is about 117 miles. The un-constructed portion of the project, deepening the channel from 6 feet to 12 feet from the Atlantic Ocean at Manasquan Inlet to Cape May Harbor, was de-authorized on 1 January 1990, by PL 99-662. Normal tide range in sections of the waterway remote from inlets is 0.5 foot.

Existing project was adopted by 1945 River and Harbor Act (H. Doc 133, 76th Cong., and 1st Sess)..

PHILADELPHIA, PA DISTRICT

Latest published map is in project document. River and Harbor Act of 1946 (Public Law 525, 79th Cong., 2nd Sess., as extended by Public Law 240, 82d Cong)..

A canal 12 feet deep and 100 feet wide from Cape May Harbor to Delaware Bay was completed in 1942 as well as two parallel stone jetties at Delaware Bay entrances and a temporary highway and a railroad bridge in 1944, all with Navy Department funds. The project between Ottens Harbor and Richardson Channel and from that point to Cape May are being maintained to 10 feet and 12 feet, respectively, since they were originally dredged to these depths by the State. Section 860 of the Water Resources Development Act of 1986 authorized, for preconstruction engineering and design, a 15 foot depth in the Vicinity of Cape May Harbor, titled as Cold Spring Inlet. (See Table 3-B at end of chapter for Acts authorizing existing project. See Table 3-A at end of chapter for total costs for existing project to Sept. 30, 2007).

Local Cooperation: The project is subject to the conditions that the State of New Jersey cede to the United States all right, title, and interest that it has acquired to lands, easements, rights-of-way, and structures other than bridges for the Bayhead-Manasquan Canal; that the State of New Jersey furnish, free of cost to the United States, all lands, easements, rights-of-way, and disposal areas required for construction of the Cape May Canal and for improvement of the proposed waterway and for their subsequent maintenance; that local interests provide, maintain, and operate suitable bridges over the waterway; that the State of New Jersey donate to the United States the navigation aids in use on the present New Jersey Intracoastal Waterway; and that the State of New Jersey hold and save the United States and its agents free from any claims for damages resulting from the work of improvement. Compliance with these conditions was completed January 15, 1954, except that local interests are required to furnish disposal areas for the construction and the subsequent maintenance of the proposed improvements.

Terminal Facilities: See Annual Report for 1962.

Operations During Fiscal Year: Maintenance: Normal operation and routine maintenance of the project continued, which included Maintenance Dredging, Channel Examination Surveys, Disposal Area Management, Real Estate Coordination. There was also maintenance dredging by the Barnegat Bay Dredging Company, who removed 28,492 cubic yards of material from the Cape May Canal and 13,830 cubic yards from the Great bay area at a total cost of \$459,732.

15. SALEM RIVER

Location: This river rises in Salem County, NJ, flows through the county westerly 13 miles, thence southerly 7 miles to the City of Salem, and thence westerly 3 miles, emptying into Delaware River about 45 miles below Philadelphia, PA. It is joined at Salem by Little Salem River, or Fenwick Creek, from the east. (See U.S. Coast and Geodetic Survey Chart No. 294).

Previous project: The River and Harbor Act of July 11, 1870, provided for a survey and the original project was adopted by River and Harbor Act of March 3, 1871, and modified in 1878, and a subsequent project adopted by River and Harbor Act of March 2, 1907. This project was further modified as HD 68-110 in 1925, providing an entrance channel from the Delaware River to the fixed highway bridge in Salem with dimensions and limits as shown, including a cut-off and by the WRDA of 1986. The letter provided for channel widening and deepening; a turning basin; and wetland restoration. For further details see the Report of the Secretary of the Army dated 20 October 1994.

Existing project: Provides a channel depth to 16 feet below mean low water between the Route 49 highway bridge and the Delaware River, a distance of about 5

REPORT OF THE SECRETARY OF THE ARMY ON CIVIL WORKS ACTIVITIES FOR FY 2007

miles. The channel is 150-250 feet wide and a trapezoidal shaped turning basin has a width of 495 feet and average length of 1000 feet. The project also contains 15.6 acres of wetland restoration to replace the loss of wetlands and shallow water habitat.

The dredging for the existing project is completed. (See Table 3-B at end of Chapter for Acts authorizing existing project. See Table 3-A at end of chapter for total costs for existing project to Sept. 30, 2005).

Local cooperation: All requirements have been fully complied with.

Terminal facilities: There are 9 wharves on the river all at Salem, NJ. Eight wharves are privately owned and one is owned by the City. The facilities are considered adequate for existing commerce.

Operations during fiscal year: Maintenance: Starting of plans and specifications for the next dredging cycle and chemical testing of the soil for maintenance dredging and acquisition of State permits.

16. SCHUYLKILL RIVER, PA

Location: Rises in Schuylkill County, PA, flows generally southeasterly 150 miles, and empties into Delaware River at Philadelphia, PA (See U.S. Coast and Geodetic Survey Charts 295 and 280).

Previous Project: For details see page 325, Annual Report for 1932.

Existing Project: This provides for a channel 33 feet deep and 400 feet wide in Delaware River the mouth and within the river to 29th Street, .75 mile above the mouth; thence the same depth and 300 feet wide to Passyunk Avenue Bridge, 3.5 miles above the mouth; thence 26 feet deep and 300 feet wide to Gibson Point, 4.5 miles above the mouth; and thence 22 feet deep and 200 feet wide to University Avenue Bridge, 6 miles above the mouth, including widening at bends. The total length of the section included in the project is about 6.5 miles. All depths refer to the plane of mean lower water. The extreme tidal range, due to freshets and prolonged heavy winds, is about 14 feet.

Existing project was completed in September 1962. For details see Annual Report for 1962. (See Table 3-B at end of chapter for acts authorizing existing project. See Table 3-A at end of chapter for total costs for existing project to Sept. 30, 2007).

Local Cooperation: The River and Harbor Act of July 24, 1946, imposed the condition that the City of

Philadelphia agrees to remove 60,000 cubic yards, place measurement, of material annually from that portion of those portions of the project which the District Engineer may designate until such time as adequate municipal sewage-treatment works are constructed and placed in effective operation. Compliance with this condition has been met through the completion of sewage-treatment works by the City of Philadelphia. All other requirements have been fully complied with.

Terminal Facilities: There are 38 wharves, piers, and docks within limits of improvement. Facilities are considered adequate for existing commerce. (For further details see Port Series No. 7, Revised 1967, Corps of Engineers).

Operations During Fiscal Year: Maintenance: Condition Surveys were accomplished.

17. WILMINGTON HARBOR, DE

Location: Formed by Christina River, which rises in New Castle County, DE, flows northeasterly 16 miles, passing through the City of Wilmington, DE, and empties into Delaware River about 29 miles below Philadelphia, PA (See U.S. Coast and Geodetic Survey Chart 294).

Previous Project: For details see page 1785 of Annual Report for 1915 and page 308 of Annual Report for 1938.

Existing Project: This provides for a channel 38 feet deep and 400 feet wide from west edge of Delaware River ship channel to Lobdell Canal, a distance of about 1.2 miles; thence 21 feet deep and 250 feet wide for the distance of .8 mile to the mouth of Brandywine River; thence the same depth and 200 feet wide for a distance of about 2.2 miles to a point approximately 4.2 miles from the Delaware River ship channel; thence decreasing to a depth of 10 feet in a distance of 750 feet to Penn Central Railroad bridge No. 4; and thence 7 feet deep and 100 feet wide for a distance of about 5.6 miles to Newport, DE, approximately 9.9 miles above Delaware River ship channel, including a turning basin 38 feet deep opposite the Wilmington Marine terminal and extending upstream from the mouth to Lobdell Canal, 320 feet wide, 2,900 feet long on the north side of the channel and decreasing to a length of 2,000 feet on the north side of the basin. It also provides for the removal of about 1,200 feet of the outer end of a stone-filled, pile-and-timber crib jetty constructed 2,150 feet long on the north side of the entrance; for a steel sheet-pile jetty 2,300 feet long, with 120-foot inshore wing, on the south side of the entrance, and for a V-shaped stone-filled pile-and-timber jetty at the mouth of Brandywine River 430 feet along the north side of Brandywine and 260 feet long on the Christina.

PHILADELPHIA, PA DISTRICT

Depths refer to the plane of mean low water. The extreme tidal range, due to prolonged heavy winds, is about 13 feet. Existing project was completed in 1962. (For details see page 222, Annual Report 1962). Authority from Section 107 of the River and Harbor Act of July 1960 provide for channel and turning basin deepening from 35 to 38 feet and the turning basin widened from 200 to 320 feet. (See Table 3-B at end of Chapter for Acts authorizing existing project. See Table 3-A at end of chapter for total costs for existing project to Sept. 30, 2007).

Local Cooperation: Fully complied with.

Terminal Facilities: There are 18 piers, wharves, and docks within limits of the improvement. Facilities considered adequate for existing commerce. (For further details see Port Series No.8, revised 1966-Corps of Engineers).

Operations During Fiscal Year: Maintenance: Routine maintenance of Disposal Areas Coordination, Disposal Area Maintenance, Maintenance Dredging, Real Estate Coordination, Wilmington Harbor North D/A Dike Raising. Also, a contract for maintenance dredging of both the 35-foot and 38-foot project channels was performed under contract by the Norfolk Dredging Company from 01 July 2006 to 30 July 2006. The total shoaling removed was 467,240 cubic yards at a cost of \$3,600,406.

Shore Protection:

18. **BARNEGAT INLET TO LITTLE EGG HARBOR INLET, NJ**

Location: The project is located along the Atlantic coast of New Jersey approximately 14 miles north of Atlantic City, covering Long Beach Island, New Jersey.

Existing Project: The selected plan consists of berm and dune restoration utilizing sand obtained from offshore borrows sources. This plan would require 4.95 million cubic yard of sand for initial berm placement, and 2.45 million cubic yards for dune placement. Approximately 1.9 million yards would be needed for periodic nourishment every 7 years for the 50-year period of analysis. The template for the plan is a dune at an elevation of +22-ft NAVD, with a 30-ft dune crest width; 1V:5H slopes from dune crest down to a berm at elevation +8-ft NAVD, with a berm width of 125 feet from the centerline of the dune. (See Table 3-B at end of

Chapter for Acts authorizing existing project. See table 3-A at end of chapter for total cost for existing project to September 30, 2007).

Local Cooperation: The Non-Federal sponsor is the State of New Jersey Department of the Environment.

Operations During Fiscal Year: New Work: Continuation of initial construction within Surf City and Ship Bottom Boroughs, Sponsor coordination, engineering and design, construction management, real estate coordination, project and environmental monitoring.

19. **BRIGANTINE INLET TO GREAT EGG HARBOR INLET (BRIGANTINE ISLAND, NJ)**

Location: This project is located along the Atlantic Coast of New Jersey in Atlantic County, approximately 50 miles east of Philadelphia, Pennsylvania. Brigantine Island extends from Brigantine Inlet to Absecon Inlet and is approximately 6 miles in length. The project covers approximately 2 miles of shoreline along the northern portion of this island.

Existing Project: The project consists of providing approximately 750,000 cubic yards of initial beach fill, with subsequent periodic nourishment of 312,000 cubic yards every six years, for a 100 foot-wide berm at elevation 6 feet above mean low water and a dune to elevation 10 feet above mean low water. The plan also includes 12,000 linear feet of sand fencing and the planting of 10 acres of dune grass along the project's length. A bubble system will also be installed to divert municipal storm water that requires 50 linear feet of iron pipe and two catch basin structures. Estimated cost of project (October 2007) is \$71,500,000, of which \$46,500,000 is Federal costs and \$25,000,000 is Non-Federal costs. (See Table 3-B at end of Chapter for Acts authorizing existing project. See Table 3-A at end of chapter for total cost for existing project to Sept. 30, 2007).

Local Cooperation: The local sponsor for this project is the New Jersey Department of Environmental Protection.

Operations During Fiscal Year: New Work: Work included Sponsor coordination, engineering and design, and environmental and project monitoring.

20. CAPE MAY INLET TO LOWER TWP., NJ

Location: The project is located in Cape May County and extends along the beach front from the western side of Cape May Inlet to the boundary of Lower Township, and Cape May City.

Existing Project: The plan, as presented in HD 94-641, was authorized for the Phase I Design Memorandum Stage of Advance Engineering and Design by Section 101(a) of the Water Resources Development Act of 1976, proposes the following features: breakwater on the updrift side of Cape May Inlet; beachfill from Cape May Inlet to Cape May Point; provision of a dune with sand fence and grass from Cape May Inlet to Wilmington Avenue; construction of two groins in Cape May City and seven groins in Lower Township; inclusion of all groins comprising the existing project; and periodic nourishment of the beaches and maintenance of the dune and dikes.

The Phase I GDM, completed in August 1980 and approved by the Chief of Engineers in December 1981, determined that only beach erosion control measures in Cape May City are warranted. The plan proposed in that document consists of modifying the existing navigation project for Cape May Inlet to provide; a weir-breakwater at Cape May Inlet with construction being deferred pending demonstration of need; two new groins at Trenton and Baltimore Avenues in Cape May City; placement of beachfill between Cape May Inlet and the terminal groin at Third Avenue in Cape May City; maintenance of two new groins and existing groins in Cape May; periodic beach maintenance with material obtained from deposition basin on the northeast side of Cape May Inlet; and institution of a beach monitoring program in Lower Township area. Work for the initial beachfill was accomplished as follows; USGS feeder beach fiscal year 1989, Cape May City groin fiscal year 1990, and Beachfill Cape May City fiscal year 1991.

The existing authority is for Phase I studies as provided by Section 101(a) of the Water Resources Development Act of 1976 in accordance with the provision of House Document 94-641. Continuation of planning and engineering for this proposed project was initiated in October 1977. The Phase I GDM was completed in August 1980 and approved by the Chief of Engineers in December 1981. Phase II AE&D studies were completed in July 1983. The estimated project cost is (October 2007) is Federal, \$137,550,000, which includes \$47,700,000 of Coast Guard contributions. Non-Federal costs are \$3,150,000. The project was

authorized for separable elements under Section 501(a) of the Water Resources Development Act of 1986, PL 99-662. (See Table 3-B at end of Chapter for Acts authorizing existing project. See Table 3-A at end of chapter for total cost for existing project to Sept. 30, 2007).

Local Cooperation: The local sponsor for this project is the New Jersey Department of Environmental Protection.

Operations During Fiscal Year: New Work: Work included periodic nourishment, construction management, engineering and design, hydraulic studies, and monitoring data collection including beach profile surveys, and aerial photography.

21. DELAWARE BAY COASTLINE, REEDS BEACH TO PIERCES POINT, DE & NJ

Location: The Reeds Beach/Pierces Point project area is located within Middle Township, Cape May County, bordering the Delaware Bay in New Jersey. The project area begins at Bidwell Creek and extends approximately three miles south to Pierces Point.

Existing Project: The project consists of providing initial beachfill for the purposes of environmental restoration, and storm damage/erosion control. The project provides a total of 5,000 linear feet of berm (6,800 feet including tapers) with a minimum of 80-foot widths at a landward elevation of +5.5 feet NAVD and a bayward elevation of +3.5 feet NAVD with a 40H:1V slopes along two locations at Reeds Beach and Pierces Point. The estimated project cost (October 2007) is \$432,000 of which \$280,000 is Federal costs and \$152,000 is required Non-Federal costs. (See Table 3-B at end of Chapter for Acts authorizing existing project. See Table 3-A at end of chapter for total cost for existing project to September 30, 2007).

Local Cooperation: Federal participation in the proposed project is recommended and contingent upon the local sponsor signing the Project Cooperation Agreement (PCA) that identifies the required items of local cooperation.

Operations During Fiscal Year: New Work: Coordinated project cooperation agreement (PCA) with Non-Federal sponsor, engineering and design and completed Limited Reevaluation Report.

22 DELAWARE BAY COASTLINE, ROOSEVELT INLET, LEWES BEACH, DE

Location: The Roosevelt Inlet-Lewes Beach project area is located in Sussex County in Southern Delaware at the entrance to the Delaware Bay. Sussex County is one of three counties in the State of Delaware. It is bordered on the east by the Atlantic Ocean, on the south and west by Maryland and on the north by Kent County. The project area begins at Roosevelt Inlet and extends southeast along Lewes Beach for approximately 1,400 feet.

Existing project: The project consists of providing initial beachfill with subsequent periodic nourishment. The project for the purposes of navigation mitigation and hurricane and storm damage reduction provides for a 25-foot wide berm at an elevation of +8.0 feet (NAD) a dune at an elevation of +14.0 feet NAVD over a total project length of 1,400 feet. The total project width of the berm and dune, including side slopes, is 100 feet. The project includes dune grass, dune fencing and suitable advance beachfill and periodic nourishment every six years over the 50-year project life to ensure the integrity of the design. The project also provides for reconstruction of the south jetty at Roosevelt Inlet. The south jetty will be parallel to and will extend into the bay an equal distance as the north jetty on the opposite side of the inlet. The south jetty will have a top elevation of +5.1 feet NAVD and a bottom elevation of -6.0 feet NAVD. The top width of the jetty will be 12 feet and it will have 2H:1V side slopes. Estimated cost of project (October 2007) is \$30,600,000 of which \$23,700,000 is Federal costs and \$6,900,000 is required Non-Federal costs. (See Table 3-B at end of Chapter for Acts authorizing existing project. See Table 3-A at end of chapter for total cost for existing project to September 30, 2007).

Local Cooperation: The local sponsor for this project is the Delaware Environmental Protection Agency.

Operations during fiscal year: New Work: Completed annual monitoring of the project area.

23. DELAWARE COAST, BETHANY TO SOUTH BETHANY, DE

Location: The Bethany Beach to South Bethany Beach project area stretches for approximately 2 miles

along the northern part of the Atlantic Ocean coast of Delaware in Sussex County, Delaware. Sussex County is bordered on the east by the Atlantic Ocean, on the south and west by Maryland, and on the north by Kent County.

Existing project: The recommended plan consists of a sand fill beach and dune project, in two independent discontinuous segments, for both Bethany Beach and South Bethany. The plan at each location consists of a 150-foot wide berm at an elevation of +7.0 feet NAVD, and a dune at an elevation of +16.0 feet NAVD. The initial beachfill will be 3.5 million cubic yards, with subsequent nourishment of 480,000 cubic yards every three years. The total project length is 14,950 feet. (See Table 3-B at end of Chapter for Acts authorizing existing project. See Table 3-A at end of chapter for total cost for existing project to September 30, 2007). Total project costs are \$228,800,000; Federal \$148,700,000; Non-Federal \$80,100,000 (Oct 06 PL).

Local Cooperation: The Non-Federal sponsor is the State of Delaware.

Operations during fiscal year: New Work: Awarded and started the initial beachfill construction (\$21,290,915); provided engineering/design and construction management efforts.

24. DELAWARE COAST PROTECTION, DE

Location: The project is located in Sussex County, Delaware, on the Atlantic Ocean and starts immediately south of Delaware Bay extending in a southerly direction a distance of 24.5 miles to Fenwick Island on the Delaware-Maryland border.

Previous Project: The previous project, adopted as HD 85-216 in 1958 and modified by P.L. 87-874 in 1962, provided for Federal participation in the cost of restoration and subsequent periodic nourishment, and the initial periodic nourishment was completed in 1957 by local interests. The second increment of beach replenishment by local interest was completed in 1963.

Existing Project: Provides a sand bypass system and periodic nourishment until 2021. (For details, see S. Doc. 90, 90th Cong. 2nd Sess). Estimated cost of project (October 2007) is \$29,300,000 of which \$13,500,000 is Federal costs and \$15,800,000 is required Non-Federal costs. The construction of the feeder beach north of Indian River Inlet was completed in 1973 and nourished

REPORT OF THE SECRETARY OF THE ARMY ON CIVIL WORKS ACTIVITIES FOR FY 2007

in 1978, and 1984. Section 869 of the Water Resources Development Act of 1986 deauthorized the unscheduled portion of the project. (See Table 3-B at end of Chapter for Acts authorizing existing project. See Table 3-A at end of chapter for total costs for existing project to September 30, 2007).

Local Cooperation: Assurances of local cooperation were provided by the State of Delaware, January 13, 1981.

Operations During Fiscal Year: New work: Work included construction management, engineering and design, monitoring, environmental coordination, and operation of the sand bypassing.

25. GREAT EGG HARBOR INLET & PECK BEACH, NJ

Location: The project is located in Cape May and Atlantic Counties, New Jersey. Great Egg Harbor Inlet, an unimproved inlet, is about 1.1 miles wide at its narrowest point and provides a tidal connection between the Atlantic Ocean, Great Egg Harbor Bay, the New Jersey Intercoastal Waterway, and Great Egg Harbor River. Peck Beach is occupied in its entirety by the City

of Ocean City and extends from Great Egg Harbor Inlet southward to Corson Inlet. The ocean frontage is about eight miles in length.

Existing Project: The project consists of providing initial beachfill, with subsequent periodic nourishment, with a minimum berm width of 100 feet at an elevation of 8 feet above mean low water. The beachfill extends from Surf Road southwest to 34th Street with a 1000 foot taper south of 34th Street. This plan required the initial placement of 6,200,000 cubic yards of material and subsequent periodic nourishment of approximately 1,100,000 cubic yards every three years. The material for the initial construction, and periodic nourishment is being taken from the ebb shoal area located approximately 5,000 feet offshore of the Great Egg Harbor Inlet. Additionally, the construction of the project required the extension of 38 storm drainpipes. All work is programmed. Total project costs are \$471,000,000; Federal share is \$298,500,000 and Non-Federal is \$172,500,000 (October 2007). (See Table 3-B at end of Chapter for Acts authorizing existing project. See Table 3-A at end of chapter for total cost for existing project to Sept. 30, 2007).

Local Cooperation: The local sponsor for this project is the State of New Jersey Department of

Environmental Protection Agency.

Operations During Fiscal Year: New work: Work included monitoring and engineering and design efforts.

26. SHORE PROTECTION WORK UNDER SPECIAL AUTHORIZATION

Name of Project	Cost to Sept. 30, 2007 Feasibility
-----------------	---------------------------------------

Barnegat Lighthouse	\$88,187
---------------------	----------

Plans and Specifications

Indian River Inlet, Sussex County, DE	\$69,723

27. TOWNSEND INLET TO CAPE MAY INLET, NJ

Location: This project is located along the Atlantic Coast of New Jersey in Atlantic County, approximately 50 miles east of Philadelphia, Pennsylvania. The project area is located along the Atlantic Coast of New Jersey, extending approximately 15 miles from Townsends Inlet to Cape May Inlet, including the communities of Avalon, Stone Harbor, and North Wildwood.

Existing Project: The recommended plan includes interim shoreline protection projects for Avalon, Stone Harbor and North Wildwood, New Jersey, and an environmental restoration project for Stone Harbor Point, as follows: (1) 4.3 miles of beachfill with a berm width of 150-foot at elevation 8.5 feet NGVD and dune height of +16-feet along with periodic nourishment for Avalon and Stone Harbor; The beachfill portion of the project consists of providing approximately 4 million cubic yards of initial beachfill, with subsequent periodic nourishment of 750,000 cubic yards every three years. (2) 2.2 miles of revetment construction along Townsends and Hereford Inlets frontages; (3) and ecosystem restoration of about 107 acres of natural barrier island habitat at Stone Harbor Point including beachfill, dune construction, and the planting of bayberry and red cedar rousting habitat. Estimated project cost is (October 2007) \$365,980,000 of which \$236,300,000 is Federal costs and \$129,680,000 is Non-Federal costs. (See Table 3-B at end of Chapter for Acts authorizing existing project. See Table 3-A at end of chapter for total cost for existing project to September 30, 2007).

PHILADELPHIA, PA DISTRICT

Local Cooperation: New Jersey Department of Environmental Protection is the sponsor.

Operations During Fiscal Year: New Work: Seawall construction is continuing in North Wildwood, New Jersey, Engineering and design, construction management, Sponsor Coordination, and project and environmental monitoring.

Flood Control:

28. BELTZVILLE LAKE, PA

Location: Dam site is on Pohopoco Creek about 4.5 miles upstream from its confluence with Lehigh River and 4 miles east of Lehigh, PA (See Geological Survey Quadrangle Map for Lehigh, PA-1960).

Existing Project: This is a multiple-purpose development project providing water supply, flood control, and recreation. Plan of improvement provides for an earth and rock fill dam 4,200 feet long rising 170 feet above creek bed; a spillway around the north end of dam; and gate control outlet works discharging through a conduit on rock along right abutment. The lake, a unit of comprehensive plan for flood control and other purposes of Delaware River Basin, has a reservoir capacity of 68,250 acre-feet at spillway crest level with 1,390 acre-feet of inactive storage, 39,830 acre-feet for water supply and recreation, and 27,030 acre-feet for flood control. The cost of project was \$22,931,400 including \$6,100,000 required Non-Federal reimbursement for costs allocated to water supply storage during life of project. The construction of the dam and appurtenances was completed in 1971. (See Table 3-B at end of Chapter for Acts authorizing existing project. See Table 3-A at end of chapter for total costs for existing project to Sept. 30, 2007).

Local Cooperation: Project was approved subject to certain requirements of cooperation by local interests as defined in approved House Document. Resolution of Delaware River Basin Commission providing assurances of repayment of water supply and pollution control costs was accepted June 7, 1965. A contract for repayment of water supply costs was signed October 16, 1966.

Operations During Fiscal Year: Maintenance: Normal operation and maintenance of the project continued, Real Estate Coordination, Environmental Review Guide for Operations, Continue Evaluation Gathering, Water Control and Water Quality Analysis,

Annual Dam Inspection, Dam Safety and Conduit Repairs performance of some backlog maintenance items and environmental stewardship tasks. .

29. BLUE MARSH LAKE, PA

Location: Dam site is on Tulpehocken Creek about 1.5 miles upstream from its confluence with Plum Creek and about 6 miles northwest of Reading, PA (See Geological Survey Quadrangle Sheet, Bernville, PA)

Existing Project: This is a multiple-purpose development project providing water supply, flood control, and recreation. Construction started in 1974 and was completed in 1980. The dam is 1,775 feet long and rises 98 feet above creek bed, with spillway about 1,500 feet south of dam, and gate-controlled outlet works discharging through a conduit on rock along right abutment. The lake, a unit of comprehensive plan for flood control and other purposes of Delaware River Basin, has a capacity of 50,010 acre-feet at spillway crest level, with 3,000 acre-feet of inactive storage, 14,620 acre-feet for water supply and recreation, and 32,390 acre-feet for flood control. (For details see H.Doc 533 87th Cong., 2nd Sess). Costs of project \$63,163,791. Existing project was authorized by 1962 Flood Control Act. (See Table 3-B at end of Chapter for Acts authorizing existing project. See Table 3-A at end of chapter for total costs for existing project to Sept. 30, 2007). (H. Doc. 533, 87th Cong., 2d Sess., contains latest published maps).

Local Cooperation: Project was approved subject to certain requirements by local interests, as prescribed in House Document cited above. Delaware River Basin Commission on December 29, 1964, adopted a preliminary resolution providing for repayment of water supply costs.

Operations During Fiscal Year: Maintenance: Normal operation and maintenance, Real Estate Coordination, Environmental Review Guide for Operations, Continue Evaluation Gathering, Water Control and Water Quality Analysis, Annual Dam Inspection, Recreation and Environmental Stewardship tasks.

Emergency flood control activities-repair, flood fighting, and rescue work (Public Law 99, 84th Congress, and antecedent legislation).

Fiscal year costs were \$509,613 for disaster preparedness.

32. FRANCIS E. WALTER DAM, PA

Location: Reservoir is in northeastern Pennsylvania on Lehigh River between White Haven and Stoddartsville. Dam is about 0.4 mile below mouth of Bear Creek, about 60 miles above confluence of Lehigh River and Delaware River at Easton, PA (See Geological Survey Quadrangle Sheet, Stoddartsville, PA).

Existing Project: Plan of improvement authorized by 1946 Flood Control Act (H. Doc. 587, 79th Cong., 2d Sess). provided for a single-purpose flood control reservoir. Modification of project, authorized by 1962 Flood Control Act (H. Doc.522, 87th Cong., 2d Sess)., provides for a multiple-purpose development for water supply and recreation in addition to present single-purpose flood control project. Plan of improvement requires altering spillway, increasing height of dam, constructing a new intake tower, extending outlet tunnel by addition of a concrete conduit, and constructing new dikes and raising existing dikes. Modified dam will rise 264 feet above riverbed and be 3,500 feet long. Reservoir modification, a unit of comprehensive plan for flood control and other purposes of Delaware River Basin, will have a reservoir capacity of 181,000 acre-feet spillway crest level with 3,000 acre-feet of inactive storage, 70,000 acre-feet for water supply and recreation and 108,000 acre-feet for flood control. Total cost is \$186,000,000, estimated Federal cost of new work (October 1993) is \$30,000,000 including \$156,000,000 required Non-Federal reimbursement for costs allocated to water supply storage during life of project after use of this storage is initiated. Project as authorized under the 1946 Flood Control Act was completed June 1961. Settlement for lands was completed October 1962. The advance engineering and design for the modified project is completed. (See Table 3-B at end of Chapter for Acts authorizing existing project. See Table 3-A at end of chapter for total costs for existing project to Sept. 30, 2007).

Local Cooperation: None required under 1946 Flood Control Act. Under 1962 Flood Control Act, project was approved subject to certain requirements by local interests, as defined in House Document 522 cited above. The Delaware River Basin Commission expressed its support by a resolution dated 23 April 1980 and reiterated its sponsorship for the modified project in August 1985, October 1985, and July 1988.

Operations During Fiscal Year: Maintenance: Normal operation and routine maintenance, Project Coordination, Environmental Review Guide for Operations, Real Estate Coordination, Continuing Evaluation Gathering, Dam Safety, Water Control and Water Quality Analysis.

**33. GENERAL EDGAR JADWIN
DAM AND RESERVOIR, PA**

Location: In Dyberry Creek Valley in central part of Wayne County, PA, between borough of Honesdale and Village of Tanners Falls. Dam is about 3 miles above confluence of Dyberry Creek and Lackawaxen River in Honesdale and 29 miles above confluence of Lackawaxen and Delaware Rivers. (See Geological Survey Quadrangle Sheet, Honesdale, PA).

Existing Project: A single-purpose flood control reservoir with a capacity of 24,500 acre-feet formed by an earth embankment, about 1,225 feet long at crest and rising 109 feet above creek bed. It also has a tunnel with intake structure and a chute-type spillway with a stilling basin in left abutment. Reservoir controls runoff from a drainage area of 65 square miles which is 91 percent of watershed of Dyberry Creek and 39 percent of Lackawaxen River watershed above Honesdale, PA. Construction of project was authorized by 1948 Flood Control Act (H.Doc. 113, 80th Cong., and 1st Sess).. Project completed in June 1960. (See Table 3-B at end of Chapter for Acts authorizing existing project. See Table 3-A at end of chapter for total costs for existing project to Sept. 30, 2007).

Local Cooperation: Assurances of Compliance with requirements of local cooperation were accepted July 30, 1956. For details see page 251, Annual Report for 1962.

Operations During Fiscal Year: Maintenance: Normal operation and routine maintenance, Project Coordination, Real Estate Coordination, Continuing Evaluation Gathering, Periodic Dam Inspection and Water Control Analysis and seepage analysis.

**34. INSPECTION OF COMPLETED
FLOOD CONTROL PROJECTS**

To ascertain whether local interests were maintaining and operating completed projects as required, inspections were made as follows:

PROJECT INSPECTION	DATES
Darby Creek, PA	April 2007
East Branch, PA	July 2007
Pennypack, PA	June 2007

Local interests are satisfactorily maintaining and operating projects in accordance with regulation. Costs

during the period were \$88,000.

**35. INSPECTION OF
NON-FEDERAL LEVEES**

Inspection of Non-Federal levees were conducted at the following sites:

PROJECT INSPECTION	DATES
East Stroudsburg, PA	July 2007
Repaupo Creek, NJ	September 2007
Shellpot Creek, DE	September 2007
Stroudsburg, PA	July 2007
Weissport, PA	September 2007

Costs during the period were \$27,000.

36. MOLLY ANN'S BROOK, NJ

Location: Approximately 12 miles northwest of New York City, located in Haledon, Prospect Park and Paterson, New Jersey along Molly Ann's Brook from the mouth below Totowa Avenue in Paterson upstream to Church Street in Haledon.

Previous project: None.

Existing Project: The recommended plan modified the channel a total length of 2.5 miles. The channel includes both trapezoidal channel sections and walled sections. Five bridges were replaced and two buildings were removed. Estimated cost of project (October 1997) is \$53,300,000 of which \$34,600,000 is Federal Costs and \$18,700,000 is required Non-Federal costs. Costs are in accordance with Section 401(a) of the Water Resources Development Act (Public law 99-662), dated November 17, 1986. (See Table 3-B at end of chapter for Acts authorizing existing project. See Table 3-A at end of chapter for total costs for existing Project to Sept. 30, 2007).

Local Cooperation: Fully complied with. A Project Cooperation Agreement was executed on December 16, 1993. The State of New Jersey Department of Environmental Protection and Energy, the Non-Federal sponsor, provided a portion of their support thought the Intermodal Surface Transportation Efficiency Act of 1991.

Terminal Facilities: None.

Operations During Fiscal Year: New Work:
Work included engineering and design, supervision and administration, and contract work deferred from and repairs due to Hurricane Floyd.

37. NATIONAL EMERGENCY PREPAREDNESS

The total fiscal year cost for this category amounted to \$10,199.

38. PROMPTON LAKE, PA

Location: In Lackawaxen River Valley in central part of Wayne County, PA, between borough of Prompton and Village of Aldenville. Dam is within corporate limits of Prompton, 4 miles upstream from Honesdale, PA, and approximately 30 miles above confluence of Lackawaxen and Delaware River. (See Geological Survey Quadrangle Sheet, Honesdale, PA)

Existing Project: Plan of improvement authorized by 1948 Flood Control Act (H. Doc. 113, 80th Cong., 1st Sess). provides for a single-purpose flood control reservoir. Modification of project authorized by 1962 Flood Control Act (H. DOC 522, 87th Cong., 2nd Sess). provides for a multiple-purpose development for water supply and recreation in addition to present single-purpose flood control project. Plan of improvement requires construction of control tower with gates and service bridge, placing an impervious blanket on valley walls and floor upstream from dam, widening spillway, and clearing land and relocating roads in reservoir. Dam, completed under 1948 Flood Control Act which will not be modified, is 1,230 feet long and rises 140 feet above riverbed. Existing spillway, cut into rock of right abutment, will be modified and present uncontrolled outlet works discharging into a concrete conduit along right bank, and will be provided with gates and a control tower. Reservoir modification, a unit of comprehensive plan for flood control and other purposes of Delaware River basin has a capacity of 52,000 acre-feet: 3,500 acre-feet for inactive storage, 28,200 acre-feet for water supply and recreation, and 20,300 acre-feet for flood control. Estimated Federal cost of new work (October 2004 PL) is \$26,600,000, including \$54,990,000 required Non-Federal reimbursement for costs allocated to water supply storage during life of project after use of this storage is initiated. Project as authorized under the 1948 Flood Control Act was completed in November 1960. (For details, see page 358, Annual Report for 1963). Work accomplished under the 1962 Flood Control Act was preconstruction engineering and design. (See Table 3-B at end of Chapter for Acts

authorizing existing project. See table 3-A at end of chapter for total cost for existing project to Sept. 30, 2007).

Local Cooperation: Project modification was approved subject to certain requirements by local interests, as defined in House Document 522 cited above. Assurances of compliance under Flood Control Act of 1948 have been met. Delaware River Basin Commission on March 18, 1966, gave their view that the need for water supply was not urgent at that time. However recent studies conducted by DRBC have determined that there is now a need for water supply. In August 1983, DRBC expressed their strong support for the project modification. Preconstruction engineering and design was initiated in 1966, suspended in 1968 and again suspended in and resumed in 1986.

Operations During Fiscal Year: New Work: Spillway modified, and constructed crestwall across the top of the dam, Engineering and Design and Construction Management.

Maintenance: Normal operation and routine maintenance of the project continued, which included Project Coordination, Real Estate Coordination, Environmental Review Guide for Operations, Continuing Evaluation Gathering, Dam Safety, Water Control and Water Quality Analysis.

Environmental Restoration:

39. ENVIRONMENTAL IMPROVEMENT WORK UNDER SPECIAL AUTHORIZATION

Operations During Fiscal Year: New work:
Completed construction of water distribution project for
Milford Authority.

40. SOUTH CENTRAL PENNSYLVANIA ENVIRONMENTAL IMPROVEMENT, PA

41. SOUTHEASTERN, PA

Location: The south central Pennsylvania area includes twenty-one counties defined by the authorizing legislation. The program area within the Philadelphia District consists of Pike, Monroe, and Lackawanna Counties.

Location: Section 566 of the Water Resources Development Act (WRDA) of 1996 authorized a pilot program to provide for environmental assistance (design and construction) to Non-Federal interests for publicly owned facilities in the five (5) county areas surrounding the city of Philadelphia.

Existing Project: Section 313 of the Water Resources Development Act of 1992, as amended, established a pilot program for providing environmental assistance to Non-Federal interests in south central Pennsylvania. Such assistance may be in the form of design and construction assistance for water-related environmental infrastructure and resource protection and development projects, including projects for wastewater treatment and related facilities, water supply, storage treatment, distribution facilities, and surface water resource protection and development. The Federal share may be provided in the form of grants or reimbursements to the sponsor. FY 98 was the first year of funding for three project names in the Energy and Water Appropriations documents. Total project funds earmarked were \$7,650,000 for work within Philadelphia District. The House Report (105-190) provides \$10,000,000 in design and construction assistance under the Section 313 Program for projects in Lackawanna, Lycoming, Susquehanna, Wyoming, Pike and Monroe Counties in Pennsylvania. The Conference Report (105-271) specifies the funds among eight specific projects. Appropriations for those projects in the Philadelphia District are: Westfall Municipal Sewage Authority, Pike County; Jefferson Township, Lackawanna County; Township of Tobyhanna Sewer Authority, Monroe County. (See Table 3-B at end of chapter for acts authorizing existing project. See Table 3-A at end of chapter for total costs for existing project to September 30, 2007).

Previous Projects: The four pilot projects were the East Central Incinerator, Wissinoming, Logan (Feltonville), and Delaware Canal.

Current Projects: (1) Mill Creek Diversion - divert the stream flow generated in Montgomery County from the combined sewer by constructing an alternate channel to either the Schuylkill River via an underground tunnel under City Line Avenue or to the East Branch of Indian Creek. (2) Cobbs Creek Habitat Restoration - construct an approximately 1.2 mile channel restoration project from Millbourne Dam downstream to Marshall Road, to meet a small (about 1000 feet) restoration project PWD completed in 2005. (3) Cobbs Creek Fish Passage Restoration - investigates, select, design, and construct the best alternative to reestablish fish passage on Cobbs Creek. (4) Indian Creek Reconstruction - design and construct a new stream channel connecting the West Branch to the East Branch of Indian Creek that bypasses a combined sewer system. (5) Tacony Creek Project - investigates the feasibility and prepares the design for a 60 million gallon storage facility that would reduce average annual combined sewer discharges by approximately 600 million gallons per year.

Local Cooperation: The Non-Federal sponsors are required to provide 25% of project costs including lands, easements, rights-of-way, and relocations and bear all costs of operation, maintenance, replacement, repair and

Local Cooperation: On all projects, the Non-Federal sponsor (Philadelphia Water Department) is required to provide 25% of the project costs to include lands, easements and rights of way and bear all costs of operation and maintenance of the projects after construction. The Non-Federal sponsors receive credit for any design work completed prior to the Federal involvement.

Terminal Facilities: None.

Operations During Fiscal Year: Coordinated the Design Agreement for the Mill Creek Diversion and Initial Appraisal for Tacony Creek and Engineering and Design efforts.

42. DELAWARE BAY COASTLINE, PORT MAHON, DE & NJ

Location: The Port Mahon environmental restoration and protection project is located in Kent County, Delaware along the Delaware Bay coastline. The study area is located on the south bank near the mouth of the Mahon River and extends for roughly 1.5 miles along the Delaware Bay coastline. Port Mahon is situated about 7.5 miles east of Dover, Delaware and approximately 3 miles northeast of Little Creek, the nearest town.

Existing Project: The project consists of three elements designed to restore the ecosystem at Port Mahon. The first element consists of restoration of 19.2 acres of horseshoe crab habitat through the placement of 306,000 cubic yards (cy) of sand for approximately 4,900 feet along the shoreline with 150-foot tapers at each end to tie into the existing upland. The plan also includes construction of a 1200-foot revetment at the southern end of the proposed project to tie into the existing revetment from the termination of the beachfill to provide stability. Periodic nourishment of approximately 150,000 cubic yards of sand is scheduled to occur every 7 years for the 50-year project life. The second element of the project calls for raising State Road 89 to +7.0 feet North American Vertical Datum (NAVD) for a distance of 7,500 feet to protect 59.1 acres of wetlands to the west of State Road 89 from excessive damaging overwash. A total initial volume of 15,800 cubic yards of fill material would be required to raise State Road 89. In addition, 13,600 square yards of geotextile and 3,500 cubic yards of crushed stone would be used for the road surface. The third element consists of restoration of 21.4 acres of degraded marsh west of State Road 89. This calls for the reestablishment of daily tidal inundation into the wetlands and the creation of three open water ponds of 1-acre size. Removal of material to an elevation 6 inches below the mean high water line would enable replacement of the existing common reed (*Phragmites*) with smooth cordgrass (*Spartina alterniflora*), a more productive plant community. The excavation of the marsh, ponds, and ditches would generate approximately 96,000 cubic yards of material that would be placed adjacent to the active disposal area owned by the Delaware Department of Natural Resources and Environmental Control (DNREC). This placement is estimated to result in 10 acres of upland habitat, which would contribute to habitat diversity. Approximately 15,500 cubic yards of material

would be accommodated at the DNREC site. Estimated cost of project (October 2007) is \$53,300,000 of which \$34,600,000 is Federal costs and \$18,700,000 is required Non-Federal costs. (See Table 3-B at end of Chapter for Acts authorizing existing project. See Table 3-A at end of chapter for total cost for existing project to Sept. 30, 2007).

Local Cooperation: Federal participation in the proposed project is contingent upon a signed Project Cooperation Agreement (PCA) with the local sponsor that identifies the required items of local cooperation.

Operations During Fiscal Year: New Work: Completed the Limited Reevaluation Report and the Project Cooperation Agreement (PCA). The PCA has been provided to the State of Delaware for review and approval.

43. DELAWARE BAY COASTLINE VILLAS & VICINITY, NJ

Location: This ecosystem restoration project is located along the Delaware Bay in Middle and Lower Townships, Cape May County, New Jersey

Existing Project: The recommended plan, restoring horseshoe crab and shore bird habitats, is a one time placement of 950,000 cubic yards of beach fill to provide an 80-foot wide berm at elevation +4.7 feet NAVD over a length of 29,000 feet. Seventeen outfalls located in the project boundaries will be extended about 100 feet. The project does not involve periodic nourishment. Total project costs are \$9,150,000; Federal \$5,950,000, Non-Federal \$3,200,000 (October 2007) (See Table 3-B at end of Chapter for Acts authorizing existing project. See Table 3-A at end of chapter for total cost for existing project to September 30, 2007).

Local Cooperation: The New Jersey Department of Environmental Protection (NJDEP) will be the Non-Federal sponsor.

Operations During Fiscal Year: New Work: Coordinated Project Cooperation Agreement with the State of New Jersey and engineering and design efforts.

44. LOWER CAPE MAY MEADOWS - CAPE MAY POINT, NJ

Location: The project area includes Lower Cape May Meadows, which consists of Cape May Point State Park and the Cape May Migratory Bird Refuge, and the Borough of Cape May Point. The Lower Cape May

PHILADELPHIA, PA DISTRICT

Meadows area consists of approximately 343 acres and extends through the Borough of Cape May Point, totaling about 2 miles along the southern Atlantic coast of New Jersey.

Existing Project: The plan for the purposes of ecosystem restoration, navigation mitigation, and hurricane and storm damage reduction consists of an initial construction sand quantity of 1,400,000 cubic yards to be placed for a total length of 11,000 ft, and 650,000 cubic yards of periodic nourishment every 4 years over the 50-year project life; a dune with a 100 ft-wide base, and a 25 ft-wide crest at a height of 16.75ft (NAVD 88); a berm 100-150 feet wide in the vicinity of Cape May Point and 200-450 feet wide in the vicinity of Lower Cape May Meadows; planting of 18 acres of dune vegetation; seaward restoration of 35 acres of emergent wetland; elimination of 95 acres of the nuisance plant *Phragmites australis*; planting of 105 acres of wetland vegetation; excavation of existing drainage ditches to restore fresh water flow; creation of drainage ditches to link hydrological segments of a project area; installation of two weir-flow control structures; creation of six fish reservoirs; and construction of elements to create 25 acres of tidal marsh. The project also includes monitoring and adaptive management over a 5-year period for the Lower Cape May Meadows freshwater wetlands restoration element. Estimated project cost is \$107,251,000 (October 2007) of which \$93,600,000 is Federal cost and \$13,651,000 is Non-Federal costs. (See Table 3-B at end of Chapter for Acts authorizing existing project. See Table 3-A at end of chapter for total cost for existing project to Sept. 30, 2007).

Local Cooperation: The sponsor for this project is the New Jersey Department of Environmental Protection.

Operations During Fiscal Year: New Work: Completion of ecosystem restoration, engineering and design and construction management efforts.

Miscellaneous:

45. AQUATIC ECOSYSTEM RESTORATION WORK UNDER SPECIAL AUTHORIZATION

Activities pursuant to Section 206, Public Law 104-303.

Name of Project **Cost to Sept. 30, 2007**

Coordination

Section 206 Coordination Account Funds \$ 621

Planning & Design Analysis

Jun. 3, 1896	Depths of 21, 10 and 7 feet and jetties.	H. Doc. 66, 54 th Cong., 1 st sess. Annual Report, 1897 p. 12501
Jul. 25, 1912	Purchase or construct a dredge and auxiliaries including a wharf and depot, and maintenance of project.	H. Doc. 359, 62nd Cong., 2nd sess.
Sept. 22, 1922	Entrance channel and basin with 25-foot depth and construction by local interests of new south jetty.	H. Doc. 114, 67th Cong., 1st sess. and S. Committee Print, 68th Cong., 1st sess.
Jul. 3, 1930	A 30-foot depth between Delaware River and Lobdell Canal and modification or removal of a portion of north jetty.	Rivers and Harbors Committee Doc. 20, 71st Cong., 2nd sess.
Aug. 30, 1935 ⁶	Completion of new south jetty by the United States subject to provision that city of Wilmington reimburse the United States for cost, without interest, of any part of structure that may subsequently be occupied and utilized for city activities.	Rivers and Harbors Committee Doc. 32, 73rd Cong., 2nd sess.
Oct. 17, 1940	Permit temporary occupancy by city of Wilmington of any part of south jetty for city activities under revocable license, provided occupied portion of jetty is properly maintained without expense to the United States.	H. Doc. 658, 76th Cong., 3rd sess.
Jul. 14, 1960 sess.	A 35-foot depth between Delaware River ship channel and Lobdell Canal including turning basin of same depth, opposite Wilmington Marine Terminal, 200 feet wide, 2,900 feet long on north side of channel, and 2,000 feet long on north side of basin.	H. Doc. 88, 86th Cong., 2nd
Dec. 11, 2000	BARNEGAT INLET TO LITTLE EGG HARBOR INLET, NJ (See Section 18 of Text) Provides for shore protection and periodic nourishment over the 50-year life of the project.	Section 101 (a) (1) of WRDA 2000
Aug. 17, 1999	BRIGANTINE INLET TO GREAT EGG HARBOR INLET, NJ (BRIGANTINE ISLAND, NJ) (See Section 19 of Text) Provides for hurricane, storm damage reduction and shore protection.	Section 101 (b) (12) of WRDA 1999
	CAPE MAY INLET TO LOWER TOWNSHIP, NJ (See Section 20 of Text)	

TABLE 3-B AUTHORIZING LEGISLATION

Acts	Work Authorized	Documents
Nov. 17, 1986	Consists of beach fill; dune fill; new groins; maintenance of existing groins; rehabilitation of an existing seawall; and a breakwater with weir and deposition basin at Cape May Inlet.	Rivers & Harbors Act of 1968
Nov. 17, 1986	Project may be constructed separately or in combination with any other feature of the project.	WRDA of 1986
Aug. 17, 1999	<p>DELAWARE BAY COASTLINE, REEDS BEACH TO PIERCES POINT, DE & NJ (See Section 21 of Text) Provides for shore protection and ecosystem restoration.</p>	Section 101 (b) (6) of WRDA 1999
Aug. 17, 1999	<p>DELAWARE BAY COASTLINE, ROOSEVELT INLET, LEWES BEACH, DE (See Section 22 of Text)</p> <p>DELAWARE COAST, BETHANY TO SOUTH BETHANY (See Section 23 of Text) Provides for hurricane and storm damage reduction and periodic nourishment over the 50-year life of the project.</p>	Title I, Section 101 (a) (15) of WRDA 1999
Nov. 17, 1986	<p>DELAWARE COAST PROTECTION, DE (See Section 24 of Text) Provides for Federal participation in the cost of restoration and subsequent periodic nourishment, not to exceed 10 years, of the shore from Rehoboth Beach to Indian River Inlet.</p>	H. Doc. 90, 90th Cong., 2nd sess.
Nov. 17, 1986	Project is modified to authorize the construction of sand bypass facilities and stone revetment erosion control measures at Indian River Inlet, DE. ⁷	WRDA of 1986 Sec. 869
Nov. 17, 1986	<p>GREAT EGG HARBOR INLET & PECK BEACH, NJ (See Section 25 of Text) Project may be constructed separately or in combination with any other feature of the project. Consists of providing initial beachfill, with subsequent periodic nourishment, with a minimum berm width of 100 feet at an elevation of 8 feet above mean low water.</p>	River and Harbor Act of 1965. WRDA of 1986.
	<p>TOWNSEND INLET TO CAPE MAY INLET, NJ (See Section 27 of Text)</p>	

TABLE 3-B AUTHORIZING LEGISLATION

Acts	Work Authorized	Documents
Aug. 17, 1999	Provides for hurricane and storm damage reduction, shore protection, and ecosystem restoration.	Section 101 (a) (26) WRDA of 1999
	BELTZVILLE LAKE, PA (See Section 28 of Text)	
	Provides for multiple-purpose development for water supply flood control and recreation.	H. Doc. 522, 87th Cong., 2nd sess.
	BLUE MARSH LAKE, PA (See Section 29 of Text)	
	Provides for multiple purpose development for water supply, flood control, and recreation. Site is located on Tulpehocken Creek about 1 ½ miles up-stream from its confluence with Plum Creek and about six miles northwest of Reading, PA.	H. Doc. 522, 87th Cong., 2nd sess.
	FRANCIS E. WALTER DAM, PA (See Section 32 of Text)	
	Provided for a single-purpose flood control reservoir.	H. Doc. 587, 79th Cong., 2nd sess.
	Provides for a multiple-purpose development for water supply and recreation.	H. Doc 522, 87th Cong., 2nd sess.
	GENERAL EDGAR JADWIN DAM AND RESERVOIR, PA (See Section 33 of Text)	
October 1996	A single-purpose flood control reservoir with a capacity of 24,500 acre-feet formed by an earth embankment.	H. Doc 113, 80th Cong., 1st sess.
	MOLLY ANN'S BROOK, NJ (See Section 36 of Text)	
Nov. 17, 1986	Modify Channel with a total length of 2.5 miles. Channel will include. ⁸ both trapezoidal channel sections and walled sections. Five bridges will be replaced and one building will be removed.	WRDA of 1986
	PROMPTON LAKE, PA (See Section 39 of Text)	
October 1996	Provides for a single-purpose flood control reservoir.	H. Doc. 113, 80th Cong., 1st sess.
	Provides for multiple-purpose development for water supply, and recreation in addition to present single-purpose flood control project.	H. Doc. 522, 87th Cong., 2nd sess.

SOUTH CENTRAL PENNSYLVANIA

10. Includes \$3,489,088 for AE&D.

BALTIMORE, MD DISTRICT

This district comprises the watershed of Susquehanna River and its tributaries from headwaters in south central New York State through central Pennsylvania to its mouth in Chesapeake Bay; watershed of the Potomac River and its tributaries from headquarters in Maryland, eastern West Virginia, and

Northern Virginia to its mouth in Chesapeake Bay; District of Columbia; and southwestern portion of Delaware. It includes that portion of Chesapeake Bay and its tributaries north of Smith Point, MD, on western shore of the bay, and includes that portion of Maryland between Chesapeake Bay and Atlantic Ocean.

NAVIGATION

1. BALTIMORE HARBOR AND CHANNELS, MD AND VA

Location. Baltimore Harbor is at the head of the navigable portion of Patapsco River about 12 miles from Chesapeake Bay. The Patapsco River rises near the town of Westminster in Carroll County, MD, and flows generally southeast for about 65 miles to enter Chesapeake Bay. (See National Ocean Survey Chart 12278.)

Existing project.

a. A uniform main channel depth of 50 feet between Cape Charles, VA, and Fort McHenry at Baltimore, MD, with dimensions as follows: (1) Cape Henry Channel: 50 feet deep and 1,000 feet wide from the 50-foot depth curve in the Atlantic Ocean to that depth in Chesapeake Bay, a distance of 3.0 miles; (2) York Spit Channel: 50 feet deep and 1,000 (constructed to 800 feet wide) feet wide connecting the 50-foot depth curves in Chesapeake Bay near York Spit, a distance of 18.4 miles; (3) Rappahannock Shoal Channel: 50 feet deep and 1,000 (constructed to 800 feet wide) feet wide connecting the 50-foot depth curves in the Chesapeake Bay opposite the Rappahannock River, a distance of 10.3 miles; and (4) Baltimore Harbor Approach Channels: 50 feet deep and generally 800 (constructed to 700 feet wide) feet wide, widened at the approach and bends, from the 50-foot depth curve in Chesapeake Bay opposite the mouth of the Magothy River to Fort McHenry on the Patapsco River, a distance of 20.7 miles.

b. Branch channels with dimensions as follows: (1) Connecting Channel to Chesapeake and Delaware Canal Approach Channel: 35 feet deep, 600 feet wide, and 15.6 miles long from the Cutoff Angle in the main channel to the 35-foot depth curves in the natural channel on the east side of Chesapeake Bay which is part of the inland waterway from Delaware River to Chesapeake Bay. The channel includes the Brewerton Extension and Swan Point and Tolchester Channels; (2) Curtis Bay: 50 feet deep, 600 (constructed to 400 feet wide) feet wide, and 2.3 miles long from the main channel to and including a turning basin at the head of Curtis Bay; (3) Curtis Creek: (a) a channel, 35 feet deep and generally 200 feet wide, from the 50-foot channel in Curtis Bay to 750 feet downstream of the Pennington Avenue Bridge; (b) a channel, 22 feet deep and generally 200 feet wide, from the 35-foot channel to and along the marginal wharf of the Curtis Bay Ordnance Depot; (c) an irregular shaped 3-acre basin, with a depth of 18 feet, adjacent to the head of the 22-foot channel; (d) a basin, 15 feet deep and 450 feet wide, from the end of the 22-foot channel to the end of the marginal wharf; and (e) a channel, 22 feet deep and 200 feet wide, from the 22-foot channel south of the Baltimore and Ohio Railroad Bridge to the vicinity of

Arundel Cove, a distance of 2,800 feet, thence 100 feet wide in Arundel Cove for a distance of 2,100 feet, with an anchorage basin, 700 feet square, adjacent to the channel and southwest of the wharf of the Coast Guard Depot at Curtis Bay; (4) Middle Branch; Ferry Bar East Section: a channel, 42 feet deep and 600 feet wide, from the main channel at Fort McHenry to Ferry Bar, a distance of 1.5 miles; and (5) Northwest Branch: Federal maintenance of 39-foot or 35-foot deep channels after either depth has been provided by local interests: (a) East Channel: a channel, 49 feet deep, 600 feet wide, and 1.0 mile long with a turning basin at the head of the channel from that depth existing at the time of construction; and (b) West Channel: a channel, 40 feet deep, 600 feet wide, and 1.3 miles long with a turning basin at the head of the channel from that depth existing at the time of construction.

c. The following anchorages: (1) Riverview Anchorage No. 2: 30 feet deep, 2400 feet long, and 1,200 feet wide; (2) Riverview Anchorage No. 1: 35 feet deep, 4,500 feet long, and 1,500 feet wide; and (3) Fort McHenry Anchorage: 35 feet deep, 3,500 feet long, and 400 feet wide.

The mean range of tide is 2.8 feet at the Cape Henry Channel, 2.3 feet at the York Spit Channel, 1.4 feet at the Rappahannock Shoal Channel, 0.8 foot at the Craighill Entrance, 0.9 foot in the Cutoff Section, 1.1 feet at Fort McHenry, and 1.2 feet at Pooles Island in the upper Chesapeake Bay. Depths refer to mean low water.

Estimated cost for new work is \$361,581,000 which includes: \$8,330,000 for completed work through the River and Harbor Act of 1945; \$38,411,000 for work completed under the River and Harbor Act of 1958 of which \$33,991,000 is Corps of Engineers, \$60,000 is U.S. Coast Guard and \$4,360,000 is non-Federal; and \$314,840,000 (October 1989 prices) for work authorized by the River and Harbor Act of 1970, of which \$460,000 is U.S. Coast Guard and \$314,380,000 is Corps of Engineers and non-Federal.

Local cooperation. Requirements are described in full on page 4-3 of Fiscal Year 1982 Annual Report.

Terminal facilities. The Port of Baltimore has 45 miles of waterfront with more than 100 piers, wharves and docks spread among 23 private and 7 public marine terminals. These terminals handle a full spectrum of bulk, breakbulk and containerized cargo. The Port has more than 1,000 acres of open storage. There are 39 public general merchandise warehouses, with 8.5 million square feet of storage space and 16.8 million cubic feet of cold storage space. There are 3 ship repair facilities, and the port is served by 2 trunkline railroads. Latest description of terminal facilities is in "Port Series No. 10 (revised 1991)" on Port of Baltimore, MD, (issued by Board of Engineers for Rivers and Harbors).

Operations and results during fiscal year.

New Work, Baltimore District: None.

New Work, Norfolk District: None.

Maintenance, Baltimore District. Condition surveys of the project channels were performed.

A contract in the amount of \$18,834,200 was awarded to Great Lakes Dredge & Dock Company on August 23, 2006 to dredge 1,925,500 cy of material from the Craighill Entrance, Craighill Channel, Cutoff Angle, Brewerton Channel Eastern Extension and Swan Point Channel and to place the material in the Poplar Island Environmental Restoration Project. Dredging began in January 2007 and was finished on April 27, 2007. A total of 1,910,213 cubic yards (cy) of material was dredged and placed in Sarbanes Environmental Restoration Project at Poplar Island at a cost of \$18,888,805 (\$12,032,172 Operations & Maintenance – Baltimore Harbor, \$ 6,856,633 Construction General – Poplar Island).

A contract to dredge an estimated 2,595,700 cy from Craighill Angle, Craighill Upper Range, Cutoff Angle, Brewerton Channel, Brewerton Angle, Ft McHenry Channel, and Brewerton Extension was advertised on September 5, 2007. Dredged material placement will be at Hart-Miller Island and the Sarbanes Environmental Restoration Project at Poplar Island.

Maintenance, Norfolk District. Condition surveys of Cape Henry Channel and York Spit Channel were made. The USACE Dredge McFarland performed maintenance dredging of the York Spit Channel. Dredging commenced on June 18, 2007 and was completed on August 5, 2007 with 607,781 cubic yards dredged and placed in the Wolf Trap overboard placement site.

1A. TOLCHESTER CHANNEL S-TURN, MD

Location. The Tolchester Channel is located along the eastern side of the upper Chesapeake Bay, near Tolchester Beach, Kent County, Maryland (see National Ocean Survey Chart 12278).

Existing Project. The Tolchester Channel is a uniform channel 35 feet deep, 600 feet wide with widening at the bends, and 7 miles long that follows the naturally deeper water along the eastern side of the upper Chesapeake Bay. The mean range of tide is 1.2 feet. Depths refer to mean lower low water. Section 329 of the Water Resources Development Act of 1999 modified Section 101 of the Rivers & Harbors Act of 1958 to “direct the Secretary to straighten the Tolchester Channel S-Turn as part of the project maintenance”. The project provides for a new straight channel 35 feet deep, 600 feet wide, and 2 miles long to replace the Tolchester Channel S-Turn, which had several turns within a 3-mile long reach of channel.

Local cooperation. Section 101 of the River and Harbor Act of 1958, PL 85-500, 3 Jul 1958 requires locals interests to: (1) furnish without costs to the

United States all lands, easements, right-of-way, and dredged material placement areas necessary for construction and subsequent maintenance, when and as required; (2) hold and save the United States free from damages due to construction and maintenance of the project, and (3) provide and maintain all necessary alterations in sewer, water supply, drainage, and other utilities.

Terminal facilities. Terminal facilities are described under the Baltimore Harbor & Channel, MD and VA, Federal navigation project.

Operations and results during fiscal year. Maintenance: Condition surveys of the project channel were performed.

2. BALTIMORE HARBOR ANCHORAGES AND CHANNELS, MD

Location. The project area encompasses the 32-square mile area of the Port of Baltimore. The port area of Baltimore includes the navigable part of the Patapsco River below Hanover Street, the Northwest and Middle Branches, and Curtis Bay and its tributary, Curtis Creek.

Existing project. Prior to the project, existing anchorages and branch channels were not of sufficient depth, length and width to accommodate vessels now in operation. The implemented plan will reduce delays and increase efficiency and safety through the following improvements: (1) widen and deepen Federal Anchorages 3 and 4; (2) widen and provide flared corners for state-owned East Dundalk, Seagirt, Connecting, and West Dundalk branch channels; (3) dredge a new branch channel at South Locust Point; and (4) dredge a turning basin at the head of the Fort McHenry Channel. An estimated 4.3 million cubic yards of material were dredged for these improvements. The current project cost estimate is \$30.5 million including \$22.4 million Federal and \$8.1 million non-Federal. The state of Maryland will also reimburse an additional \$1.5 million over 30 years to the Federal government.

Local cooperation. The PCA with the State of Maryland was executed December 19, 2001. The sponsor is required to provide lands, easements, rights-of-way, including disposal areas and pay 25 percent of costs allocated to general navigation facilities during construction and pay 50 percent of the costs of incremental maintenance below 45 feet below mean low water. All dredged material from the project is considered contaminated by law, and was placed in a containment site provided by the non-Federal sponsor (Hart-Miller Island). The State will receive credit for proportional costs to modify the site to make it usable for placement of project material.

Terminal facilities. See Section 1 of this text.

Operations and results during fiscal year. New Work, Baltimore District: None. Maintenance, Baltimore District: Condition surveys on the project channels were performed.

3. BALTIMORE HARBOR, MD, COLLECTION AND REMOVAL OF DRIFT

Location. Project applies to Baltimore Harbor, MD, and its tributaries.

Existing project. Provides for collection and removal of drift from Baltimore Harbor and its tributary waters, and authorizes the Secretary of the Army to allot such amounts as may be necessary for work from appropriations for maintenance and improvement of existing river and harbor works or other available appropriations, and that this work shall be carried as a separate and distinct project. It is wholly a work of maintenance. Purpose of work is to afford relief from variable conditions of obstruction.

Local cooperation. None required.

Terminal facilities. See Section 1 of this text.

Operations and results during fiscal year. Maintenance: Operations, by hired labor, consisted of collection and disposal of 25,380 cubic feet of driftwood, ranging from small blocks up to timbers of large dimensions.

4. KNAPPS NARROW, MD

Location. A small channel separating Tilghman Island from mainland of eastern shore of Chesapeake Bay about 40 miles south of Baltimore, MD. (See Coast and Geodetic Survey Chart 12226.)

Existing project. A channel 9 feet deep at mean low water, 75 feet wide, widened at the bends from deep water in Chesapeake Bay to deep water in Harris Creek, MD. Mean range of tide is 1.4 feet. Cost of new work for completed project was \$46,121. Existing project channel was authorized by the Public Works Administration, September 16, 1933, and later adopted by 1935 River and Harbor Act.

Local cooperation. Complied with except local interests must furnish disposal areas as needed for future maintenance.

Terminal facilities. A bulkhead wharf exists on each side of the southerly abutment of the bridge across the Narrows. There are several small-boat landings within the Narrows and several marine railways for repairing boats of a few feet in draft. A bulkhead landing is available for public use at the turning basin.

Operations and results during fiscal year. Maintenance: Maintenance dredging removed 47,100 cubic yards of dredged material at a contract cost of \$809,490

5. NANTICOKE RIVER, DE AND MD

Location. Headwaters of Nanticoke River consist of numerous branches rising mainly in the northern portion of Sussex County, DE. The river is about 50 miles long and flows southwesterly from its source to Tangier Sound.

Northwest Fork is a branch of Nanticoke River which rises in Kent County, DE, and flows past Federalsburg, MD, generally southerly through Dorchester County, MD, to its junction with the main river opposite Riverton, MD. It is about 30 miles long. (See Coast Geodetic Survey Chart 12261.)

Existing project. Nanticoke River: Channel 12 feet deep and 100 feet wide from the 12-foot depth curve in Tangier Sound to the highway bridge at Seaford, DE, with a turning basin at the upper end. Disjointed sections included in the project is about 4 miles long, extending over 32 miles of river; lower end of the first section of the project is about 8 miles above the mouth of the river. Mean range of tide is 3.4 feet, and the extreme tidal range is 4.3 feet.

Northwest for: Dredging a channel 6 feet deep and 60 feet wide at a mean low water from upper Browns wharf to within one-half mile of the southern boundary of town of Federalsburg, with a turning basin at the upper end. Section included in the project is about 4 miles long, and its lower ends are 11.75 miles above the mouth of the river. Mean range of tide is 2.6 feet.

Local cooperation. Local interests must furnish disposal areas for future maintenance dredging.

Terminal facilities. Waterfront at Seaford consists largely of unconnected pile-and-timber bulkhead wharves with earthfills. One public wharf is used as a launching ramp. Remaining wharves are privately owned. A rail siding extends along a considerable portion of waterfront and offers facilities for interchange of rail and water traffic. Existing terminals are reasonably adequate for present and prospective commerce.

Terminal facilities on Northwest Fork are all privately owned and open to general public use. They consist of one solid bulkhead wharf of 8-foot frontage and three landings each with 60-foot frontages. Depths of water are from 2 to 8 feet. Landings are log revetments backed by earthfill and are in poor condition.

Operations and results during fiscal year. Maintenance: Engineering and design activities were performed for future maintenance dredging of the project. Local sponsor identified tentative placement site for the dredged material.

6. OCEAN CITY HARBOR AND INLET AND SINEPUXENT BAY, MD

Location. Ocean City is on a barrier island between Sinepuxent Bay and Atlantic Ocean about 35 miles south of entrance to Delaware Bay. (See U.S. Coast and Geodetic Survey Chart 12211.)

Existing project. This provides for an inlet channel 200 feet wide and 10 feet deep through the inlet to the channel in the Isle of Wight Bay, protected on the south side by a stone jetty with a top elevation of 8.8 feet above mean low water and a top width of 18 feet, and on the north side by a stone jetty with a top elevation of 9 feet above mean low water and a top width of generally 20 feet, thence generally 100 feet wide and 6 feet deep to the project harbor; a channel 6 feet deep and 150 feet wide in Sinepuxent Bay from the inlet to Green Point, and thence 100 feet wide in Chincoteague Bay; and for a channel 6 feet deep and 125 feet wide from the inlet channel to a point opposite North Eighth Street in Ocean City, thence 75 feet wide into the Isle of Wight Bay. The modification authorized by the 1954 River and Harbor Act was de-authorized in December 1989. This work included 16- and 14-foot depth channels with widths from 300 to 100 feet from the Atlantic Ocean to the head of the harbor. Depths in the inlet channel and harbor refer to project datum. Depths in the bay channels refer to mean low water.

The elevation of mean low water in the bays above mean low water in the ocean at Ocean City varies from about 0.8 foot in the vicinity of the inlet to 1.7 feet at their heads. The mean range of ocean tide is 3.4 feet. The extreme range is from 3 feet below mean low water to about 3.5 feet above mean high water, a total of 9.9 feet. In the bays the mean range of tide varies from approximately 2.5 feet at the inlet to 0.3 foot at their heads. Greater fluctuations are caused by prolonged high winds. Federal cost of new work for the completed project was \$1,190,530, exclusive of \$500,000 contributed by local interests and exclusive of \$3,700,000 for rehabilitating the south jetty.

Local cooperation. Fully met except local interests must furnish disposal areas for future maintenance as needed.

Terminal facilities. On bay side of Ocean City: two storage basins, for pleasure and small commercial craft, and numerous privately owned pile-and timber piers and bulkhead wharves. At project harbor: a public landing about 1,000 feet long, several privately constructed bulkhead wharves open to the public for transaction of business with the owners, and a boat repair yard with a marine railway capable of handling boats up to about 150 tons. All piers and wharves are accessible by highway. Port facilities have been expanded to include all available space in the Fish Harbor.

Operations and results during fiscal year. Maintenance: Engineering and design activities were performed for future maintenance dredging of the project.

7. POTOMAC AND ANACOSTIA RIVERS, DC, COLLECTION AND REMOVAL OF DRIFT

Location. Project applies to the Potomac and Anacostia Rivers, Washington, DC, and their tributaries.

Existing project. Collection and removal of drift from the waters of the Potomac and Anacostia Rivers and their tributaries in the Washington area from the head of tidewater to Mount Vernon, VA. Total length of project, considering both sides of the waterway, is about 50 miles.

Local cooperation. None required.

Terminal facilities. See Section 22 of this text.

Operations and results during fiscal year. Maintenance: Operations by hired labor consisted of collection and disposal of 124,200 cubic feet of driftwood, ranging from small blocks up to timbers of large dimensions.

8. POTOMAC RIVER BELOW WASHINGTON, DC

Location. Potomac River is formed 21 miles below Cumberland, MD, and flows southeasterly about 285 miles and enters Chesapeake Bay, about 80 miles from Atlantic Ocean. Washington, DC is 108 miles upstream of mouth, and head of tidewater is at mile 117. (See Coast and Geodetic Survey Charts No., 12233, 12286, 12287, 12288, and 12289.)

Existing project. Provides for a channel 24 feet deep and 200 feet wide between the mouth of the river and Giesboro Point at Washington, DC—a distance of 108 miles. Plane of reference is mean low water. Tidal ranges are: mean, 1.3 feet at mouth, 2.9 feet at Washington; irregular, 2 feet at mouth, 4.5 feet at Washington; extreme, about 6 feet a mouth, 10.7 feet at Washington. Federal cost of new work for the completed project was \$153,836.

Local Cooperation. None required.

Terminal Facilities. In general, the improvement is a main river channel, and terminal facilities are only served where the channel runs close to either bank of river.

Operations and results during fiscal year. Maintenance: Engineering and design activities were performed for future maintenance dredging of the project.

9. TILGHMAN ISLAND HARBOR, MD

Location. This harbor (also called Dogwood Harbor) is about 60 miles southeast of Baltimore Harbor on the eastern side of Tilghman Island, which lies between Chesapeake Bay and Choptank River. (See Coast and Geodetic Survey Chart 12266.)

Existing project. Provides for a channel 60 feet wide and 6 feet from that depth in Harris Creek to and including an anchorage basin of irregular shape 500 feet long by 200 feet wide, with a 6-foot depth. On October 20, 1980, the Chief of Engineers under authority of Section 107 of the 1960 River and Harbor Act, as amended, authorized construction of a breakwater at the harbor entrance. The estimated first cost of this work is \$249,000, of which \$245,000 is Federal cost and \$4,000 is required local cash contributions.

Local cooperation. Fully complied with for work authorized May 13, 1966, except that local interests must furnish all lands, and rights-of-way for future maintenance as needed and maintain a suitable public landing as needed with adequate approaches thereto. For work authorized by the Chief of Engineers October 20, 1980, local interests have fully complied (excluding furnishment of lands and right-of-ways for future maintenance). For details of requirements see section 23 of the 1982 Annual Report.

Terminal facilities. Consists of one pier operated by a local seafood packer for transfer of seafood to processing plant. Local interests constructed a public landing and approach road thereto in accordance with terms of local cooperation as part of the project development.

Operations and results during fiscal year. Maintenance: Maintenance dredging removed 12,000 cubic yards of dredged material at a contract cost of \$583,843.

10. WASHINGTON HARBOR, DC

Location. Within the District of Columbia at junction of the Anacostia River with the Potomac River which flows southeasterly 108 miles to the Chesapeake Bay. It is southerly 202 miles by water from Baltimore, MD, and northerly 195 miles from Norfolk, VA. (See U.S. Coast and Geodetic Survey Chart 12289.)

Existing projects. The Washington Harbor project provides for a channel in the Potomac River from Giesboro Point to Key Bridge, a second channel from Giesboro Point to the end of Washington Channel, and a third channel from the mouth of the Anacostia River to the foot of 15th Street, SE, with turning basins opposite the Naval Weapons Plant (800 feet wide 2,400 feet long) and at the head of the Anacostia Channel (400 feet square). Channel dimensions are 24 feet deep and 400 feet wide except upstream from Anacostia Channel Bridge where the width is reduced to 200 feet and from Giesboro Point to a point 3,000 feet downstream of Arlington Memorial Bridge and above

Easby Point where channel dimensions are 20 feet deep and 200 feet wide. Channel lengths including turning basins are: Virginia Channel, 5,000 feet; Washington Channel, 10,000 feet; and Anacostia River, 15,000 feet; and operations and maintenance of the inlet gates and lock and the outlet gates of the Tidal Basin constructed under a previous project to flush Washington Channel. Plane of reference is low-water datum which is .35 foot below mean low tide as observed from 1932 to 1942. Tidal ranges are: mean, 2.9 feet; irregular, 4.5 feet; and extreme, 10.7 feet. Federal cost of new work for the completed project was \$162,006.

Local cooperation. None required.

Terminal facilities. There are four wharves generally of bulkhead type on Virginia Channel that are privately owned and not open to the public except by special arrangement. On Washington Channel there are four piers under jurisdiction of District of Columbia, two of which are open to the public and one open to the public by special arrangement. In Anacostia River there are four privately owned piers and eight government piers and slips. None of the piers is open to the public except by special arrangement. Terminal facilities are considered adequate for existing commerce.

Operations and results during fiscal year. Maintenance: The tidal basin gates were inspected and maintained by hired labor. Replacement of the tidal basin outlet gates was completed at a cost of \$602,000 .

11. WICOMICO RIVER, MD

Location. Wicomico River has its source in northern part of Wicomico County, MD, and flows generally southwardly emptying into Monie Bay, a tributary of Tangier Sound on the east side of Chesapeake Bay about 85 miles southeast of Baltimore. Webster Cove is the site of an improved small-boat harbor on southeast bank of Wicomico River about 3 miles above the mouth. (See U.S. Coast and Geodetic Survey Charts 12261.)

Existing project. Channel 14 feet deep and 150 feet wide from Chesapeake Bay to Salisbury, about 37 miles long, including about 12 miles from the mouth of river to Chesapeake Bay; 14 feet deep in channels and turning basins in north and south prongs with channel widths of 100 feet, and a channel 6 feet deep and 60 feet wide extending from 6-foot contour in Wicomico River to and including a basin in Webster Cove of the same depth, 100 feet wide and 400 feet long; and extension of basin 200 feet long and 100 feet wide on each side. Plane of reference is mean lower low water. Mean range of tide is about 3 feet, and extreme tidal range is 4.4 feet. Cost of new work for the completed project was \$421,609, exclusive of amounts expended on the previous project.

Local cooperation. Fully met, except that local interests are to furnish disposal areas for future

maintenance as needed and hold the United States free from such damages as may occur to public or leased oyster beds.

Terminal facilities. Present waterfront at Salisbury consists of pile-and-timber bulkheads with earthfills. Some wharves have warehouses and factories with mechanical freight-handling and petroleum handling facilities. All terminals are privately owned. A shipyard, with two marine railways with capacities of 1,200 and 500 tons, respectively, is on right bank of river below prongs. Areas for development of new terminals on north prong are limited. Areas for considerable expansion of terminal facilities are available on main river. There is a pile-and -timber wharf about 4 miles above the mouth of river at Mount Vernon. A wharf of similar construction is at White Haven. There is a county wharf at head of basin in Webster Cove, a pile-and-timber pier at oyster house on southwest side of basin, a T-shaped pile-and-timber pier at cafe on southwest side of basin and several small timber piers on walkways that local interests constructed around the basin. Fueling facilities are available for construction of additional facilities when required.

Operations and results during fiscal year. Maintenance: Maintenance dredging in the lower river channel near Webster Cove removed 115,000 cubic yards of dredged material at a contract cost of \$1,921,587

12. RECONNAISSANCE AND CONDITION SURVEYS

(See Table 4-H at end of chapter.)

13. NAVIGATION WORK UNDER SPECIAL AUTHORIZATION

Fiscal year costs were \$4,912 for Section 107 Coordination; \$6,140 for Coan River, VA; \$35,947 for Nanticoke Harbor, MD; and \$23,040 for St. Jerome Creek, St. Mary's County, MD.

SHORE PROTECTION

14. ASSATEAGUE ISLAND, MD

Location. The Town of Ocean City and adjacent areas of Worcester County comprise an area of 625 square miles including Assateague Island, Ocean City Inlet, and Chincoteague, Sinepuxent, Assawoman, and Isle of Wight Bays on the Eastern Shore of Maryland. Adjacent to Ocean City is the Assateague Island National Seashore and State Park.

Existing project. The project involves the short-term and long-term restoration of Assateague Island. Completed in December 2002, tThe short-term

restoration plan included the dredging of approximately 1.4 million cubic metersyards from Great Gull Bank and placing it on Assateague Island in the area between 1.6 miles and 7.2 miles south of the south jetty. The beach waswill be widened varying distances based on the varying erosion rates. A and a low- storm berm wasill be constructed to elevation 3.3 meters. The long-term portion of the project consists of the mobile bypassing of 190,000 cubic yards of sand around the inlet that occurs in the spring and in the fall. Both the short-term and long-term projects include monitoring components. The project area is composed of 4.7 miles of National Park Service and 0.9 miles of State of Maryland land.

Local cooperation. The sponsor for the project is the National Park Service who administers the Assateague Island National Seashore. The National Park Service will provide lands, easements and rights-of-way for the initial construction work. Short-term costs will be 100% Corps funded and Long-term costs will be 50% Corps and 50% National Park Service.

Operations and results during fiscal year. New Work: Monitoring activities for both the short-term and long-term portions of the project continued throughout the fiscal year. Mobile bypassing of sand by the Wilmington District's dredge "Currituck" was completed in Spring 2007 and Fall 2007.

15. ATLANTIC COAST OF MARYLAND

Location. The project is located on Fenwick Island at Ocean City, MD, which is about 35 miles south of the entrance to Delaware Bay. (See U.S. Coast and Geodetic Survey Charts 1220.)

Existing project. The authorized project provides for a steel sheetpile bulkhead along the oceanward edge of the boardwalk from about 4th Street to 27th Street and a sand dune from 27th Street to about 0.3 mile across the Delaware line. The bulkhead is fronted by a 165-foot wide beach, and the dune is fronted by a 100-foot wide beach. The project also provides for periodic nourishment over the 50-year project life. The current estimated total project cost is \$500,000,000 (including a future inflation allowance through the project completion) which includes \$44,881,000 for initial construction and \$455,119,000 for periodic nourishment.

Local cooperation. The State of Maryland is the project sponsor and the Local Cooperation Agreement was executed March 30, 1990. The sponsor is required to: provide lands, easements, and rights-of-way; modify or relocate buildings, utilities, roads, bridges and other facilities; pay 35% of the first costs and 47% of periodic nourishment costs; and bear all costs of operation maintenance, replacement and major

rehabilitation of storm damage reduction facilities. To date, the sponsor has fully met these requirements.

Operations and results during fiscal year. The latest renourishment project was completed in November 2006. Monitoring work continues. The Corps determined that projects in some areas experiencing severe erosion were not Federally-justified. The draft NEPA document to address new borrow areas for future nourishment projects is still underway.

16. SHORE PROTECTION WORK UNDER SPECIAL AUTHORIZATION

Shore Protection pursuant to Sec. 103 of Public Law 727, as amended (pre-authorization). Fiscal year costs were \$54,649 for Section 103; \$22,235 for Conquest Preserve, Queen Anne's County; \$8,717 for Franklin Point Park, Anne Arundel County, MD; \$5,628 for Mayo Beach, Anne Arundel County, MD; and \$4,566 for Pleasure Island, Baltimore County, MD.

FLOOD CONTROL

17. CUMBERLAND, MD, AND RIDGELEY, WV

Location. On the North Branch of the Potomac River, 21 miles upstream from its junction with the South Branch of the Potomac River and 197 miles upstream from Washington, DC. The Chesapeake and Ohio (C&O) Canal stretches 184.5 miles along the Potomac River from the District of Columbia to its terminus in Cumberland, MD, Allegany County. (See Geological Survey Quadrangles, Frostburg and Flintstone, MD, WV, and PA.)

Existing project. Channel improvements on the North Branch of Potomac River from the Western Maryland Railway bridge in South Cumberland upstream to the mouth of Wills Creek, with levees and fill along the left bank and levees along the right bank from downstream corporate limits of Ridgeley, WV, to a point about 150 feet above Johnson Street Bridge; channel improvements along Wills Creek from its mouth upstream to a point in the Narrows about 500 feet upstream from the highway bridge on U.S. Highway 40; levee and flood wall in West Cumberland, MD, on the left bank of the North Branch of the Potomac River from the mouth of Wills Creek upstream to Kelly Boulevard; levee and flood wall in Ridgeley, WV, on the right bank of the North Branch of the Potomac River from Carpenter Avenue upstream to Patapsco Street near the upstream corporate limits of Ridgeley, WV; interior drainage facilities in Cumberland and West Cumberland, MD, and Ridgeley, WV; removal of the Chesapeake and Ohio Canal dam

and construction of a new industrial dam on the North Branch of the Potomac River immediately above mouth of Wills Creek; and alteration and reconstruction of highway and railroad bridges.

Section 580 of WRDA 99 authorizes the Secretary of the Army to undertake "restoration of the historic Chesapeake and Ohio Canal substantially in accordance with the Chesapeake and Ohio Canal National Historic Park"...The plan envisioned is to re-build and rewater up to 1.1 miles of the historic Chesapeake and Ohio Canal terminus at Cumberland. The turning basin was filled in by the Corps in the 1950's as part of the Cumberland, MD-Ridgeley, WV Flood Protection Project. WRDA 2007 increased the project authorization from \$15 million up to \$25.75 million. How to maintain the Western Maryland Scenic Railroad connection to the CSX mainline needs to be resolved before the project can proceed beyond the completed quarter-mile portion.

Local cooperation. Fully met for the project. The City of Cumberland is the non-Federal sponsor for the new work. The local sponsor is required to provide 35% of the cost of the project, including lands, easements, rights-of-way, and relocations. In-kind services are permitted to count towards the sponsor's share to include those incurred prior to a signed project cooperation agreement. The National Park Service (NPS) is responsible for operation and maintenance (O&M).

Operations and results during fiscal year. New Work: None. The NPS has assumed O&M responsibilities. Maintenance: Normal operation and maintenance of the flood protection project continued. Repair of the most critical areas of deteriorated concrete in the Wills Creek channel were completed.

18. JENNINGS RANDOLPH LAKE, MD AND WV

Location. Project is located on the North Branch Potomac River on the state line between Garrett County, MD, and Mineral County, WV. The damsite is located approximately 7.9 miles upstream from the confluence with Savage River at Bloomington, MD. It is also about 5 air miles southwest of the tritowns of Luke and Westernport, MD and Piedmont, WV. (See Geological Survey quadrangle sheets, Kitzmiller and Westernport, MD.)

Existing project. The improvement consists of a rolled earth and rock fill dam with an impervious core and an 800-foot long dike on the left bank. Top of dam is 296 feet above streambed with a total length of 2,130 feet. When filled to spillway crest, the reservoir will extend about 6.6 miles upstream and inundate 965 acres. Flood control storage of 36,200 acre-feet is provided. Storage available for low flow augmentation for water supply and water quality improvement is

92,000 acre-feet. The reservoir controls a drainage area of 263 square miles. Recreation facilities are provided for picnicking, camping and boating. Final project cost is \$176,325,300.

Local cooperation. See page 4-15 of the 1977 Annual Report for requirements. A water supply contract between the Federal Government and the Washington Suburban Sanitary Commission in concert with the Fairfax County Water Authority, VA and the District of Columbia was executed for repayment of all water supply costs. The first of 50 annual payments began in July 1981. Federally approved water quality standards put into effect by Maryland, Virginia, West Virginia, and the District of Columbia are considered satisfactory assurances of intent to control pollution. Satisfactory assurances have been received from Maryland, West Virginia, and Virginia that they will protect downstream channels from encroachment that would adversely affect operation of the project. Local interests operate a white water access area below the dam. The State of Maryland has constructed a recreation area on the Maryland side of the lake.

Operations and results during fiscal year. New Work: Preparation of plans and specifications for the dam safety assurance project continued. Maintenance: Normal operation and maintenance of the project continues.

19. LACKAWANNA RIVER BASIN, PA

Flood Control Act of 1962 authorized construction of Aylesworth Creek Lake, Fall Brook Lake, and local protection works on Lackawanna River at Scranton, PA, substantially as recommended by the Chief of Engineers (S. Doc. 141, 87th Cong., 2d Sess.). The Basin includes an area of 346 square miles in northeastern Pennsylvania.

19A. AYLESWORTH CREEK LAKE, PA

Location. Project is located in Lackawanna County on Aylesworth Creek about one mile above its confluence with the Lackawanna River, near the community of East Jermyn, PA.

Existing project. Provides for an earthfill dam with a maximum height of 90 feet above streambed and a top length of 1,200 feet. The spillway located adjacent to the left abutment is an open cut channel 80 feet wide with a concrete sill. The outlet works consist of a 3-foot diameter uncontrolled conduit. Project controls a drainage area of 6.2 square miles and provides flood control storage of 1,700 acre-feet equivalent to 5.1 inches of runoff from the drainage areas. The lake will extend about 4,600 feet and inundate 87 acres when filled to spillway crest. Recreation facilities constructed by local interests include a bathing beach, bathhouse,

and picnic area. Federal cost of new work was \$2,268,200 of which \$2,153,559 was for construction and \$114,641 for lands and damages. In addition \$52,200 Federal and \$52,200 non-Federal funds were expended for construction of bathhouse facilities under the recreation facilities for completed projects program.

Local cooperation. None required. Lackawanna County operates and maintains limited day use facilities including a small beach.

Operations and results during fiscal year. Maintenance: Normal operation and maintenance of the project continued.

20. LACKAWANNA RIVER, OLYPHANT, PA

Location. The project is located along the Lackawanna River in Lackawanna County, Pennsylvania. (See Geological Survey quadrangle sheets, Olyphant, PA)

Existing project. The project provides 100-year level of protection and includes a combination of approximately 5,200 feet of levee and floodwall, a closure structure, interior drainage structures, and an upgraded flood forecast and warning system. Project completed in October 2006.

Local cooperation. The Borough of Olyphant is the sponsor for the project.

Operations and results during fiscal year. The sponsor is responsible for the operation and maintenance of the completed project.

21. RAYSTOWN LAKE, RAYSTOWN BRANCH, JUNIATA RIVER, PA

Location. Dam site is on Raystown Branch, about 5.5 miles upstream from its confluence with Juniata River. Project is about 10 miles south of Huntingdon, PA. (See Geological Survey Quadrangle sheets, Huntingdon, Mt. Union, Broad Top and Everett, PA.)

Existing project. The rock and earthfill dam rises 225 feet above streambed with a gated concrete spillway and auxiliary spillway in the right abutment. The reservoir has a storage capacity of 762,000 acre-feet, of which 248,000 acre-feet are for flood control, 476,000 acre-feet for recreation and water quality control, and the balance for sediment reserve. At full flood control pool elevation, the reservoir would inundate 10,800 acres and extend 34 miles upstream. Recreation facilities are provided for boating, fishing, camping, swimming, hunting, hiking, and picnicking. Federal cost for new work was \$77,408,700 of which \$46,120,931 was for construction and \$31,287,769 was for lands and damages including relocations. Construction of a private hydroelectric plant at Raystown Lake was completed May 1988.

Local cooperation. None required.

Operations and results during fiscal year. Maintenance: Normal operation and maintenance of the project continued. Repairs to the sewage treatment plant in the Seven Points Recreation Area were completed.

22. LACKAWANNA RIVER, SCRANTON, PA

Location. The project is located along the Lackawanna River in the northeastern portion of the Commonwealth of Pennsylvania in Lackawanna County. (See Geological Survey Quadrangle sheets, Scranton, PA.)

Existing project. The project provides 100-year level of flood protection for the communities of Albright, Plot, and Green Ridge. The Albright portion of the project was completed in September 2003, and provides for 6,800 feet of earth levee, 700 feet of concrete floodwall, 3 closure structures, interior drainage facilities, 2,700 feet of gabion slope protection, an improved flood warning system, removal of a railroad bridge, access ramps, and associated cultural mitigation. Construction is currently underway in the communities of Plot and Green Ridge. This portion of the project consists of 13,700 feet of earth levee and floodwall, 5 closure structures, and interior drainage facilities. The current estimated total project cost is \$53,000,000.

Local cooperation. The City of Scranton is the sponsor for the project. The local sponsor is required to: provide lands, easements and rights-of-way; modify or relocate buildings, utilities, roads, bridges, and other facilities; pay a minimum of 5% of the cost allocated to flood control; and bear all costs of operation, maintenance, and replacement of flood control facilities after construction.

Operations and results during fiscal year. New Work: The Corps completed construction on the Albright portion of the project in September 2003. On September 28, 2005, the Corps awarded a contract to Tri-State Construction Company, Inc./KC Construction Company, Inc., in the amount \$9,197,236 for the construction of levees, floodwalls, and drainage structures in Plot and the upstream end of Green Ridge. The overall project is scheduled to be completed in December 2009.

23. WEST VIRGINIA AND PENNSYLVANIA FLOOD CONTROL

Location. The projects within the Baltimore District are located in the City of Altoona, Logan Township and Allegheny Township; Carbon Township; Coalmont Borough; the Borough of Everett; and Bedford County.

Existing project. Section 581 of the Water Resources Development Act of 1996, as amended, provides for design and construction of structural and non-structural flood control, streambank protection, stormwater management and channel clearing and modification measures in the Lower Allegheny and Lower Monongahela (Pittsburgh District) and West Branch Susquehanna River and Juniata River basins, Pennsylvania at a level of production that is sufficient to prevent any future losses to communities in the basins from flooding such as occurred in January 1996, but no less than a 100-year level of flood protection with respect to measures that incorporate levees or floodwalls. The current estimated total project cost is \$16,532,000 which includes a future inflation allowance through project completion.

Local cooperation. Local sponsors identified to date include the Borough of Everett, Logan Township/Altoona, and Coalmont Borough. The sponsors are required to: provide lands, easements, and rights-of-way; modify or relocate utilities, roads, bridges, and other facilities; provide cash contributions such that their total share, including LERRDS, is a minimum of 25 percent; and bear all costs of operation and maintenance.

Operations and results during fiscal year. Construction activities for Coalbank Run in Coalmont Borough was completed in November, 2006.

24. SOUTHERN NEW YORK FLOOD CONTROL PROJECTS

Authorized plan provides for construction of reservoirs and related flood control works for protections are located in the upper watershed of the Susquehanna River to and including the Chemung River.

24A. ADDISON, NY

Location. At confluence of Tuscarora Creek and Canisteo River in the City of Addison, NY. (See Geological Survey map for Addison, NY.)

Existing project. Provides for construction of about 3,100 feet of earth levee and 700 feet of concrete flood wall on the right bank of the Canisteo River, extending from high ground on Steuben Street near the Baltimore & Ohio Railroad to the mouth of Tuscarora Creek; removal of existing dam, mill, and raceway from the channel; construction of about 2,200 feet of earth levee on the left bank of Tuscarora Creek, extending from Tuscarora Street to Canisteo River; construction of 4,600 feet of earth levee on the right bank of Tuscarora Creek, extending from high ground at the southwest edge of the village to high ground at the southeast edge of the village; and appurtenant drainage structures.

Local cooperation. Fully met.

Operations and results during fiscal year. Maintenance: Normal operation and maintenance of the project continued.

24B. ALMOND LAKE, NY

Location. Dam is located two miles upstream from Hornell, NY, on Canacadea Creek, a tributary of the Canisteo River. (See Geological Survey map for Hornell, NY.)

Existing project. The dam is an earthfill structure, 1,260 feet long rising 90 feet above the streambed, with a concrete spillway and a gated outlet conduit in the left abutment. The outlet works consist of three 5-foot by 10-foot service gates and three emergency gates of the same size. The reservoir has a storage capacity of 14,640 acre-feet at spillway crest. The project controls a drainage area of 56 square miles, 36 percent of the watershed of the Canisteo River upstream from Hornell, NY. Recreation facilities include a boat-launching ramp and dock, bathing beach, picnic area, and tent and trailer camping area.

Local cooperation. None required. Local interests have developed recreational facilities at the lake in conjunction with the Federal Government. These facilities are operated and maintained by the Steuben County Board of Supervisors.

Operations and results during fiscal year. Maintenance: Normal operation and maintenance of the project continued.

24C. ARKPORT DAM, NY

Location. Dam is located five miles upstream from Hornell, NY, on the Canisteo River, a tributary of the Chemung River which flows into the Susquehanna River. (See Geological Survey map for Arkport, NY.)

Existing project. The dam is an earthfill structure, 1,200 feet long, exclusive of spillway, rises 113 feet above the streambed, with a concrete spillway and an ungated outlet in the right abutment. The outlet structure consists of an 8-foot diameter reinforced concrete lined conduit, 660 feet long. A cast iron nozzle placed in the lower end of the conduit, reduced the outlet size to 4 feet 4 inches. The reservoir has a storage capacity of 7,950 acre-feet at spillway crest. The project controls a drainage area of 31 square miles, 20 percent of the watershed of the Canisteo River upstream from Hornell.

Local cooperation. None required.

Operations and results during fiscal year. Maintenance: Normal operation and maintenance of the project continued.

24D. AVOCA, NY

Location. On the Cohocton River at the Village of Avoca, NY, about 30 miles upstream from the confluence of the Cohocton and Chemung Rivers. (See Geological Survey map for Avoca, NY.)

Existing project. Provides for improvement and realignment of about 8,300 feet of Cohocton River channel, extending from above the Erie Railroad to below the junction of Main Street and U.S. Highway 15; construction of about 8,500 feet of earth levee on left bank of the Cohocton River, extending from high ground above Alexander Avenue to about 1,300 feet below the junction of Main Street and U.S. Highway 15; and 4,500 feet of earth levee on the right bank of Salmon Creek, extending from high ground above Alexander Avenue to the Erie Railroad; a new highway bridge for U.S. Highway 15 over Cohocton River, raising of the Erie Railroad bridge 4 feet; and appurtenant drainage structures.

Local cooperation. Fully met.

Operations and results during fiscal year. Maintenance: Normal operation and maintenance of the project continued.

24E. BINGHAMTON, NY

Location. At the confluence of the Chenango and Susquehanna Rivers in the City of Binghamton, NY. (See Geological Survey map for Binghamton, NY.)

Existing project. Provides for construction of earth levees, concrete flood walls, and appurtenant drainage structures, consisting of about 850 feet of channel excavation and about 1,375 feet of earth levee along Phelps Creek, Town of Port Dickinson; new concrete wall on the right bank of the Chenango River, extending downstream from high ground near the city limits to an existing flood wall below DeForest Street, a distance of about 520 feet; about 150 feet of concrete wall just below Cutler Dam; about 180 feet of concrete wall at the pumphouse near McDonald Avenue; raising existing earth levees on the right bank of Chenango River, extending from Cutler Dam downstream for about 1,220 feet; about 2,915 feet of earth levee on the left bank of Chenango River north of the city limits in the Village of Port Dickinson, extending from Church Street to high ground just north of the city line; about 3,900 feet of earth levee on the left bank of Chenango River, extending from DeForest Street to Cutler Dam; new concrete flood walls and riverbank revetment for about 5,570 feet extending on the left bank of Chenango River from Cutler Dam to the junction with the Susquehanna River; about 540 feet of new concrete flood wall and raising about 1,085 feet of concrete flood wall on the right bank of the Susquehanna River, extending from the Delaware, Lackawanna & Western Railroad downstream to Tompkins Street Bridge; about 1,940 feet of earth levee; about 1,940 feet of concrete flood wall and capping about 125 feet of concrete flood

wall, on the right bank of the Susquehanna River from Stuyvesent Street to mouth of Chenango River; about 8,380 feet of earth levee, about 2,180 feet of new concrete flood wall on the left bank of the Susquehanna River extending from Pierce Creek to high ground at State Highway 17, a debris dam and flume between Corbett and Hotchkiss Streets and a concrete pressure conduit, 1,060 feet long to carry flow of Park Creek from Vestal Avenue to the Susquehanna River; about 665 feet of levee extending from the Erie Railroad to high ground along the right bank of Chamberlain Creek near the mouth; closure structures at Erie Railroad and at Court Street; a weir, a drop structure, and about 1,800 feet of earth levee, about 2,235 feet of channel excavation, about 645 feet of channel paving and raising, about 470 feet of existing concrete flood wall, and about 200 feet of new concrete flood wall for improvement of Pierce Creek from its mouth to about 1,000 feet about Conklin Avenue; and appurtenant drainage structures. Improvement, supplemented by authorized flood control dams above the area, will provide protection for the City of Binghamton against a flood discharge about 20 percent greater than the maximum flood of record, which occurred in July 1935 on the Chenango River and in March 1936 on the Susquehanna River.

Local cooperation. Fully met.

Operations and results during fiscal year. Maintenance: Normal operation and maintenance of the project continued. Interim repairs were completed to the Pierce Creek channel, which sustained damage during a high water event which occurred in November 2006. Cost of repairs was \$250,000.

24F. CANISTEO, NY

Location. On Purdy and Bonnets Creeks in the Town of Canisteo, NY, situated along the south side of the Canisteo River, at the confluence of Bonnets Creek and in the Canisteo River. (See Geological Survey map for Canisteo, NY.)

Existing project. Provides for construction of about 8,000 feet of earth levees on the right bank of the Canisteo River, extending from high ground 1,570 feet west of State Highway Route 21 above the Town to a point at the intersection of Ordway Lane and East Main Street; about 7,400 feet of earth levee on the left bank of Purdy and Bennetts Creeks, extending from the Main Street Bridge to high ground above Greenwood Street 1,000 feet of earth levee on the right bank of Bennetts Creek extending upstream from the Main Street Bridge; a concrete check dam with wing levees from Greenwood Street; a new highway bridge at Greenwood Street; channel excavation in Bennetts and Purdy Creeks; and appurtenant drainage structures.

Local cooperation. Fully met.

Operations and results during fiscal year. Maintenance: Normal operation and maintenance of the project continued.

24G. CORNING, NY

Location. On the Chemung River in the City of Corning, NY, about 44 miles upstream from the confluence of Chemung River and North Branch of Susquehanna River. (See Geological Survey map for Corning, NY.)

Existing project. Plan of improvement provides for construction of a pumping station, earth levees, and concrete flood walls, consisting of about 4,300 feet of earth levee, enlargement of about 8,610 feet of existing earth levee and about 3,100 feet of concrete flood wall on the right bank of the Chemung River, extending from the Erie Railroad Bridge to high ground at Park Avenue below the City; about 200 feet of concrete flood walls, about 2,500 feet of earth levees and enlargement of about 11,500 feet of existing earth levee on the left bank of the Chemung and Cohocton Rivers, extending from the Erie Railroad Bridge over Cohocton River to the mouth of Post Creek; about 2,500 feet of earth levee and enlargement of about 4,700 feet of existing earth levee on the right bank of Post Creek; about 2,500 feet of earth levee and enlargement of about 4,700 feet of existing earth levee on the right bank of Post Creek from its mouth to Watkins Street; realignment of about 3,000 feet of channel, about 8,800 feet of earth levee, about 3,000 feet of channel excavation, a pressure conduit about 400 feet long, a drop structure and a weir for improvement of Cutler Creek, extending from its mouth to high ground at Deckertown Road and Hornby Road; and appurtenant drainage structures. Flood protection on Monkey Run was authorized by the Flood Control Act of 1950. Plan of improvement provides for construction of 2,010 feet of open flume, 2320 feet of pressure conduit storm sewers, and appurtenant facilities between the existing improved channel above Sixth Street and the Chemung River at a point immediately east of Pine Street East. Modified improvement will provide protection for the City of Corning against a flood discharge in Chemung River approximately equal to the maximum flood of record, which occurred in May 1945, and on tributary streams against floods of greater magnitude than known to date.

Local cooperation. Fully met.

Operations and results during fiscal year. Maintenance: Normal operation and maintenance of the project continued.

24H. EAST SIDNEY LAKE, NY

Location. Dam is located near East Sidney, NY, on the Ouleout Creek, about five miles above the

confluence of the creek with the Susquehanna River. (See Geological Survey map for Franklin, NY.)

Existing project. The dam is an earthfill and concrete structure, 2,010 feet long, including spillway, rises 130 feet above the streambed and consists of a concrete gravity-type section with a compacted earth-dike section at the right abutment. The outlet works consist of five rectangular conduits each 3.5 feet by 5.85 feet and 105 feet long. The reservoir has a storage capacity of 33,500 acre-feet at spillway crest. The project controls a drainage area of 102 square miles which is 93 percent of the Ouleout Creek drainage area, and 5 percent of the watershed of the Susquehanna River upstream from Binghamton, NY, exclusive of the separately controlled Chenango River. Recreation facilities include a bathing beach, picnic and camping areas, and boat-launching and docking facilities.

Local cooperation. None required. The Town of Sidney, NY, cooperated in the development of recreation facilities and operations and maintains all the facilities with the exception of the recreational pool, which is the responsibility of the Federal Government.

Operations and results during fiscal year. Maintenance: Normal operations and maintenance of the project continued. A new pool of record was attained at the project in June 2006.

24I. ELMIRA, NY

Location. On the Chemung River in the City of Elmira, NY, about 27 miles stream from the confluence of the Chemung River and North Branch of Susquehanna River (See Geological Survey map for Elmira, NY).

Existing project. Provides for about 17,700 feet of earth levees, and about 4,100 feet of concrete flood wall on the right bank of the Chemung River, extending from South Hoffman Street to a point below the city near the upper end of Big Island; about 12,100 feet of earth levee and about 6,300 feet of concrete wall on the left bank of the Chemung River extending from Durland Avenue to the Delaware, Lackawanna & Western Railroad at the mouth of Newton Creek; about 10,000 feet of earth levee on right bank of Newton Creek, extending from about the intersection of Delaware, Lackawanna & Western Railroad and East Church Street to high ground near intersection of Sullivan and Warren Streets; about 4,300 feet of earth levee on the right bank of Divan Creek; about 2,000 feet of concrete conduit enclosing Hoffman Brook from West Second Street to the Chemung River; clearing islands and riverbanks of trees and brush for about 3.5 miles in the Chemung River; about 14,300 feet of earth levee on the left bank of Seely Creek, extending from the Erie Railroad to high ground approximately 1,000 feet northwest of the intersection of South Broadway and Pennsylvania Avenue; a pumping plant for disposal

of interior drainage; an interceptor sewer about 6,000 feet long varying in size from 48 to 96 inches in diameter; and appurtenant structures.

Local cooperation. Fully met.

Operations and results during fiscal year. Maintenance: Normal operation and maintenance of the project continued.

24J. HORNELL, NY

Location. On the Canisteo River in the City of Hornell, NY, about 42 miles upstream from the confluence of the Canisteo and Tioga Rivers. (See Geological Survey map for Canisteo, NY.)

Existing project. Provides for channel realignment and earth levees, concrete flood walls, and check dams consisting of: realignment of about 4,600 feet of the Canisteo River channel, and about 5,800 feet of earth levee on its right bank, extending from Seneca Street upstream to the junction of the Pittsburgh, Shawmut & Northern Railroad and the Erie Railroad; about 4,500 feet of earth levee, extending on both sides of Seneca Street from the Canisteo River to Wrightman Avenue and the junction of Cleveland Avenue and Bethesda Drive; about 7,200 feet of earth levee, about 2,500 feet of concrete flood wall, and raising about 1,500 feet of existing concrete flood wall, on the right bank of the Canisteo River, and about 12,000 feet of channel improvement, extending from Seneca Street to the Erie Railroad; about 2,500 feet of earth levee, about 2,100 feet of concrete flood wall on the left bank of the Canisteo River extending from Seneca Street to the Erie Railroad; about 2,500 feet of earth levee, about 2,100 feet of concrete flood wall on the left bank of the Canisteo River extending from a point opposite Walnut Street to the Erie Railroad; a ring-earth levee about 2,800 feet long around the sewage-disposal plant on the left bank of the Canisteo River; about 4,500 feet of realignment and improvement of the Canisteo River Channel with about 4,500 feet of earth levee on its right bank extending from Cedar Street downstream to about 1,400 feet about East Avenue; about 2,400 feet of channel paving, 1,400 feet of earth levee, raising about 1,900 feet of concrete flood wall, and construction of one check dam on Canacadea Creek; about 1,600 feet of channel paving and construction of three check dams on Chauncey Run with about 300 feet of new wall and about 300 feet of capping; a weir, a check dam, 3,030 feet of channel paving, 4,800 feet of flood walls and levees, and related work on existing walls, on Crosby Creek; removal of 6 bridges, erection of 4 bridges, miscellaneous bridge structures, and 3 drop structures; and appurtenant drainage structures and small stream control works. Improvement, supplemented by Arkport and Almond Reservoirs above the area, provides protection for the City of Hornell against a flood

discharge approximately double the maximum flood of record, which occurred in July 1935.

Local cooperation. Fully met.

Operations and results during fiscal year.

Maintenance: Normal operation and maintenance of the project continued. Hurricane Ivan supplemental funding (\$16,000) was received for debris cleanup.

24K. LISLE, NY

Location. On the Tioughnioga River in the Village of Lisle, NY, about 12 miles upstream from the confluence of the Tioughnioga and Chenango Rivers. (See Geological Survey map for Lisle, NY.)

Existing project. Provides for channel realignment and construction of earth levees and concrete flood walls, consisting of: relocation of about 3,000 feet of Dudley Creek Channel, extending from 1,200 feet west of the intersection of Cortland and Main Streets to the confluence with Tioughnioga River; realignment of some 5,700 feet of Tioughnioga River Channel east of the Village; about 4,150 feet of earth levee and 970 feet of concrete wall on the right bank of Dudley Creek and Tioughnioga River; realignment of some 5,700 feet of Tioughnioga Street to the railroad crossing on River Street; raising about 1,860 feet of the Delaware, Lackawanna & Western single track railroad over the levee; relocation of about 1,600 feet of Cortland Street; a new bridge over relocated Dudley Creek; and appurtenant drainage structures.

Local cooperation. Fully met.

Operations and results during fiscal year.

Maintenance: Normal operation and maintenance of the project continued.

24L. OXFORD, NY

Location. On the Chenango River in the Village of Oxford, NY, about 40 miles upstream from the confluence of the Chenango and Susquehanna Rivers. (See Geological Survey map for Oxford, NY.)

Existing project. Provides for earth levees and clearing of Chenango River Channel, consisting of about 2,100 feet of earth levees on the left bank of the Chenango River, extending from high ground near Cemetery Drive and running mostly along the railroad to high ground near Main Street; removal of dam and island below Main Street; raising the Delaware, Lackawanna & Western Railroad over the levee; and appurtenant closure and drainage structures. Improvement provides protection for the Village of Oxford on the left bank against a flood discharge substantially larger than the maximum flood of record, which occurred in July 1935.

Local cooperation. Fully met.

Operations and results during fiscal year.

Maintenance: Normal operation and maintenance of the project continued.

24M. WHITNEY POINT LAKE, NY

Location. Dam is located near Whitney Point, NY, on the Otselic River about 0.7 mile upstream from its confluence with Tioughnioga River. (See Geological Survey map for Whitney Point and Willet, NY.)

Existing project. The dam is an earthfill structure, 4,900 feet long, exclusive of a spillway, rises 95 feet above the streambed, with a concrete spillway and gated outlet in the left abutment. The outlet works consist of three 5-foot by 10-foot gates and one emergency gate of the same size. The reservoir has a storage capacity of 86,440 acre-feet at spillway crest. The project controls a drainage area of 255 square miles, the entire watershed of Otselic River, or 16 percent of the Chenango River watershed upstream from Binghamton, NY. Recreation facilities, constructed in cooperation with local interests, provide for swimming, picnicking, camping, boating, fishing, and hunting.

Local cooperation. None required. Local interests operate and maintain all of the recreation facilities.

Operations and results during fiscal year. Plans and specifications for the Section 1135 project modification were completed. This modification consists of improvements to several recreational features, creation of a wetland enhancement area, and changes to reservoir operations to augment environmental releases. A construction contract for the recreational modifications was awarded in September 2007. Construction completion is scheduled for spring 2009. Maintenance: Normal operation and maintenance of the project continued.

24N. WHITNEY POINT VILLAGE, NY

Location. On the Tioughnioga River at the confluence of the Tioughnioga and Otselic Rivers, tributaries of the Susquehanna River. (See Geological Survey map for Whitney Point, NY.)

Existing project. Provides for channel realignment and earth levees, consisting of realignment of about 1,800 feet of Tioughnioga River Channel, above the confluence with Otselic River; about 7,100 feet of earth levee along the right bank of the Tioughnioga River, extending from high ground on Main Street above the Village to Collins Street just below the Village; and appurtenant drainage structures.

Local cooperation. Fully met.

Operations and results during fiscal year.

Maintenance: Normal operation and maintenance of the project continued.

**25. STILLWATER LAKE,
LACKAWANNA RIVER, PA**

Location. Dam is on the Lackawanna River, 39 miles from the mouth of the stream and about 4 miles upstream from Forest City, Susquehanna County, PA (See Geological Survey Quadrangle sheet, Honesdale, PA.)

Existing project. Dam is earthfill type, rising 77 feet above the streambed, with a controlled outlet conduit and side channel spillway in the left abutment. Reservoir capacity is 12,000 acre-feet, of which 11,600 acre-feet is flood control storage and the remainder is used to maintain the existing water supply reservoir for Forest City, PA, at this site. Reservoir area is 422 acres, and the pool extends about 2.1 miles upstream. Reservoir controls 52 percent of the watershed above Carbondale, 26 percent above Olyphant, and 17 percent above Scranton. Federal cost of new work, completed in 1965, was \$5,725,700 of which \$4,500,500 was for construction and \$1,225,200 was for lands and damages.

Local cooperation. None required. Section 2, Flood Control Act of June 28, 1938, applies. Pennsylvania Fish and Boat Commission operates and maintains a boat launch at the project.

Operations and results during fiscal year. Maintenance: Normal operation and maintenance of the project continued.

**26. SUSQUEHANNA RIVER FLOOD
CONTROL PROJECTS, NY AND PA**

Plan of improvement authorized by the 1958 Flood Control Act provides for construction of Cowanesque Lake, PA, Tioga-Hammond Lakes, PA, local protection works at Elkland, PA, and Nichols, NY, and channel improvements at Cortland, NY. This project plan supplemented the comprehensive flood control program for Southern New York and Northern Pennsylvania which included the Southern New York flood control project and Stillwater, Genegantslet, and South Plymouth Reservoirs.

26A. COWANESQUE LAKE, PA

Location. Dam is on the Cowanesque River about 2.2 miles above its confluence with Tioga River at Lawrenceville, PA. (See Geological Survey map for Tioga, PA.)

Existing project. The project provides for an earthfill dam 3,100 feet long and rising 151 feet above the streambed, an uncontrolled spillway in the right abutment, a gated conduit in the Valley floor, and flood control storage is 82,000 acre-feet. Relocation of the Town of Nelson to a new townsite was authorized by Section 121 of the Water Resources Development Act of 1976. The Federal cost of this new work was

\$106,030,700 of which \$61,743,600 was for construction and \$44,287,100 was for lands and damages and relocations (which includes \$5,755,000 for relocation of the Town of Nelson). Within the discretionary authority of the Chief of Engineers the project was modified in March 1983 in accordance with the Water Supply Act of 1958, as amended, and the Flood Control Act of 1944, as amended. The modification provides for reallocating 25,600 acre-feet of present flood control storage for water supply storage by raising the permanent pool from elevation 1,045 to 1,080 mean sea level. Other features include modifying the existing intake tower and two access ramps, stabilizing the reservoir slope near the relocated Town of Nelson, replacing existing day-use recreation facilities, and expanding both day-and overnight-use recreation facilities to accommodate an expected increase in annual visitation due to the larger pool. Estimated cost (October 1991) of the modification is \$55,198,00 of which \$1,257,00 is Federal (for expanded recreation facilities) and \$53,941,000 is non-Federal (which includes \$39,414,000 for reimbursement of the cost of existing flood control storage reallocation to water supply storage, \$13,270,000 cash contribution for the water supply modification, and \$1,257,000 cash contribution for expanded recreation facilities.)

Local cooperation. The Water Resources Development Act of 1976, which authorized relocation of the Town of Nelson, provides that before the Secretary of the Army acquires any real estate property for the new townsite, appropriate non-Federal interests shall furnish binding contractual commitments that all lots in the new townsite will be either occupied when available, replacements for open space and vacant lots in the existing town, or will be purchased by non-Federal interests at the fair market value. The required contractual agreement for local cooperation was executed with Nelson Township on August 25, 1977. The March 1983 project modification (discussed above) requires non-Federal interests repay 100 percent of the investment cost of project modifications allocated to water supply, to terrestrial wildlife habitat mitigation, and to in-kind replacement recreation, plus the allocated share of the project's original cost (escalated to current price levels). Additionally, they are required to pay annual costs of operation, maintenance, and major replacements allocated to water supply and to provide 50 percent of the cost of expanded recreation facilities, as well as, all operation, maintenance, and replacement costs for the expanded facilities. Water supply and recreation contracts were executed by the Assistant Secretary of the Army (Civil Works) and the Susquehanna River Basin Commission on June 30, 1986.

Operations and results during fiscal year. Maintenance: Normal operation and maintenance of the project continued. .

26B. TIOGA-HAMMOND LAKES, PA

Location. The dams are located in Tioga County, PA, upstream from the confluence of the Tioga River and Crooked Creek. Tioga Dam is located on the Tioga River and Hammond Dam on Crooked Creek, approximately opposite the Tioga damsite, about 3.3 miles above its mouth and less than one mile from the Village of Brooklyn. (See Geological Survey map for Tioga, PA.)

Existing project. Tioga Dam is 2,600 feet long, rising 140 feet above the streambed, with a controlled outlet conduit. Hammond Dam is 5,900 feet long, and has a maximum height of 121.5 feet above the streambed, with a concrete spillway. Both dams are of earth and rockfill construction. The Tioga-Hammond Lakes project controls a total drainage area of 402 square miles, with Tioga Dam controlling 280 square miles of the Tioga River Basin and Hammond Dam controlling 122 square miles of the Crooked Creek Basin. Recreation facilities are provided for swimming, camping, picnicking, boating, and fishing. Federal cost of completed work was \$185,620,000 of which \$125,029,000 is for completed construction and \$60,591,000 is for lands and damages and relocations. Estimated Federal cost (October 1988) of Mill Creek recreation facilities (inactive) is \$7,500,000.

Local cooperation. None required.

Operations and results during fiscal year. Maintenance: Normal operation and maintenance of the project continued.

**27. WEST BRANCH OF
SUSQUEHANNA RIVER, PA**

A system of three flood control reservoirs, in the headwaters of the West Branch Susquehanna River, PA, are known as Curwensville, Alvin R. Bush (formerly known as Kettle Creek), and Foster Joseph Sayers (formerly known as Blanchard).

In accordance with the terms of local cooperation, the Commonwealth of Pennsylvania furnished assurances that it will coordinate operation of George B. Stevenson Reservoir (formerly known as First Fork Reservoir) with operation of Curwensville, Alvin R. Bush, and Foster Joseph Sayers Reservoirs to secure optimum flood control benefits from system operation. George B. Stevenson Reservoir on the First Fork Sinnemahoning Creek in Cameron and Potter Counties, PA, was constructed by the Commonwealth of Pennsylvania at a first cost of \$12,240,000 and an estimated \$30,000 annually for operation and maintenance.

27A. ALVIN R. BUSH DAM, PA

Location. Alvin R. Bush (formerly Kettle Creek Dam) is located on Kettle Creek about 8.4 miles above the mouth and 15 miles upstream from Renovo, PA. (See Geological Survey map for Keating, PA.)

Existing project. Dam is an earthfill structure, about 1,350 feet long, rises 165 feet above the streambed, with an uncontrolled spillway located in rock adjacent to the right abutment, and has a horseshoe-shaped outlet tunnel with 3 service gates. The reservoir has a storage capacity of 75,000 acre-feet at spillway crest. The project controls a drainage area of 226 square miles or about 92 percent of the Kettle Creek watershed. Recreation facilities are provided for camping, fishing, boating, picnicking, hiking, winter sports, hunting, and swimming by the State of Pennsylvania at Kettle Creek State Park.

Local cooperation. None required.

Operations and results during fiscal year. Maintenance: Normal operation and maintenance of the project continued.

27B. CURWENSVILLE LAKE, PA

Location. Dam is on the West Branch of Susquehanna River approximately 2.5 miles upstream from Curwensville, Clearfield County, PA. (See Geological Survey map for Curwensville, PA.)

Existing project. Within the discretionary authority of the Chief of Engineers, the project was modified in September 1992, in accordance with the Water Supply Act of 1958, as amended. The modification provides for reallocating an estimated 5,360 acre-feet of storage from conservation to water supply. The reallocation project includes a year-round normal pool and modifications to the existing recreation area. Estimated cost of the modification is \$1.7 million which is being funded entirely by the local sponsor, the Susquehanna River Basin Commission. In addition, the sponsor will reimburse the Federal Government about \$4.5 million for part of the original project cost.

Local cooperation. The 1992 project modification requires non-Federal interests to pay 100 percent of costs allocated to water supply plus the allocated share of the original project cost (escalated to current price levels). Additionally, they must pay annual costs of operation, maintenance, and major replacement allocated to water supply. A water supply contract was executed on September 30, 1994.

Operations and results during fiscal year. Maintenance: Normal operation and maintenance of the project continued.

**27C. FOSTER JOSEPH SAYERS
DAM, PA**

Location. Dam is located on Bald Eagle Creek in Centre County, PA, about one mile upstream from

Blanchard and about 14 miles above the confluence of Bald Eagle Creek with the West Branch Susquehanna River at Lock Haven, PA. (See Geological Survey map for Howard, PA.)

Existing project. Dam is an earthfill structure, about 6,835 feet long, rises 100 feet above the streambed, and has an open-cut concrete chute and uncontrolled concrete weir 600 feet wide located in rock in a saddle adjacent to the left abutment. The outlet works, located in the left abutment, consist of a 15-foot diameter circular outlet conduit with two hydraulically-operated wheel gates 7 feet wide and 15 feet high. The reservoir has a storage capacity of 99,000 acre-feet at spillway crest. The project controls a drainage area of 339 square miles or 88 percent of the drainage area above Beech Creek and 43 percent of the Bald Eagle Creek drainage area. Recreation facilities are provided for boating, camping, fishing, picnicking, hunting, swimming, hiking, and winter sports by the State of Pennsylvania at Bald Eagle State Park.

Local cooperation. None required.

Operations and results during fiscal year. Maintenance: Normal operation and maintenance of the project continued.

28. WYOMING VALLEY, PA (LEVEE RAISING)

Location. The Wyoming Valley flood control projects are located in Northeastern Pennsylvania on the Susquehanna River in Luzerne County and are the four contiguous existing Federal flood control projects at Plymouth, Kingston-Edwardsville, Swoyersville-Forty Fort, and Wilkes-Barre/Hanover Township, which together function as a flood control system within the Wyoming Valley.

Existing project. The proposed modification provides for raising existing levees and floodwalls between 3 and 5 feet, structural, mechanical and electrical modifications to pump stations, modifying closure structures, relocating utilities and providing some new floodwalls and levees to maintain the integrity of the existing flood control system. The proposed project also includes a plan to reduce project-related adverse impacts. The current estimated total project is \$175,000,000 which includes a future inflation allowance through project completion.

Local cooperation. The Luzerne County Flood Protection Authority is the sponsor for the project. The local sponsor is required to: provide lands, easements and rights-of-way; modify or relocate buildings, utilities, roads, bridges, and other facilities; pay a minimum of 5% of costs allocated to flood control and pay 50% of costs allocated to recreation; and bear all costs of operations, maintenance and replacement of flood control and recreation facilities after construction.

Operations and results during fiscal year. Work was completed on Modifications to Abrahmas Creek Drainage Structure, Relief Culverts and Outfalls/Penetrations through the levees. Engineering and design work continues as well as feasibility analysis of possible additions to the overall project, including modifications to the Toby Creek Impounding Basin.

Active Construction includes:

1. Wilkes-Barre 2C- Riverfront project was awarded 25 September 2006, to Conti Environmental, Inc. for \$22,623,222.00; Scheduled completion timeframe is in Spring 2009. Work consists of riverfront development including: 2 portals (Millenium Circle and Northampton Portals, fountain, bridge and closure structures, river landing and fishing terrace, amphitheater and stage, riverside access road, ramps, plazas, stairs, lighting, floodwall and site furnishings.)
2. Toby Creek Phase I – Embankment Raising – Contract award in September 2007.

29. YORK, INDIAN ROCK DAM, PA

Location. On Codorus Creek 10 miles above its confluence with the Susquehanna River. Codorus Creek has tributary branches in York County in the south and central parts of Pennsylvania. (See Geological Survey Quadrangle sheets for York and Hanover, PA.)

Existing project. Indian Rock Dam is an earth and rockfill dam about 1,000 feet long at the top, rising 83 feet above the streambed, with a reservoir providing for control storage of 28,000 acre-feet. The dam is on the main branch of Codorus Creek about 3 miles above York. Outlet works are in the right abutment, and the uncontrolled spillway is on the right bank. The reservoir will control the entire drainage area of the main branch of Codorus Creek and 41 percent of the drainage area above York. Improvements in Codorus Creek in the vicinity of and through the City of York provide for 22,969 feet of channel extending from 300 feet above Richland Avenue to a point downstream from the Pennsylvania Railroad crossing known as Black Bridge. Improvements, which will increase channel capacity to 24,000 cubic feet per second, include widening and deepening the channel, bank protection, removal of York Roller Mill Dam, and a low water channel about 3,900 feet long in the vicinity of York Roller Mill Dam. Cost of new work for the completed project was \$5,061,167, of which \$4,566,446 (regular funds) and \$11,588 (emergency relief funds) were for construction and \$483,133 (regular funds) was for lands and damages.

Local cooperation. Section 2, Flood Control Act of June 28, 1938, applies.

Operations and results during fiscal year. Maintenance: Normal operation and maintenance of the

project continued. in New York, Pennsylvania, Maryland, District of Columbia, and Virginia were inspected during the period by hired labor. See Table 4-I.

30. INSPECTION OF COMPLETED FLOOD CONTROL PROJECTS

Projects in New York, Pennsylvania, Maryland, District of Columbia, and Virginia were inspected during the period by hired labor. See Table 4-I.

31. SCHEDULING FLOOD CONTROL RESERVOIR OPERATIONS

Operations and results during fiscal year. The operation of George B. Stevenson Dam, PA, was coordinated with the operation of Alvin R. Bush, Curwensville, and Foster Joseph Sayers Dams in the West Branch Susquehanna River Basin in order to secure optimum flood control benefits from the system operation. Costs during the period were \$.

Supplemental instructions for the operation of Savage River Dam, MD, were provided, during periods of high water, to insure maximum protection for downstream localities. Costs during the period were \$94980.46.

32. FLOOD CONTROL WORK UNDER SPECIAL AUTHORIZATION

Cost for the period was \$311,611 for the Disaster Preparedness Program; \$28,686 for Emergency Operations; \$870,066 for Rehabilitation and Inspection Program. Federal year costs were \$5,005 for Section 205 Coordination; \$344,730 for Heshbon to Hepburnville, Lycoming County, PA; and \$124,890 for Montoursville Lycoming County, PA. Non-Federal contributed costs were: \$94,249 for Heshbon to Hepburnville, Lycoming County, PA and \$18,991 for Montoursville, Lycoming, PA.

Flood control activities pursuant to Section 14, Public Law 526, 79th Congress, as amended (pre-authorization). Fiscal year costs were \$5,009 for Section 14 Coordination; \$454,706 for Newton Creek Newton Avenue, NY; \$70,871 for Patuxent River Patuxent Beach Road, MD and \$8,874 for Lidy's Creek, Center Street, PA. Dam Safety Assurance Fiscal Year costs were \$97,780 Jennings Randolph Lake. Non-Federal contributed costs were: \$382,885 for Newton Creek Newton Avenue, NY.

MULTIPLE-PURPOSE PROJECTS INCLUDING POWER - None

ENVIRONMENTAL

33. ANACOSTIA RIVER AND

TRIBUTARIES, MD AND DC

Location. The project area is the 170-square mile watershed of the Anacostia River. This watershed encompasses approximately 145 square miles in Montgomery and Prince George's Counties, Maryland, and 25 square miles in the District of Columbia. The entire area is within the Washington, D.C. metropolitan area.

Existing project. The authorized plan provides for the construction of 80 acres of tidal and non-tidal freshwater wetlands, the restoration of 5 miles of piedmont streams, and the planting of 33 acres of bottomland hardwood forest within the highly urbanized Anacostia River watershed. The construction is located at 13 sites within the project area. The 13 actions include 2 wetland restorations, development of 5 stormwater management wetlands areas, and restoration of 6 stream reaches. The current estimated total cost for the Anacostia environmental restoration project is \$18 million.

Local cooperation. The non-Federal sponsors for the project are Montgomery County, Prince George's County, the District of Columbia, the Maryland-National Capital Park and Planning Commission, and the National Park Service. The last two sponsors are the current landowners of the project sites. The non-Federal sponsors are required to pay 25 percent of the cost allocated to fish and wildlife restoration and to bear all costs of operation, maintenance, repair, rehabilitation and replacement of the facilities after construction.

Operations and results during fiscal year. The construction at eight sites in Montgomery County and the Kingman Lake and River Fringe Wetlands site in the District of Columbia was completed in 2000-2003. The remaining sites will not be constructed at the sponsors' request. Project monitoring of the completed sites is ongoing.

34. CHESAPEAKE BAY OYSTER RECOVERY, MD AND VA

Location. The project is located in the Maryland portion of the Chesapeake Bay.

Existing project. The authorized project contributes to multi-agency and private efforts to restore oyster populations in the Maryland portion of the Chesapeake Bay. Project elements include: construction and rehabilitation of oyster habitat; construction of seed bar facilities for production of oyster seed or "spat"; purchase of disease-free spat from the state-owned hatcheries, planting of disease-free spat in locations which best foster oyster production and health; and monitoring of project performance to increase oyster populations. The current authorized Federal cost for the restoration program is \$50 million.

Local cooperation. The State of Maryland is the sponsor for the Maryland portion of the project. The

local sponsor is required to pay 25% of the cost allocated to fish and wildlife restoration and to bear all costs of operation, maintenance, repair, rehabilitation and replacement of fish and wildlife facilities after construction. The program extends into the Chesapeake Bay waters in Virginia where the Norfolk District conducts activities.

Operations and results during fiscal year. New Work: Short-term construction activities were conducted in the summer of 2002-2006; in 2007 only project monitoring was conducted due to the unavailability of suitable substrate. Planning for a Chesapeake Bay-wide native oyster restoration master plan is ongoing and will continue through 2009.

35. CHESAPEAKE BAY ENVIRONMENTAL RESTORATION/PROTECTION PROGRAM, MD

Location. The project is located in the Chesapeake Bay area within portions of the states of Maryland, Virginia and Pennsylvania.

Existing Project. Section 510 of WRDA 1996 authorizes the Corps of Engineers to provide design and construction assistance to non-Federal interests for publicly owned water-related environmental infrastructure and resource protection and development of projects affecting the Chesapeake Bay estuary. These projects include sediment and erosion control, protection of eroding shorelines, creation or restoration of wetlands, protection of essential public works, wastewater treatment and related facilities, water supply and related facilities, and beneficial uses of dredged material, and other related projects that may enhance the living resources of the estuary. At least one project shall be established in each of the states of Maryland, Virginia and Pennsylvania. The Maryland projects include Tylerton, Shoreline Protection, Taylors Island Shoreline Protection, Warner Street Wetland Creation-Middle Branch Patapsco River, and an upgrade of the two Smith Island Wastewater Treatment Plants. The Virginia project was an oyster restoration project completed by Norfolk District and the Pennsylvania project will be an upgrade of the Scranton Wastewater Treatment Plant to include nitrogen removal. The current Federal authorized limit is \$40 million.

Local cooperation. In order of the projects listed above, the Maryland sponsors include Somerset County, the Council for Dorchester County, the City of Baltimore, and the Maryland Department of the Environment. For Virginia, the sponsor was the Marine Resources Commission and for Pennsylvania, it will be the Sewer Authority of the City of Scranton.

Operations and results during fiscal year. The stone revetment portion of the Taylors Island Shoreline

Protection Project is under construction and is scheduled to be completed in March 2008. Construction of the Tylerton wastewater treatment plant on Smith Island is complete. The Norfolk District is working toward completing the non-native oyster EIS.

36. BALTIMORE METROPOLITAN WATER RESOURCES, GWYNNS FALLS WATERSHED, MD

Location. The Gwynns Falls watershed is located in Baltimore City and County and drains through the Baltimore Harbor into Chesapeake Bay. The watershed is approximately 66 square miles (42,000 acres) in total area.

Proposed projects. The proposed projects include restoring 3.3 acres of wetland habitat, stabilizing 2,000 feet of streambank, rehabilitating 7 miles of sanitary sewer pipe, daylighting 600 feet of piped stream, and constructing one stormwater management feature.

Local cooperation. The City of Baltimore is the non-Federal sponsor for the project and is cost sharing the construction of the project at a rate of 65 percent Federal and 35 percent non-Federal. The current estimated cost of construction is \$14,700,000.

Operations and results during fiscal year. The design for the first phase of construction (Maidens Choice Run – Site MC10) was completed in November 2006. The estimated cost of construction is \$1.7M and is scheduled to begin in the Spring 2008.

37. HART MILLER ISLAND, MD

Location. Hart-Miller Island (HMI) is located in the open waters of the northern Chesapeake Bay in Baltimore County, Maryland. The 1100-acre island is located adjacent to the Brewerton section of the 50-foot navigation channel serving the port of Baltimore.

Previous project. HMI was constructed of dredged material beginning in 1981 and is the authorized placement site for dredged material removed from the Federal navigation project serving the Port of Baltimore. The island is divided into two cells, a north cell and a south cell. In 1991, the State of Maryland closed the 300-acre south cell of the facility to further placement of dredged material.

Existing project. The project for the restoration of the south cell of the island consists of approximately 180 acres of wetlands and mudflats for shorebird habitat, a one-acre nesting island, and 118 acres of upland for songbird habitat. A pumping system manages the water levels in the project area. The project is expected to provide habitat for over 200 species of birds and create nesting habitat for the endangered Least Tern.

Local Cooperation. The Maryland Port Administration is the non-Federal sponsor. The

Maryland Department of Natural Resources will operate and maintain the site upon completion of construction. The state has completed their cost-sharing requirements, pending financial closeout. The State has provided sufficient cash and credits to satisfy the requirement of Section 1135 for the costs associated with the study, plans and specifications, and construction.

Operations and results during fiscal year. Project construction was physically completed in 2006, and the construction contract was closed out in FY 07. Monitoring began in the Fall of 2006 and will be completed in FY 09. The final project cost is estimated to be \$5.7 million.

38. HERITAGE ISLAND, DC

Location. Heritage Island is located in Kingman Lake, near RFK Memorial Stadium, on the Anacostia River in Washington, DC. The project area is an area west of Heritage Island, along the east bank of the DC mainland.

Previous project. Kingman Lake was constructed when the Corps of Engineers dredged extensive existing freshwater tidal marsh habitat from the 1920s through the 1930s to create recreational opportunities for area residents. The 5-acre Heritage Island was constructed from this dredged material.

Existing project. The project for the restoration of the formerly Anacostia River, now Kingman Lake wetlands, adjacent to Heritage Island, consists of approximately 6 acres of freshwater tidal marsh habitat. These wetlands are expected to provide habitat for resident fish, migratory fish, migratory birds, and a variety of reptile and amphibian species. Dredging this portion of Kingman Lake serves to build the wetland by raising the elevation of the marsh substrate and re-open natural tidal channels.

Local Cooperation. The DC Department of Health is the non-Federal sponsor. The restored wetland is to be monitored by DC for three years following project completion. The study design had been an integrated effort between the National Park Service, Fish & Wildlife Service, DC DOH and the Corps. The Project Cooperation Agreement between the Corps and sponsor was signed July 2005.

The Anacostia River watershed is highly urbanized and has been identified as a high priority area for restoration by the Chesapeake Bay Program. The Anacostia Watershed Restoration Committee (AWRC) was formed to facilitate coordination of restoration activities between Federal and local government agencies. The AWRC developed the *Six Point Action Plan*, with one of its objectives being to restore both

tidal and non-tidal wetlands for fish and wildlife habitat and to improve water quality in the Anacostia river.

Operations and maintenance. The following Section 219 projects have been constructed and turned over to the local sponsors for operations and maintenance: Muncy Creek Sewer Project, Halls Station Sewer Project, and the Athens Sewer Project.

39. NORTHEAST COUNTIES, PA

Location. The authorized program area consists of the following Pennsylvania counties: Lackawanna, Lycoming, Susquehanna, Wyoming Pike, Wayne, Sullivan, Bradford, and Monroe, including assistance for the Mountoursville Regional Sewer Authority, Lycoming County, Pennsylvania. WRDA 2007 added the counties of Northumberland, Union, Snyder, and Luzerne.

Existing program. Section 219, WRDA 92 provides planning and design assistance for water and sewer related environmental infrastructure and resource protection and development projects for local communities. The program was amended by Section 502, WRDA 99 to allow for the provision of construction services as well. The program for Northeast Pennsylvania is authorized up to \$20 million.

Local cooperation. Cost sharing is 75% Federal and 25% non-Federal. The non-Federal sponsor can use real estate credit and cash to meet their cost-sharing requirement; no in-kind credits are permitted. The non-Federal sponsor assumes 100% of the responsibility for operations & maintenance.

Operations and maintenance, results during fiscal year. The following Section 219 projects have been constructed and turned over to the local sponsors for operations and maintenance: Muncy Creek Sewer Project, Halls Station Sewer Project, and the Athens Sewer Project. Maintenance: G&M Crawford, Inc. completed a \$2.2 million dollar contract to construct 31,000 LF of gravity sewer, 204 LF of forcemain, and sixteen grinder pumps. The Athens Sewer Project was completed.

40. POPLAR ISLAND, MD

Location. The group of islands known as Poplar Island is located in the upper middle Chesapeake Bay approximately 34 nautical miles southeast of the Port of Baltimore and 1 mile northwest of Tilghman Island, Talbot County, MD.

Existing project. The authorized project provides for the use of approximately 33 million cubic yards of dredged material from the southern approach channels of the Baltimore Harbor and Channels navigation project to restore 1,140 acres of remote habitat. The restoration project will employ dikes to contain the dredged materials necessary for the wetlands vegetation

and to protect the facility from the severe wave activity common in this region of the Chesapeake Bay. The placement site will restore Poplar Island to its approximate 1847 configuration and will consist of 570 acres of upland habitat at an elevation up to +20 feet MLLW and 570 acres of wetland habitat that would be further divided into approximately 444 acres of low marsh and 111 acres of high marsh. The current estimated total project cost is \$340 million (including a future inflation allowance through the project completion).

Local cooperation. The State of Maryland is the project sponsor and the Local Cooperation Agreement was executed April 4, 1997. The sponsor is required to provide lands, easements, and rights-of-way; pay 25% of the cost of the project; and bear all costs of operation, maintenance, replacement and major rehabilitation of the ecosystem restoration project.

Operations and results during fiscal year. New Work: The seventh inflow of dredged material started in December 2006 and was completed in March 2007. Awarded contract for cell 6 closure.

41. SOUTH CENTRAL PENNSYLVANIA ENVIRONMENTAL IMPROVEMENT PROGRAM

Location. The south central Pennsylvania area includes fifteen counties defined by the authorizing legislation. Funds for an additional six counties were provided in the FY 1998 and FY 1999 Energy and Water Appropriation Act. The program area within the Baltimore District consists of the Chesapeake Bay watershed portion of the program area including Bedford, Blair, Clearfield, Franklin, Fulton, Huntingdon, Juniata, Mifflin, Snyder, and a portion of Cambria Counties. Section 3143 of the Water Resources Development Act of 2007, removed Clearfield, Mifflin and Snyder Counties.

Existing project. Section 313 of the Water Resources Development Act of 1992, as amended, established a pilot program for providing environmental assistance to non-Federal interests in south central Pennsylvania. Such assistance may be in the form of design and construction assistance for water-related environmental infrastructure and resource protection and development projects, including projects for waste water treatment and related facilities, water supply, storage treatment, distribution facilities, and surface water resource protection and development. The Federal share may be provided in the form of grants or reimbursements to the sponsor. Section 313 as amended authorizes Federal appropriations of \$200 million to carry out the program, including \$100 million within the Chesapeake Bay watershed area. From FY 94 through FY07, Congress has added \$85,265,000 to the Corps budget for 65 projects in the Baltimore

District for water supply and distribution, wastewater collection and treatment and a master plan.

Local cooperation. The non-Federal sponsors are required to provide 25% of project costs including lands, easements, rights-of-way, and relocations and bear all costs of operation, maintenance, replacement, repair and rehabilitation of the project after construction.

Operations and results during fiscal year. New Work: Project Cooperation Agreements were signed for 2 new projects and work continued on 20 ongoing projects.

42. REGULATORY PROGRAM

The Baltimore District Regulatory Program began FY07 with 1115 applications pending from FY06. During FY07, 5,034 new applications were received; 4,790 permits actions were finalized; no applications were denied and 14 were withdrawn, for activities in regulated waterways and wetlands in MD, Washington DC, and part of PA. At the beginning of the FY, 333 enforcement cases were pending. During FY07, 283 violations were restored and 215 new violations were discovered/reported. 3378 jurisdictional determinations were requested and verified. Total FY07 Regulatory Program costs were \$5,247,385.

AQUATIC ECOSYSTEM RESTORATION

43. DENTS RUN, PA

Location. The Dents Run watershed is located in Benezette Township, Elk County, Pennsylvania. The lower 4.5 miles of Dents Run is devoid of aquatic life due to acid mine drainage (AMD) along its tributary, Porcupine Hollow. In addition, approximately 250 acres of upland habitat scarred from past mining activities does not provide suitable habitat for wildlife.

Existing Project. The project includes a combination of reclamation and passive treatment technologies at six AMD sites (1934, 3888, 3893, 3896, 3897, and 3898) within the Dents Run watershed. The work is being accomplished, under Section 206 of the Water Resources Development Act of 1996, as amended.

Local cooperation. The sponsor is the Bennett Branch Watershed Association. The sponsor funds are provided from PADEP-BAMR (\$2.7 million) and the Pennsylvania Growing Greener Program (\$1.3 million), and in partnership with the Pennsylvania Game Commission (PGC) is responsible for providing 35 percent of the project costs and for providing the entire cost of design and construction reclamation and passive treatment system work at PA 1934. The Western Pennsylvania Conservancy, under a Memorandum of

Understanding with the sponsor, will assist the sponsor in all real estate acquisition activities.

Operations and results during fiscal year. Construction of the passive treatment measures at Site 3888 and 3893 is currently underway and is scheduled to be completed in the summer 2008.

44. AQUATIC ECOSYSTEM RESTORATION

Fiscal year costs were \$5,073 for Section 206 Coordination; \$62178 for Upper Tioga River Watershed, PA; \$149,611 for Greenbury Point, MD; \$5,325 for Nanticoke, Creek Luzerne, PA; \$176,745 for Blackwater, MD; \$58,417 for Western Branch, Patuxent, MD; \$28,325 for Chenango Lake, NY; \$21,054 for Paint Branch Fish Passage, MD; \$10,282 for Codorus Creek, PA; \$301,954 for Tidal Middle Branch, MD; and \$106,332 for St. Martin's/Bishop.

Fiscal year costs were \$4,214 for Section 1135 Coordination; \$142,521 for Whitney Point Reservoir, NY; and \$47,530 for Lower Kingman Island.

Non-Federal contributed costs were: \$62,985 for South Central, PA; and \$952,391 for Northeast, PA for the Environmental Infrastructure.

WATER SUPPLY

45. WASHINGTON AQUEDUCT

Location. The diversion dam and raw water supply intakes at Great Falls, the two collecting conduits, part of Dalecarlia receiving reservoir, the booster pumping of Dalecarlia receiving reservoir, the booster pumping station and the Little Falls raw water pumping station are located in Maryland. All other structures of the water supply system including parts of the raw water collecting system, two purification plants, pumping stations, storage reservoirs, and transmission mains are in the District of Columbia. Federally owned water mains are maintained in Virginia and Maryland.

Existing project. Control of the water supply system is vested in the Chief of Engineers (see Acts of March 3, 1859, and March 2, 1867, November 22, 1973 and Sec. 1800 of Revised Statutes). The project includes: administration; operation and maintenance of the collection, purification, pumping, and transmission facilities; protection of the water supply system; engineering; and construction of major water system additions and improvements.

Authority to supply water to Arlington County, the City of Falls Church, and other jurisdictions in Virginia is contained in Public Law 119, 69th Congress, approved April 14, 1926; and Public Law 118, 80th Congress, June 26, 1947.

Local cooperation. Requirements are described in full on page 4-19 of the Fiscal Year 1981 Annual Report.

Operations and results during fiscal year 2007. Purified water furnished to the District of Columbia; Arlington County and Falls Church, VA; and to Federal Establishments in the District of Columbia, Arlington County, VA, and Montgomery County, MD. Total consumption for fiscal year 2007 was 57.5 billion gallons. The average amount furnished Arlington County and Falls Church, VA was 39.98 million gallons per day. The Corps of Engineers was reimbursed \$32,343,158.95 for operations and maintenance of which \$9,188,562.51 was from Virginia.

GENERAL INVESTIGATIONS

46. SURVEYS

Federal costs for the fiscal year were \$2,805,368 including \$8,317 for flood damage prevention studies, \$485,020 for shoreline protection studies, \$1,870,443 for special studies, \$49,817 for Watershed comprehensive studies, \$156,629 for special investigations, \$25,465 interagency water resource development, \$3,977 for National estuary studies, and \$197,215 for coordination with other agencies and non-Federal interests.

Non-Federal contributed costs for the fiscal year were \$719,542 of which \$500,953 was for navigation studies, \$56,836 for flood damage prevention studies, and \$135,903 non-Federal interest.

47. COLLECTION AND STUDY OF BASIC DATA

Costs for flood plain management activities and general planning guidance during the period was \$332,872. Providing assistance and guidance to local interests on methods and procedures for preventing and reducing flood damages was in progress at end of fiscal year.

48. PRECONSTRUCTION ENGINEERING AND DESIGN

No Preconstruction Engineering and Design projects for FY07.

FORMERLY UTILIZED SITES REMEDIAL ACTION PROGRAM (FUSRAP)

49. W.R. GRACE, CURTIS BAY FACILITY, MD

Location. The W.R. Grace Curtis Bay Facility is located at 5500 Chemical Road in Baltimore, Maryland on an industrialized peninsula in south Baltimore, and consists of 260 acres owned by Grace. The property is bordered on the north by Curtis Bay, on the west by Curtis Creek, on the east by the Patapsco River, and on the south by the Baltimore City Municipal Landfill. The facility currently consists of a manufacturing plant and waste disposal areas.

Existing project. Currently, W.R. Grace manufactures and produces specialty chemicals at its Curtis Bay facility. Contamination at the site consists of radioactively-contaminated slabs and other surfaces impacted by the thorium extraction process in Building 23 and the Radioactive Waste Disposal Area to the east

of the plant property. The W.R. Grace Site has been separated into 2 distinct work components: Building 23 and the Radioactive Waste Disposal Area. The overall project cost is estimated at over \$40 million. Building 23 has a signed Record of Decision (ROD) and is waiting for available funding to complete the remedial design and remedial action.

Local Cooperation. Not applicable.

Operation and results during fiscal year. New Work: The Feasibility Study for the Radioactive Waste Disposal Area was completed. A site-wide draft Settlement Agreement was completed. Total cost for the fiscal year was \$ 634,597.

BALTIMORE, MD DISTRICT

1. Includes \$8,467,003 for previous projects.
2. Includes \$399,802 for previous projects.
3. Excludes \$3,822,977 in previous projects.
4. Unconstructed portion of the project was deauthorized November 2, 1979.
5. Includes \$283,008 public works funds and \$67,185 emergency relief funds; excludes \$500,000 contributed funds.
6. Excludes \$464,788 for previous projects.
7. Excludes \$1,504,297 for previous New Start projects, \$216,265 for previous O&M projects, and \$10,306 for contributed funds.
8. Includes \$3,029,001 for previous projects.
9. Excludes \$1,831,609 for previous projects.
10. Excludes \$4,000 for emergency dredging under provisions of Sec 3, 1945 River and Harbors Act.
11. Includes \$50,000 for previous project and excludes \$14,000 contributed funds.
12. Includes \$62,577 emergency relief funds.
13. Includes \$109,944 emergency relief funds.
14. Excludes \$163,096 contributed funds.
15. Includes \$207,520 rehabilitation funds.
16. Excludes \$34,729 contributed funds.
17. Includes \$250,899 emergency relief funds and excludes \$15,000 contributed funds.
18. Includes \$71,557 emergency relief funds.
19. Includes \$73,465 emergency relief funds.
20. Excludes \$263,900 contributed funds in accordance with the Tri-party Agreement for construction of sanitary system for public use.
21. Includes \$11,588 emergency relief funds.
22. Includes \$15,000 for deferred maintenance.

TABLE 4-B AUTHORIZING LEGISLATION

See Section in Text	Date Authorizing Act	Project and Work Authorized	Documents
1.		BALTIMORE HARBOR AND CHANNELS, MD and VA	
	Aug 8, 1917	Branch channel 35 feet deep to head to Curtis Bay, and one 35 feet deep and 400 feet wide Fort McHenry to Port Covington entrance channel, thence 150 feet wide to Ferry Bar, and thence 27 feet deep and 150 feet wide to Hanover Street Bridge, widen approaches and bends, and enlarge anchorage basin near entrance. Inclusion of Patapsco River and tributaries into one project for Baltimore Harbor.	H. Doc. 799, 64th Cong., 1 st Sess.
	Jan 21, 1927	Change in location of anchorage near upper end of Fort McHenry Channel.	
	Jul 3, 1930	Increased anchorage facilities Rivers and Harbors.	
	Jul 3, 1930	For 37-foot depth in that portion of channel to Baltimore lying between 37-foot depth curve near Baltimore Light to Sparrows Point entrance channel; widen angle between Fort McHenry and Ferry Bar section; and for width of 400 feet in Curtis Bay section.	Committee Doc. 11, 70th Cong., 1 st Sess. H. Doc. 86, 85 th Cong., 1 st Sess.
	Oct 17, 1940	For 22-, 18-, and 15-foot channels in Curtis Creek from 22-foot depth below Pennington Avenue Bridge to upper end of marginal wharf of U.S. Ordinance Depot	Adopted as a national defense project. (No printed report.)
	Mar 2, 1945	Uniform main channel 309 feet deep from the ocean through York Spit section and Craighill entrance to Fort McHenry, additional anchorage area, 2,400 feet long, 1,200 feet wide, and 30 feet deep; a connecting channel 400 feet wide and 27 feet deep from Cutoff Brewerton Angle in main channel to Inland Waterway from Delaware River to Chesapeake Bay; a channel in Curtis Creek 200 feet wide and 35 feet deep from head of existing 35-foot project channel in Curtis Bay to a point in the creek about 750 feet below Pennington Avenue Bridge.	H. Doc. 741, 79 th Cong., 2 nd Sess.
	Mar 2, 1945	A channel 22 feet deep and 200 feet wide from 22-foot depth curve south of Baltimore & Ohio R.R. bridge about 2,800 feet to vicinity of Arundel Cove, thence 100 feet wide in Arundel Cove for about 2,100 feet; with an anchorage basin about 700 feet square adjacent to channel southwesterly of Coast Guard wharf.	In accordance with plans on file in the Office, Chief of Engineers
	Jul 3, 1958	Main channel 42 feet deep and 1,000 feet wide in Cape Henry section at entrance to Chesapeake Bay and in York Spit section; 42 feet deep and 800 feet wide in Rappahannock Spit section and in approach channel to Baltimore Harbor from Craighill entrance to Fort McHenry, with widening at entrance and bends; channels 42 feet deep and 600 feet wide in Curtis Bay and Ferry Bar sections of harbor; a connecting channel 35 feet deep and 600 feet wide from main channel to approach channel to Chesapeake and Delaware Canal; and for three disjointed sections of channels of same depth and width in Chesapeake Bay leading to Chesapeake and Delaware Canal; and to provide Federal maintenance of 39-foot depth in Northwest Branch, in areas dredged to that depth by local interests.	H. Doc. 86, 85 th Cong., 1 st Sess.
	Dec 31, 1970	Deepening of the Cape Henry Channel to 50 feet at the existing width of 1,000 feet, with widening at bends; deepening of the Spit Channel to 50 feet at the existing width of 1,000 feet, with widening at bends; enlargement of the Rappahannock Shoal Channel to a depth of 50 feet and a width of 1,000 feet; deepening of the main ship channel from Chesapeake Bay to Fort McHenry to a depth of 50 feet at the existing width of 800 feet, with widening at bends and at the Craighill Entrance; deepening of the Curtis Bay Channel to a depth of 50 feet at the existing width of 600 feet, and deepening of the 950-foot wide and 980-foot long turning basin at the head of channel to the same depth; deepening of the Northwest Branch0East Channel to a depth of 49 feet from the depth existing at the time of construction at a width of 600 feet, and deepening of the 950-foot wide and 950-foot long turning basin at the head of the channel to the same depth; and deepening and extension of the Northwest Branch0West Channel to a depth of 40 feet from the depth existing at the time of construction, at a width of 600 feet, and with an irregularly shaped turning basin at the head of the channel 40 feet deep and about 2,000 feet long with a maximum width of 1,150 feet.	H. Doc. 181, 94 th Cong., 1 st Sess.
	Aug 5, 1999	Dredge a new straight channel 35 feet deep, 600 feet wide, and 2 miles long to replace the existing Tolchester Channel S-Turn off Tolchester Beach.	Water Resources Dev. Act of 1999

BALTIMORE, MD DISTRICT

TABLE 4-B AUTHORIZING LEGISLATION

See Section in Text	Date Authorizing Act	Project and Work Authorized	Documents
2.	Aug 17, 1999	BALTIMORE HARBOR ANCHORAGES AND CHANNELS, MD Widen and deepen two existing Federal anchorages; widen several connecting channels; provide a new turning basin near Fort McHenry; and provide a new branch channel within the Port of Baltimore.	Chief of Engineers Report dated Jun 8, 1998
3.	Jun 30, 1948	BALTIMORE HARBOR, MD, COLLECTION AND REMOVAL OF DRIFT Collection and removal of drift from Baltimore Harbor and its tributary waters.	River and Harbor Act of 1948
4.	Aug 30, 1935	KNAPPS NARROWS, MD A channel 9 feet deep at mean low water, 75 feet wide, widened at the bends from deep water in Chesapeake Bay in deep water in Harris Creek, MD with a turning basin west of the drawbridge, 7 feet deep at mean low water, about 320 feet long and 120 feet wide. Project channel was authorized by the Public Works Administration September 16, 1933 and later adopted by 1935 River and Harbor Act.	H. Doc. 308, 72 nd Cong., 1 st Sess.
5.	Jun 3, 1986	NANTICOKE RIVER DE AND MD A 9-foot channel, 100 feet wide up to Seaford, DE, with a turning basin.	H. Doc. 333, 53 rd Cong., 3 rd Sess., and Annual Report, 1985,
	Jun 25, 1910	Sight widening between bridges in harbor at Seaford, DE.	H. Doc. 674, 61 st Cong., 2 nd Sess.
	Mar 2, 1945	A channel 12 feet deep, 100 feet wide from 12-foot contour in Tangier Sound to	S. Doc. 69, 77 th Cong., 1 st Sess.
6.	Aug 30, 1935	OCEAN CITY HARBOR AND INLET AND SINEPUXENT BAY, MD Construction of an inlet between the Atlantic Ocean and Sinepuxent Bay, 10 feet deep and 200 feet wide, protected by jetties; a channel 8 feet deep and 100 feet wide from the inlet to Ocean City, 6 feet deep and 150 feet wide to Green Point, and 100 feet wide into Chincoteague Bay.	Rivers and Harbors Committee Doc. 38, 72 nd Cong., 1 st Sess. ³
	Aug 30, 1935	Modification providing a 10-foot by 100-foot channel from the inlet to the west side of the bay with two turning basins; a channel 6 feet deep and 125 feet wide from the inlet to Ocean City, 6 feet deep and 150 feet wide to Green Point feet wide into Isle of Wight Bay.	Rivers and Harbors Committee Doc. 60, 74 th Cong., 1 st Sess. ⁴
	Sep 3, 1945	Modification providing for raising the north jetty to an elevation 9 feet above mean low water, and a channel 300 feet wide and 16 feet deep from the ocean through the inlet to the Isle of Wight Bay Channel, thence 200 feet to the project harbor, and a depth of 14 feet in the project harbor. Channel depths refer to project datum.	H. Doc. 444, 82 nd Cong., 2 nd Sess.
7.	Oct 27, 1985	POTOMAC & ANACOSTIA RIVERS, DC, COLLECTION & REMOVAL OF DRIFT Collection and removal of drift from waters of the Potomac and Anacostia Rivers and their tributaries in the Washington, DC area from the head of the tidewater to Mount Vernon. VA.	H. Doc. 286, 89 th Cong., 1 st Sess.
8.	Mar 3, 1899	POTOMAC RIVER BELOW WASHINGTON, DC A channel 24 feet deep and 200 feet wide between mouth at Chesapeake Bay and Giesboro Point at Washington, DC, a distance of 108 miles.	H.Doc. 33, 52 nd Cong., 1 st Sess.

TABLE 4-B AUTHORIZING LEGISLATION

See Section in Text	Date Authorizing Act	Project and Work Authorized	Documents
9. TILGHMAN ISLAND HARBOR, MD			
	May 13, 1966 Sec. 107 Jul. 14, 1960	A channel 60 feet wide and 6 feet deep from that depth in Harris Creek to and including two anchorage basins of the same depth, 300 feet by 70 feet and 500 feet by an average width of 110 feet.	Detailed Project Report, August 1965.
	Oct 20, 1980 Sec. 107 Jul 14, 1960	Modification to provide for construction of a breakwater at the harbor entrance.	Detailed Project Report, July 1980
10. WASHINGTON HARBOR, DC			
	Aug 30, 1935	Provides for: (a) Virginia Channel, from Giesboro Point to area for 25,000 square feet; (b) Washington Channel, from Haines Point to head of Washington Channel, 24 feet deep and 400 feet wide; (c) Anacostia River from Giesboro Point to Anacostia Bridge, 24 feet deep and 400 feet wide, with turning basin 800 feet wide and about 2,400 feet long of same depth opposite Naval Weapons Plant, (d) Anacostia River from Anacostia Bridge 24 feet deep and 200 feet wide to turning basin 400 feet square of same depth at foot of 15th Street SE Channel lengths including turning basins are: Virginia Channel, 25,000 feet; Washington Channel, 10,000 feet; and Anacostia River, 15,000 feet; and (e) operation and maintenance of inlet gates and lock and outlet gates of Tidal Basin constructed under a previous project to flush Washington Channel.	Rivers and Harbors Committee Doc. 22, 74 th Cong., 1 st Sess ¹
11. WICOMICO RIVER, MD			
	Sep 19, 1890	Channel 9 feet deep from Main Street Bridge to about 2 miles below.	H. Doc. 20, 51 st Cong., 1 st Sess., and Annual Report 1890, p. 947
	Jun 25, 1910	Extend 9-foot depth into north prong from Main Street Bridge to the Salisbury Dam and turning basin.	H. Doc. 569, 61 st Cong., 2 nd Sess.
	Mar 2, 1919	Extend 9-foot depth into south prong to head of navigation at Cathell Street, including a turning basin, and extend project down to mouth of river in Monie Bay.	H. Doc. 1509, 63 rd Cong., 3 rd Sess.
	Jul 3, 1930	A 12-foot channel below the Main Street Bridge.	
	Aug 26, 1937	A 14-foot channel, 150 feet wide; depths of 14 feet in the north and south prongs and a basin 6 feet deep at Webster Cove and approach channel thereto of the same depth.	Senate Committee Print, 75 th Cong., 3 rd Sess. ²
	Sep 3, 1954	Enlarge existing basin at Webster Cove, by dredging an extension 6 feet deep, 100 feet wide, and 200 feet long on each side of existing basin to form a T-shaped harbor.	H. Doc. 619, 81 st Cong., 2 nd Sess.
14. ASSATEAGUE ISLAND, MD			
	Oct 12, 1996	Provides for expediting the Assateague Island restoration feature of the Ocean City, Maryland and vicinity study with a Federal appropriation limit of \$35 million.	P.L. 104-303
15. ATLANTIC COAST OF MARYLAND			
	Nov 17, 1986	Consists of a dune beginning at 27th Street extending north to the Delaware line; a steel sheetpile bulkhead from 27th Street south to Fourth Street; and widened and raised beach from Third Street to just beyond the Delaware line.	Report of the Chief of Engineers dated Sept. 29, 1981 Energy Water Dev. Approp. Act
	Sep 29, 1989	Modification reauthorized the project at a higher project cost determined by Section 902 of the Water Resources Development Act of 1986.	District Engineer's Post Authorization Notification Report

BALTIMORE, MD DISTRICT

17. CUMBERLAND, MD, AND RIDGELEY, WV			
	Jun 22, 1936	Levees, retaining walls, movable dam, and channel clearing for Cumberland, West Cumberland and South Cumberland, MD and Ridgeley, WV.	H. Doc. 101, 73 rd Cong., 1 st Sess.
	Jul 24, 1946	Levees, wall, channel improvement, remove Chesapeake and Ohio Canal Dam and construct new industrial dam.	Report on file in Office, Chief of Engineers
	Oct 12, 1996	Secretary may provide, technical, planning and design assistance for Restoration of C&O Canal	P.L. 104-303 Sec. 535
	Aug 17, 1999	Authorized project for restoration of historic C&O Canal at total cost of \$15,000,000.	P.L 106-53 Sec. 580
	Nov 8, 2007	Increases authorization limit to \$25,750,000	P.L. 110-114 Sec. 3086
18. JENNINGS RANDOLPH LAKE, MD AND WV			
	Oct 23, 1962	Construction of Bloomington Lake project.	H. Doc. 469, 87 th Cong., 2 nd Sess.
19. LACKAWANNA RIVER BASIN, PA			
	Oct 23, 1962	Construction of Aylesworth Creek Lake, Fall Brook Lake, and local protection works on Lackawanna River at Scranton, Pennsylvania	S. Doc. 141, 87 th Cong., 2 nd Sess. Authorized by Detailed Project Report, Dec 2001
20. OLYPHANT, LACKAWANNA RIVER, PA			
	Oct 31, 1992	Provides for 3,800 feet of earth levee, 1,400 feet of concrete floodwall, a closure structure, interior drainage facilities, 1,500 feet of gabion slope protection and associated cultural mitigation and environmental restoration.	Report of the Chief of Engineers dated June 29, 1992
	Dec 1, 2003	Increases project authorization to \$23,000,000.	P.L. 108-137
21. RAYSTOWN LAKE, RAYSTOWN BRANCH, JUNIATA RIVER, PA			
	Oct 23, 1962	Construction of dam and appurtenant facilities.	H. Doc. 565, 87 th Cong., 2 nd Sess.
	Nov 8, 2007	Authorize to take action to prevent shoreline erosion on east shore of Raystown Lake	P.L. 110-114 Sec. 3140
22. LACKAWANNA RIVER, SCRANTON, PA			
	Oct 31, 1992	Provides for 5,800 feet of earth levee, 1,700 feet of concrete floodwall, 3 closure structures, interior drainage facilities, 2,700 feet of gabion slope protection, an improved flood warning system, removal of a railroad bridge, access ramp, and associated cultural mitigation.	Report of the Chief of Engineers dated June 29, 1992
	Modified by Act of Oct 12, 1996	Directs Secretary to carry out the project for Plot and Green Ridge sections and allows non-Federal interest to participate in the financing of the project in accordance with Section 903(c) of WRDA 86.	P.L. 104-303
23. WV & PA FLOODING PROGRAM			
	Oct 12, 1996	Provides for design and construction of structural and non-structural flood control, streambank protection, stormwater management and channel clearing and modification measures in the West Branch Susquehanna River and Juniata River Basins in Pennsylvania.	P.L. 104-303
	Aug 17 1999	Requires flood protection not less than 100-year level for measures that incorporate levees or floodwalls.	P.L. 106-53

TABLE 4-B AUTHORIZING LEGISLATION

See Section in Text	Date Authorizing Act	Project and Work Authorized	Documents
24. SOUTHERN NEW YORK FLOOD CONTROL PROJECTS			
	Jun 22, 1936 modified by Acts of Jun 28, 1938 Aug 18, 1941; Dec 22, 1944; May 17, 1950; and Jul 3, 1958	Construction of detention reservoirs and related flood control works for protection of Binghamton, Hornell, Corning and other towns in New York and Pennsylvania.	H. Doc. 702, 77 th Cong., 2 nd Sess.
25. STILLWATER LAKE, LACKAWANNA RIVER, PA			
	Aug 18, 1941	Construction of a flood control reservoir.	H. Doc. 702, 77 th Cong., 2 nd Sess.
26. SUSQUEHANNA RIVER FLOOD CONTROL PROJECTS, NY AND PA			
	Jul 3, 1958	Construction of Cowanesque and Tioga-Hannond reservoirs, local flood protection works at Elkland, PA, and Nichols, NY and channel improvement at Cortland, NY.	H. Doc. 702, 77 th Cong., 2 nd
	Oct 22, 1976	Modification in connection with the construction of Cowanesque Lake to relocate the Town of Nelson, PA, to a new townsite.	H. Doc. 394, 84 th Cong., 2 nd Sess.
	Mar 1, 1983	Modification of Cowanesque Lake to include water supply as provided by Section 4 of the Flood Control Act of 1944 (PL 78-534) and Section 301 of Water Supply Act of 1958 (PL 85-500).	
27. WEST BRANCH OF SUSQUEHANNA RIVER, PA			
	Sep 3, 1954	Construction of three flood control reservoirs.	H. Doc. 29, 84 th Cong., 1 st Sess.
28. WYOMING VALLEY, PA (LEVEE RAISING)			
	Nov 17, 1986	Modification provides for raising existing levees and floodwalls between 3 and 5 feet, modifying closure structures, relocating utilities and providing some new floodwalls and levees to maintain the integrity of the existing flood control system.	Report of the Chief of Engineers dated October 19, 1983
	Oct 12, 1996	Modification to include as part of the construction of the project mechanical and electrical upgrades to stormwater pumping stations. The second modification is for the non-Federal sponsor to carry out mitigation measures that the Secretary would otherwise be authorized to carry out.	PL 104-303 Sec. 346
	Nov 8, 2007	Modify project to include Solomon's Creek as project element.	P.L. 110-114 Sec. 3142
	Nov 8, 2007	Coordinate with non-Federal interest to review opportunities for interests to	P.L. 110-114 Sec. 3144
29. YORK, INDIAN ROCK DAM, PA			
	Jun 22, 1936	Construction of Indian Rock Dam and channel improvements on Codorus Creek.	H. Doc. 702, 77 th Cong., 2 nd Se
33. ANACOSTIA RIVER AND TRIBUTARIES, MD AND DC			
	Oct 12, 1996	The project consists of two wetland restoration sites in the District of Columbia, one stream restoration site and one stormwater wetland site in Prince George's County, and nine stream restoration and stormwater wetland sites in Montgomery County. The project will restore a total of 80 acres of tidal and non-tidal freshwater wetlands, 5 miles of piedmont streams, and 33 acres of bottomland hardwood forest within the highly urbanized Anacostia River watershed.	Report of the Chief of Engineers, dated November 15, 1994

BALTIMORE, MD DISTRICT

TABLE 4-B AUTHORIZING LEGISLATION

See Section in Text	Date Authorizing Act	Project and Work Authorized	Documents
34. CHESAPEAKE BAY OYSTER RECOVERY, MD			
	Nov 17, 1986	Contributes to multi-agency and private efforts to restore oyster populations in the Maryland portion of the Chesapeake Bay. Up to \$5M authorized for Construction. Established project cost-sharing as 75 percent Federal, 25 Percent non-Federal.	P.L. 99 - 662
	Oct 12, 1996	Modification by inserting "and Virginia" after "Maryland" and increased program Authorization to \$7 million.	P.L. 104-303
	Dec 11, 2000	Increased program authorization to \$20 million. Changed project type to "the construction of reefs and related clean shell substrate for fish habitat, including Manmade 3-dimensional oyster reefs, in the Chesapeake Bay and its tributaries In Maryland and Virginia...". Added provision about permanent sanctuaries By the non-Federal interests, consistent with the June 1999 Oyster Consensus Document. Added provision that use of commercial watermen was acceptable.	P.L. 106-541 Sec. 342
	2002	Allows in-kind service credits for the entire non-Federal share, including Provision of shell stock material. Effective for credits after October 1, 2000. Credits must be integral to the project.	P.L. 107-66 Sec. 113
	Nov 19, 2006	Increases authorization limit to \$30M.	P.L. 109-103
	Nov 8, 2007	Increases authorization limit to \$50M. Identifies five specific types of activities For oyster restoration – adds construction/upgrading of hatcheries, allows Use of appropriate alternative substrate. Identifies that the purpose for the oyster restoration activities is for establishing permanent sanctuaries and harvest management areas. Identifies that these activities are to be consistent with other restoration plans and strategies.	P.L 110-114 Development Act Sec. 5021
35. CHESAPEAKE BAY ENVIRONMENTAL PROGRAM, MD AND VA			
	Oct 12, 1996	Establishes a pilot program to provide environmental design and construction assistance to new Federal interests in the Chesapeake Bay watershed.	P.L. 104-303
	Nov 8, 2007	Increases authorization limit to \$40,000,000 and adds submerged aquatic vegetation as project purpose.	P.L. 110-114 Sec. 5020
36. GWYNNS FALLS, MD			
	Sep 30, 2004	The Secretary of the Army shall implement the project for ecosystem restoration, Gwynns Falls, Maryland, in accordance with the Baltimore Metropolitan Water Resources-Gwynns Falls Watershed Feasibility Report prepared by the Corps of Engineers and the City of Baltimore, Maryland.	P.L 108-357 Sec 123
37. HART MILLER ISLAND, MD			
	Nov 17, 1986	Provide avian habitat and significantly improve regional wildlife habitat diversity in the northern Chesapeake Bay. Restoration of the south cell of the existing placement site includes approximately 180 acres of wetlands and mudflats for shorebird habitat, a one-acre nesting island, and 118 acres of upland for songbird habitat.	Sec. 1135 PL 99-662 Authorized by Detailed Project Report, Sep 1998
38. HERITAGE ISLAND, DC			
	May 17, 1950	Anacostia River Flood Control and Navigation Project. Consisting of 14,400 feet of flood control channels and 28,100 linear feet of levees along Anacostia River and the Northeast and Northwest Branches, including 4 pumping stations, 1 pressure conduit, and relocation and reconstruction of 4 highway bridges and 1 railroad bridge, and maintenance of an 8 foot deep, 80 foot wide, and 12,500 feet long navigation channel.	Flood Control Act of 1950
	May 22, 2002	Create wetlands to replace existing mudflats and to restore and enhance the wildlife/fisheries habitat.	Chief of Planning, North Atlantic Div.

TABLE 4-B AUTHORIZING LEGISLATION

See Section in Text	Date Authorizing Act	Project and Work Authorized	Documents
39. NORTHEAST COUNTIES, PA			
	Oct 31, 1992	Establishes a pilot program for water-related environmental infrastructure and resource protection and development projects, including waste water treatment and related facilities and water supply, storage, treatment, and distribution facilities. Such assistance may be in the form of technical and planning and design assistance.	P.L. 102-580 Sec. 580
	Aug 17, 1999	Provides construction assistance of \$20,000,000 for water related infrastructure in the counties of Lackawanna, Lycoming, Susquehanna, Wyoming, Pike, Wayne, Sullivan, Bradford, and Monroe, PA, including assistance for the Mountoursville Regional Sewer Authority, Lycoming County, PA.	P.L. 106-53 Sec. 502(f)(11)
	Nov 8,	Adds Northumberland, Union, Snyder and Luzerne Counties.	P.L. 110-114 Sec. 5125
40. POPLAR ISLAND, MARYLAND			
	Oct 12, 1996	The project consists of reconstructing Poplar Island to its approximate size in 1847 (1,110 acres), using an estimated 38 million cubic yards of uncontaminated dredged material from maintenance dredging of the southern approach channels of the Baltimore harbor and Channels navigation project.	Report of the Secretary of the Army, dated September 3, 1996
	Dec 11, 2000	Modification that the non-Federal share of the cost of a project may be provided in cash or in the form of In-kind-services or materials.	P.L. 106-541
	Nov 19, 2005	Renames project Paul S. Sarbanes Ecosystem Restoration project at Poplar Island.	P.L. 109-103
	Nov 8, 2007	Authorizes construction of expansion at total cost of \$260,000,000.	P.L. 110-114 Sec. 3087
41. SOUTH CENTRAL PA ENVIRONMENTAL IMPROVEMENT PROGRAM			
	Oct 31, 1992	Pilot program for providing environmental assistance to non-Federal interests in South Central Pennsylvania.	P.L. 102-580
	Modified by Acts of Nov 13, 1995	Expanded scope to include 15 counties; increased program authorization limits to \$50 million; provided for non-Federal sponsor credit for design and construction prior to PCA execution; allowed for Federal share of project costs to be provided in the form of grants or reimbursement of project costs; and provided the non-Federal sponsors to receive credit for reasonable interest to provide non-Federal share of project's cost.	P.L. 104-46
	Nov 8, 2007	Increases authorization limit to \$200,000,000 and deletes Clearfield, Mifflin and Snyder Counties.	P.L. 110-114 Sec. 3143
43. DENTS RUN, PA			
	Oct 12, 1996	An aquatic ecosystem restoration and protection project if the Secretary determines that the project will improve the quality of the environment and is in the public interest.	Detailed Project Report, Oct. 2001
49. W.R. GRACE, CURTIS BAY FACILITY, MD			

1. Exclusive of portion considered inactive. Inactive portion is widening 35-foot depth channel from 150 to 400 feet from Port Covington to Ferry Bar, widening 27-foot depth channel from 150 to 250 feet to Hanover Street Bridge, and providing a channel 127 feet deep by 250 feet wide to Western Maryland Railway Bridge with an anchorage and turning

basin at the upper end.
 2. Contains latest published maps.
 3. Included in Emergency Relief Program 1935.
 4. Raising of the north jetty to an elevation of 9 feet above mean low water was accomplished with maintenance funds in 1956.

TABLE 4-I INSPECTION OF COMPLETED PROJECTS – FY07

Project	Date Inspected
NOTE:	
Per DOA USACE memorandum dated 26 Sep 2006 signed by MG Riley, prioritization for use of FY07 ICW inspection funds was issued. First priority was the continued evaluation of projects with I-Wall construction; second priority was notifications for all federal and non-federal projects having received a rating of Fair, Poor, or Unacceptable during the last inspection under the ICW or RIP programs; and third priority was to conduct scheduled inspections of those projects that the district determined a priority to inspect. <i>Dates in italics indicate no FY07 inspection.</i>

NORFOLK, VA DISTRICT

The district comprises the State of Virginia, except the Potomac, Roanoke, and Ohio River Basins; the entire area on the eastern shore of Virginia except for the project for Pocomoke River, Maryland and Virginia. On the west shore of Chesapeake Bay, all waterways south of Smith Point, VA, at the mouth of the Potomac River except the project for Little Wicomico River, VA. North Carolina, only the Chowan River Basin downstream to and including the mouth of the Meherin River, and the Dismal Swamp Canal Route of the Atlantic Intracoastal Waterway to the Albemarle Sound. West Virginia, only the James River Basin.

NAVIGATION

1. APPOMATTOX RIVER, VA

Location. This river rises in Appomattox County, VA, flows northeasterly 137 miles, and empties into the James River at Hopewell, VA. The portion under improvement extends from its mouth to Petersburg, VA, a distance of 11 miles, which is the length of the tidal and navigable reach. (See National Ocean Service Chart No. 12251.)

Existing project. This project provides for a channel 60 to 80 feet wide and 10 feet deep from the mouth of the river to a point 400 feet above Lieutenant Run; thence 80 feet wide and of such depth, not exceeding 10 feet, as can be obtained without rock excavation to the head of navigation at Petersburg; including a turning basin at the mouth of Lieutenant Run 410 feet long, 80 to 140 feet wide, and 10 feet deep. All depths are referred to mean low water.

The project also provides for a dam at Petersburg and the excavation for a width of from 200 to 300 feet of a diversion channel connecting the river above the dam with the river at a point 2.5 miles below; for about 1.7 miles of levees on the low grounds between the navigable and the diversion channels; for a highway bridge and a railway bridge across the diversion channel; and for other work incidental to the diversion channel.

Under ordinary conditions the mean tidal range is 2.9 feet and the extremes 2.4 and 3.3 feet. There are no records available

of the heights of stage due to ordinary floods. These are estimated at 6 to 8 feet above mean low water at Petersburg, where the extremes are from 15.6 feet to 17.1 feet.

Local cooperation. Fully complied with. City of Petersburg, VA is the local sponsor. For details, see page 212 of Annual Report for 1969.

Terminal facilities. There are about 2,500 feet of wooden bulkheads and a shore landing in Petersburg Harbor. These facilities are in an abandoned, dilapidated condition and have not been used by commercial traffic on the river since 1950. There are two large recreational facilities now in operation on the Appomattox River. One is located about 2 miles downstream from Petersburg, VA and the other is at Hopewell, VA near the confluence of the Appomattox and the James. There is also a sand and gravel loading facility at Puddledock, located about 3 miles downstream from Petersburg, VA.

Operations during fiscal year. Fiscal year 2007 Federal funds in the amount of \$292,108 were used for performing engineering, design, environmental testing and analyses, soil borings, soil sampling, surveys and numerical modeling. Work also consisted of coordination and technical assistance to the City of Petersburg in their efforts to evaluate and secure a site for placing contaminated dredged material.

2. ATLANTIC INTRACOASTAL WATERWAY BETWEEN NORFOLK, VA, AND ST. JOHNS RIVER, FL (NORFOLK DISTRICT)

Location. Two inland water routes approximately paralleling Atlantic coast south of Norfolk, VA, between a point in Southern Branch of Elizabeth River, VA, 2,500 feet upstream of Norfolk & Western Railway bridge and Virginia-North Carolina state line in North Landing River, a distance of 27.2 miles; and 64.6 miles between mouth of Deep Creek, VA, and mouth of Pasquotank River, NC. These routes are shown on National Ocean Service Chart 12206.

Existing project. A channel 12 feet deep at mean low water and 90 to 250 feet wide following southern Branch of Elizabeth River, 5.2 miles, Virginia Land Cut, 8.3 miles, and North Landing River, 13.7 miles; and construction of tidal guard lock at Great Bridge, VA. It also provides channels 10 feet deep at mean low water and 90 to 100 feet wide in Deep Creek, 3.1 miles, Turners Cut, 4.3 miles and Pasquotank River, 35.1 miles; maintaining Dismal Swamp Canal, 22.1 miles, to about 9 feet deep mean canal level over a width of 50 feet; protection of banks in Turners Cut with sheet piling, and cutting curtain sharp points in Pasquotank River to shorten its course. Project includes operating and care of completed locks, spillways, and bridges. Southern Branch of Elizabeth River and Deep Creek sections of the two routes are tidal, mean range being about 3 feet with extremes of minus 3.5 and plus 9.6 feet. Remaining sections are non-tidal with

fluctuations of 1 to 2 feet in level due to winds.

Local cooperation. None required.

Terminal facilities. Existing facilities are considered adequate. See Annual Report for FY 1970.

Operations during fiscal year. Work consisted of operation and operational maintenance of the locks, bridges, spillways, wharves, canal equipment, grounds, roadways, and buildings along Norfolk District's portion of the Atlantic Intracoastal Waterway. All work was performed by contract under A-76 program.

3. ATLANTIC INTRACOASTAL WATERWAY BETWEEN NORFOLK, VA, AND ST. JOHNS RIVER, FL (NORFOLK DISTRICT)

Location. Deep Creek, located in southeastern Virginia within the City of Chesapeake, is the northern terminus of the Dismal Swamp Canal (DSC). The DSC is a portion of the Atlantic Intracoastal Waterway (AIW) that connects the Southern Branch of the Elizabeth River at Deep Creek to the Pasquotank River at South Mills, North Carolina, via Turner's Cut, covering a distance of 64.6 miles. The route of the AIW, extending from New Jersey to Florida, passes through the harbor of Baltimore, Maryland; Norfolk Harbor, Virginia; and down the Southern Branch of the Elizabeth River, to the tidal river Deep Creek, a tributary to the Southern Branch, down to the Deep Creek Locks where the DSC begins. The canal is generally oriented north-south.

Existing project. Atlantic Intracoastal Waterway Bridge at Deep Creek, Virginia, is federally owned and Corps operated facility that is functionally obsolete because of its narrow roadway and poor alignment with the connection roads, compounded by increasing traffic volumes. This project is to replace the existing structure in conjunction with the city's and the Commonwealth of Virginia's plans to improve the road system in this area. The new bridge will be a split leaf pit bascule consisting of a 2-lane leaf (eastbound) and a 3-lane leaf (westbound). Once completed, the local sponsor will assume ownership of the bridge and take over operation and maintenance.

Local cooperation. Complied with except that the entire project through construction will be federally funded. Upon completion of construction, the bridge will be turned over to the City of Chesapeake, Virginia, for operation and maintenance. Project Authorized for Construction in Section 1001 (44) of WRDA 2007.

Operations during fiscal year. FY 2007 funds in the amount of \$289,000 were utilized to continue the design of split leaf pit bascule bridge.

4. CHINCOTEAGUE INLET, VA

Location. Chincoteague Inlet at the southern end of Assateague Island provides access to the Atlantic Ocean from the inland waterway near the town of Chincoteague, VA. (See National Ocean Service Chart

12211.)

Existing project. Provides for a channel 12 feet deep and 150 feet wide across the ocean bar in the Atlantic Ocean and to the mouth of the inlet, a channel 9 feet deep and 100 feet wide from the inlet through the canal, and then along Chincoteague Channel to a point approximately 2,000 feet north of the state highway bridge to Chincoteague, a distance of about 6.6 miles. Mean range of tide is about 3 feet. All depths are referred to mean low water.

Local cooperation. Fully complied with. For details see Annual Report for 1974.

Terminal facilities. Existing facilities at Chincoteague are considered adequate for current and prospective traffic.

Operations during fiscal year. Fiscal year 2007 funds in the amount of \$852,000 were used for engineering, design, coordination and maintenance dredging on the outer channel.

5. CRANEY ISLAND EASTWARD EXPANSION FEASIBILITY STUDY, VA

Location. The Craney Island Dredged Material Management Area (CIDMMA) is a man-made dredge containment area located along the south bank of the James River in Portsmouth, Virginia.

Existing project. Authorized in 1946 and constructed between 1956 and

1958, provides a 2,500 acre dredge disposal site for the deposition of dredge spoils from the Hampton Roads inner harbor. The site is owned by the Federal government and operated by the Corps of Engineers, Norfolk District. Project is operated and maintained by the collection of tolls from users. Feasibility study was authorized by a 1997 resolution of the U.S. House of Representatives Committee on Transportation and Infrastructure. Purpose of the study is to investigate an eastward expansion of Craney Island giving specific attention to rapid filling to accommodate anticipated port expansion and to the operation of the existing facility while extending the useful life of Craney Island, and shall take into account all relevant environmental issues and the subsequent transfer of the expanded area to the Commonwealth of Virginia. The feasibility study and the Chief's of Engineers Report were approved in 2006. The Record of decision was issued in 2007. The project was authorized by WRDA 2007 at a cost of \$712M to be equally cost shared between the Federal government and the Commonwealth of Virginia.

Local cooperation.

Commonwealth of Virginia funded 50% of the feasibility study cost and 25% of the design cost.

Terminal facilities. Existing facilities require expansion to meet future dredge material placement needs of the Hampton Roads Port.

Operations during fiscal year. \$3M of FY2007 federal funds and \$1M of VPA funds are being used for geo-tech engineering investigations. \$2.8M of FY2008 funds and \$.933M of VPA funds will be used to design the first construction

element.

**6. HAMPTON ROADS, VA
COLLECTION AND REMOVAL OF
DRIFT**

Location. Hampton Roads is a natural harbor 300 miles south of New York and 180 miles south of Washington, DC. Its principal tributaries are the James River, affording a natural deep harbor at Newport News, VA; Elizabeth River, with its Southern, Eastern, and Western Branches providing harbors for Norfolk and Portsmouth, VA; and Hampton Creek, serving the harbor at Hampton, VA. (See National Ocean Service Chart Nos. 12248, 12245 and 12253.)

Existing project. Collection and removal of drift in Hampton Roads and its tributary waters authorizes the Secretary of the Army to allot necessary amounts of work from Appropriations for main-other available Appropriations and that this work shall be carded on as a separate and distinct project. It is wholly a work of maintenance. The purpose of work is to afford relief from variable conditions of obstruction. No advance estimate of the amount of work is required.

Local cooperation. None required.

Terminal facilities. See Norfolk Harbor, VA, and Channel to Newport News, VA.

Operations during fiscal year.

Fiscal year 2007 funds in the amount of \$920,000 were used as follows: Maintenance: Operation of the project resulted in collection and disposal of a variety of floating refuse. Operations were performed using government plant and hired labor.

7. JAMES RIVER, VA

Location. The river is formed by the junction of the Cowpasture and Jackson Rivers in Botetourt County, VA, flows east 340 miles and empties into Hampton Roads at Newport News, VA. (See National Ocean Service Chart Nos. 12248 and 12251.)

Existing project. A channel 25 feet deep and 300 feet wide from the mouth to Hopewell, 25 feet deep and 200 feet from Hopewell to the Richmond Deepwater Terminal, and a channel 18 feet deep and 200 feet wide from the Deepwater terminal to Richmond Lock; a turning basin at Richmond Deepwater Terminal to 500 feet wide, 2,770 feet long and 25 feet deep; a turning basin in Richmond Harbor 200 feet wide, 600 feet long and 18 feet deep; and construction of spur and training dikes. Depth of channels is referred to mean lower low water. Total length of channel included in the project is 91 miles, which is the navigable section. Mean tidal ranges under ordinary conditions for different parts of the river are: mouth, 2.6 feet; Jamestown, 2.0 feet; City Point, 2.6 feet; and Richmond, 3.2 feet. Spring tide ranges under ordinary conditions at the same localities are mouth, 3.1 feet; Jamestown, 2.4 feet; City Point, 3.0 feet; Richmond, 3.2 feet. Ordinary fluctuations of stage at Richmond, due to floods are 6 to 12 feet above mean low water. Extreme fluctuations are 16 to 32 feet. Flood heights below Richmond diminish rapidly. The extreme according to available information is about 11 feet lower at Dutch gap, 14 miles below Richmond, and 17 to 18 feet lower, 20 miles below Richmond. For previous projects, see Annual Report for

1938.

Local cooperation. Fully complied with for conditions imposed by River and Harbor Act of 1962. However, the local sponsor (City of Richmond) is required to furnish cost sharing in accordance with the provisions described in the Water Resources Development Act of 1986, as amended. Deepening the project from 25 feet to 35 feet, and the widening, authorized by the River and Harbor Act of 1962 has not been started.

Terminal facilities. There are city-owned wharves at Richmond Harbor and at Richmond Deepwater Terminal, and numerous private facilities elsewhere on the James River. The Deepwater Terminal is at the head of the 25-foot deep improved channel, and it serves oceangoing vessels and larger ships engaged in coast-wide trading. For detailed information on the terminal facilities on the James River, see Port Series No. 11, (Revised 1993) on Ports of Hampton Roads, prepared by the Water Resources Support Center. Existing terminal facilities are adequate for present commerce.

Operations during fiscal year. Fiscal year 2007 funds in the amount of \$3,725,740 were used for normal operations and maintenance activities in support of the navigation project. These include condition surveys, engineering studies, design, and preparation of plans for dredging, dredging Dancing Point-Swann Point Shoal, Goose Hill Shoal, and Richmond Deepwater Terminal, and supervision and administration of the dredging contracts.

8. NORFOLK HARBOR AND CHANNELS, VA.

Location. Norfolk, VA, is 187 miles south of Baltimore, MD, and 30 miles from entrance to Chesapeake Bay at Cape Charles and Cape Henry. Harbor extends 18.3 miles from 55-foot contour in the Chesapeake Bay to a point 0.8 miles above the interstate 64 high level bridge in the Southern Branch of the Elizabeth River. (See National Ocean Service Chart Nos. 12245 and 12253.)

Previous projects. For details see Annual Report for 1938.

Existing project. For details see Annual Report for 1993.

Local Cooperation. Fully complied with for dredging to an intermediate depth of 50 feet: (1) the outbound channel completed December 1988; (2) the Anchorage completed October 2000; and (3) the inbound channel completed November 2006. The non-Federal sponsor (Virginia Port Authority) is required to furnish cost sharing in accordance with the provisions described in the Water Resources Development Act of 1986, as amended for additional deepening.

Operations during the fiscal year: Fiscal year 2007 funds in the amount of \$123,000 were used to initiate Project Management Plans for the Update of the Navigation Management Plan for the Port of Hampton Roads and the Elizabeth River 45-Foot and Southern Branch 40-Foot projects and to prepare a decision document addressing a cost sharing issue on the Norfolk Harbor 50-Foot Inbound Element.

CRANEY ISLAND DREDGED MATERIAL AREA: A dredge material placement area of about 2,500 acres adjacent

to and north of Portsmouth, Virginia, enclosed by stone-faced levee of sand; re-handling basin, approach and exit channels connecting re-handling basin and Norfolk Harbor 55-foot channel.

Operations during fiscal year. Fiscal year 2007 funds in the amount of \$11,879,000 were used for maintenance dredging Norfolk Harbor and work associated with the Craney Island Dredged Material Management Area. The Craney Island Dredged Material Management Area work includes raising and maintaining the containment and division dikes, facility maintenance, mosquito control, equipment repair, and site utilities. The dike construction is needed to provide sufficient capacity to support the Norfolk Harbor Deepening, Virginia Port Authority Deepening, and the construction of the APM (Maersk) Container Port.

Terminal facilities. See Port Series No. 11 (revised 1993) on Ports of Hampton Roads, prepared by the Water Resources Support Center.

9. RUDEE INLET, VA

Location. On the Atlantic Coast of Virginia, within the City of Virginia Beach, approximately 5 miles south of Cape Henry. (See National Ocean Service Chart No. 12205.)

Existing Project. An entrance channel 10 feet deep, 100 to 72 feet wide and 1,605 feet long; an inner channel 7 feet deep, 72 to 53 feet wide and 2,495 feet long, including a safety area 7 feet deep, and approximately 1.9 acres in size and a turning basin 7 feet deep, 175 feet wide and 1,570 feet long; a sand trap 18 feet deep and

approximately 3.3 acres in size; and a weir and jetty system at the mouth of the inlet. Mean tidal range is about 3.3 feet.

Local cooperation. Fully complied with. The City of Virginia Beach as local sponsor is required to financially participate in continued annual maintenance as described in the Local Cooperation Agreement, and has fully participated through the current fiscal year.

Terminal facilities. Existing terminal facilities are considered adequate for present commerce.

Operations during fiscal year. Fiscal year 2007 funds in the amount of \$386,000 were used to perform engineering, design, coordination and maintenance dredging in the entrance channel portion of the project with the USACE Dredge Currituck.

10. SUPERVISOR OF NORFOLK HARBOR (PREVENTION OF OBSTRUCTIVE AND INJURIOUS DEPOSITS)

The District Engineer, Norfolk District, was designated Supervisor of the harbor of Hampton Roads under the provisions of the River and Harbor Act of June 29, 1888 (33 U.S.C. 441-451), as amended July 12, 1952. Under this Act, the Supervisor of the harbor of Hampton Roads is charged with the mission of preventing the deposit of obstructive and injurious materials in the tidal waters of the harbors of Norfolk, Portsmouth, Newport News, Hampton Roads, and their adjacent and tributary waters, so much of the

Chesapeake Bay and its tributaries as lies within the state of Virginia, and so much of the Atlantic Ocean and its tributaries as lies within the jurisdiction of the United States within or to the east of the State of Virginia. The River and Harbor Act of March 3, 1899 (33 U.S.C. 403,407,409), as amended, prohibits obstructions to navigable waters such as unauthorized structures, unauthorized fill, deposit of refuse, and sinking of vessels. Other laws relating to the supervision of Norfolk Harbor and its tributary waters are the Clean Water Act, The Marine Protection, Research and Sanctuaries Act of 1972, the Coastal Zone Management Act of 1969, the Fish and Wildlife Act of 1956, the Federal Power Act of 1920, the National Historic Prevention Act of 1966, the Endangered Species Act of 1973, the Deepwater Port Act of 1972, the Wild and Scenic Rivers Act, and the Land and Water Conservation Fund Act. Direct supervision of the waters under the jurisdiction of the Norfolk District was accomplished by means of two patrol vessels performing inspections, removing debris and investigating navigational hazards and sunken abandoned vessels. A derrick boat and crane barge performs removal of sunken vessels and navigational hazards and supports federal dredging projects. In addition, surveillance of the harbor was performed regarding the Corps' regulatory program, using also two small outboard craft, motor vehicles from land and occasional chartered aerial reconnaissance. This regulatory surveillance involved compliance surveys of permitted activities and evaluation of navigational impacts of proposed piers and other structures.

Operations during fiscal year.

Project minimally funded in FY 2007 to only \$40,000. Responded to 100 of 730 calls and investigated and resolved only 10 of 55 cases received.

BEACH EROSION CONTROL

11. VIRGINIA BEACH, VA (HURRICANE PROTECTION)

Location. The city of Virginia Beach is located on the southeastern coast of Virginia bordered by the Atlantic Ocean on the east, Chesapeake Bay on the north, the cities of Norfolk and Chesapeake on the west, and North Carolina on the south (See National Ocean Service Chart 12207.)

Existing project. The plan of improvement includes construction of a vertical steel sheet-pile wall with concrete cap extending from Rudee Inlet to 58th Street (about 4 miles), enhancement of the existing dune system between 58th Street and 89th Street (about 2 miles), construction and periodic re-nourishment of a widened and raised beach berm between Rudee Inlet and 89th Street (about 6.2 miles), a new boardwalk integrated with the vertical wall which will be placed seaward of the existing boardwalk extending from Rudee Inlet to approximately 40th Street (about 3 miles), a storm water runoff system consisting of the offshore discharge by pumped flow through submarine pipelines, and appropriate beach access structures consisting of ramps, stairs and dune crossover facilities. Periodic beach nourishment will maintain the beach and dune system over the 50 year project life. The Project Cooperation Agreement was executed in June 1996 and the first construction contract was underway in October 1996. Initial construction of the

project is scheduled for completion in November 2008.

Local cooperation. The local sponsor (city of Virginia Beach) is required to furnish cost sharing in accordance with the provisions described in The Water Resources Development Act of 1986.

Operations during fiscal year. Fiscal year 2007 funds in the amount of \$9,300,000 were used to complete design and award contracts for the repair of the stormwater outfall pipes at the 42nd Street Pump Station and construction of a new stormwater ocean outfall at the 79th Street Pump Station.

12. WILLOUGHBY SPIT, NORFOLK, VA

Location. The project area is located in the City of Norfolk, Virginia, and consists of 7.3 miles of southern Chesapeake Bay extending from the tip of Willoughby Spit near the Hampton Roads Bridge-Tunnel to the Federal navigation project at Little Creek Inlet.

Existing project. The Water Resources Development Act of 1986 authorized the project to include the construction and periodic nourishment of a 60-foot wide beach berm, at an elevation of 5.0 feet above mean low water, for the entire shoreline. With the assistance of the Commonwealth of Virginia, the City constructed a series of breakwaters along the Willoughby Spit-Ocean View shoreline in the late 1990s. State funding was discontinued before beach nourishment behind the breakwaters could be accomplished, leaving the project area with a reduced level of protection. Shoreline recession is a major

problem in the easternmost portion of the shoreline. The Norfolk District is currently conducting Preconstruction, Engineering, and Design investigations which include the conduct of a General Reevaluation study to determine continued Federal interest in the authorized project or a reformulated project.

Local cooperation. A Design Agreement was executed with the non-Federal sponsor, the City of Norfolk, in May 2005.

Operations during fiscal year. Fiscal year 2007 funds in the amount of \$290,000 were used to prepare, negotiate, and execute a design agreement between the Department of the Army and the City of Norfolk to perform Preconstruction Engineering and Design investigations.

FLOOD CONTROL

13. EMERGENCY FLOOD CONTROL ACTIVITIES

During FY 2005, a total of \$25,000 was spent on Catastrophic Disaster Preparedness Program (Approp. 96X3123), and \$3,489,000 on Flood Control and Coastal Emergencies including Emergency Operations (Approp. 96X3125).

14. GATHRIGHT DAM AND LAKE MOOMAW, VA

Location. Gathright Dam is on the Jackson River, a tributary of James River at mile 43.4 in Allegheny County. Gathright Dam site is in the reach of the Jackson River known as the Gorge, about 19 miles upstream from Covington, VA. At the elevation of the

top of the conservation pool, the lake extends upstream about 9 miles. (See Falling Spring and Mountain Grove, Virginia-West Virginia quadrangles of geological survey.)

Existing project. Gathright Dam consists of a 1,172-foot long, rolled-rock-fill dam with an impervious core, with the top at elevation 1,684.5; outlet works consisting of a concrete intake structure located in the right bank 500 feet upstream from the axis of the dam: a 1,075-foot long outlet tunnel through the right abutment and a stilling basin; and a 2,450-foot long fixed-crest emergency spillway excavated in a low saddle in the divide at Fortney Branch about 2.5 miles south of the dam. Discharges through the maximum conservation port elevation 1,582 will be provided for water quality control. The reservoir area at elevation 1,582 will be 2,530 acres. A total of 302,000 acre-feet of storage between elevation 1,582 and the spillway crest (elevation 1,663.5) will be reserved for flood control. At the spillway crest the reservoir will have an area of 4,540 acres. A Section 216 Project is being pursued by the Commonwealth of Virginia in FY08 to alleviate environmental issues downstream within the Jackson River.

Local cooperation. None required.

Operations during fiscal year. Fiscal year 2007 funds in the amount of \$1,943,000 were used for normal operations and maintenance activities in support of the flood control project. These include condition surveys, post filling monitoring, water management for flood reductions and on and off-site management of operations and

maintenance activities.

ENVIRONMENTAL RESTORATION

15. CHESAPEAKE BAY OYSTER RECOVERY, VA (Virginia Portion Only)

Location. Lynnhaven River, Great Wicomico River and Tangier Sound.

Existing Projects. Project is authorized by WRDA 1986 as amended. Construction of 150 acres of low relief reefs and 8 acres of 3-D reefs in the Tangier Sound were completed Sep 2002. These reefs were seeded with disease tolerant oyster seed in April 2003. Construction of 90 acres of medium relief reefs in the Great Wicomico was completed in September 2004 and seeded with disease tolerant broodstock oysters in 2005 and 2006. Recent monitoring of the Great Wicomico sites indicates that these reefs and newly seeded oysters are doing very well. The next restoration project is the Lynnhaven River. Native oysters have been identified as an important component to the Bay eco-system due to its natural ability to filter water. Oyster population has declined to a dangerous level due to years of over harvesting, diseases, and pollution.

Local cooperation.

Commonwealth of Virginia is funding 25% of the project cost through in-kind services.

Operations during fiscal year.

Fiscal year 2007 funds in the amount of \$2,125,000 were used for oversight of VIMS monitoring of project sites in the Rappahannock River, Great Wicomico River and Tangier Sound, and construction of 30 acres of reefs in the Lynnhaven River.

16. CSO, RICHMOND, VA

Location. Richmond, Virginia.

Existing project. The project consists of studies to support the re-evaluation of City of Richmond's Combined Sewer Overflow Long Term Control Plan (LTCP). Work will include reliability and interface planning for Combined Sewer Overflow and Dry Weather Flow facilities and the Wastewater Treatment Plant and Satellite locations.

Local cooperation. The local sponsor is the City of Richmond, Virginia.

Operations during fiscal year.

Project was not funded in FY 2007.

17. DISMAL SWAMP & DISMAL SWAMP CANAL, VA

Location. The project is located in the City of Chesapeake, Virginia, centered around a portion of the Atlantic Intracoastal Waterway approximately 64.6 miles long between the mouth of Deep Creek, Virginia, and the mouth of Pasquotank River, North Carolina. The route is shown on National Ocean Service Chart 12206.

Existing project. A channel 10 feet deep at mean low water and 90 to 100 feet wide in Deep Creek, 3.1 miles, Turners Cut, 4.3 miles and Pasquotank River, 35.0 miles; maintaining Dismal Swamp Canal, 22.1 miles, to about 9 feet deep mean canal level over a width of 50 feet; protection of banks in Turners Cut with sheet piling, and cutting curtain sharp points in Pasquotank River to shorten its course. Project includes operating and care of completed locks, dams and bridges. The Deep Creek section of the

route is tidal, mean range being about 3 feet with extremes of minus 3.5 and plus 9.6 feet. Remaining sections are non-tidal with fluctuations of 1 to 2 feet in level due to winds. The public perceives that the Corps may have prevented or minimized the flooding by diverting the floodwaters from Lake Drummond through the navigation locks at Deep Creek, Virginia, and at South Mills, North Carolina. the feasibility study will address these concerns as well as opportunities to provide for environmental restoration.

Local cooperation. The local sponsor has provided their cost share in the feasibility study.

Operations during fiscal year. Fiscal year 2007 funds in the amount of \$362,000 were used to continue the two phase feasibility study.

18. ELIZABETH RIVER BASIN, ENVIRONMENTAL RESTORATION, PHASE I, VA

Location. In general, the study area encompasses the entire Elizabeth River Basin, which includes Suffolk, Portsmouth, Chesapeake, Norfolk, and Virginia Beach, within the Southside Hampton Roads area of southeastern Virginia. The Elizabeth River is approximately 20 miles in length and has a drainage area of about 165 square miles. The river is tidal and empties into the Hampton Roads Harbor in the lower Chesapeake Bay. The specific project area for sediment clean up is the Scuffletown Creek area, a tributary to the Southern Branch of the Elizabeth

River, located on the east bank approximately two nautical miles from the Eastern Branch/Southern Branch confluence in the City of Chesapeake.

Existing project. The recommended plan (National Ecosystem Restoration Plan or NER) for addressing the environmental problems and needs in the Elizabeth River Basin, as presented in detail in the Final Feasibility Report and Environmental Assessment, dated June 2001, is environmental restoration which would involve a combination of both sediment restoration or clean-up at Scuffletown Creek, a tributary to the Southern Branch of the river, and wetland restoration at eight different sites throughout the river system. Sediment restoration involves environmental dredging, transport of dredged material by barge or truck, permanent placement in a dredged material placement site; and/or temporary placement, treatment, and permanent placement in a regulated landfill. Sediment restoration will result in improved bottom community abundance and diversity, reduced fish cancers, and reduced bottom sediment contaminants and toxicity.

Local cooperation. A Design Agreement was executed in 2004 with the five non-Federal sponsors consisting of the Commonwealth of Virginia and the Cities of Chesapeake, Norfolk, Portsmouth, and Virginia Beach. A Project Cooperation Agreement will require execution prior to project construction.

Operations during fiscal year. Fiscal year 2007 funds in the amount \$160,000 were used to continue

Preconstruction Engineering and Design for the Scuffletown Creek sediment remediation project.

19. ELIZABETH RIVER BASIN, ENVIRONMENTAL RESTORATION, PHASE II, VA

Location. In general, the study area encompasses the entire Elizabeth River Basin, which includes Suffolk, Portsmouth, Chesapeake, Norfolk, and Virginia Beach, within the Southside Hampton Roads area of southeastern Virginia. The Elizabeth River is approximately 20 miles in length and has a drainage area of about 165 square miles. The river is tidal and empties into the lower Chesapeake Bay.

Existing project. The second feasibility study is addressing sediment contamination in the Elizabeth River at Paradise Creek in Portsmouth, Virginia.

Local cooperation. A Feasibility Cost Share Agreement was executed with the five non-Federal sponsors consisting of the Commonwealth of Virginia and the Cities of Chesapeake, Norfolk, Portsmouth, and Virginia Beach in June 2006.

Operations during fiscal year. Fiscal year 2007 funds in the amount of \$24,000 were used to continue the feasibility study of Paradise Creek.

20. LAKE MERRIWEATHER, LITTLE CALFPASTURE, GOSHEN, VA

Location. Goshen, Virginia, is located in the western part of Virginia, approximately 30 miles west of Lexington, Virginia.

Existing project. The project consists of the repair and upgrade of the Goshen Dam and Appurtenant Features to include fixing (setting) the existing spillway crest at elevation 1369 and providing roller compacted concrete armor of the dam embankment.

Local cooperation. The local sponsor is the Commonwealth of Virginia.

Operations during fiscal year. Project was not funded in FY 2007.

21. LYNNHAVEN RIVER, ENVIRONMENTAL RESTORATION, VA

Location. The Lynnhaven River Basin study area is located in Virginia Beach, Virginia, on the south shore of the Chesapeake Bay. The Lynnhaven River, with its three branches, the Eastern, Western, and the Broad Bay/Linkhorn Bay, encompasses an area of land and water surface of nearly 64 square miles.

Existing project. The feasibility study will assess five specific areas of concern within the river basin; water quality, tidal wetlands, submerged aquatic vegetation, siltation, and benthic ecology restoration.

Local cooperation. A Feasibility Cost Share Agreement was executed with the city of Virginia Beach in September 2004.

Operations during fiscal year. Fiscal year 2007 funds \$349,000 were used to continue the feasibility phase of the study, continue the hydrodynamic/water quality modeling, complete the benthic index of biotic integrity study, complete shallow water fish and shoreline inventory study and

initiating project alternative and benefit analysis.

22. RAPPAHANNOCK RIVER, VA

Location. Fredericksburg, Virginia.

Existing project. The project will provide for fish passage by removal of the Embrey Dam located at approximately river mile 109. Also included in the project are sediment removal and placement, bank stabilization and riparian restoration behind the dam and preservation of the historic Rappahannock Canal.

Local cooperation. The local sponsor is the City of Fredericksburg, Virginia.

Operations during fiscal year. \$600,000 along with carryover funded was used to award the final contract for the project for supplying water to the historic Rappahannock canal.

GENERAL INVESTIGATIONS

23. FLOOD PLAIN MANAGEMENT SERVICES PROGRAM

The Flood Plain Management Services Program (FPMS) provides various water resources related technical services and planning guidance to federal, state, and local governments, and private requestors. Typical assistance includes quick responses for readily available information, providing guides and pamphlets, flood hazard evaluations, hurricane evacuation planning, etc. FPMS funding for FY 2007 was

\$100,000.

24. GENERAL INVESTIGATION SURVEYS

FY 2007 total federal cost of surveys during the fiscal year amounted to \$ 1, 466,000.

Also work consisted of Interagency Water Resources Development \$20,000; Special Investigations, \$14,000; FPMS and Section 22 \$345,000.

25. PLANNING ASSISTANCE TO STATES, SECTION 22, VA

Section 22 of the Water Resources Development Act (WRDA) of 1974, as amended, provides authority for the Corps of Engineers to assist the States, local governments, and other non-Federal entities, in the preparation of comprehensive plans for the development, utilization, and conservation of water and related land resources. Section 208 of the Water Resources Development Act of 1992 amended the WRDA of 1974 to include Native American Tribes as equivalent to a State.

The Planning Assistance to States program is funded annually by Congress. Federal allotments for each State or Tribe from the nation-wide appropriation are limited to \$2,000,000 annually, but typically are much less. Individual studies, of which there may be more than one per State or Tribe per year, generally cost \$25,000 to \$75,000. These studies are cost shared on a 50 percent Federal - 50 percent non-Federal basis.

The needed planning assistance is determined by the individual States and Tribes. Every year, each State and Indian Tribe can provide the Corps of Engineers its

request for studies under the program, and the Corps then accommodates as many studies as possible within the funding allotment. Typical studies are only planning level of detail; they do not include detailed design for project construction. The studies generally involve the analysis of existing data for planning purposes using standard engineering techniques although some data collection is often necessary. Most studies become the basis for State or Tribal and local planning decisions.

The Norfolk District is the lead Corps of Engineers District in Virginia with respect to the Section 22 program (work is also performed by the Wilmington, Nashville, Huntington, and Baltimore Districts).

In fiscal year 2007, the Norfolk District completed five Section 22 efforts in the Commonwealth of Virginia; one storm water management investigation for the City of Charlottesville, VA, one storm water management investigation for the City of Chesapeake, VA, one flood assessment for the major waste water treatment facility in the City of Richmond, VA, and two evaluations of water quality for the City of Virginia Beach, VA. Total federal funds expended were \$245,000 which was matched by an equal amount in cash from the four cities listed above.

26. WORK UNDER CONTINUING AUTHORITY PROGRAM

The district continues work on two Section 107 (Navigation) projects: Nassawadox Creek, Northampton County, VA, continuing the detailed project design and Fishermans Cove, Norfolk, VA completing the detailed project design. In addition, the district continues work on several Section 206

(Aquatic Ecosystem Restoration) projects, including a feasibility study on Lake Anna, Louisa, Orange, and Spotsylvania Counties, VA and four projects on the Elizabeth River: ODU Drainage Canal, Norfolk, VA; Scuffletown Creek, Chesapeake, VA; Grandy Village, Norfolk, VA; and Woodstock Park, Virginia Beach, VA, all of which are in the detailed design portion of the project. The district also completing the feasibility study for Village of Oyster, Northampton County, VA, a section 1135 (Project Modifications for the Improvement of the Environment) project.

INSPECTION OF COMPLETED WORKS

27. INSPECTION OF COMPLETED WORKS

This year's work consisted of the evaluation of projects with I-Wall construction (Richmond, Virginia, Local Flood Protection Project; including the Richmond, Virginia Water Filtration Plant; and the Norfolk, Virginia, Flood Protection System), and inspections and reports of completed local flood damage reduction and civil works projects in the Norfolk District. Inspections included the Virginia Beach, Virginia, Hurricane and Shoreline Protection Projects; James R. Olin Flood Protection Project, Buena Vista, Virginia; Scottsville, Virginia, Local Flood Protection Project; and

Richmond, Virginia, Local Flood Protection Project. Expenditures for FY07 were \$217,000 for the evaluations and inspections. The flood damage reduction projects were constructed by the Corps, and operated/maintained by the local interests.

	Cost (\$000)		286	568	
27. Inspection of Completed Work	New Work				
	Approp (\$000)		76	97	217
	Cost(\$000)		76	97	

WILMINGTON, N.C., DISTRICT

This district comprises central and eastern North Carolina and a portion of south-central Virginia, embraced in drainage basins tributary to the Atlantic Ocean from the southern boundary of Virginia to the Shallotte River, inclusive, with exception of the Meherrin River Basin above Murfreesboro, N. C., the Chowan River Basin above the confluence of the Nottaway and Blackwater Rivers, and the Pasquotank

River and its tributaries for navigation only. Also included are those portions of the Yadkin-Pee-Dee and Catawba River basins within the State of N. C. as well as a portion of the Atlantic Intracoastal Waterway from the northern boundary of North Carolina to Little River, S.C., and a portion of the waterway from Norfolk, Va., to the Sounds of North Carolina, south of the north shore of Albemarle Sound.

Navigation

1. ATLANTIC INTRACOASTAL WATERWAY BETWEEN NORFOLK, VA, AND ST. JOHNS RIVER, FL. (WILMINGTON DISTRICT)

Location. The project is located on the east coast of the United States, between Norfolk, Va., and St. Johns River, Florida. The section within Wilmington District begins at the Virginia-North Carolina State line and extends generally southerly and southwestwardly to Little River, S.C., a total of 308 statute miles. (See Coast and Geodetic Survey Charts 830 to 842, inclusive.)

Previous projects. For details see Annual Reports for 1915, 1926, 1932, and 1938.

Existing project. The authorized project provides for a waterway, 12 feet deep, with widths varying from 90 feet in land cuts to 300 feet in open waters; the construction, operation and maintenance of suitable bridges; saltwater intrusion preventive measures in the vicinity of Fairfield, N.C.; a channel in Peltier Creek, 6 feet deep and 50 feet wide from the Intracoastal Waterway in Bogue Sound to and including a basin in Peltier Creek, 6 feet deep, 200 feet wide, and 600 feet long; a channel, 6 feet deep and 90 feet wide between the Intracoastal Waterway and the gorge in Bogue Inlet, then 8 feet deep and 150 feet wide across the ocean bar; a channel, 12 feet deep and 90 feet wide to a turning basin, 200 feet wide and 350 feet long, at Swansboro; a channel, 6 feet deep and 90 feet wide in New River Inlet, and a connecting channel of the same dimensions to the Intracoastal Waterway near the mouth of New River; a channel, 10 feet deep, and 90 feet wide in New River, between the Intracoastal Waterway and the Seaboard Coastline Railroad bridge at Jacksonville, N.C.; a channel through New Topsail Inlet, 8 feet deep and 150 feet wide and a channel from New Topsail Inlet to the Intracoastal Waterway by way of Old Topsail Creek, 7 feet deep and 80 feet wide; a channel, 7 feet deep and 80 feet wide, in Banks Channel, from New Topsail Inlet, paralleling the barrier beach, to the Atlantic Intracoastal Waterway; a channel, 14 feet deep and 400 feet wide, across the ocean bar at Masonboro Inlet, with suitable jetties at the entrance, thence 12 feet deep and 90 feet wide to the channel of the Intracoastal Waterway at Wrightsville Beach by way of Banks and Motte Channels; a turning basin, 15 feet deep, 300 feet wide, and 700 feet long, on the east side of Banks Channel near Masonboro Inlet, with three 15-pile dolphins therein; a channel, 8 feet deep and 150 feet wide across the ocean bar at Carolina Beach Inlet to the Atlantic Intracoastal Waterway; a channel, 6 feet deep, 80 feet wide, and 8,000 feet long, to and including a

turning basin of the same depth, 130 feet wide and 180 feet long, at Carolina Beach; a yacht basin, 230 feet wide, 450 feet long, and 12 feet deep, at the town of Southport, connected to the waterway by a suitable channel of the same depth; and maintenance of the general navigation features of the North Carolina State Ports Authority Small Boat Harbor at Southport, consisting of an entrance channel, 150 feet wide and 400 feet long, an eastern harbor access channel, 70 feet wide and 430 feet long, a western harbor-access channel, 60 feet wide and 185 feet long, to a turning basin, 180 feet wide and 550 feet long, all to a depth of 6 feet. A modification providing for the replacement of five federally owned and operated highway bridges was authorized in December 1970. A modification providing for 100 percent Federal funding for Walter B. Jones (formerly Wilkerson Creek) and Joseph P. Knapp (formerly Coinjock) bridges was authorized in October 1976. A modification providing for 100 percent Federal funding at Core Creek, Gene A. Potter (formerly Hobucken), and Fairfield Bridges was authorized in November 1986. Estimated Federal cost is \$70,200,000 (2000). The tidal lock at Snow's Cut was deauthorized September 23, 1986, under authority of Sec. 12, PL 93-251. The 12-foot-deep channel in Peltier Creek was deauthorized by the Water Resources Development Act of 1986. The 12-foot deep channel modification to New River was deauthorized January 1, 1990, under Sec. 1002, PL 99-662. The jetties at Masonboro Inlet are complete except for the training wall, which was deauthorized April 5, 1999. A Section 111 project to mitigate damages caused by the north jetty was authorized in October 1980 and was completed in April 1981. Length of channels and basins total 347.7 miles. Plane of reference is mean low water. In the waterway north of Neuse River, variations in water surface due to winds seldom exceed 2 feet above or below mean stage. Between Beaufort and the Cape Fear River, normal tidal range varies from 3.5 feet at the inlets to 1 foot at points between. Average range of tide is 4 feet on the ocean side of Bogue Inlet and 2.5 feet just inside the inlet. At New River, tidal range varies from 3.5 feet at the inlet to 1 foot at the head of the marshes and zero at Tar Landing, 31 miles upstream. From Cape Fear River, N. C., to Little River, S. C., mean tidal range varies between 4.7 feet in Cape Fear River and 4 feet at the intermediate inlets, and 2 feet at points midway between the inlets. On October 15, 1954 (Hurricane Hazel), the tide at Holden Beach reached an elevation of 17.6 feet. (See Table 6-B for Authorizing Legislation.)

Local cooperation. Fully complied with to date except for the uncompleted modifications. The State of North Carolina agreed to keep the bridges toll free and upon completion of each bridge, accept maintenance, replacement, and ownership responsibilities. They

WILMINGTON, N.C. DISTRICT

withdrew their offer to contribute 25 percent of first cost. Water Resources Development Acts of 1976 and 1986 modified the terms of local cooperation to delete the non-Federal cost-sharing requirement for all five bridges.

Operations and results during fiscal year.
Maintenance: : Between June 22, 2007 and August 27, 2007 and September 9-30, 2007 the contract dredge *Richmond* dredged 220,000 cubic yards from shoals in Core Creek Land and Alligator Pungo Land at a cost of \$2,298,928. During intermittent periods the U.S. debris boat *Snell* conducted clearing and snagging operations and maintained dredging ranges and mooring facilities at a cost of \$47,036 in Operations and Maintenance, General funds and \$209,570 in FY 2006 Emergency Supplemental funds for a total cost of \$256,606. FY 2006 inlet crossings maintenance was completed at a cost of \$9,798 in Operations and Maintenance, General funds and \$1,398 in FY 2006 Emergency Supplemental funds for a total cost of \$11,196. Between August 1-3, 2007 the sidecasting dredge *Fry* removed 31,670 cubic yards from the New River Inlet Crossings at a cost of \$28,500. Mosquito control in disposal areas at a cost of \$153,963. Real estate support for easements and audit at a cost of \$29,278. Long-term environmental dredging and monitoring studies at a cost of \$15,959. Economic update and miscellaneous planning activities at a cost of \$5,406. Dredged material management plan at a cost of \$2,039. Engineering and design for FY 2008 maintenance dredging at a cost of \$51,379. Water control management at a cost of \$12,400. Geotechnical investigations were conducted at a cost of \$53,336 in FY 2006 Emergency Supplemental Funds. Condition and operations studies and project operation and management at a cost of \$276,980 in Operations and Maintenance, General funds and \$24,360 in FY 2006 Emergency Supplemental funds. Receipts in connection with non-Federal use of Federal diked disposal areas and other miscellaneous collections resulted in a negative cost adjustment of \$63,393.

Carolina Beach Inlet – During intermittent periods the U.S. sidecasting dredge *Merritt* removed 99,040 cubic yards from shoals in Carolina Beach Inlet at a cost of \$85,500. February 7-20, 2007 the U.S. sidecasting dredge *Fry* removed 63,040 cubic yards from shoals in Carolina Beach Inlet at a cost of \$133,000. Economic evaluation at a cost of \$2,546. Condition and operation studies and project operation and management at a cost of \$35,002. **Masonboro Inlet** – The FY 2006 booster bypass contract for Masonboro Island in connection with the Wrightsville Beach nourishment contract closeout resulted in a negative cost adjustment of \$149,486. **New River Inlet** – During intermittent periods, the U.S. sidecasting dredge *Merritt* removed 204,810 cubic yards from shoals in New River Inlet at a

cost of \$437,000. During intermittent periods, the U.S. sidecasting dredge *Fry* removed 271,460 cubic yards from shoals in New River Inlet at a cost of \$560,500 in Operations and Maintenance, General funds and \$76,000 in FY 2006 Emergency Supplemental funds for a total cost of \$636,500. Geotechnical investigations were conducted at a cost of \$22,859 in FY 2006 Emergency Supplemental Funds. Economic evaluation at a cost of \$1,703. Condition and operation studies and Project Management at a cost of \$56,997. **New Topsail Inlet** – At intermittent periods, the sidecasting dredge *Fry* removed 167,665 cubic yards from shoals in New Topsail Inlet at a cost of \$399,000 in FY 2006 Emergency Supplemental funds.. The U.S. debris boat *Snell* performed maintenance work at a cost of \$54,230 in FY 2006 Emergency Supplemental Funds. Geotechnical investigations were conducted at a cost of \$22,859 in FY 2006 Emergency Supplemental Funds. Condition and operation studies and project operation and management at a cost of \$585.

Condition at end of fiscal year. The project was completed in September 1997 except for three tie-up dolphins at Masonboro Inlet and the replacement of Fairfield Bridge. Fairfield Bridge is the last of the AIWW bridges to be replaced and was opened to traffic on March 12, 2001. Total cost of existing project to September 30, 2007, was \$342,411,232; of which \$88,917,536 was for new work including \$86,851 in contributed funds and \$253,493,696 for maintenance, including \$667,300 in contributed funds.

2. BEAUFORT HARBOR, N. C.

Location. The project is just inside Beaufort Inlet, adjacent to Morehead City Harbor. (See Coast and Geodetic survey Chart 420.)

Previous project. For details see Annual Reports for 1915 and 1938.

Existing project. The authorized project provides for stopping erosion at Beaufort Inlet by jetties and sand fences at Fort Macon and Shackleford points and other shore protection; channels 15 feet deep at mean low water and 100 feet wide in Bulkhead and Gallants Channels, except for a depth of 12 feet in the upper 5,000 feet of Gallants Channel; a harbor of refuge in Town Creek 12 feet deep, 400 feet wide, and 900 feet long connected to Gallants Channel by a channel 12 feet deep, 150 feet wide, and 1,400 feet long; a basin 12 feet deep, 600 feet wide in front of the town of Beaufort except for a channel 15 feet deep, 100 feet wide through the basin; a stone bulkhead from Town Marsh across Bird Shoal to the west end of Carrot Island; a channel 14 feet deep, 70 feet wide, and 1,900 feet long from Bulkhead Channel to a turning basin 14 feet deep, 150 feet wide, and 300 feet long near the upper end of

Morgan Creek; and a channel in Taylors Creek 15 feet deep, 100 feet wide, extending about 2.6 miles easterly from about opposite Marsh Street in Beaufort to Lennoxville Point at North River except for an 800-foot-long section at the east end, which is 12 feet deep. Total length of channels is 7.3 miles. Average tidal range is 2.5 feet at Beaufort and 3.5 feet at the inlet. (See Table 6-B for Authorizing Legislation.)

Local cooperation. Fully complied with to date.

Terminal facilities. There are fifty waterfront facilities with a total frontage of 2,000 feet. These facilities are adequate for present commerce.

Operations and results during fiscal year.
Maintenance: On March 15-28, 2007, the contract dredge Richmond removed 12,044 cubic yards of material from Beaufort Harbor at a cost of \$125,295 in FY 2006 Emergency Supplemental Funds. Condition and operations studies and project operation and management at a cost of \$24,164 in FY 2006 Emergency Supplemental Funds.

Condition at end of fiscal year. The project was completed in October 1965 except for the Morgan Creek modification which was completed on November 12, 1983. Total cost of the existing project to September 30, 2007, was \$6,464,382 of which \$818,040 was for new work, including \$34,000 in contributed funds and \$5,286,117 was for maintenance including \$326,225 in contributed funds. (For further details see Annual Report for 1962.)

3. CAPE FEAR RIVER, N. C. ABOVE WILMINGTON

Location. The river is formed by confluence of the Deep and Haw Rivers at Moncure, Chatham County, N.C., and empties into the Atlantic Ocean at Cape Fear, near the southern extremity of the state. (See Coast and Geodetic Survey Chart 426.)

Previous project. For details see Annual Reports for 1915 and 1938.

Existing project. The authorized project provides for a channel 25 feet deep and 200 feet wide from Wilmington to a turning basin 400 feet wide and 550 feet long at Navassa (2.9 miles); a channel 12 feet deep and 140 feet wide from Navassa to mile board 30 at Acme, with five channel cutoffs, 12 feet deep and 150 feet wide to eliminate sharp bends; a channel 8 feet deep from mile board 30 to Fayetteville by constructing three locks and dams and by dredging river shoals; and recreational facilities at the locks and dams. Total length of the project channels is 113.9 miles. The project was authorized by River and Harbor Acts of June 25, 1910; June 26, 1934; August 30, 1935; August 26, 1937; October 27, 1965; and Section 4, Flood Control Act of

1944. (For further details see Annual Reports for 1962 and 1970.)

Local cooperation. Fully complied with to date.

Terminal facilities. There are twelve waterfront facilities on the river, with a total frontage of 1,190 feet.

Operations and results during fiscal year.
Maintenance: During intermittent periods, the U.S. debris boat *Snell* conducted clearing and snagging, dredging operations at a cost of \$90,560. Operation and maintenance of the three locks and dams at a cost of \$549,856.

Condition at end of fiscal year. The project was completed in June 1970. Total cost of existing project to September 30, 2007, was \$32,527,571 of which \$3,759,573 (including \$1,226,385 public works) was for new work and \$28,767,998 was for maintenance.

4. LOCKWOODS FOLLY RIVER, N. C.

Location. The project is located on the south coast of North Carolina about 12 miles west of Cape Fear River. (See Coast and Geodetic Survey Chart 1236 and Geological Survey Map of North Carolina.)

Existing project. The authorized project provides for a channel 100 feet wide and 6 feet deep at low water from the ocean to the bridge at Supply 12.5 miles upstream, to be obtained by dredging through oyster rocks and mudflats. The completed river portion of the project above the waterway was reclassified to the active category in 1971. Lunar tidal ranges in Lockwoods Folly River are 4.5 feet at the inlet and 2 feet at the head of navigation at Supply. The existing project was authorized by the 1890 River and Harbor Act. (See Annual Report for 1887, page 1099.) A modification to enlarge the channel from 6 to 12 feet deep and from 100 to 150 feet wide across the ocean bar for a distance of 4,700 feet was approved by the Chief of Engineers on June 3, 1980, under Section 107 of the 1960 River and Harbor Act. During dredging operations it became apparent that establishment of the 12-foot project would not be possible with currently available equipment. Therefore, the Chief of Engineers, on December 20, 1983, approved the District's recommendation that further construction activity for the Lockwoods Folly Inlet project be suspended until suitable equipment becomes available and that the project be maintained at an 8-foot project depth in the interim.

Local cooperation. For the new modification local interests must: (a) pay, contribute in kind, or repay with interest, one-half of the first costs of construction allocated to recreational boating; (b) hold and save the United States free from damages resulting from changes in ground water levels, saltwater intrusion, or wave

WILMINGTON, N.C. DISTRICT

action due to the construction works, except damages due to the fault or negligence of the United States or its contractor; (c) provide without cost to the United States all lands, easements, and rights-of-way necessary for the construction and maintenance of the project and for aids to navigation upon request of the Chief of Engineers, and (d) provide depths in berthing areas commensurate with project depths and provide service facilities.

Terminal facilities. There are thirty-one piers and wharves on the Atlantic Intracoastal Waterway at Holden Beach, about 1.25 miles west of Lockwoods Folly Inlet, with a total frontage of about 1,980 feet available. At Dixons Landing, about 2 miles upstream of the inlet, there are five wharves with a total frontage of 240 feet. Numerous natural landings are used for loading and unloading small boats. Berthing space in the vicinity of Lockwoods Folly Inlet totals about 2,220 feet. Facilities are considered adequate for present commerce.

Operations and results during fiscal year.
Maintenance: – During intermittent periods, the U.S. sidelaying dredge *Fry* removed 251,530 cubic yards from shoals in Lockwoods Folly Inlet at a cost of \$266,000. October 6-25, 2006, the U.S. sidelaying dredge *Merritt* removed 93,740 cubic yards from shoals in Lockwoods Folly Inlet at a cost of \$199,500. Economic evaluation at a cost of \$1,442. Condition and operation studies and project operation and management at a cost of \$21,713.

Condition at end of fiscal year. The active portion of the project was completed in June 1965 except for the latest modification. Work was initiated on the latest modification on September 23, 1982, with a depth of 8 feet being reached in October 1982. The project will be maintained at the 8-foot depth until suitable equipment for deepening to 12 feet becomes available. Total cost of the existing project to September 30, 2007, was \$17,095,984 of which \$333,922 was for new work, including \$92,650 in contributed funds and \$16,762,062 was for maintenance.

5. MANTEO (SHALLOWBAG) BAY, N. C.

Location. The project is located on the northeastern side of Roanoke Island, North Carolina. (See Coast and Geodetic Survey Chart 1229.)

Existing project. The authorized project provides for a channel 14 feet deep and 400 feet wide from the Atlantic Ocean through Oregon Inlet with connecting 12-foot channels, 100 feet wide, to Pamlico Sound, Manteo, and Wanchese; and a channel 6 feet deep and 100 feet wide connecting the Manteo-Oregon Inlet Channel with Albemarle Sound. Length of channels is 25.4 miles. The project modification authorized in 1970 provided for stabilization of Oregon Inlet with a dual

rubble-mound jetty system, including means for sand transfer to the down drift beach; a channel, 20 feet deep and 400 feet wide, through the ocean bar at Oregon Inlet; a channel, 14 feet deep and 120 feet wide, from the gorge in Oregon Inlet to and through Roanoke Sound to and including a 15-acre basin of the same depth at Wanchese; and a channel 10 feet deep and 100 feet wide from the 12-foot-deep channel in Manteo (Shallowbag) Bay through Roanoke and Albemarle Sounds to deep water near the northern end of Croatan Sound. In FY 2003, after years of controversy, the Oregon Inlet stabilization project was referred to the President's Council on Environmental Quality, which directed the Corps of Engineers to a) develop alternative approaches for improving navigation; b) implement the channel widener project; and c) survey navigation channels more frequently and make the data available directly to the public and through NOAA's Electronic Navigational Charts. As a result, the Corps of Engineers agreed to terminate plans to construct jetties at Oregon Inlet. The unconstructed portion of the 1970 project was reclassified as deferred September 23, 2003. The State of N.C. has constructed the Wanchese Harbor portion and was reimbursed under Sec. 215, PL 90-483. The project was authorized by River and Harbor Acts of June 25, 1910; October 17, 1940; May 17, 1950; and December 31, 1970; and under Section 107 of the 1960 River and Harbor Act, as amended.

Local cooperation. Fully complied with to date.

Terminal facilities. The project is served by thirty-three waterfront facilities with a total frontage of 3,320 feet. Additional wharves and facilities will be provided with the enlarged basin at Wanchese.

Operations and results during fiscal year.
Maintenance: In connection with prior year dredging for the Vicinity Spit completed at a cost of \$ 1,512. At intermittent periods, the U.S. sidelaying dredge *Fry* removed 241,870 cubic yards at a cost of \$617,500; the U.S. hopper dredge *Currituck* removed 113145 cubic yards at a cost of \$634733; and the U.S. sidelaying dredge *Merritt* removed 702,466 cubic yards of material at a cost of \$1,805,000 from shoals in Oregon Inlet. The U.S. debris boat *Snell* repaired the dock at Wanchese at a cost of \$40,320. Engineering and design for FY 2007 maintenance dredging for Old House Channel and Channel to Wanchese at a cost of \$33,531. Engineering and design for FY 2007 maintenance dredging for the ocean bar at a cost of \$26,854. Engineering and design for future year maintenance for FY 2008 for the Interior Channels at a cost of \$22,942 and for the ocean bar at a cost of \$86,185. Environmental and sea turtle monitoring at a cost of \$4,027. Economic update at a cost of \$14,307. Condition and operation studies and project operation and management at a cost of \$584,260. Negative cost

adjustment in association with completion of the FY 2006 maintenance dredging of the Interior Channels at a cost of \$56,120. Island H disposal area repairs at a cost of \$59,076 in contributed funds.

Condition at end of fiscal year. The project is complete except for the latest modification. Environmental mitigation for the constructed 15 acre basin at Wanchese remains to be implemented. Total cost of the existing project to September 30, 2007, was \$161,395,393 of which \$10,099,515 was for new work, and \$151,295,878 was for maintenance including \$4,957,170 in contributed funds. (For further detail, see Annual Report of 1962.)

6. MOREHEAD CITY HARBOR, N. C.

Location. The project is located on the northern shore of Bogue Sound, adjacent to Beaufort Inlet. (See Coast and Geodetic Survey Chart 420.)

Previous project. For details see page 470 of Annual Report for 1935.

Existing project. A channel 47 feet deep and 450 feet wide from deep water in the Atlantic Ocean through the ocean bar at Beaufort Inlet with three widenings; a cutoff channel 400 feet wide and a depth of 45 feet in the east leg of the basin, including a 1,350 foot diameter turning area; a channel 12 feet deep, 100 feet wide from the turning basin to Sixth Street, Morehead City, then 12 feet deep, 200 to 400 feet wide to Tenth Street; then 6 feet deep, 75 feet wide, to Bogue Sound. Project also includes assumption of maintenance in the northwest leg and the east leg extension. The Corps of Engineers also assumed maintenance of the West Turning Basin as part of the Morehead City Harbor Project, in accordance with Section 509(a)(17) of WRDA 1996 and ASA (CW) approval on September 20, 2002, and as constructed by the State of North Carolina. Jetties at Beaufort Inlet were reclassified to the "active" category on March 8, 1972. The jetties were deauthorized by the Water Resources Development Act of 1986. The project was authorized by the 1958 River and Harbor Act (S.D. 54, 84th Cong., 1st sess.), the River and Harbor Act of December 31, 1970, the Water Resources Development Act of 1992, and Section 519(a)(17) of the Water Resources Development Act of 1996. (For further details see Annual Report for 1962.)

Local cooperation. Fully complied with to date.

Terminal facilities. Twenty-six waterfront facilities serve the port, with a total frontage of 1,250 feet. Marine terminals provide 5,300 feet of berthing space, with a depth alongside of 35 feet, and facilities for transfer of cargoes between rail and water carriers. Improvements to facilities were completed in 1969.

(For further details see Port Series No. 12, revised 1987, Corps of Engineers.)

Operations and results during fiscal year.
Maintenance: Between January 17 and March 27, 2007, the contract hopper dredge *BE Lindholm* removed 452,599 cubic yards at a cost of \$ 3,153,352 in Operations and Maintenance General funds; and 145,173 cubic yards at a cost \$888,456 in FY 2006 Emergency Supplemental Funds and placed the material in the ODMDS. Contract pipeline dredge *Lexington* removed 50,450 cubic yards out of the East Leg at a cost of \$320,910 and 133,044 cubic yards out of Range C at a cost of \$1,050,355. The U.S. debris boat *Snell* performed clearing and snagging at a cost of \$43,086. Prior year dredging for the Brandt Island pump out was completed at a Federal cost of \$89 GPS unit purchased at a cost of \$21,375. Dredged material management plan at a cost of \$43,287. Environmental studies and monitoring conducted at a cost of \$5,170. Underwater historic site evaluation at a cost of \$486. Geotechnical investigation at a cost of \$14,793. Economic benefit update at a cost of \$9,566. Engineering and design for FY 2007 maintenance for the Inner Harbor at a cost of \$83,711 in Operations and Maintenance General funds and \$37,000 in FY 2006 Emergency Supplemental funds. Engineering and design for future year dredging for FY 2008 of the Ocean Bar and Inner Harbor at a cost of \$15,306 in Operations and Maintenance. General funds and \$191,893 in FY 2006 Emergency Supplemental funds. Condition and operation studies and project operation and management at a cost of \$118,730 in Operations and Maintenance, General funds and \$126,385 in FY 2006 Emergency Supplemental funds.

Condition at end of fiscal year. The project is complete with the latest modification being physically completed in April 1994. (For further details, see Annual Report of 1962.) Total cost of the existing project to September 30, 2007, was \$135,840,721 of which \$15,936,703 was for new work, including \$2,731,996 contributed funds (including \$553,477 public works funds) and \$119,904,018 for maintenance, including \$3,888,024 contributed funds.

7. ROLLINSON CHANNEL, N. C.

Location. The project is located about 3.5 miles northeast of Hatteras Inlet. (See Coast and Geodetic Survey Chart 1232.)

Existing project. The authorized project provides for a channel 12 feet deep, 100 feet wide, and about 5.1 miles long from deep water in Pamlico Sound to and including a basin of the same depth, 80 to 150 feet wide, and 1,450 feet long at Hatteras; a rubble-mound breakwater on each side of the channel at the entrance to

WILMINGTON, N.C. DISTRICT

the basin; and a channel 10 feet deep and 100 feet wide from that depth in Hatteras Inlet gorge to Rollinson Channel, in the vicinity of the basin at Hatteras. The project was authorized by the River and Harbor Acts of August 30, 1935; March 2, 1945; September 3, 1954; and October 23, 1962. (For further details see Annual Report for 1961.)

Local cooperation. Fully complied with to date.

Terminal facilities. Six waterfront facilities serve the channel, with a total frontage of 926 feet. Existing facilities are adequate for present commerce.

Operations and results during fiscal year.
Maintenance: The contract pipeline dredge *Marion* removed 96,633 cubic yards of material from Rollison Channel in connection with the FY 2006 maintenance at a cost of \$70124 in Operations and Maintenance General funds and \$594,855 in FY 2006 Emergency Supplemental funds. Condition and operation studies and project operation and management at a cost of \$11,927 in Operations and Maintenance, General funds and \$8,708 in FY 2006 Emergency Supplemental funds.

Condition at end of fiscal year. The project was completed August 22, 1966. Total costs of the existing project to September 30, 2007, was \$5,217,019 of which \$589,105 was for new work, and \$4,627,914 was for maintenance including \$41,142 in contributed funds. (For further details see Annual Report for 1961.)

8. FAR CREEK, N.C.,

Location. Flows easterly from Engelhard into Pamlico Sounds, about 95 miles south Norfolk, Va. (See Coast and Geodetic Survey Chart 1231.)

Existing project. A channel 12 feet deep and 80 to 100 feet wide from Pamlico Sound to highway bridge at Engelhard, with a turning basin 12 feet deep, 200 feet wide and 900 feet long at the head. Project was authorized by the River and Harbors Acts of July 3, 1930, and May 17, 1950.

Local cooperation. Fully complied with to date.

Terminal facilities. Project is served by 12 waterfront facilities with a total frontage of 2,300 feet, all privately owned. Existing facilities are adequate for present commerce.

Operations and results during fiscal year.
Maintenance: Completion of the FY 2006 maintenance dredging at a cost of \$10,372 in FY 2006 Emergency Supplemental funds.

Condition at end of fiscal year. The project was completed June 1957. Total costs of the existing project to September 30, 2007, was \$2,485,540 of which \$164,642 was for new work, and \$2,320,898 was for

maintenance including \$11,181 in contributed funds. (For further details see Annual Report for 1961.)

8. SILVER LAKE HARBOR, N. C.

Location. The project is located at the southwest end of Ocracoke Island, a portion of the Outer Banks on the southeast coast of North Carolina, separating Pamlico Sound from the Atlantic Ocean. (See Coast and Geodetic Survey Chart No. 1232.)

Existing project. The authorized project provides for basin depths of 12 feet in Silver Lake Harbor; an entrance channel 12 feet deep and 60 feet wide, from the basin to Teaches Hole Channel; a channel, 12 feet deep and 150 feet wide, from the entrance channel through Big Foot Slough Bar to the 12-foot contour in Pamlico Sound; a channel, 12 feet deep and 150 feet wide, from the entrance channel through Teaches Hole Channel to the gorge in Ocracoke Inlet; a channel, 12 feet deep and 150 feet wide, across Bluff Shoal; and for rubble-mound training walls on the north and south sides of the entrance channel, 300 feet and 400 feet long, respectively. Mean tidal ranges are 1.9 feet in the throat of Ocracoke Inlet and 1 foot at Ocracoke. Variations in the water surface of Pamlico Sound are generally due to winds and seldom exceed 1 or 2 feet above or below mean stage. Severe storms have raised the water surface as much as 7 feet above normal water level at Ocracoke. (See Table 6-B for Authorizing Legislation.)

Local cooperation. Fully complied with to date.

Terminal facilities. Twelve waterfront facilities serve the harbor. These facilities are adequate for existing commerce.

Operations and results during fiscal year.
Maintenance: During intermittent periods the U.S. debris boat *Snell* performed maintenance at a cost of \$8,960 in Operations and Maintenance General funds and \$54,400 in FY 2006 Emergency Supplemental funds. Between June 26 and July 28, 2007, the U.S. sidecasting dredge *Fry* removed 137,470 cubic yards from shoals in the channel at a cost of \$370,500 in FY 2006 Emergency Supplemental funds. Between March 14 and April 10, 2007 the U.S. sidecasting dredge *Merritt* removed 120,910 cubic yards from shoals in Teaches Hole Channel at a cost of \$190,000 in FY 2006 Emergency Supplemental funds. Condition and operations studies and project management at a cost of \$720 in Operations and Maintenance General funds and \$43,120 in FY 2006 Emergency Supplemental funds.

Condition at end of fiscal year. The project was completed in July 28, 1970. Total cost of the existing project to September 30, 2007, was \$14,463,673 of

which \$184,284 was for new work, and \$14,279,389 was for maintenance including \$75,000 in contributed funds. (For further details see Annual Report for 1961.)

9. WATERWAY CONNECTING PAMLICO SOUND AND BEAUFORT HARBOR, N. C.

Location. The project is located in Core Sound, west of the outer banks of eastern North Carolina. (See Coast and Geodetic Survey Charts Nos. 420 and 1233.)

Existing project. The authorized project provides for a through channel to Core Sound 7 feet deep and 75 feet wide from Pamlico Sound to Beaufort Harbor; an alternative route of the same dimensions through Back Sound by way of channels at the east and west ends of Harkers Island; a channel 7 feet deep and 70 feet wide from the through channel to the local harbor at Cedar Island, including the authorized passage and future maintenance of a channel through the existing private basin, and an access channel 6 feet deep, 50 feet wide and about 400 feet long to a basin the same depth, 60 feet by 100 feet; a channel 7 feet deep and 75 feet wide from the through channel to Atlantic; a channel 7 feet deep and 75 feet wide, with a basin 200 feet by 500 feet, the same depth, at Sea level; a channel 5 feet deep and 75 feet wide, with basin 150 feet by 130 feet, the same depth, at Davis; a channel 6 feet deep and 60 feet wide with a basin 100 feet by 600 feet, the same depth, at Marshallberg; an entrance channel 6 feet deep and 60 feet wide, from Back Sound to harbor of refuge 120 feet by 250 feet, the same depth in Brooks Creek at the west end of Harkers Island; and a channel 7 feet deep and 70 feet wide, from the existing side channel at Atlantic, N.C., to the mouth of Little Port Brook; thence 7 feet deep and 50 feet wide, along the Brook to a basin 600 feet long, 180 feet wide, and 7 feet deep, with a breakwater, beginning at a point between the mouth of Little Port Brook and White Point, running along the channel approximately 2,000 feet. Plane of reference is mean low water. The length of the authorized channels is about 50.6 miles. (See Table 6-B for authorizing legislation.)

Local cooperation. Fully complied with to date for completed portion.

Terminal facilities. Sixteen small wharves serve the waterway. Additional facilities are needed along Core Sound.

Operations and results during fiscal year.
Maintenance: Between February 28 and June 13, 2007 the contract pipeline dredge *Marion* removed 220,166 cubic yards from Wainwright Slough, Atlantic Harbor, and Taylors Creek at a cost of \$1,941,118 in FY 2006 Emergency Supplemental funds. On June 2, 2007 the

U.S. debris boat *Snell* performed maintenance at a cost of \$6,750 in FY 2006 Emergency Supplemental funds.

Condition at end of fiscal year. The project was completed in September 1972. Total cost of the existing project to September 30, 2007, was \$6,675,518 of which \$502,567 was for new work, and \$6,172,951 was for maintenance including \$17,252 in contributed funds. (For further details, see Annual Report for 1961.)

10. WILMINGTON HARBOR, N. C.

Location. The project is located on the Cape Fear River, on southeast coast of North Carolina, between the Atlantic Ocean and Wilmington, North Carolina. (See Coast and Geodetic Survey Chart No. 426.)

Previous projects. For details, see page 1804 of Annual Report for 1915 and page 533 of Annual Report for 1938.

Existing project. The authorized and constructed project provides for a channel 40 feet deep and 500 feet wide from the Atlantic Ocean through the ocean bar and entrance channels to Southport, thence 38 feet deep and 400 feet wide to the upper end of the anchorage basin (foot of Castle Street) at Wilmington, thence 32 feet deep and 400 feet wide, to Hilton Bridge over Northeast Cape Fear River; a 38-foot deep anchorage basin at Wilmington; a 32-foot-deep turning basin opposite the principal terminals; a connecting channel 12 feet deep and 100 feet wide to the AIWW, about 3 miles long, in Cape Fear River; and a channel 25 feet deep and 200 feet wide from Hilton Bridge over Northeast Cape Fear River to a point 1.66 miles above, including a turning basin of the same depth, 700 feet wide and 500 feet long, at a point 1.25 miles above the bridge. The project was authorized by River and Harbor Acts of July 3, 1930; March 2, 1945; May 17, 1950; October 23, 1962; and March 10, 1964; and under the continuing authority of Section 107 of the 1960 River and Harbor Act. Three modifications to the project were authorized by the Water Resources Development Acts of November 17, 1986 (PL 99-662) and October 12, 1996 (PL 104-303). The Energy and Water Development Appropriations Act, 1998, subsequently combined these three modifications into one project modification. The project consists of two separable elements, the portion for deepening of the existing project and the portion for raising the dikes on Eagle Island dredged material disposal facility (DMDF) for maintenance of the existing 38 foot project until the deepening is completed. The plan of improvement consists of deepening the ocean bar and entrance channels from the authorized depth of 40 feet to 44 feet; deepening the authorized 38-foot project to 42 feet up to and including the anchorage basin immediately upriver from the State Ports Authority dock, and extending the anchorage

WILMINGTON, N.C. DISTRICT

basin northward by 300 feet; widening the existing 400-foot wide channel to 600 feet over a total length of 6.2 miles including Lower and Upper Midnight and Lower Lilliput reaches; widen five turns and bends by 100 to 200 feet providing a total average channel width of 500 to 675 feet; widening the Fourth East Jetty Channel to 500 feet over a total length of 1.5 miles; deepening the 32-foot channel between Castle Street and the Hilton Railroad Bridge, the 32-foot turning basin just above the mouth of the Northeast Cape Fear river on the west side, and the 25-foot channel from the Hilton Railroad Bridge to 750 feet upstream all to a depth of 38 feet; deepening the 25-foot channel from 750 feet upstream of the Hilton Railroad Bridge to the turning basin near the upstream limits of the project to 34 feet, along with widening of the channel from 200 to 250 feet; and widening the turning basin from 700 to 800 feet; mitigation to include acquiring, by fee title, 30 acres of upland and construction of an embayment and acquisition of about 500 acres of existing marsh and upland areas for preservation of habitat to offset losses of wetlands and primary nursery areas. The plan of improvement for the dredged material disposal facility consists of incrementally raising the dikes of three cells on Eagle Island dredged material disposal facility from their current elevations to an ultimate elevation of 40 feet. The environmental enhancement portion of the project is unprogrammed. The estimated Federal cost is \$471,000,000 (2007) for the deepening project separable element and \$49,600,000 (2007) for the dredged material disposal facility separable element. (For further details of authorization, see 1962 Annual Report.)

Local cooperation. Fully complied with to date except for latest modification. Cost sharing and financing are in accordance with concepts reflected in the Water Resources Development Act of 1986. For the deepening project separable element the non-Federal sponsor must (1) provide all lands, easements, rights-of-way, and dredged material disposal area lands presently estimated at \$2,367,000, and bear all operation and maintenance costs presently estimated at \$6,000 annually; (2) modify or relocate buildings, utilities, roads, bridges (except railroad bridges), and other facilities, where necessary in the construction of the project, presently estimated at \$22,929,000; (3) pay 25 percent of the costs allocated to deep draft navigation during construction presently estimated at \$107,750,000 (4) pay 35 percent of costs allocated to the Section 933 portion during construction, for at cost of \$5,162,000 and reimburse an additional 10 percent of the costs allocated to deep draft navigation within a period of 30 years following completion of construction which is partially offset by a credit allowed for the value of lands, easements, rights-of-way, relocations (except utility relocations), and dredged material disposal areas,

for a total cost of \$14,709,000; and (4) provide and maintain, at its own expense, the local service facilities necessary to realize the benefits of the general navigation features, presently estimated at \$24,209,000. For the dredged material disposal facility separable element the non-Federal sponsor must (1) pay 25 percent of the costs allocated to deep draft navigation during construction, presently estimated at \$12,400,000; and (2) reimburse an additional 10 percent of the costs allocated to deep draft navigation within a period of 30 years following completion of construction, presently estimated at \$4,960,000.

Terminal facilities. Forty-three principal wharves, piers, and docks at the port of Wilmington, with a berthing space of about 20,000 linear feet, serve the harbor. These facilities handle general cargo and petroleum products. (For further details, see Port Series No. 12, revised 1987, Corps of Engineers.)

Operations and results during fiscal year. New Work: Engineering and design and construction management in connection with the harbor deepening project performed at a Federal cost of \$3,024,571 and \$1,129,340 in contributed funds. Construction activities for the Ocean Bar II (Inner Bar - New Channel) performed at a Federal cost of \$61,349. Disposal area construction in connection with the harbor deepening project resulted in a Federal cost of \$146,951. Engineering and design, site investigation, and plans and specifications at a cost of \$109,870 for the Northeast Cape Fear River.

Maintenance: Between December 20, 2006 and January 11, 2007 the contract hopper dredge *Glenn Edwards* removed 704,874 cubic yards from the Ocean Bar at a cost of \$1,930,317. Between October 27 2006 and February 21, 2007 the pipeline contract dredge *Cherokee* removed 1,202,445 cubic yards from shoals in the Anchorage Basin at a Federal cost of \$551,566 in Operations and Maintenance General funds \$1,000,000 in FY 2006 Emergency Supplemental funds. Between February 28 and April 30, 2007, the contract pipeline dredge *Illinois* removed 659,324 cubic yards from the Inner Ocean Bar at a Federal cost of \$5,147,227. During intermittent periods; the U.S. debris boat *Snell* conducted clearing and snagging operations and maintained dredging ranges and mooring facilities at a cost of \$398,620. Engineering and design in connection with anchorage basin and ocean bar at a cost of \$1,859,213. Real estate studies at a cost of \$7,651. Geotechnical investigation at a cost of \$12,967. Engineering and design in connection with future year dredging of the Mid River Channels at cost of \$33,480. Engineering and design in connection with future year dredging of the Ocean Bar at cost of \$26,329. Completion of prior year dredging of the Anchorage Basin at a cost of \$745. Sea turtle monitoring at a cost

of \$9,280. Water control management at a cost of \$12,400. Economic benefits planning evaluation at a cost of \$16,346. ODMDS/ocean dumping monitoring at a cost of \$5,725. Mosquito control in disposal areas at a cost of \$206,885. Condition and operation studies and project operation and management at a cost of \$585,191. Receipts in connection with non-Federal use of Federal diked disposal areas and other miscellaneous collections resulted in a negative cost adjustment of \$151,431.

Condition at end of fiscal year. The active portion of the project was completed August 1997 except for the latest modification. (For further details, see Annual Report for 1962.) Total cost of existing project to September 30, 2007, was \$546,716,441 of which \$355,832,478 was for new work, including \$86,299,361 in contributed funds and \$190,883,963 was for maintenance, including \$12,907,181 in contributed funds. The remaining uncompleted portion of the work authorized under the River and Harbor Act of March 2, 1945, was deauthorized in accordance with Section 1001(b) (1), PL 99-662. A new construction start for the latest modification was received in FY 1998, with the first disposal area construction contract awarded in May 1999 and completed in October 1999 and the mitigation contract awarded in August 1999 and completed in November 2000 and the first deepening contract awarded in August 2000. The interim milestone of providing deep water to the State Ports was reached in January 2004. Completion of the 6.2 mile passing lane was achieved in May 2006 thus rendering a fully functional portion of the project up to and including the Anchorage and Turning Basins immediately adjacent to the N.C. State Ports Facility. The Brunswick County Section 933 beneficial use of dredge material was completed in FY 2007.

11. PROJECT CONDITION SURVEYS

To determine the extent of shoaling and pinch points at various locations along the AIWW and coastal North Carolina survey vessels collected reconnaissance and condition surveys from the following locations in FY 2007: Pamlico Sound to Rodanth, Bouge Inlet, Masonboro and Connecting Channels, Neuse River at New Bern, Lockwoods Folly, New Topsail Inlet, Channel Back Sound to Lookout, Far Creek, Stumpy Point Bay, Beaufort Harbor, Carolina Beach Inlet, Silver Lake Harbor, Atlantic Beach Channels, Rollison Channel, and Waterway Connecting Pamlico Sound to Beaufort Harbor at a cost of \$213,510 in Operations and Maintenance General funds and \$18,456 in FY 2006 Emergency Supplemental funds.

11. NAVIGATION WORKS UNDER SPECIAL AUTHORIZATION

Navigation activities pursuant to CAP Section 107, Public Law 645, 86th Congress, as amended (preauthorization). (See Table 6-J.)

“Emergency Removal of Sunken Vessels” pursuant to “Section 20” of the River and Harbor Act of 1899 as amended.

A sunken vessel, the *ANGLE DAWN*, was removed from Manteo (Shallowbag) Bay, at a cost of \$100,000. Reimbursement by the owner (cost recovery) has been requested.

Flood Damage Reduction

12. CAPE FEAR RIVER BASIN, N. C.

Location. Work covered by this project consists of a series of dams and reservoirs on tributaries of the Cape Fear River in North Carolina within a radius of 100 miles from Raleigh, North Carolina. (See Geological Survey Map of North Carolina.)

Existing project. Public Law 88-253, approved December 30, 1963, authorized three principal dams and reservoirs and a series of smaller reservoirs on tributaries of the Cape Fear River in accordance with the comprehensive plans in House Document 508, 87th Congress, 2d session. The act also provides that the appropriate agencies of the Departments of the Army and Agriculture shall conduct joint investigations and surveys and prepare a report on the upper tributaries of the Cape Fear River in the interest of watershed protection and flood damage reduction, and the conservation, development, utilization, and disposal of water. The report was prepared in compliance with provisions of Public Law 87-639. The study was unfavorable and has been submitted to Congress. No further action will be taken. B. Everett Jordan Dam and Lake, Randleman Lake, and Howards Mill Lake were included in the comprehensive plan and were authorized for construction in accordance with the above authorization. Howards Mill Lake was deauthorized in July 1995 due to the current lack of economic justification. Randleman Lake was reclassified to the "deferred" category in April 1992, due to the current lack of economic justification, and was deauthorized in April 2002. See Table 6-H on Dams and Reservoirs. Estimates of cost as given are based on 1960 price levels, except for B. Everett Jordan Dam and Lake which was revised in 1994 and Randleman Lake, which was revised in 1990.

Local cooperation. Requirements are given in the individual project reports.

12-A. B. EVERETT JORDAN DAM AND LAKE, N. C.

Location. The project is located on the Haw River, N.C., 4.3 miles above its mouth, and 2.5 miles north of Moncure, N. C.

Existing project. The project provides for an earth dam 1,330 feet long with a maximum height of 112 feet above the streambed, an uncontrolled, unpaved chute spillway, and a controlled 19-foot diameter outlet structure. Some saddle dikes are required beyond the spillway. The reservoir has a gross storage capacity of 753,500 acre-feet, of which 538,400 acre-feet is for flood damage reduction and a conservation pool of 215,100 acre-feet for water-quality control, water supply, and sedimentation. The reservoir will be operated as a unit of a coordinated system for flood damage reduction in the Cape Fear River Basin and for water supply, water-quality control, and other purposes. Estimated Federal cost for new work is \$147,600,000 (1994), consisting of \$89,186,000 for construction, and \$58,414,000 for lands and damages, including highway, railroad, and utility relocations. The existing project was authorized by Public Law 88-253 approved December 30, 1963 (H.D.508, 87th Cong., 2d Session).

Local cooperation. Local interests must protect downstream channels from encroachments and obstructions which would adversely affect operation of the project; reimburse the Federal Government for all costs allocated to municipal and industrial water supply, presently estimated at \$3,700,000 and bear all annual costs for operation, maintenance, and major replacements allocated to municipal and industrial water supply, an amount presently estimated at \$46,000 annually; and contribute toward the cost of the ranger security buildings, an amount presently estimated at \$44,000. A contract between the State of N. C. and the United States for water supply storage space was executed by ASA (CW) on April 10, 1988. In addition, the State of N. C. has leased the project for public park, recreational, fish, wildlife, and other natural resource management purposes and the estimated cost to the state for operation and maintenance under this lease is \$806,000 annually.

Operations and results during fiscal year.
Maintenance: Jordan Dam Rd. water main installation at a cost of \$4,266. Periodic inspections at a cost of \$14,404. Normal operation and maintenance cost of dam and reservoir at cost of \$304,080. Draught Management Plan at a cost of \$15,058. Natural and cultural resource management at a cost of \$331,051. Operation and maintenance of recreational facilities at a cost of \$387,825. The update of the master plan at a cost of \$26,591. Water control management at a cost of \$190,101. Activities associated with real estate at a cost of \$127,750. Environmental impact statement, EIS,

review of wastewater for the town of Cary at a cost of \$323. Receipts in connection with non-Federal use of Federal timber sells and other miscellaneous collections resulted in a negative cost adjustment of \$17,105.

Condition at end of fiscal year. All facilities are complete. Impoundment was completed in February 1982, with dedication on May 1, 1982. The project was completed in June 1999. The real estate audit was completed March 2001. The boater use study was completed March 2004. Construction of the water main at Jordan Dam Rd. was partially complete in FY 2007. Total cost of existing project to September 30, 2007, was \$181,403,702 of which \$151,680,379 was for new work, including \$1,764,735 in contributed funds and \$29,723,323 was for maintenance.

14. NEUSE RIVER BASIN, N. C.

Location. Works covered by this project consist of a series of dams and reservoirs in the Neuse River Basin in North Carolina within a radius of 50 miles from Raleigh, North Carolina. (See Geological Survey Map of North Carolina.)

Existing project. The Flood Control Act of 1965 authorized construction of the Falls Lake project as the key project in the recommended general plan of development of the Neuse River Basin. The plan will serve as a guide for immediate and future development of the basin's water resources as set forth in House Document 175, 89th Congress, 1st Session. A list of projects included in the general plan of development follows. (See Table 6-J on Dams and Reservoirs.) Estimated costs as given are based on 1963 price levels, except for Falls Lake, which was revised in 1989.

14A. FALLS LAKE, N. C.

Location. The project is on the Neuse River about 10 miles north of the city of Raleigh, North Carolina.

Existing project. The authorized project provides for an earth dam 1,915 feet long with a maximum height of 95 feet above streambed. The dam has a 30-foot top width. An uncontrolled chute spillway, 100 feet wide, is located in the east abutment. The reservoir has a gross storage capacity of 374,450 acre-feet, of which 243,050 acre-feet is for flood damage reduction, 45,000 acre-feet for water supply for the city of Raleigh, 61,330 acre-feet for water quality control, and 25,070 acre-feet for sediment storage. The reservoir will be operated as the initial unit of a coordinated system for flood damage reduction in the Neuse River Basin for water supply, water quality control, recreation, and other purposes. Estimated cost of new work is \$183,000,000 (1996) consisting of \$91,334,000 for construction and \$91,666,000 for lands and damages, including highway,

railroad, and utility relocations. The project was authorized by the 1965 Flood Control Act (H.D. 175, 89th Cong., 1st sess.).

Local cooperation. Local interests must prevent encroachment on downstream channels that would interfere with the operation of the reservoir; pay the United States in accordance with the Water Supply Act of 1958, as amended, the entire amount of construction cost allocated to water supply, presently estimated at \$13,637,000 and entire amount of operation, maintenance, and replacement costs allocated to water supply, presently estimated at \$116,000 annually, the final amounts to be determined after actual costs are known; administer project land and water areas for recreation and fish and wildlife enhancement; pay, contribute in kind, or repay (which may be through user fees), with interest, one-half of the separable cost of the project allocated to recreation and one-fourth of the separable cost allocated to fish and wildlife enhancement, the amount involved currently being estimated at \$21,595,000, and bear all costs of operation, maintenance, and replacement of recreation and fish and wildlife lands and facilities, the amount involved currently being estimated at \$1,544,000 on an average annual basis. Formal assurances have been received. The N.C. Department of Natural and Economic Resources has been authorized by an act of legislation to assure payment of all non-Federal costs allocable to water supply in all Federal projects as required by law. The state will require repayment of water supply costs by the users. A contract between the city of Raleigh and the United States for water-supply storage space was approved by the Secretary of the Army on September 11, 1972. A contract agreement for cost sharing of recreational lands and facilities in accordance with PL 89-72 was approved by the Secretary of the Army on September 11, 1972. A contract agreement in accordance with Section 221 of PL 91-611 was executed on October 10, 1972.

Operations and results during fiscal year. New Work: Holly Point Recreation Area improvements at a cost of \$2,142.

Maintenance: Periodic inspections at a cost of \$34,219. Normal operation and maintenance at a cost of \$348,130. Natural and cultural resource management at a cost of \$236,831. Operation and maintenance of recreational facilities at a cost of \$459,413. Draught Management Plan at a cost of \$15,490. Update of the master plan at a cost of \$4,490. Water control management at a cost of \$195,051. Water quality management at a cost of \$5,992. Activities associated with real estate at a cost of \$38,540. Federal timber sells and other miscellaneous collections resulted in a negative cost adjustment of \$4,850.

Condition at end of fiscal year. Reservoir filling was completed on December 7, 1983. Dedication ceremonies were held on April 30, 1983. The real estate audit was completed in January 2000. The project was completed in March 2000. The boater use study was completed in March 2004. The only new work construction item remaining is the Holly Point Recreation Area well connection, completed in May 2006. The master plan update will be completed with operation and maintenance funds. Total cost of existing project to September 30, 2007, was \$213,148,952 of which \$184,708,443 was for new work, including \$259,724 in contributed funds and \$28,440,509 was for maintenance.

15. ROANOKE RIVER UPPER BASIN, VIRGINIA, HEADWATERS AREA

Location. The project is located on the Roanoke River in the city of Roanoke, Va. (See USGS quadrangle sheet, Roanoke, Va.)

Existing project. The authorized plan includes about 6.2 miles of channel widening along the 10-mile project reach through the city of Roanoke, Va. Channel widening will be accomplished with the construction of a benched channel above the elevation of the average stream flow. Other flood damage reduction features include flood proofing at two locations, training walls to prevent floodwater intrusion into low areas along the river (total length 6,120 feet), replacement of two low-level bridges that constrict stream flows, and a flood warning system. Recreation facilities consist of a 9.5-mile recreation trail along the project reach and access and parking areas. Approved estimated Federal cost for new work is \$46,700,000 (2007). The project was authorized by the Water Resources Development Act of 1986 (H.R. 6, PL 99-662).

Local cooperation. Local interests must provide all lands, easements, and rights-of-way including spoil disposal areas presently estimated at \$7,968,000; modify or relocate buildings, utilities, roads and other facilities except railroad bridges, where necessary for construction of the project presently estimated at \$6,569,000; pay 25 percent of the cost of the flood warning system (partially offset by a credit for lands, easements, rights-of-way, and relocations) presently estimated at \$10,000; pay 5 percent of the total cost allocated to flood damage reduction in cash in addition to all lands, easements, rights-of-way and relocations presently estimated at \$2,215,700, and bear all costs of operation, maintenance, and replacement of flood damage reduction facilities presently estimated at \$101,000, annually; pay one-half of the separable cost allocated to recreation presently estimated at \$6,180,300, (partially offset by a credit for land, easements, rights-of-way and relocations) and bear all

costs of operation, maintenance and replacement of recreation facilities presently estimated at \$9,000, annually; pay 25 percent of the cost of non-structural flood proofing (partially offset by a credit for lands, easements, rights-of-way and relocations) presently estimated at \$367,000. Fully complied with to date.

Operations and results during fiscal year. New work: Water quality monitoring at a cost of \$150,480. Cultural resources data recovery at a cost of \$68,612. Log perch monitoring at a cost of \$92,457. Engineering and design and construction continued at a cost of \$1,134,727. Construction of bench cuts for flood damage reduction and recreational trail at a cost of \$5,387,468 in Federal funds and \$946,906 in contributed funds.

Condition at end of fiscal year. The contract for the flood warning system was completed in January 1991. The contract for the sewage treatment plant flood proofing was awarded in August 1991 and completed in February 1993. Two hazardous material sites have been cleaned by the owners. Sponsor initiated land acquisition for channel improvement in FY 1998 and completed land acquisition for the downstream half of the project in October 2003. As of September 30, 2007 seven bench cuts between the waste water treatment plant and Wasena Park are substantially complete and four miles of recreational trails are complete. Project completion is scheduled for September 2010. Total cost of existing project to September 30, 2007, was \$25,744,458 including \$2,329,136 in contributed funds.

17. YADKIN RIVER BASIN, N. C. AND S.C.

Location. The river rises on the eastern slope of the Blue Ridge Mountains in western North Carolina, flows generally easterly about 100 miles to the vicinity of Donnahaha, North Carolina, thence southeasterly 104 miles to its confluence with Uwharrie River near Badin, North Carolina, where its name changes to Great Pee Dee River. (See U.S. Geological Survey map of North Carolina.)

Existing project. The Flood Control Act of July 24, 1946, authorized construction of four flood damage reduction dams in the Upper Yadkin River Basin, two on the Yadkin River above Wilkesboro, North Carolina, and two on Reddies River, a tributary stream. Studies made subsequent to authorization established the economic advantage of providing needed flood damage reduction storage in only two reservoirs. W. Kerr Scott Dam and Reservoir was constructed in 1962 on the Yadkin River and was transferred to the Wilmington District from Charleston District in Fiscal Year 1980. Reddies River Lake and Roaring River Lake were deauthorized in April 2002. (See Table 6-H on Dams and Reservoirs.)

17A. W. KERR SCOTT DAM AND RESERVOIR, N. C.

Location. W. Kerr Scott Dam and Reservoir is on Yadkin River, North Carolina, about 6 miles upstream from Wilkesboro. At full flood damage reduction pool elevation (1,075 feet mean sea level), the reservoir extends 15.7 miles upstream to the Wilkes-Caldwell County line.

Existing project. The project consists of a rolled earth-fill dam 1,740 feet long, with top of dam at elevation 1,107.5 feet mean sea level or about 148 feet above streambed elevation; a spillway near the north abutment of the dam in a rock cut with crest elevation 1,075; and outlet works consisting of an intake structure, control tower, and a circular concrete conduit 12.25 feet in diameter through the base of the dam near the south abutment. The reservoir has a gross capacity of 153,000 acre-feet of which 112,000 acre-feet are reserved for flood damage reduction, 33,000 acre-feet will be used as required for water supply, and 8,000 acre-feet being contained in the minimum pool. Estimated cost is \$9,110,000 (1983) for new work. The existing project was authorized by the 1946 Flood Control Act.

Local cooperation. Requirements fully satisfied. For details, see page 413 of Annual Report for 1963.

Operations and results during fiscal year. Maintenance: Normal operation and maintenance at a cost of \$1,813,484. Natural and cultural resource management at a cost of \$290,289. Water control management at a cost of \$196,058. Real estate at a cost of \$26,322. Normal operation and maintenance of recreation facilities at a cost of \$464,368. Federal timber sells and other miscellaneous collections resulted in a negative cost adjustment of \$31,104.

Condition at end of fiscal year. The project commenced in August 1960 and placed in operation for flood damage reduction and water storage purposes in August 1962. Total cost of existing project to September 30, 2007, was \$68,569,895 of which \$8,841,326 was for new work, and \$59,728,569 was for maintenance.

18. INSPECTION OF COMPLETED FLOOD DAMAGE REDUCTION AND COASTAL STORM DAMAGE REDUCTION PROJECTS

To determine the extent of compliance with approved regulations for maintenance and operation, review and

inspections were made for the following projects during Fiscal Year 2006: Ararat River, N.C. (CAP Sec 205); Deep Creek, N.C. (CAP Sec 205); Ellerbe Creek, N.C. (CAP Sec 205); Core Creek, N.C. (CAP Sec 205); and Leith Creek, N.C. (CAP Sec 205); Little Rockfish Creek (CAP Sec 205); and Joyce Creek, N.C. (CAP Sec 205); Roanoke River Upper Basin Flood Damage Reduction Project, VA., and Tar River, Princeville, N.C.; Brunswick County Beaches, Ocean Isle Beach, Brunswick County, N.C.; Carolina Beach and Vicinity, N.C.; Carolina Beach Area South, N.C. (Kure Beach); and Wrightsville Beach, N.C. Responsible local officials were advised of inadequacies in maintenance and operation on local flood damage reduction works, where appropriate. Cost for the period was \$137,547. Total cost to September 30, 2007, was \$822,539, charged to operations. A one time adjustment of the cumulative costs corrects errors made and carried forward each year, including a -\$36 error prior to FY 76, a +\$3,000 error in FY 99, and a typographical error in FY 02.

19. FLOOD DAMAGE REDUCTION WORKS UNDER SPECIAL AUTHORIZATION

Flood damage reduction activities pursuant to Section 205, Public Law 858, 80th Congress, as amended (preauthorization). (See Table 6-L.)

Emergency flood damage reduction activities and coastal storm damage reduction activities at Federally authorized projects (Public Law 99, 84th Congress, and antecedent legislation).

Catastrophic Disaster Preparedness Program cost \$20,246.

COASTAL STORM DAMAGE REDUCTION

20. BRUNSWICK COUNTY BEACHES, N.C. (CAPE FEAR TO NORTH CAROLINA-SOUTH CAROLINA STATE LINE)

Location. The project is in Brunswick County, on the south Atlantic coast of North Carolina, between the mouth of the Cape Fear River and the North Carolina-South Carolina State Line. (See Coast and Geodetic Survey Charts 1236 and 1237.)

Existing Project. The project was authorized by the 1966 Flood Control Act (H.D. 511, 89th Congress, 2d session). The project was rejected by a public referendum in 1974 and was reclassified inactive in February 1976. The project was reclassified to active in 1985 due to renewed local interest caused by continuing erosion and repeated storm damage, with the exception

of Sunset Beach, which remains inactive. The General Reevaluation Report for Ocean Isle Beach was approved May 15, 1998. The authorized project for the Ocean Isle Beach portion provides a continuous vegetated dune and berm stabilized by periodic re-nourishment. The dune crown width is 25 feet at elevation 9.5 feet NGVD fronted by a berm 50 feet wide at 7 feet NGVD for a distance of 5,150 feet, then a berm with crown width of 50 feet at 7 feet NGVD for a distance of 2,600 feet, then a berm with crown width of 25 feet at 7 feet NGVD for a distance of 2,400 feet. Transitions will be 4,200 feet on the eastern end and 2,800 feet on the western end. Total length of the beach segment including transitions is 17,150 feet. A General Reevaluation is underway for the Oak Island (formerly Long Beach and Yaupon Beach), Caswell Beach, and Holden Beach portion. Sunset Beach remains inactive. The estimated Federal cost is \$78,150,000 (2007) for the Ocean Isle beach portion and \$141,000,000 (2007) for the Oak Island, Caswell Beach, and Holden Beach portion.

Local Cooperation. The PCA executed January 9, 2001, for the Ocean Isle Beach portion provides that the non-Federal sponsor shall: (a) provide all lands, easements, rights-of-way, and suitable borrow and dredged or excavated material disposal areas; (b) perform required relocations; (c) during initial construction, contribute 35 percent of construction costs assigned to coastal storm damage reduction, with credit allowed for (a) and (b), currently estimated at \$3,157,000; (d) during periodic re-nourishment, contribute 35 percent of construction costs assigned to coastal storm damage reduction, with credit allowed for (a) and (b), currently estimated at \$37,080,000; (e) participate in and comply with applicable Federal floodplain management and flood insurance programs; (f) not less than once a year inform affected interests of the extent of protection afforded by the project; (g) enforce floodplain regulations; (h) provide and maintain public ownership, during the economic life of the project, of an adequate width of beach for public use, with acceptable beach access, parking areas, and other facilities necessary for realization of the benefits upon which Government participation is based; (i) adopt and enforce ordinances to provide for preservation of the project and its protective vegetation; (j) control water pollution to the extent necessary to safeguard the health of bathers; and (k) operate, maintain, repair, and rehabilitate the project. The non-Federal sponsor share of total project costs for the Oak Island, Caswell Beach, and Holden Beach portion is currently estimated to be \$41,000,000.

Operations and results during fiscal year. New Work: Engineering and design in connection with an Ocean Isle Beach and the Brunswick County General Reevaluation at a Federal cost of \$224,986 FY 2006

WILMINGTON, N.C. DISTRICT

Emergency Supplemental funds in the amount of \$428,600. Nourishment for the Ocean Isle Beach portion for the FY 2007 nourishment cycle at a cost of \$1,869,166 in FY 2006 Emergency Supplemental funds and cost of \$982,324 in contributed funds.

Condition at end of fiscal year. For the Ocean Isle Beach portion, a new construction start was approved in FY 2000, the PCA was executed January 9, 2001, the construction contract was awarded February 26, 2001, and initial project construction was substantially complete and the project was operational May 15, 2001. The first nourishment cycle scheduled was awarded in FY 2006 and was completed in December 2007. The General Reevaluation is continuing for the Oak Island, Caswell Beach, and Holden Beach portion. Sunset Beach remains inactive. Total cost of existing project to September 30, 2007, was \$13,894,178 including \$4,071,968 in contributed funds.

21. CAROLINA BEACH AND VICINITY, N.C.

Location. The project is in New Hanover County, about 15 miles southeast of Wilmington, N. C., on the peninsula which separates lower Cape Fear River from the Atlantic Ocean. (See Coast and Geodetic Survey Map 834.)

Existing project. The authorized project consists of two separable elements, the Carolina Beach Portion and the Area South of Carolina Beach and extends about 32,000 feet from the northern limits of Carolina Beach to the southern limits of Kure Beach. Federal participation in the cost of periodic beach nourishment will be for a period not to exceed 50 years from the year of initial placement. The project provides for construction of a dune with a crown width of 25 feet at elevation 13.5 feet National geodetic vertical datum (NGVD), a berm with a crown width of 50 feet at elevation 10.5 feet NGVD for Carolina Beach and 9 feet NGVD for the Area South, and for Carolina Beach a rock revetment at elevation 10.5 feet NGVD along the northern 2,050 feet fronted by a 130-foot wide berm at elevation 6.5 feet NGVD. The Area South of Carolina Beach was reclassified to the active category, June 1985. The estimated Federal cost for the Carolina Beach Portion is \$28,600,000 (2007) and for the Area South is \$89,050,000 (2007). The project was authorized by the 1962 Flood Control Act (H.D.418, 87th Cong. 2d sess.). The Water Resources Development Act of 1986 authorized Federal participation in future nourishment for 50 years.

Local cooperation. For the **Carolina Beach portion**, as originally authorized and constructed, local

interests must (a) provide lands, easements, and rights-of-way for construction; (b) make required relocations and alterations of streets, utilities, or structures; (c) contribute 37.9 percent of the total first cost, with credit allowed for (a) and (b); (d) hold the United States free from damages; (e) maintain all works and undertake periodic beach nourishment after completion, with specified Federal contributions for 10 years after completion; and (f) additional provisions in the agreement executed August 17, 1981. Subsequently, WRDA 86 extended Federal participation to 50 years from initial construction (1964-2014). A PCA was executed July 29, 1994 that addressed periodic nourishment through the project life and provided that local interests shall (a) provide all lands, easements, relocations, rights-of-way, and suitable borrow and dredged or excavated material disposal areas (b) pay 35 percent of the total costs of each periodic nourishment assigned to coastal storm damage reduction; with credit for (a) above; and (c) operate, maintain, repair, replace, and rehabilitate coastal storm damage reduction facilities. For the **Area South portion**, local interests must: (a) provide lands, easements, relocations, rights-of-way, including suitable borrow and dredged or excavated material disposal areas; (b) pay 35 percent of the total costs of initial construction and of each periodic nourishment assigned to coastal storm damage reduction with credit for (a) above; and (c) bear all costs of operation, maintenance and replacement of coastal storm damage reduction facilities; and additional provisions in the PCA executed September 26, 1995.

Operations and results during fiscal year. New Work: Construction placement for the FY 2006 emergency placement at a cost of \$4,570,995 in Emergency Supplemental funds and \$2,554,742 in contributed funds.

Condition at end of fiscal year. Initial project construction for the Carolina Beach portion was completed August 12, 1982, except for grassing which was completed in September 1983. The latest cycle of periodic nourishment for the Carolina Beach portion and Area South was completed in February and March of FY 2007 respectively. The contract for the initial construction of the Area South portion was awarded August 1996 with dredging completed in January 1998, and final contract completion in December 1999. The contract for the first cycle of periodic nourishment for Area South was awarded in January 2001 and completed in June 2001. Total cost of existing project to September 30, 2007, was \$53,988,175 including \$20,440,964 in contributed funds.

22. DARE COUNTY BEACHES, N.C. (BODIE ISLAND PORTION)

Location. The project is in Dare County on the north coast of North Carolina, about 40 miles south of the North Carolina-Virginia state line. (USGS quadrangle sheets Kitty Hawk, Manteo, and Roanoke Island NE)

Existing Project. The project was authorized by the Water Resource Development Act of 2000. (Chief of Engineers Report dated December 29, 2000) The authorized project consists of a 25 foot wide dune at elevation 13 feet National Geodetic Vertical Datum (NGVD) and a 50 foot wide berm to be constructed at elevation 7 feet NGVD along two separate stretches of shoreline starting at Kitty Hawk and ending at Nags Head. Total length is about 14.1 miles. The estimated Federal cost is \$786,784,000 (2007).

Local Cooperation. The PCA has not been executed, but in accordance with changed cost sharing and financing requirements, the non-Federal sponsor must provide: a) all lands, easements and rights-of-way, including suitable borrow and spoil disposal areas, presently estimated at \$7,092,000; b) required relocations; c) 35 percent of the initial construction cost allocated to coastal storm damage reduction, with credit for a) and b) above, presently estimated at \$99,134,000, and d) 50 percent of periodic re-nourishment costs allocated to coastal storm damage reduction, presently estimated at \$687,650,000 and e) bear all costs of operation, maintenance, repair, rehabilitation, and replacement of coastal storm damage reduction facilities, estimated at \$100,000.

Operations and results during fiscal year. New Work: Engineering and design, preconstruction physical and biological monitoring, and real estate activities continued at a Federal cost of \$653,286; and \$36,962 in FY 2006 Emergency Supplemental funds.

Condition at end of fiscal year. A new construction start was approved in FY 2004. Subject to availability of funds the PCA is scheduled to be executed in the third quarter of FY 2008. Total cost of existing project to September 30, 2007, was \$3,599,361.

23. WEST ONSLOW BEACH AND NEW RIVER INLET, NC

Location. The project is in the town of Topsail Beach at the southern end of Topsail Island in Pender County on the central North Carolina coast. Topsail Island is a barrier island located approximately 40 miles northeast of Wilmington, North Carolina. (See USGS quadrangle sheets Hampstead and Holly Ridge)

Existing Project. The project was authorized by Title I, Section 101 (15) of the Water Resources Development Act of 1992. (H.D. 102-393, 102nd Congress, 2d

session). Funds to initiate preconstruction engineering and design were appropriated in FY 1990. The project received a new construction start for FY 1994; however, no Construction, General appropriation funds were expended. The project cooperation agreement was not executed due to the Sponsor's inability to fund their share of the project cost. The project was placed in inactive status in July 1994 due to lack of local support. The town of Topsail Beach has experienced severe beach erosion, heavy property damage, and damage to or destruction of the primary dune system as a result of storm surges from hurricanes in 1996 and 1999 and northeasters over recent years. Local interests are now able to finance their share and support the project. In FY 2001, a design agreement was executed and a General Reevaluation was initiated to reevaluate the authorized project and the adjacent shoreline. The authorized project consists of a sand dune constructed to an elevation of 13 feet above mean sea level (MSL) fronted by a storm berm constructed to an elevation of 9 feet above mean sea level and a beach (natural) berm constructed to an elevation of 7 feet above MSL along 9,500 feet of shoreline; two transition sections constructed to elevation 7 feet above MSL along 2,400 feet on the southern end and along 6,860 feet on the northern end; and renourishment of the project at approximately two year intervals. The borrow areas, located in offshore, will be dredged to depths of 35-55 feet below mean low water. The estimated Federal cost for new work is \$138,000,000 (2007).

Local Cooperation. The authorizing document provides that the non-Federal sponsor shall (a) provide all lands, easements, rights-of-way, and suitable borrow and dredged or excavated material disposal areas; (b) perform required relocations; (c) during initial construction, contribute 35 percent of construction costs assigned to coastal storm damage reduction, with credit allowed for (a) and (b), currently estimated at \$12,600,000; (d) during periodic re-nourishment, contribute 50 percent of construction costs assigned to coastal storm damage reduction, with credit allowed for (a) and (b), currently estimated at \$104,068,000; (e) hold and save the Government free from damages; (f) comply with the Uniform Relocations Assistance and Real Property Acquisition Act of 1970; (g) publicize flood plain information for the area; (h) provide and maintain public ownership and use, during the economic life of the project, of an adequate width of beach for public use, with acceptable beach access, parking areas, and other facilities necessary for realization of the benefits upon which Government participation is based; (i) at least once a year inform affected interests of the limitations of the protection provided by the project; (j) adopt and enforce regulations to prevent encroachment and preserve the project.; and (k) operate, maintain, repair, and rehabilitate the project.

Operations and results during fiscal year. New Work: The General Reevaluation Report was continued at a Federal cost of \$256,610; \$100,385 in FY 2006 Emergency Supplemental funds; and \$4,336 in FY 2006 Emergency Supplemental contributed funds.

Condition at end of fiscal year. The draft General Reevaluation Report was completed in September 2006. Total cost of existing project to September 30, 2007, was \$3,385,672 including \$971,748 in contributed funds.

24. WRIGHTSVILLE BEACH, N. C.

Location. A small island 10 miles east of Wilmington, N. C. (See Coast and Geodetic Survey Map p.834)

Existing Project. A dune with a base bordering at or near the building line, with a crown width of 25 feet at elevation 15 feet above mean low water, together with a beach berm with a crown width of 50 feet at elevation 12, extending about 14,000 feet from Moores Inlet on the north to Masonboro Inlet on the south. Existing project was authorized by 1962 Flood Control Act (H.D. 511, 87th Cong., 2d sess.). The Water Resources Development Act of 1986 authorized Federal participation in future nourishment for the life of the project. The estimated Federal cost for new work is \$23,200,000 (2006).

Local cooperation. Fully complied with to date.

Operations and results during fiscal year. New Work: Engineering and design future renourishment at a Federal cost of \$54,737.

Condition at end of fiscal year. All work under the initial authorization has been completed. Initial construction was completed May 1970. The latest periodic renourishment was completed in FY 2006, with the next cycle scheduled for FY 2010. Total cost of existing project to September 30, 2007, was \$12,986,231 including \$4,977,203 in contributed funds.

Multi-Purpose Projects, Including Power

25. ROANOKE RIVER BASIN, VA. AND N.C.

Location. The project is on the Roanoke River and its tributaries in Virginia and North Carolina within a radius of 100 miles from Danville, Virginia.

Existing project. The Flood Control Act of 1944 approved a general plan for the comprehensive

development of the Roanoke River Basin for flood damage reduction and other purposes, and authorized construction of John H. Kerr and Philpott Reservoirs. (See Table 6-H for a list of dams and reservoirs included in the comprehensive plan.)

Local cooperation. None required. John H. Kerr and Philpott Reservoirs are the only projects in the comprehensive plan that have been authorized for construction. (See Table 6-H on Dams and Reservoirs.)

25A. JOHN H. KERR DAM AND RESERVOIR, VA. AND N.C.

Location. The project is on Roanoke River, about 178.7 river miles above its mouth, in Mecklenburg County, Virginia, and 20.3 miles downstream from Clarksville, Virginia. The reservoir extends upstream on the Roanoke River 56 miles and on the Dan River 34 miles.

Existing project. The authorized project provides for a concrete gravity dam with wing and saddle dikes on the right and left banks, with a total length of about 22,285 feet. The reservoir is operated as a unit of a coordinated system of reservoirs in the Roanoke River Basin for reduction of floods, generation of hydroelectric power, regulation of low-water flow, and for other purposes. The power installation is 204,000 kilowatts. (For further details see Annual Report for 1962.) The existing project was authorized by the 1944 Flood Control Act.

Local cooperation. None required.

Operations and results during fiscal year. New Work: Major rehabilitation of power facilities at a cost of 15,181,269 including engineering and design, construction management, and construction contract earnings.

Maintenance: The Station Service rehabilitation was performed at a cost of \$1,901,333. Normal operation and maintenance of the hydropower facilities at a cost of \$2,800,956. Normal operation and maintenance at a cost of \$396,142. Erosion control at the Mikell property at a cost of \$45,535. Construction of a pre-engineer storage building for the hydropower facilities at a cost of \$301,797. Repair and repavement of the boat ramp at Island Creek at a cost of \$115,562. Natural and cultural resource management at a cost of \$1,700,738. Operation and maintenance of recreational facilities at a cost of \$2,850,673. Water control management at a cost of \$457,247. Activities associated with real estate at a cost of \$408,963. Recreation mitigation for HWY 58 at cost of \$561 in contributed funds. Federal timber sells and other miscellaneous collections resulted in a negative cost adjustment of \$582,261.

Condition at end of fiscal year. Project is complete except for additional recreational facilities. Production of power and protection from floods are provided by project. Major rehabilitation of power facilities, with a new construction start in FY 2000, is scheduled for completion in FY 2010. Total cost of existing project to September 30, 2007, was \$368,629,019 of which \$94,402,927 was for new work; \$42,269,272 was for the Major Rehab; and \$231,956,820 was for maintenance including \$390,096 in contributed funds.

25B. PHILPOTT LAKE, VA.

Location. The project is located on the Smith River, Virginia, 44.3 miles above its junction with Dan River, and 35 miles upstream from the Virginia-North Carolina State line in Franklin and Henry Counties.

Existing project. The authorized project provides for a concrete gravity dam 892 feet long and with a maximum height of 220 feet. Reservoir is operated as a unit of a coordinated reservoir system for flood damage reduction in the Roanoke River Basin, generation of hydroelectric power, regulation of low-water flow, and for other purposes. The powerhouse has a total installation of 14,000 kilowatts. (For further details see Annual Report for 1962). Existing project was authorized by 1944 Flood Control Act.

Local cooperation. None required.

Operations and results during fiscal year.
Maintenance: : The Station Service rehabilitation was performed at a cost of \$1,889,891. Normal operation and maintenance of the hydropower facilities at a cost of \$567,204. Normal operation and maintenance at a cost of \$362,055. Natural and cultural resource management at a cost of \$393,323. Operation and maintenance of recreational facilities at a cost of \$1,727,362. Water control management at a cost of \$179,162. Activities associated with real estate at a cost of \$45,314. Federal timber sells and other miscellaneous collections resulted in a negative cost adjustment of \$320.

Condition at end of fiscal year. The project is complete except for additional recreational facilities, and is providing power and flood damage reduction. . Total cost of existing project to September 30, 2007, was \$88,144,543 of which \$14,796,384 was for new work and \$73,348,159 was for maintenance.

26. SCHEDULING FLOOD DAMAGE REDUCTION RESERVOIR OPERATIONS

Five flood control reservoir projects were operated in Wilmington District in FY 2006. All provided some measure of flood damage reduction while two, John H. Kerr Dam and Reservoir and Philpott Lake, additionally provided hydropower generation and revenue. A summary of each project follows.

B. Everett Jordan Dam and Lake is located in the Cape Fear River Basin, North Carolina. Flood damages reduced during FY 2007 were \$3,640,800 for a cumulative total of \$255,295,600 since inception of the project in 1983.

John H. Kerr Dam and Reservoir is located in the Roanoke River Basin, Virginia and North Carolina. Gross power generation for the fiscal year was 405,991,000 kilowatt-hours (kwh), compared to a period of record (1953-2007) average of 413,171,100 kwh and net marketed power revenue was \$7,310,922, making the cumulative total \$238,076,996 since inception of the project in 1952. SEPA did not purchase replacement energy for John H Kerr project during the fiscal year. Flood damages reduced during FY 2007 were \$4,175,000, increasing the cumulative total since 1952 to \$427,172,200.

Falls Lake is located in the Neuse River Basin, North Carolina. Flood damages reduced during FY 2007 were \$3,362,00 for a cumulative total of \$584,976,200 since inception of the project in 1983.

Philpott Lake is located on the Smith River in the Dan River Basin, Virginia. Gross power generation for the fiscal year was 24,190,000 kwh, compared to a period of record (1953-2007) average of 34,296,300 kwh, and net marketed power revenue was \$1,214,3400, making the cumulative total \$38,272,068 since inception of the project in 1952. SEPA did not purchase replacement energy for Philpott Lake project during the fiscal year. Flood damages reduced during FY 2007 were \$2,457,900 raising the cumulative total to \$542,588,800.

W. Kerr Scott Dam and Reservoir is located in the Yadkin-Pee Dee River Basin, North Carolina. Flood damages reduced during FY 2007 were \$683,900, making the total damages prevented since inception of the project \$182,767,600.

Miscellaneous

27. SEA TURTLE HABITAT RESTORATION, OAK ISLAND, N.C. (CAP Section 1135)

Location. This project is located on the oceanfront of the town of Oak Island (formerly Long Beach), south of the Atlantic Intracoastal Waterway in Brunswick

WILMINGTON, N.C. DISTRICT

County, North Carolina. (See USGS quadrangle sheet, Southport, N.C.)

Existing project. This project modification for improvement of the environment modifies the Atlantic Intracoastal Waterway between Norfolk, Virginia and the St. Johns River, Florida. The project modification restores sea turtle nesting habitat on Oak Island by placing beach compatible sand from the Yellow Banks Confined Disposal Facility between East 26th Place and East 58th Street to construct a 8,900 foot long main fill and a small dune to discourage turtles from crawling beyond the project. Implementation of a lighting ordinance will provide a more attractive nesting beach and improve survival of hatchlings. The approved estimated cost for construction implementation is \$11,284,000 (2000), consisting of \$5,000,000 Federal and \$6,284,000 non-Federal. The project was approved by the Division Commander on September 17, 1999 under the continuing authority of Section 1135, Water Resources Development Act of 1986, as amended.

Local Cooperation. The sponsor shall contribute 25 percent of total project modification costs, which include implementation of the authorized improvements as well as planning, engineering, design, supervision and administration, monitoring, and other activities associated with implementation, but does not include betterments. The sponsor shall also contribute sufficient additional funds to keep the Federal cost from exceeding the per project limit of \$5,000,000. The non-Federal contribution will consist of credit for required lands, easements, relocations, and rights-of way; work-in-kind credit for dune walkover structures and dune stabilization provided by the sponsor; credit for participation on the Project Coordination Team; and cash.

Operations and results during fiscal year. New Work: Resolution of a construction contractor claim cost \$2,909 in contributed funds.

Condition at end of fiscal year. The construction contract was awarded in December 2000 and substantially completed in May 2001. Monitoring of turtles and seabeach amaranth is continuing. Project closeout is underway. A construction contractor claim has been addressed. Project is awaiting financial completion.

28. ROANOKE ISLAND FESTIVAL PARK, DARE COUNTY, NC. (CAP Section 206)

Location. The Roanoke Island Festival Park is a state owned historic facility located on Iceplant Island, in Shallowbag Bay, off of Roanoke Sound adjacent to Manteo, in Dare County, North Carolina, about 75 miles south of Norfolk, Virginia. (See USGS quadrangle sheet, Manteo)

Existing project. This project will provide 4 acres of valuable estuarine and wetland habitat that will be restored and protected, including protection of 2 acres of existing coastal marsh and adjacent wooded wetlands from erosion and restoration of about 2 acres of shallow water area by marsh restoration and development of sea grass, marine rock and oyster habitat. In order to facilitate the construction of the aquatic ecosystem restoration features and to protect the aquatic habitat from further wave erosion, a 1,330-foot long rock sill and breakwater will be constructed. The project will provide incidental benefits by shoreline protection for public facilities located at Festival Park. The approved estimated cost for construction implementation is \$1,080,000 (2002), consisting of \$702,000 Federal and \$378,000 non-Federal. The project was approved by the Division Commander on November 21, 2001 under the continuing authority of Section 206, Water Resources Development Act of 1996, as amended.

Local Cooperation. The sponsor shall contribute 35 percent of project costs, which include implementation of the authorized improvements as well as planning, engineering, design, supervision and administration, monitoring, and other activities associated with implementation, but does not include betterments. The sponsor shall also contribute sufficient additional funds to keep the Federal cost from exceeding the per project limit of \$5,000,000. The non-Federal contribution will consist of credit for required lands, easements, relocations, and rights-of way; estimated at \$1,000; work-in-kind credit for oyster bed placement, management of the 1.3 acres of wooded wetland, and project signage, estimated at \$42,000, and participation on the project coordination team, estimated at \$6,000; and cash.

Operations and results during fiscal year. New Work: The construction phase was completed, including monitoring and coordination with the sponsor on work-in-kind credits, at a Federal cost of \$220.

Condition at end of fiscal year. The Division Commander approved the PDA Documentation and the project on November 21, 2001. Construction was substantially completed and the project was operational in FY 2002. Additional construction to complete the rock sill was completed in FY 2003. Marsh and sea grass plantings, as needed, and project monitoring was continued through FY 2007. Project closeout is scheduled for the third quarter of FY 2008.

29. WILSON BAY RESTORATION, JACKSONVILLE, N.C. (CAP Section 206)

Location. Wilson Bay is a 126-acre shallow estuarine embayment of the New River within the city of

Jacksonville, Onslow County, North Carolina (See USGS quadrangle sheet Jacksonville North).

Existing Project. The project will restore the Wilson Bay ecosystem, which has been degraded for many years by wastewater plant discharges, urban runoff, and alteration of hydrology. The project consists of mechanical water column aeration by the purchase, installation, and operation of three aerators and the use of three existing aerators; restoration of approximately 11.3 acres of wetlands along creeks and drainages within the Wilson Bay urban watershed; restoration of a viable benthic community by bivalve plantings at Wilson Bay Island and Wilson Bay Park; planting of approximately 4.5 acres of submerged aquatic vegetation in five areas on the perimeter of the bay; planting of approximately 1.6 acres of bioswale in an area characterized with relatively heavy surface runoff within the Wilson Bay urban watershed; and planting of approximately .08 acre of rain gardens in areas characterized with sheet flow. The approved estimated cost for design and implementation is \$6,580,000 (2007), consisting of \$4,277,000 Federal and \$2,303,000 non-Federal.

Local Cooperation. The sponsor shall contribute 35 percent of project costs, which include implementation of the authorized improvements as well as planning, engineering, design, supervision and administration, monitoring, and other activities associated with implementation, but does not include betterments. The sponsor shall also contribute sufficient additional funds to keep the Federal cost from exceeding the per project limit of \$5,000,000. The non-Federal contribution will consist of credit for required lands, easements, relocations, and rights-of way; estimated at \$696,000; work-in-kind credit currently estimated at \$1,168,000, and participation on the project coordination team, estimated at \$5,000 and cash contribution currently estimated at \$434,000. The sponsor will assume full responsibility for the costs of operation, maintenance, repair, rehabilitation, and replacement of project features, currently estimated at \$20,000 per year.

Operations and results during fiscal year. New Work: Preparation of plans and specifications and real estate coordination continued at a cost of \$96,327.

Condition at end of fiscal year. The feasibility report and project were approved in June 2003 and construction funds were committed in August 2003. Preparation of plans and specifications started in June 2003 and is continuing. The PCA was executed in April 2004. Construction by the sponsor started in August 2004, as specified in the PCA. Subject to availability of funds Federal construction will begin in the first quarter of FY 2009.

30. WANCHESE MARSH CREATION AND PROTECTION, DARE COUNTY, NC (CAP Section 204)

Location. This project is in Dare County, North Carolina on the southeastern corner of Roanoke Island at Wanchese Harbor adjacent to the channel from Oregon Inlet and north of the entrance to Wanchese Harbor. (See USGS quadrangle sheet, Oregon Inlet)

Existing project. The marshes of Roanoke Sound are important habitat for fish and wildlife resources, support recreational and commercial activities that rely on these resources, and provide an important function as nursery habitat for estuarine fish and shellfish and support a rich and diverse benthic fauna. The proposed project will create an estuarine creek and marsh area within a protective dike. The project will encompass an area of about 12.1 acres including; (1) 8.6 acres of construction in an area that is primarily open sound waters, (2) 2 acres of high marsh that will be protected by the proposed construction and (3) 1.5 acres of *Phragmites* to be removed by chemical control and replaced by native grasses. Construction will include a dike to protect the marsh from wave action until it becomes established and can withstand the strong wave action in this area. The dike will be parallel to the existing harbor entrance channel for approximately 500 feet and then turn in a northerly direction and parallel the shoreline for approximately 700 feet. Armor stone will be placed on the outside of the permanent dike to protect against wave action. The construction of the new marsh will protect 2 acres of existing marsh from continued erosion and provide an incidental benefit by helping to stabilize the Wanchese Harbor entrance. The marsh area will be graded, planted with marsh grasses as needed over a 3-year establishment period, and monitored for the same 3 years to determine appropriate functioning of the habitat. Dredged material will come from maintenance dredging of the Manteo (Shallowbag) Bay – Channel to Wanchese navigation channel. The new marsh will be established by sprigging with at least three varieties of native marsh grasses including smooth cordgrass (*Spartina alterniflora*), black needlerush (*Juncus roemerianus*) and saltmeadow hay (*Spartina patens*). The use of additional species to increase habitat diversity will be considered. The approved estimated cost for construction implementation is \$1,972,000 (2004) consisting of \$1,479,000 Federal and \$493,000 non-Federal. The Division Commander approved the project on August 9, 2001 under the continuing authority of Section 204, Water Resources Development Act of 1992, as amended.

Local Cooperation. The sponsor shall contribute 25 percent of project costs which include implementation of the authorized improvements as well as planning, engineering, design, supervision and administration,

monitoring, and other activities associated with implementation, but does not include betterments. The non-Federal contribution will consist of credit for required lands, easements, relocations, and rights-of way; credit for participation on the Project Coordination Team; and cash.

Operations and results during fiscal year. New Work: Planting of marsh grass and plans and specifications for the FY 2008 dike opening at a Federal cost of \$212,711 and contributed funds at a cost of \$49,481.

Condition at end of fiscal year. The PCA was executed in November 2002. The construction contract for the sill was awarded in February 2003 and completed in FY 2004. Dredged material, in connection with a maintenance dredging contract, was placed in the site in FY 2004 but the material was found to be unsuitable. Additional material was placed in FY 2006. After the material has settled, the site will be graded and planted in marsh grass in FY 2007. The dike will be opened for flushing in the 3rd quarter of FY 2008. Monitoring will continue through FY 2012.

31. MOREHEAD CITY HARBOR, N.C. SEC 933 (CAP Section 933)

Location. This Section 933 project is located on the mid Atlantic coast, on Bogue Banks in Carteret County, North Carolina. (See Coast and Geodetic Survey Chart 420)

Existing Project. The project makes beneficial use of dredged material available from periodic maintenance dredging of the adjacent Morehead City Harbor, NC navigation project. The recommended plan consists of two portions and uses maintenance dredging material to construct a sand berm along a portion of the oceanfront of Bogue Banks at an elevation of 7 feet above National Geodetic Vertical Datum (NGVD). This elevation mimics the natural berm elevation of the area. The approved estimated construction implementation cost is \$11,852,000 (2006), consisting of \$8,216,000 Federal and \$4,424,000 non-Federal.

Local Cooperation. The sponsor shall contribute 35 percent of project costs, which include implementation of the authorized improvements as well as planning, engineering, design, supervision and administration, monitoring, and other activities associated with implementation, but does not include betterments. The non-Federal contribution will consist entirely of cash. The sponsor shall provide all required lands, easements, relocations, and rights-of way; at no cost to the Government. No per project cost limit nor any provision for credit for work-in-kind has been established for Section 933 projects. The sponsor will maintain beach access throughout the 10-year life of the project. In

accordance with the PCA, there is no requirement for operation, maintenance, repair, rehabilitation, and replacement of project features.

Operations and results during fiscal year. New Work: Between February 4 and March 1, 2007 the contract hopper dredge *RN Weeks* removed 256,187 cubic yards from the Ocean Bar and disposed of the material in the ODMDS and March 17 – 27 the contract hopper dredge *BE Lindholm* removed 548,598 cubic yards of beach quality material from the Ocean Bar and placed in on the beach at Pine Knoll Shores at a Federal Cost of \$3,147,401 and contributed funds cost of \$1,554,045.

Condition at end of fiscal year. The feasibility report and plans and specifications were completed in FY 2003 with O&M funds. The PCA was approved by the ASA(CW) and was executed in January 2004. The first construction portion makes beneficial use of dredged material from maintenance of the entrance channel by placing it along Indian Beach, Salter Path, and a part of Pine Knoll Shores, and was substantially completed in March 2004. The second construction portion made beneficial use of dredged material from maintenance of the entrance channel by placing it along other parts of Pine Knoll Shores in FY 2007.

32. STANLY COUNTY WASTEWATER INFRASTRUCTURE, N.C. (Section 219)

Location. The project is located in Stanly County, in mid-southern North Carolina about 26 miles northeast of Charlotte. (See USGS quadrangle sheets, Norwood, Stanfield, Mt. Pleasant, and Albemarle).

Existing project. The county desires to upgrade a substandard wastewater and water supply systems. The county is predominately rural and unemployment is relatively high. In much of the county, basic infrastructures such as wastewater lines, water supply lines and highways necessary to attract industry are lacking. Without major infrastructure improvements, quality of life in many of the communities in the county will continue to fall well short of the rest of the Nation. The estimated project cost is \$7,775,667 (2007), including \$5,896,000 Federal and \$1,906,667 non-Federal. This project is authorized by Sec 219(f) of the WRDA of 1992, as amended and Section 108(d) of the FY 2001 Omnibus Appropriations Act, and Section 5114 of the Water Resource Development Act of 2007 which provides “\$8,900,000 for wastewater Infrastructure, Stanly County, North Carolina”.

Local cooperation. The sponsor shall contribute 25 percent of the total cost of the project, estimated at \$1,906,667. Project costs include implementation of the authorized improvements as well as planning, engineering, design, supervision and administration,

monitoring, and other activities associated with implementation, but does not include betterments. The non-Federal contribution will consist of credit for required lands, easements, relocations, rights-of way, and borrow or disposal areas and participation on the project coordination team.

Operations and results during fiscal year. New Work: Design and preparation of plans and specifications and construction for Millingport continued at a Federal cost of \$291,112 and contributed funds at a cost of \$66,727. Financial completion of Norword continued at a Federal cost of \$28,318 and a contributed funds cost of \$58,480.

Condition at end of fiscal year. Replacement of a wastewater pumping station and associated force main in the town of Norwood to benefit Aquadale School is complete. The decision document was approved in August 2003. The project cooperation agreement was executed in August 2004. The Collins and Ailaman force main and pump station in Norward N.C. was physically complete in September 2005. It is projected that financial completion of the Norward contract will occur in February 2008. Design of wastewater facilities for Millingport School in the city of Albemarle is ongoing. The decision document was approved in August 2004. The design agreement was executed in July 2005. The Project Cooperation Agreement was executed in September 2006. It is projected that the construction of Millingport will be substantially completed in November 2008.

Damage Reduction studies, \$150,738 for Coastal Storm Damage Reduction studies, \$100,778 to match FY 2006 Emergency Supplemental funds for Coastal Storm Damage Reduction studies, \$77,555 for Watershed/Ecosystem Restoration studies, and \$73,821 for Planning Assistance to States.

33. REGULATORY PROGRAM

Cost for the period was \$6,040,191, including \$4,625,581 for Permit Evaluation, \$783,670 for Enforcement, \$34,656 for Environmental Impact Statement preparation and \$581,528 for Compliance.

General Investigations

34. SURVEYS

Cost for the period was \$1,009,142 for Flood Damage Reduction studies, \$169,705 for Coastal Storm Damage Reduction studies, \$101,188 in FY 2006 Emergency Supplemental funds for Coastal Storm Damage Reduction studies, \$232,628 for Watershed/Ecosystem Restoration studies, \$11,182 for Special Investigations, \$850 for FERC License Review, \$7,633 for Interagency Water Resources Development, \$1,434 for National Estuary Studies, \$481 for North American Waterfowl Management, and \$99,914 for Planning Assistance to States. Contributed funds cost was \$492,535 for Flood

**35. COLLECTION AND STUDY OF
BASIC DATA**

Flood plain management information studies, as authorized by Section 206, 1960 Flood Control Act, as amended, provide information, technical assistance, and guidance in identifying the magnitude of the flood hazard and for planning wise use of the flood plain. Direct response and assistance are provided to states, Indian tribes, and local governments without charge and to Federal agencies and private persons on a cost reimbursable basis. Total costs for the period were \$109,291. Total costs to September 30, 2007, were \$9,605,225.

Hydrologic studies collect and analyze basic data on hydrologic, climatologic, and river morphology for general use in connection with Corps planning, design, construction, and operation of water resource projects. Total costs for the period were \$2,713.

**36. PRECONSTRUCTION ENGINEERING
AND DESIGN**

No work for preconstruction engineering and design (PED) was accomplished for FY 2007.

REPORT OF THE SECRETARY OF THE ARMY ON CIVIL WORKS ACTIVITIES FOR FY 2007

TABLE 6-A COST AND FINANCIAL STATEMENT

See Section								
In Text	Project	Funding	FY04	FY05	FY06	FY07	Total cost to Sept. 30, 2007

REPORT OF THE SECRETARY OF THE ARMY ON CIVIL WORKS ACTIVITIES FOR FY 2007

16. Includes \$4,625,614 for new work on previous projects.
17. Includes \$602,614 for previous projects. Includes Emergency Supplemental funds: FY06, \$3,500,000.
18. Includes refunds to local interests: FY78, \$92,374; FY79, \$8,000; FY80, \$14,007; FY81, \$1,847; FY82, \$2,823; FY85, \$60,000.
19. Includes maintenance and operation of Dams funds: FY87, \$66,678; FY88, \$75,000; FY89, \$73,000; FY90, \$54,000; FY91, \$97,200; FY92, \$79,000; FY93, \$80,300; FY94, \$67,800; FY95, \$153,900.
20. Includes maintenance and operation of Dams costs: FY87, \$66,678; FY88, \$75,000; FY89, \$73,000; FY90, \$54,000; FY91, \$97,200; FY92, \$79,000; FY93, \$80,300; FY94, \$67,800; FY95, \$153,900.
23. Includes maintenance and operation of Dams funds: FY87, \$66,678; FY88, \$75,000; FY89, \$73,000; FY90, \$54,000; FY91, \$97,200; FY92, \$79,000; FY93, \$80,300; FY94, \$67,800; FY95, \$153,900.
24. Includes maintenance and operation of Dams costs: FY87, \$66,678; FY88, \$75,000; FY89, \$73,000; FY90, \$54,000; FY91, \$97,200; FY92, \$79,000; FY93, \$80,300; FY94, \$67,800; FY95, \$153,900.
25. Adjusted in FY 2000 report to remove funds and costs for reimbursable, support for others work on the low water bridges; should not have been included in the FY90 - FY99 report.
26. Includes Special Recreation Use Fees funds: FY74, \$4,000; FY75, \$5,500; FY76 & 76T, \$3,600; FY 77, \$5,800; FY78, \$7,200; FY79, \$8,000; FY80, \$10,000; FY81, \$10,000; FY82, \$11,040; FY83, \$7,000; FY84, \$9,000; and maintenance and operation of Dams funds: FY87, \$66,678; FY88, \$75,000; FY89, \$73,000; FY90, \$54,000; FY91, \$97,200; FY92, \$79,200; FY93, \$80,300; FY94, \$67,800; FY95, \$153,900.
27. Includes Special Recreation Use Fees costs: FY74, \$4,000; FY75, \$4,400; FY76 & 76T, \$4,666; FY 77, \$5,193; FY78, \$6,824; FY79, \$7,506; FY80, \$11,312; FY81, \$9,688; FY82, \$9,727; FY83, \$7,000; FY84, \$8,444; FY85, \$2,379; and maintenance and operation of Dams costs: FY87, \$66,678; FY88, \$75,000; FY89, \$73,000; FY90, \$54,000; FY91, \$97,200; FY92, \$79,200; FY93, \$80,300; FY94, \$67,800; FY95, \$153,900.
28. Includes \$116,508 refund to local interests and prior to FY77 costs of \$31,161 for Ocean Isle, \$49,731 for Long Beach, \$41,443 for Yaupon Beach and \$31,157 for Sunset Beach. Includes Emergency Supplemental funds: FY06, \$2,800,000.
29. Includes refunds to local interests: FY83, \$400,000; FY84, \$128,345; FY85, \$82,600.
30. Includes Emergency Supplemental funds: FY06, \$1,211,921.
31. Does not include preauthorization PED funds and costs of \$4,837,200 GI Federal through FY 2004.
32. Includes Emergency Supplemental funds: FY06, \$6,000,000.
33. Does not include preauthorization PED funds and costs of \$970,000 GI Federal and \$323,333,33 non-Federal contributed funds through FY 2004. Includes Emergency Supplemental funds: FY06, \$3,202,500.
34. Does not include preauthorization PED funds and costs of \$461,600 GI Federal through FY 1994. Includes Emergency Supplemental funds: FY06, \$100,000.
35. Includes Emergency Supplemental funds: FY06, \$6,500.
36. Includes \$61,585 refund to local interests. Includes Emergency Supplemental funds: FY06, \$1,900,000.
37. Includes Emergency Supplemental funds: FY06, \$1,023,000.
38. Includes Special Recreation Use Fees funds: FY74, \$35,000; FY76 & 76T, \$48,000; FY77, \$51,400; FY78, \$115,100; FY79, \$63,000; FY80, \$60,000; FY81, \$80,000; FY82, \$67,160; FY83, \$77,759; FY84, \$73,000; and maintenance and operation of Dams funds: FY79, \$167,646; FY87, \$66,678; FY88, \$75,000; FY89, \$73,000; FY90, \$54,000; FY91, \$97,200; FY92, \$79,000; FY93, \$80,300; FY94, \$67,800; FY95, \$153,900; FY00, \$475,769.
39. Includes Special Recreation Use Fees costs: FY75, \$35,000; FY76 & 76T, \$13,606; FY77, \$85,692; FY78, \$114,604; FY79, \$1,120; FY80, \$118,718; FY81, \$83,760; FY82, \$67,160; FY83, \$77,759; FY84, \$67,850; FY85, \$5,149; and maintenance and operation of Dams costs: FY79, \$167,350; FY80, \$296; FY87, \$66,678; FY88, \$75,000; FY89, \$73,000; FY90, \$54,000; FY91, \$97,200; FY92, \$79,000; FY93, \$80,300; FY94, \$67,800; FY95, \$153,900; FY00, \$472,993.
40. Includes Special Recreation Use Fees funds: FY75, \$47,000; FY78, \$40,400; FY79, \$22,000; FY80, \$25,000; FY81, \$20,000; FY82, \$20,240; FY83, \$21,000; FY84, \$19,000; and maintenance and operation of Dams funds: FY87, \$66,678; FY88, \$75,000; FY89, \$73,000; FY90, \$54,000; FY91, \$97,200; FY92, \$79,000; FY93, \$80,300; FY94, \$67,800; FY95, \$153,900; FY00, \$18,748.
41. Includes Special Recreation Use Fees costs: FY75, \$13,741; FY76 & 76T, \$31,666; FY77, \$1,593; FY78, \$39,771; FY79, \$22,629; FY80, \$24,619; FY 81, \$20,381; FY82, \$20,240; FY83, \$21,000; FY84, \$19,000; and maintenance and operation of Dams costs: FY87, \$66,678; FY88, \$75,000; FY89, \$73,000; FY90, \$54,000; FY91, \$97,200; FY92, \$79,000; FY93, \$80,300; FY94, \$67,800; FY95, \$153,900.
42. Includes preauthorization study funds: FY97, \$150,000; FY98, \$30,000, FY99, \$40,000; and preconstruction planning funds: FY99, \$ 1,000; FY00, \$184,000; and FY01, \$31,000.
43. Includes preauthorization study costs: FY97, \$4,792; FY98, \$167,663; FY99, \$43,471; FY00, \$4,074; and preconstruction planning costs: FY00 \$179,408; and FY01, \$36,592.
44. Includes planning design and analysis funds: FY02, \$15,000; and construction implementation funds: FY02, \$529,000; FY03, \$54,000; and FY04, \$15,000.

WILMINGTON, N.C. DISTRICT

45. Includes planning design and analysis costs: FY02, \$15,000; and construction implementation costs: FY02, \$527,671; FY03, \$53,638; and FY04, \$16,691.
46. Includes preauthorization study funds: FY00, \$45,000; FY01, (\$12,000); FY02, \$217,000; FY03, \$40,000; and preconstruction planning funds: FY03, \$40,000; FY04, \$151,000.
47. Includes preauthorization study costs: FY00, \$24,347; FY01, \$4,793; FY02, \$219,140; FY03, \$40,513; FY04, \$1,207; and preconstruction planning costs: FY03, \$39,959; FY04, \$151,041.
48. Includes preauthorization study funds: FY97, \$25,000; FY98, \$115,000; FY99, \$28,000; FY00, \$16,000; FY01, \$14,000; and preconstruction planning funds: FY01, \$51,000; FY02, \$48,000; and FY03, \$5,000.
49. Includes preauthorization study costs: FY98, \$103,281; FY99, \$61,594; FY00, \$15,236; FY01, \$17,869; FY02, \$20; and preconstruction planning costs: FY01, \$26,074; FY02, \$67,179; and FY03, \$10,747.
50. Includes \$768,000 of O&M funds and costs through FY03, prior to CAP C.G. funding. O&M funds were used for the Section 933 report and plans and specifications and will be included in the final accounting and cost sharing calculations.

REPORT OF THE SECRETARY OF THE ARMY ON CIVIL WORKS ACTIVITIES FOR FY 2007

TABLE 6-B

AUTHORIZING LEGISLATION

Acts	Project and Work Authorized	Documents
ATLANTIC INTRACOASTAL WATERWAY BETWEEN NORFOLK, VA. AND ST. JOHNS RIVER, FLA.		
July 25, 1912	Original route of the Norfolk-Beaufort Inlet section.	H.D. 391, 62d Cong., 2d sess.
July 25, 1912	Purchase of canal.	H.D. 589, 62d Cong., 2d sess.
August 8, 1917	Change in route; following changes approved by Secretary of War, April 14, 1919.	H.D. 1478, 63d Cong., 3d sess. and H. D. 1136, 64th Cong., 1 st sess. ¹
	Albemarle Sound-Pamlico Sound section: Changed from "Alligator River-Rose Bay route" to "Alligator River- Pungo River route." Pamlico Sound-Neuse River section: Changed from "Pamlico Sound-Brant Shoal Neuse River route" to "Goose Creek-Bay River route."	
July 18, 1918	Alligator River-Pungo route (proposed land cut connecting the rivers): Changed from a straight line to a bent line approaching nearer town of Fairfield, N. C.	Approved by Secretary of War, May 15, 1919.
January 21, 1927	A 12-foot channel 90 feet wide from Beaufort to Cape Fear River, N.C., including highway bridge and tidal lock. ⁴	H.D. 450, 69th Cong., 1st sess.
July 3, 1930	An 8-foot channel 75 feet wide from Cape Fear River to Winyah Bay, S.C.	H.D. 41, 71st Cong., 1st sess.
March 4, 1933 ²	Construct a suitable bridge near Fairfield, N. C.	Rivers and Harbors Committee Doc. 5, 72d Cong., 1st sess.
June 26, 1934 ³	Operating and care of works of improvements provided for with funds from War Department appropriations for rivers and harbors.	
August 26, 1937	Increasing dimensions of waterway to 12 feet deep and 90 feet wide.	Rivers and Harbors Committee, Doc. 6, 75th Cong., 1st sess. ¹
August 26, 1937	A 12-foot side channel 90 feet wide to Swansboro.	Rivers and Harbors Committee, Doc. 16, 75th Cong., 1st sess. ¹
June 20, 1938	A yacht basin near Southport, 12 feet deep, 230 feet wide, and 450 feet long, with connecting channel.	H.D. 549, 75th Cong., 3d sess. ¹
June 20, 1938	A 6-foot channel 90 feet wide from New River Inlet to Inland Waterway.	H.D. 691, 75th Cong., 3d sess. ¹
March 2, 1945	Six mooring basins. ⁵	H.D. 660, 76th Cong., 3d sess. ¹
June 30, 1948	A 12-foot channel in New River. ^{6, 11}	H.D. 421, 80th Cong., 1st sess. ¹
May 17, 1950	Vicinity of Fairfield - drainage.	H.D. 723, 80th Cong., 2d sess. ¹
May 17, 1950	Masonboro Inlet and connecting channels, including jetties at the inlet. ^{7, 12}	H.D. 341, 81st Cong., 1st sess. ¹
September 3, 1954	A 12-foot channel and basin in Peltier Creek. ⁸	H.D. 379, 81st Cong., 1st sess. ¹
November 29, 1963, Sec. 107 July 14, 1960	A 6-foot channel 90 feet wide from Intracoastal Waterway to Bogue Inlet gorge.	Detailed Project Report April 1963.
April 7, 1966 Sec. 107, July 14, 1960	An 8-foot channel 150 feet wide through New Topsail Inlet, thence a 7-foot channel 80 feet wide to Intracoastal Waterway by way of Old Topsail Creek; and a 7-foot channel 80 feet wide in Banks Channel from New Topsail Inlet, paralleling barrier beach, to Intracoastal Waterway.	Detailed Project Report July 1965.

WILMINGTON, N.C. DISTRICT

TABLE 6-B

AUTHORIZING LEGISLATION

Acts	Project and Work Authorized	Documents
November 7, 1966	Maintenance of a channel 6 feet deep, 80 feet wide, and 8,000 feet long, from the through channel of the waterway to and including a basin of the same depth, 130 feet wide and 180 feet long at Carolina Beach.	H.D. 515, 89th Cong., 2d sess. ¹
November 7, 1966	Maintenance of general navigation features of N.C. State Ports Authority Small Boat Harbor at Southport.	H.D. 514, 89th Cong., 2d sess.
December 31, 1970	Replacement of federally-owned and operated highway bridges at Coinjock, Fairfield, Wilkerson Creek, Hobucken, and Core Creek.	H.D. 142, 92nd Cong., 1st sess.
October 22, 1976	Modification of terms of local cooperation to allow for full Federal funding of Wilkerson Creek and Coinjock Bridges.	H.D. 597, 94th Cong., 2d sess.
August 13, 1968	Mitigation of damages caused by north jetty at Masonboro Inlet.	Approved by OCE Oct. 2, 1980
February 18, 1982, Sec. 107 July 14, 1960	An 8-foot channel 150 feet wide through Carolina Beach Inlet to the Intracoastal Waterway.	Detailed Project Report June 1980
September 7, 1983, Sec. 107 July 14, 1960	An 8-foot channel 150 feet wide from the gorge in Bogue Inlet through the ocean bar.	Detailed Project Report May 1983
November 17, 1986	Modification of terms of local cooperation to allow for full Federal funding of Core Creek, Hobucken and Fairfield Bridges.	
	BEAUFORT HARBOR, N.C.	
March 3, 1881	A 9-foot channel 200 feet wide through Bulkhead Channel to Beaufort; a 6-foot channel 100 feet wide to North River and Core Sound; and construct jetties on Shackleford Point.	Annual Report, 1881, p.1013
March 2, 1907	Repairs to Fort Macon jetties and additional jetties and shore protection.	Specified in act.
March 3, 1925	Bulkhead across Bird Shoal.	Rivers and Harbors Committee Doc. 8, 68th Cong., 2d sess. ¹
July 3, 1930	Increase in depth to 12 feet in Bulkhead Channel, Gallants Channel, and in front of Beaufort.	H.D. 776, 69th Cong., 2nd sess. ¹
March 2, 1945	Increase in width and length of basin in front of Beaufort, all to 12 feet deep.	H.D. 334, 76th Cong., 2nd sess. ¹
May 17, 1950	Increase in depth to 12 feet and in width to 100 feet in Taylors Creek; transfer to Beaufort Harbor project.	H.D. 111, 81st Cong., 2nd sess. ¹
May 21, 1965, Sec. 107 July 14, 1960	Channels 15 feet deep, 100 feet wide in Bulkhead, Gallants and Taylors Creek channels, and through turning basin in front of Beaufort; and harbor of refuge in Town Creek, 12 feet deep, 400 feet wide and 900 feet long connected to Gallants Channel by channel 12 feet deep, 150 feet wide and 1,400 feet long.	Detailed Project Report April 1965
August 12, 1983 Sec. 107 July 14, 1960	A channel 14 feet deep, 70 feet wide, and 1,900 feet long, from Bulkhead Channel to a turning basin 14 feet deep, 150 feet wide, and 300 feet long near the upper end of Morgan Creek.	Detailed Project Report June 1983

REPORT OF THE SECRETARY OF THE ARMY ON CIVIL WORKS ACTIVITIES FOR FY 2007

TABLE 6-B AUTHORIZING LEGISLATION

Acts	Project and Work Authorized	Documents
SILVER LAKE HARBOR, N. C.		
July 3, 1930	Entrance channel, 5 feet deep and 50 feet wide, from Pamlico Sound to the 3-foot contour in the lake, and training wall at entrance.	Rivers and Harbors Committee Doc. 3, 70th Cong., 1st sess.
October 17, 1940	Channel, 10 feet deep, and anchorage basin of same depth, 100 feet wide across Big Foot Slough and 60 feet wide in entrance.	H.D. 325, 76th Cong., 1st sess. ¹
February 7, 1967, Sec. 107 July 14, 1960	Basin depth of 12 feet in Silver Lake Harbor; channels 12 feet deep, 150 feet wide, in Teaches Hole and Big Foot Slough Channels and across Bluff Shoal; entrance channel, same depth, 60 feet wide; and training wall on south side of entrance channel.	Detailed Project Report July 9, 1965
WATERWAY CONNECTING PAMLICO SOUND AND BEAUFORT HARBOR, N. C.		
August 30, 1935 ⁹	A 7-foot channel 75 feet wide from Pamlico Sound to Beaufort Harbor via Wainright Channel.	H.D. 485, 72d Cong., 2d sess. ¹
August 26, 1937	A 7-foot channel 75 feet wide to Atlantic.	Rivers and Harbors Committee Doc. 92, 74th Cong., 2d sess. ¹
March 2, 1945	Channels, 7 feet deep, 75 feet wide, at east and west ends of Harkers Island and side channel 5 feet deep, 75 feet wide, with basin 150 by 130 feet, same depth, at Davis.	H.D. 99, 77th Cong., 1st sess. ¹
March 2, 1945	A 7-foot side channel 75 feet wide, with basin 200 feet by 500 feet, same depth, at sea level.	S.D. 247, 77th Cong., 2d sess. ¹
May 17, 1950	A 6-foot side channel 60 feet wide, with basin 100 feet by about 600 feet, same depth, at Marshallberg.	H.D. 68, 81st Cong., 1st sess. ¹
July 11, 1963, Sec. 107 July 14, 1960	A side channel 7 feet deep, 70 feet wide to local harbor at Cedar Island and an access channel 6 feet deep, 60 feet wide and about 400 feet long to a basin same depth, 60 by 100 feet.	Detailed Project Report Dec. 12, 1962
September 22, 1967, Sec. 107 July 14, 1960	An entrance channel 6 feet deep, 60 feet wide, from Back Sound to harbor of refuge 120 by 250 feet, same depth, at west end of Harkers Island in Brook Creek.	Detailed Project Report March 13, 1967
February 17, 1969, Sec. 107 July 14, 1960	A channel 7 feet deep, 70 feet wide, from existing side channel at Atlantic to a basin 600 by 180 feet, same depth, with a breakwater, between mouth of Little Port Brook and White Point.	Detailed Project Report December 21, 1967
April 3, 1975, Sec. 107 July 14, 1960 ¹⁰	Deepening the existing 5-foot channel and basin at Davis to 7 feet.	Detailed Project Report Feb. 8, 1974

1. Contains latest published maps.
2. Public Law No. 443, 72d Cong.
3. Permanent Appropriations Repeal Act.
4. Tidal lock in land cut between Myrtle Sound and Cape Fear River, deauthorized September 23, 1986, under authority of Sec. 12, PL 93-251.
5. Deauthorized August 5, 1977, under authority of Sec. 12, PL 93-251.
6. A 12-foot by 90-foot channel in New River from Intracoastal Waterway to and including a basin at Jacksonville, N.C.
7. Jetties on each side of Masonboro Inlet.
8. A 6-foot by 50-foot channel provided under Section 3, River and Harbor Act of March 2, 1945; 12-foot by 90-foot project deauthorized November 17, 1986, under authority of 1002, PL 99-662.
9. Included in the Public Works Administration Program January 3, 1934.
10. Deauthorized by the Chief of Engineers March 31, 1982.
11. Deauthorized January 1, 1990, under authority of Sec. 1001(b)(1), PL 99-662.
12. Training wall at Masonboro Inlet deauthorized April 5, 1999 under authority of Sec. 1001 (b)(1), PL 99-662.

TABLE 6-E OTHER AUTHORIZED FLOOD CONTROL PROJECTS

1. Project authorized by Chief of Engineers under continuing authority.	FY87, \$49,888; FY88, \$3,562; FY89, \$30,816; FY90, \$32,657; FY91, \$63,108; FY92, \$50,468; FY93, \$3,024; FY94, \$662; and preconstruction planning costs: FY94, \$25,758; FY95 \$70,987; FY96, \$27,117; FY97, \$41,023; FY98, \$21,990; and FY99 \$25,551.
2. Includes \$17,356 refund to local interests.	
3. Adjusted to reflect actual cost.	
4. Includes \$1,519 refund to local interests.	
5. Includes \$387 refund to local interests	
6. Includes \$338 refund to local interests	
7. Adjusted \$3,000 to include preauthorization cost prior to FY 1960.	
8. Transferred from Charleston District, FY 1980.	
9. Reclassified to inactive category February 3, 1976.	
10. Transferred from Charleston District, FY 1984.	
11. Includes \$1,057 refund to local interests.	
12. Includes preauthorization study funds; FY98, \$40,000; FY99, \$110,000; FY00, \$10,000; and preconstruction planning funds: FY00, \$65,000; FY01, \$145,000; FY02, \$97,000; FY03, \$13,000; and FY04, \$5,000.	
13. Includes preauthorization study costs; FY98, \$16,807; FY99, \$128,745; FY00, \$14,448; and preconstruction planning costs: FY00, \$38,176; FY01, \$156,678; FY02, \$89,036; FY03, \$35,839; and FY04, \$5,271.	
14. Includes preauthorization study funds: FY99, \$59,000; FY00, \$111,000 and preconstruction planning funds: FY00, \$40,000; FY01, \$190,000; FY02, \$136,000; FY03, \$27,000; and FY04, \$4,000.	
15. Includes preauthorization study costs: FY99, \$44,071; FY00, \$112,681; FY01, \$11,766; FY02, \$1,482; and preconstruction planning costs: FY00, \$39,968; FY01, \$155,536; FY02, \$144,441; FY03, \$52,672; and FY04, \$4,383.	
16. Includes preauthorization study funds: FY91, \$70,000; FY92, \$15,000; FY93, \$3,000; FY94, \$35,000; FY95, \$4,543; and preconstruction planning funds: FY95, \$457; FY96, \$20,000; FY97, \$55,000; FY98, \$15,000; FY99, \$10,000; FY00, \$32,000; and FY01, \$14,000.	
17. Includes preauthorization study costs: FY91, \$12,573; FY92, \$69,544; FY93, \$57; FY94, \$32,103; FY95, \$13,311; FY96, -\$45; and preconstruction planning costs: FY96, \$11,317; FY97, \$26,257; FY98, \$45,357; FY99, \$15,425; FY00, \$23,500; and FY01, \$24,601.	
18. Includes preauthorization study funds: FY82, \$10,000; FY83, \$85,000; FY84, \$70,000; FY85, \$35,000; FY86, \$45,000; FY87, \$30,000; FY88, \$1,000; FY89, \$55,000; FY90, \$85,000; FY92, \$39,484; and preconstruction planning funds: FY92, \$516; FY94, \$40,000; FY95, \$75,000; FY96, \$61,000; FY97, \$10,000; FY98, \$14,000 and FY99, \$11,910.	
19. Includes preauthorization study costs: FY82, \$4,828; FY83, \$76,218; FY84, \$61,709; FY85, \$41,994; FY86, \$36,550;

1. Includes highway, railroad, and utility relocations.
2. For details, see individual report.
3. Includes \$3,700,000 presently allocated to water supply to be reimbursed in the future by local interests and \$44,000 cash contribution for construction of ranger security buildings.
4. Includes \$13,637,000 presently allocated to water supply and \$21,595,000 recreation and fish and wildlife to be reimbursed in the future by local interests.
5. Exclusive of transmission lines.
6. Construction completed in 1963 by Virginia Electric and Power Co.
7. Based on modified plan developed in fiscal year 1949. Construction completed June 1955 by Virginia Electric and Power Co.

8. Construction completed in February 1966 by Appalachian Power Co.
9. Construction completed in June 1963 by Appalachian Power Co.
10. Includes cost of earth dam on Whipping Creek.
11. Authorizing legislation provided for earth dam; concrete gravity dam constructed.
12. Includes \$1,600,000 presently allocated to recreation and fish and wildlife.
13. Includes \$74,058,000 presently allocated to water supply, \$8,646,000 allocated to recreation and \$8,296,000 to flood control to be paid by local interests during construction.
14. Deauthorized April 2002

CHARLESTON, S.C., DISTRICT*

This district comprises all of South Carolina (except local watersheds draining into the Savannah River). It embraces the drainage basins tributary to the Atlantic Ocean between

Little River and Port Royal Sound, except watersheds of Mackey and Skull Creeks, and excluding Hilton Head Island.

*All costs and financial statements for projects are listed at the end of this chapter. All other tables are referenced in text and also appear at the end of this chapter.

Navigation

1. AQUATIC PLANT CONTROL, SC

Location. The project includes all public waters in the State of South Carolina.

Existing Project. The project provides for the control of noxious aquatic plant growths from public waters in the combined interest of navigation, flood control, drainage, agriculture, fish and wildlife conservation, and public health.

Local Cooperation. Local interests must agree to hold the United States free from damages that may occur from operations performed in connection with this project and contribute 50 percent of the total cost. The South Carolina Department of Natural Resources, Water Resources Division, is designated as the State's lead agency for aquatic plant management and meets local interest requirements.

Operations and results during fiscal year. Funding from the Corps of Engineers was not available this year. Therefore, the costs for aquatic plant control measures were almost evenly split between the local cost share monies and Water Recreation Resource funds. Increasing hydrilla and the abundance of native submerged vegetation in 2007 brought about maintenance stocking of Triploid Grass Carp in Lake Marion, Lake Moultrie, and Goose Creek Reservoir. A total of 2,620 sterile carp were stocked in the Santee Cooper Lakes with an additional 185 fish stocked into Goose Creek Reservoir. In total 4,208 acres of invasive species were treated at a cost of \$774,671. In the continuing battle against phragmites invasion, headway was made and important habitat was reclaimed. Funding was used from the U.S. Navy, Naval Weapons Station in Goose Creek for treatment of phragmites on a Navy owned dredge material disposal area (156 acres) in Charleston Harbor. Additional phragmites treatment occurred on the Santee Coastal Wildlife Management Area (714 acres), the Tom Yawkey Wildlife Center (120 acres), and an additional 748 acres in various locations in Colleton, Charleston, and Georgetown Counties. In total, 1,738 acres of phragmites were treated at a cost of \$324,576. Federal costs of \$592 were spent for coordination activities.

2. ATLANTIC INTRACOASTAL WATERWAY BETWEEN NORFOLK, VA AND ST. JOHNS RIVER, FL (CHARLESTON DISTRICT)

Location. The project starts near Little River at the North Carolina-South Carolina state line and extends generally south along the coast of South Carolina 62 miles to Winyah Bay; thence 63.5 miles to Charleston; thence 84.5 miles to and including Port Royal Sound; a total of 210 miles. (See National Ocean Survey Charts Nos. 11513, 11521, 11531, 11534, and 11535.)

Previous projects. For further details see page 613 of Annual Report for 1932.

Existing project. The project provides for a waterway twelve feet deep and not less than 90 feet wide with a branch channel of the same dimensions to McClellanville and construction of three bridges crossing the waterway in Horry County, South Carolina. Existing project was completed in 1940; three bridges were completed in 1936. (See Table 7-B for authorizing legislation.)

Local cooperation. None required.

Terminal facilities. There are rail-water terminals at Georgetown, Charleston and Port Royal and numerous open-pile wharves mostly for shipping agricultural products, fish, oysters, pulpwood, wood products, and petroleum products. Marinas are located at convenient intervals along the waterway where limited supplies and repair facilities are available for both commercial vessels and pleasure craft. Facilities are considered adequate for existing commerce and recreation requirements.

Operations and results during fiscal year. New Work: None. Maintenance: Costs of \$30,288 were incurred for mosquito abatement and trenching. A contract for erosion protection measures at disposal area 1006/10275 was awarded on September 29, 2006 to Smalls Loading Limited, Inc. This disposal area is located just off the Isle of Palms Connector. During October 2006 - February 2007, the contractor placed 8,123 tons of quarry-run granite rock to form two rock sills that run parallel to the dike slope. The southernmost rock sill measures approximately 593 feet and the northern rock sill measures approximately 243 feet. The final contract costs were \$1,543,088. Condition and operation studies, natural resource management, project operations management, planning, engineering and design and supervision and administration costs were \$413,126. Federal costs for the project were \$1,986,502.

3. BROOKGREEN GARDENS, SC

Location. The project is located on the western boundary of Brookgreen Gardens near Murrells Inlet in Georgetown County, SC.

Existing project. The project provides for a 3,600 foot canal with a 30 foot bottom width maintained to a depth of four feet mlw. (See Table 7-B for authorizing legislation.)

Local Cooperation. Requirements are fully satisfied.

Operations and results during fiscal year. New Work: None. Maintenance: Federal costs for the project were \$4,512 for supervision and administration activities.

4. CHARLESTON HARBOR, SC

Location. The harbor is located on the coast of South Carolina about 15 miles south of the midpoint of the coastline, 50 miles southwest of Winyah Bay, SC, and 80 miles northeast of the mouth of Savannah River. (See National Ocean Survey Charts Nos. 11521 and 11524.)

Previous projects. For further details see page 1808 of the Annual Report for 1915; page 579 of the Annual Report for 1926; page 562 of the Annual Report for 1938; page 425 of the Annual Report for 1962; and page 7-2 of the Report for 1997.

Existing project. The project as authorized by the 1996 Water Resources Development Act provides for deepening of the entrance channel from 42 ft deep to 47 ft deep and the inner channels from 40 ft deep to 45 ft deep. Other improvements include realignment/widening of various channels/reaches, construction of a new turning basin opposite the future Daniel Island terminal, construction of a new contraction dike, reconstruction of two existing dikes and removal of a third existing dike. Removal of the east contraction dike on Daniel Island was completed in June 1999. Dredging of the Daniel Island Reach was completed in July 2000. The Entrance Channel dredging was completed in September 2001. Dredging in the Lower Harbor was completed in April 2002. Dredging in the Upper Harbor was completed in May 2004. All features have been completed except for the turning basin. (See Table 7-B for authorizing legislation.)

Local cooperation. Requirements are described in full on pg 7-2 of the FY 99 Annual Report. The non-Federal partner is the South Carolina State Ports Authority. The Project Cooperation Agreement was executed on June 5, 1998.

Terminal facilities. The South Carolina State Ports Authority owns and operates five public terminals and a grain elevator in Charleston Harbor. These terminals offer more than two miles of berthing space, room enough for seventeen vessels at one time. The Ports Authority operates twenty-one container cranes, thirty rubber tire gantry cranes, fifty-nine toplifters, five chassis stackers, nine emptyhandlers, and two traveling breakbulk gantry cranes. There are 1.4 million square feet of warehouse space with covered rail access and truck loading docks. In addition to both CSX and Norfolk Southern rail lines, over 150 truck carriers provide inland transportation for Charleston Harbor. Facilities for marine repairs and servicing are available at Detyens Shipyard, which operates two yards. The main shipyard is located on the Cooper River and the original, smaller shipyard is located on the Wando River. For further details see Port Series No. 13, 1987, Corps of Engineers.

Operations and results during fiscal year. New Work: A General Re-Evaluation Report to analyze channel alignment/modification of the authorized but not constructed turning basin for a revised terminal configuration is underway. Total project costs were \$140,730; \$115,719 Federal and \$25,011

non-Federal. Maintenance: Costs of \$132,184 were incurred for equitable adjustment to Southern Dredging Company, Inc. for work performed in FY04 for dredging of Lower Town Creek and Shem Creek. Dredging was performed (a) by Marinex Construction Company, Inc. using a pipeline dredge in the Upper Reaches and Shipyard River during February – June 2007, removing 1,530,937 cubic yards of material, at a cost of \$4,469,644, and (b) by Norfolk Dredging Company using a pipeline dredge in the Lower Reaches during October 2006 – March 2007, removing 1,452,092 cubic yards of material, at a cost of \$5,608,603. Costs of \$117,332 were incurred for mosquito abatement and trenching. A contract was awarded on September 20, 2007 to Specpro Environmental Services, LLC for clearing, ditching, and drainage activities at the Clouter Creek Disposal Area. The work will begin in November 2007. Condition and operation studies, ODMDS monitoring, planning, engineering and design, and supervision and administration costs were \$766,685. Federal costs for maintenance were \$11,094,448.

5. COOPER RIVER, CHARLESTON HARBOR, SC

Location. Cooper River is located in Charleston and Berkeley Counties, SC, and empties into the Atlantic Ocean at Charleston (See National Ocean Survey Charts Nos. 11521 and 11524.)

Existing project. The major cause of the shoaling problem in Charleston Harbor was the diversion of fresh water from the Santee River through Pinopolis Dam into the salt water of Charleston Harbor, which caused density currents that trapped sediments resulting in a phenomenal rate of deposition. The most practical solution of the shoaling problem was to divert most of the Santee River waters above Pinopolis Dam back into the lower Santee River through a canal beginning at Lake Moultrie and extending to the Santee River in the vicinity of St. Stephen, South Carolina. The project for Cooper River, as authorized by the 1968 River and Harbor Act, provided that the discharge through the existing Pinopolis Hydroplant be reduced to a flow which would not establish a density current in the harbor. This flow was estimated at 3,000 cubic feet per second (cfs) during the design phase of the project, but after operational tests, this flow is estimated at 4,500 cfs. The excess water impounded in Lake Moultrie is being directed through a new canal above St. Stephen, South Carolina, to enter the Santee River at a point well below the Lake Marion Spillway (Wilson Dam). A new hydroelectric facility was constructed on the new canal at the edge of the swamp adjacent to the Santee River. This plant replaces those features made less effective at Pinopolis through curtailment of flows. The average flow of 11,000 cfs at the new powerplant, plus the 4,500 cfs average release planned for Pinopolis, approximates the historical average flow at Pinopolis. The three generators at the new plant are rated at 28,000 kilowatts each, for a total of 84,000 kilowatts. In the interest of fish and wildlife resources of the area, the project includes a herring lift at the new powerhouse site and a fish hatchery. Construction as initiated March 1977. The power-on-line date was March 1985. The

power plant, channels and canals, and attendant work were completed in FY 85. (See Table 7-B for authorizing legislation.)

Local cooperation. None required.

Operations and results during fiscal year. New Work: None. Maintenance: Funds of \$3,232,760 were spent for maintenance of completed work.

6. FOLLY RIVER, SC

Location. The project begins in Folly River and Folly Creek north of the Town of Folly Beach and follows a southwesterly course into the Atlantic Ocean. (See National Ocean Survey Chart No. 11521.)

Existing project. The project provides for an entrance channel, eleven feet deep by 100 feet wide extending from the Stono River three miles through the ocean bar; a channel within Folly River nine feet deep and 80 feet wide, extending three miles downstream from U. S. Highway 171 to the confluence of Folly and Stono Rivers; and a channel within Folly Creek nine feet deep by 80 feet wide extending three miles downstream from Highway 171 to the confluence with the Folly River. The existing project was completed in FY 79. (See Table 7-B for authorizing legislation.)

Local cooperation. None required.

Operations and results during fiscal year. New Work: None. Maintenance: Condition and operations studies, environmental monitoring, and supervision and administration costs were \$20,690. Federal costs for the project were \$20,690.

7. GEORGETOWN HARBOR, SC

Location. The harbor is located on the coast of South Carolina 50 miles northeast of Charleston Harbor and 90 miles southwest of the entrance to Cape Fear River, North Carolina. (See National Ocean Survey Chart No. 11532)

Previous projects. For further details see page 1806 of Annual Report for 1915; page 549 of Annual Report for 1938; and page 442 of Annual Report for 1944.

Existing project. The authorizations provide for a channel 27 feet deep with varying widths of 600 feet to 400 feet from the Atlantic Ocean to and including a turning basin at the U. S. Highway 17 bridge over Sampit River, with a side channel 2,400 feet long and not less than 200 feet wide leading to a turning basin at the upper end of the built-up portion of the city waterfront, a total of 17.9 miles. The project also provides for the continued maintenance to a depth of 18 feet and a width of 400 feet for the bypassed portion of Sampit River opposite the City of Georgetown. The existing project was completed in 1951. The jetties were completed in 1903 - 1904. (See Table 7-B for authorizing legislation.)

Local cooperation. None required.

Terminal facilities. Terminal facilities at the Port of Georgetown consist of one 600-foot concrete wharf, one 700-foot bulkhead adjacent to a paved outside storage area, and one 600-foot steel berth. There are 103,000 square feet of transit warehouse space, 36,400 square feet of covered transit storage sheds, and 25 acres of paved backup space. Mobile cranes with up to a 225-ton lifting capacity are available. The port is equipped with special handling facilities for metals, cement, salt, and forest products. On-terminal rail service is provided by CSX and the port is accessible via U.S. Highways 17, 521, 701 and Interstates 95,26, and 20. For further details, see Port Series No. 13, 1987, Corps of Engineers.

Operations and results during fiscal year. New Work: None. Maintenance: Maintenance dredging was performed by Southern Dredging Company, Inc in the Sampit River and Upper Winyah Bay using a pipeline dredge during March - May 2007, removing 596,539 cubic yards of material, at a cost of \$1,604,268. A contract was awarded on September 29, 2007 to Smalls Loading Limited, Inc. for diking activities at the Waccamaw Point Disposal Area. The work will begin in October 2007. Condition and operation studies, planning, engineering and design and supervision and administration costs were \$535,893. Federal costs for the project were \$2,140,161.

8. LITTLE RIVER INLET, NC AND SC

Location. The project is located near the North Carolina-South Carolina state line. Little River enters the Atlantic Ocean at Little River Inlet at the state line and affords the only connection between the Atlantic Intracoastal Waterway and the ocean along 68 miles of coastline from Shallotte, N. C. to Georgetown, S. C. (See National Ocean Survey Chart No. 11535.)

Existing project. The project provides for an entrance channel twelve feet by 300 feet across the ocean bar; thence a ten by 90-foot inner channel to the Atlantic Intracoastal Waterway. The entrance channel is stabilized by jetties extending seaward 3,284 feet and 3,830 feet long on the east and west sides of the inlet, respectively. The project was completed in FY 84. (See Table 7-B for authorizing legislation.)

Local cooperation. Fully in compliance.

Terminal facilities. There are seven marinas, numerous private docks, and several public boat ramps located in or near Little River.

Operations and results during fiscal year. New Work: None. Maintenance: Receipts in connection with non-Federal miscellaneous collections resulted in a negative cost adjustment of \$-500.

9. MURRELLS INLET, SC

Location. The project is located on the coast of South Carolina, in Georgetown County, about 13 miles southwest of the City of Myrtle Beach. The inlet is the ocean entrance through a barrier beach to several tidal streams in the Murrells Inlet-Garden City estuarine area. (See National Ocean Survey Chart No. 11535.)

Existing project. The project provides for an entrance channel twelve feet by 300 feet across the seaward bar; thence a ten by 90-foot inner channel to a turning basin at the old Army crashboat dock. The entrance channel is stabilized by ocean jetties extending seaward 3,445 feet and 3,319 feet on the north and south sides of the inlet, respectively. The recreational project includes a walkway on the south jetty with access road and parking area. The existing project was completed in 1981. (See Table 7-B for authorizing legislation.)

Local cooperation. Fully in compliance.

Terminal facilities. There are five marinas, numerous private docks, and several public boat ramps located about the Murrells Inlet Harbor.

Operations and results during fiscal year. New Work: None. Maintenance: None.

10. TOWN CREEK, SC

Location. Town Creek Channel begins at the AIWW directly south of the Town of McClellanville in Charleston County, SC. The channel follows Five Fathom Creek in a southerly direction to the Atlantic Ocean. (See National Ocean Survey Chart No. 11531.)

Existing project. The project provides a channel ten feet deep by 80 feet wide from the AIWW to the mouth of Five Fathom Creek, a distance of 6.2 miles. The project includes an entrance channel twelve feet deep by 100 feet wide across the ocean bar, a distance of 4.0 miles. The existing project was completed in 1975. In 1989, Hurricane Hugo breached Sandy Point and created a new inlet to the ocean. This inlet continued to increase in size and was being used by local traffic to get to the Atlantic Ocean. In 1997, the district requested authority to maintain this new inlet in lieu of the existing authorized channel. Our request to abandon the existing Town Creek channel alignment and establish the Clark's Creek channel alignment was approved by headquarters. The proposed channel relocation, due to natural occurrences, is within the scope of the project authorization. The authorized project dimensions of 12 feet deep by 100 feet wide shall be maintained as appropriate. (See Table 7-B for authorizing legislation.)

Local cooperation. Requirements fully satisfied.

Operations and results during fiscal year. New Work: None. Maintenance: Maintenance dredging was performed by the government-owned sidecaster dredge *Fry* during April - May 2007, removing 51,235 cubic yards of material, at a cost of \$437,000. A study was initiated to investigate channel improvements and ways to reduce Federal expenses. Condition and operations studies, natural resource management, planning, engineering and design and supervision and administration costs were \$24,986. Federal costs for the project were \$461,986.

11. RECONNAISSANCE AND CONDITION SURVEYS

Costs of \$433,188 were incurred.

12. OTHER AUTHORIZED NAVIGATION PROJECTS

(See Table 7-C.)

13. NAVIGATION WORK UNDER SPECIAL AUTHORIZATION

Navigation Activities Pursuant to Section 107, Public Law 86-645, as amended (Preauthorization).

No cost incurred in FY07.

Snagging and Clearing for Navigation (Section 3, Public Law 79-14.)

No cost incurred in FY07.

Shore Protection

14. FOLLY BEACH, SC

Location. The municipality of Folly Beach, SC is located along the Atlantic shoreline of Folly Island, approximately 12 miles south of the City of Charleston, SC. Folly Island is 6.1 miles in length, of which 5.34 miles are included in the Federal project. (See National Ocean Survey Chart No. 11521).

Existing project. The project includes a protective beach for 28,200 linear feet (5.34 miles) of shoreline to provide storm damage protection. Initial project construction was completed in 1993 placing 2.7 million cubic yards of material on the beach. Rehabilitation of nine groins was completed in May 1993. Periodic nourishment will be required approximately every eight years, however, the project held up beyond expectations. The first periodic nourishment was completed in December 2005 placing

2.3 million cubic yards of material on the beach. (See Table 7-B for authorizing legislation.)

Local cooperation. Requirements are described in full on page 7-8 of the FY 1994 Annual Report.

Operations and results during fiscal year. P.L. 84-99 rehabilitation assistance authorized in FY2005: Final contract costs for sand placement were \$6,750. Final grassing and fencing costs were \$10,727. Environmental monitoring and supervision and administration costs were \$135,949.

P.L. 84-99 rehabilitation assistance authorized in FY2006 related to Hurricane Ophelia: Sand placement was performed by Great Lakes Dredge and Dock Company using a pipeline dredge during May – June 2007, placing 486,100 cubic yards of material, at a cost of \$7,508,623. Planning, engineering and design, and supervision and administration costs were \$430,705.

Total project costs were \$8,092,754; \$8,081,577 Federal and \$11,177 non-Federal.

15. MORRIS ISLAND LIGHTHOUSE, SC

Location. The Morris Island Lighthouse is located approximately one-quarter mile off Morris Island in Charleston County, South Carolina. The lighthouse sits in 10 feet of water southwest of the Charleston Harbor jetties in the Atlantic Ocean. Morris Island Lighthouse was built in 1876 and placed on the National Register of Historic Places in 1982.

Existing project. For over a century the lighthouse has weathered ocean currents, earthquakes, and hurricanes but is now in danger of being destroyed by natural forces. The conceptual plan for erosion protection includes a sheetpile cell around the base of lighthouse with rip-rap and filter cloth around the outside perimeter of the cell. (See Table 7-B for authorizing legislation).

Local cooperation. The Section 103 Project Cooperation Agreement was executed on October 13, 2006. The sponsor is the South Carolina State Budget and Control Board. The cost sharing on this project is 87.5% Federal/12.5% Non-Federal to offset the damages attributed to the Charleston Harbor jetties.

Operations and results during fiscal year. A contract was awarded on March 30, 2007 to Taylor Brothers Marine Construction, Inc. for \$2,949,542. Construction began in May 2007 and is scheduled to be completed in March 2008. Contract costs were \$1,636,568. Environmental activities, planning, engineering and design and supervision and administrative costs were \$163,145. Total costs for the project were \$1,799,713; \$1,524,562 Federal and \$275,151 non-Federal.

16. MYRTLE BEACH, SC

Location. Myrtle Beach is located along the northern coast of SC. The area is commonly referred to as the Grand Strand. The Grand Strand extends from Little River Inlet at the NC border, in a southerly direction, to Murrells Inlet, SC for a total distance of approximately 37 miles. This project includes the developed area along the coast of Horry County, SC and a portion of the coastal area of Georgetown County, SC. Major municipalities in the project area include the cities of Myrtle Beach and North Myrtle Beach, Garden City, and the Town of Surfside Beach.

Existing project. The plan of improvement placed about 6.3 million cubic yards of sand over a total project reach of 25.4 miles of beach encompassing three separable reaches. The material came from offshore borrow sites. Periodic nourishment will be required once every 8 to 10 years throughout the project life of 50 years. Sand placement on the North Myrtle Beach reach was completed in May 1997 placing 2.5 million cubic yards of sand. Sand placement on the Myrtle Beach reach was completed in January 1998 placing 2.3 million cubic yards of sand. Sand placement on the Garden City/Surfside reach was completed in November 1998 placing 1.5 million cubic yards of sand. (See Table 7-B for authorizing legislation.)

Local cooperation. Requirements are described in full on page 7-8 of the FY 1995 Annual Report.

Operations and results during fiscal year. P.L. 84-99 rehabilitation assistance authorized in FY2006 related to Hurricane Ophelia: A construction contract was awarded on September 28, 2007 to Great Lakes Dredge and Dock Company for \$29,454,350. The work is scheduled to begin in November 2007. Planning, engineering and design costs were \$854,344, all Federal.

17. OTHER AUTHORIZED SHORE PROTECTION PROJECTS

(See Table 7-D.)

18. SHORE PROTECTION WORK UNDER SPECIAL AUTHORIZATION

Shore Protection Activities Pursuant to Section 103, Public Law 87-874 (Preauthorization).

Fiscal year costs were Coordination Account, \$37,887.

Flood Control

19. INSPECTION OF COMPLETED WORKS

Flood Control Act of June 22, 1936, and subsequent acts require local interests to maintain and operate local protection

projects after completion in accordance with regulations prescribed by Secretary of the Army. Inspections were made to determine extent of compliance and responsible local officials were advised of inadequacies in maintenance and operation on local flood protection works when appropriate. Cost for the period was \$39,043. For project inspection data see Table 7-K.

20. OTHER AUTHORIZED FLOOD CONTROL PROJECTS

(See Table 7-E.)

21. FLOOD CONTROL WORK UNDER SPECIAL AUTHORIZATION

Flood Control Activities Pursuant to Section 205, Public Law 80-858, as amended (Preauthorization).

(See Table 7-J.)

Emergency Bank Protection

22. STREAMBANK EROSION UNDER SPECIAL AUTHORIZATION

Emergency Streambank and Shoreline Protection Activities Pursuant to Section 14, Public Law 79-526 as amended (Preauthorization).

Fiscal year costs were Westside Cemetery, SC, \$-703 and Coordination Account, \$21,084. (See Table 7-H for Other Authorized Streambank Erosion Control Projects.)

Snagging and Clearing of Navigable Streams and Tributaries in Interest of Flood Control, Section 208, Public Law 83-780.

Fiscal year costs were Coordination Account, \$17,441.

Environmental Infrastructure

23. LAKES MARION & MOULTRIE, SC

Location. The Lakes Marion and Moultrie, SC project is located in the east central part of the state and the two lakes make up the Santee Cooper Lake system. Calhoun, Clarendon, Colleton, Dorchester, Orangeburg, and Sumter Counties are located around Lakes Marion and Moultrie.

Existing project. Six counties and fourteen municipalities joined together to form the Lake Marion Regional Water Agency. Using Lake Marion as a source, the system will provide potable

water to satisfy the immediate and future water supply needs for a large portion of five counties and six municipalities located in central South Carolina in the proximity of Lake Marion. The proposed project includes construction of an 8 MGD (million gallon per day) water treatment plant and installation of approximately 62 miles of water transmission lines (includes six separable reaches) and installation of a sewer component. The five reaches are Santee, Elloree, Holly Hill, St. George, and Manning. The U.S. Army Corps of Engineers currently has authorization to expend \$35 million for planning, engineering, design, and construction assistance for the project. (See Table 7-B for authorizing legislation).

Local cooperation. The Design Agreement was executed on May 11, 2001 with the Lake Marion Regional Water Agency. An amendment was executed on January 14, 2002 that allowed the Corps to accept a design provided by the sponsor. A second amendment was executed on June 4, 2004 to include design of the sewer component. The Project Cooperation Agreement was executed on June 4, 2004.

Operations and results during fiscal year. The water treatment plant is approximately 90% complete. In June 2006, due to a shortage of Federal funds the plant couldn't be completed and the Corps issued a partial suspension. The sponsor provided additional funds beyond the required cost share in January 2007 to ensure adequate funding to complete the plant. The contractor restarted construction on the plant in May 2007. Contract costs were \$5,401,568. Environmental activities, planning, engineering and design and supervision and administration costs were \$443,120. Total costs for the project were \$5,844,688; \$5,099,405 Federal and \$745,283 non-Federal.

24. MULTIPLE PURPOSE PROJECTS INCLUDING POWER

(See Table 7-F.)

Miscellaneous

25. ECOSYSTEM RESTORATION AND PROTECTION

Project modifications accomplished under the authority of Section 206, Aquatic Ecosystem Restoration, Water Resources Development Act of 1996 (Preauthorization).

(See Table 7-M.)

Project modifications accomplished under the authority of Section 204, Beneficial Use of Dredged Material, Water Resources Development Act of 1986, as amended.

No cost incurred in FY07.

Project modifications accomplished under the authority of Section 1135, Project Modifications For Improvement of the Environment, Water Resources Development Act of 1986, as amended.

Fiscal year costs were Coordination Account, \$1,660.

See Table 7-L for Other Authorized Environmental Projects.

26. EMERGENCY RESPONSE ACTIVITIES - FLOOD CONTROL AND COASTAL EMERGENCIES

Federal costs incurred under the Flood Control and Coastal Emergencies Program for planning, training, and facilities was \$441,623.

Federal costs incurred under Emergency Response Operations and Operational Support was \$77,316.

Emergency Work in Support of Other Federal Agencies. Costs of \$2,908,506 were incurred largely for FEMA ice support in response to Hurricane Katrina.

Costs of \$35,330 were incurred for the Catastrophic Disaster Preparedness Program.

Emergency flood control activities – repair, flood fighting, and rescue work (Public Law 99, 84th Congress, and antecedent legislation).

Fiscal year costs were Folly Beach, SC, \$7,981,384 and Myrtle Beach, SC, \$674,409. See individual project write-ups for details.

27. GENERAL REGULATORY ACTIVITIES

During FY 07, \$3,355,570 was expended on Permit Evaluation, \$213,752 on Enforcement, \$178,093 on Compliance and \$23,805 on EIS. Total costs were \$3,771,220.

General Investigations

28. ACTIVE INVESTIGATIONS

See Table 7-I which covers: Surveys, Collections, and Study of Basic Data, and Research and Development Activities.

1 Includes \$109,490 for new work for previous projects.
 2 Includes \$69,422 for maintenance of previous projects.
 3 Includes \$47,395,108 for previous projects and \$318,000 for Preconstruction, Engineering and Design on the current project.
 4 Includes \$401,989 for maintenance of previous projects and \$600 for maintenance expended from contributed funds for the existing project.

5 Includes \$12,409,848 for the 40 ft project, excludes \$2,996,994 credit for LERRD's and \$1,966,945 final project reimbursement for the 40 ft project. Includes \$179,000 for Preconstruction, Engineering and Design on the current project.
 6 Includes \$765,000 appropriated and expended in FY 96 under appropriation 96X5125 Maintenance and Operation of Dams and Other Improvements of Navigable Waters.
 7 Includes \$2,445,852 for new work for previous projects.
 8 Includes \$114,556 for maintenance of previous projects.
 9 Includes \$67,000 accomplished under authority of Section 3, P.L. 79-11 incurred through FY 73.

TABLE 7-B AUTHORIZING LEGISLATION

See Sect. in Text	Date of Authorizing Act	Project and Work Authorized	Documents
AQUATIC PLANT CONTROL, SC			
1.	Oct. 27, 1965	Provides for control and progressive eradication of water hyacinth, alligatorweed, Eurasian water-milfoil and other obnoxious aquatic plant growths from navigable waters, tributary streams, connecting channels, and other allied waters of the U.S., in combined interest of navigation, flood control, drainage, agriculture, fish and wildlife conservation, public health and related purposes, including continued research for development of most effective and economic control measures in cooperation with other Federal and state agencies.	H.D. 251, 89th Cong., 1st Sess. P.L. 89-298
ATLANTIC INTRACOASTAL WATERWAY BETWEEN NORFOLK, VA, AND ST. JOHNS RIVER, FL			
2.	Sep. 19, 1890 Jun. 13, 1902 Mar. 2, 1907 Mar. 2, 1907 Mar. 3, 1925 Mar. 3, 1925 Jul. 3, 1930 Aug. 30, 1935 ¹ Aug. 30, 1935 ² Aug. 30, 1935 ² Aug. 26, 1937 Mar. 2, 1945	Channel from Minim Creek to Winyah Bay. Channel from Charleston to a point opposite McClellanville. Branch channel to McClellanville. Extending the channel to Minim Creek, thence through the Esterville-Minim Canal to Winyah Bay. Cut across the Santee Delta at Four Mile Creek. Widening and deepening the waterway from Charleston to Beaufort. A waterway eight feet deep and 75 feet wide from Cape Fear River to Winyah Bay. Construction of bridges across the waterway in Horry County, SC. Cutoff between Ashepoo and Coosaw Rivers. Enlarging the channel from Winyah Bay to Charleston including the branch channel to McClellanville, to depth of ten feet and bottom width of 90 feet. Increasing dimensions of waterway to twelve feet deep and 90 feet wide. Anchorage Basin 125 feet wide, 335 feet long, twelve feet deep, near Myrtle Beach, SC. (Deauthorized by 1986 WRDA) ⁴	Annual Report, 1889, p. 1184. H.D. 84, 56th Cong., 1st sess. and Annual Report 1900, p.1908 Annual Report 1903, p. 1133 H.D. 178, 63rd Cong., 1st. sess. TABLE 7-B AUTHORIZING LEGISLATION

See Sect. in Text	Date of Authorizing Act	Project and Work Authorized	Documents
3.	Jul. 14, 1960 as amended	BROOKGREEN GARDENS, SC Provides for a 3,600 foot canal with a 30-foot bottom width, maintained to a depth of four feet mlw.	Sec. 107, P.L. 86-645
		CHARLESTON HARBOR, SC	
4.	Jun. 18, 1878 Aug. 8, 1917 Jul. 18, 1918	2 jetties. ⁵ Increase in depth to 30 feet with width of 500 feet between the jetties and 1,000 feet seaward thereof. The 40-foot channel to the Naval Base. Act provided that the 40-foot channel should not be undertaken "until the proposed new drydocks at this navy yard, carrying a depth of 40 feet of water over the blocks, has been authorized." This dock was authorized in the Naval Appropriations Act approved July 1, 1918 (40 Stat. L. 725).	Annual Report 1878, pp. 553-572. H.D. 288, 62nd Cong., 2nd sess. H.D. 1946, 64th Cong., 2nd sess, pt.1, pp. 21-29, 57, 58, and 64-68.
	Jan. 21, 1927	A 30-foot channel from the sea to Goose Creek via Cooper River, together with a 30-foot channel through Town Creek for commercial purposes. The act also provided that the 40-foot channel be prosecuted only as found necessary for national defense.	H.D. 249, 69th Cong. 1st sess.
	Oct. 17, 1940	The 35-foot channel depth from the sea to the head of the project via Cooper River and Town Creek, also a channel in Shem Creek to Mount Pleasant, 110 feet wide and ten feet deep, including a turning basin at the upper end.	H.D. 259, 76th Cong., 1st sess.
	Mar. 2, 1945	An anchorage area 30 feet deep in the water area between Castle Pinckney and Fort Moultrie. ⁶ (Deauthorized by 1986 WRDA)	H.D. 156, 77th Cong., 1st sess.
	Sep. 3, 1954	Deepen the 30-foot channel north and east of Drum Island to 35 feet.	S.D. 136, 83rd Cong., 2nd sess. ³
	Jul. 14, 1960 as amended	Shem Creek Channel modified by extending 1,150 feet upstream and downstream from mouth to Atlantic Intracoastal Waterway.	H.D. 35, 86th Cong., 1st sess.
	Oct. 22, 1976	Project authorized for the Phase I design memorandum stage of Advanced Engineering and Design.	H.D. 94-436, 94th Cong., 2nd sess.
	Nov. 17, 1986	Deepening 35 foot channel to 40 feet (42 feet in the ocean bar and entrance channel) from the 42 foot ocean contour to Goose Creek, a distance of 27.1 miles, construction of one turning basin, modification of existing turning basins, deepening and modification of the anchorage basin, deepening Shipyard River to 38 feet, maintain the Wando River Channel to 35 feet at Federal expense and the deepening of this channel to 40 feet if economically justified.	99th Cong. 2nd sess., P.L. 96-662

TABLE 7-B AUTHORIZING LEGISLATION

See Sect. in Text	Date of Authorizing Act	Project and Work Authorized	Documents
	Oct 12, 1996	Deepening of the entrance channel from 42 ft. deep to 47 ft. deep and the inner channels from 40 ft. deep to 45 ft. deep. Other improvements include realignment/widening of various channels/reaches, construction of a new turning basin opposite the future Daniel Island terminal, construction of a new contraction dike, reconstruction of two existing dikes and removal of a third existing dike.	104 th Cong. P.L. 104-303
		COOPER RIVER, CHARLESTON HARBOR, SC (ST. STEPHEN PROJECT)	
5.	Aug. 13, 1968	Redivert most of the Santee River waters Pinopolis Dam into the lower Santee River through a canal beginning at Lake Moultrie and extending to the Santee River in the vicinity of St. Stephen, South Carolina	S.D. 88, 90th Cong.,P.L. 90-483
		FOLLY RIVER, SC	
6.	Jul. 14, 1960 as amended	Consists of stable all-tide channel nine feet deep and 80 feet wide in Folly River and Folly Creek and an entrance channel at Stono Inlet 100 feet wide and eleven feet deep.	Sec. 107, P.L. 86-645. Authorized by Chief of Engineers, Dec. 23, 1977.
		GEORGETOWN HARBOR, SC	
7.	Aug. 5, 1886	Jetties and earthen dike to protect south jetty.	H. Ex. Doc. 258 48th Cong., 2nd sess., and Annual Report 1885, pp. 1154-1170, and H. Ex. Doc. 117, 50th Cong., 2nd sess., and Annual Report 1889, pp. 1110-1111.
	Jun. 25, 1910	Previous project channel dimensions and training wall.	H.D. 398, 58th Cong., 2nd sess. and Annual Report 1904, pp. 1591-1605.
	Mar. 2, 1945	27-foot channel from ocean, including a turning basin in Sampit River.	H.D. 211, 76th Cong., 1st sess.
	Jun. 30, 1948	Cutoff and side channel in Sampit River.	H.D. 21, 81st Cong., 1st sess.

CHARLESTON, SOUTH CAROLINA DISTRICT

TABLE 7-B AUTHORIZING LEGISLATION

See Sect. in Text	Date of Authorizing Act	Project and Work Authorized	Documents
LITTLE RIVER INLET, NC AND SC			
8.	Oct. 27, 1965	Provides for an entrance channel twelve feet by 300 feet across the ocean bar; thence ten feet by 90-foot inner channel to the Atlantic Intracoastal Waterway.	H.D. 362, 92nd Cong. Section 201, P.L. 89-298 River and Harbor and Flood Control Act of 1965
	Mar. 7, 1974	Authorized emergency dredging operations as the Chief of Engineers determines necessary to maintain channel depths sufficient to permit free and safe movement of vessels until such time as the authorized project is constructed.	H.D. 10203, 93rd Cong. Section 67, P.L. 93-251 Water Resources Development Act of 1974
MURRELLS INLET, SC			
9.	Oct. 27, 1965	Provides for an entrance channel twelve feet by 300 feet across the seaward bar, thence ten by 90-foot inner channel to a turning basin at the old Army crash boat dock.	H.D. 137, 92 nd Cong. Section 201, P.L. 89-298 River and Harbor and Flood Control Act of 1965
	Mar. 7, 1974	Authorized emergency dredging operations as the Chief of Engineers determines necessary to maintain channel depths sufficient to permit free and safe movement of vessels until such time as the authorized project is constructed.	H.D. 10203, 93 rd Congr. Section 67, P.L. 93-251 Water Resources Development Act of 1974
TOWN CREEK, SC			
10.	Jul 14, 1960 as amended	An entrance channel twelve feet deep by 100 feet wide across the ocean bar a distance of 4.0 miles and a channel ten feet deep by 80 feet wide from the mouth of Five Fathom Creek to the Atlantic Intracoastal Waterway, a distance of 6.2 miles.	Sec. 107, P.L. 86-645. Authorized by Chief of Engineers, Feb. 12, 1974.

TABLE 7-B AUTHORIZING LEGISLATION

See Sect. in Text	Date of Authorizing Act	Project and Work Authorized	Documents
FOLLY BEACH, SC			
14.	Nov. 17, 1986	Shoreline protection.	P.L. 99-662 99 th Cong., 2 nd sess.
	Aug. 17, 1991	Construct hurricane and storm protection measures.	P.L. 102-104, 102 nd Cong.
MORRIS ISLAND LIGHTHOUSE, SC			
15.	Oct. 23, 1962	Erosion protection consisting of a sheetpile cell around the base of lighthouse with rip-rap and filter cloth around the outside perimeter of the cell.	Sec. 103, P.L. 87-874 Authorized by Chief of Engineers, Sep. 28, 2006
16.	Nov. 28, 1990	MYRTLE BEACH, SC	P.L. 101-640
.		Storm damage reduction for periodic nourishment over the 50-year life of the project.	
LAKES MARION & MOULTRIE, SC			
23.	Aug. 17, 1999	Provide technical, planning and design, and construction assistance for \$5M for water supply treatment and distribution projects in the counties of Calhoun, Clarendon, Colleton, Dorchester, Orangeburg, and Sumter, SC.	Sec. 502(f)(25), P.L. 106-53 Water Resources Development Act of 1999
	Dec. 21, 2000	Increased authority from \$5M to \$15M	Sec. 108(c)(4), P.L. 106-554
	Dec. 1, 2003	Increased authority from \$15M to \$35M and added wastewater treatment component.	Sec. 126, P.L. 108-137
1/ Included in Public Works Administration Program September 6, 1933.		4/ Inactive.	
2/ Included in Emergency Relief Administration Program May 28, 1935.		5/ Completed under previous projects.	
3/ Contains latest published maps.		6/ For national defense.

SAVANNAH, GA, DISTRICT

The District comprises drainage basins that flow into the Atlantic Ocean between Port Royal Sound, SC, and Cumberland Sound, GA and FL, and includes the Atlantic Intracoastal Waterway between these points. This area covers the headwaters of the Savannah River in southwestern North Carolina, eastern Georgia, and a small portion of northeastern Florida.

NAVIGATION

1. Atlantic Intracoastal Waterway between Norfolk, VA, and St. Johns River, FL

(Savannah District)

Location. This 161-mile section of waterway connects Port Royal Sound, SC, with Cumberland Sound, GA, and FL. (See NOAA charts 11489-11507, formerly Coast and Geodetic Survey Charts 838-841, inclusive.)

Previous Project. (Between Savannah, GA, and Fernandina, FL.) For details see pages 1814, 1821-1823 of Annual Report for 1915 and page 585 of Annual Report for 1938.

Existing Project. The project provides for a waterway, 12 feet deep at mean low water (MLW), and not less than 90 feet wide, between Port Royal Sound, SC, and Savannah, GA; 12 feet deep at MLW, with widths of 90 feet in land cuts and narrow streams and 150 feet in open waters between Savannah, GA, and Cumberland Sound, GA and FL; and a suitable anchorage basin at Isle of Hope, GA. Mean tidal range between Port Royal, SC, and Cumberland Sound, GA and FL, is from 6 to 8 feet with fluctuations from 1.5 to 2.5 feet due to winds and lunar phases. (See Table 8-B for Authorizing Legislation)

Local Cooperation. Fully complied with.

Terminal Facilities. Exclusive or adequate terminal facilities at port of entry. This improvement serves numerous wharves, some of which are open to the public on equal terms. Facilities are considered sufficient for existing commerce.

Operations during Fiscal Year. Operation and Maintenance costs for the FY were \$229,281. (See Table 8-A, Cost and Financial Statement.)

Condition at End of Fiscal Year. The main channel of the existing project, completed in 1941, has not been maintained at 12 feet since 2001. The former main channel, now an alternate route through the westerly end of the south channel and northerly end of Wilmington River, will be maintained to a depth of 7 feet MLW for traffic points north and south of Savannah Harbor. Relocation of the main channel from the Frederica to Mackay Rivers near St. Simons Island, GA, was accomplished under Section 107 of the Continuing Authorities Program after construction of a new bridge for the Torras Causeway. The notice on the final Environmental Impact Statement (EIS) appeared in the Fed-

eral Register October 29, 1976. The controlling depth in the District's portion of the project was 4 feet MLW throughout the year.

2. Brunswick Harbor, GA

Location. The harbor entrance is 70 statute miles south of the entrance to Savannah Harbor, GA, and 25 statute miles north of the entrance to Fernandina Harbor, FL. (See NOAA Chart 11215, formerly Coast and Geodetic Survey Chart 447.)

Previous Project. For details see page 1818 of Annual Report for 1915 and page 591 of Annual Report for 1938.

Existing Project. The project provides for a stone jetty, 4,350 feet long, at the entrance to East River and the following channels 38 feet deep and 500 feet wide across the bar; 36 feet deep and 400 feet wide through St. Simons Sound; 36 feet deep and 400 feet wide through Brunswick River and East River to the foot of Second Avenue; 30 feet deep and 300 feet wide in Turtle River to the Allied Chemical Company wharf, formerly the Atlantic Refining Company; 36 feet deep and 400 feet wide in South Brunswick River; 36 feet deep and 400 feet wide in East River from Second Avenue to its confluence with Academy Creek; a channel in Back River 20 feet deep and 150 feet wide from St. Simons Sound to the mouth of Mill Creek; a channel in Terry Creek 10 feet deep and 80 feet wide from its mouth to a point immediately above the wharf of the former Glynn Canning Company. All depths refer to MLW. Mean tidal range on the bar is 6.5 feet, at the City of Brunswick 7.3 and 7.6 feet at the upper end of the harbor. For further details, see Annual Report for 1962 and 2003.

Local Cooperation. Complied with to date.

Terminal Facilities. Twenty-six wharves and piers, almost all privately or state (Georgia Ports Authority) owned, have a berthing space of 7,530 linear feet. The Port of Brunswick and the State of Georgia have a transit shed and modem docks with 1,640 feet of berthing space (three general cargo berths) on East River. For further details, see Port Series No. 14, Corps of Engineers (revised 2000).

Operations during Fiscal Year.

Maintenance: The District used Marinex Construction Company, Inc. during first quarter in FY 07 to dredge East River using the dredge "Arlington". The dredge removed 286,457 cubic yards of maintenance material at a cost of \$1,324,215. The District used Manson Construction Company during the first and second quarter in FY 07 to dredge the Entrance Channel using the dredges

SAVANNAH, GA, DISTRICT

“Newport” and “Bayport”. The dredge removed 966,172 cubic yards of maintenance material at a cost of \$1,999,701 out of a total need of 2.8M cubic yard for the channel to be fully maintained.

Operation and Maintenance costs for the FY amounted to \$4,339,522, which included such items as water quality monitoring, project condition surveying, real estate monitoring, environmental and cultural resources monitoring. (See Table 8-A, Cost and Financial Statement.)

Condition at End of Fiscal Year. The dredges existing project was completed in August 2007. General condition of the harbor works are poor quality. Maintenance dredging continues. The notice on the final EIS Statement appeared in the Federal Register October 3, 1975.

Total cost for existing completed project to September 30, 2007, is \$164,087,978. New work costs for the FY were \$28,813,674. (See Table 8-A, Cost and Financial Statement.)

New Work Dredging.

In FY 07, the \$10,167,801 of carryover was added to an FY07 appropriation amount of \$19,700,000 to complete the East and South Brunswick River channel dredging and the new turning basin in the East River. The dredge Illinois worked from 14 July 2007 to 23 August 2007 between stations 10+750 to 19+000 and dredged 532,627 cubic yards. The dredge Florida worked from 29 October 2006 to 15 April 2007 completed stations 0+235 to 12+000, removing a total of 1,843,249 cubic yards. The dredge Florida also completed the East River Turning Basin Expansion between 3 May 2007 and 31 July 2007 from stations 2+420 to 6+820 with a total dredged yardage of 1,769,764 cubic yards. The upland yardage removed in construction the basin East River Turning Basin Expansion excavation above +6m11w was 402,850 cubic yards.

The East River Turning Basin location was changed with the approval of a General Reevaluation (Post Authorization Change) Report in April 2007, which included a cost savings justification and rationale, based upon the unknown, excessive costs associated with the intended mitigation plan on Jekyll Island. Moving the turning basin closer to the mouth of East River reduced the marsh creation mitigation requirements from 59 acres to 16 acres and allowed the cost of the mitigation to be reduced from an estimate \$ 10.2 Million to \$1.765 Million.

During the process of dredging the Brunswick River Channel, a 21-acre island was constructed by Great

Lakes Dredge between stations 6+250 to 19+100 and the total cubic yards pumped into the island template was approximately 532,627 and it was constructed between July 2007 and September 2007. The island has approximately 6 acres above elevation +23' MLW and 9 acres above 15' MLW.

The work performed by the Savannah District in FY07 also includes the design of the East River Turning Basin Mitigation contract, which was negotiated as a competitive 8(a) project. The total cost for that project in FY08 will be \$1,765,164. It will be cost shared as other General Navigation Features at 65/35percentage.

3. Lower Savannah River Basin, GA and SC

Location. The project is located on the Savannah River between river mile 40.9 and river mile 42.0, approximately 20 river miles above the city of Savannah, GA. The project area itself is located within Effingham County, GA, and Jasper County, SC. A portion of the project is within the Federal Savannah National Wildlife Refuge.

Existing Project. This environmental restoration project was authorized by a resolution passed on August 1, 1990, by the U.S. House of Representatives Committee on Public Works and Transportation. The approved project cost is \$4,222,000. The recommended plan includes a large partial diversion structure at cut #3; a plug in bend #3 below the mouth of Bear Creek; a realignment and restoration of the mouths of Bear and Mill Creeks, which provides improved flows into both creeks.

The PCA was executed and the construction phase officially began in FY 00. Construction was completed in FY 02. In addition, there is a requirement for five years of monitoring and the preparation of a final monitoring report.

Local Cooperation. The cost share is 75 percent federal and 25 percent non-federal, with the value of lands being a portion of the local sponsor's 25 percent.

4. Savannah Harbor, GA

Location. Harbor entrance is 75 statute miles south of Charleston, SC, and 70 miles north of Brunswick Harbor, GA. (See NOAA Chart 11512, formerly Coast and Geodetic Survey Chart 440.)

REPORT OF THE SECRETARY OF THE ARMY ON CIVIL WORKS ACTIVITIES FOR FY 2007

Previous Project. For details see page 1810 of Annual Report 1915 and page 578 of Annual Report 1938.

Existing Project. The harbor consists of 11.4 miles of ocean channel and 21.3 miles of inner harbor channel. The ocean channel is 44 feet deep MLW and 600 feet wide. The inner channel is 42 feet deep MLW and 500 feet wide to the upper end of Kings Island Turning Basin; 36 feet deep MLW and 400 feet wide to the upper end of Argyle Island Turning Basin; and 30 feet deep MLW and 200 feet wide to the upper limit of the project.

Bend wideners and advance maintenance in critical shoaling areas assist passage of ships through the harbor. The inner harbor has six turning basins and an inactivated Tide Gate structure adjacent to a Sediment Basin. Kings Island Turning Basin (42 feet deep MLW, 1500 feet wide and 1600 feet long) is the primary turning basin and lies adjacent to the bulk of Georgia Ports Authority docks. Georgia Department of Transportation became the local sponsor on December 8, 1999, and provides lands, easements, and rights-of-way for the construction of dredged sediment containment areas. The Savannah District and the Environmental Protection Agency have a Memorandum of Understanding on the use of an offshore disposal area for placement of sediments dredged from the offshore portion of the channel. The offshore area is monitored by hydrographic surveys before and after each dredging event to determine the amount of sediment retention within the boundaries of the area.

Fig Island and Marsh Island Turning Basins 34 feet deep by 900 feet wide by 1,000 feet long. Kings Island Turning Basin 42 feet deep with advance maintenance to 50 feet MLW by 1,500 feet wide by 1,600 feet long in the vicinity of the Garden City Terminal of the Georgia Ports Authority; Argyle Island and Port Wentworth Turning Basins 30 feet deep by 600 feet long and at the extreme upper limit of the project and a 1,200 foot long by 1,050 foot wide by 40 foot deep Oyster Bed Island Turning Basin in the vicinity of Georgia Ports Authority Lash Facility. The project also provides for sediment control works consisting of an inactivated tide gate structure across Back River; a sediment basin 40 feet deep, 600 feet wide; about 2 miles long, with an entrance channel 38 to 40 feet deep and 300 feet wide; a closed drainage canal across Argyle Island 15 feet deep and 300 feet wide; control works and canals for supplying fresh water to the Savannah National Wildlife Refuge; and facilities to mitigate damages to presently improved areas other than refuge lands. Mean range of tide is 7.9 feet at the upper end of the harbor and 6.9

feet at the lower end. Extreme ranges are about 11.1 and 10.7 feet, respectively.

The tide gate structure across Back River was taken out of operation as of March 1991 to decrease salinity levels in the wildlife refuge. The drainage canal across Argyle Island, which was part of the original tide gate project, was closed as of April 1992 by the New Cut closure contract done by a Section 1135 program. The cost of this project was \$1,531,847.

Local Cooperation. Local interests must provide the real estate for suitable disposal areas and retaining dikes for construction and future maintenance of the project. The Georgia Department of Transportation became the local sponsor in December 1999 and has met all requirements to date. In January 2005, an amendment to the Project Cooperation Agreement was executed that changed the local sponsor's responsibility from providing capacity to that of providing the real estate and to cost-share the capacity increase. Maintenance of the diked disposal areas, as they are being raised, is now a Federal responsibility.

Terminal Facilities. Sixty-one piers and wharves adequately serve existing waterborne commerce of the port. These facilities, with use of dolphins, have a combined berthing space of 46,930 linear feet at MLW. Included in the berthing space are tent container berths with 271 acres of handling area. All have railway and highway connections. The "Lash" Facilities are located at the entrance to the harbor and have depth ranging up to 42 feet MLW. The berthing space of "Lash" facilities is included in the above combined berthing space; however, the Lash facility is no longer active. For further details, see Port Series No. 14, Corps of Engineers (revised 1982) and Annual Report for 1990.

Savannah Harbor Deepening

The Savannah Harbor Deepening project was authorized by WRDA 92 on October 31, 1992. The Local Cooperation Agreement (LCA) was signed with the local sponsor and the Georgia Ports Authority on March 2, 1993. Because Federal appropriations would be no earlier than FY 95, the LCA was written and negotiated to allow the local sponsor to up-front the construction funds upon project authorization and the signing of the LCA under the authority of Section II of the 1927 Rivers and Harbor Act.

The first phase contracts for the Savannah Harbor Deepening project were awarded in March 1993 for the outer bar channel from Station 0+000 to -60+000, and the lower inner harbor channel from Station 0+000 to 70+000 at a cost of \$7,298,876 and \$8,748,883, respec-

SAVANNAH, GA, DISTRICT

tively. The second phase, in which the portion of the project required significant real estate acquisition, was awarded in July 1993 from Station 70+000 to 103+000, for \$4,675,376. The total project scope entailed the deepening of the harbor by 4 feet, from -38 feet MLW to -42 feet MLW in the inner harbor and from -40 feet MLW to -44 feet MLW in the bar channel, for a total of 31 miles of harbor improvement.

Construction was initiated with the Inner Harbor contract (0+000 to 70+000) on May 1, 1993, and was completed on April 21, 1994. The authorized cost for the Savannah Harbor Deepening project is \$50,050,000. The final actual cost for the project is now \$32,030,000.

In the FY 95 appropriations bill, Congress provided \$11,585,000 as the anticipated reimbursement to the local sponsor for the Federal share of the NED plan. The appropriations bill also provided the \$2,083,000 of those funds to be used for the cost shared Savannah Riverwalk Extension Project. The PCA for the Savannah Riverwalk Extension Project was executed on July 21, 1995. The final cost estimate for the project is \$3,532,499, of which the Federal share was fixed at \$2,083,000 and the City of Savannah's share was \$1,449,499. Work was completed as scheduled on May 24, 1996 and a dedication ceremony took place on June 10, 1996. In November 1996, the Georgia Ports Authority received an initial \$7,500,000 towards their reimbursement of the Federal share of the project and the balance of the Federal share of \$1,500,000 has been forwarded now that all the contracts have been closed out and the final audits completed.

Savannah Harbor Expansion

The Georgia Ports Authority completed the Feasibility Study and Tier I EIS for the Savannah Harbor Expansion project in August 1998, under the authority of Section 203 of WRDA 86. Based on this study, WRDA 1999 gave a conditional authorization for construction. The conditions are the completion of a Chief's Report by the end of CY 1999 and the preparation of a Tier II EIS and General Reevaluation Report (GRR). In addition, this Tier II EIS and GRR must obtain the approvals from the Secretary of the Army, the Director of the Environmental Protection Agency, and the Secretary of Commerce and Interior before construction can begin.

The Georgia Ports Authority and the Department of the Army signed a Memorandum of Understanding in July 2001 regarding the preparation of the GRR and Tier II EIS. The authorization calls for the Savannah Harbor to be deepened as much as 6 feet, from the present -42 feet MLW to as deep as -48 feet MLW at a first cost (October 1997 price levels) of \$229,527,000. The Savannah

District has completed performing the modeling of impact to the environment and the proposed mitigation of these impacts for each depth alternative as required by the authorization. These studies are scheduled to be completed in May 2008. The final GRR and Tier II EIS is scheduled for public review in September 2008, with final Record of Decision scheduled for July 2009. Georgia Ports Authority have contributed over 30,000 to date.

Operations during Fiscal Year.

Maintenance. The District dredged the Inner Harbor from Station 0+000 to 112+500 with a contract to Marinex Corporation, using the dredge "Arlington". The "Arlington" dredged 3,670,394 cubic yards and 1,250 feet of station dredging from Station 0+000 to 112+500 at a cost of \$12,400,863. The Sediment Basin was not dredged. The dredge "Glen Edwards" owned by Manson Corporation dredged 836,702 cubic yards from the Entrance Channel, at a cost of \$2,088,739 and 10.5 days of turtle traveling, at a cost of \$36,750.

Operation and Maintenance costs for the FY amounted to \$16,384,400, which included such items as water quality monitoring, project condition surveying, and cultural resources monitoring. (See Table 8-A, Cost and Financial Statement.)

Condition at End of Fiscal Year. In FY07, environmental modeling studies were essentially completed and work was begun on determining impacts to Dissolved Oxygen, Salinity, Fisheries, and Freshwater Marshes. A complete revision of the economics report was begun and substantially completed to reflect the expansion of the Panama Canal. Alternative mitigation strategies were also coordinated with the three Cabinet level agencies that must approve the project plan.

A federal fund for \$971,160 was expended in FY 2007 while the Georgia Ports Authority contributed \$1,400,754 of non-federal funds.

New work costs for the FY were \$641. (See Table 8-A, Cost and Financial Statement.)

The notice on the final EIS appeared in the Federal Register June 25, 1976. Notices of availability on two final Supplements to the EIS appeared in the Federal Register September 25, 1978, and January 8, 1980.

5. Savannah River Below Augusta, GA

Location. Savannah River is formed by the confluence of the Tugaloo and Seneca Rivers on the boundary line between Georgia and South Carolina. It flows southeast 314 miles, forming the boundary line between two

states, and empties into the Atlantic Ocean 16.6 miles below Savannah, GA. (See NOAA Charts 11514 and 11515, formerly Geological Survey maps of Georgia and South Carolina.)

Previous Projects. For details see page 1813 of Annual Report for 1915 and page 581 of Annual Report for 1938.

Existing Project. The authorized project provides for a channel 9 feet deep and 90 feet wide (at ordinary summer flow of 5,800 second-feet at Augusta, GA) from the upper end of the Savannah Harbor to the head of navigation at Augusta, above the 13th Street Bridge (R.M. 202.6), a total distance of about 181 miles. A lock and dam is located approximately 15 miles below the upper limit of the project at New Savannah Bluff. Improvement is to be obtained by construction of contraction works, closure of cutoffs, bank protection, dredging, removal of snags, over hanging trees and wrecks, and open-river regulation. Mean tidal variation at the mouth of the river is 7 feet. Freshet variation above the normal pool level (elevation 114.5 mean sea level) of New Savannah Bluff Lock and Dam at mile 187 is ordinarily about 13 feet with an extreme of 34 feet. Due to lack of commercial use, the river has not been dredged or otherwise maintained since FY 79.

Local Cooperation. Complied with to date.

Terminal Facilities. The only water terminals served by this improvement are at Augusta, Sylvania, and at or near Savannah. Augusta provided a municipal dock valued at \$50,000 and Georgia Ports Authority constructed a state port at Augusta, GA, costing approximately \$418,000. These facilities were expanded in 1965 at an additional cost of about \$250,000. These are supplemented by natural landings along the river and extensive facilities at Savannah.

Operations during Fiscal Year. In general, open-channel works are in good condition. The notice on the final EIS appeared in the Federal Register February 18, 1977. There were no dredging projects during this fiscal year.

Operation and Maintenance costs for the FY were \$25,824. (See Table 8-A, Cost and Financial Statement.)

6. Reconnaissance and Condition Surveys

Project Condition Surveys was conducted in FY 07 on the Savannah River below Augusta Operation and Maintenance costs for the FY were \$ 31,124.

7. Other Authorized Navigation Projects

(See Table 8-C.)

8. Dredged Material Disposal Facilities Program

Expenditures in FY 07 were incurred for Savannah Harbor Disposal Area, GA and SC: \$2,695,081.

9. Navigation Work under Special Authorization

Navigation activities pursuant to Section 107, Public Law 86-645 (preauthorization). During FY 07, no cost was incurred.

Mitigation of Shore Damages activities pursuant to Section 111, Public Law 90-483 (preauthorization). During FY 07, no costs were incurred.

BEACH EROSION CONTROL

10. Tybee Island, GA

Location. Tybee Island is located directly south of the Savannah River entrance, about 17 miles east of the City of Savannah, GA. (See NOAA 11512, 11513, and 11509, formerly U. S. Coast and Geodetic Survey Charts Numbers 440, 1240, and 1241, and on maps included in HD 92-105, 92nd Cong.) The only portion of the island that has developed is bounded on the north by the south channel of the Savannah River, on the east by the Atlantic Ocean, and on the south and west by Tybee Creek and other small tidal streams. The city of Tybee Island, GA, occupies this area, hereinafter referred to as "Tybee Island." The ocean face of this area has a wide sandy beach. Tybee Island is about 3.5 miles long from its northerly tip to the mouth of Tybee Creek with an average width of about 0.5 miles. Behind the beach lies a line of sand dunes, a number of which have been removed during the past years to make room for improvements and for various other reasons. Those that remain are from 10 to 20 feet high. The ground elevation west of the dunes is from 10 to 18 feet and slopes westward to the salt marsh.

Existing Project. The Water Resources Development Act of 1976 authorized a Project Plan of Improvement for an 800-foot rock groin at the north end of the island, with a 225-foot tie-in to high ground. An additional 1,200-foot extension of this groin is deferred, as are two additional intermediate groins (480 feet long); these would be added at a later date, if needed. The plan also provided for the initial restoration of approximately 13,300 feet of beach, from the vicinity of 18th Street to the terminal groin located at the northern end of the island. Periodic nourishment is authorized to maintain suitable beach dimensions. Section 201 of the Flood

SAVANNAH, GA, DISTRICT

Control Act of 1965, U.S. Senate Committee Resolution of June 22, 1971 approved the project as contained in House Document No. 92-105. The main features included a north terminal groin that was completed in June 1975; initial nourishment in March 1976; construction of the south terminal groin in February 1987; the first periodic renourishment in April 1987, and the second renourishment in July of 2000. The Federal Project included 2.6 miles of oceanfront beach between the north and south terminal rock groins. In 1993, the Savannah Harbor Deepening Project placed 1,000,000 cubic yard of material on the north end of the Island. In 1994, the Georgia Ports Authority placed an additional 1,000,000 cubic yard on the south end. These two actions allowed the deferment for the second renourishment to 2000.

Operations during Fiscal Year. The Section 905(b) Report for inclusion of the North Beach was prepared and approved on November 17, 2004 at a cost of \$32,000.

Condition at End of Fiscal Year. New work costs for the FY were \$27,001. (See Table 8-A, Cost and Financial Statement.)

Local Cooperation. Local interests must: (a) contribute in cash the required percentage of the first cost (including costs for construction, engineering and design, and administration; and excluding the cost of lands, easements, rights-of-way and relocation) of all items of work to be provided by the Corps of Engineers. According to the 2006 Limited Reevaluation Report, the local contribution is presently estimated at 39.3 percent, to be paid in a lump sum prior to start of construction or in installments prior to the start of pertinent work items in accordance with construction schedules as required by the Chief of Engineers, the final apportionment of cost to be made after the actual costs have been determined; (b) provide maintenance and repair of the groins, and provide (after the first 10 years of project life) periodic nourishment of the restored beach as may be required to serve the intended purpose during the life of the project; (c) provide without cost to the United States all lands, easements, rights-of-way, and relocations required for construction and subsequent nourishment of the project; (e) control water pollution to the extent necessary to safeguard the health of bathers; and (f) provide, without cost to the United States, access and facilities necessary for realization of the public benefits upon which Federal participation is based, and maintain continued public use of the beach and administer it for public use during the life of the project, and provide further the construction on the project shall not be started until local interests furnish lands for beach ac-

cess and parking, satisfactory to the Chief of Engineers, for the entire project limits.

Section 934 of 1986 WRDA and Corps policy guidance required a reevaluation of renourishment projects. The purpose was to determine if future renourishments met current policy and further federal participation was justified. The analysis, completed in October 1994, recommended extending the project life for the remaining 28 years of the 50-year project life. Section 506 of 1996 WRDA, approved in June 1995, was the formal Secretary of the Army authorization to continue periodic renourishment until 2024. The analysis further indicated the National Economic Development Plan (NED) might be different than the authorized project and lead to a more detailed analysis in the Special Report on South Tip Beach/Back River.

The Asst. Secretary of the Army (Civil Works) approved the Special Report on South Tip Beach/Back River on August 24, 1998. The report determined the South Tip and Back River segments should be added to the authorized project. It resulted in passage of Section 301 of 1996 WRDA that modified the authorized project to include the portion of Tybee Island located south of the existing south terminal groin between 18th and 19th Streets, including the east bank of Tybee Creek up to Horse Pen Creek as shown below. The project now extends from the north terminal groin southward for 3.5 miles to Horse Pen Creek.

Section 301 of Water Resources Development Act of 1996 modified the authorized project as follows:

SECTION 301(b) PROJECTS SUBJECT TO REPORTS.--The following projects are modified as follows, except that no funds may be obligated to carry out work under such modifications until completion of a report by the Corps of Engineers finding that such work is technically sound, environmentally acceptable, and economically justified.

(4) TYBEE ISLAND, GEORGIA.--The project for beach erosion control, Tybee Island, Georgia, authorized pursuant to section 201 of the Flood Control Act of 1968 (42 U.S.C. 1962d-5; 79 Stat. 1073-1074) is modified to include as an integral part of the project the portion of Tybee Island located south of the existing south terminal groin between 18th and 19th Streets, including the east bank of Tybee Creek up to Horse Pen Creek.

In 1999, the Department of the Army and the City of Tybee Island, GA, signed a PCA that allowed renourishment of oceanfront, nourishment of a State placed

REPORT OF THE SECRETARY OF THE ARMY ON CIVIL WORKS ACTIVITIES FOR FY 2007

groin field on South Tip, and construction of several rock groins and initial nourishment in Back River. (Civil Works) City of Tybee Island is the non-Federal sponsor for the project. The agreement is included in Appendix B. The project, now constructed, includes:

- Renourishing 13,200 feet of oceanfront beach between north and south Federal terminal groins to provide minimum 124-foot wide beach at high tide.
- Constructing rock groin field along 1,800 feet of Back River Beach.
- Restoring the beach along Back River Beach. In September 1999, construction of the Back River Beach groins began and the associated beach renourishment was completed in July 2000.

The District continued the long term monitoring in FY 2002, performing two full beach surveys in March and August at a contract cost of \$27,857. The surveys showed only slight erosion occurring along the Ocean Front beach with marked erosion along the Back River segment. Per the Operations and Maintenance Manual, the South Tip groins were notched once the total erosion between the three Back River cells exceeded 40 percent of the baseline volume. The notching occurred on October 16, 2002 with six of the Campbell units removed from the oceanward end of the three groins. Pre-notching topographic survey information was gathered on October 13, 2002. Agreement was reached that requires three of the units to be replaced if the total sand loss in any cell reaches 30 percent or three feet on average along the seawall in any groin cell or if five feet of the seawall is exposed at any given location within the groin fields.

In FY 2004, the District continued to monitor the beach profiles with particular emphasis on the South Tip and Back River. Two monitoring surveys of the Back River and South Tip were taken on October 13, 2002, and January 15, 2003. There was 100 cubic yards of material gained on the Back River while 3,000 cubic yards of material were gained on the South Tip and between the groins. The criteria to replace the Campbell Units was as follows:

Review monitoring surveys after 6 months:

- 1) If 50 percent of material lost off South Tip is not accreted on the Back River Beach, replace the modules.
- 2) If the sea wall is exposed for 25 feet or less, or an average 3 feet maximum of 5 feet is exposed at any given location between the groins, the modules must be replaced.
- 3) Terminate if more than 30 percent in any groins cell on the South Tip is lost, or if 25 percent or less of the material quantity eroded from the South Tip

is accreted on Back River Beach, or the dune system is threatened.

- 4) Terminate if documented hazards exist to bathers.

A full monitoring survey of the entire beach was completed on Jun 13, 2003. The beach face was shown to be eroding and the local sponsor requested an analysis, as it appeared the groin notching was exacerbating the erosion. The analysis was inconclusive and the experiment was continued. By Oct 2003, the beach face along the southern end had eroded but the South Tip and Back River had accreted dramatically with a huge sand bar forming along Pelican spit.

The studies planned for FY 04/05 were an analysis of the possibility of including the North Beach into the federal project, a Limited Reevaluation Report of the existing project and a study to determine the impacts to the beach caused by the Savannah Harbor Federal navigation channel. Of the \$225,000 requested in FY04, Congress under the CG Program allocated only \$150,000 of federal funds. Only \$84,000 of that was available due to Saving and Slippage.

The 905(b) Reconnaissance Report was completed with the recommendation to proceed into the feasibility phase of the storm damage reduction and harbor mitigation for the remainder of the Island for the North Beach.

The Impact of Savannah Harbor Deep Draft Navigation Project on Tybee Island & Shoreline Report was completed in FY 07. This report showed approximately 75% of the Tybee Island Shoreline erosion was attributable to the Savannah Harbor Navigation Channel.

FLOOD CONTROL

11. Inspection of Completed Flood Control Projects

Expenditures for the FY were \$41,421. (See Table 8-A and 8-D.)

12. Other Authorized Flood Control Projects

During FY 07, costs were incurred as follows:
Oates Creek, Richmond County, GA -----\$29,154
(See Table 8-D)

13. Flood Control Work under Special Authorization

These Flood Damage Reduction activities are accomplished under the authority of Section 205, Flood Control Act of 1948 (Public Law 858, 80th Congress) as amended. During FY 07a total of \$72,315 was spent on preauthorization flood damage reduction studies. Study efforts during FY 07 were as follows:

Unnamed Tributaries Ben Hill County-----\$24,300

14. Emergency Stream bank and Shoreline Protection under Special Authorization

During FY 07, costs were incurred as follows:
Coordination Sec. 14-----\$8,928

15. Snagging and Clearing

In FY 07, no costs were incurred for Section 208.

ENVIRONMENTAL RESTORATION

16. Project Modification to Improve Environment under Special Authorization

These projects are accomplished under the authority of Section 1135, Water Resources Development Act of 1986 (Public Law 99-662) as amended. During FY 07, costs were incurred as follows:
Section 1135-----\$4,749

17. Aquatic Ecosystem Restoration under Special Authorization

These projects are accomplished under the authority of Section 206, Aquatic Ecosystem Restoration, and Water Resources Development Act of 1996. No costs were incurred during FY 07.

18. Wetland/Other Aquatic Habitat

These projects are accomplished under the authority of Section 204, Public Law 102-560. During FY 07 costs incurred for Section 204, Coordination Account was \$8,239.

MULTIPLE-PURPOSE POWER PROJECTS INCLUDING MAJOR REHABILITATION

19. J. Strom Thurmond Dam and Lake, GA and SC (Formerly Clark Hill Lake)

Location. J. Strom Thurmond Dam and Lake is located at mile 237.7 on the Savannah River about 22 miles upstream from Augusta, GA. (See Geological Survey maps of GA and SC.)

Existing Project. The authorized project provides for construction of J. Strom Thurmond Dam and Reservoir, the final cost of which was \$79,156,300. The dam has a concrete section 2,282 feet long with a maximum height of 200 feet and a controlled spillway 1,096 feet long. The concrete section is flanked on the west side by a rolled-earth embankment of 2,069 feet and on the east side by a similar embankment of 1,329 feet.

The total length of the dam is 5,680 feet. The lake covers 71,100 acres at maximum power pool elevation of 330 mean sea levels (MSW). It provides a total storage capacity of 2,900,000 acre-feet allocated as follows:

- flood control---- 390,000 acre-feet
- hydropower----- 1,045,000 acre-feet
- dead storage ---- 1,465,000 acre-feet.

At the end of FY 06, there were seven units producing 52,000 kilowatts each, with a total of 364,000 kilowatts, and an average annual output of 700 million kilowatt-hours of electrical energy.

Local Cooperation. None required.

Operations during Fiscal Year. Net generations of electrical energy for the period were 392,443 megawatt-hours, all of which was marketed by the Southeastern Power Administration. Cumulative flood damage prevented through FY 07 was \$100,743,600 for the period 1955 thru 2007.

Maintenance: Operation and Maintenance costs for the FY amounted to \$10,409,847. (See Table 8-A, Cost and Financial Statement.) The notice of availability on the final EIS on J. Strom Thurmond Dam and Reservoir Operation and Maintenance appeared in the December 18, 1981 Federal Register. In FY 07, approximately 6,189,925, persons visited the lake.

Condition at End of Fiscal Year. Construction is complete except for providing additional recreational development.

Major Rehabilitation. The J. Strom Thurmond Powerplant was included as a project in the Major Rehabilitation Program in 1996. An Evaluation Report was approved in July 1994. Appropriations were provided in the FY 96 Energy and Water Bill in November 1995. Current project cost estimate remain at \$69,700,000. All contracts have been awarded. Project completion date is Sep 2011, which includes remaining miscellaneous work items. The eight major rehabilitation contracts were completed in FY 06. Major Rehabilitation costs for the FY 07 amounted to \$347,341. (See Table 8-A, Cost and Financial Statement.) These funds were used to begin an upgrade of the plants HVAC system required to support operation of the new auto-venting turbines.

20. Hartwell Dam and Lake, GA and SC

Location. Hartwell Dam and Lake is on the Savannah River 305 miles above its mouth and 89 miles upstream from Augusta, GA (See Geological Survey maps of GA and SC.)

Existing Project. The dam is a concrete gravity-type structure 1,900 feet long with a maximum height of 204 feet and a controlled spillway 480 feet in length. The concrete section is flanked on the east and west abutments by earth embankments totaling 13,362 feet in length and by a saddle dike 2,590 feet long also on the west side. Total length of the dam is 17,852 feet. At maximum conservation pool elevation of 660 feet the lake covers 55,950 acres. Total capacity of the lake is 2,843,000 acre-feet of storage allocated as follows:

flood control ----293,000 acre-feet
hydropower-----1,416,000 acre-feet
dead storage-----1,134,000 acre-feet

Four 66,000 kilowatt generators having a generating capacity of 264,000 kilowatts were installed initially with provisions for a fifth unit. Unit 5 went into operation in 1983 with a nameplate rating of 80,000 kilowatts. Rehabilitation Phase I is complete for Units 1-4 and has increased their nameplate rating to 85,500 kilowatts for a total plant nameplate capacity of 422,000 kilowatts.

Local Cooperation. None required.

Operations during Fiscal Year. Net generations of electrical energy for the period amounted to 283,042 megawatt-hours, all of which was marketed by the Southeastern Power Administration Generating \$18,409,583 power revenue returns to the treasury. Cumulative flood damage prevented through the FY 07 is \$ 59,871,500 for the period 1962 thru 2007

Maintenance: Operation and Maintenance costs for the FY amounted to \$14,041,831. (See Table 8-A, Cost and Financial Statement.) The notice on the final EIS on the operation and maintenance of Hartwell Dam and Lake appeared in the Federal Register on August 21, 1978. In FY 07, approximately 10,294,974 people visited the lake generating \$1,198,574 recreation revenue returned to the treasury.

Major Rehabilitation. The Hartwell Powerplant Major Rehabilitation project was approved by Headquarters, US Army Corps of Engineers (USACE), and was included in the FY 96 budget for construction. The project scope includes the rewinding of the first four generators, the replacement of the transformers, the refurbishment of the turbine water passageways, and the replacement of key electrical/mechanical peripheral equipment and the replacement/refurbishment of the four older headgates. The fully funded cost for the recommended plan is \$26,000,000. All contracts have been awarded and Rehabilitation Phase I was completed in September 2000. Phase II will include replacing the exciters and

voltage regulators, governor upgrades, replacing the 230-kilovolt switchyard breakers, and upgraded the switchyard equipment and current capacity. Funding for \$10 million has been authorized for Phase II Rehabilitation Program. Rehab Phase II was completed in FY 06. Major Rehabilitation costs for the FY 07 amounted to \$30,998. (See Table 8-A, Cost and Financial Statement)

21. Richard B. Russell Dam and Lake, GA and SC (Formerly Trotters Shoals Lake, GA and SC)

Location. Richard B. Russell Dam is located on the Savannah River 275.1 miles above its mouth, 29.9 miles below Hartwell Dam, and about 37.4 miles above J. Strom Thurmond Dam (formerly Clark Hill Dam). (See NOAA Survey maps of GA and SC.)

Existing Project. The authorized project provides for construction of Richard B. Russell Dam and Lake substantially in accordance with the recommendations. The latest approved (FY 03) cost estimate for the project is \$626,000,000 of which \$466,969,000 is for construction; \$28,857,000 for lands and damages; \$4,880,000 for cultural resources; and \$124,174,000 for engineering/design, supervision/administration, and all project studies, including environmental. Approval was received in January 1977 to include minimum provisions for pumped storage.

A Feasibility Report and final EIS to address the installation and operation of four 75-megawatt reversible pump-turbines were prepared in 1979 with the Record of Decision signed in August 1980. The Richard B. Russell Fish and Wildlife Mitigation Plan were completed in 1981, approved by the Assistant Secretary of the Army (Civil Works) in September 1982, and the provisions have been implemented.

Since 1986, the District has conducted comprehensive fishery studies in the Russell tailrace and J. Strom Thurmond Lake (formerly Clark Hill Lake) downstream. In addition, the District conducted water quality studies, hydraulic modeling, and an evaluation of various fish protection measures associated with hydroelectric projects. The results of these study efforts have been used to evaluate the need to develop fish protection at the Richard B. Russell Project associated with pumped storage operations. This evaluation is presented in a supplement to the final EIS on pumped storage. The Record-of-Decision was signed September 1991. Installation of pumped storage is complete; final Phase III environmental testing was completed in October 1996.

SAVANNAH, GA, DISTRICT

The Phase III Environmental Report and its Interagency Review was completed in August 1997. The District completed the National Environmental Policy Act of 1969 (NEPA) Documentation Phase and completed discussions with the resource agencies in attempting to resolve issues. The Savannah District reached an agreement with South Carolina Department of Natural Resources (SCDNR) on operational measures and general mitigation package. The remaining issue was that SC insisted on a consent order for commercial operations. USACE could not accept this condition and attempted to resolve this with a Memorandum of Agreement (MOA) in addition to the NEPA Documentation. SCDNR did not accept the MOA. DOJ/USACE request for summary judgment and oral arguments were presented in the Charleston, SC, U.S. District Court on October 17, 2000, requesting release from the injunction to commercially operate this 320-megawatt addition. The court ruled in USACE's favor on May 3, 2002, and the units were placed into commercial production on September 1, 2002. Installation of the pumped storage static start system and eight new circuit breakers as well as construction of the JST 02 system has been delayed due to lack of funding in FY 04, 05 and 06. All cost-shared recreation is complete except a wilderness park that was planned in the McCalla Peninsula.

Local Cooperation. Federal Water Project Recreation Act. Public Law 89-72; 79 stat. 213C (for Legislative History of Act see page 1864).

Operations during Fiscal Year. Net generations of electrical energy for the period were 555,970 megawatt-hours. Cumulative flood damage prevented through FY 07 is \$20,236,652 for the period 1983 thru 2007.

Maintenance: Operation and Maintenance costs for the FY amounted to \$7,346,559. These funds were for management of lake and power activities. In FY 07, approximately 1,058,269 persons visited the lake.

New Work: Total cost of project to Sep 30, 2007, is \$138,826,264. New work costs for the FY amounted to \$1,226,198. Main circuit breaker and static start JST 02 system. (See Table 8-A, Cost and Financial Statement)

Condition at End of Fiscal Year. The project is 98.5 percent complete.

22. Richard B. Russell Dam and Lake Wildlife Mitigation, GA and SC

Location. The 10,165 acres of land involved with this conveyance are located on four tracts of land located in Jasper, Colleton, and Hampton counties, SC.

Existing Project. The District completed NEPA and Real Estate closure and conveyed the land to SC in FY 05.

Local Cooperation. None required.

Condition at End of Fiscal Year. There were no costs for the FY. (See Table 8-A, Cost and Financial Statement.)

23. Hartwell Lake/Clemson Upper and Lower Diversion Dams, GA and SC

Location. Both Diversion Dams are located on Government property located between Clemson University and the Savannah River Basin on the South Carolina side of Hartwell Lake, approximately 20 miles upstream of Hartwell Dam.

Existing Project. The Remedial Measures to Increase Post Earthquake Stability for both Upper and Lower Clemson Diversion Dams in accordance with the Dam Safety Assurance Program was authorized in Senate and House Committee resolutions pursuant to the Water Resources Development Act of 2000, as presented to 106th Congress dated January 24, 2000.

Both upper and lower earthen dams were constructed in 1960 and 1961 prior to the impoundment of Hartwell Reservoir to protect Clemson University lands and existing facilities. The upper dam is 2,100 feet and the lower dam is 3,000 feet long, both have a maximum height of 75 feet. Seismic evaluation indicates that the downstream slopes of both dams (the Clemson University side) will fail from seismic events that could occur with a probability of once in every 475 years. Earthquake triggering events of as low as .07 to .10 g forces could cause liquefaction and subsequent failure. In this scenario, 390 acres of Clemson University will flood in about 5 hours. Economic damage is estimated at \$1.1 billion and there is a high probability that human life will be lost in such event.

The total project for both upper and lower diversion dams includes the following construction components:

a. Excavation at Upper and Lower Dams
Temporarily excavated existing material from the downstream side over the entire 2,100 and 3,000-foot lengths of both upper and lower dams, respectively. The excavation took place between approximate elevations of 645 feet to 640 feet MSW. This section traverses 50 feet perpendicular to the dams and involves removing material to an average depth of about 4 feet.

REPORT OF THE SECRETARY OF THE ARMY ON CIVIL WORKS ACTIVITIES FOR FY 2007

b. Deep Soil Mixing at Upper and Lower Dams
 Deep soil mixing elements were installed to a depth of two feet below the existing loose alluvium layer. The deep soil mixing elements were installed into 3-foot diameter auger holes driven to varying depths of 40 to 45 feet. All holes were overlapped into each other to create 51 foot continuous under ground shear walls oriented perpendicular to the axis of each dam and spaced every 11.5 feet. A longitudinal wall paralleling the dam axis connects the upstream ends of the transverse walls and runs the entire length of both dams.

c. Restore Downstream Side of the Dams to Original Template

Original excavation material was reused. Excess excavated material was placed in the lower berm.

Local Cooperation. None required.

Condition at End of Fiscal Year. The project was funded with construction general funds. The total project cost estimate is \$8,741,000 and this figure includes all engineering and design as well as supervision and administration during construction and a 25-percent contingency on the construction cost estimate. The project design was completed in June 2004 and it was awarded for construction in September 2004. The construction period was 18 months and was completed on schedule in May 2005. New work costs for the FY amounted to \$9,360. (See Table 8-A, Cost and Financial Statement)

GENERAL INVESTIGATIONS

24. Surveys

During FY 07, costs of \$3,332,124 were incurred as follows:

Flood Damage Prevention Studies -----	\$82,459
Special Studies -----	\$62,500
Miscellaneous Activities -----	\$64,885
Shoreline Protection Studies -----	\$140,108

25. Coordination with Other Agencies

Planning Assistance to States activities are accomplished under the authority of Section 22, Water Resources Development Act of 1974, as amended. During FY 07, a total of \$6,009 was expended.

26. Collection and Study of Basic Data

During FY 07, under the Flood Plain Management Services Program, flood hazard related information and assistance were provided to state and local governments on a nonreimbursable basis and to other Federal agen-

cies and private persons on a cost recovery basis. Expenditure was as follows:

Flood Plain Management Services -----	\$143,162
---------------------------------------	-----------

27. Pre-Construction Engineering and Design (PED)

Total PED expenditures in FY 07:

Projects Not Fully Authorized -----	\$691,858
Savannah Harbor Expansion, GA -----	\$971,160
Congress added funds for development of the Tier II EIS, GRR and the federal oversight of the project that was formulated by the Georgia Ports Authority, a non-Federal interest, under Section 203 of WRDA 86. The project was conditionally authorized for construction by Congress in the Water Resources Development Act of 1999. The Georgia Ports Authority is conducting numerous studies and data gathering under federal oversight for the required Tier II EIS.	

MISCELLANEOUS

28. Catastrophic Disaster Preparedness Program

Continuity of Operations -----	\$61
TOTAL: -----	\$61

29. Flood Control and Coastal Emergencies

Disaster Preparedness Program

Disaster Preparedness Program (Code 100)--	\$487,192
Rehabilitation & Inspection Program-----	16,208
Reimbursable Work for Others -----	\$910
TOTAL: -----	\$504,310

General Regulatory Functions

Permit Evaluation -----	\$3,024,943
Enforcement -----	\$407,175
Compliance-Authorized Activities	
And Mitigation -----	\$628,174
TOTAL: -----	\$4,060,292

30. Rivers and Harbors Contributed Funds

Contributed funds expended in FY 07 for authorized federal studies included:

General Investigations

Savannah Harbor -----	\$568,867
Augusta-Richmond, GA -----	\$670,600
PAS-GA-Anderson County-----	\$907
PAS-GA-Effingham County SWMP-----	\$1,517
PAS-GA-Port Wentworth SWMP-----	\$12
PAS-EPD Comp Water Mgt-----	\$379
PAS-GA-Chatham County -----	\$6,770
Subtotal: -----	\$1,249,052

Construction

SAVANNAH, GA, DISTRICT

Brunswick Harbor, GA -----\$15,446,234
Savannah Harbor Disposal Area----- \$3,696,300
Subtotal: -----\$19,142,534

Maintenance

Richard B. Russell----- \$4,955
Subtotal: ----- \$4,955

Flood Control Mississippi River and Tributaries

Tybee Island, GA (Code412) -----\$55,450
Savannah Harbor Expansion ----- \$1,400,754
Subtotal: ----- \$1,456,204

Flood Control Projects

Oates Creek-----\$1,178
Ocmulgee River----- \$76
Ben Hill County, GA-----\$24,300
Subtotal: ----- 25,554

TOTAL: -----\$26,442,962

TABLE 8-B AUTHORIZING LEGISLATION

See Section	Date of Authorizing Act	Project and Work Authorized	Documents
1. ATLANTIC INTRACOASTAL WATERWAY BETWEEN NORFOLK, VA, AND ST. JOHNS RIVER, FL (SAVANNAH DISTRICT)			
	Jun 3, 1896	Section from Beaufort, SC, to Savannah, GA Route No. 2 adopted.	HD295, 53d Cong., 3d sess.
	Mar 3, 1899	Route No. 1 adopted.	HD295, 53d, Cong., 3d sess.
	Jul 13, 1892	Section from Savannah, GA, to Fernandina, FL. Original 7-foot channel.	HD41, 52d Cong., 1st sess.
	Mar 3, 1905	Provided for Skidaway Narrows.	HD450, 58th Cong., 2d sess.
	Jul 25, 1912	Incorporated alternative routes previously improved as separate projects and the auxiliary channels.	HD1236, 60th Cong., 2d sess.
	Aug 8, 1917	Section from Cumberland Sound, GA and FL to St. Johns River, FL. Consolidation of the 3 sections shown above, into "Waterway between Beaufort SC, and St. Johns River, FL."	
	Mar 2, 1919	Section from Beaufort, SC to Cumberland Sound, GA and FL. Removing logs and snags from Generals Cut.	HD581, 63d Cong., 2d sess.
	Mar 2, 1919	Improving Back River to provide a channel 7 feet deep and 150 wide.	HD1391, 62d Cong., 3d sess.
	Mar 3, 1925	Channel 75 feet wide between Beaufort, SC, and Savannah, GA.	SD178, 68th Cong., 2d sess.
	Jul 3, 1930	Channel from Baileys Cut to Dover Creek.	SD43, 71st Cong., 2d sess.
	Aug 26, 1937	A 7-foot protected channel around St. Andrews Sound.	Senate Committee Print, 74 th Cong., 1st sess.
	Aug 26, 1937	A 12-foot channel between Beaufort, SC, and Savannah, GA, via Beaufort River and Port Royal Sound.	Rivers and Harbors Committee, Doc 6, 75th Cong., 3d sess.
	Jun 20, 1938	A 12-foot channel between Savannah, GA, and Fernandina, FL, various cutoffs; and anchorage basin at Thunderbolt, GA.	HD618, 75th Cong., 3d sess.
	Mar 2, 1945	An alternate route 9 feet deep and 150 feet wide in that part of Frederica River, GA, not now traversed by the main route, at no additional cost to the United States.	HD114, 77th Cong., 1st sess.
	Oct 15, 1981	Main channel relocated from Frederica River to Mackay River in the vicinity of Torras Causeway. Navigation Project.	Project authorized by Chief of Engineers under the Small Navigation Project Authority, Sec. 107, PL 86-645, as amended.
2. BRUNSWICK HARBOR, GA			
	Mar 3, 1879	Construction of East River jetty.	Annual Report, 1980, p.959.

REPORT OF THE SECRETARY OF THE ARMY ON CIVIL WORKS ACTIVITIES FOR FY 2007

TABLE 8-B (continued) AUTHORIZING LEGISLATION

See Section	Date of Authorizing Act	Project and Work Authorized	Documents
	Mar 2, 1907	Channels in the inner and outer harbors of 30-foot depth at mean high water, with widths varying from 150 feet in Academy Creek to 400 feet across the outer bar, extension of training wall in East River and construction of two spur dikes.	HD407, 59th Cong., 1st sess.
	Mar 2, 1919	Channels 27 feet deep at MLW over the bar and at Brunswick point; and 24 feet deep at MLW in the inner harbor and provides for a cut from Academy Creek to Turtle River, if deemed advisable.	HD393, 64th Cong., 1st sess.
	Jul 3, 1930	A channel in Back River 230 feet deep and 150 feet wide.	SD57, 71st Cong., 2d sess.
	Jul 3, 1930	Increased Channel dimensions of the bar, Brunswick Point, East River, and Turtle River, as given in the then existing project.	SD132, 71st Cong., 2d sess.
	Jun 20, 1938	A 10-foot channel in Terry Creek.	HD690, 75th Cong., 3d sess.
	May 17, 1950	Increased channel dimensions of the bar, St. Simons Sound, Brunswick River, East River, and Turtle River, as given in the existing project.	HD110, 81st Cong., 1st sess.
	Oct 22, 1976	Provides for Phase I AE&D studies for deepening portions of existing harbor (East River and Entrance Channel) and for provision of a navigation channel to Colonels Island.	Report of Chief of Engineers dated Aug. 18, 1976.
	Jul 14, 1981	Enlargement of the maneuvering area of the entrance to East River and dredging Brunswick and Turtle Rivers to obtain depths authorized by the Rivers and Harbors Act of May 17, 1950.	HD177, 97th Cong., 1st sess.
	Jul 13, 1983	Enlargement of the East River Turning Basin to a length of 1,000 feet and a width of 750 feet.	PL 98-360
	Oct 17, 1986	Incorporated Georgia Port Authority's 30-foot deep by 300-foot wide by 8000-foot channel in South Brunswick River serving Colonel's Island into Brunswick Harbor Navigation Project.	HR6, 99th Cong., 2d sess., Section 846
	Aug 17, 1999	A six-foot deepening in the inner harbor from 30 to 36 feet and the bar channel from 32 to 38 feet, construct a new turning basin in Upper East River, and widen inner harbor to 400 feet. Construct a 10-acre migratory bird-nesting island as a beneficial use of dredged material and a 1300-foot bend widener for safe ship handling.	PL 108-07 WRDA 99
3. LOWER SAVANNAH RIVER BASIN, GA AND SC.			
	PL-104-303 Water Resources Development Act of 1996, Oct 12, 1996	Project for the environmental restoration of the Lower Savannah River Basin; modification to cut off Bend No. 3 and improve the mouths of Bear Creek and Mill Creek.	HD105-173, 105th Congress, 2nd Session, Jan 27, 1998

SAVANNAH, GA, DISTRICT

4.	SAVANNAH HARBOR, GA		
	Mar 2, 1907	Tentative provisions for a 26-foot channel from the Quarantine Station to the Seaboard Air Line Railway Bridge.	HD181, 59th Cong., 1st sess.
	Jun 25, 1910	Definite provision for the 26-foot channel.	
	Jul 25, 1912	A 21-foot channel from the Seaboard Air Line Railway Bridge to the foot of Kings Island.	HD563, 62d, Cong., 2d sess.
	Aug 8, 1917	A 30-foot depth from the sea to the Quarantine Station.	HD1471, 64th Cong., 2d sess.
	Jan 21, 1927	A 21-foot channel above Kings Island.	HD261, 69th Cong., 1st sess.
	Jan 21, 1927	Channel 30 feet deep, with general width 50 feet, from the ocean to the Quarantine Station, thence 26 feet deep, general width 400 feet, to the Seaboard Air Line Rho. Bridge, thence 21 feet deep and 300 feet wide to Kings Island. Widening at West Broad and Barnard Streets; anchorage basin; mooring dolphins; regulating dam across South Channel; relocation of the Inland Waterway; dredging Drakes Cut to 13 feet; widening to 525 feet. at Kings Island; extension of training walls, revetments, and jetties. Consolidation of projects relating to Savannah Harbor.	HD262, 69th Cong., 1st sess.
	Jul 3, 1930	Channel 26 feet deep and 300 feet wide from the Seaboard Air Line Rho. Bridge to the foot of Kings Island.	SD39, 71st Cong., 1st sess.
	Aug 30, 1935	Authorized the 30-foot project and eliminated from the project (a) the relating dam across South Channel; (b) the relocation of the Inland waterway; and (c) the further extension of training walls, revetments, and jetties.	HD276, 73d Cong., 2d sess.
	Mar 2, 1945	Deepening the channel and turning basin above the Seaboard Air Line Rho. Bridge from 26 to 30 feet and widening the channel opposite the Atlantic Coast Line Terminals to a maximum of 550 feet for a length of 5,000 feet.	HD283, 76th Cong., 1st sess.
	Nov 7, 1945	Deepening the channels to 36 feet deep and 500 feet wide across the ocean bar; 34 feet deep and generally 400 feet wide increased to 550 feet opposite the Atlantic Coast Line Terminals, with a turning basin 34 feet deep at the Mexican Petroleum Corp. Refinery; and with such modifications thereof as the Secretary of War and the Chief of Engineers may consider desirable.	HD227, 79th Cong., 1st sess.
	Jul 24, 1946	Extending channel 30 feet deep, 200 feet wide upstream from Atlantic Creosoting Terminal to a point 1,500 feet below the Atlantic Coastal Highway Bridge, with turning basin 30 feet deep at upper end.	HD678, 79th Cong., 2d sess.

REPORT OF THE SECRETARY OF THE ARMY ON CIVIL WORKS ACTIVITIES FOR FY 2007

TABLE 8-B (continued) AUTHORIZING LEGISLATION

See Section	Date of Authorizing Act	Project and Work Authorized	Documents
	Sep 3, 1954	Deepening the channel to 34 feet and widening to 400 feet from the upper end of the presently authorized 34-foot channel in the vicinity of the American Oil Company Refinery wharf, to the Savannah Sugar Refinery Corp. with a turning basin at the upper end of the proposed improvement made by widening the channel to 600 feet for a length of 700 feet and providing approaches.	HD110, 83d Cong., 1st sess.
	Oct 23, 1962	Enlargement of turning basin near Kings Island to a width of 900 feet and a length of 1,000 feet, with suitable approaches, at a depth of 34 feet.	SD115, 87th Cong., 1st sess.
	Oct 27, 1965	Deepening the bar channel from 36 feet to 40 feet, the channel between the bar channel and Garden City Terminal from 34 feet to 38 feet, and the channel from the Garden City Terminal to the vicinity of the Savannah Sugar Refining Corp., from 30 feet to 36 feet; widening the bar channel from 500 feet to 600 feet, the channel between Fort Pulaski and the Atlantic Coast Line Terminal from 400 feet to 500 feet, and the channel between Garden City Terminal and the Savannah Sugar Refinery Corp., from 200 feet to 400 feet; providing necessary wideners of the bends; constructing a new turning basin 900 feet wide by 1,000 feet long by 34 feet deep opposite the Atlantic Coast Line Terminals; and enlargement of existing turning basin at the American Oil Company Terminal from 600 feet wide by 600 feet long to 900 feet wide by 1,000 feet long.	HD226, 89th Cong., 1st sess.
	Oct 27, 1965	Providing sediment control works consisting of tide gate structure across Back River; sediment basin 40 feet deep, 600 feet wide about 2 miles long, with entrance channel 38 to 40 feet deep and 300 feet wide; control works and canals for supplying fresh water to Savannah National Wildlife Refuge; and facilities to mitigate damages to presently improved areas other than refuge lands.	HD223, 89th Cong., 1st sess.
SPWC Resolution Jun 15, 1976 and HPWC, Jun 9, 1976 under authority of Sec. 201, Flood Control Act of 1965		Provided for modification of the existing project to include (1) incorporation of the LASH Turning Basin as an element of the existing Federal navigation project for maintenance purposes, (2) enlargement of Kings Island Turning Basin to 1,500 feet by 38 feet.	HD94-520, 94th Cong. dated June 8, 1976.
	Jul 16, 1984	Construction of three new work curve wideners in the inner harbor channel. Curve Widener #1 is between mile 11.1 and 11.9. Curve widener #2 is between mile 13.2 and 13.8 and curve widener #3 is between mile 14.0 and 14.8. The Wideners are located on the north side of the channel.	PL 98-360

SAVANNAH, GA, DISTRICT

TABLE 8-B (continued) AUTHORIZING LEGISLATION

See Section	Date of Authorizing Act	Project and Work Authorized	Documents
	Oct 17, 1986	Savannah Harbor Widening as described in Report of Chief of Engineers date Dec. 19, 1978. Widen channel from 400 feet to 500 feet between Kings Island turning Basin and Fig Island Turning Basin. Allows planning, engineering and design to remove drift and debris as part of operations and maintenance	HD6, 99th Cong., 2d sess. Dated Oct. 17, 1986, Section 201 Section 867
	Oct 31, 1992	Savannah Harbor Deepening deepened harbor from -38 feet to -42 feet MLW in Inner Harbor and from -40 feet to -44 feet MLW in the Bar Channel for a total of 31 miles of harbor improvements.	WRDA 1992
	Aug 17, 1999	Savannah Harbor Deepening conditional approval for -42 feet to -48 feet MLW in the Inner Harbor	WRDA 1999

SAVANNAH, GA, DISTRICT

TABLE 8-C OTHER AUTHORIZED NAVIGATION PROJECTS

(See Section 0, page 8-6)

Project	Status	For Last Full Report See Annual Report	Cost to Sep 30, 2007	
			Construction	Operation and Maintenance
Bellville Point, GA	Completed		--	--
Cedar Point, GA	Completed	1982	656,233	--
Darien Harbor, GA	Completed	1975	199,723	185,433
Fancy Bluff Creek, GA ¹	Completed	1935	8,000	7,200
St. Mary's River, GA and FL, and North River, GA	Completed	1951	15,688	69,936
Sapelo Harbor, GA ^{2, 3}	Completed	1929	17,906	19,594
Satilla River, GA ^{1, 4, 5, 6}	Completed	1951	9,452	57,172
Savannah River above Augusta, GA ^{2, 3, 6}	See Notes	1929	69,600	85,944
Savannah River at Augusta, GA ^{2, 3, 4}	See Notes	1929	200,556	17,444

¹ Channel adequate for commerce.

² Project recommended for abandonment in HD 467, 69th Cong., 1st session.

³ No commerce reported.

⁴ Excludes \$185,000 contributed funds (\$172,151 for construction and \$12,849 for operation and maintenance).

⁵ Water Resources Development Act of 1986 authorized demonstration project on the Umbrella Creek - Dover Creek for the purpose of reducing shoaling. Monitor for 10 years, develop a hydrodynamic model.

⁶ About 84 percent completed. Owing to construction of two power dams which submerged much of the work under the present and former projects, this improvement cannot be completed as originally planned.

REPORT OF THE SECRETARY OF THE ARMY ON CIVIL WORKS ACTIVITIES FOR FY 2007

TABLE 8-D OTHER AUTHORIZED FLOOD CONTROL PROJECTS

(See Section 0, page 8-8)

Project	Status	For Last Full Report See Annual Report	Cost to Sep 30, 2007	
			Construction	Operation and Maintenance
Augusta, Savannah River, GA	Completed	1941	643,016	38,242
Curry Creek Dam and Lake, GA ¹	See Note	1974	--	--
Dunn Branch, Woodbine, Camden County, GA	Completed	1977	132,640	5,219
Macon, GA	Completed	1955	380,043	38,243
Oates Creek, GA ²	Completed	1993	12,571,350 ³	--
Peacock Creek, Liberty County, GA	Completed	1976	582,163	5,219

¹ Feasibility report completed. Project not authorized for construction.

² Authorized by HR 6, Water Resource Development Act of 1986 dated October 17, 1986. First Federal cost of \$9,600,000 and non-federal cost of \$4,100,000.

³ Cost of construction includes \$6,350 for deficiency correction. The original project is complete and further deficiency correction is on hold due to lack of funds.

TABLE 8-E SAVANNAH RIVER BASIN, DAMS AND LAKES, GA AND SC

(See Section 0, 0, 0, and 0)

Name	River	Estimated Cost		Total
		Federal	Non-federal	
J. Strom Thurmond Dam and Lake, GA and SC	Savannah	69,700,000		69,700,000 ^{1, 2}
Hartwell Dam and Lake, GA and SC	Savannah	32,700,000		32,700,000 ³
Richard B. Russell Dam and Lake, GA and SC ^{4, 5}	Savannah	624,100,000	1,900,000	626,000,000 ⁵
Hartwell Lake/Clemson Upper and Lower Diversion Dams, GA and SC	Savannah	8,741,000		8,741,000

¹ Approved July 1954.

² Final Cost (excludes \$127,000 for preauthorization study).

³ Approved August 1963 (excludes \$73,000 for preauthorization study).

⁴ Excludes Code 710 funds.

⁵ Richard B. Russell Dam and Lake (formerly Trotters Shoals Lake) replaced Goat Island, GA and SC, and Middleton Shoals, GA and SC.

JACKSONVILLE, FL DISTRICT*

With the exception of a small area in the north-eastern section of Florida, this district comprises a portion of south-central Georgia and all of peninsular Florida, embracing the watersheds tributary to the

Atlantic Ocean and the Gulf of Mexico from, and including the harbor at Fernandina, Florida, to and including the Aucilla River. It also includes Puerto Rico and the U.S. Virgin Islands.

Navigation

1. AQUATIC PLANT CONTROL (R&H ACT OF 1965)

Location. Navigable waters, tributary streams, connecting channels, and other allied waters in Florida.

Existing project. The authorized project provides for control and progressive eradication of water hyacinth, alligator weed, Eurasian water-milfoil, and other noxious aquatic plant growths from navigable waters, tributary streams, connecting channels, and other allied waters of the United States, in combined interest of navigation, flood control, drainage, agriculture, fish and wildlife conservation, public health, and related purposes, including continued research for development of most effective and economical control measures in cooperation with other Federal and State agencies in accordance with report of Chief of Engineers, H 251/89/1. The Water Resource Development Act of 1986 amended the River and Harbor Act of 1965 requiring the local sponsor to share 50 percent of planning costs and 50 percent of research costs that are local in nature. The cost of research that is regional or national in scope shall be borne fully by the United States.

Local cooperation. Florida Department of Natural Resources holds the United States free from damages that may occur from operations performed in connection with this project and contributes 50 percent of cost of operations. Compliance with requirements of local cooperation is on schedule.

Operations and results during fiscal year. New work: \$36,307. ERDC funded the annual Alligator weed flea beetle collection and dispersal program for biological control of Alligator weed in the Southeastern U.S. HQUSACE funded district staff to initiate the revision of the APC Program regulation and support the Puerto Rico aquatic plant management program.

Condition at end of fiscal year. Cost share operation by the Corps and the State of Florida are on hold due to lack of funding. Water hyacinths within Florida are under maintenance control. Hydrilla is continuing to spread throughout the state and is causing major problems in some areas.

2. ARECIBO HARBOR, PR

Location. The harbor is located on the north shore of Puerto Rico about 40 miles west of San Juan Harbor. (See NOAA Nautical Chart No. 25668.)

Previous project. For details see page 504 of 1956 Annual Report.

Existing project. The project provides for a channel 25 feet deep by 400 feet wide, with flare at entrance and widening at inner end to form a maneuvering area and a stone breakwater 1,200 feet long. Plane of reference is mean low water. Mean tidal range is 1.1 feet. (See Table 9-B for Authorizing Legislation.)

Local cooperation. Fully complied with to date.

Terminal facilities. A bulkhead wharf 688 by 220 feet providing deep water berthing space of approximately 500 feet and a 300 by 100-foot transit shed. Facilities are considered adequate for existing commerce.

Operations and results during fiscal year. None.

Condition at end of fiscal year. Project was completed in 1944. Breakwater was repaired in 1952. Wave action has since caused damage.

3. ATLANTIC INTRACOASTAL WATERWAY BETWEEN NORFOLK, VA AND ST. JOHNS RIVER, FL (JACKSONVILLE DISTRICT)

Location. That part of Intracoastal Waterway between southerly limit of Fernandina Harbor, FL, at junction of Lanceford Creek and Amelia River, and St. Johns River, FL. (See NOAA Nautical Chart No. 11489.)

Previous project. For details see page 605 of 1938 Annual Report.

Existing project. Channel 12, 90 to 150 feet wide from Fernandina Harbor to St. Johns River, about 22 miles long. Plane of reference is mean low water. Mean tidal range is 6 feet at Fernandina and 3.8 feet at St. Johns River. (See Table 9-B for Authorizing Legislation.)

REPORT OF THE SECRETARY OF THE ARMY ON CIVIL WORKS ACTIVITIES FOR FY 2007

Existing project was authorized by River and Harbor Acts of 1913 (H 898/62/2) and 1938 (H 618/75/3).

Local cooperation. Fully complied with to date.

Terminal facilities. There is a commercial marina located at Sisters Creek. No other facilities exist along this section of the waterway and none are currently required.

Operations and results during fiscal year. Maintenance cost was \$2,081,879.

Condition at end of fiscal year. Next maintenance dredging scheduled for 2010. Minor shoals exist throughout the project.

4. BAKERS HAULOVER INLET, FL

Location. The inlet connects the Intracoastal Waterway and the Atlantic Ocean and is located 2 miles north of Miami Beach in Dade County, Florida.

Existing project. The authorized project provides for an entrance channel 11 by 200 feet, thence 8 by 100 feet to the Intracoastal Waterway and a marina basin 8 by 200 feet. The length of the project is 1.02 miles. Plane of reference is mean low water.

Operations and results during fiscal year. None.

Condition at end of fiscal year. The initial construction of project was completed in December 1964. Maintenance dredging of the Intracoastal Waterway intersection was completed in Spring 2006.

5. CANAVERAL HARBOR, FL

Location. The harbor is located on the east coast of Florida in Canaveral Bight, about 146 miles south of the entrance to Jacksonville Harbor and 69 miles north of the entrance to Fort Pierce Harbor. (See NOAA Nautical Chart Nos. 11478 and 11484.)

Existing project. The authorized project provides for a 37 foot deep entrance channel and maintenance of the 44 foot deep Navy channel in the 37 foot channel reach; and 35 foot depth turning basin; construction and operation of a sand transfer plant; relocation of the perimeter dike about 4,000 feet westward and extension of the harbor westward; south entrance jetty 1,100 feet long and the north entrance jetty 1,150 feet long; a lock; a channel and turning

basin 31 feet deep near the relocated dike; and a barge canal 12 by 125 feet from the turning basin to the Atlantic Intracoastal Waterway. Plane of reference is mean low water (Banana River) for barge canal. The project is about 11.5 miles long. Mean tidal range is 3.5 feet at the entrance and practically non-tidal in Banana and Indian Rivers. (See Table 9-B for Authorizing Legislation.)

Estimated project cost for Canaveral Harbor Sand Transfer System is \$132,600,000 Federal and \$5,000,000 non-Federal.

Local cooperation. Local interests must; provide all lands, rights-of-way, spoil-disposal areas, retaining dikes, and embankments; hold United States free from damages; provide and maintain four-lane bridge and roadway subject to Federal contribution of 65.3 percent of cost of constructing bridge and 51.2 percent of constructing roadway; provide public terminal and transfer facilities; and make alterations as required in berthing facilities. For further details see Senate Document 140, 87th Congress, 2nd session.

Terminal facilities. Canaveral Harbor has 27 commercial waterfront facilities. The General Cargo Facilities consist of 1,900 feet of usable berthing space capacity of 168,000 square feet. The Oil Handling Facilities operate with 3,760 feet of usable berthing space and 1,413,000 barrels of tank storage. Available warehouse storage includes 28,000 square feet of dry storage and 2,500,000 cubic feet of cold storage. Open storage is 189 acres.

Three-cruise ship berths totaling 1,400 feet long by 34-foot depth and three 8,800 square foot cruise terminals are also located on the south side. The western cruise ship berth is equipped with a roll on/off ramp and is adjacent to 20 acres of trailer storage area.

Hoisting facilities consist of one 45-ton floating crane and crawler and mobile cranes, with capacities from 70 to 200 tons, available from local crane rental services. There are 2 waterfront marine repair facilities with the nearest dry-dock facilities located at Port Everglades and Jacksonville. Two tugs with ratings of 1,600 and 2,250 horsepower are also available. There is no rail service available at the port. The nearest rail service is the Florida East Coast Railway located 9 miles away. Facilities are considered adequate for existing commerce. (See Port Series No. 16, Rev. 1982.)

JACKSONVILLE, FL DISTRICT

Operations and results during fiscal year. New work: contract cost: \$-137,077; Engineering and Design: \$197,639. Maintenance cost was \$4,521,478.

Condition at end of fiscal year. A new study to investigate a permanent sand tightening of the north jetty was completed on 7 Nov 03. The construction contract was awarded on October 2004, and was completed in Dec 2005. Also, construction of the 3rd Sand Bypass is scheduled for completion in December 2007.

6. CHANNEL FROM NAPLES TO BIG MARCO PASS, FL

Location. Naples Bay is on the southwestern side of the Florida peninsula about 35 miles south of the mouth of the Caloosahatchee River and approximately 1-mile inland and parallel to the Gulf of Mexico coastline. (See NOAA Nautical Chart No. 11430.)

Existing project. The authorized project provides for an interior channel 6 by 70 feet from Naples to Big Marco Pass; a channel 12 by 150 feet from the Gulf of Mexico to Gordon Pass, thence 10 by 100-70 feet to a 10 foot depth turning basin in the upper Naples Bay; and an 8 foot depth turning basin at the municipal yacht basin. Plane of reference is mean low water. Mean tidal range is 2.1 feet. (See Table 9-B for Authorizing Legislation.) For further details see Annual Report of 1962.

Local cooperation. Fully complied with to date.

Terminal facilities. Four seafood-packing houses; 4 marine repair yards; a municipal pier and basin for use by recreational boats; and numerous private piers and slips for both commercial and recreational craft are available. Facilities are considered adequate for existing commerce.

Operations and results during fiscal year: None.

Condition at end of fiscal year. Minor shoals exist throughout the project. Next maintenance dredging scheduled for 2009.

7. CHARLOTTE HARBOR, FL

Location. The Harbor is located on the west coast of Florida about 68 miles south of the entrance to Tampa Bay and 150 miles north of Key West. (See NOAA Nautical Chart No. 11429.)

Previous projects. For details, see page 457 of 1959 Annual Report.

Existing project. The authorized project provides for a channel 32 by 300 feet, increased to 700 feet at the bend, from the Gulf of Mexico to Port Boca Grande to and including a turning basin at 200 feet square at the municipal terminal at Punta Gorda. Plane of reference is mean low water. The project is about 29.5 miles long.

Mean tidal range is one foot at Port Boca Grande and 1.4 feet at Punta Gorda. Extreme range is about 3 feet at Port Boca Grande and 3.8 feet at Punta Gorda. Strong southwesterly winds raise water levels about 1.5 feet; strong northerly and easterly winds lower water levels about one foot. (See Table 9-B for Authorizing Legislation.)

Local cooperation. Local cooperation is fully complied with to date.

Terminal facilities. Existing facilities consist of a phosphate wharf at Port Boca Grande and a municipal earth fill pier about 850 feet long at Punta Gorda, both open to the public. Railway connections are available at Port Boca Grande, and highway and railway connections are available at Punta Gorda.

Operations and results during fiscal year. None.

Condition at end of fiscal year. The project was completed in 1959, and was dredged for maintenance in June 1998. The Florida Power and Light Company no longer has a requirement for bunker fuel oil to be delivered into Charlotte Harbor. Therefore, there is no future maintenance scheduled for the project.

8. EAU GALLIE HARBOR, FL

Location. The Harbor is located on Indian River about midway of the State of Florida, 176 miles south of Jacksonville Harbor and 174 miles north of Miami Harbor.

Existing project. The authorized project provides for a channel 8 by 100 feet from Indian River to and including a 300 by 600-foot turning basin in Eau Gallie. The project is about 2,700 feet long. Plane of reference is mean low water. The harbor is almost non-tidal.

Local cooperation. Fully complied with to date.

Terminal facilities. A privately owned boatyard in Eau Gallie Harbor provides more than 600 feet of docking space used chiefly by pleasure boats. There are also 2 marine railways and repair and storage facilities available. The facilities are considered adequate for the present needs of navigation.

Operations and results during fiscal year. None. No future maintenance is scheduled for this project.

Condition at end of fiscal year. The project was completed in 1939. In December 1982, the controlling depth of the channel was 5 feet.

9. FERNANDINA HARBOR, FL

Location. Entrance to the harbor is located on the northeast coast of Florida about 95 miles south of the entrance to Savannah Harbor, Georgia, and 22 miles north of the entrance to Jacksonville Harbor, Florida. (See NOAA Nautical Chart No. 11503.)

Existing project. The authorized project provides for a 32 foot depth channel (maximum channel in active status: 28 feet) generally 300-400 feet wide from deep water in the ocean to the junction of Lanceford Creek with Amelia River; an 800 foot wide turning basin at the first bend below Lanceford Creek; and 2 jetties, 19,150 and 11,200 feet long. The project is 7 miles long. Plane of reference is mean low water. Mean tidal range is 5.8 feet on the bar and 6 feet in the inner harbor. (See Table 9-B for Authorizing Legislation.)

Local cooperation. Fully complied with to date. Non-Federal contribution for new work was \$935,000.

Terminal facilities. There are 2 large wharves operated by industrial plants; 12 wharves serving fishing boats, recreational craft, and other vessels; 3 oil handling wharves with pipelines; and a Municipal Marina and Sportsman's Wharf with public facilities for small craft. Total berthing space is approximately 4,065 feet. Most terminals are served by rail, and all have highway access. Facilities are considered adequate for existing commerce. (See Port Series No. 16 (Part 2), 1964.)

Operations and results during fiscal year. Maintenance: Maintenance contract dredging including E&D and S&A, entrance channel \$1,594,151.

Condition at end of fiscal year. The active portion of the existing project is complete. Jetties are in poor condition and are badly in need of repair. Remaining work is to deepen the inner harbor channel and turning basin to 32 feet when and if the presently inactive 1950 authorization is reactivated. The entrance channel has been deepened to 46 feet for the Kings Bay project. Authorized depths were restored as of March 1991.

10. FORT MYERS BEACH, FL

Location. Fort Myers Beach is on Estero Island near the mouth of the Caloosahatchee River, about 20 miles below Fort Myers and 110 miles south of Tampa, Florida. (See NOAA Nautical Chart No. 11427.)

Existing project. The authorized project provides for a channel 12 by 150 feet from that depth in San Carlos Bay into Matanzas Pass, thence 11 by 125 feet in Matanzas Pass to and including a turning basin 2,000 feet upstream from the upper shrimp terminals. Plane of reference is mean low water. Project is 2.5 miles long.

Mean tidal range is 1.7 feet. Spring range is about 2.3 feet. Strong northerly winds lower the water surface 1 to 2 feet; strong southerly winds have an opposite effect. (See Table 9-B for Authorizing Legislation.)

Local cooperation. Fully complied with to date.

Terminal facilities. There are 3 shrimp-packing houses and several fish-packing houses, 2 marine railways, a fuel terminal and an ice manufacturing plant in the area. There are several commercial facilities for servicing shrimp boats. Recreational craft facilities include 9 marinas, a boat motor testing laboratory which is closed, and numerous privately owned piers and wharves. All terminals have highway access. Facilities are considered adequate for existing commerce.

Operations and results during fiscal year. Maint: Engineering and design \$980.

Condition at end of fiscal year. Hurricane season of 2005 caused shoaling in the channel. Future operation and maintenance dredging pending receipt of funds.

11. FORT PIERCE HARBOR, FL

JACKSONVILLE, FL DISTRICT

Location. On east coast of Florida, about 218 miles south of entrance to St. Johns River and about 124 miles north of entrance to Miami Harbor. (See NOAA Nautical Chart No. 11475.)

Existing project. Entrance channel to 400 feet wide and 30 feet deep, the interior channel to 250 feet wide and 28 feet deep, the existing turning basin to 1,100 feet square and 28 feet deep, and providing an access channel 1,250 feet long, 250 feet wide and 28 feet deep north of the main turning basin.

Mean tidal range is 2.6 feet at the entrance and 0.7 feet at terminals. (See Table 9-B for Authorizing Legislation.) For further details see 1961 Annual Report.

Local cooperation. Fully complied with to date. Non-Federal contribution for new work was \$2,503,387. A 25% contribution and an additional 10% reimbursement over 30 years from locals were required.

Terminal facilities. Two earth-filled piers forming a slip 200 by 300 feet, with bulkhead wharf at inner end, affording berthing space of about 1,653 feet. The south pier and bulkhead wharf are municipally owned. Railway and both piers serve the north pier by highway connections. North of the turning basin local interests have provided deep-draft berthing and pier facilities. Also available is a bulkhead wharf with a depth of 25 feet with ample room for open storage and with tank storage for petroleum in the rear. Facilities are considered adequate for existing commerce.

Operations and results during fiscal year. Maintenance: No work in FY 2007.

Condition at end of fiscal year. Existing project is complete.

12. INTRACOASTAL WATERWAY, CALOOSAHATCHEE RIVER TO ANCLOTE RIVER, FL

Location. The Waterway extends from the mouth of the Caloosahatchee River at Punta Rassa, Florida, to the mouth of Anclote River, Florida, following in general an almost continuous series of protected inside waterways along the gulf coast of Florida. (See NOAA Nautical Chart Nos. 11411, 11425 and 11427.)

Previous projects. For details see page 767 of 1945 Annual Report.

Existing project. The authorized project provides for a channel 9 by 100 feet from Caloosahatchee River to Anclote River; deepening the existing channel at Casey's Pass to 9 feet; a channel 6 by 80 feet (Cats Point Channel) along the southeastern side of Boca Ciega Bay past Frenchman Creek and Gulfport; maintenance of bulkheads, revetments, and two jetties built at Casey's Pass under previous project; and improvement and maintenance of Sunshine Skyway Channel. Plane of reference is mean low water. The project includes about 160 miles of channels.

Mean ranges of tide are 1.7 feet at Punta Rassa, 1 foot at Port Boca Grande, 1.4 feet in Tampa Bay at Anna Maria, and 2 feet at entrance to Anclote River. Extreme ranges are about 4.5 feet at Punta Rassa, about 3 to 4 feet between Port Boca Grande and Corey Causeway over Boca Ciega Bay, and about 5.5 feet at entrance to Anclote River. Southerly winds over the area generally raise water levels by 1 to 1.5 feet; northerly winds lower water levels by 1 to 2 feet. (See Table 9-B for Authorizing Legislation.)

Local cooperation. Fully complied with to date.

Terminal facilities. Existing facilities include one municipal concrete pier, one railway pier, one freight wharf, one marginal wharf 500 feet long on Terminal Island, and 11 privately owned landings, all at Sarasota. Municipal pier and freight wharf are open to the public. All piers have highway connections. There are 6 wharves along Boca Ciega Bay and a number of small privately owned piers and wharves at various points along waterway for use by commercial fishing boats and recreational craft. Facilities are considered adequate for existing commerce.

Operations and results during fiscal year. Operations: \$113,601; Maintenance: \$201,887.

Condition at end of fiscal year. Existing project is complete. Shoaling exists in northern Pinellas County, around Longboat Pass and Venice Inlet and just south of the Sunshine Skyway Bridge. Spot shoals exist in Lee County. Engineering and design is underway for maintenance dredging in 2009 and 2010 pending funds.

13. INTRACOASTAL WATERWAY, JACKSONVILLE TO MIAMI, FL

Location. The Waterway extends from Jacksonville to Miami, Florida, following the St. Johns

REPORT OF THE SECRETARY OF THE ARMY ON CIVIL WORKS ACTIVITIES FOR FY 2007

River to the mouth of Pablo Creek and thence following in general an almost continuous series of protected inside waterways along the Atlantic coast of Florida to Miami. (See NOAA Nautical Chart Nos. 11489, 11485, 11472 and 11467.)

Previous projects. For details, see pages 618-619 of 1938 Annual Report.

Existing project. The authorized project provides for a channel 12 by 125 feet from Jacksonville to Miami, modified by Chief of Engineer's report of July 22, 1960; side channels at Sebastian and Daytona Beach and turning basins at Sebastian and Vero Beach, all to an 8 foot depth, and operation and maintenance of Palm Valley highway bridge. Project is 370 miles long, including 21 miles in Jacksonville Harbor. Mean range of tide is 3.8 feet at St. Johns River, 0.7 foot in Indian River at Fort Pierce, 1.8 feet in Lake Worth at Port of Palm Beach terminals, 2.3 feet at the Port Everglades terminals, and 2 feet in Biscayne Bay. The extreme range is about 7 feet at St. Johns River, 1.5 feet at Fort Pierce, and 3 feet in Biscayne Bay. Plane of reference is mean low water. Tidal effect is imperceptible at points along waterway distant from inlets. (See Table 9-B for Authorizing Legislation.)

Local cooperation. Fully complied with to date.

Terminal facilities. There are a number of privately owned piers, wharves, and landings at various points along waterway. Terminals with railway connections are available at Jacksonville, Fort Pierce, West Palm Beach, Port Everglades, and Miami. Municipal piers or wharves have been constructed at Titusville, Cocoa, Melbourne, and Vero Beach for handling general freight and at St. Augustine, Daytona Beach, New Smyrna Beach, Eau Gallie, West Palm Beach, Delray Beach, Fort Lauderdale, and Miami for use of recreational craft. Yacht basins, open to the public, have been provided at Jacksonville Beach, Daytona Beach, Titusville, Eau Gallie, Vero Beach, Fort Pierce, West Palm Beach, Fort Lauderdale, Hollywood, and Miami. Facilities are considered adequate for existing commerce. (For further details on facilities at Jacksonville, see Port Series No. 15, 1969, and at Palm Beach, Port Everglades, and Miami, see Port Series No. 16, Revised 1972.)

Operations and results during fiscal year. Maintenance: \$3,482,858.

Condition at end of fiscal year. The existing project as modified by the Chief of Engineers is complete. (Construction of the channel and turning

basin at Sebastian, Florida, was deauthorized by WRDA of 1988, P.L. 100-676.) (See Table 9-A for total project costs.) Maintenance dredging of IWW in the vicinity of Nassau Sound, FL; and Bakers Haulover Inlet, FL was completed in 2006. Maintenance dredging in the vicinity of Matanzas Inlet and New Smyrna is underway in 2007 and is scheduled to be completed in 2008.

14. JACKSONVILLE HARBOR, FL

Location. The authorized project comprises the lower 24.9 miles of St. Johns River, which empties into the Atlantic Ocean near the northeasterly corner of the Florida peninsula. (See NOAA Nautical Chart No. 11491.)

Previous projects. For details, see page 607 of Annual Report, 1938.

Existing project. The authorized project provides for a channel 40 feet deep by 400-1,200 feet wide from ocean to mile 14.7 via Dame Point-Fulton Cutoff, a channel 38 feet deep from ocean mile 14.7 to ocean mile 20.0, thence 34 feet to Commodore Point, and thence 30 feet deep to the FEC railway bridge at Jacksonville, including a 30 foot channel in Arlington cut in the old Dames Point-Fulton channel; maintenance of the existing 42 and 40 foot depth entrance channel; widening of channel by 100 feet near mile 5 and by 200 feet near mile 7; maintenance of jetties at channel entrance; maintenance of training walls and revetments; a navigation and floodway channel 26 by 200 feet along south side of Commodore Point; on approach and mooring basin 20 feet deep, 1,300 feet long at 20 foot depth contour and 600 feet long at pier head line near Naval Reserve Armory in south Jacksonville; a depth of 24 feet between that depth contour and the pier head line from Hogan Creek to the foot of Laura Street; and a depth of 28 feet to within 60 feet of pier head line between foot of Laura Street and St. Elmo W. Acosta (formerly Upper State) bridge. Length of project is about 26.8 miles. In addition the Navy has provided funds for a deeper Jacksonville Harbor entrance channel 42 feet deep and 800 feet long, intersecting with the Navy's Mayport entrance channel to the Mayport turning basin; also an extension of the existing project to provide 38 foot depth for the Navy fuel depot, at Drummond Creek.

Mean tidal range is 5.3 feet on the bar, 4.9 feet at Mayport, 2.6 feet at Dame Point, and 1.1 feet at Jacksonville. The extreme range varies from about 9 feet on the bar to about 1.5 feet at Jacksonville. Strong

JACKSONVILLE, FL DISTRICT

northeasterly winds raise the water level about 2 feet at Mayport and Jacksonville. Strong southwesterly winds lower the water about 1.5 feet at Mayport and one foot at Jacksonville. (See Table 9-B for Authorizing Legislation.)

Estimated cost of new work \$46,000,000 Federal and \$36,600,000 non-Federal.

Local cooperation. Fully complied to date. A 25 percent contribution and an additional 10 percent reimbursement over 30 years from local sponsor is required for general navigation features, a 100 percent contribution is required for local service facilities, and non-Federal contribution for new work is \$7,275,000.

Terminal facilities. Jacksonville Harbor has 84 waterfront facilities. Available at the General Cargo Facilities are 11,140 feet of usable berthing space and 12 transit sheds with a total storage space of 1,009,800 square feet. The Oil Handling Facilities consist of 7,843 feet of usable berthing space and 179 storage tanks providing a total of 8,478,900 barrels of tank storage. Warehouse storage at the port includes 3,266,900 square feet of dry storage and 4,071,100 cubic feet of cold storage. Available open storage is 233 acres. Four fixed cranes with capacities from 40 to 100 tons are located at the port. Available locally are crawler and truck cranes with capacities up to 100 tons. Various phases of marine repair work are accomplished by 7 waterfront repair facilities and numerous other companies located off water. Dry-dock facilities consist of 6 floating dry-docks with capacities from 800 to 33,000 tons. Floating equipment includes 25 tugs with up to 3,300 horsepower and 16 tank barges with capacities up to 20,700 barrels. Three major railroads furnish rail service from port docks to all points outside of Jacksonville. Facilities are considered adequate for existing commerce (See Port Series No. 15, Rev. 1978.)

Operations and results during fiscal year. New Work: Navigation construction \$2,011,796; Engineering and Design \$491,863; Contract management \$63,956. Maintenance: Contract dredging cost including Engineering and Design and Contract Management \$3,417,060.

Condition at end of fiscal year: A GRR to extend the 40 foot depth from river mile 14.7 to river mile 20.0 is complete and is authorized. A second GRR is underway to evaluate additional project features.

15. JACKSONVILLE HARBOR (MILL

COVE), FL

Location. The authorized Mill Cove project comprises a 6 square mile body of shallow water on the St. Johns River approximately 10 miles from the Atlantic Ocean near the northeasterly corner of the Florida peninsula. (See NOAA Nautical Chart No. 11491.)

Previous project. None.

Existing project. The authorized project provides improved flow and circulation through Mill Cove to eliminate further shoaling. This large shallow area averages about 2 to 4 feet deep, is about 5.5 miles long, and varies from 0.5 to 2.0 miles wide. It is situated along the St. Johns River near the Dame Point-Fulton Cutoff portion of the Jacksonville Harbor navigation project. The Mill Cove project includes dredging a 650 foot by 3,600 foot flow channel at the west end to -12 feet MSL; enlarging the weir opening at the eastern end to 1,300 feet wide and -12 feet MSL; and installing flow diversion features at the west and east ends of the cove. Mean tidal range is 4.9 feet at entrance, 4.5 feet at Mayport, 3.0 feet at Dame Point, and 1.2 feet at Jacksonville. Strong northeasterly winds raise the water level about 2 feet at Mayport and Jacksonville. Strong southwesterly winds lower the water about 1.5 feet at Mayport and 1 foot at Jacksonville (See Table 9-B for Authorizing Legislation.)

Local cooperation. In conformance with Section 221, Public Law 91-611, and prior to commencement of construction, the Jacksonville Port Authority, as local sponsor, must provide written agreement to the following local cooperation requirements: provide without cost to the United States all lands, easements, and rights-of-way required for construction and subsequent maintenance of the project; hold and save the United States free from damages that result due to construction and maintenance other than damages due to the fault or negligence of the United States or its contractors; accomplish without cost to the United States such utility and other relocations or alterations as necessary for construction.

Terminal facilities. None.

Operations and results during fiscal year. None.

Condition at end of fiscal year. Project completed November 2002.

16. JOHNS PASS, FL

Location. A natural inlet on the west coast of Florida connecting Boca Ciega Bay with Gulf of Mexico. The pass is located about 8 miles northwest of lower Tampa Bay directly across Boca Ciega Bay from St. Petersburg, Florida. (See NOAA Nautical Chart No. 11411.)

Existing project. Channel 10 by 150 feet in the Gulf, thence 8 by 100 feet inside pass, and 6 by 100 feet to the Intracoastal Waterway, and suitable protective measures over a frontage of approximately 1,000 linear feet of shore along the north end of Treasure Island. Plane of reference is mean low water. Mean range of tide is 1.5 feet. Project is about 2.6 miles long. Project was authorized December 2, 1964 by the Chief of Engineers under Section 107 of the 1960 River and Harbor Act and by Section 110 of the 1966 River and Harbor Act.

Local cooperation. Fully complied with to date.

Terminal facilities. Only small marinas and repair yards for recreational craft are in the general vicinity. Facilities are considered adequate for existing commerce.

Operations and results during fiscal year. None.

Condition at end of fiscal year. Project was completed in 1968. Authorized project depths were restored as of June 2002.

17. LONGBOAT PASS, FL

Location. Longboat Pass is located on the west coast of Florida about 11 miles northwest of Sarasota and 23 miles south of St. Petersburg. Located in Manatee County, it is one of several natural inlets connecting Sarasota Bay, a tidal estuary, with the Gulf of Mexico. (See NOAA Nautical Chart No. 11425.)

Existing project. The authorized project provides for an entrance channel 12 by 150 feet from the Gulf to Longboat Pass Bridge, thence a channel 10 by 100 feet from Longboat Pass Bridge along a north to northeasterly alignment to the Intracoastal Waterway to Cortez Bridge. The mean tidal range is 2.2 feet and the maximum tidal range is about 5 feet. Currents are predominantly tidal. (See Table 9-B for Authorizing Legislation.)

Local cooperation. Fully complied with to date. See 1978 Annual Report for detailed local cooperation requirements.

Terminal facilities. From Sarasota north to Tampa Bay there are about 28 small craft facilities including marinas, boat repair yards, and boat basins along the Intracoastal Waterway. Nine of them are located within 2 miles of Longboat Pass. Numerous private mooring piers and wharves also exist in the area. The marina and repair facilities appear adequate for the general boating needs of the area.

Operations and results during fiscal year. None.

Condition at end of fiscal year. Construction of the project is complete. Authorized project depths were restored as of May 2003. The channel depths are adequate for navigation.

18. MANATEE HARBOR, FL

Location. The project is located in Manatee County on the east side of Tampa Bay 10 miles from the Gulf of Mexico. (See NOAA Nautical Chart No. 11414.)

Existing project. The authorized project provides for maintenance of the existing 40-foot deep draft navigation channel and turning basin, which extends from Tampa Bay Channel to berthing facilities at Port Manatee. Also provide initial construction for a widener at the northwest end of the Manatee Harbor Channel and a repositioned 900 by 1300 foot turning basin adjacent to the northern berthing area to provide a larger turning basin. All material from the project was placed on upland sites west and northeast of the port slip.

Estimated cost of new work \$59,900,000 Federal and \$25,800,000 non-Federal.

Local cooperation. Fully complied with to date. A 25 percent contribution and an additional 10 percent reimbursement over 30 years from locals are required.

Terminal facilities. Existing facilities at Port Manatee consist of 675 acres of port operational lands, a ship basin 1,500 feet long by 788 feet wide; and an approximately 3 mile access channel, with a design width of 400 feet, which connects with the Federally authorized Tampa Bay Channel. The Manatee project was constructed between August 1968 and February 1970. The required design depth was 40 feet, and the dredging contractor was allowed a pay over depth of 2

JACKSONVILLE, FL DISTRICT

feet. Port Manatee also operates its own terminal railroad, which is licensed under the Interstate Commerce Commission, and publishes a switching tariff as a Class III railroad. It also maintains and operates 2 switch engines and about 30,000 feet of track, which connects with the CSX Railroad.

Operations and results during fiscal year. New Work: Navigation costs were \$4,187,807; Engineering and Design costs were \$31,489. Maintenance costs were \$627,487.

Condition at end of fiscal year. Phase II will entail removal of approximately 2,676,000 cubic yards for the new wideners at the entrance of the harbor and the turning basin enlargement. Phase II construction contract was awarded in September 2002 and was completed in February 2006. A General Reevaluation Report is being completed under current policies, and guidelines to add a channel extension 1590 feet long by 400 feet wide to provide additional berthing areas.

19. MAYAGUEZ HARBOR, PR

Location. The Project is on the west coast of Puerto Rico, about 110 miles by water from San Juan Harbor. (See NOAA Nautical Chart No. 25673.)

Existing project. The authorized project provides for a 30 by 1,000-foot approach channel to the deep-water terminal, decreasing to a 500-foot width opposite the westerly end of terminal, thence the same width to the easterly end of terminal. (See Table 9-B for Authorizing Legislation.)

Local cooperation. Fully complied with to date.

Terminal facilities. A modern deep water terminal is located in the northeast section of the harbor consisting of a bulkhead wharf about 1,270 feet long with a storage transit shed 800 by 60 feet immediately shoreward. The Puerto Rico Industrial Development Company, an agency of the Commonwealth of Puerto Rico, owns a bulkhead wharf of about 200 feet in line with the existing deep-water terminal plant located within the industrial harbor area. In addition, Bumble Bee Packing Company, Inc., owns and operates a dock of about 200 feet for docking tuna fish boats. Facilities are considered adequate for existing commerce.

Operations and results during fiscal year. None.

Condition at end of fiscal year. Project was completed in 1934.

20. MELBOURNE HARBOR, FL

Location. The project is on Indian River about midway of the east coast of Florida, 179 miles south of Jacksonville Harbor and 171 miles north of Miami Harbor.

Existing project. The authorized project provides for a channel 8 by 100 feet from Indian River to a 400 by 800 foot turning basin in Crane Creek. Project is about 3,150 feet long. Plane of reference is mean low water. The harbor is almost non-tidal.

Terminal facilities. The Municipal Marina on the north end of the turning basin has a 350 foot steel bulkhead with 11 finger piers, each about 40 feet long. There are also 2 privately owned storage and repair facilities and several privately owned boathouses and docks. The facilities are considered adequate for existing commerce.

Operations and results during fiscal year. None.

Condition at end of fiscal year. The project was completed in 1938. As of September 1984 channel depths as authorized were available throughout the project. Project determined to have inadequate economic benefits to justify further use of operation and maintenance funds. Therefore, no future maintenance is planned for this project.

21. MIAMI HARBOR, FL

Location. Miami is near the northern end of Biscayne Bay, about 71 miles south of the entrance to Palm Beach Harbor. Miami River has its source in the Everglades and flows southeasterly to enter Biscayne Bay at Miami. (See NOAA Nautical Chart No. 11468.)

Existing project. The authorized project provides for a 44 by 500 foot channel from the ocean to the outer end of the north jetty, thence 42 by 400 feet through the entrance and across Biscayne Bay to and including a turning basin at the municipal terminals; a 42 foot depth turning basin at Fisher Island; 2 rubble stone jetties at the entrance; and a channel 15 feet deep in Miami River varying in width from 150 feet at mouth to 90 feet 5.5 miles inland. Plane of reference is mean lower low water, except for 15-foot channel in Miami River where depths are based on flood conditions. Total length of the project is about 13 miles.

REPORT OF THE SECRETARY OF THE ARMY ON CIVIL WORKS ACTIVITIES FOR FY 2007

Mean tidal variation is 2.5 feet at entrance and 2 feet in the bay. Extreme variation is about 4.5 feet at entrance and 3 feet in Biscayne Bay. Strong easterly winds raise the water level about 1.5 feet at entrance and 1 foot in the bay. Strong westerly winds lower water level about 1 foot at entrance and about 0.5 foot in the bay.

Estimated cost for Miami Harbor Channel is \$154,100,000 Federal and \$111,000,000 non-Federal. (See Table 9-B for Authorizing Legislation.)

Local cooperation. Fully complied with to date. See 1978 Annual Report for detailed local cooperation requirements. Assurances of local cooperation for the 1968 modification to the project were accepted December 18, 1968.

Terminal facilities. There are 91 commercial waterfront facilities serving the port. The General Cargo Facilities include 21,373 feet of usable berthing space, 13 transit sheds with a total capacity of 474,300 square feet, and 9 freight stations with a total storage capacity of 270,400 square feet. Oil Handling Facilities consist of 2,714 feet of usable berthing space and 36 storage tanks with a total storage capacity of 744,475 barrels. Available shore house storage includes dry storage of 1,450,500 square feet and cold storage of 11,204,000 cubic feet. There are 117.1 acres of open storage at the port.

Hoisting Facilities located at the port include two 40 ton cranes and cranes with capacities up to 200 tons available through local rental. Twelve waterfront repair yards and 2 off water yards serve the port. Dry-dock facilities available include 7 marine railways and 4 boat lifts with haul out capacities ranging from 40 to 1,000 tons and lifting capacities ranging from 79 to 500 tons. Nine tugs, with ratings up to 3,000 horsepower, and 13 tank barges, with capacities up to 35,000 barrels, are also available. The CSX and the Florida East Coast Railway serve rail Facilities at the port.

Facilities are considered adequate for existing commerce. (See Port Series No. 16, Rev. 1982.)

Operations and results during fiscal year. New work: Navigation costs: \$2,131,171; Engineering and Design costs, \$86,226; Construction Management costs \$190,045. Maintenance cost \$26,051. Miami River Maintenance cost: \$217,482.

Condition at end of fiscal year. The remainder of Phase II was completed in July 2006. A GRR for

deepening was completed in 2004 with a Chief's Report on 25 April 2005 and the ROD was signed by Mr. Woodley 22 May 2006. Maintenance dredging of the Miami River was underway in 2007 with the contract performance period ending in 2009.

22. NEW PASS, SARASOTA, FL

Location. Sarasota Bay is a tidal lagoon along the west coast of Florida immediately south of Tampa Bay. New Pass is a gulf inlet across the bay from Sarasota, Florida. (See NOAA Nautical Chart No. 11425.)

Existing project. The authorized project provides for an entrance channel 10 feet deep and 150 feet wide in the Gulf of Mexico diminishing to 8 by 100 feet through New Pass and extending across Sarasota Bay to the Intracoastal Waterway with side channels to, and turning basins at, Payne Terminal and city pier. Plane of reference is mean low water. Mean range of tide is 1.3 feet in Sarasota Bay; mean spring range is 1.7 feet. Project is about 4 miles long. (See Table 9-B for Authorizing Legislation.)

Local cooperation. Fully complied with to date.

Terminal facilities. Consist of Payne Terminal, a slip 200 by 650 feet, and city pier, 400 feet long with 2 finger piers equipped with adequate facilities at each location.

Operations and results during fiscal year. None.

Condition at end of fiscal year. Project was completed in 1964. Authorized project depths were restored as of May 2003. Limit of federal participation in maintenance dredging has been met.

23. OKEECHOBEE WATERWAY, FL

Location. The waterway traverses the southern part of the Florida peninsula via the Caloosahatchee River, Lake Okeechobee, and St. Lucie Canal, connecting coastal waterways along the Gulf and Atlantic Shores. (See NOAA Nautical Chart No. 11428.)

Previous project. For details, see page 785 of 1949 Annual Report.

Existing project. The authorized project provides for replacing the old locks on the St. Lucie Canal by a single new lock; a channel 10 by 100 feet from Ft. Myers for about 5 miles upstream, thence 8 by 80-100

JACKSONVILLE, FL DISTRICT

feet to the Intracoastal Waterway, Jacksonville to Miami, near Stuart; a side channel at Ft. Myers; operation and care of St. Lucie Lock; and maintenance of features completed under previous projects as follows: a 12 by 200 foot channel from the Gulf of Mexico to Punta Rassa, thence 10 by 100 feet to Ft. Myers with a 10 foot depth basin at Fort Myers; a 6 by 80 foot channel along the south shore of Lake Okeechobee from Clewiston to St. Lucie Canal; a 6 by 60 foot channel in Taylor Creek from the town of Okeechobee to the Lake; and operation and care of Moore Haven and Ortona Locks. (See Table 9-B for Authorizing Legislation.)

For further details see 1962 Annual Report.

Local cooperation. Fully complied with for completed portion of project.

Terminal facilities. There are 3 freight piers, one municipal recreation pier, 4 privately owned piers, and a municipal yacht basin on the Caloosahatchee River near Fort Myers. The Corps has provided a boat basin, launching ramp, and a 120-foot wharf on the Caloosahatchee River about one-quarter mile below Ortona Lock. There are tie-up dolphins above and below all 5 locks. Commercial yacht basins are provided on the south side of the Caloosahatchee River about halfway between Ortona and Moore Haven Locks and about 3 miles east of LaBelle. A commercial/municipal yacht basin is provided on the north side of the St. Lucie Canal at Indiantown.

There are numerous small wooden-pile landings along the Caloosahatchee River, St. Lucie Canal, and on the St. Lucie River, including one railroad terminal pier, municipal pier, and a pier for handling petroleum products at Stuart. Also, 550 feet of wharves have been provided on the west side of Taylor Creek immediately landward of Hurricane Gate No. 6 and 150 feet on the east side of the creek. A yacht basin has been provided on the west side of the creek immediately landward of the hurricane gate. The installations on Taylor Creek are privately owned, but are open to the public. A breakwater-protected harbor is available at Pahokee. There is a 440 foot marginal wharf on the Industrial Canal at Clewiston; a 125 foot wharf at LaBelle; a 150 foot wharf at Belle Glade; a 125 foot wharf at Moore Haven; a 50 foot wharf at Alva; and a 30 foot wharf on Taylor Creek at the town of Okeechobee. A docking facility for loading raw sugar was constructed in 1967 on Herbert Hoover Dike near Belle Glade. All have highway and/or railway connections. Facilities are considered adequate for existing commerce.

Operations and results during fiscal year. (See Table 9-H for work accomplished.)

Condition at end of fiscal year. The project is complete. (The 8 foot depth basin at Stuart was deauthorized by WRDA of 1988, P.L. 100-676.)

24. OKLAWAHA RIVER, FL

Location. The river has its source in a system of large lakes in the central part of the Florida peninsula and flows generally northerly, then easterly, and emptying into St. Johns River 22 miles upstream from Palatka. The extreme head of the system is considered to be Lake Apopka, 120 miles above the river's mouth.

Previous projects. For details, see page 613 of 1938 Annual Report.

Existing project. The authorized project provides for clearing a channel to Lake Griffin; maintaining dikes to obtain a navigable depth of about 4 feet to Leesburg and construction of a lock and dam at Moss Bluff. The project length is about 85.7 miles. (See Table 9-B for Authorizing Legislation.)

Local cooperation. Fully complied with to date.

Terminal facilities. Several private and public landings and boat-launching ramps are located along the river. Public recreation craft basins and boat launching ramps are near Silver Springs and State Roads 40 and 316 bridges. There is a municipal wharf on Lake Griffin at Leesburg. A dam has created Lake Ocklawaha (13,000 acres) with egress to the St. Johns River through Buckman Lock. Along the lake are 4 launching ramps; Payne's Landing, Orange Springs, Kenwood Landing, and Rodman Recreation Area. Access below the dam is at the Ocklawaha Boat launch ramp and at State Road 19. Facilities are considered adequate for existing commerce.

Operations and results during fiscal year. None.

Condition at end of fiscal year. The project is complete. (A 6-foot depth channel from the mouth of the river to the head of Silver Springs Run was deauthorized.) The Moss Bluff lock and dam structure was replaced under the Four River Basins, Florida flood control project.

25. PALM BEACH HARBOR, FL

REPORT OF THE SECRETARY OF THE ARMY ON CIVIL WORKS ACTIVITIES FOR FY 2007

Location. The authorized project is located on the east coast of Florida about 71 miles north of the entrance to Miami Harbor and about 264 miles southeasterly from the entrance to Jacksonville Harbor. (See NOAA Nautical Chart No. 11472.)

Existing project. The authorized project provides for an entrance channel 35 by 400 feet merging with an inner channel 33 by 300 feet to and including a turning basin; tank revetment; and restoring jetties. Plane of reference is mean lower water. The project is about 1.6 miles long.

Mean range of tide in the ocean at the entrance is 2.8 feet and at the turning basin, 2.2 feet. Extreme range of tide is about 4.5 feet at the inlet and 3 feet at the terminals. Seven-foot tidal ranges have occurred during storms. For details, see 1962 Annual Report. (See Table 9-B for Authorizing Legislation.)

Local cooperation. Fully complied with to date. For requirements, see 1961 Annual Report.

Terminal facilities. The port has 13 commercial waterfront facilities. The General Cargo Facilities include 5,156 feet of usable berthing space and 6 transit sheds with a total of 118,030 square feet of storage capacity. The Oil Handling Facilities consist of 10 storage tanks with a total capacity of 2,029,600 barrels. Usable berthing space is not available at the Oil Handling Facilities. Dry storage is available at 150,500 square feet, cold storage at 19,200 cubic feet and open storage at 27.1 acres. Seven cranes with capacities from 15 to 230 tons are located at the port. There are no floating cranes, repair facilities or dry-dock facilities located at the port. A 100-ton vertical boatlift is located on the Intracoastal Waterway south of the port for heavy lifts. Two tugs with ratings of 900 and 1,000 horsepower are available. The Palm Beach Belt Line, which connects, with the Florida East Coast Railway serves the port. Facilities are considered adequate for existing commerce. (See Port Series No.16, Rev. 1982.)

Operations and results during fiscal year. Maintenance: Contract dredging, \$3,560,096.

Condition at end of fiscal year. The project was completed in 1967. Jetties and revetment are in need of repair. Future maintenance dredging will occur yearly as necessary depending on shoaling conditions.

26. PALM VALLEY BRIDGE, FL

Location. Palm Valley Bridge is located over the Intracoastal Waterway on State Road 210 in St. John's County, Florida.

Existing project. The project replaced the existing Palm Valley Bridge with a new high-level bridge that is fixed for navigation. Additional roadway construction was required because of the new bridge alignment. The old bridge was removed and the Intracoastal Waterway in the vicinity of the old bridge was dredged to its authorized dimensions in FY 2005. (See Table 9-B for Authorizing Legislation).

Local cooperation. Operations and Maintenance at an estimated \$75,000 per year.

Terminal facilities. None in the immediate area.

Operations and results during the fiscal year. None.

Condition at end of fiscal year. Local sponsor has funded expansion from 2 to 4 lanes. PCA executed in December 1999. Construction contract awarded September 2000. The County Commissioners have approved a betterment to a 4-lane bridge. The new bridge was completed in July 2002.

27. PONCE DE LEON INLET, FL

Location. Ponce de Leon Inlet is on the Atlantic coast of Florida about 65 miles south of St. Augustine Harbor and 57 miles north of Canaveral Harbor. (See NOAA Nautical Chart No. 11485.)

Existing project. The authorized project provides for an entrance channel 15 by 200 feet across the ocean bar, thence 12 by 200 feet and 12 by 100 feet through the inlet; thence southward in Indian River North, 12 by 100 feet, and northward in Halifax River, 7 by 100 feet, each leg continuing to the Intracoastal Waterway; ocean jetties on the north and south of the inlet 4,200 and 2,700 feet long respectively, and weir in the north jetty with an impoundment basin inside the jetty. Plane of reference is mean low water. Mean range of tide is 4.1 feet in the ocean and 2.3 feet inside the inlet. The project is about 5 miles long.

Estimated cost for new work is \$4,600,000 Federal and \$3,900,000 non-Federal.

Local cooperation. Fully complied with to date.

Terminal facilities. None in the immediate area.

JACKSONVILLE, FL DISTRICT

Operations and results during fiscal year. New Work: Engineering and Design \$54,148; Maintenance: No work in FY 2007.

Condition at end of fiscal year. The south jetty extension is awaiting sponsor approval to proceed.

28. PONCE HARBOR, PR

Location. Ponce Harbor is an open bay about midway on the south coast of Puerto Rico. From the center of the city of Ponce, the harbor is about 3 miles south. (See NOAA Nautical Chart No. 25677.)

Previous project. For details, see page 12 of Annual Report for 1975.

Existing project. The authorized project provides for a seawall 362 feet long extending northwesterly across the rock reef from near the landward end of the municipal pier, 30 feet deep and containing about 18 acres; a breakwater 2,400 feet long extending southwesterly from Punta Carenero; a channel 36 feet deep by 600 feet wide extending from the Caribbean Sea approximately 2.8 miles up to the port, thence a channel 400 feet wide by 36 feet deep into the harbor, and a 36 foot deep, irregularly shaped turning basin with a diameter of 959 feet. Plane of reference is mean low water. Mean tidal range is 0.6 foot, extreme varies between about 1 foot below and 2 feet above mean low water. (See Table 9-B for Authorizing Legislation.)

Local cooperation. Should provide all lands, easements and rights-of-way; provide and maintain at local expense depths in berthing areas and local access channels; hold United States free from any damages resulting from construction and maintenance of the project; relocate without cost to the United States all cables, sewer mains, water supply, drainage and other utility installations as required; provide adequate public terminal and transfer facilities open to all on equal terms. A letter has been received from mayor of Ponce, assuring compliance with local requirements and to cost share the project. Non-Federal contribution for new work was \$717,304. A 25 percent contribution is required and an additional 10 percent reimbursement over 30 years from locals.

Terminal facilities. The municipality of Ponce owns and operates the only deep-draft terminal facilities in Ponce Harbor, which consist of a municipal pier 515 feet long and 108 feet wide, and a bulkhead wharf 3,811 feet long. Both are equipped for transfer and storage of freight. A 40-ton container lift

shore crane is available for the handling of loaded containers. The municipal pier has a steel transit shed 386 by 85 feet. The bulkhead wharf has 4 steel transit sheds totaling over 103,000 square feet. Three concrete and steel warehouses are available providing 800,000 square feet for general storage. Open storage areas for structural steel, lumber, and other bulk and package commodities are also provided. Bulk cement is handled and loaded into cement cargo ships by the use of a private pipeline loading facility. A tuna fish processing and canning factory is located on the premises, with direct access to the bulkhead wharf. Existing facilities are open to the public. Facilities are considered adequate for existing commerce.

Operations and results during fiscal year. Maintenance: None.

Condition at end of fiscal year. Construction of the project is complete. South and north jetties are in fair condition.

29. PORT EVERGLADES HARBOR, FL

Location. The harbor is on the east coast of Florida about 23 miles north of Miami and about 48 miles south of Palm Beach Harbor, Florida. (See NOAA Nautical Chart No. 11470.)

Existing project. The authorized project provides for an ocean entrance channel 45 by 500 feet through an ocean bar tapering to 42 by 450 feet between rubble stone entrance jetties, and continuing at that depth to an irregularly flared entrance and turning basin of same depth; enlarging Pier 7 channel to 36 by 400 feet for distance of about 1,600 feet; maintenance of the locally dredged channel opposite Berth 18 to 36 feet deep over a length of 700 feet with varying widths of 200 to 150 feet; construction of a south jetty fishing walkway; and, maintenance of the jetties. Plane of reference is mean low water. The project is about 1.9 miles long. Mean range of tide is 2.5 feet at the entrance and 2.3 feet at the terminals; extreme range is about 4.5 feet with storm tides of about 6.5 feet.

Estimated cost of new work is \$80,000,000 Federal and \$190,000,000 non-Federal.

Local cooperation. Fully complied with for work completed to date. For work under H 144/93/1, local interests must: provide all lands, easements and rights-of-way; save United States free from damages; accomplish utility and other relocations or alterations; provide depths in berthing areas and local access

REPORT OF THE SECRETARY OF THE ARMY ON CIVIL WORKS ACTIVITIES FOR FY 2007

channels serving the terminals commensurate with depths provided in the related project areas; establish regulations prohibiting discharge of pollutants into waters of the channel by users thereof; prohibit erection of any structure within 100 feet of project channel as authorized at time of construction; provide and maintain public terminal and transfer facilities; contribute 50 percent of total first costs of recreational jetty fishing facility; and operate and maintain jetty fishing facility. The local sponsor has furnished assurances of local cooperation for the 1974 authorization.

Terminal facilities. There are 22 commercial waterfront facilities serving the port. The General Cargo Facilities include 13,807 feet of usable berthing space, 7 transit sheds with a total capacity of 393,870 square feet, and 6 container yards with space for 3,965 containers. Oil Handling Facilities consist of 232 storage tanks with a total storage capacity of 9,564,800 barrels. There is no usable berthing space located at the Oil Handling Facilities. Dry storage is available at 225,000 cubic feet and open storage at 100.3 acres.

Hoisting facilities available from a local firm include 8 cranes with capacities from 20 to 155 tons. No floating cranes or derricks for heavy lifts are available at the port. There are 2 marine repair yards. Dry-dock facilities include 2 dry-docks with capacities of 2,200 and 3,200 tons and a 4,270 ton vertical boatlift. Three tugs with ratings up to 4,290 horsepower serve the port. The Port Everglades Belt Line connects with the CSX railroad to serve the port. Facilities are considered adequate for existing commerce. (See Port Series No. 16, Rev. 1982.)

Operations and results during fiscal year. Maintenance: No work during FY 2007; New work: No work during FY 2007.

Condition at end of fiscal year. Feasibility study to expand and deepen the port is scheduled to be completed in July 2009. PED is scheduled to start in August 2009.

30. REMOVAL OF AQUATIC GROWTH FROM NAVIGABLE WATERS IN THE STATE OF FLORIDA.

Location. Water hyacinth, hydrilla and water lettuce are found in Federal navigation projects in the Jacksonville District.

Existing project. The authorized project provides for destruction or removal of aquatic growth in Federal navigation projects in Jacksonville District, which threaten or negatively impact navigation. This project is 100% federally funded. No estimate of the final cost of work has been made. (See Table 9-B for Authorizing Legislation.)

For further details, see 1962 Annual Report.

Local cooperation. None required.

Operations and results during fiscal year. Maintenance: Operations continued during the year: \$3,287,824; (See Table 9-B for Authorizing Legislation and Table 9-I for spraying operations.)

Condition at end of fiscal year. The project is for maintenance of federal navigation projects. During the year approximately 7,500 acres of floating vegetation (water hyacinth and/or water lettuce) and 500 acres of hydrilla were controlled.

31. ST. AUGUSTINE HARBOR, FL

Location. The harbor is on the east coast of Florida, about 35 miles south of the entrance to St. Johns River and about 180 miles north of Fort Pierce Harbor. (See NOAA Nautical Chart No. 11485.)

Previous project. For details see page 412 of Annual Report for 1958.

Existing project. The authorized project provides for a channel 16 by 200 feet along the best natural new inlet bar, thence 12 feet deep to the Intracoastal Waterway; a sand trap groin on the north side of the inlet extending seaward from the shore of Vilano Beach, and a sand-tight jetty on the south side of the channel extending seaward from the shore of Conch Island parallel to and coextensive with the groin; future landward extension of the groin and jetty; and a channel 10 by 100 feet in San Sebastian River from the Intracoastal Waterway to King Street Bridge, with a turning basin near the upper end. Length of the inlet channel is about 1.5 miles and length of the San Sebastian River channel is about 2.6 miles. Plane of reference is mean low water. The mean tidal range is 4.5 feet in the ocean at St. Augustine Inlet and 4.2 feet at the city waterfront. Strong northerly winds, mostly in the winter, lower the water surface about 1 foot. (See Table 9-B for Authorizing Legislation.)

Local cooperation. Fully complied with to date.

JACKSONVILLE, FL DISTRICT

Terminal facilities. There are several timber docks on the Matanzas waterfront of St. Augustine. In this area of the harbor is a concrete dock, which serves as a municipal yacht pier. It has fuel facilities, 19 slips and accommodates boats up to 60 feet in length. A large public boat ramp is also available. The principal terminals are the numerous shrimp docks in the San Sebastian River, which flows southward through the city into the Matanzas River south of the bridge. These consist of timber wharves, with frame and corrugated iron warehouses thereon, and 9 marine railways for small boats. There is also a marine supply facility and several boat yards. The present terminals have highway connections and several of the shrimp docks have rail connections. They are considered adequate for existing commerce and recreational craft.

Operations and results during fiscal year. Maintenance: None.

Condition at end of fiscal year. Project is complete except for the North Jetty, which is in a deferred status. The groin is in good condition except for the 300 feet, which has subsided to about elevation 3.0 feet, mean low water. The jetty is in good condition, but is submerged at high tide. Maintenance dredging at the entrance channel was completed December 2002.

32. ST. JOHNS RIVER, FL, JACKSONVILLE TO LAKE HARNEY

Location. Rises in marshes of Brevard County, Florida, near east coast, and flows northwesterly to Jacksonville, thence easterly into the Atlantic Ocean, 122 miles south of Savannah River. River is about 285 miles long, of which 161.5 miles are included in project. (See NOAA Nautical Chart No. 11492.)

Previous projects. Adopted by River and Harbor Acts of June 14, 1880 and July 5, 1884. For further details see Annual Reports for 1915 and 1938.

Existing project. Channel is 13 by 200 feet from Florida East Coast Railway Bridge at Jacksonville to Palatka, thence 12 by 100 feet to Sanford, and thence 5 by 100 feet to Lake Harney, with side channel to Enterprise and maintenance of two jetties.

Existing project was authorized by River and Harbor Acts of March 2, 1945 (H 445/78/2) and July 24, 1946 (SD 208/79/2). For further details see Annual Report for 1962.

Terminal facilities. There are 36 piers and wharves along project, including municipal piers and wharves at Green Cove Springs and Palatka, 12 Navy piers at Green Cove Springs, a municipal recreational pier at Sanford, and 19 privately owned piers, 5 of which have nearby tank storage facilities for petroleum projects. Facilities are considered adequate for existing commerce.

Operations and results during fiscal year. None.

Condition at end of fiscal year. Active portion is complete. Condition of project, as a whole is adequate for present needs of navigation. (For more detailed information refer to 1963 Annual Report.)

33. ST. LUCIE INLET, FL

Location. The inlet is on the east coast of Florida about 19 miles south of the entrance to Fort Pierce Harbor, Florida, and 100 miles north of the entrance to Miami Harbor, Florida. (See NOAA Nautical Chart No. 11472.)

Previous project. For details see page 764 of Annual Report for 1949.

Existing project. The authorized project provides for a north jetty with a sand bypass weir section about 500 feet long; a sand impoundment basin adjacent to the bypass weir in the north jetty; a south jetty consisting of a rubble mound structure about 2,200 feet long with a walkway for recreational fishing; channel between existing bar cut and the Intracoastal Waterway 10 by 500 feet through the bar cut, tapering to 150 feet through the inlet, and 7 by 100 feet to the Intracoastal Waterway. Total project length is about 1.9 miles. Plane of reference is mean low water. Mean tidal range is 2.6 feet on the ocean side and about one foot on the landside of the inlet. (See Table 9-B for Authorizing Legislation.)

Estimated cost of new work \$23,291,000 Federal and \$4,573,000 non-Federal.

Local cooperation. Local interests must contribute 19.9 percent of construction cost allocated to navigation in the combined project, 23.1 percent allocated to beach erosion, and 50 percent of construction cost of jetty fishing walkway; provide 39.8 percent of the annual maintenance cost allocated to navigation and 23.2 percent of the annual costs for maintenance dredging allocated to beach erosion control for periodic beach nourishment and 100

REPORT OF THE SECRETARY OF THE ARMY ON CIVIL WORKS ACTIVITIES FOR FY 2007

percent of the annual jetty maintenance costs allocated to beach erosion control; maintain jetty fishing walkway; agree that each 5 years the amount of local cost sharing for maintenance is to be adjusted; provide all lands, easements, and rights-of-way; hold United States free from damages; provide marina with mooring facilities and utilities; provide and maintain depths in berthing area and local access and feeder channels commensurate with the depths provided in the project; accomplish such alterations as required to sewer, water supply, drainage, and other utility facilities, and take action to place in effect statutes and/or regulations which will protect water quality for the authorized uses of the project. The local sponsor signed assurances of local cooperation for the 1974 modification on August 24, 1978.

Terminal facilities. A municipal pier provides facilities for docking and servicing charter fishing and small recreational craft. At Stuart there is a dock for handling bulk petroleum products and several marinas, which provide facilities for mooring, servicing and minor repair of small craft. Facilities are considered adequate for existing commerce.

Operations and results during fiscal year. New Work: Engineering and design, \$126,225. Maintenance: Maintenance dredging contract including E&D and S&A, impoundment basin and channel dredging \$11,031,467.

Condition at end of fiscal year. Construction of remaining jetty elements scheduled for Summer 2008 pending completion of a Contributed Funds Agreement. Maintenance dredging is scheduled to for 2011.

34. SAN JUAN HARBOR, PR

Location. San Juan Harbor is on the north coast of Puerto Rico and about 35 miles from the east end of the island and 1,100 miles southeast of Miami, Florida. (See NOAA Nautical Chart No. 25670.)

Previous projects. For details see Annual Reports for 1915, 1916, and 1938.

Existing project. The authorized project to provide the deepening of the Bar Channel to 48 feet and shifting its alignment 350 feet west; deepening Anegado and Army Terminal to 40 feet; deepening Graving Dock Channel, the Cruise Ship Basin, Puerto Nuevo Channel, and San Antonio Channel to 36 feet; and deepening Anchorage Area E to 38 feet while reducing its size and constructing 6 mooring dolphins

within its limits. The Sabana approach channel deepened to 32 feet.

Estimated cost of new work \$47,700,000 Federal and \$17,200,000 non-Federal.

Local cooperation. Should provide all lands, easements and rights-of-way; hold the United States free from any damages; provide and maintain depths in berthing areas and local access and feeder channels; provide alterations as required to sewer, water supply, and other utility facilities. It is further recommended that local interests be reimbursed for work performed by them on the project subsequent to project authorization. A 25 percent contribution and an additional 10 percent reimbursement over 30 years from locals are required. Non-Federal contribution was \$16,128,708.

Terminal facilities. There are 28 piers and bulkhead wharves in the harbor capable of docking deep-draft vessels, which have an aggregate berthing length of about 23,700 feet. Eleven piers and bulkhead wharves are on the north shore, 2 piers and a three-level ramp facility for roll-on/roll-off operations at Front Graving Dock turning basin and channel, 9 at the eastern side and 3 at the western side of the Army Terminal basin and channel, and 3 on the south shore of San Antonio Channel. One pier and bulkhead wharf are privately owned, 7 are U.S. Government property, and the Commonwealth of Puerto Rico owns 24. Twenty piers and wharves are equipped with mechanical crane transfer facilities. Five wharves are equipped with a special crane for handling loaded containers. Twenty-four are open to the general public. Pier No. 6 was repaired and improved in 1985.

There is an aggregate length of about 1,339 feet of berthing space at Catano Point used principally by small vessels within the 18-foot draft range. This space is also open to the public. In addition, there are 10 piers and bulkhead wharves with approximately 6,910 feet of berthing space owned and operated by different agencies of the Federal Government. This space is not open to the public.

Facilities are considered adequate for existing commerce.

Operations and results during fiscal year. Maintenance: \$5,693,056.

Condition at end of fiscal year. The PED phase was completed in September 1995. Revisions to the plans and specifications were accomplished in FY 97.

JACKSONVILLE, FL DISTRICT

Execution of PCA was completed June 1998. Authorized in WRDA 1996. Contract II (navigation improvements for the Bar, Anegado, and Army Terminal Channel) has been completed. Plans and specifications for Mitigation contract are ongoing and contract is scheduled for award in FY 09.

Existing project includes the entrance channel and turning basin to Army Terminal, which cost \$1,543,712 (this expenditure was made from military appropriations and is not included in Table 9-A costs).

35. TAMPA HARBOR, FL

Location. Tampa Harbor is in a large natural indentation of the Gulf of Mexico about midway of the west coast of Florida. The entrance is about 220 miles north of Key West and about 330 miles southeast of Pensacola. (See NOAA Nautical Chart Nos. 11413 and 11414.)

Previous projects. For details see page 665 of 1938 Annual Report.

Existing project. The authorized project provides for a channel from the Gulf of Mexico to Port Sutton and Tampa; 46 by 700 feet from the Gulf of Mexico to Mullet Key; 44 by 600 feet in Mullet Key Cut Channel; 44 by 500 feet in Tampa Bay from Mullet Key Cut to Hillsborough Bay and Port Tampa Channels; 44 by 500 feet in Hillsborough Bay from junction with Tampa Bay and Port Tampa Channels to the junction with Port Sutton entrance channel, thence 42 by 400 feet to the junction with Seddon and Garrison Channels; 44 by 400 feet in Port Sutton entrance channel; 42 by 400 feet in Sparkman Channel; 40 by 300 feet in Ybor Channel; 42 by 400 feet in Port Tampa Channel; 44 by 400-500 feet in East Bay entrance channel; 44 by 300 feet in East Bay approach channel; 12 by 200 feet in Seddon and Garrison Channels; 32 by 200 feet in Alafia River; 9 by 100 feet in Hillsborough River to a point 2,000 feet above Columbus River bridge; a breakwater; a 42 by 290 foot Port Sutton Terminal Channel 3,700 feet long; turning basins at Ybor Channel, Port Tampa, East Bay, mouth of Hillsborough River, and in Alafia River; and maintenance of a channel 12 by 200 feet in Hillsborough River, and 34 by 300 feet in East Bay Channel. (The 46-foot and 44 foot depth portions of the project include a 5-foot under keel clearance. Special studies on the project concluded that 4 feet under keel is sufficient. Therefore, a one-foot over depth has been placed in an inactive status, resulting in active project depths of 45 and 43 feet respectively.)

Plane of reference is mean low water. The project is about 67 miles long, including 10 miles in Hillsborough River and 3.6 miles in Alafia River. Mean range of tide is 1.3 feet at the lower end of the bay, 1.6 feet at Port Tampa, and 1.8 feet at Tampa. Extreme range is about 3.8 feet at the lower end of the bay and 4.8 feet at Tampa. Strong southwesterly winds raise the water level about 1.5 feet. Strong northerly winds, which usually occur in the winter, lower the water level about 2 feet. (See Table 9-B for Authorizing Legislation.) For further details, see 1962 Annual Report.

Estimated cost for Big Bend Channel \$19,100,000 Federal and \$6,900,000 non-Federal. Estimated cost for Alafia River is \$48,600,000 Federal and \$22,000,000 non-Federal. Estimated cost for Port Sutton is \$8,500,000 Federal and \$5,500,000 for non-Federal.

Local cooperation. Local cooperation has been fully complied with for work completed to date. See 1978 Annual Report for requirements for work authorized by the River and Harbor Act of 1970, H 401/91/2 and H 150/91/1. The Secretary of the Army approved assurances of local cooperation for the 1970 authorization on January 10, 1973. The LCA for branch channels was signed June 20, 1986. An amendment to the LCA reflecting cost sharing requirements of WRDA of 1986 for section 6 was signed August 31, 1987. Non-Federal contribution for new work was \$4,971,144. A 25 percent contribution and an additional 10 percent reimbursement over 30 years are required from locals.

Terminal facilities. There are 102 commercial waterfront facilities serving Tampa Harbor. The General Cargo Facilities consist of 7,226 feet of usable berthing space and 15 transit sheds with a total of 585,200 square feet of storage space. The Oil Handling Facilities include 16,440 feet of usable berthing space and 316 storage tanks for a total capacity of 11,610,350 barrels. Dry storage is available at 1,904,750 square feet, cold storage at 14,309,000 cubic feet, and open storage at 59.4 acres. There are 2 wharves available for coal storage at 750,000 tons total storage and grain elevators with a 3,400,000-bushel total capacity. One elevator on Ybor Channel has a 1,000,000-bushel capacity.

Hoisting Facilities include 13 cranes, fixed and mobile, with capacities from 45 to 150 tons and other crawler and mobile cranes available locally. Marine repair yards include 9 waterfront repair facilities and numerous other off water companies engaged in

various phases of marine repair. There are 4 floating and 4 graving docks available at the port with capacities ranging from 548 to 5,400 long tons. Floating equipment includes 24 tugs with up to 3,350 horsepower and 4 companies with tank barges of capacities up to 14,000 barrels. The CSX Railroad serves the port. Facilities are considered adequate for existing commerce. (See Port Series No. 17, Rev. 1979.)

Operations and results during fiscal year. New work: Port Sutton: Engineering and design cost was \$91,770; Big Bend: Engineering and Design \$48,939; Tampa Harbor GRR Engineering and Design \$408,790. Maintenance: Main Channel: \$9,039,809.

Condition at end of fiscal year. Big Bend Channel Chief's report signed in October 1998. PED agreement executed February 1998. PED on hold during FY 2007 waiting direction from sponsor. Feasibility report for Alafia River completed October 2000. Final Feasibility report was approved by HQUSACE in January 2004. PED on hold during FY 2007 waiting direction from sponsor. GRR for widening Cut-A and Cut-B under review.

36. NAVIGATION PROJECTS ON WHICH RECONNAISSANCE AND CONDITION SURVEYS ONLY WERE CONDUCTED DURING PERIOD

Total cost was \$620,000. (See Table 9-G.)

37. OTHER AUTHORIZED NAVIGATION PROJECTS

(See Table 9-C.)

38. NAVIGATION WORK UNDER SPECIAL AUTHORIZATION

Navigation Activities Pursuant to Section 107, Public Law 86-645 (Preauthorization)

Fiscal year costs for Palm Beach Harbor, FL \$48,396

Snagging and clearing for navigation (Section 3 of 1945 River and Harbor Act, Public Law 14, 79th Congress.)

No costs incurred.

Mitigation of shore damages attributed to navigation projects (Sec 111).

Virginia Beach Key, FL: \$49,127; and Aguadilla Coastline, PR \$5,078.

Beach Erosion Control

39. BREVARD COUNTY, FL

Location. The project is on the east coast of Florida at approximately the midpoint of the peninsula. (See NOAA Nautical Chart Nos. 11484 and 11476.)

Existing project. The authorization provides for a protective and recreational beach with a berm 50 feet wide at elevation 10 feet above mean low water and a natural seaward slope as would be shaped by wave action, along 9.4 miles from the Canaveral harbor south jetty to Patrick Air Force base, (North Reach) and 3.4 miles of beach at Indialantic and Melbourne beach, and for periodic nourishment of the restored beach at Indialantic and Melbourne beach limited initially to a period of 6 years. Nourishment of the restored beach at the city of Cape Canaveral would be provided by the authorized sand-transfer plant for construction at Canaveral Harbor. The project also provides for improvement of the Federally owned shores for beach erosion control or hurricane protection to be accomplished by the Federal agencies involved, subject to their own determination of economic justification. Mean tidal range in the area is 3.5 feet. (See Table 9-B for Authorizing Legislation.)

Estimated cost for new work \$145,300,000 Federal and \$113,500,000 non-Federal.

Local cooperation. Local interests must contribute 50 percent of all first costs of the work and 50 percent of the nourishment cost at Indialantic and Melbourne beach for the first 10 years of the project life; provide lands and rights-of-way; provide, after the first 10 years of project life, periodic nourishment of the restored beach at Indialantic and Melbourne beach during project life; maintain continued public ownership of the shore upon which the amount of Federal participation is based; control water pollution; and hold the United States free from damages. The Secretary of the Army approved assurances of local cooperation on July 9, 1973. Non-Federal contribution for new work was \$343,366.

JACKSONVILLE, FL DISTRICT

Operations and results during fiscal year. New work: Beach re-nourishment contract: \$0; Engineering and design cost was \$491,271.

Condition at end of fiscal year. Feasibility report was completed in September 1996, approved in December 1996, and authorized by Section 101(b) of WRDA 1996. PED completed in September 1999. PCA was signed April 2000 and North Reach contract was awarded September 2000. A continued construction contract was awarded for South Reach in December 2001 and completed in April 2003. A GRR was initiated in FY04 for the mid reach, which consists of 7.6 miles south of Patrick Air Force base. The GRR is scheduled to be completed by September 2009.

40. BROWARD COUNTY, FL BEACH EROSION CONTROL AND HILLSBORO INLET, FL NAVIGATION PROJECT

Location. Broward County is on the lower east coast of Florida, 300 miles south of Jacksonville and about 30 miles north of Miami. Hillsboro Inlet is in the northern part of Broward County. (See NOAA Nautical Chart No. 11466.)

Existing project. Broward County, - North County Line to Hillsboro Inlet (Segment I), Hillsboro Inlet to Port Everglades (Segment II) and, Port Everglades to the south county line (Segment III), Florida. The authorization provides for Federal participation in cost sharing of a shore restoration and protection project and a project to maintain a channel adequate for small craft navigation. The authorized plan provides for restoration of a shoreline protection and recreational beach at 4 locations generally 100 feet wide with berm elevation of 10 feet above mean low water; a navigation channel 8 by 100 feet from the Intracoastal Waterway to a point 1,500 feet ocean ward in Hillsboro Inlet, thence 10 by 150 feet in the ocean; jetties on north and south sides of ocean entrance; a permanently based floating dredge; and on a deferred basis, a trestle-mounted sand-transfer plant, if needed. Navigation portion of the project is in an inactive status. Mean range of tide in areas is 2.5 feet. Plane of reference is mean low water. Initial authorization provided for construction by the local sponsor with reimbursement of the Federal share of eligible costs. The city of Deerfield Beach, which occupies the northern portion of the 4.4 miles of Segment I, recently indicated a desire to implement the project along Segment I. Broward County, the project sponsor initially constructed and re-nourished Segments II and

III, a re-nourishment contract for Segment III was completed in February 2006. A re-nourishment contract for Segment II is scheduled to be awarded in Fall 2009 by Broward County.

Cost estimate for Broward County is \$122,069,000 Federal and \$94,669,000 non-Federal contribution. For Hillsboro Inlet, \$3,630,000 and \$1,158,000 non-Federal. (See Table 9-B for Authorizing Legislation.)

Local cooperation. Local interests must contribute 90.5 percent of the first cost beach restoration in the reach between north county line and Hillsboro Inlet, Seg. I, 55.35 percent of cost allocated to periodic renourishment, and 50 percent of first cost allocated to navigation for reach between Hillsboro Inlet and Port Everglades, Seg. II, and 56.16 percent of beach restoration costs in the reach between Port Everglades and south county line, Seg. III; provide all lands and rights-of-way; obtain approval of Chief of Engineers of plans and specifications if local interests construct beach erosion features; and furnish assurances that they will hold the United States free from damages; provide and maintain adequate public landing or wharf at Hillsboro Inlet; establish a public body to cooperate financially and to provide and operate local facilities for navigation, control water pollution, maintain ownership of publicly owned shores, and maintain all project works except the jetties (maintenance of the channel to revert to the United States if sand-transfer plant is constructed). Assurances of local cooperation were accepted November 22, 1968.

Operations and results during fiscal year. New work: Broward County BEC: Beach re-nourishment contract: \$1,600,000; Engineering and Design: \$104,674. Hillsboro Inlet: None.

Condition at end of fiscal year. As a result of the hurricane impacts to the project (Segments II & III) in 2004, the FY 05 Supplemental Appropriations were utilized for replacement of the erosion losses attributed to the hurricanes at 100% Federal cost based upon Project Information Reports and execution of cost sharing agreements. The sponsor's overall re-nourishment contract for Seg. III to replace the erosion losses was completed in February 2006. The federal contract to replace 2004 hurricane losses along Segment III was also completed in February 2006. Another re-nourishment contract is scheduled to be awarded by the sponsor in 2009 for Segment II (pending state Water Quality Certification). The Federal contract, to replace 2004 hurricane erosion losses along Segment II at 100% Federal cost, is also anticipated to be awarded at that time.

41. DUVAL COUNTY, FL

Location. On upper east coast of Florida, within 20 miles of Florida-Georgia line. Ocean shoreline is about 16 miles long. (See NOAA Nautical Chart No. 11488.)

Existing project. Authorization provides for a beach 60 feet wide at elevation 11 feet above mean low water with a natural slope seaward. Project also provides for periodic re-nourishment as may justified. Mean tidal range at south jetty in St. Johns River is 4.9 feet. Project was authorized by River and Harbor Act of 1965 (H 273/89/1).

Estimated cost of new work \$95,725,000 Federal and \$63,278,000 non-Federal.

Local cooperation. Local interests must contribute 50 percent of first cost of constructing non-Federal publicly owned shores; contribute 44.5 percent of periodic nourishment costs for first 10 years of project life; provide all lands, rights-of-way, and relocations; hold the United States free from damages; control water pollution; and furnish assurances that they will maintain continued public ownership of the shore upon which the amount of federal participation is based during economic life of project. Assurances of local cooperation were accepted on November 29, 1973.

Operations and results during fiscal year. New work: Beach re-nourishment contract: \$-163,991; Engineering and Design cost was, \$127,767; Contract Management \$1,683.

Condition at end of fiscal year. Due to severe impacts of the 2004 hurricane season, rehabilitation efforts were conducted and completed in 2005. Annual surveys were conducted. The next renourishment is scheduled for 2010.

42. FORT PIERCE BEACH, FL

Location. Fort Pierce Beach Erosion Control Project extends 1.3 miles south of Fort Pierce Inlet, on the east coast of Florida about 120 miles north of Miami.

Existing project. The project fill was initially completed by local interests in 1971, using offshore borrow material. Prior to the nourishment, severe shorefront recession had destroyed a private residence and threatened other residences and a state road. Local interests were reimbursed the federal share of the

initial project construction cost. Federal participation in re-nourishment was authorized for an initial 10-year period and subsequently extended five years under the discretionary authority of the Chief of Engineers until 1985. The project was re-nourished in 1980, 1999, 2003 and 2004. The next re-nourishment is scheduled for 2009.

A Section 111 project authorized in 1982 provides that 60 percent of the cost of material required to nourish 1.3 miles south of Fort Pierce Inlet should be reallocated to the navigation project. A section 934 reevaluation report authorized the extension of federal participation in cost sharing to 50 years from date of initial construction to 2020.

Estimated cost of new work \$38,100,000 Federal and \$21,900,000 non-Federal.

Local cooperation. Non-Federal contribution is 53%. Sponsor is fully complying with local requirements.

Operations and results during fiscal year. New work: Beach re-nourishment contract: \$2,539,337; Engineering and Design cost \$824,517; Contract Management \$82,599.

Condition at end of fiscal year. Re-nourishment of the project is scheduled for Spring 2009.

43. INDIAN RIVER COUNTY, FL

Location. Indian River County is on the east coast of Florida, midway between Jacksonville and Miami. The authorized project comprises 2.65 miles of beach along the ocean shore of Vero Beach and 1.7 miles along the Sebastian Inlet State Park. (See NOAA Nautical Chart Nos. 11474 and 11476.)

Existing project. The authorized project provides nourishment for 8,870 feet (1.68) miles) of the State Park, south of Sebastian inlet. The initial beach fill would consist of 202,000 cubic yards of nourishment material. An estimated 202,000 cubic yards of periodic nourishment at 5-year intervals would be required. The Federal share of the first cost was estimated to be 65 percent of this segment.

The plan also provided for nourishment of 9,180 feet (1.74 miles) of Vero Beach. The initial beach fill consisted of 572,000 cubic yards of material, including advance nourishment. The restored beach would have a 20-foot wide level berm at an elevation of 15 feet

JACKSONVILLE, FL DISTRICT

above mean low water. The beach fill as designed would provide protection against a 10-year return interval storm. An estimated 120,000 cubic yards of periodic nourishment would be required at 5-year intervals. In addition to the beach fill a "Sabecon" reef breakwater was recommended. The structure would be placed 500 feet offshore of the new beach and would be 400 feet in length, with a zero mean low water crest elevation. The Federal share of the first cost was estimated to be 43.7 percent for this segment. The project was authorized on November 17, 1986 (Public Law 99-662) by the 1986 Water Resource Development Act.

Local cooperation. The authorization of a beach erosion control project for Indian River County, Florida was made with the provision that the State and local interests will, in addition to the general requirements, agree to comply with the following requirements: provide all necessary lands, easements and rights-of way; including borrow areas and disposal areas for excavated material, and relocations; hold and save the United States free from claims for damages; assure continued conditions of public ownership and public use of the shore; assure maintenance and repair during the economic life of the project; provide and maintain as necessary access roads, parking areas and other public use facilities; provide a cash contribution for periodic nourishment's for the life of the project; provide an additional cash contribution for the Sebastian Inlet State Park Beach. The project, as authorized, provides that the work may be accomplished in separate units or features and that the written agreement with non-Federal interests be obtained. The Indian River County Board of Commissioners, by letters dated December 21, 1984 and January 15, 1987, affirmed their support for the project and their willingness and ability to share in project costs.

Operations and results during fiscal year. New work: None.

Condition at end of fiscal year. No work is currently scheduled.

44. LEE COUNTY, FL

Location. Lee County is on the lower Gulf coast of Florida, about 90 miles south of the entrance to Tampa Bay and 130 miles north of Key West.

Existing project. The project provides for the Federal participation in restoration and protection of

Lee County, Florida, as follows: On Gasparilla Island, restore beach along 2.7 miles of shore and provide revetment along 2,400 feet of shore and a 500-foot terminal groin; on Captiva Island, restore beach along 4.7 miles of shore; and on Estero Island, restore beach along 4.6 and provide a 5-year advance supply of beach nourishment material and periodic nourishment of the restored beaches, as needed, with Federal aid for nourishment limited to the first 10 years of project life after completion of the initial fill placement on each island. (See Table 9-B for Authorizing Legislation.)

Estimated cost is \$65,404,000 Federal cost and \$120,702,000 non-Federal cost.

Local Cooperation. Local interest must: contribute in cash) including contract price, engineering and design, and supervision and administration) 65.8 percent of first cost at Gasparilla Island, 91.3 percent of first cost at Captiva Island, and 87.5 percent of first cost at Estero Island; contribute toward beach nourishment for the first 10 years of project life, 95.5 percent for Gasparilla Island; 91.3 percent for Captiva Island, and 96.9 percent for Estero Island; and contribute 50.9 percent of the annual maintenance costs of the terminal groin on Estero Island; provide after 10 years of project life periodic nourishment of the restored beaches; provide lands, easements, rights-of-way, and relocations; assure continued public ownership for public use of the shore upon which the amount of Federal participation is based; control water pollution; save the United States free from damages; and provide an adequate width of beach with acceptable access and other facilities necessary for public use.

Operations and results during fiscal year. New work: Beach re-nourishment contract: \$2,506,913; Engineering and Design cost: \$58,437.

Condition at end of fiscal year. Construction was completed in 2006 for rehabilitation of Captiva Island to it's pre-hurricane condition under FY05 Emergency Supplemental funding. The Captiva Erosion Prevention District has applied for emergency rehabilitation due to the hurricane season of 2005. The Project Implementation Report for that work was approved at the work is scheduled for Spring 2008. The initial construction contract for Gasparilla Island was completed under the authority of Section 206 of WRDA 92 and reimbursement is scheduled for Summer 2008.

45. MANATEE COUNTY, FL

Location. Manatee County is on the west coast of Florida, just south of the entrance to Tampa Bay. The county's 14-mile gulf shoreline consists of 2 barrier islands, Anna Maria Key and the northern half of Longboat Key, separated from the mainland by Tampa and Sarasota Bays and from each other by Longboat Pass. Project consists of about 7.5 miles of gulf shoreline.

Existing project. Provides for Federal participation in the shore protection project for Manatee County, which includes the entire 7.5-mile, gulf shoreline of Anna Maria Key. The project consists of restoration of 3.2 miles of gulf shore beach to an elevation 6 feet above mean low water with a level berm 50 feet wide and a natural slope seaward as would be shaped by wave action. The project also provides for periodic nourishment of the restored beach and such adjacent shoreline as may be and justified for the project life. Mean tidal range is 2.3 feet. (See Table 9-B for Authorizing Legislation.)

Estimated cost is \$42,700,000 Federal and \$35,700,000 non-Federal.

Local cooperation. The authorization of a shore protection project for Manatee County, Florida was made with the provision that Federal cost sharing would be in accordance with policy established by existing law, and the percentages based on conditions of shore ownership and use existing at the time of construction: Provided that, prior to construction, local interests furnish assurances satisfactory to the Secretary of the Army that they will: (a) Provide without cost to the United States all lands, easements, and rights-of-way, including borrow areas, and relocations necessary for construction of the improvements; (b) Provide a cash contribution equal to 47 percent of the first cost of construction, subject to any credit for eligible construction costs incurred by local interests, and exclusive of costs for lands, easements, rights-of-way, relocations, and alterations, and exclusive of the cost of fill placed behind the Corps construction line, the final percentage to be based on shore ownership and use existing at the time of construction; (c) Provide all costs of construction for nourishment landward of the Corps construction line; (d) Provide a cash contribution for periodic nourishment equal to 41 percent of the cost of each nourishment, such contribution to be made prior to each nourishment operation, and the final percentage to be based on shore ownership and use existing at the time of construction; (e) Hold and save the United

States free from damage due to the construction works, except for damages due to the fault or negligence of the United States or its contractors; (f) Assure continued public ownership and administration of the shore upon which the amount of Federal participation is based; (g) Provide without cost to the United States appropriate access and facilities, including parking and sanitation, necessary for realization of the public benefits upon which Federal participation is based; (h) Adopt appropriate ordinances, or provide other means, to insure the intended use of the beach fill areas; (i) Control water pollution to the extent necessary to safeguard the health of bathers; and (j) Agree to pay 100 percent of the operation, maintenance, and replacement and rehabilitation's costs of the project, or functional element thereof.

Operations and results during fiscal year. New work: None.

Condition at end of fiscal year. The initial construction was completed in 1993. The County completed the first periodic re-nourishment of the project in 2002. Partial reimbursement of the Federal share of the costs was accomplished in 2004. As a result of the hurricane impacts to the project in 2004, FY 05 Supplemental Appropriations were utilized for a contract to replace erosion losses attributed to the hurricanes at 100% Federal cost based on a Project Information Report (PIR) and execution of a cost sharing agreement.

46. MARTIN COUNTY, FL

Location. Martin County is located on the east coast of Florida about 300 miles south of Jacksonville and 70 miles north of Miami. (See Table 9-B for Authorizing Legislation.)

Existing project. The recommended plan of improvement for Martin County provides for restoration of a protective beach along 4.0 miles of shoreline. The plan includes restoration of the primary dune as needed and a 35-foot wide protective berm. The recommended plan was designed to reduce environmental impacts. Of primary importance is the impact of project construction on sea turtle nesting. In order to avoid these impacts, project construction has to occur between November 1st and April 15th. Only one island segment is authorized for this project, which is located on Hutchinson Island in Martin County. The project begins at the St. Lucie/Martin County line and proceeds south 4 miles. The actual project to be constructed is 3.75 miles. The project was shortened 0.25 miles to avoid impacting sensitive hard-grounds.

JACKSONVILLE, FL DISTRICT

The borrow area is approximately 3,000 feet offshore of the southern end of the project area. (See Table 9-B for Authorizing Legislation.) Initial nourishment was completed April 1996. The last re-nourishment was in March 2005.

Estimated cost of new work is \$21,700,000 Federal and \$24,900,000 non-Federal.

Local cooperation. Martin County Board of Commissioners is the local sponsor.

Operations and results during fiscal year. New work: Engineering and Design cost: \$513,066.

Condition at end of fiscal year. The project is functioning as designed.

47. NASSAU COUNTY, FL

Location. Nassau County is on the east coast of Florida, north of Jacksonville and adjoins the state of Georgia. The authorized project comprises 4.3 miles of beach along the ocean shore of northern Amelia Island, and tightening 1,500 feet of the shoreward end of the existing south jetty at the entrance to Fernandina Harbor.

Existing project. The authorized project would provide initial restoration of 3.6 miles of eroded beach, starting at a point about .7 mile south of the Fernandina Harbor south jetty and extending south to Sadler Road; sand tightening about 1,500 feet of the shoreward end of the south jetty; and periodic nourishment of 4.3 miles of shore between the south jetty and Sadler Road. The restored beach would have a 50-foot wide level berm at an elevation of 13 feet above mean low water. The initial beach fill would consist of an estimated 1,500,000 cubic yards of nourishment material. An estimated 240,000 cubic yards of nourishment at 2-year intervals would be required. Sand tightening would require about 16,700 tons of stone. The Federal share of the first cost was estimated to be 77%. (Sand tightening, accomplished as part of the Navy's effort to deepen and widen the navigation channel was deleted from the plan.)

Estimated cost of new work \$150,800,000 Federal and \$42,000,000 non-Federal contributed funds.

Local cooperation. The authorization of a shore protection project for Nassau County, Florida was made with the provision that the State and local interests will, in addition to the general requirements,

agree to comply with the following requirements: provide without cost to the United States all necessary lands, easements, and rights-of-way, including borrow areas and disposal areas for excavated material and relocations required for construction of the project, including that required for periodic nourishment; hold and save the United States free from claims for damages which may result from construction and subsequent maintenance, operation and public use of the project, except damages due to the fault or negligence of the United States or its contractors; assure continued conditions of public ownership and public use of the shore upon which the amount of Federal participation is based during the useful life of the project; assure maintenance and repair during the useful life of the project as required to serve the project's intended purpose; provide and maintain clearly marked beach access, nearby parking areas, and other public use facilities, open to all on equal terms, and as required to realize the benefits upon which Federal participation is based; provide a cash contribution for beach erosion control equal to the appropriate percentage of the final construction cost allocated to this function, exclusive of lands, easements, rights-of-way, alterations, and relocations, the percentage to be in accordance with existing law and based on shore ownership at the time of implementation; provide a cash contribution for periodic nourishment during the useful life of the project, such contribution to be made prior to each nourishment, with the actual amount to be based on existing law and conditions of ownership at the time of each nourishment; and at least annually inform affected interests of the limitations of the protection afforded by the project.

Operations and results during fiscal year. New work: Engineering and Design cost: \$432,728.

Condition at end of fiscal year. GRR completed April 2006. Project Cooperation Agreement executed September 2007 with Plans and Specifications scheduled for completion in January 2008. Construction of the project scheduled to begin Spring 2008.

48. PALM BEACH COUNTY, FL

Location. Palm Beach County is on the east coast of Florida about 300 miles south of Jacksonville and 70 miles north of Miami. (See NOAA Nautical Chart No. 11466.)

REPORT OF THE SECRETARY OF THE ARMY ON CIVIL WORKS ACTIVITIES FOR FY 2007

Existing project. Project authorization, the River and Harbor Act of 1962, provides for Federal participation toward the cost of local shore project for restoration of beaches to a general width of 100 feet with a berm elevation of 10 feet above mean low water, and periodic nourishment for 10 years from the year of initial nourishment, as follows: 62.1 percent of the cost for Martin County line-Jupiter Inlet segment; 55.8 percent of cost for Jupiter Inlet-Lake Worth Inlet segment; and 50 percent for south Lake Worth Inlet-Delray Beach; and 53 percent of cost for Delray Beach-Boca Raton inlet segment. Mean range of tide is 2.8 feet in the Atlantic Ocean at Palm Beach and 2.3 feet at Boca Raton Inlet. (See Table 9-B for Authorizing Legislation.)

Estimated cost for Palm Beach County is \$68,601,000 Federal and \$148,102,000 non-Federal cash contributions.

Local cooperation. Federal participation is subject to the conditions that responsible local authorities will: (a) obtain approval by the Chief of Engineers, prior to commencement of work on the project, of detailed plans and specifications and arrangements for prosecution of the work on the project; (b) provide at their own expense all necessary lands, easements, and rights-of-way; (c) furnish assurances satisfactory to the Secretary of the Army that they will: (1) assure maintenance of the protective measures during their economic life as may be required to serve their intended purpose, and periodic nourishment of the protective beach at suitable intervals; (2) control water pollution to the extent necessary to safeguard the health of bathers; and (3) maintain continued public ownership of the publicly owned shores upon which a part of the recommended Federal participation is based and their administration for public use during the economic life of the project.

Operations and results during fiscal year. New work: Beach re-nourishment contract: \$-281,237; Engineering and Design cost: \$337,677; Construction Management cost: \$3,219.

Condition at end of fiscal year. The County completed the first periodic nourishment for the Jupiter/Carlin segment in Spring 2002. Coordination with the sponsor for their preparation of the LRR for north Boca Raton was underway during FY 2007. FY 05 Supplemental Appropriations were utilized for replacement of erosion losses attributed to the 2004 hurricanes at 100% Federal cost based upon approval of Project Information Reports (PIR) and execution of cost sharing agreements. The Delray Beach and Ocean

Ridge segments were re-nourished during the summer of 2006. Delray Beach was re-nourished to replace only the 2004 hurricane losses at 100% federal cost. The Ocean Ridge segment was completely re-nourished to replace erosion losses since initial construction in 1998. The re-nourishment cost was shared with the project sponsor except for the cost to replace the 2004 hurricane losses which were 100% federal. Storm impacts along the Jupiter/Carlin segment during 2007 have prompted the sponsor to schedule the next re-nourishment for Fall 2009.

49. PALM BEACH ISLAND, FL

Location. Palm Beach Island is on the east coast of Florida about 300 miles south of Jacksonville and 70 miles north of Miami. (See NOAA Nautical Chart No. 11466).

Existing project. The River and Harbor Act of 1958 authorization provides for Federal participation in the costs of a plan for protection of the shore of the Palm Beach Island, comprising restoration of a protective beach with berm elevation of 10 feet above mean high water from Lake Worth Inlet to a point about 1,000 feet south of Southern Boulevard extended, thence with a general width of 100 feet to South Lake Worth Inlet, construction and operation of a sand-transfer plant at Lake Worth Inlet, and additional periodic nourishment from Lake Worth or other suitable source, substantially in accordance with the plan developed by the district engineer, with such modifications thereof as may be considered advisable by the Chief of Engineers. Federal assistance would entail contribution of funds in the amount of 4.7 percent of the initial construction cost of the beach restoration and appurtenant drainage work, and of the expenditures for periodic nourishment from Lake Worth for a period of 10 years from the year of the initial placement, plus 19.3 percent of the expenditures for construction, and for operation, maintenance, and current replacements of parts of the sand-transfer plant for the same period. Mean tidal range is 2.8 feet in the Atlantic Ocean at Palm Beach and 2.3 feet at Boca Raton Inlet. (See Table 9-B for Authorizing Legislation.)

Local cooperation. Federal participation is subject to the conditions that responsible local authorities will: (a) obtain approval of the Chief of Engineers, prior to commencement of work on the project (except the sand-transfer plant already under contract), of detailed plans and specifications and arrangements for prosecution of the work on the project; (b) make

JACKSONVILLE, FL DISTRICT

appropriate modification of the location of the end of the discharge line of the sand-transfer plant to accomplish satisfactory dispersion of bypassed material; (c) provide at their own expense all necessary lands, easements, and rights-of-way; (d) furnish assurances satisfactory to the Secretary of the Army that they will: (1) assure maintenance of the protective measures during their economic as may be required to serve their intended purpose, and periodic nourishment of the protective beach at suitable intervals, including operation of the sand-transfer plant; (2) control water pollution to the extent necessary to safeguard the health of bathers; and (3) maintain continued public ownership of the publicly owned shores upon which a part of the recommended Federal participation is based and their administration for public use during the economic life of the project.

Operations and results during fiscal year. New Work: None.

Condition at end of fiscal year. The Town of Palm Beach completed initial construction of the Midtown project including construction of an offshore reef and groins in 1996 at non-Federal cost. The town is currently planning to re-nourish the Midtown project. PL 84-99 assistance would not apply to the Town of Palm Beach (Midtown) since a Federal project has not been constructed there prior to the 2004 hurricane impacts. Rehabilitation assistance under PL 84-99 can only be utilized to replace the erosion losses that have occurred along a constructed Federal project. Storm impacts along the private property at Singer Island have caused significant erosion during 2007. Non-Federal interests are pursuing erosion control measures.

50. PINELLAS COUNTY, FL

Location. Pinellas County is on the Gulf coast of Florida, about midway of the peninsula. It extends northerly about 39 miles from the main entrance to Tampa Bay to the vicinity of the mouth of Anclote River. (See NOAA Nautical Chart No. 11411.)

Previous project. For details see page 429 of Annual Report for 1965.

Existing project. The authorized project provides for Federal participation in preserving and protecting the shores of Pinellas County, Florida, by: restoration of 5,000 feet of beach at Clearwater Beach Island; restoration of 49,000 feet of beach at Sand Key; restoration of 9,200 feet of beach at Treasure Island;

construction of 600 feet of revetment at Long Key; and advance nourishment of Long Key and periodic nourishment of each island. (See Table 9-B for Authorizing Legislation.)

Estimated cost is \$174,100,000 Federal and \$116,800,000 non-Federal.

Local cooperation. Local interests must (a) contribute in cash the required percentages of the first costs of work provided by the Corps of Engineers, the percentages varying with the type of beach ownership; 94.1 to 50 percent of the beach restoration at Clearwater Beach; 98.1 to 50 percent of the improvement at Sand Key; 94.3 to 50 percent of the improvement at Treasure Island; and 50 percent of the first cost of the revetment at Long Key; (b) contribute in cash an amount computed in accordance with the cost sharing provision contained in P.L. 826, 84th Congress as amended by P.L. 87-874, for beach nourishment cost for the first 10 years of the project life; (c) provide lands, easements, and rights-of-way; (d) assure maintenance and repair of the stone revetment of Long Key; (e) assure periodic nourishment of the restored beaches; (f) assure public ownership of beaches; (g) assure against water pollution; (h) hold the United States free from damages; and (i) provide beach for public use. Assurances of local cooperation were accepted March 22, 1967.

Operations and results during fiscal year. New work: Beach replenishment cost was \$3,750,218; Engineering and Design: \$764,246; and Construction Management cost \$184,100.

Condition at end of fiscal year. Borrow area studies were initiated during FY 2007 for the Long Key, Treasure Island, and Sand Key segments.

51. ST. JOHNS COUNTY, FL

Location. St. John's County is located about 100 miles south of the Florida/Georgia border.

Existing project. The project consists of restoration of 2.5 miles of shoreline, beginning approximately 2.7 miles south of St. Augustine Inlet, and including the City of St. Augustine Beach. The authorized project provides for initial restoration of the beach to a width of 60 feet +12 feet elevation relative to mean low water. The initial fill consisted of placement of 3,580,000 cubic yards of beach quality sand, includes six years of advanced nourishment. The

REPORT OF THE SECRETARY OF THE ARMY ON CIVIL WORKS ACTIVITIES FOR FY 2007

project would replace sand lost due to frequent northeasters and provide storm protection to upland development. The borrow area is located at the ebb tidal shoal south of St. Augustine. The project was authorized with a 50-year project life from the start of construction. (See Table 9-B for Authorizing Legislation.)

Estimated cost is \$145,100,000 Federal and \$35,100,000 Non-Federal.

Local cooperation. The sponsor of this project is the St. John's County Board of Commissioners. Cost sharing for this project is 80 percent Federal and 20 percent Non-Federal. The cost sharing reflects the higher Federal percentage required to mitigate for erosion caused by the Federal navigation project at St. Augustine Harbor.

Operations and results during fiscal year. New work: Beach re-nourishment contract: \$-77,314; Construction Management: \$2,986.

Condition at end of fiscal year. Rehabilitation from the impacts of the 2004 hurricane season were completed. A feasibility study was initiated in 2005 to examine the critical erosion areas of the Vilano, Summerhaven, and South Ponte Vedra Beach shorelines. Second re-nourishment is scheduled for FY 2010.

52. SARASOTA COUNTY, FL

Location. Sarasota County is on the Gulf coast of Florida about 30 miles south of Tampa Bay. The northern most portion of the project adjoins the Manatee County Beach Erosion Control Project on Longboat Key. The total project consists of about 5.7 miles of gulf shoreline on Longboat Key and Venice Beach.

Existing project. The authorized project provides for Federal participation in the construction of a protective beach 12,600 feet long at Longboat Key and a protective beach 29,400 feet long at Manasota Key at the City of Venice, Florida. Two borrow areas will be required. The first is located within 2 shoal areas located between 1 to 2 miles offshore of Manasota Key south of the project area. This borrow area will be supplemented by material located within the ebb tidal shoal of Big Sarasota Pass which is about 13 nautical miles north of the project beach at Venice. The project also provides periodic nourishment of the restored beach and such adjacent shoreline as may be needed

and justified for life of the project. The mean tidal range is 2.1 feet. (See Table 9-B for Authorizing Legislation.)

Estimated cost is \$51,713,000 Federal and \$28,905,000 non-Federal. The Federal share of each periodic nourishment is 72.55 percent for Venice, and 15.4 percent for Longboat, of applicable nourishment costs.

Local cooperation. Federal participation is subject to the conditions that responsible local authorities will: (a) provide without cost to the United States all lands, easements, and rights-of-way, including borrow areas, and relocations necessary for construction of the improvements; (b) provide a cash contribution equal to 29.3 percent of the first cost of construction, subject to any credit for eligible construction costs incurred by local interests, and exclusive of costs for lands, easements, and rights-of-way, relocations, and alterations, and exclusive of the cost of fill placed behind the Erosion Control Line (ECL), the final percentage to be based on shore ownership and use existing at the time of construction; (c) provide all costs of construction for nourishment of private lands and share in the costs of construction for public lands landward of the Erosion Control Line (ECL); (d) provide a cash contribution for periodic nourishment equal to 29.3 percent of the cost of each nourishment, such contribution to be made prior to each nourishment operation, and the final percentage to be based on shore ownership and use existing at the time of construction; (e) hold and save the United States free from damage due to the construction works, except for damages due to the fault or negligence of the United States or its contractors; (f) assure continued public ownership and administration of the shore upon which the amount of Federal participation is based; (g) provide without cost to the United States appropriate access and facilities, including parking and sanitation, necessary for realization of the public benefits upon which Federal participation is based; (h) adopt appropriate ordinances, or provide other means, to insure the intended use of the beach fill areas; (i) control water pollution to the extent necessary to safeguard the health of bathers; and (j) agrees to pay 100 percent of the operation, maintenance, and replacement and rehabilitation costs of the project, or functional element thereof.

Operations and results during fiscal year. New work: Beach replenishment contract: \$-2,133,641; Engineering and Design cost was \$203,328; Construction Management cost was \$758.

JACKSONVILLE, FL DISTRICT

Condition at end of fiscal year. Re-nourishment was completed in the Summer of 2005 for flood control and coastal emergencies following the hurricane season of 2004. Borrow area sources were depleted during the last re-nourishment and therefore borrow area studies were conducted during FY 2007. The next re-nourishment is scheduled for FY 2011.

53. OTHER AUTHORIZED BEACH EROSION CONTROL PROJECTS

Key West, FL; Lido Key, FL; Mullet Key, FL; Virginia Key and Key Biscayne, FL were deauthorized January 1, 1990 by the WRDA of 1988, P.L. 100-676. (See Table 9-D.)

54. BEACH EROSION CONTROL ACTIVITIES UNDER SPECIAL AUTHORIZATION

Beach erosion control activities pursuant to section 103, Public Law 87-874 (Preauthorization) Reports incurring costs during the fiscal year were Fort San Geronimo, PR \$81,205; Tarpon Springs, FL \$21,095; Veteran's Drive Shoreline, St. Thomas, VI \$58,529; and Section 103 Coordination \$58,868 for a total cost of \$219,697.

Beach erosion control activities pursuant to section III, Public Law 90-433, Mitigation of Shore Damages Attributable to Navigation Projects.

No costs were incurred under the above authorization.

Shoreline Erosion Control Development and Demo Program pursuant to Section 227, Public Law 104-303.

No costs were incurred under the above authorization.

Beach erosion control activities pursuant to Shoreline Erosion Control Act of 1074, Public Law 93-251.

No costs were incurred under the above authorization.

Flood Control

55. CEDAR HAMMOCK (WARES CREEK), FL

Location. The project area is located in Bradenton and unincorporated Manatee County on the southwest side of Peninsular Florida.

Existing project. The project provides for clearing and snagging from approximately 500 feet upstream of Manatee Avenue bridge and extending 17th Avenue West; trapezoidal grass-lined channel, 1V:2H side slopes, 26-foot-bottom width from 17th Avenue West to 21st Avenue West; Vertical Sheet Pile Wall channel from just upstream of 21st Avenue West to 14th Street West (B.R. 41) with a 40-foot-bottom; and trapezoidal grass-lined channel, 1V:2H side slopes, 26-foot-bottom width from upstream of the 14th Street West (B.R. 41) and extending to just downstream of 44th Avenue West (Cortez Road) bridge. (See Table 9-B for Authorizing Legislation.)

Estimated cost is \$18,700,000 Federal and \$26,900,000 non-Federal.

Local cooperation. In accordance with the cost sharing and financing concepts reflected in WRDA 1986, the sponsor must provide lands, easements, rights of way, and borrow and excavated or dredged material disposal sites; modify or relocate utilities, roads, bridges, and other facilities where necessary for the construction of the project; and pay 10.06 percent of the costs allocated to flood damage reduction during construction.

Operations and results during fiscal year. New Work: Engineering and design cost was \$402,952.

Condition at end of fiscal year. The sponsor has decided to proceed with the real estate surveys prior to signing PCA. Awaiting Water Quality Certificate from the Florida Department of Environmental Protection, to finalize Plans and Specifications, execute Project Cooperation Agreement and advertise contract.

56. DADE COUNTY, FL

Location. Dade County is on the southeast coast of Florida. Project area consists of that part of the Atlantic shoreline of the county from Government Cut north to Bakers Haulover Inlet and at Haulover Beach Park. (See NOAA Nautical Chart No. 11466.)

Existing project. Project provides for a protective and recreational beach having a dune at elevation 11.5 feet and a level berm 50 feet wide at elevation 9 feet, mean low water, for beach erosion control and hurricane protection between Government Cut and

REPORT OF THE SECRETARY OF THE ARMY ON CIVIL WORKS ACTIVITIES FOR FY 2007

Bakers Haulover Inlet; a protective and recreational beach with a berm elevation of 9 feet for beach erosion control at Haulover Beach Park; and Federal participation in the initial construction and in periodic nourishment of both the above reaches for the first 10 years of project life. Plane of reference is mean low water. Mean range of tide in the area is 2.5 feet. Project was authorized by Flood Control Act of 1968 (H 335/90/2).

Estimated cost of the project is \$182,900,000 Federal cost and \$166,300 non-Federal cost.

Local cooperation. Local interests must (a) contribute for the first cost of the work: between Government Cut and Bakers Haulover Inlet amounts ranging from 60.2 percent of the cost of the fill within the project limit with existing shorefront ownership, and 100 percent of the cost of fill required landward of the project limit; and for the work at Haulover Beach Park, contribute 21.3 percent of the entire first cost excluding costs for lands, easements, rights-of-way, relocations, and pre-project work, but including credit for pre-project work; (b) contribute in cash for the first 10 years of project life, amounts ranging from 88.9 percent of the nourishment cost for the beach, with existing ownership, to 60.7 percent with public ownership, and the entire maintenance cost for dune, all between Government Cut and Bakers Haulover Inlet; (c) provide all lands and rights-of-way; (d) hold United States free from damages; (e) assure continued public ownership and use of the shore upon which the amount of Federal participation is based; (f) assure maintenance of the groin, and after 10 years of project life, periodic nourishment of the protective beach and maintenance of the dune during the economic life of the project; (g) assure that water pollution will not be permitted; (h) prevent removal or relocation by man of fill from the beach berm and dune; (i) prevent the erection of barriers to the littoral movement of material that would interfere with the nourishment of the beach; (j) maintain at the parks qualifying for 70 percent Federal participation a zone that excludes permanent human habitation; (k) at least annually inform interests affected that the project will not provide complete protection from a hurricane tide level equal to or higher in elevation than that of the hurricane of September 1926; and (l) establish in public ownership for public use the beaches within project limits as a requirement for Federal participation in the allocated beach erosion control costs of improvement of shores presently in private ownership. Assurances of local cooperation were accepted January 16, 1973. A supplemental agreement for Bal Harbour portion was approved June 30, 1976.

Operations and results during fiscal year. New work: Engineering and Design: \$296,993.

Condition at end of fiscal year. The contract for construction of the Sunny Isles Modification was awarded in September 2000 and completed in spring 2003 at a cost of \$19,224,000. The contract consisted of construction of two offshore breakwaters, a transitional beach fill along 1,500 feet of Golden Beach, and re-nourishment of about 2.5 miles at Sunny Isles. An option for that contract was awarded for North Miami Beach in January 2001. Engineering and Design for preparation of plans and specifications for award of a re-nourishment contract for North Miami Beach (Test Beach) was suspended in Summer 2006 due to a lack of a viable domestic source of beach fill.

57. DADE COUNTY, NORTH OF HAULOVER BEACH, FL

Location. On the southeast coast of Florida. Project area consists of that part of the Atlantic shoreline extending 2.5 miles north of Haulover Beach Park. (See NOAA Nautical chart No. 11466.)

Existing project. The existing shore protection project for Dade County provides for Federal participation in the cost of construction of a beach fill for the purpose of erosion control and hurricane protection along 9.3 miles of shore between Government Cut and Bakers Haulover Inlet and for the construction of a beach fill for the purpose of erosion control along the 1.2 miles of shore fronting Haulover Beach Park and provides for protection and nourishment of 2.5 miles of beach shore north of Haulover Beach Park and for extension of the period of Federal participation from 10 years to the life of the project. (See Table 9-B for Authorizing Legislation.)

Local cooperation. Consistent with the cost-sharing and financing concepts agreed to by the administration and Senate Majority Leadership, local interests will be required to: provide lands, easements, and rights-of-way and relocations; pay 50 percent of the separable and joint costs allocated to recreation; pay 35 percent of the cost allocated to storm damage prevention; hold the United States free from damages; control water pollution; and furnish assurances that they will maintain continued public ownership of the shore upon which the amount of Federal participation is based during economic life of project. Assurances of local cooperation have been requested from local sponsors.

JACKSONVILLE, FL DISTRICT

Operations and results during fiscal year. New work: None.

Condition at end of fiscal year. No new work scheduled. Last re-nourishment was completed at Sunny Isles in 2003 along with construction of two offshore breakwaters.

58. FOUR RIVER BASINS, FL

Location. The Four River Basins area covers about 6,000 square miles within 14 counties in central and southwest peninsular Florida. Project includes all or part of the four mainstream basins -- the Hillsborough, Oklawaha, Withlacoochee, and Peace Rivers -- and all of three smaller coastal basins north of Tampa, Florida, drained by the Pithlachascotee and Anclote Rivers and Lake Tarpon.

Existing project. The authorized project provided for improvements for control of floods and drainage, and for conservation through construction of necessary canals, levees, reservoirs, and control structures. More specifically, the project provided for: *Green Swamp Area* -- a conservation area and 3 storage reservoirs with necessary canals and control structures; *Hillsborough River* -- 4 flood-storage reservoirs, with necessary channels, control structures and levees; *Oklawaha River* -- a levee on the north shore of Lake Apopka, improvement of parts of the river channel and a west bank levee below Moss Bluff lock and dam, and replacement of the lock and dam; *Withlacoochee River* -- one flood-storage reservoir with outlet canals and control structures; *Peace River* -- Peace Creek canal and control structures and improvements to the existing water control and drainage features; *Gulf Coastal Areas* -- Lake Tarpon; outlet canal and control structure; Pithlachascotee River: reservoir with outlet canals and control structures. (See Table 9-O on Moss Bluff Lock.) (See Table 9-B for Authorizing Legislation.)

Estimated cost for new work is \$192,500,000 Federal and \$169,800,000 non-Federal.

Local cooperation. Local interests must furnish all lands, and rights-of-way; provide all alterations or replacements of public and private utilities, roads, bridges (except railroad bridges), etc.; hold the United States free from damages; operate and maintain all project works after completion; construct and maintain such associated works as are necessary to realize benefits made available by the project works; and

contribute in cash 17 percent of the first cost of construction and 50 percent of recreation costs.

Operations and results during fiscal year. New work: None.

Condition at end of fiscal year. Construction of the project commenced April 18, 1966 and the scheduled work is 98 percent complete. Flatwoods Phase II has not been funded.

59. PORTUGUES AND BUCANA RIVERS, PR

(This project is authorized as Lago de Cerrillos, Lago de Portugues, and Channel Improvement at Ponce.)

Location. Portugues and Bucana Rivers originate on the southern slopes of Cordillera Central divide of Puerto Rico and flow from this central ridge of the island to the Caribbean Sea. Their drainage areas are 22.6 and 31.4 square miles, respectively. Ponce, the second largest city in Puerto Rico, is located in the lower coastal area along Portugues River and is the only urban community in the two basins.

Existing project. The authorized project provides for 2 multiple-purpose reservoirs for flood control, water supply, general recreation, and fish and wildlife enhancement -- one on Portugues River and the other on Cerrillos River, a tributary to the Bucana River; enlargement of about 5.7 miles of the Bucana River, with an additional 0.2 mile long tieback levee at the upstream terminus of the improvement; enlargement of 2.1 miles of the Portugues River, with an additional 0.5 mile of tieback levee at the upstream terminus of the improvement; and a 1.3 mile diversion channel connecting Portugues River to lower Bucana River. (See Table 9-B for Authorizing Legislation.)

Estimated cost of the project is \$586,400,000 Federal and \$170,000,000 non-Federal.

Local cooperation. Local interests must provide all lands, easements, and rights-of-way; hold the United States free from damages; operate and maintain all project works after completion; repay construction cost allocated to water supply in accordance with Water Supply Act of 1958; pay one-half of the separable cost allocated to recreation and fish and wildlife enhancement; prohibit discharge of inadequately treated sewage and other pollutants into the reservoir; and prevent encroachment on

REPORT OF THE SECRETARY OF THE ARMY ON CIVIL WORKS ACTIVITIES FOR FY 2007

downstream channels. Assurances of local cooperation have not been completed, except for Cerrillos Reservoir, which was signed March 15, 1982.

Operations and results during fiscal year. New work: Real estate: \$243,193; Recreation: \$2,806,259; Engineering and Design: \$2,204,037; and Construction Management cost \$67,985.

Condition at end of fiscal year. Cerrillos Dam Lake Recreation contract was completed in July 2005. Remaining Lake Recreation was awarded in September 2005 with a schedule completion of October 2007. Portugues Shoal Removal Phase II has been postponed pending completion of Portugues Dam. New Portugues Dam contract schedule for in March 2008. Cost allocation report for Cerrillos dam was completed in August 2005.

60. RIO DE LA PLATA, PR

Location. The Rio de La Plata basin is located about 11 miles west of the San Juan metropolitan area along the north coast of Puerto Rico. The Rio de la Plata basin drains an area of 240 square miles through several towns and villages into the Atlantic Ocean.

Existing project. The Water Resources Development Act of 1990 authorized the project. It would provide 100-year protection upstream of PR Highway 2 and SPF protection down stream and calls for construction of 7.6 miles of levees. The plan includes the replacement of 3 bridges, recreation facilities, and mitigation for the loss of environmental habitats. (See Table 9-B for Authorizing Legislation.)

Estimated cost is \$75,100,000 Federal and \$44,000,000 Non-Federal.

Local cooperation. The project cooperation agreement was executed on 7 June 1995. The Commonwealth of Puerto Rico, Department of Natural and Environmental Resources, is the body authorized to represent the local interest and is responsible for complying with the following requirements: (1) provide a cash contribution equal to five percent of total project costs; (2) provide all lands, easements, rights-of-way, relocations, and dredged material disposal areas; (3) provide an additional cash payment when the sum of both items (1) and (2) are less than 25 percent of total project costs; (4) operate and maintain the project after completion, including accomplishment of any needed repairs or rehabilitation's of any of its components; (5) hold and save the United States free from damages due to the construction or subsequent

maintenance of the project, except due to damages due to the fault or negligence of the United States or its contractors; (6) prevent future encroachments which might interfere with proper functioning of the project; (7) participate in and comply with applicable Federal flood plain management and flood insurance programs; and (8) (a) Provide guidance and leadership to prevent unwise future development in the flood plain; and (b) recreation local cooperation requirements: (1) provide one-half of the separable first cost of post authorization planning and construction of recreation facilities and provide all land required for recreation; and (2) all costs and full responsibility for the operation, maintenance, replacement, and management of recreation lands and facilities.

Operations and results during fiscal year. New work: Engineering and design cost was \$17,193.

Condition at end of fiscal year. Land acquisition process was initiated following execution of the Project Cooperation Agreement (PCA) in June 1995. Plans and Specifications for Contract 1A, the lower reach of La Plata channel improvements and levees, were completed in Fiscal Year 2004. Contract award is pending completion of the land acquisition by the Sponsor and allocation of Federal funds.

61. RIO GRANDE DE ARECIBO, PR

Location. The city of Arecibo is located on the northern coast of Puerto Rico, approximately 40 miles west of San Juan. The Rio Arecibo Basin covers a 272 square mile area and includes towns of Utuado, Jayuya, and Adjuntas.

Existing Project. The authorized project for flood control includes channel improvements, a floodwall, and a levee along the Arecibo River; a levee along the Tanama River; and a plug, channel improvements, and a diversion channel along the Santiago River. (See Table 9-B for Authorizing Legislation.)

Estimated cost of the project is \$38,200,000 Federal and \$21,700,000 non-Federal.

Local cooperation. Local interests must provide lands, easements, rights of way, and dredged material disposal areas; modify or relocate buildings, utilities, roads, bridges (except railroad bridges), and other facilities, where necessary in the construction of the project; pay one-half of the separable costs allocated to recreation and bear all costs of operation and maintenance, and replacement of recreation facilities; pay 8.52 percent of the first costs allocated to flood

JACKSONVILLE, FL DISTRICT

control, and bear all cost of operation, maintenance, and replacement of flood control structures; and has also agreed to make all required payments concurrently with project construction. Non-Federal contribution for new work was \$669,764 for FY 2007.

Operations and results during fiscal year. New work: Lands and damages \$881; Engineering and design cost was \$867,781; Channel and canals \$-1,000; Flood control contract \$3,750,155; Construction management cost \$313,045.

Condition at end of fiscal year. The first construction contract, the Arecibo and Tanama Levees and the Rio Santiago Diversion Channel, was awarded in September 2004 for a total of \$12.9M. Notice to proceed was issued in May 2005. Construction of this contract continues and is expected to be completed in June 2008.

62. RIO GRANDE DE LOIZA, PR

Location. The Rio Grande De Loiza basin, located in the eastern central part of Puerto Rico, is the island's largest basin. It comprises the coastal plain of Carolina and the metropolitan area of Caguas in the interior valley. The project area consists of 530 square kilometers draining into Lake Loiza. It includes the city of Caguas and the town of Gurabo where over 4,100 families and numerous public buildings and commercial facilities are affected by flooding.

Existing project. The authorized project would provide channels, levees, and floodwalls for flood protection for the highly urbanized areas of the city of Caguas and the town of Gurabo. It consists of 1.8 kilometers of gabion-lined channel, 1.9 kilometers of concrete channels, and a debris basin for Rio Caguitas; 1.3 kilometers of concrete channels, 1.0 kilometers of earth channel, 0.6 kilometers of gabion-lined channel, 1.0 kilometers of levees, and a debris basin for Rio Bairoa; 2.8 kilometers of levees and floodwalls for Rio Grande De Loiza; and 0.7 kilometers of pilot channel and 1.8 kilometers of levees for Rio Gurabo. It also provides for recreation bikeway/pedestrian trails at Rio Grande De Loiza and Rio Gurabo levees. The average level of protection at Rio Caguitas and Rio Bairoa is estimated at 70 years and 220 years, respectively. The average level of protection for the remaining reaches is estimated at 100 years. (See Table 9-B for Authorizing Legislation.)

Estimated cost is \$164,300,000 Federal and \$57,400,000 non-Federal.

Local cooperation. In accordance with the cost sharing and finance concepts reflected in the Flood Control Act of 1970 and the WRDA 1986, the sponsor must provide lands, easements, and rights-of-way; modify or relocate buildings, utilities, roads, bridges, and other facilities, where necessary in the construction of the project; pay 6.32 percent of the costs allocated to flood control to bring the total non-Federal share of flood control costs to 25 percent and bear all costs of operations, maintenance, and replacement of flood control facilities; and pay one-half of the separable costs allocated to recreation and bear all costs of operation, maintenance, and replacement of recreation facilities.

Operations and results during fiscal year. New work: No new work during FY 2007.

Condition at the end of fiscal year. An updated LRR for entire project will be required in order to proceed with PCA execution. This action will be completed when Federal funding is made available.

63. RIO MANATI, BARCELONETA, PR

Location. The project area consists of the Rio Grande De Manati basin, which is located in the north-central coastal region of Puerto Rico at the town of Barceloneta.

Existing project. The recommended plan consists of providing a 5,300-meter long ring levee, two pilot channels totaling 1,620 meters in length, and minimum interior drainage facilities. Project implementation requires acquisition of seven residential structures, relocation of one boat ramp, three highway ramps, and one agricultural road ramp, and relocation of existing utilities impacted by the levee at four locations. The project is designed to protect against the 100-year flood and would reduce 92 percent of the total annual flood damages for the flood prone areas of the town of Barceloneta. The recommended plan maximizes the net national economic development benefits. (See Table 9-B for Authorizing Legislation.)

Estimated cost is \$16,300,000 Federal and \$8,100,000 non-Federal.

Local cooperation. In accordance with the cost sharing and financing concepts reflected in the Chief of Engineers Reported dated 22 January 1999 and WRDA '99, the non-Federal sponsor must provide

REPORT OF THE SECRETARY OF THE ARMY ON CIVIL WORKS ACTIVITIES FOR FY 2007

lands, easements, rights-of-way, and dredged material disposal areas; modify or relocate buildings, utilities, roads, bridges (except railroad bridges), and other facilities, where necessary in the construction of the project; and pay 15.95 percent of the first costs allocated to flood control, and bear all cost of operation, maintenance, and replacement of flood control structures. The non-Federal sponsor has agreed to make all required payments concurrently with project construction.

Operations and results during fiscal year. New work: Channels and canals \$1,902; Levees and floodwalls \$496,828; Engineering and Design: \$71,962; and Construction Management cost was \$75,739.

Condition at the end of fiscal year. Construction contract was awarded September 2001 and is scheduled for completion in May 2008.

64. RIO PUERTO NUEVO, PR

Location. The Rio Puerto Nuevo drainage basin is located within the San Juan Metropolitan Area along the northern coast of Puerto Rico. The basin joins the southeast side of San Juan Harbor and extends south and up into the foothills of the central mountains of Puerto Rico. The Rio Piedras, Rio Puerto Nuevo, Quebrada Margarita, Quebrada Josefina, Quebrada Dona Ana, Quebrada Vista, and Quebrada Guaracanal traverse the basin.

Existing project. The authorized project for flood control includes improvements to 11.2 miles of the existing channel of Rio Puerto Nuevo and Rio Piedras and five tributaries of the Rio Puerto Nuevo drainage basin. The 25 square mile drainage basin drains into San Juan Harbor. (See Table 9-B for Authorizing Legislation.)

Estimated cost of the project is \$360,900,000 Federal and \$135,500,000 non-Federal.

Local cooperation. Local interests must provide cash contribution equal to five percent of the total project costs; provide LERRD (except railroad bridge alterations); provide an additional cash payment when the sum of cash and LERRD are less than 25 percent of the total project costs; operate and maintain project works after completion; hold and save the United States free from damages; prevent future encroachments; participate and comply with Federal flood plain management and flood insurance programs;

provide guidance and leadership to prevent unwise future development in the flood plain; provide one-half of the separable first cost of post authorization planning and construction of recreation facilities; and all costs and full responsibility for operations, maintenance, replacement, and management of the recreation lands and facilities.

Operations and results during fiscal year. New work: Roads, Railroads, and Bridges: \$236,196; Channels and Canals: \$10,219,895; Engineering and Design: \$1,422,875; and Construction Management cost was \$1,329,299.

Condition at end of fiscal year. Contract No.1 (first 1.7 miles of channel) was completed in January 2004. Contract #2A (Margarita Earthen Channel, next 1.3 miles of channel) was terminated and will be re-advertised as resumption of 2A in FY 2009. Contract 1A was awarded in April 2002 and was completed in October 2005. Contract 2AA (Margarita Levee and Bechara Drainage Works) was awarded in FY03 and work is scheduled for completion in Summer 2009. Contract 2D1 was awarded in FY03 and is underway and is scheduled for completion in FY 2009.

65. INSPECTION OF COMPLETED FLOOD CONTROL PROJECTS

Features transferred to the Central and Southern Florida Flood Control District and Southwest Florida Water Management District were inspected quarterly during the fiscal year at a total cost of \$265,109.

66. OTHER AUTHORIZED FLOOD CONTROL PROJECTS

(See Table 9-E.)

67. FLOOD CONTROL WORK UNDER SPECIAL AUTHORIZATION

Flood control activities pursuant to section 205, Public Law 685, 84th Congress, as amended (Preauthorization).

(See Table 9-Q.)

Emergency flood control activities -- repair, flood fighting, and rescue work (Public Law 99, 84th Congress, and antecedent legislation).

JACKSONVILLE, FL DISTRICT

Federal costs for the fiscal year were \$25,088 for the Disaster Preparedness Program. Disaster Response Planning cost was \$11,775. Emergency facilities \$6,263. Total Cost was: \$43,127.

Emergency stream bank and shoreline protection activities pursuant to Section 14, Public Law 526, 79th Congress as amended (Preauthorization).

Total cost for the fiscal year was Section 14 Coordination for \$-165.

General Investigations

68. SURVEYS

Costs during the fiscal year were: navigation studies \$619,646; flood damage prevention studies \$17,635; shoreline protection studies \$400,135; miscellaneous activities \$46,699 and coordination with other agencies and non-Federal interests \$183,884 for a total cost of \$1,267,999.

69. COLLECTION AND STUDY OF BASIC DATA

The requirement for preparation of regular flood plain information studies has been rescinded. FPI studies that deal with land use changes will continue to be prepared. Flood Plain Management Services \$80,820; Technical Services \$57,173; Quick Responses \$7,446; Jacksonville HES \$8,975; HES \$5,967; HES Islands Support \$2,606; for a total cost of \$162,987.

70. CONTINUATION OF PLANNING AND ENGINEERING

Navigation costs were Cano Martin Pena, PR \$0. Total cost for Continuation of Planning and Engineering was \$0.

71. ADVANCE ENGINEERING AND DESIGN

Navigation cost was, St. Petersburg Harbor, FL \$9,255 and Lido Sarasota Springs \$50,074 for a total cost for Advance Engineering and Design was \$59,330.

General Regulatory

72. PERMIT EVALUATION (R&H ACT of 1899; CWA of 1977; MPRSA of 1972)

Location. Geographic coverage includes navigable waters of the United States (including tributary systems, headwaters and isolated waters) and ocean waters to the limits of the territorial seas in Florida, Puerto Rico, and the U.S. Virgin Islands.

Existing Program. The program evaluates permit applications for work (dredging, filling, and other structures) and the transportation of dredged material to the oceans for ocean disposal. Decision making criteria consist of the public interest review, Section 404(b)(1) Guidelines, and ocean dumping criteria. We have a full array of Regional General Permits and are working on 11 more. We issued 6,276 permits and verifications. This number does not include 1,877 permit verifications issued by the Florida under the State Programmatic General Permit. This number also does not include jurisdictional determinations and other services to the public. We are aggressively working to streamline our review and processing timeframes and are looking at the program on a watershed basis.

Local Cooperation. The joint application arrangements with Florida, Puerto Rico, and the U.S. Virgin Islands continue in place. The Florida State Programmatic General Permit was maintained. This was the initial year implementing the transportation decision streamlining process with FDOT and FHWA. We entered into a formal agreement with South Florida Water Management District to provide for accelerated permits under a coordinated process to support Florida's Accel8 program of critical projects that are supporting the Everglades restoration program. We have developed a Strategic Plan with specific targets and timeframes to accomplish actions to include our local and regional partners and accomplish the goals of protecting the environment and supporting economic development.

Operations and results during fiscal year. Permit evaluation cost was \$11,237,748.

73. ENFORCEMENT (R&H ACT of 1899; CWA of 1977; MPRSA of 1972)

Existing program. The program takes appropriate action on findings of noncompliance with issued permits as well as unauthorized work (performed without a permit).

Focus shift: Inspections of issued permits have significantly increased to support the new *performance measures and we continue to take appropriate actions on unauthorized work. This is shifting resources formally allocated to unauthorized activities and promotes compliance with issued permits.*

Operations. Operation of the program is continuing to make increased use of alternative dispute resolution processes to remediate violations. Close coordination with and cooperation of Department of Justice continues, with development of consent orders and fines as appropriate. To improve efficiency and better served the public, we have moved three of the seven project manager positions from the Jacksonville District to field offices (Miami, Tampa, and Panama City).

Operations and results during fiscal year. Cost incurred this fiscal year for enforcement was \$387,259.

74. STUDIES (R&H Act of 1899)

Location. Navigable waters of the United States in Florida, Puerto Rico, and the U.S. Virgin Islands.

Existing program. This program conducts studies to determine geographic extent of navigable waters of the United States, and establishment of danger or restricted zones in these waters.

Operations and results during fiscal year. Compliance-authorized and mitigation costs were \$656,841.

Environmental Improvement Projects

75. ALLIGATOR CREEK ADDITION RESTORATION PROJECT, FL

Location. Alligator Creek Addition Restoration Project is on the South West Florida Coast in Charlotte County, Florida.

Existing Project. The primary goal of this project is to restore the historic saltern that once comprised the majority of the west central portions of the Alligator Creek Addition parcel. The area has been severely impacted by the construction of mosquito ditches, which functioned to divert water flow and subsequently alter the hydro period of the saltern. Restoration will involved backfilling approximately 35,000 linear feet of mosquito ditches. Backfilling will allow a more diffuse sheet flow of fresh water from upland areas and will allow extreme high tide events to flood the salterns and slowly sheet flow out through the mangrove forest fringe to the west. This project is anticipated to restore the natural hydro period, raise the interstitial salinities and restore the natural sill in the saltern resulting in approximately 350 acres of saltern restoration and enhancement.

Estimated cost for new work is \$1,368,702. The Estuary Habitat Restoration Council set an absolute limit on the Estuary Act funds that can go to this project at \$4,000,000. These are cost share projects and normally the Federal share is limited to 65% of the cost

Local cooperation. Fully complied with to date.

Operations and results during fiscal year. New Work: Engineering and Design \$19,731.

Condition at the end of fiscal year. State and federal permits have been obtained. The Alligator Creek Estuary Habitat Restoration Program Project Letter Report - Charlotte County, FL was approved on 13 September 2005. Awaiting approval of the Project Cooperation Agreement.

76. CENTRAL AND SOUTHERN FLORIDA, INCLUDING COMPREHENSIVE EVERGLADES RESTORATION PLAN

Location. The C&SF project is generally located within the southeastern 18 counties of Florida covering an area of about 18,000 square miles. It is comprised of the Upper St. Johns River basin in the northeastern section of project, Kissimmee River basin in central section north of the Lake Okeechobee-Everglades area in the central and southwestern section, and the east coast Everglades area in southeastern section. The CERP area consists of the lands and waters within the boundary of the South Florida Water Management District, including the Everglades, the Florida Keys,

JACKSONVILLE, FL DISTRICT

and the contiguous near-shore coastal waters of South Florida.

Previous projects. Completed works for control of Lake Okeechobee were included in and constructed under the navigation project for Okeechobee Waterway, FL (formerly Caloosahatchee River and Lake Okeechobee drainage area, FL) and under provisions of River and Harbor Acts of July 3, 1930 and August 30, 1935. For further information, see Annual Reports for 1948 and 1949.

Existing projects. The authorized project is for flood relief and water conservation and provides principally for: an east coast protective levee extending from the Homestead area north to the eastern shore of Lake Okeechobee near the St. Lucie Canal; three conservation areas for water impoundment in the Everglades area west of the east coast protective levee with control structures to effect transfer of water as necessary; local protective works along the lower east coast; encirclement of the Lake Okeechobee agricultural area by levees and canals; enlargement of portions of Miami, North New River, Hillsboro, and West Palm Beach Canals; enlargement of the existing Lake Okeechobee levees and construction of new levees on the northeast and northwest shores of the lake; increased outlet capacity for improved control of Lake Okeechobee; floodway channels in the Kissimmee River basin, with suitable control structures to prevent over-drainage; an interrelated system of canals, levees, pumping stations, and structures in southwest Dade County to control water levels; and facilities for regulating floods in Upper St. Johns River basin; a system of canals and control structures for gravity drainage of Martin County and distribution of available water supplies to portions of Martin and St. Lucie Counties; and works to improve the supply, distribution, and conservation of water resources in central and southern Florida, including the Lake Okeechobee agricultural area, Everglades National Park, and other related areas. The project will provide water control and protection from recurrence of the devastating floodwaters from the Everglades and local sources, for the highly developed urban area along the lower east coast of Florida and for the productive agricultural areas around Lake Okeechobee (including towns around the lake), in the Upper St. Johns and Kissimmee River basins, and in South Dade County. The project includes a total of 990 miles of levees, 978 miles of canals, 30 pumping plants, 212-floodway control and diversion structures, 56 railroad bridge relocations, and 2 highway bridge relocations. The project also provides that upon completion, local

interests assume operation and maintenance of all completed works except levees, channels, locks, and control works for regulation of Lake Okeechobee and the main control structures of conservation areas, which will be operated and maintained by the United States. The principal features of the hurricane gates, constructed under previous projects for Okeechobee Waterway and maintained under existing project since July 1, 1950, are set forth in Table 9-L. Also, see Table 9-N for principal features of locks and dams. (See Table 9-B for Authorizing Legislation.)

The Comprehensive Everglades Restoration Plan is the ecosystem restoration component of the Central and Southern Florida Project. The authorized project shall develop a comprehensive plan for the purpose of restoring, preserving, and protecting the South Florida Ecosystem. The comprehensive plan shall provide for the protection of water quality in, and the reduction of the loss of fresh water from the Everglades. The comprehensive plan shall include such features as are necessary to provide for the water-related needs of the region, including flood control, the enhancement of water supplies, and other objectives served by the Central and Southern Florida Project. The comprehensive plan shall be developed in consultation with the Task Force.

Projects identified for design and construction of any Central and Southern Florida Project that are authorized may use funds that are available, provided that they will accelerate the restoration, preservation, and protection of the South Florida ecosystem; will be generally consistent with the conceptual framework specified in the report entitled "Conceptual Plan for the Central and Southern Florida Project Restudy"; and be compatible with the overall authorized purposes of the Central and Southern Florida Project.

Local Cooperation. (See Table 9-M for local cash contribution.) Local interests must also: provide lands, rights-of-way, and spoil disposal areas; hold the United States free from damages; bear the cost of maintenance and operation of all works except those having to do with regulation of Lake Okeechobee and the main control structures of conservation areas; construct and maintain lateral drainage facilities; prohibit encroachment on flood-carrying capacity of the improved channels; and assume cost of all new highway bridges, relocations of existing bridges and alterations to utilities incident to construction of the project. In addition, for small boat navigation channels, local interests must provide, maintain, and operate adequate public landings, sanitary and access facilities, and establish regulations prohibiting discharge of

REPORT OF THE SECRETARY OF THE ARMY ON CIVIL WORKS ACTIVITIES FOR FY 2007

pollutants into the waters of the locks and channels by users thereof. Assurances of local cooperation have been accepted by the District Engineer for all items of work authorized to date.

The Comprehensive Plan shall be developed in cooperation with the non-Federal sponsor and in consultation with the Task Force. The non-Federal cost share is 50%, except for water quality, which is 100% with the exclusion of that needed for Everglades restoration, for which the share is 50%. The value of lands or interests in land acquired by non-Federal interests will be included in the total cost of the activity and credited against the non-Federal share of the cost of the activity.

Operations and results during fiscal year. (See Table 9-N for work accomplished.)

Operations and care.

a. Features completed under previous navigation project for Okeechobee Waterway and being maintained under this project are: a levee about 70 miles long following in general the south shore of Lake Okeechobee and a north shore levee 15.8 miles long; spillways at Ortona and St. Lucie Locks; 5 hurricane gates; and 16 spillways along St. Lucie Canal.

b. Features completed under existing project that are to be maintained with operation and maintenance funds are: (1) Levees 47, 48, 49 and 50 -- total length 63 miles and enlargement of existing levees L-D1, L-D2, L-D3, L-D4, and L-D9, (2) spillway structures S-10, S-11, S-12, S-18C, S-77, and S-78 (3) C-43, Section 4 (Caloosahatchee River), and (4) W.P. Franklin Lock and Dam.

In addition to the actual facilities listed above it is necessary under operation and maintenance to continue meteorological studies, water level records, stream gauging stations, etc., for proper regulation of the level of Lake Okeechobee and storage of water in Conservation Areas 1, 2 and 3.

Corps of Engineers - The Corps of Engineers operates and maintains the major outlets to Lake Okeechobee and Water Conservation Area Nos. 1, 2A and 3A in central and southern Florida.

South Florida Water Management District - SFWMD is responsible for operation and maintenance of the project facilities, including major pumping

stations, spillways, locks (except on Okeechobee Waterway), levees and culverts.

Condition at end of fiscal year. Extensive planning and design efforts are underway on many of the 45 projects included in CERP. Much of the effort is with the South Florida Water Management District where design is proceeding according to the Design Agreement executed in May 2000 on some 37 of these projects. Design Agreements have been executed with Palm Beach County for the Winsberg Farm Wetland Restoration project and Lee County for Lakes Park Restoration project. Other agreements with the State, Miami-Dade County, and the Miccosukee Indian Tribe are pending. Feasibility Cost Share Agreement (FCSA) has been initiated for the Comprehensive Water Quality Feasibility Study. Currently, 9 project implementation reports (PIR) are ongoing & 5 have been completed and have moved on to the design phase: Indian River Lagoon, Picayune Strand, Site 1, Broward County Water Preserve Area, and Caloosahatchee River (C-43) West Basin Storage Reservoir. Design of the 6 pilot projects is underway. Three final pilot project design reports have been completed on the aquifer storage & recovery projects: Lake Okeechobee, Hillsboro & Caloosahatchee. The Corps is continuing with the design and construction of the portions of the Upper St. Johns Basin, West Palm Beach Canal (STA-1E/C-51), South Dade County (C-111), Manatee Pass Gates projects. 2 Feasibility Studies are underway: Southwest Florida Feasibility Study and Florida Bay Florida Keys Feasibility Study. In addition, 2 special reports are also underway: ASR Regional and Master Recreation Plan. The CERP RECOVER efforts are underway. RECOVER's Adaptive Management Strategy was developed in FY 05 and was implemented in FY 06. The monitoring and assessment plan (MAP) monitoring components implementation, assessment protocols, assessment guidance report, MAP Part 2, system status report criteria and processes, and the ASR contingency plan was developed in FY 06. The draft Initial System Operating Manual was posted for review in FY 06. The finals of the Pre-CERP baseline, six Guidance Memoranda, Master Implementation Sequencing Plan (MISP) and Interim Goals/Interim Targets were completed in FY 05.

77. EVERGLADES & SOUTH FLORIDA ECOSYSTEM RESTORATION

Location. The area consisting of the lands and waters within the boundary of the South Florida Water Management District, including the Everglades, the

JACKSONVILLE, FL DISTRICT

Florida Keys, and the contiguous near-shore coastal waters of South Florida.

Existing Project. This project is called the Critical Restoration Projects Program. Nine quick-start projects designed to restore the South Florida ecosystem are in progress or complete across the lower part of the state. They are spreading early restoration as partnering agencies prepare to construct the Comprehensive Everglades Restoration Plan.

If the Secretary of the Army determines, in cooperation with the non-Federal sponsor and the Task Force, that a restoration project for the South Florida ecosystem will produce independent, immediate, and substantial restoration, preservation, and protection benefits, and will be generally consistent with the conceptual framework specified in the "Conceptual Plan for the Central and Southern Florida Project Study" published by the Governor's Commission for a Sustainable South Florida, the Secretary shall proceed expeditiously with the implementation of the restoration project. (See Table 9-B for authorizing legislation.)

Estimated cost of the project \$95,000,000 Federal and \$148,800,000 non-Federal.

Local Cooperation. The non-Federal share of the cost of work performed under this program is 50%. Congress has authorized \$95 million to be appropriated to the Department of the Army to pay the Federal share of the cost. The Federal share of the cost of carrying out any 1 project is limited to \$25 million. The cost of features to improve water quality essential to Everglades restoration will be cost shared as above; the cost to improve water quality for other purposes will be solely the responsibility of the local sponsor. Credit may be provided to a non-Federal sponsor for the reasonable costs of any work that has been performed or will be performed in connection with a study or activity if the non-Federal sponsor's work is necessary, will substantially expedite completion of a critical restoration project, and is granted pursuant to a project-specific agreement that prescribes the terms and conditions of the credit or reimbursement.

Regardless of the date of acquisition, the value of lands or interests in land acquired by non-Federal interests shall be included in the total cost of the activity and credited against the non-Federal share of the cost of the activity, given that the lands proposed for credit are compatible with a specific project in this program. The operation and maintenance of projects will be a non-Federal responsibility with the exception

of the Seminole Big Cypress Water Conservation Plan, for which the operations and maintenance costs will be split 50-50 between the Seminole Tribe and the U.S. Army Corps of Engineers.

Operations and results during fiscal year. Reservoirs \$8,195,935; Engineering and design cost was \$815,157. Construction management cost was \$942,227.

Condition at end of fiscal year. This program consists of the following nine projects:

- East Cost Canal Structures: Complete
- Tamiami Trail Culverts: Design is complete. Western features will be built under the CERP Picayune strand project. Construction of the eastern features await availability of funds.
- Western C-11 Water Quality Treatment: Complete.
- Florida Keys Carrying Capacity Study: Complete.
- Seminole Big Cypress Water Conservation Plan: The Phase 1 Canal System construction is complete. There are 4 basins included in Phase 2. The first contract of Phase 2 has been awarded by the Corps of Engineers. The Seminole Tribe has awarded the contract for a second basin. The remaining two basins award is pending outcome of the first two.
- Southern CREW: Under construction.
- Lake Okeechobee Water Retention Areas: Complete.
- Ten Mile Creek: Construction physically complete.
- Lake Trafford: Under construction. Will be completed in 2009.

78. FLORIDA KEYS WATER QUALITY IMPROVEMENTS

Water Quality Improvements pursuant to Section 109, Public Law 106-554.

Location. The Florida Keys Water Quality Improvements Program study area lies within the Florida Keys National Marine Sanctuary, which includes 2,800 square nautical miles of near shore waters beginning just south of Miami, Florida and extending to the Dry Tortugas. The Sanctuary is part of a complex ecosystem that includes the Everglades, Florida Bay and adjacent areas. The Keys themselves are a chain of more than 800 islands that extend approximately 220 miles southwest from the southern tip of the Florida peninsula and through the sanctuary. The Florida Keys Water Quality Improvements

REPORT OF THE SECRETARY OF THE ARMY ON CIVIL WORKS ACTIVITIES FOR FY 2007

Program is targeting the portion of the Keys from Key Largo to Key West, approximately 110 miles.

Existing Project. Under the authority of Public Law 106-554, date December 21, 2000, the Corps of Engineers is authorized to provide technical and financial assistance to carry out projects for planning, design, and construction of treatment works to improve water quality in the Florida Keys. As a result of concerns regarding the water quality in the Florida Keys, the Monroe county Year 2010 Comprehensive Plan mandated that nutrient loading be reduced in the Keys marine ecosystem by the year 2010. In 1998, The Governor issued Executive Order 98-309, which directed both local and state agencies to coordinate with Monroe County to implement the Year 2010 Comprehensive Plan. This includes the elimination of cesspits, failing septic systems and other substandard on-site sewer systems.

Estimated cost: The total cost of the program is in excess of \$600M. However, the Federal Government has been authorized to spend up to \$100M. The non-Federal share will be \$53.8M.

Local Cooperation. 6 Municipalities within Monroe County serve as the local cost sharing sponsors for the program. These are Key Largo, Islamorada, Marathon, Layton, Key Colony Beach and Key West. The South Florida Water Management District, an agency of the State of Florida, is serving as a liaison between the Federal Government and local governments. They are not the project sponsor or cost-sharing partner. It is important to note that the 6 separate Municipalities will be directly funding the non-Federal portion of the project. South Florida Water Management District's role will consist of coordinating with the various municipalities in Monroe County who will be paying for the non-Federal share.

Operations and results during fiscal year: Engineering, design and construction: \$37,030.

Condition at the end of the fiscal year. Currently, environmental documentation for all six municipalities involved in the Florida Keys Water Quality Improvements Program has been completed. Decision documents outlining recommendations for implementation have also been completed for all six municipalities. Individual Program Cooperation Agreements will be developed based on Program Implementation Guidance received from USACE HQ in December 2006. Once complete, these Program Cooperation Agreements will be forwarded to the

Corps of Engineers' South Atlantic Division and Headquarters for review for all six municipalities. Once approved, the Corps of Engineers will be able to begin reimbursements for construction of wastewater and storm water facilities as well as sunk planning and design costs which have been incurred since signing of the Program Cooperation Agreements.

79. KISSIMMEE RIVER, FLORIDA

Location. The Kissimmee River Basin comprises 3,013 square miles, and extends from Orlando southward to Lake Okeechobee, the second largest freshwater lake in the United States. The area is bounded on the north by the lakes of the Orlando area, on the west by the Peace River Basin, on the south by Lake Okeechobee, and in the east by the Upper St. John's and the Taylor Creek-Nuddin Slough Basins. The watershed is about 105 miles long and has a maximum width of 35 miles.

Existing Project. The purpose of this project is to implement the Level II Back-filling plan, as developed by the South Florida Water Management District, for restoration of the Kissimmee River and flood plain ecosystem. It is expected that this restoration project will restore the ecological integrity of the river system and provide for environmental improvements through modification of operations for Lake Kissimmee, Cypress, and Hatchineha. The project will include canal and/or structure improvements and real estate acquisition. Construction will include the backfilling of approximately 22 miles of canal C-38. This will result in the restoration of almost 29,000 acres of wetlands in the floodplain. Two structures will be removed and two bridges and associated utilities will be relocated. Real estate interests will be acquired for affected portions of the floodplain. (See Table 9-B for Authorizing Legislation.)

Estimated cost of the project for Kissimmee River (Upper and Lower Basins) \$317,000,000 Federal and \$317,000,000 non-Federal.

Local Cooperation. The South Florida Water Management District, an agency of the State of Florida, is the project sponsor and cost-sharing partner, and has expressed its intent to be the project sponsor. Local cost for the Headwater Revitalization is to be credited towards the total project cost. The authorization calls for the restoration to be cost-shared 50%-50% and that the lands be credited toward the total cost of the Kissimmee River Restoration. A draft

JACKSONVILLE, FL DISTRICT

Project Cooperation Agreement (PCA) was executed on 22 March 1994.

Operations and results during fiscal year. New work: Lands, \$170,786; Channels and canal cost \$9,750,897; Floodway control structure cost \$600,375; Engineering and design cost \$3,785,316; and Construction management cost \$520,596. Buildings, grounds, and utilities were \$670,018.

Condition at the end of the fiscal year. Ongoing construction for S-68 Spillway, and Isotokpoga Canal.

80. RESTORATION WORK UNDER SPECIAL AUTHORIZATION

Restoration Activities Pursuant to Section 1135, Public Law 99-662.

Fiscal year costs were: C102/103 Restoration, Dade Cty, FL \$44,102; C-7, Miami Dade, FL \$8,125; C-8, Miami Dade, FL \$1,832; C-9, Miami Dade, FL \$3,664; Dinner Key, FL \$4,418; Johns Island, FL \$28,079; La Esperanza, PR \$28,619; Peanut Island, FL \$3,651,286; Ponce De Leon Inlet, FL \$240 Virginia Beach Key, FL \$48,383; Wetland Restoration, Oklawaha River \$52,764; Total FY 2005 Cost \$3,871,511.

Restoration Activities Pursuant to Sec 206, Public Law 104-303.

Fiscal year costs were: Aquatic Ecosystem Restoration, Rose Bay, FL \$220,505; Boqueron Refuge, PR \$161; C-1 Re-diversion/Lagoon Restoration, FL \$220,229; Coordination Account (206) \$4,888; Davis Lake Restoration, FL \$5,381; Hogan's Creek, FL \$14,795; Lake Hell N Blazes \$51,482; Lake Sawgrass, FL \$62,938; Sawgrass Lake Hell N Blazes, FL \$10,941; Stevenson Creek Estuary, FL \$235,072; Tsala Apopka Litoral Shelf Restoration, FL \$6,896; Total FY 05 Cost \$833,288.

81. WETLAND AND OTHER AQUATIC HABITAT CREATION UNDER SPECIAL AUTHORIZATION

Wetland Activities Pursuant to Sec 204 Public Law 102-560.

Fiscal year costs were: Condado Lagoon, PR \$0; Sec 204 Coordination Accounts \$0.

82. OTHER PROGRAMS AND ACTIVITIES

Fiscal year costs were: Nationwide civil works activities \$0; Regional Sediment Management \$0; and Anti-terrorism/force protection \$0.

REPORT OF THE SECRETARY OF THE ARMY ON CIVIL WORKS ACTIVITIES FOR FY 2007

REPORT OF THE SECRETARY OF THE ARMY ON CIVIL WORKS ACTIVITIES FOR FY 2007

¹Excludes \$288,000 for contributed funds for new work.

²Includes \$97,566 for previous project.

³Excludes \$243,235 contributed funds for new work.

⁴Excludes \$700,000 contributed by NASA in connection with construction of lock.

⁵Includes \$113,000 for new work on previous project; excludes \$15,563 expended for new work on existing project in Boca Grande entrance channel from contributed funds.

⁶Includes \$905,221 expended for recreation facilities.

⁷Includes \$10,128 cost for reconnaissance and detailed project report prepared under Section 107 modification to the project. Excludes \$1,095 contributed funds for new work.

⁸Includes \$515,479 for new work for previous projects: \$8,472 for new work on Sunshine Skyway Channel; and \$9,707 for new work for Cats Point Channel. Excludes \$14,473 contributed funds for new work for Sunshine Skyway and Boca Ciega Bay channels.

⁹Includes \$450,749 for maintenance for previous project.

¹⁰Includes \$94,776 for work for previous projects. Excludes \$2,199,842 expended from public works funds for new work.

¹¹Includes \$213,222 for maintenance on previous projects and \$3,179 operating and care under provisions of permanent indefinite appropriation.

¹²Includes \$3,520,137 new work on previous project and \$290,013 for new work expended from public works funds.

¹³Includes \$543,399 maintenance on previous projects.

¹⁴Includes unused contributed funds of \$64,136 returned to local interests.

¹⁵Project authorized December 2, 1964, by Chief of Engineers under Section 107 of 1960 R&H Act and by Section 110 of the 1966 R&H Act. Cost of new work excludes \$53,732 contributed funds.

¹⁶Includes \$5,502,126 expended from public work funds for new work. Includes costs of \$6,777,906 for recreation facilities.

¹⁷Includes \$381,479 work-in-kind and \$172,314 in costs for north jetty recreation facility.

¹⁸Excludes \$45,811 contributed funds for new work.

¹⁹Includes \$21,101,919 for new work under previous project, \$626,925 for recreational facilities (Code 710), and \$27,574 for reconnaissance and detailed project report prepared under Section 107 modification to the project.

²⁰Includes \$7,581,150 for maintenance for previous projects. Excludes \$1,000 for maintenance.

²¹Includes \$3,912 for new work for previous projects.

²²Includes \$11,414 for operating and care under provisions for permanent indefinite appropriation.

²³Includes \$80,000 new work from public works funds. Excludes \$509,506 contributed funds.

²⁴Includes \$30,000 for maintenance from public works funds.

²⁵Includes \$11,588 expended for restudy, but excludes \$21,960 expended for new work from contributed funds.

²⁶Excludes \$1,033,069 contributed funds.

²⁷Includes \$71,303 for new work on previous project. Excludes \$137,500 contributed funds.

²⁸Baresford cutoff and completion of cutoffs and easing of bends in Putnam Lake and Volusia Counties in inactive status were deauthorized by Public Law 93-251 section 12. Includes \$29,566 for new work under previous project.

²⁹Includes \$25,838 under previous project.

³⁰Includes \$26,689 for new work under previous project.

³¹Includes \$747,684 for new work under previous project. Excludes \$100,000 expended for new work from contributed funds.

³²Includes \$44,730 for maintenance from public works funds under previous project.

³³Includes \$853,050 for new work from public works funds under previous project and \$1,463,000 from emergency relief funds. Excludes \$270,466 for new work for Hillsborough River and \$13,939 for new work from contributed funds.

³⁴Includes \$17,107 for maintenance under previous project.

³⁵Includes work-in-kind.

³⁶Excludes \$15,543 for property received without reimbursement and R&H Funds, expended on previous projects (see cost and financial statement for Okeechobee Waterway, FL, project for these costs). Excludes \$100,000 advanced by local interests toward federal costs. Includes \$175,000 appropriation and \$175,000 cost for new work at C&SF St. Johns Water Management District.

³⁷Includes \$2,294,134 for reimbursement costs to Bal Harbor.

³⁸Excludes unused contributed funds of \$17,969 returned to local interests.

³⁹Includes costs of \$89,691 for recreation facilities at Moss Bluff and \$2,638,272 at Lake Tarpon.

⁴⁰Funds appropriated under General Regulatory Functions 96X3126. Include #73 permit evaluation, #74 enforcement and #75 studies.

JACKSONVILLE, FL DISTRICT

TABLE 9-B AUTHORIZING LEGISLATION

Acts	Work Authorized	Documents
Oct. 27, 1965	AQUATIC PLANT CONTROL (See Section 1 of Text) Control and progressive eradication of obnoxious aquatic plants, and continued research to develop best method of control.	H.Doc. 251, 89th Cong., 1st sess.
WRDA Aug. 17, 1999	LOWER ST. JOHNS RIVER BASIN, FL May apply the computer model developed under the feasibility study to assist non-Federal interests in developing strategies for improving water quality at 50 percent cost share.	P.L. 106-53, Aug. 17, 1999 106 th Cong., 1 st sess.
WRDA Oct. 12, 1996	TAMPA, FL May enter into a cooperative agreement under section 229 with the Museum of Science and Industry, Tampa, Fl to provide technical, planning, and design assistance to demonstrate the water quality functions found in wetlands, at an estimated total Federal cost of \$500,000.	P.L. 104-303, Oct. 12, 1996 104th Cong.
WRDA Oct. 12, 1996	WEST DADE, FL Conduct a reconnaissance study to determine the Federal interest in using the West Dade, FL, reuse facility to improve water quality in, and increase the supply of surface water to, the Everglades in order to enhance fish and wildlife habitat.	P.L. 104-303, Oct. 12, 1996 104th Cong.
NAVIGATION PROJECTS		
Aug. 26, 1937	ARECIBO HARBOR, PR (See Section 2 of Text) Construction of breakwater 1,200 feet long and dredging channel 25 feet deep and 400 feet wide with flare at entrance and widening at inner end to form a maneuvering area.	Rivers and Harbors Committee Doc. 43, Cong., 75th 1st sess.
WRDA Oct. 12, 1996	ATLANTIC INTRACOASTAL WATERWAY, ST. JOHNS COUNTY, FL Project for navigation. Operation, maintenance, repair, replacement and rehabilitation shall be a non-Federal responsibility, and the non-Federal interest shall assume ownership for the bridge.	P.L.104-303, Oct. 12, 1996 104th Cong.
Mar. 4, 1913	ATLANTIC INTRACOASTAL WATERWAY BETWEEN NORFOLK, VA AND THE ST. JOHNS RIVER, FL (See Section 3 of Text) Channel 7 x 100 feet.	H.Doc. 898, 62nd Cong., 2d sess.
Jun. 20, 1939	Channel 12 feet deep and 90-150 feet wide with cutoffs.	H.Doc. 618, 75th Cong., 3d sess.
Jul. 14, 1960	BAKERS HAULOVER, FL (See Section 4 of Text) Channel 11 x 200 feet in ocean entrance, thence 8 x 100 feet to Intracoastal Waterway; Marina basin 8 x 200 feet; reconstruction of jetties and protection of inlet shores.	H.Doc. 189, 86th Cong., 1st sess.

TABLE 9-B (Continued) AUTHORIZING LEGISLATION

Acts	Work Authorized	Documents
CANAVERAL HARBOR, FL (See Section 5 of Text)		
Mar. 2, 1945	Entrance channel jetties, a turning basin enclosed by a dike, and a barge canal with a lock.	H.Doc. 367, 77th Cong., 1st sess.
Oct. 23, 1962	Maintain improved channel, turning basin, enlarge barge channel and lock, relocate dike, provide channel and turning basin west of 35-foot turning basin, construct and operate sand-transfer plant.	S.Doc. 140, 87th Cong., 2d sess.
Report of the Chief of Engineers Oct. 1985	Mitigation of fish and wildlife losses at Port Canaveral West Turning Basin Project.	P.L. 99-662, Nov. 17, 1986 99th Cong., 2d sess
Report of the Chief of Engineers Jul. 24, 1991	Project for navigation, Canaveral Harbor, FL, as modified by the letter of the Secretary dated Oct. 10, 1991	P.L. 102-580, Oct. 13, 1992 102nd Cong., 2d sess.
WRDA Oct. 12, 1996	Modification of navigation project to reclassify the removal and replacement of stone protection on both sides of the channel as general navigation features.	P.L. 104-303, Oct. 12, 1996 104th Cong.
CHANNEL FROM NAPLES TO BIG MARCO PASS, FL (See Section 6 of Text)		
Jun. 20, 1938	Interior channel 6 x 70 feet.	H.Doc. 596, 75th Cong., 3d sess.
Jul. 14, 1960	Channel 12 x 150 feet from the Gulf to Gordon Pass, thence 10 x 100 feet to a point 400 feet south of U.S. Highway 41 Bridge, thence 10 x 70 feet to bridge and two turning basins.	H.Doc. 183, 86th Cong., 1st sess.
CHARLOTTE HARBOR, FL (See Section 7 of Text)		
Jul. 25, 1912	Channel 24 x 300 feet through Gulf through Boca Grande entrance.	H.Doc. 699, 62nd Cong., 2d sess.
Mar. 3, 1925	Depth of 27 feet at entrance and width of 500 feet at bend.	H.Doc. 113, 66th Cong., 1st sess.
Jul. 3, 1930	Channel 10 x 100 feet to Punta Gorda and a turning basin.	Rivers and Harbors Committee, Doc. 1, 70th Cong., 1st sess.
Aug. 26, 1937	Depth of 30 feet at entrance and width of 700 feet at bend.	Rivers and Harbors Committee Doc.95, 74th Cong., 2d sess.
May 17, 1950	Depth of 32 feet in entrance channel.	H.Doc. 186, 81st Cong., 1st sess.

JACKSONVILLE, FL DISTRICT

TABLE 9-B (Continued) AUTHORIZING LEGISLATION

Acts	Work Authorized	Documents
Jun. 20, 1938	EAU GALLIE HARBOR, FL (See Section 8 of Text) Channel 8 x 100 feet and a turning basin.	H.Doc. 497, 75th Cong., 3 sess.
Jun. 14, 1880	FERNANDINA HARBOR, FL (See Section 9 of Text) Entrance jetties.	Annual Report 1879
Jul. 13, 1892	Raising and extending jetties to provide a 19-foot depth.	Annual Report 1891 & 1896
Mar. 2, 1907	Improvement of inner harbor to obtain 20 to 24-foot depth and 400 to 600-foot channel width.	H.Doc. 388, 59th Cong., 1st sess.
Jun. 25, 1910	Combining improvement of Fernandina Harbor and Cumberland Sound under the general heading of Fernandina Harbor.	
Mar. 3, 1925	Provided for a 26-foot channel.	H.Doc. 227, 68th Cong., 1st sess.
Jun. 20, 1938	Provided for the 28-foot channel and turning basin.	H.Doc. 548, 75th Cong., 3d sess.
Mar. 2, 1945	Provided for reducing the maximum width of turning basin from 1,000 to 800 feet, for shifting channel line in this vicinity vicinity 50 feet northwesterly and for including in authorized project small area dredged by Rayonier, Inc.	H.Doc. 284, 87th Cong., 1st sess.
May 17, 1950	Provided for 32-foot channel and turning basin.	H.Doc. 662, 80th Cong., 2d sess.
WRDA Nov. 28, 1990	Re-designated location of turning basin until Section 107 (R&H Act of 1960) study is completed and the resulting project constructed	P.L. 101-640, Nov. 28, 1990 101st Cong.? sess.
WRDA Jan. 24, 2000	Realign the access channel in the vicinity of the Fernandina Beach Municipal Marina 100 feet to the west and cost shall be a non-Federal expense.	P.L. 106-541, Jan. 24, 2000 106 th Cong., 2 nd sess.
Jul. 14, 1960	FORT MYERS BEACH, FL (See Section 10 of Text) 12 x 150 foot channel in San Carlos Bay, thence 11 x 125 feet in Matanzas Pass to upper shrimp terminals.	H.Doc. 183, 86th Cong., 1st sess.
Auth. by Chief of Engineers Dec. 6, 1968 under Sec. 107 of 1960 R&H Act	Extension of 11 x 125 foot channel easterly about 2,000 feet to and including a turning basin adjacent to natural deep water in Matanzas Pass.	

TABLE 9-B (Continued) AUTHORIZING LEGISLATION

Acts	Work Authorized	Documents
FORT PIERCE HARBOR, FL (See Section 11 of Text)		
Def. Act of Mar. 4, 1931	Expenditure of \$20,000 for dredging channel, maintenance by local interests.	Specified in Act
War Dept. Approp. Act, Mar. 4, 1933	Expenditure of up to \$30,000 for dredging channel.	Specified in Act
Aug. 30, 1935	Maintaining channels, jetties, and revetments, and enlarging channels and turning basin to existing project dimensions.	H.Doc. 252, 72nd Cong., 1st sess. and Rivers and Harbors Committee Doc. 21, 74th Cong., 1st sess.
Report of the Chief of Engineers Dec. 14, 1987	Deepening and enlarging channels and turning basin. Total cost of \$6,742,000.	P.L. 100-676, Nov. 17, 1988 100th Cong., 2d sess.
INTRACOASTAL WATERWAY, CALOOSAHATCHEE RIVER TO ANCLOTE RIVER, FL (See Section 13 of Text)		
Mar. 2, 1945	9 x 100 foot channel; deepening channel at Casey's Pass to 9 feet and construction of Highway Bridge at Venice.	H.Doc. 371, 76th Cong., 1st sess.
Jun. 30, 1948	Original route may be modified at no excess cost to U.S.	Specified in Act
May 17, 1950	Any route in Venice-Lemon Bay area may be used.	Specified in Act
Sep. 3, 1954	Use of alternate Route C-1 in Venice-Lemon Bay area.	Specified in Act
May 10-16, 1957	Local interests to bear costs of Venice Avenue highway bridge and any other necessary crossing over Route C-1.	H.Doc. 109, 85th Cong., 1st sess.
Auth. Mar. 1, 1962 by Senate and House Public. Works Comm	Sunshine Skyway Channel to be improved and maintained to. 9 x 100 feet	
Auth. by Chief of Engineers, Mar.1, 1963, under Sec 107 of 1960 R&H Act	6 x 80 foot channel in Boca Ciega Bay.

Acts	Work Authorized	Documents
Mar. 2, 1945	Deepening to 8 feet from Ft. Myers to Jacksonville-Miami waterway near Stuart via channel across lake from Clewiston.	H.Doc. 696, 76th Cong., 3d sess.
Mar. 2, 1945	Channel to yacht basin at Ft. Myers and a basin at Stuart.	H.Doc. 736, 79th Cong., 2d sess.
WRDA Nov. 17, 1986	Deauthorized basin at Stuart.	PL 99-662, Nov. 17, 1986 99th Cong., 2d sess.
Auth. by Chief of Engineers Nov. 5, 1968, under Sec. 107 of 1960 R&H Act	Enlarge existing 8 x 90 foot section of Okeechobee Waterway for about 5 miles upstream from Ft. Myers to 10 x 100 feet.	
OKLAWAHA RIVER, FL (See Section 24 of Text)		
Sep. 19, 1890	Clearing obstructions for channel 4 feet deep from mouth to Leesburg.	Annual Report 1889, p.1360
Mar. 2, 1907	Channel 6 feet deep from mouth to head of Silver Springs Run.	H.Doc. 782, 59th Cong., 1st sess.
Jun. 25, 1910 Jul. 25, 1912	Maintenance of levels in the lakes at head of river.	Specified in Acts
Jul. 27, 1916	Acceptance of certain artificial waterways in lieu of portions of natural riverbed.	Specified in Act
PARA Jun. 26, 1934	Operation and care of lock and dam provided for with funds from appropriations for rivers and harbors.	Specified in Act
WRDA Nov. 17, 1986	De-authorized channel 6 feet deep from mouth to head of Silver Springs Run	P.L. 99-662, Nov. 17, 1986 99th Cong., 2d sess.
PALM BEACH HARBOR, FL (See Section 25 of Text)		
Mar. 13, 1934	Maintenance of improvement previously constructed by local interests.	H.Doc. 185, 73rd Cong., 2d sess.
Dec. 10, 1934	Deepening the channels and turning basin, as constructed by local of interests, to 20 feet.	Recommended by Chief Engineers to Public Works Administration Oct. 17, 1934

TABLE 9-B (Continued) AUTHORIZING LEGISLATION

Acts	Work Authorized	Documents
Aug. 30, 1935	Authorized the work previously approved by Public Works Administration, and widening the channels to existing project dimensions, enlarging the 700-foot square turning basin eastward removing the obstructive point on south side of the and inlet, revetting the banks of the inlet restoring existing jetties.	H.Doc. 185, 73rd Cong., 2d sess. and Rivers and Harbors Comm. H. Doc. 42, 74th Cong., 1st sess.
Mar. 2, 1945	Deepening the channels and turning basin to 25 feet.	H.Doc. 530, 78th Cong., Cong., 2d sess.
May 17, 1950	Extending the turning basin 550 feet southward over a 900-foot width, with a flare to the east; provided that local interests may be reimbursed not to exceed \$305,000 for work done by them on this modification subsequent to July 1, 1949.	H.Doc. 704, 80th Cong., 2d sess.
Jul. 14, 1960	An entrance channel 35 feet deep, 400 feet wide, and 0.8 mile long merging with an inner channel 33 feet deep, 300 feet wide and 0.3 mile long, thence flaring into a turning basin, 1,400 feet north-south by a minimum of 1,200 feet east-west.	H.Doc. 283, 86th Cong., 1st sess. (contains latest published map)
Report of the Chief of Engineers Dec. 10, 1985	Assume maintenance of locally expanded turning basin to a depth of 25 feet on north side of existing basin.	P.L. 99-662, Nov.17, 1986, 99th Cong., 2d sess.
WRDA Oct. 12, 1996	PALM VALLEY BRIDGE, FL (See Section 26 of Text) Replacement of a two lane bridge.	P.L.104-303 Oct. 12, 1996 104 th Cong.
Oct. 27, 1965	PONCE DE LEON INLET, FL (See Section 27 of Text) Widening and deepening channels; jetties on north and south sides of inlet; a weir in the north jetty and an impoundment basin inside the weir	H.Doc. 74, 89th Cong., 1st sess.
WRDA Aug. 17, 1999	Project for navigation and related purposes.	P.L. 106-53, Aug. 17, 1999, 106 th Cong., 1 st sess.
Mar. 3, 1925	PONCE HARBOR, PR (See Section 28 of Text) Dredging 3 continuous areas, aggregating 153 acres, to depths of 30, 18, and 9 feet, and construction of a seawall, costs to be shared by U.S. and local interests.	H.Doc. 532, 67th Cong., 4th sess.
Aug. 30, 1935	Modified conditions of local cooperation to provide that U.S. undertake all dredging at Federal expense and return local funds previously contributed for dredging, all other portions of the improvement hereafter to be at the expense of local interests.	Rivers and Harbors Committee Doc. 18, 72nd Cong., 1st sess.
Mar. 2, 1945	Eliminate previously authorized 9-foot dredging area, and provided for dredging 30-foot depth area and 18 acres off the municipal pier and for construction of the breakwater off Punta Carenero.	H.Doc. 745, 79th Cong., 2d sess.

JACKSONVILLE, FL DISTRICT

TABLE 9-B (Continued) AUTHORIZING LEGISLATION

Acts	Work Authorized	Documents
H.R. Sep. 23, 1976, S.R. Oct. 1, 1976	Eliminate previously authorized 18-foot and a portion of the 30-foot project outside the proposed 36-foot and a portion adjacent to the municipal bulkhead. Channel 36 x 600 feet from Caribbean Sea to harbor; channel 36 x 400 feet into harbor; and a 36-foot turning basin.	H.Doc. 532, 94th Cong., Cong., 2d sess.
Jul. 3, 1930	PORT EVERGLADES HARBOR, FL (See Section 29 of Text) Maintenance of harbor constructed by local interests.	Cong., 2d sess.
Aug. 30, 1935	Enlarge entrance channel and complete turning basin to 1,200 feet square.	Rivers and Harbors Committee Doc. 25, 74th Cong., 1st sess.
Jun. 20, 1938	Widen turning basin 350 feet on north side.	H.Doc. 545, 75th Cong., 3d sess.
Jul. 24, 1946	Widen turning basin 200 feet on north side, 500 feet on south side and enlarge flare at entrance channel.	H.Doc. 768, 78th Cong., 2d sess.
Jul. 3, 1958	Deepen and widen entrance channel on a new alignment and increase turning basin in size and depth.	H.Doc. 346, 85th Cong., 2d sess.
H.R. May 9, 1974; S.R. May 31, 1974	Deepen and widen entrance channel, enlarge turning basin, widen Pier 7 channel, maintenance of Berth 18 channel, and planning for a south jetty fishing walkway with construction contingent upon need as developed by detailed post authorization studies.	H.Doc. 144, 93rd Cong., 1st sess.
WRDA Jan. 24, 2000	Reimbursement of the non-Federal interest for the project for navigation, \$15,003,000 for the Federal share of costs incurred by the non-Federal interest in carrying out the project and determined by the Secretary to be eligible for reimbursement under the limited reevaluation report dated April 1998.	P.L. 106-541, Jan. 24, 2000 106 th Cong., 2d sess.
Report of the Chief of Engineers Sep. 23, 1991	Project for navigation.	P.L. 102-580, Oct.31, 1992 102nd Cong., 2d sess.
Mar. 3, 1899	REMOVAL OF AQUATIC GROWTH FROM NAVIGABLE WATERS IN THE STATE OF FLORIDA (See Section 30 of Text) Construction and operation of a suitable vessel and use of log booms for removal of water hyacinths in the navigable waters of the State.	Annual Report 1899
Jun. 13, 1902	Extermination and removal of water hyacinths by any mechanical, chemical or other means.	Specified in Act
Mar. 3, 1905	Prohibits use of any chemical process injurious to cattle.	Specified in Act

TABLE 9-B (Continued) AUTHORIZING LEGISLATION

Jun. 20, 1938	ST. AUGUSTINE HARBOR, FL (See Section 31 of Text) Channel 27 x 200 feet protected by a groin.	H.Doc. 555, 75th Cong., 3d sess.
May 17, 1950	Channel 16 x 200 feet across bar, and thence 12 feet deep to Intracoastal Waterway; jetty on south side of inlet; future landward extension of groin and jetty; and channel 10 x 100 feet in San Sebastian River.	H.Doc. 133, 81st Cong., 1st sess.
Mar. 3, 1899	ST. JOHNS RIVER, FL, JACKSONVILLE TO LAKE HARNEY (See Section 32 of Text) A channel 13 feet deep and 200 feet wide from Jacksonville to Palatka.	H.Doc. 523, 55th Cong., 2d sess. and Annual Report 1899 p. 1343
Mar. 2, 1919	The improvement of Deep Creek.	H.Doc. 699, 63rd Cong., 2d sess.
Jun. 14, 1880	Two jetties at Volusia Bar (Maintenance only; new work completed under previous project).	Annual Report for 1879, pp. 795-798
Jun. 25, 1910	A channel 100 feet wide, 8 feet deep from Palatka to Sanford with a side channel to Enterprise, and thence 5 feet deep to Lake Harney.	H.Doc. 1111, 60th Cong., 2d sess.
Jul. 3, 1930	Cutoffs at Butcher Bend, Shake Creek, and Starks Landing, and easing bends at other points.	H.Doc. 691, 69th Cong., 2d sess.
Mar. 2, 1945	A channel 10 feet deep and 100 feet wide from Palatka to Sanford, with a side channel to Enterprise and with cutoffs and easing of bends. (Cutoffs de-authorized)	H.Doc. 603, 76th Cong., 3d sess.
Mar. 2, 1945	Combining the two projects above into a single project for St. Johns River, FL, Jacksonville to Lake Harney, and for a cutoff 5 feet deep and 75 feet wide between Lake Monroe and the vicinity of Osteen Bridge (Woodruff Creek Cutoff).	H.Doc. 445, 78th Cong., 2d sess.
Jul. 24, 1946	A channel 12 feet deep and 100 feet wide from Palatka to Sanford, and in the branch to Enterprise.	S.Doc. 208, 79th Cong., 2d sess.
Mar. 2, 1945	ST. LUCIE INLET, FL (See Section 33 of Text) Channel 10 x 200 feet.	H.Doc. 391, 77th Cong., 1st sess.
Nov. 7, 1966	Modification to maintain existing channel 6 x 100 feet.	H.Doc. 508, 89th Cong., 2d sess.

JACKSONVILLE, FL DISTRICT

TABLE 9-B (Continued) AUTHORIZING LEGISLATION

Acts	Work Authorized	Documents
H.R. May 9, 1974 S.R. May 31, 1974	Extending north jetty and modifying existing jetty to provide a sand bypass weir section; excavation of sand impoundment basin; construction of south jetty with a walkway for recreational fishing; channel 10 x 500 feet through bar cut, tapering to 150 feet through the inlet, and 100 feet and 7 feet deep to the Intracoastal Waterway; and transfer of 380,000 cubic yards of material to the south beach during each two-year maintenance period.	H.Doc. 294, 93rd Cong., 1st sess.
Aug. 8, 1917	SAN JUAN HARBOR, PR (See Section 34 of Text) Anchorage (inner harbor) area of 206 acres and San Antonio Channel to 30-foot depth.	H.Doc. 865, 63rd Cong., 2d sess.
Sep. 22, 1922	Substitution of a 68-acre area 30 feet deep along southeasterly side of anchorage area, for one 25 acres in extent and of same depth extending easterly from eastern end of the San Antonio project channel.	Specified in Act
Jul. 3, 1930	Modified condition of local cooperation.	H.Doc. 45, 71st Cong., 2d sess.
Aug. 30, 1935	Entrance channel across outer bar 38 feet deep and 800 feet wide, and thence across bay to anchorage area (Anegado Reach Channel) 30 feet deep and 700 feet wide and increasing anchorage area to 239 acres to 30-foot depth.	R&H Comm. Doc. 38, 74th Cong., 1st sess.
Aug. 26, 1937	Widening Anegado Reach Channel and increasing anchorage area to 329 acres	R&H Comm. Doc. 42, 75th Cong., 1st sess.
Oct. 17, 1940	Removal to 8-foot depth of Anegado, Largo, and Capitanejo Shoals, and dredging to 30-foot depth the entrance channel and turning basin to the Graving Dock.	H.Doc. 364, 76th Cong., 1st sess.
Mar. 2, 1945	Maintenance of the 30-foot depth entrance channel and turning basin to the Army Terminal.	Specified in Act
Jul. 3, 1958	Deepening portions of entrance and approach channels and basins to Army Terminal and San Antonio Pier areas to 35-45 feet; new 32-foot depth Puerto Nuevo Channel; new 36-foot depth anchorage.	H.Doc. 38, 85th Cong., 1st sess.

TABLE 9-B (Continued) AUTHORIZING LEGISLATION

Acts	Work Authorized	Documents
Aug. 4, 1976	A bar channel 48 x 800 feet, shifting the centerline 350 feet west; deepening Anegado Channel in steps from 46 to 40 feet while reducing width to 800 feet; deepening Army Terminal Channel and turning basin to 40 feet while widening the channel to 450 feet; deepening Puerto Nuevo Channel to 40 feet and widening it to 400 feet; deepening Graving Dock Channel to 40 feet at existing 400-foot width; deepening San Antonio Channel to 38 feet at varying widths, minimum of 500 feet; deepening cruise ship basin at 30 x 250 feet; provide a 38-foot depth in Anchorage Area "E" with irregular width; six mooring dolphins for vessels using the area.	H.Doc. 574, 94th Cong., 2d sess.
Report of the Chief of Engineers Dec. 23, 1982	Modification of the authorized project to provide the deepening of the Bar Channel to 48 feet and shifting its alignment 350 feet to the west; deepening Anegado, and Army Terminal to 40 feet; deepening Graving Dock Channel, and Cruise Ship Basin, Puerto Nuevo Channel, and San Antonio Channel to 36 feet; and deepening Anchorage Area "E" to 38 feet while reducing its size and constructing six mooring dolphins within its limits. A 1,500-foot long extension to San Antonio Channel would be added to the Federal project and Sabana approach deepened to 32 feet.	P.L. 99-662 Nov. 17, 1986 99th Cong., 2d sess
WRDA Oct. 12, 1996	Modification of the project to deepen the bar channel to depths varying from 49 feet to 56 feet below mean low water with other modifications to authorized interior channels as described in the General Reevaluation Report and Environmental Assessment dated March 1994.	P.L. 104-303, Oct.12, 1996 104th Cong.
TAMPA HARBOR, FL (See Section 35 of Text) TAMPA BAY		
Mar. 3, 1899	For a channel 27 feet deep from the Gulf of Mexico to Port Tampa, 500 feet wide across the bar and 300 feet wide in the bay.	H.Doc. 52, 55th Cong., 3d sess. (Also printed in Annual Report 1899, p. 1640) Channel dimensions specified in Act
Mar. 3, 1905	For a channel depth of 26 feet with sufficient width from the Gulf of Mexico to Port Tampa.	Specified in Act
TAMPA AND HILLSBOROUGH BAYS		
Jun. 25, 1910	For a depth of 24 feet in Hillsborough Bay.	H.Doc. 634, 61st Cong., 2d sess.
Aug. 8, 1917	For a 27-foot depth from Gulf of Mexico up to and in the several channels of Hillsborough Bay, the widths to be 500 feet on the bar, 300 feet in Tampa Bay, Ybor, and Garrison Channels, and 200 feet in Hillsborough Bay, Sparkman, and Seddon Channels, with turning basins at the mouth of Hillsborough and at Ybor Estuary.	H.Doc. 634, 61st Cong., 1st sess.

Do.	Improvement of supply, distribution and conservation of water resources in Central and Southern Florida, including Lake Okeechobee agricultural area, Everglades National Park and other related areas.	H.Doc. 369, 90th Cong., 2d sess.
Approved Dec. 17, 1970 under the provisions of Section 201 of the Flood Control Act of 1965	Navigation improvements suitable for recreational craft.	H.Doc. 394, 91st Cong., 2d sess.
WRDA Nov. 17, 1986	De-authorized flood protection on Boggy Creek, near Orlando; primary works for flood control and major drainage in southwest Dade County; and navigation improvements suitable for recreational craft.	P.L. 99-662, Nov.17, 1986, 99th Cong., 2d sess
WRDA Nov. 17, 1988	Extended modified water delivery schedules to Everglades National Park.	P.L. 100-676, Nov. 17,1988,
Everglades National Park Protection and Expansion Act of 1989	Construct modifications to the Central and Southern Florida Project to improve water deliveries into the park and shall, to the extent practicable take steps to restore the natural hydrological conditions within the park.	P.L.101-229, Dec.13, 1989 101st Cong., 2d sess
WRDA Oct. 12, 1996	Modification of project for flood protection of West Palm Beach (C-51) to provide for the construction of an enlarged storm water detention area, Storm Water Treatment Area 1 East.	P.L. 104-303, Oct.12, 1996 104th Cong.
WRDA Oct.12, 1996	Modification of the project to implement the recommended plan of improvement for South Dade County (C-111), including acquisition by non-Federal interests of such portions of the Frog Pond and Rocky Glades areas as are needed for the project. Project consists of a comprehensive plan for the purpose of restoring, preserving, and protecting the South Florida ecosystem. The comprehensive plan shall provide for the protection of water quality in, and the reduction of the loss of fresh water from, the Everglades. The comprehensive plan shall include such features as are necessary to provide for the water-related needs of the region, including flood control, the enhancement of water supplies, and other objectives served by the Central and Southern Florida project. Project consists of a comprehensive plan for the purpose of restoring, preserving, and protecting the South Florida ecosystem. The comprehensive plan shall provide for the protection of water quality in, and the reduction of the loss of fresh water from, the Everglades. The comprehensive plan shall include such features as are necessary to provide for the water-related needs of the region, including flood control, the enhancement of water supplies, and other objectives served by the Central and Southern Florida project	P.L. 104-303, Oct. 12,1996 104th Cong.

TABLE 9-B (Continued) AUTHORIZING LEGISLATION

Acts	Work Authorized	Documents
WRDA Aug. 17, 1999	Amends WRDA 1999 S.528(e)(4) by predicating sponsor real estate credit on the applicability of sponsor-acquired real estate to specific restoration projects. Also expands authority to grant credit for sponsor-performed work done in furtherance of restoration projects.	P.L. 106-53 Aug. 17, 1999 106 th Cong., 1 st sess.
WRDA Jan. 24, 2000	Specific authorization for Pilot Projects and Initial Projects	P.L. 106-541, Jan. 24, 2000 106 th Cong., 2 nd sess.
KISSIMMEE RIVER RESTORATION, FL (See Section 79 of Text)		
WRDA Nov. 28, 1990	Conduct a feasibility study for the purpose of determining modifications of the flood control project for central and southern Florida, authorized by section 203 of Flood Control Act of 1948 (62 Stat. 1176), which are necessary to provide a comprehensive plan for the environmental restoration.	P.L. 101-640, Nov. 28, 1990 101st Cong., 2d sess
Report of the Chief of Engineers Mar. 17, 1992	Project for the ecosystem restoration, to construct the headwaters revitalization project, and any modifications for the environmental restoration of the Kissimmee River Basin, ensuring that implementation of the project to restore the Kissimmee River will maintain the same level of flood protection as is provided by the current flood control project.	P.L. 102-580, Oct. 31, 1992 102nd Cong., 2d sess.
EVERGLADES AND SOUTH FLORIDA ECOSYSTEM RESTORATION (See Section 77 of Text)		
WRDA Oct. 12, 1996	Authorized the Critical Projects Restoration program. If the Secretary of the Army determines, in cooperation with the non-Federal sponsor and the Task Force, that a restoration project for the South Florida ecosystem independent, immediate, and substantial Restoration, preservation, and protection benefits, and will be Generally consistent with the conceptual framework specified in the "Conceptual Plan for the Central and Southern Florida Project Study" published by the Governor's Commission for a Sustainable South Florida, the Secretary shall proceed expeditiously with the Implementation of the restoration project.	P.L. 104-303, Oct. 12, 1996 104 th Cong.,
WRDA Aug. 17, 1999	Extension of program from 1999 until 2003 and amendment to credit and reimbursement of past and future activities to non-Federal sponsor.	P.L. 106-53 Aug. 17, 1999 106 th Cong., 1 st sess.
WRDA Jan. 24, 2000	Changes cost sharing of O&M activities on Seminole Big Cypress project from 100% sponsor responsibility to 50%	P.L. 106-541, Jan. 24, 2000, 106 th Cong., 2 nd sess.
HILLSBORO AND OKEECHOBEE AQUIFER, FLORIDA		
WRDA Aug. 17, 1999	The project for aquifer storage and recovery described in the Central and Southern Florida Water Supply Study and House Document 369	P.L. 106-53 Aug. 17, 1999 106 th Cong., 1 st sess.

MOBILE, ALABAMA, DISTRICT

This district comprises a small portion of southeastern Tennessee, western George, western Florida, all of Alabama south of Tennessee River Basin, eastern Mississippi, and a small portion of southeastern Louisiana embraced in drainage basins tributary to the Gulf of Mexico, west of Aucilla River Basin, to and including the Pascagoula River Basin. The Pearl River

Basin, Mississippi was included as part of the Mobile District until October 1, 1981, when responsibilities were transferred to Vicksburg District, Lower Mississippi Valley Division. A section of the Gulf Intracoastal Water from St. Marks, Florida, to Lake Borgne Light No. 29, Louisiana is also within Mobile District.

Navigation

1. ALABAMA-COOSA RIVERS, AL AND GA

Location. Alabama River is formed 18 miles above Montgomery, Alabama, by the junctions of the Coosa and Tallapoosa Rivers. It then flows southwesterly through Alabama 318 miles and unites with the Tombigbee River about 45 miles north of Mobile, in southwestern Alabama, to form the Mobile River. (See Geological Survey maps for central and southwest Alabama.) The Coosa River is formed at Rome, Georgia, in northwest Georgia, by the junction of the Oostanaula and Etowah Rivers, which have their sources in southeastern Tennessee and northern Georgia. From Rome the Coosa River flows southwesterly through Georgia and Alabama 286 miles and unites with the Tallapoosa River near Montgomery, Alabama, at about the center of the State, to form the Alabama River. (See Geological Survey maps for northeast Alabama, southeast Tennessee, and northwest Georgia.)

Previous project. Projects for Alabama River: for details see page 1837, Annual Report for 1915; page 725, Annual Report for 1938; and page 592, Annual Report for 1944. Projects for Coosa River: for details see page 1837, Annual Report for 1915; page 728, Annual Report for 1938; and page 594, Annual Report for 1944.

Existing project. The authorized project provides for full development of the Alabama-Coosa Rivers and tributaries for navigation, flood control, power, recreation, and other purposes, in accordance with plans under preparation by Chief of Engineers, subject to modifications thereof which may be advisable for increasing development of hydroelectric power. (See Table 10-B for authorizing legislation.) Public Law 436, 83rd Congress, suspended authorization of the comprehensive plan, insofar as it provides for development of hydroelectric power for Coosa River, to permit non-Federal interests to develop the Coosa River by construction of a series of dams in accordance with conditions of a license issued pursuant to Federal Power Act and in accordance with certain other provisions and requirements of the aforementioned public law. The plan was further modified by the WRDA of 1986 to authorize planning, engineering and design for the project generally in accordance with the plans contained in Design Memorandum No. 1, General Design, dated May 1982. The present phase of improvement includes the construction of Robert F. Henry and Millers Ferry multiple-purpose improvements, Claiborne Lock and Dam, and supplemental channel work providing for a nine-foot deep navigation channel from the mouth of the Alabama River to Montgomery, Alabama, and construction of Carters Dam, a multiple-purpose improvement on Coosawattee River, Georgia.

Local cooperation. Requirements of local cooperation will be determined as formulation of plans for development of projects

progress. No action in the matter of local cooperation has been initiated.

Terminal facilities. On the east bank of the river a natural landing connects with city streets at Montgomery. There are also various natural landings along the river. Facilities and natural landings on Alabama River are considered adequate for existing commerce.

Operations and results during fiscal year.

Maintenance: Operation and maintenance for Claiborne Lock and Dam, navigation maintenance for the waterway, snagging and clearing of channels and general charges for water control management, condition surveys, engineering and design, supervision and administration amounted to \$15,552,160.

Condition at end of fiscal year. Construction was initiated on Carters Dam in April 1962, on Millers Ferry Lock and Dam in April 1963, Claiborne Lock and Dam in May 1965, and Robert F. Henry Lock and Dam in June 1966. Carters Dam was completed in FY 1980. The authorized nine-foot navigation channel to Montgomery, Alabama was opened to traffic in January 1972. Overall construction is complete in Millers Ferry Lock and Dam. Construction of Robert F. Henry Lock and Dam is complete. Total Federal cost of the existing project as of September 30, 2007 is \$141,073,814, including \$3,245,400 for new work and \$137,828,414 for maintenance. (See Table 10-L.)

1A. CLAIBORNE LOCK AND DAM, AL

Location. The site is in Monroe County at mile 72.5 on the Alabama River, 15 miles northwest of Monroeville and 5.7 miles upstream from the U.S. Highway 84 bridge.

Existing project. The existing project consists of a short earth dike on the right bank, a combination of a fixed-crest and gated spillway extending across the river channel and into the left bank, a navigation lock and mound on the left bank, and an earth dike extending across the left overbank to high ground. Normal upper pool is elevation 35 and the minimum pool will be elevation 32 to provide storage for reregulation of Millers Ferry powerplant releases. The 60-mile long reservoir has an area of 5,850 acres and a volume of 96,360 acre-feet. For other information see description of Alabama-Coosa projects.

Operations and results during fiscal year.

Maintenance: Maintenance cost included under overall Alabama-Coosa Rivers, Alabama and Georgia.

Condition at end of fiscal year. Construction began in May 1965 and was completed in FY 1976 at a total cost of \$27,997,450. Recreation attendance during FY 2007 totaled 223,609 visits.

1B. COOSA RIVER, MONTGOMERY TO GADSDEN, AL

Location. The Coosa River is one of the two major tributaries forming the Alabama River approximately 18 miles northeast of Montgomery, Alabama. From its source at the juncture of the Etowah and Oostanaula Rivers in northwest Georgia, it flows southwesterly about 286 miles to join with the Tallapoosa River in forming the Alabama River.

Existing project. The improvement of the Alabama-Coosa River for navigation to Rome, Georgia was authorized by Congress in the River and Harbor Act of 1945. A report in House Document 320, transmitted to Congress on January 27, 1960, recommended that the navigation project for the Coosa River from Montgomery to Gadsden be accomplished after the waterway to Montgomery was assured. The plan of improvement identified in House Document 320 provided for a waterway 9 feet deep with widths of 200 feet to Montgomery, Alabama, and 150 feet to Rome, Georgia. The waterway to Montgomery is complete. The plan for the Coosa River segment of the waterway between Montgomery and Gadsden was further modified by the WRDA of 1986 to authorize planning, engineering and design for the project generally in accordance with the plans contained in Design Memorandum No. 1, General Design, dated May 1982. Total Federal cost of the existing project as of September 30, 2007 is \$14,988,935 for new work.

2. APALACHICOLA BAY, FL

Location. The project is on the coast of northwest Florida 160 miles east of Pensacola Harbor. (See Coast and Geodetic Survey Chart 11401.)

Previous project. For details, see page 1833, Annual Report for 1915, and page 689, Annual Report for 1938.

Existing project. The existing project provides for: (a) A channel 10 feet deep and 100 feet wide from the 10-foot depth in Apalachicola Bay, across St. George Island, to within 300 feet of the gulf shore, thence increasing uniformly in width to 200 feet at the shore and continuing with that width to the 10-foot depth in the Gulf of Mexico, with twin jetties extending from the dune line to the outer end of the channel; (b) an inner bar channel, 10 feet deep and 100 feet wide, in Apalachicola Bay; (c) a boat basin 200 feet by 880 feet and 9 feet deep at Apalachicola, Florida, with a connecting channel 9 feet deep and 80 feet wide through Scipio Creek to Apalachicola River; (d) a channel known as Link Channel, 10 feet deep and 150 feet wide, in Apalachicola Bay; (e) a channel generally parallel to the shore at Eastpoint, Florida, 6 feet deep, 100 feet wide, and about 6,000 feet long, and a connecting channel 6 feet deep and 100 feet wide to water at the same depth in St. George Sound, with twin breakwaters on either side parallel to the shore and having a total length of 5,300 feet; (f) a channel 10 feet deep and 100 feet wide through Bulkhead Shoals, connecting Apalachicola Bay with St. George

Sound; and (g) a 6-foot by 100-foot channel about one mile long, generally parallel to the shore at Two Mile, Florida, with a 6-foot by 100-foot connecting channel to water of the same depth in Apalachicola Bay. Mean range of tide throughout this harbor is 1.6 feet. Extreme range, except during storms, is about three feet. Plane of reference is mean low water. (See Table 10-B for authorizing legislation.)

Local cooperation. Requirements have been fully complied with.

Terminal facilities. Facilities consist of pile-and-timber wharves which are considered adequate for existing commerce.

Operations and results during fiscal year.

Maintenance: Dredging, condition surveys, supervision and administration and other miscellaneous costs amounted to \$6,267.

Condition at end of fiscal year. The existing project, authorized by the 1954 River and Harbor Act, was completed in 1959, including reimbursement to local interests for approved work, as authorized by the 1958 River and Harbor Act. Improvements at Two Mile except for modifications authorized in 1975 were completed in September 1964. Construction of the breakwater and channel improvements authorized in 1975 at Two Mile was completed in September 1977. Construction of breakwaters at Eastpoint authorized in 1983 was completed in March 1984. Total Federal cost under existing project as of September 30, 2007 is \$2,033,461 for new work and \$10,051,742 for maintenance, a total of \$12,085,203.

3. APALACHICOLA, CHATTAHOOCHEE, AND FLINT RIVERS, AL, GA, AND FL

Location. The Apalachicola River is formed at the southwest corner of the State of Georgia by the junction of the Chattahoochee and Flint Rivers and flows south 108 miles emptying into Apalachicola Bay. The Florida River enters the Apalachicola from the east at mile 45.4 and the River Styx also enters from the east at mile 36.7 and Chipola River enters from the west at mile 28.2. (See Coast and Geodetic Survey Chart 11401.) The Chattahoochee River, 418 miles long, rises in northeast Georgia and flows southwesterly to West Point, and thence southerly to join the Flint River at the southwest corner of Georgia, forming the Apalachicola River. (See Geological Survey maps for northwest Georgia.) The Flint River, 330 miles long, rises in west central Georgia, flows generally southeasterly to Albany, and thence southwest to the southwest corner of the State, where it joins the Chattahoochee River to form the Apalachicola River. (See Geological Survey maps for southwest Georgia.)

Previous project. For details see page 484 of Annual Report for 1963.

Existing project. The authorized project provides for development of the Apalachicola, Chattahoochee, and Flint Rivers for navigation, flood control, hydropower, and recreation. Navigation features of the existing project consist of a continuous 9-foot by 100-foot channel in the Apalachicola River from the intersection of the Gulf Intracoastal Waterway to the confluence of the Chattahoochee and Flint Rivers, 104 miles, thence to Columbus, Georgia, on the Chattahoochee River, 164 miles, and to Bainbridge, Georgia, on the Flint River, 29 miles, and a 3-foot by 100-foot channel on the Flint River from Bainbridge to Albany, Georgia, 74 miles, thence a channel suitable for light draft vessels at moderate stage to Montezuma, Georgia, 79 miles to be accomplished by dredging, contract works, and construction of three locks and dams (Jim Woodruff, George W. Andrews, and Walter F. George) along the 9-foot depth channel, two multipurpose dams (West Point and Buford) on the Chattahoochee River. Three multipurpose dams (Lower Auchumpkee Creek, Lazer Creek, and Spewrell Bluff) on the Flint River were deauthorized in the Water Resources Development Act of 1986. The project also provides for minor improvements of certain streams tributary to the Apalachicola River, including a 9-foot by 100-foot side channel, approximately 2,000 feet long, from Apalachicola River to Apalachicola River Industrial Park at Blountstown, Fla. Plane side of reference is mean low water. Hydropower and flood control storage is provided at Sidney Lanier, Walter F. George, and West Point, and hydropower is provided at Jim Woodruff. For further details see Annual Report for 1962. The project was originally authorized in section 2 of the River and Harbor Act of 1945, was further modified by the WRDA of 1986 (P.L. 99-662). (See Table 10-B for authorizing legislation.)

Mean range of tide at the mouth of Apalachicola River is 1.6 feet. At the point where the river is formed the variation between low and high water is about 37 feet. On the Chattahoochee River, variation between average low and high water is about 20 feet, and extreme fluctuation is 65.3 feet at Eufaula. On the Flint River the extreme fluctuation of stage due to flood is 40 feet, while average variation between low and high water is about 21.5 feet. A Comprehensive Basin Study has been completed on the Apalachicola, Chattahoochee, Flint (ACF), and Alabama-Coosa-Tallapoosa (ACT) River Systems. No maintenance dredging has been conducted on the Apalachicola River portion of the navigation project since 2001, and the State of Florida has denied Section 401 water quality certification for the project. A report to higher headquarters was submitted in February 2006, and in July 2006 it was determined that maintenance dredging of the Apalachicola River portions of the project would be deferred.

Local cooperation. The six Florida Counties that originally served as local sponsors for the Florida portion of the waterway have all informed the District in writing that they no longer wish to serve as local sponsors. The State of Florida has also declined assumption of responsibilities of local sponsorship. At this time no items of local cooperation are being complied with. No local

sponsors are required for the Alabama and Georgia portions of the waterway.

Terminal facilities. About 200 feet of public docks, in addition to private wharves, are available at Apalachicola, Florida. There are numerous constructed and natural landings along the entire system for launching small craft. For details of other terminal facilities, which are considered adequate for existing commerce, see individual project descriptions. See also Table 10-M on locks and dams and multiple-purpose development included in existing project.

Operations and results during fiscal year.

Maintenance: Operation and maintenance of George W. Andrew Lock and Dam is included in overall project. All other cost for the project amounted to \$2,602,251.

Condition at end of fiscal year. Improvement of Apalachicola River channel by dredging to provide project dimensions throughout is complete. All major construction on Lake Sidney Lanier Dam, George W. Andrews Lock and Dam, Jim Woodruff Lock and Dam, Walter F. George Lock and Dam and West Point are complete. Channel rectification in Apalachicola River was completed December 1970. More detailed information concerning condition at the end of fiscal year for individual locks and dams and multiple-purpose developments comprising the system is presented under their respective project titles elsewhere in this report. Total Federal cost under existing project as of September 30, 2007 is \$4,452,162 for new work and \$162,183,738 for maintenance, a total of \$166,635,900. (See Tables 10-A and 10-M for fiscal year costs and summaries of overall project.)

3A. GEORGE W. ANDREWS LOCK AND DAM, AL AND GA

Location. The project is on the Chattahoochee River about 46.5 miles above its mouth and about one mile below the town of Columbia, Alabama, near the head of Jim Woodruff Reservoir. (See Geological Survey maps for southeast Alabama). The pool extends up the navigation channel about 28 miles upstream to Walter F. George Lock and Dam.

Existing project. This single-purpose project provides for a concrete fixed-crest spillway 340 feet long extending into the right bank with a crest at elevation 102 feet national geodetic datum, a concrete gate spillway adjacent to the lock 280 feet long with crest at elevation 82 feet national geodetic datum, a single-lift lock with usable chamber dimensions of 82 feet by 450 feet, and a maximum lift of 25 feet. Depths are 13 feet over the lower sill and 19 over the upper sill at normal pool elevation. The underlying foundation is limestone. The project provides for maintenance and care. The House Committee on Public Works, by resolution adopted May 19, 1953, approved the plan as proposed by the Chief of Engineers for a high dam at Walter F. George site and a low dam at the Fort Benning site and a high dam at the upper Columbia site, construction of which was authorized by the 1946 River and

Harbor Act as the initiation and partial accomplishment of the plan for full development of the Apalachicola, Chattahoochee, and Flint River system. (See Table 10-B for authorizing legislation.)

Local cooperation. Local interests must operate all movable span bridges, provide suitable public terminals, and hold the United States free from damages. These conditions are being complied with.

Terminal facilities. At Columbia, Alabama, there is a public wharf with concrete deck for handling general cargo and a bulk petroleum terminal with an unloading dock. Facilities are considered adequate for existing commerce.

Operations and results during fiscal year.

Maintenance: Maintenance cost included under overall Apalachicola, Chattahoochee and Flint project. Recreation attendance for FY 2007 totaled 231,869.

Condition at end of fiscal year. Construction of the lock and dam began in March 1959 and was completed in November 1963 at a total cost of \$13,038,427. (See also Table 10-M).

**4. AQUATIC PLANT CONTROL
(RIVER AND HARBOR ACT OF 1965)**

Location. Navigable water, tributary streams, connecting channels and other allied waters in Mobile District.

Existing project. The existing project provides for management and control of water hyacinth, alligatorweed, Eurasian watermilfoil, hydrilla, and other obnoxious aquatic plant growths from navigable water, tributary streams, connecting channels, and other allied waters of the United States, in the combined interest of navigation, flood control, drainage, agriculture, fish and wildlife conservation, public health, and related purposes, including continued research for development of the most effective and economical control measures to be administered by the Chief of Engineers, under the direction of the Secretary of the Army, in cooperation with other Federal and State agencies. Research and planning cost prior to construction shall be borne fully by the United States. (See Table 10-B for authorizing legislation).

Local cooperation. Local interests shall agree to hold and save the United States free from claims that may occur from control operations and to participate to the extent of 50 percent of such operations. Requirements are being met in the State of Alabama by the Department of Conservation and Natural Resources.

Operations and results during fiscal year. Environmental studies amounted to \$13,859.

Condition at end of fiscal year. Total Federal cost under the exiting project as of September 30, 2007 is \$994,788. Contributed funds for maintenance amount to \$21,225.

5. BAYOU CODEN, AL

Location. The project is located in a small tidal stream on the southern coast of Mobile County, Alabama, emptying into Mississippi Sound about 7.6 miles northwest of Cedar Point, the southern tip of western mainland shore of Mobile Bay. (See Coast and Geodetic Survey Chart 11376.)

Previous project. For details see Annual Report for 1945, page 843.

Existing project. The existing project provides for a channel 8 feet deep by 60 feet wide extending from La Belle Avenue bridge south for about 3,000 feet through the bayou to Portersville Bay, thence 8 feet deep by 100 feet wide extending about 2.3 miles westward across Portersville Bay to connect with the Bayou La Batre channel, and a turning basin 8 feet deep by 60 feet wide by 100 feet long on the west side of the bayou channel about 500 feet south of the La Belle Avenue bridge. Mean tidal range is 1.75 feet, and extreme, except during storms, is 3.5 feet. Plane of reference is mean low water. (See Table 10-B for authorizing legislation.)

Local cooperation. Requirements have been fully complied with.

Terminal facilities. Small privately-owned timber dock piles used in connection with fishing industry in this locality are adequate for existing commerce. A small ship building facility is located near the upper limits of the channel. The marina which will accommodate about 12 small recreational craft, and a slip with facilities for loading oyster shells are located near the mouth of the bayou, and are maintained by the Alabama Department of Conservation.

Operations and results during fiscal year.

Maintenance: Condition surveys and miscellaneous cost amounted to \$333,979.

Condition at end of fiscal year. That portion of the project authorized prior to the 1969 modification was completed in 1956. Construction authorized in 1969 was initiated March 31, 1975 and completed March 26, 1976. Total Federal cost under existing project as of September 30, 2007 is \$330,701 for new work and \$3,466,503 for maintenance, a total of \$3,797,204. Contributed funds expended for new work amount to \$100,000 and \$131,912 for maintenance.

6. BAYOU LA BATRE, AL

Location. Bayou La Batre is a tidal stream about 10 miles long, emptying into Mississippi Sound on the southern coast of Mobile County, AL., about 10 miles northwest of Cedar Point, the southern tip of the western mainland shore of Mobile Bay. (See Coast and Geodetic Survey Chart 11373.)

MOBILE, ALABAMA, DISTRICT

Previous project. For details see Annual Report for 1945, page 844.

Existing project. The existing project provides for a 18-foot by 120-foot channel from Pascagoula Ship channel, connecting with the GIWW, along the GIWW alignment, connecting with an extension of the previous 12-foot channel alignment, through Mississippi Sound to the mouth of the bayou, a total distance of approximately 20 miles; then provides for a 12-foot by 100-foot channel to a point about 2,800 feet south of the highway bridge, thence a channel 12 feet deep by 75 feet wide to the bridge, with the channel widened at a point 0.6 mile below the bridge to provide a turning basin 12 feet deep and about 2.6 acres in area. Authorized by the Water Resources Development Act of 1990, the plan of improvement includes deepening channel to 18-foot by 100-foot from the mouth through the turning basin, a distance of about 1.8 miles; deepen channel from turning basin to 0.29 miles above highway 188 bridge to 14-feet by 75-feet, a distance of about 0.89 miles; extend a 14-foot by 50-foot channel from turning basin into Snake Bayou for about 730 feet and a 12-foot by 50-foot channel within Snake Bayou about 790 feet. Mean tidal range is 1.75 feet, and extreme, except during storms, is 3.75 feet. Plane of reference is mean low water. (See Table 10-B for authorizing legislation.)

Local cooperation. Requirements have been fully complied with.

Terminal facilities. Wooden wharves have been provided at seafood processing plants and public launching ramps are available. Several boatways for construction of small seagoing vessels are also available. Facilities are adequate for existing commerce.

Operations and results during fiscal year.

New work: None.

Maintenance: Condition surveys, environmental permits and miscellaneous costs amounted to \$597,846.

Condition at end of fiscal year. The existing project was modified December 30, 1966 under the discretionary authority of the Chief of Engineers to include a turning basin. The project was completed in March 1967. The contract for deepening the Sound Channel was completed in May 1994. The construction of the Bayou Channel was completed in September 1997. Total Federal cost under existing project as of September 30, 2007 is \$5,755,195 for new work and \$13,002,984 for maintenance, a total of \$18,758,179. Contributed funds from local interests for new work amount to \$678,618.

7. BILOXI HARBOR, MS

Location. The project is located on Mississippi Sound in southeastern Mississippi, 32 miles by water west of Pascagoula Harbor, Mississippi, and 14 miles east of Gulfport Harbor, Mississippi (See Coast and Geodetic Survey Chart 11373.)

Previous project. For details see page 584, Annual Report for 1962.

Existing project. The existing project provides for a continuous channel 12 feet deep, 150 feet wide and 23 miles long from the Gulf Intracoastal Waterway through Mississippi Sound east of Deer Island, Biloxi Bay, Back Bay, Cranes Neck, and a land cut to Gulfport lake, including a 500-foot by 2,600-foot basin in the lake, thence a 12-foot deep by 100-foot wide channel for about two miles westward from the west end of the lake, terminating in a 300-foot by 500-foot basin; a 12-foot by 100-foot channel from the main channel in Big Lake to and up Bayou Bernard to the Air Force oil terminal at about mile 2.6; a 12-foot by 150-foot spur channel from the main channel in Biloxi Bay for about one mile, terminating in a 400-foot by 600-foot turning basin opposite Ott Bayou; continuation of maintenance of the 12-by 150-foot lateral channel westward about 2.2 miles to Biloxi's south waterfront; a 10-foot by 150-foot channel from Mississippi Sound, passing west of Deer Island to a point where it connects to the 12-foot by 150-foot lateral channel at Biloxi's south waterfront. Construction for the modifications lateral channel authorized by River and Harbor Act of November 7, 1966 was commenced in FY 1974 and completed in February 1975. Further modifications to the project were authorized by the Chief of Engineers on March 28, 1979, which provided for a channel 10 feet deep, 100 feet wide and 300 feet long extending northward from the Biloxi Lateral Channel, and into a rectangular basin, approximately 300 by 370 feet, for use by commercial small craft, and an East Harrison County Canal project which provides for a 12-foot project depth, 130-foot wide and about 2,100 feet long, and a 300 by 300 foot turning basin also to a 12-foot project depth. This work was completed in April 1980.

Cost of modification as authorized by the 1966 River and Harbor Act was \$664,390. That portion of the project providing for an entrance channel 6 feet deep, 50 feet wide,

and about 1,800 feet long into Old Fort Bayou, as authorized by the 1945 River and Harbor Act, is inactive. Estimated cost (1954) of this portion was \$6,000. (See Table 10-B for authorizing legislation.)

Local cooperation. Requirements have been fully complied with.

Terminal facilities. A number of wooden piling-and-timber piers for small craft and fishing boats, a bulk gasoline terminal, several boat ways, and concrete products plant are available.

Operations and results during fiscal year.

Maintenance: Dredging, supervision and administration and miscellaneous costs totaled \$332,000.

Condition at end of fiscal year. The existing project, prior to the modification authorized in 1966, was commenced in 1931 and completed in 1962. The 1966 modification was completed in FY 1975. The 1979 modification was completed in 1980. Total

Federal cost under existing project as of September 30, 2007 is \$1,431,919 for new work and \$22,438,577 for maintenance, a total of \$23,870,496. Contributed funds for new work amount to \$102,600. Contributed funds for maintenance amount to \$238,640.

8. BLACK WARRIOR AND TOMBIGBEE RIVERS, AL

Location. Black Warrior River rises in northern Alabama above Birmingham and flows generally southwesterly to unite with the Tombigbee River at Demopolis, Alabama. Thence the Tombigbee flows south, uniting with the Alabama River to form the Mobile River 45 miles above the head of Mobile Bay. Distance by water from Mobile to vicinity of Birmingham is about 430 miles.

Previous project. For details see page 732, Annual Report for 1938.

Existing project. The existing project provides for a channel 9 feet deep and 200 feet wide from the mouth of the Tombigbee River, 45 miles above Mobile, to the vicinity of Birmingham, via the Tombigbee and Black Warrior Rivers, to mile 430.4 on Sipsey Fork, mile 429.6 on Mulberry Fork and mile 407.8 on Locust Fork, and for maintenance by snagging of Mobile River above the mouth of Chickasaw Creek, a total waterway distance of about 408 miles. The total lift of 255 feet is accomplished by six locks and dams. The original construction program, consisting of 17 dams and 18 lifts, was completed in 1915. Replacement of the original structures with new 110-by 600-foot locks and dams, under the modernization program is as follows: William Bacon Oliver replaced locks 10, 11, and 12; Armistead I. Selden replaced locks 8 and 9; Demopolis replaced locks 4, 5, 6, and 7; Coffeeville (Jackson) replaced locks 1, 2, and 3; and Holt replaced locks 13, 14, 15, and 16. Thus, 16 of the original locks have been replaced by five new locks. Bankhead Lock and Dam (Lock 17) rehabilitation to replace the original double lift lock with a single lift lock was completed in 1980. The Coffeeville Lock and Dam wildlife refuge, authorized in 1960, includes 4,250 acres within the reservoir area and along its boundaries. A replacement lock for the old Oliver Lock located 2,300 feet downstream has been completed. The replacement lock has dimensions of 110 feet by 600 feet. A fixed crest spillway extends 800 feet across the river. Minimum provision was provided to allow construction of a hydropower plant. (See Table 10-B for authorizing legislation.)

Tidal influence extends upstream from Mobile 101.6 miles to Coffeeville Lock and Dam, where tidal effect is apparent only at low stages of the river. At Mobile the mean and extreme tidal ranges are 1.5 and 3.6 feet, respectively. These are at times slightly increased by the effect of winds. The greatest fluctuation of river stages is at Demopolis, Ala., the maximum being 59.7 feet. Maximum fluctuations at other points are 40 feet at old lock 1, which is 100.6 miles from Mobile; 57.8 feet at Tuscaloosa, 346.1 miles from Mobile; 13 feet at Birminghamport, 404.9 miles from Mobile; and 27 feet at Cordova, 424.3 miles from Mobile.

Ordinary fluctuations at these points are at old lock 1, 20 feet; at Demopolis, 35 feet; at Tuscaloosa, 40 feet; at Birminghamport, four feet; and at Cordova, seven feet. Works of improvement reduced the amount of fluctuations at different points by three to 10 feet.

Local cooperation. Requirements have been fully complied with.

Terminal facilities. Docks, storage facilities, and handling equipment have been provided as required at most loading and unloading points along the waterway. These include facilities for handling petroleum and petroleum products, coal, ores, sand and gravel, pulpwood, manufacturers, and various other commodities. While most terminal facilities are privately owned, many are available for use by the general public. Facilities are considered adequate for existing commerce. (See Table 10-N for existing locks and dams.)

Operations and results during fiscal year.

Maintenance: Contract dredging of the river system, condition surveys, engineering and design cost supervision, administration and other general charges for the overall river project totaled \$19,586,721. Recreation attendance for FY 2007 totaled 3,829,862 visits.

Condition at end of fiscal year. Work on the project, commenced in 1887, was essentially completed in 1915. Since then three of the original locks and dams (10, 11 and 12) were replaced by William Bacon Oliver (Tuscaloosa) Lock and Dam which was opened to navigation in August 1939; four original lock and dams (4, 5, 6 and 7) were replaced by Demopolis Lock and Dam which was opened to navigation in August 1954; two original locks and dams (8 and 9) were replaced by Warrior Lock and Dam which was opened to navigation in October 1957; three original locks and dams (1, 2 and 3) were replaced by Coffeeville Lock and Dam which was opened to navigation in August 1960; and four original locks and dams (13, 14, 15 and 16) were replaced by Holt Lock and Dam which was opened to navigation in June 1966. Rehabilitation of the spillway at John Hollis Bankhead Lock and Dam commenced in 1966, and physically completed February 6, 1970. Replacement of the double lift lock with a single lift lock at John Hollis Bankhead Lock and Dam commenced in April 1970 and was completed in 1980. The power plant at John Hollis Bankhead Lock and Dam and Holt Lock and Dam, was built and is operated by the Alabama Power Co. Construction of the new Oliver Lock and Dam is completed with the new lock open to traffic as of July 1991. Project construction began in November 1986 and is scheduled for completion in January 1996. Total Federal cost under existing project as of September 30, 2007 is \$88,461,935 for new work and \$571,294,258 for maintenance, and \$52,292,880 for major rehabilitation, a total of \$712,049,073.

9. BON SECOUR RIVER, AL

Location. Rises 2 miles south of Foley, Ala., and flows southerly about 8 miles, emptying into Bon Secour Bay, an arm of Mobile Bay in southwest Alabama.

Existing project. A 10- by 80-foot channel from Gulf Intracoastal Waterway through Bon Secour Bay to mouth of Bon Secour River and extending up river to vicinity of Swifts Landing, thence 6 by 80 feet up river to a point about 600 feet above Oak Landing with two turning and maneuvering areas 150 feet wide and 1,100 to 1,200 feet long opposite Swifts Landing and ice loading dock. Also a 10 by 80 foot South Fork channel from the intersection with the Bon Secour channel, 1.14 miles to a 150 x 150 foot turning basin. Plane of reference is mean low water. Overall length of improvement is about 4.7 miles. Mean tidal range is about 1.5 feet and extreme, except during storms, is 3.5 feet. Existing project was authorized by Chief of Engineers, May 16, 1963, under authority in Section 107, River and Harbor Act of 1960.

Local cooperation. Requirements have been fully complied with.

Terminal facilities. A number of pile-and-timber marginal wharves used by the seafood industry and a marine ways are located along the existing project. These, together with numerous privately owned piers, are considered adequate for existing commerce.

Operations and results during fiscal year.

Maintenance: Contract dredging, condition surveys, supervision and administration and miscellaneous cost \$7,990.

Condition at end of fiscal year. Project was commenced in July and completed in October 1964. Total Federal cost under existing project as of September 30, 2007 is \$150,615 for new work and \$2,891,686 for maintenance, a total of \$3,042,301. Contributed funds for new work amounted to \$9,700.

10. CARRABELLE HARBOR, FLORIDA

Location. Carrabelle Bar and Harbor is located 50 miles south, southeast of Tallahassee, Florida, on St. George Sound and the Gulf of Mexico.

Existing Project. The existing project provides for a 27- by 200-foot channel from the Gulf of Mexico for 3 miles to a point west of Dog Island, thence a 25- by 150-foot channel for 5 miles through St. George Sound and Carrabelle River to a turning basin 500 feet square and 25 feet deep at the town of Carrabelle, a 10- by 100-foot channel from turning basin for 0.6 mile to U.S. 98 bridge, thence a 10- by 80-foot channel for 3 miles to the confluence of New and Crooked Rivers. Plane of reference is mean low water. Channels above the turning basin were authorized May 17, 1965 by Chief of Engineers under authority in Section 107 of the River and Harbor Act of July 14, 1960. Other features of existing project were authorized by River and Harbor Act of September 3, 1954. The mean tidal range is 2.2 feet, and extreme is 3.0 feet, exclusive of storms.

Local Cooperation. Items of local cooperation have been furnished by the Board of County Commissioners, Franklin County, Florida.

Terminal Facilities. Existing terminal facilities are adequate for the current needs of the project.

Operations and results during fiscal year.

Maintenance: Miscellaneous cost \$0.

Condition at end of fiscal year. All new work for this project was completed in 1965. Total Federal cost of the existing project as of September 30, 2007 is \$481,627 for new work and \$1,067,101 for maintenance, a total of \$1,548,728.

11. DAUPHIN ISLAND BAY, AL

Location. The project is located between Dauphin and Little Dauphin Island on the west side of the entrance to Mobile Bay, about 30 miles south of Mobile, Alabama and 55 miles west of Pensacola, Florida. (See Coast and Geodetic Survey Chart 11376.)

Existing project. The existing project provides for: (a) A channel 7 feet deep and 150 feet wide from Mobile Bay to an anchorage basin of the same depth, and about 7 acres in area, in the marsh just north of Fort Gaines on Dauphin Island; a channel 6 feet deep and 40 feet wide from the anchorage basin to Dauphin Island Bay; and a jetty and revetment to protect the entrance channel; and (b) an anchorage basin 7 feet deep and 500 feet square at Dauphin Island Village, with an entrance channel of like depth, 100 feet wide and about 8,300 feet long, extending to the 7-foot hydrographic contour in Mississippi Sound. Mean tidal range is 1.1 feet, and extreme, except during storms is about 4 feet. Plane of reference is mean low water. (See Table 10-B for authorizing legislation.)

Local cooperation. Requirements have been fully complied with.

Terminal facilities. Several privately-owned wharves for handling seafood, a public dock and mooring slip, and a pier for recreational craft are located on the village basin. A marina, public launching ramp, and a number of private piers are located on the bay. Facilities are considered adequate for existing commerce.

Operations and results during fiscal year.

Maintenance: Contract dredging, condition surveys, supervision and administration and miscellaneous costs \$7,791.

Condition at end of fiscal year. The project was completed in July 1959. Total Federal cost under existing project as of September 30, 2007 is \$292,864 for new work and \$6,134,520 for maintenance, a total of \$6,427,384.

12. DOG AND FOWL RIVERS, AL

Location. Dog and Fowl Rivers are primarily tidal streams emptying into the west side of Mobile Bay, 8.5 and 17 miles, respectively, south of central Mobile (See Coast and Geodetic Survey Chart 11376.)

Existing project. The Dog River project provides for a 7 by 100-foot channel with a total length of 4.5 miles to provide access to the Mobile ship channel.

The Fowl River project provides for a channel 8 feet deep and 100 feet wide from Mobile Bay into and up Fowl River to deep water about 6,700 feet above its mouth. Total length of the channel is about 2.6 miles. Plane of reference is mean low water. Mean range of tide is about 1.5 feet in Dog River. Extreme range during storms is about 3.6 feet. This segment of the project was completed in November 1973. (See Table 10-B for authorizing legislation.)

Local cooperation. Requirements have been fully complied with.

Terminal facilities. Existing facilities consist of a boatyard for fabricating steel vessel hulls, nine marinas, four marine ways, a yacht basin on Dog River; two marinas on Fowl River, and numerous timber piers and docks on both rivers. Facilities are considered adequate for existing commerce.

Operations and results during fiscal year.

Maintenance: Condition surveys and other miscellaneous cost \$166,065.

Condition at end of fiscal year. The existing Fowl River portion of the project was commenced in August 1973 and completed in November 1973. Work on the Dog River channel realignment was initiated and completed during FY 1986. Total Federal cost on the existing project as of September 30, 2007 is \$8,871,091; \$391,354 for new work and \$8,479,737 for maintenance. Contributed funds for new work amounted to \$195,626.

13. EAST PASS CHANNEL FROM GULF OF MEXICO INTO CHOCTAWHATCHEE BAY, FL

Location. East Pass Channel is located in the entrance from the Gulf into Choctawhatchee Bay at eastern end of Santa Rosa Island, 48 miles east of the entrance into Pensacola Bay and 49 miles west of the new entrance to St. Andrews Bay. (See Coast and Geodetic Survey Chart 11388.)

Previous project. For details see page 672 of Annual Report for 1937.

Existing project. The existing project provides for a 12-foot by 180-foot channel from the Gulf of Mexico into Choctawhatchee Bay, and a 6-foot by 10-foot channel from East Pass Channel into Old Pass Lagoon. The project consists also of two converging jetties spaced 1,000 feet apart at the seaward end. Mean range of tide is 1.3 feet; extreme range, except during storms, is 2.5 feet. Plane of reference is mean low water. (See Table 10-B for authorizing legislation.)

Local cooperation. Requirements have been fully complied with.

Terminal facilities. Small privately-owned pile-and-timber piers used in connection with the fishing industry in this locality are considered adequate for existing commerce.

Operations and results during fiscal year.

Maintenance: Condition surveys, supervision and administration and miscellaneous cost \$7,172.

Condition at end of fiscal year. Construction of the 1965 modification was commenced October 1967 and completed January 1969. Total Federal cost under existing project as of September 30, 2007 is \$916,715 for new work and \$17,228,755 for maintenance, a total of \$18,145,470. Contributed funds for new work from local interests amount to \$398,000.

14. FLY CREEK, AL

Location. Fly Creek (Volanta Bayou) is a small stream about 4.5 miles long rising in Baldwin County, Alabama, 3 miles east of town of Fairhope, from whence it flows northerly, thence westerly and southerly, to form an estuary on eastern shore of Mobile Bay just north of Fairhope and about 13 miles southeast of Mobile, Alabama. (See U.S. Coast and Geodetic Survey Chart No. 11376.)

Existing project. Provides for a channel 6 feet deep, 80 feet wide, and about 1,650 feet long from 6-foot depth in Mobile Bay to a turning basin of same depth, 100 feet wide and 350 feet long, in Fly Creek. Mean tidal range in vicinity of project is about 1.3 feet, and extreme, except during storms, is 3.5 feet.

Existing project was authorized by the River and Harbor Act of May 17, 1950, (H. Doc. 194, 81st Cong., 1st Sess.). The project document contains the latest published map.

Local cooperation. Requirements have been fully complied with.

Terminal facilities. Fairhope Yacht Club has facilities for small recreational craft on the south bank near mouth of creek, consisting of a pile-and-timber service wharves, several sheet metal boat sheds, boat slips, and other mooring facilities. There is also a commercial marina on north bank of creek.

Operations and results during fiscal year.

Maintenance: Condition surveys and other miscellaneous costs \$447,872.

Condition at end of fiscal year. Project was commenced in August and completed in October, 1957. Total project costs as of September 30, 2007 amounted to \$1,148,835 of which \$29,000 was for new work and \$1,119,835 for maintenance.

15. GULF INTRACOASTAL WATERWAY BETWEEN APALACHEE BAY, FL AND MEXICAN BORDER (MOBILE DISTRICT)

Location. The project extends westward from Apalachee Bay, Florida, along the Gulf coast to the Rigolets, Louisiana, via a

MOBILE, ALABAMA, DISTRICT

series of coastal lakes, bays, sounds, and land cists. (For further details see Annual Report for 1962.)

Previous project. For details see page 906, Annual Report for 1930.

Existing project. The existing project provides for a waterway 12 feet deep and 125 feet wide at mean low water from Apalachee Bay, Florida, to Mobile Bay, Alabama, and 12 feet deep and 150 feet wide from Mobile Bay, Alabama to Rigolets, Louisiana (Lake Borgne Light No. 29), and for a tributary channel (Gulf County Canal), 12 feet deep, 125 feet wide and about six miles long connecting Intracoastal Waterway at White City, Florida, with St. Joseph Bay. The waterway between the 12-foot depth contours in Apalachee Bay and Lake Borgne Light No. 29 at the Rigolets is 379 miles long. (See Table 10-B for authorizing legislation.)

Local cooperation. None.

Terminal facilities. Facilities are available for public use at Carrabelle, Apalachicola, Panama City, and Pensacola, Florida; Mobile and Bayou La Batre, Alabama; and Pascagoula, Biloxi, Gulfport, Pass Christian, and Bay St. Louis, Mississippi. Facilities are considered adequate for existing commerce.

Operations and results during fiscal year.

Maintenance: Dredging navigation channel maintenance, condition surveys, and supervision and administration cost totaled \$4,033,000.

Condition at end of fiscal year. The existing project is completed except for the portion between Apalachicola Bay and St. Marks, Florida, which has been deauthorized. Modification of the Gulf County Canal to provide a 12-foot by 125-foot channel was commenced July 1968 and completed June 1969. Total cost of the existing project as of September 30, 2007 is \$140,735,334, of which \$6,480,299 was for new work and \$134,255,035 for maintenance.

16. GULFPORT HARBOR, MS

Location. The project is located on Mississippi Sound in southeastern Mississippi, about 35 miles west of Pascagoula, Mississippi, and 60 miles east of New Orleans. (See Coast and Geodetic Survey Chart 11373.)

Previous project. For details see page 747. Annual Report for 1938, and page 995, Annual Report for 1948.

Existing project. The existing project provides for: (a) A channel 32 feet deep, 300 feet wide, and about eight miles long across Ship Island Bar, a channel 30 feet deep, 220 feet wide, and about 11 miles long through Mississippi Sound, and an anchorage basin at Gulfport 30 feet deep, 1,320 feet wide, and 2,640 feet long; and (b) maintenance of the existing commercial smallboat harbor about 26 acres in area, and a straight-approach

channel, 100 feet wide and about 4,300 feet long, from deep water in Mississippi Sound to a smallboat basin, all at a depth of 8 feet. Under ordinary conditions mean tidal range is about 1.75 feet, and extreme range, except during storms, is about 3.5 feet. Plane of reference is mean low water. The project is authorized in the Water Resources Development Act (WRDA) 1986, and further amended by WRDA 1988 to modify the existing ship channel to 36 by 300 feet in Mississippi Sound, and 38 by 400 feet across the bar, with changes in the channel alignment and the turning basin for safe and unrestricted navigation. The FY 91 construction appropriation provided for constructing an increment of the authorized project and provide a 36 by 220 feet channel in Mississippi Sound and 38 by 300 feet across the bar. (See Table 10-B for authorizing legislation.)

Local cooperation. Requirements have been fully complied with.

Terminal facilities. Existing modern rail-connected terminal facilities at this port are considered adequate for existing commerce. (See Port Series 19, revised in 1979.)

Operations and results during fiscal year.

Maintenance: Contract dredging, condition surveys, supervision and administration and miscellaneous costs \$2,509,000.

Condition at end of fiscal year. The main harbor was commenced 1932 and completed April 1950. Maintenance for small boat harbor and approach channel, constructed by local interests in 1950, was authorized by 1958 River and Harbor Act. Awarded thin-layer monitoring contract in June 1991 under the authority of WRDA 1986 and 1988. The channel contract was awarded in April 1992, and completed in September 1996. Total Federal cost under existing project as of September 30, 2007 is \$26,818,824 for new work and \$84,151,525 for maintenance, a total of \$110,970,349. Contributed funds for new work amounted to \$9,254,221.

17. MOBILE HARBOR, AL

Location. The project is located along the lower 5 miles of Mobile River, and channel extends thru Mobile Bay and into Gulf of Mexico, in southwestern Alabama, 91 miles by water west of Pensacola Harbor, Florida, 90 miles east of Gulfport Harbor, Mississippi, and 144 miles by water northeast of mouth of Mississippi River. (See Coast and Geodetic Survey Chart 11376.)

Previous project. For details see page 503, Annual Report for 1963.

Existing project. The existing project provides for: (a) A 47-foot by 600-foot channel about 1.5 miles long across Mobile Bar; (b) a 45-foot by 400-foot channel in Mobile Bay to mouth of Mobile River; (c) a 40-foot channel in Mobile River to highway bridge, varying from 500 to 775 feet wide; (d) a 25-foot channel from highway bridge to and up Chickasaw Creek to a point 400

REPORT OF THE SECRETARY OF THE ARMY ON CIVIL WORKS ACTIVITIES FOR FY 2007

feet south of mouth of Shell Bayou, widths being 500 feet in Mobile River and 250 feet in Chickasaw Creek; (e) a turning basin 40 feet deep, 2,500 feet long, and 800 to 1,000 feet wide, opposite Alabama State Docks; (f) a turning basin 40 feet deep, 1,000 feet wide, and 1,600 feet long opposite Magazine Point; (g) a 27-foot by 150-foot channel from Mobile Bay Channel along Arlington pier to a turning basin 800 feet long and 600 feet wide opposite Brookley Complex ocean terminal, and continuing thence a turning basin 250 feet wide and 800 feet long in Garrows Bend, thence a 22-foot by 150-foot channel to the causeway linking McDuffie Island to the mainland; (h) a channel serving the Theodore Industrial Park 40 feet deep and 400 feet wide from the main ship channel in Mobile Bay and extending northwesterly for about 5.3 miles to the shore of Mobile Bay, including an anchorage basin near the shoreline, thence a land cut 40 feet deep, 300 feet wide and 1.9 miles long to and including a 42 acre trapezoid turning basin 40 feet deep, and a barge channel 12-by 100-feet, extending 6,500 feet and terminating in a 300- by 300-foot turning basin; and (i) maintenance of Three Mile Creek by snagging, from its intersection with Industrial Canal to Mobile River. The project provides also for an anchorage area 32 feet deep, 100 feet wide, and 200 feet long opposite site formerly occupied by the U.S. Quarantine Station at McDuffie (Sand) Island. Prior to widening the Mobile Bay Channel as authorized in 1954, the Quarantine Station anchorage area was maintained to a project width of 200 feet. Construction by local interests of a solid-fill causeway across Garrows Bend Channel between McDuffie Island and the mainland is also provided for under existing project. Total length of the bay and river channel is about 41.7 miles. Plane of reference is mean low water. Under ordinary conditions mean tidal range at the lower end of the improvement is 1.2 feet and at the upper end 1.5 feet. Extreme tidal range is 3.4 feet at the lower end and 3.6 feet at the upper end.

Further authorization provides for future development to deepen and widen entrance channel over the bar to 57 feet by 700 feet about 7.4 miles long, deepen and widen bay channel to 55 feet by 550 feet about 27.0 miles long, deepen and widen an additional 3.6 miles of bay channel to 55 feet by 650 feet and provide 55 foot deep anchorage area and turning basin in vicinity of Little Sand Island. All dredged material will be placed in an approved disposal area in the Gulf of Mexico. (See Table 10-B for authorizing legislation.)

Local cooperation. A local cooperation agreement was signed by the local sponsor to construct the project for the first increment of work.

Terminal facilities. Modern rail-connected terminal facilities at this port are considered adequate for existing commerce. (See Port Series No. 18, revised in 1979.)

Operations and results during fiscal year.

Maintenance: Contract dredging, condition surveys, engineering and design and supervision and administration cost \$22,549,076.

Condition at end of fiscal year. Phase I of the project modification was completed in June 1990. Current estimated Federal cost is \$218,548,000, and non-Federal cost is \$178,452,000. Total Federal cost under existing project as of September 30, 2007 is \$98,505,754 for new work and \$475,825,265 for maintenance, a total of \$574,331,019. Contributed funds expended amounted to \$19,404,670 for maintenance. New work contributed funds amounted to \$202,040.

18. PANAMA CITY HARBOR, FL

Location. The project is located on the northwest coast of Florida, 102 miles east of entrance to Pensacola Harbor. (See Coast and Geodetic Survey Chart 11389.)

Previous project. For details see page 710, Annual Report for 1938.

Existing project. The existing project provides for a channel about 3.5 miles long, extending from deep water in St. Andrew bay through barrier peninsula, known as Lands End, to the Gulf of Mexico, 300 feet wide and 32 feet deep in the bay through Lands End; and 450 feet wide and 34 feet deep in the gulf, protected by east, west jetties, extending 2,075 feet and 2,896 feet respectively; a channel 100 feet wide and 8 feet deep in Grand Lagoon to a point about 2,400 feet east of State Highway 392 Bridge, with branches to serve terminal facilities; and the maintenance of a channel in Watson Bayou, an arm of St. Andrew Bay, 100 feet wide and 10 feet deep from that depth in bay to highway bridge.

Authorized modifications includes branch channels 38 feet deep and 300 feet wide, leading from the inner end of the main entrance channel westward to the Port Authority terminal at Dyers Point and eastward to the Bay Harbor terminal, about 3.4 and 3.6 miles in length, respectively; turning and maneuvering areas comprising about 55 acres opposite Dyers Point, and 42 acres opposite Bay Harbor, both at a depth of 38 feet; and an anchoring and loading basin for LASH type intermodal carriers, 40 feet deep and containing about 177 acres in St. Andrew Bay near the inner end of the main entrance channel. Mean tidal range is about normally 1.3 feet and 3.0 feet extreme. (See Table 10-B for authorizing legislation.)

Local cooperation. Requirements have been fully complied with.

Terminal facilities. Available terminal facilities are considered adequate for existing commerce. (See Port Series No. 19.)

MOBILE, ALABAMA, DISTRICT

Operations and results during fiscal year.

Condition surveys and maintenance: Miscellaneous costs \$1,690,717.

Condition at end of fiscal year. The existing project (prior to modifications) was completed in November 1949. Repairs to jetties were commenced in June 1961 and completed October 1968. Modifications to the project at Grand Lagoon were completed in January 1972. Total Federal cost under existing project as of September 30, 2007 is \$4,724,110 for new work and \$16,824,575 for maintenance, a total of \$21,548,685. Contributed funds expended for new work amount to \$1,996,826.

19. PASCAGOULA HARBOR, MS

Location. The project is located along lower 6.8 miles of Pascagoula River, the lower six miles of Dog River, and in Bayou Casotte (about four miles east of the mouth of Pascagoula River), and through Mississippi Sound into the Gulf of Mexico, in southeastern Mississippi, about 38 miles west of Mobile, Alabama, and about 100 miles east of New Orleans, Louisiana. (See Coast and Geodetic Survey Chart 11373.)

Previous project. For details see page 741, Annual Report for 1938.

Existing project. The existing project provides for (a) An entrance channel 44 feet deep and 450 feet wide from the Gulf of Mexico through Horn Island Pass Channel 44 feet deep and 600 feet wide, including an impounding area for littoral drift, 44 feet deep, 200 feet wide, and about 1,500 feet long adjacent to the channel at the west end of Petit Bois Island; (b) a lower sound channel 42 feet deep and 350 feet wide and an upper sound channel 38 feet deep and 350 feet wide in Mississippi Sound and Pascagoula River to the railroad bridge at Pascagoula, including a turning basin 2,000 feet long and 950 feet wide (including channel area) on the west side of the river below the railroad bridge; (c) a channel 42 feet deep and 350 feet wide from the ship channel in Mississippi Sound to the mouth of Bayou Casotte, thence 42 feet deep and 350 feet wide for about one mile to a turning basin 42 feet deep, 1,000 feet wide, and 1,750 feet long; (d) a 22-foot deep by 150-foot wide channel up Pascagoula River from the railroad bridge to the mouth of Escatawpa (or Dog) River, then up Escatawpa River to Highway 613 (formerly 63) bridge; (e) a 12-foot by 125-foot channel from the highway bridge; via Robertson and Bounds Lakes, to mile 6 on Escatawpa River; and (f) a 12-foot by 80-foot channel extending from deep water in the Pascagoula River (about one-half mile north of the railroad bridge) to a turning basin in Krebs Lake a distance of about 1,500 feet, then along the south bank of the lake a channel 10-foot by 60-foot and terminating at a second turning basin, a distance of 2,700 feet from the first. Under ordinary conditions

mean tidal range is 1.75 feet, and extreme range is 3.75 feet. Plane of reference is mean low water.

Further authorization provides for widening gulf entrance channel to 550 feet and deepen upper Mississippi Sound portion to 42 feet. Disposal of all new material in Gulf of Mexico. (See Table 10-B for authorizing legislation.)

Local cooperation. Requirements have been fully complied with.

Terminal facilities. Modern rail-connected terminal facilities at this port are considered adequate for existing commerce. (See Port Series No. 19.)

Operations and results during fiscal year.

Maintenance: Contract dredging, condition surveys, supervision and administration and miscellaneous costs totaled \$6,999,630.

Condition at end of fiscal year. The existing project was completed in August 1965 and the Krebs Lake project was completed in November 1983. The General Design Memorandum (GDM) was approved in June 1992 for deepening and widening channels. Preconstruction Engineering and Design is complete. The channel dredging contract was awarded in September 1994, and completed November 2001. Total Federal cost of existing project as of September 30, 2007 is \$40,800,272 for new work and \$113,253,038 for maintenance, a total of \$154,053,310. Contributed funds expended for new work amounted to \$12,989,994. Contributed funds expended for maintenance amounted to \$9,396,240.

20. PENSACOLA HARBOR, FL

Location. The project is located in a landlocked bay on the coast of northwest Florida about 50 miles east of the entrance to Mobile Bay. (See Coast and Geodetic Survey Charts 490 and 11382.)

Previous project. For details see Annual Report for 1938.

Existing project. The existing project provides for: (a) A 35-foot by 500-foot entrance channel about five miles long, from the Gulf of Mexico to lower Pensacola Bay; (b) a 33-foot by 300-foot bay channel; (c) two 33-foot by 300-foot parallel approach channels to opposite ends of the inner harbor channel; (d) an inner harbor channel 500 feet wide, 33 feet deep, and 3,950 feet long; (e) a 30-foot by 250-foot approach channel to the pierhead line south of Muscogee wharf; and (f) a 15-foot by 100-foot entrance channel into Bayou Chico, thence a channel 14 feet deep, 75 feet wide, and about 4,400 feet long to a turning basin 14 feet deep and 500 feet square. Mean range of tide throughout the harbor is about 1.1 feet near the entrance and about 1.6 feet at the head of bay. Extreme tidal range, except during storms, is

about three feet. Plane of reference is mean low water.

Modification of the Bayou Chico project to provide for enlarging the entrance channel to 21 by 100 feet, the bayou channel to 20 feet by 100 feet, and deepening the turning basin to 20 feet has been deferred for restudy. (See Table 10-B for authorizing legislation.)

Local cooperation. Requirements have been fully complied with.

Terminal facilities. Modern rail-connected terminal facilities at this port are considered adequate for existing commerce. (See Port Series No. 19, revised in 1979.)

Operations and results during fiscal year.

Maintenance: Dredging, condition survey, environmental permits, support activities and miscellaneous costs totaled \$139,197.

Condition at end of fiscal year. New work is completed except for features which are deferred for restudy. The modification authorized in 1962 was commenced in March and completed in May 1965. Total Federal cost of the existing project as of September 30, 2007 is \$1,469,693 for new work and \$11,070,430 for maintenance, a total of \$12,540,123. Contributed funds for maintenance amount to \$312,350.

21. PERDIDO PASS CHANNEL, AL

Location. The project is located about midway between Pensacola, Florida, and Mobile, Alabama. (See Coast and Geodetic Chart 11378.)

Existing project. The existing project provides for a channel 12 feet deep and 150 feet wide for about 1,300 feet from the Gulf of Mexico into the inlet, thence 9 feet deep and 100 feet wide for about 2,200 feet to the highway bridge, where the channel branches into two arms, each having dimensions of 9 by 100 feet, one of which extends about 3,400 feet into Terry Cove and the other about 3,200 feet into the southern arm of Perdido Bay. The project also provides for two jetties spaced 600 feet apart at the seaward end. The east jetty has a low weir section, 1000 feet long to permit passage of littoral drift into a dredged deposition basin 800 feet by 1,200 feet located between the east jetty and the navigation channel. Mean tidal range is 1.1 feet and extreme is 2.8 feet. (See Table 10-B for authorizing legislation.)

Local cooperation. Requirements have been fully complied with.

Terminal facilities. Six marinas, numerous timber piers, docks, and several launching ramps are available. These facilities are considered adequate for existing commerce.

Operations and results during fiscal year.

Maintenance: Contract dredging, condition surveys and miscellaneous cost \$113,736.

Condition at end of fiscal year. The existing project was commenced in May 1968 and completed in May 1969. Total Federal cost of the existing project as of September 30, 2007 is \$629,860 for new work and \$17,163,893 for maintenance, a total of \$17,793,753. Contributions from local interest amount to \$510,000 for new work and \$10,325 for maintenance.

22. TENNESSEE-TOMBIGBEE WATERWAY, AL AND MS

Location. The waterway extends from mile 215 in Pickwick pool on the Tennessee River, southerly through northeastern Mississippi and western Alabama, a total of 234 miles, to the confluence of the Black Warrior and Tombigbee Rivers at Demopolis, Alabama.

Previous project. For details see Annual Report for 1953.

Existing project. The existing project provides for a waterway 234 miles long, connecting the Tennessee and Tombigbee Rivers via the East Fork of Tombigbee River and Mackeys and Yellow Creeks and consists of three sections as follows: (1) the river section, a 9-foot by 300-foot channel for 149 miles between Demopolis and Amory, Mississippi; (2) the canal section, 12 feet by 300 feet for 46 miles from Amory to Bay Springs; and (3) the divide section, a 12-foot by 300-foot channel (except in the 27 mile long divide cut in which the bottom width is 280 feet) for 39 miles from Bay Springs through the dividing ridge to the Tennessee River. The total lift of 341 feet is accomplished by 10 locks (See Table 10-B for authorizing legislation.)

Local cooperation. Local interests have made and are maintaining alterations in highways and highway bridges and in sewer, water-supply, and drainage facilities and provide and maintain suitable and adequate river and canal terminals. Officials of the State of Mississippi were notified of these requirements on December 13, 1949, and officials of the State of Alabama were notified on December 20, 1949. Legislation enabling boards of supervisors of the various counties concerned to enter into agreements with the United States relative to navigation projects was adopted by the State of Mississippi in 1950. A compact between the States of Alabama, Mississippi, Tennessee, Kentucky and Florida has been formed for the purpose of promoting the project. The name of this organization is the Tennessee-Tombigbee Waterway Development Authority.

During its 1962 session the Mississippi Legislature authorized the formation of the Tombigbee River Valley Water Management District. The District was organized in accordance with the enabling legislation and is empowered to fulfill the requirements of local cooperation for the portion of the project in

MOBILE, ALABAMA, DISTRICT

Mississippi. A satisfactory resolution has been furnished. During its 1967 session the Alabama Legislature authorized the formation of a public corporation to be named the Tombigbee Valley Development Authority for the purpose of further development of the Tombigbee River and tributary streams. The organization was formed in accordance with the enabling legislation and in a referendum held December 5, 1967 the voters of Alabama authorized a bond issue not to exceed \$10,000,000 of finance participation in this project and the Tombigbee River and Tributaries project. A satisfactory resolution has been furnished.

Terminal facilities. Docks, storage facilities and handling equipment are still being developed along this new waterway. As of September 30, 1998, twelve such facilities were operational, while five were under construction, and five more are planned. The operational facilities are handling grain, wood chips, and logs. When all facilities are complete, about half will be publicly owned and operated. Additional ports and terminals must be completed before the waterway can achieve its full potential. (See Table 10-N for existing locks and dams.)

Operations and results during fiscal year.

Maintenance: Contract maintenance dredging, condition surveys, supervision and administration and miscellaneous navigation costs totaled \$2,972,891. Total cost for operation and maintenance of the project for FY 2007 amounted to \$22,398,099. Recreation attendance for FY 2007 totaled 3,829,862 visits.

Condition at end of fiscal year. Total Federal cost under the existing project as of September 30, 2007 is \$1,053,001,011 for new work, and \$493,915,849 for maintenance for a total of \$1,546,916,860. Construction formally began December 12, 1972 and overall project is essentially complete. The waterway was opened for navigation in January 1985.

22A. TENNESSEE-TOMBIGBEE WATERWAY WILDLIFE

MITIGATION PROJECT, AL AND MS

Location. This project is in Alabama and Mississippi at the following locations:

(1) Existing Project Lands - Approximately 72,500 acres of Tennessee-Tombigbee Project Lands have been designated for mitigation purposes. An additional 20,100 acres have also been designated at Coffeetown Lake, Demopolis Lake, Claiborne Lake and Dannelly Lakes in Alabama and at Okatibbee Lake in Mississippi.

(2) Separable Lands - Acquisition and management of 88,000 separable lands including not less than 20,000 acres in the Mobile-Tensaw Delta, Alabama, and not less than 25,000 acres in the Pascagoula, Pearl, and Mississippi Delta Basins in Mississippi; and the balance at any location in the two states.

Previous project. None. This project was a new construction start in Fiscal year 1990. It was authorized by Section 601 of the Water Resources Development Act of 1986.

Existing project. The authorized project called for the acquisition of separable lands at the above named locations. The Alabama Department of Conservation and Natural Resources, Mississippi Department of Wildlife Fisheries and Parks, and the U.S. Fish and Wildlife Service (FWS) assisted in the selection of separable lands. The selected lands were purchased from willing sellers at fair market value. Emphasis was placed on forested wetlands, with a minimum of 34,000 acres of bottomland hardwoods being purchased.

Management of Lands, the separable lands and the existing project lands designated for mitigation purposes are being managed for wildlife. The States are primarily responsible for managing these lands in accordance with management plans jointly developed by the States, Corps and the FWS. However, due to operational constraints it is necessary for the Corps to retain management responsibility for some of the existing project lands included in the mitigation program.

Local cooperation. A local cooperation agreement is not required since the cost of this project is a 100% Federal responsibility.

Operations and results during fiscal year. Total cost for the wildlife mitigation program in FY 2007 was \$1,787,186, with \$1,870,000 being used to reimburse State efforts.

Condition at end of fiscal year. Initial funding for the project was received in January 1990. At the end of September 1998, 21,182 acres had been acquired in the Mobile-Tensaw Delta; 13,433 acres in the Pascagoula Basin; 18,542 acres in the Mississippi Delta; 7,655 acres in the Pearl Basin; 14,378 acres in northeast Mississippi; and 12,292 acres in other areas of Alabama. A variety of activities also continued to intensively manage the 92,600 acres of existing project lands included in the Mitigation Program. The total project cost is estimated to be \$94,042,000. Total Federal cost of the project as of September 30, 2007 is \$92,175,850 for new work. \$2,375,365 for environmental efforts, and \$11,008,131 for maintenance, a total of \$105,559,346.

23. OTHER AUTHORIZED NAVIGATION PROJECTS

(See Table 10-C)

24. OTHER AUTHORIZED BEACH EROSION CONTROL PROJECTS

(See Table 10-D)

25. OTHER AUTHORIZED FLOOD CONTROL PROJECTS

(See Table 10-E)

26. DEAUTHORIZED PROJECTS

(See Table 10-G)

27. NAVIGATION WORK UNDER SPECIAL AUTHORIZATION

Navigation activities pursuant to Section 107, Public Law 86-645, as amended (Preauthorization). Studies conducted under this authority amounted to \$-153,928 in FY 2002. (See Table 10-H.)

28. FLOOD CONTROL WORK UNDER SPECIAL AUTHORIZATION

(See Table 10-J.)

29. RECONNAISSANCE AND CONDITION SURVEYS

(See Table 10-K.)

FLOOD CONTROL

30. MATUBBEE CREEK AT COONTAIL ROAD, MS

Location. The project site is located along 500 feet of both banks of Matubbee Creek which runs parallel and adjacent to Coontail Road in rural Monroe County near Aberdeen, Mississippi.

Existing project. The emergency streambank protection project consists of rebuilding and armoring the left descending (southeast) bank of Matubbee Creek with riprap and filter fabric; placement of a riprap-filled toe trench along the left descending bank; grading, grassing, and armoring the adjacent road shoulder; removal and backfill of the failed grout materials along the left descending bank; grading and grassing of both banks and adjacent drainage ditches; and replacing guard rails along the road adjacent to the left descending bank.

Operations and results during fiscal year. New Work: None.

Condition at end of fiscal year. The project was awarded in January 2003. Construction was initiated in May 2003. Total Federal cost to date is \$457,238 for new work. Contributed funds expended amounted to \$215,203 for new work.

31. WEAVER CREEK AT HATLEY ROAD

Location. The project site is located along both banks above and below the Hatley Road Bridge crossing at Weaver Creek in rural Monroe County near Amory, Mississippi.

Existing project. The emergency streambank protection project consists of reconditioning and armoring the endangered slope with riprap and filter fabric; removal and backfill of the failed grout materials at the wingwalls; grading and grassing of banks and adjacent drainage ditches; and replacing adjacent guard rails.

Operations and results during fiscal year. New Work: None.

Condition at end of fiscal year. The project was awarded in January 2003. Construction was initiated in May 2003. Total Federal cost to date is \$71,517 for new work. Contributed funds expended amounted to \$60,476 for new work.

32. OKATIBBEE LAKE, MS

Location. The project is located on Okatibbee Creek 37.7 miles above its mouth, in Lauderdale County, Mississippi, seven miles northwest of Meridian.

Existing project. The project provides for a dam and reservoir for flood control, water supply, water quality control, fish and wildlife, and recreation. The dam consists of a compacted earth fill 6,540 feet long with the top elevation 369.8 feet above national geodetic datum, with top width of 18 feet. The spillway, which is located 1,500 feet east of the east end of the dam, is an unpaved free overflow type, 1,500 feet long with a fixed crest at elevation 359. A sluice intake structure near the center of the dam serves a 9.0-foot diameter concrete conduit. Storage allocated for water supply and water quality control varies seasonally from 21,400 acre-feet to 34,300 acre-feet between a minimum elevation of 328 and top-of-conservation-pool elevation varying from 339 to 343. Storage varying from 46,500 to 59,500 acre-feet between the top of the conservation pool and elevation 352 has been reserved exclusively for storage of flood waters. (See Table 10-B for authorizing legislation.)

Local cooperation. Requirements have been fully complied with.

Operations and results during fiscal year.

Maintenance: Costs for the year for ordinary maintenance and recreational management amount to \$2,167,652. Recreation attendance at the reservoir during FY 2007 totaled 719,316 visits.

Condition at end of fiscal year. Construction began in June 1965, and was completed in November 1968. Total Federal cost of the existing project as of September 30, 2007 is \$2,145,134.

**33. TOMBIGBEE RIVER (EAST FORK),
MS AND AL**

Location. The project is located on the Tombigbee River and its tributaries between the junction of the Browns and Mackeys Creek in Itawamba County, Mississippi, for a distance of 53 miles along the East Fork of the Tombigbee River, from Walkers Bridge at the junction of Browns and Mackeys Creeks to the Monroe County line.

Existing project. Provides for alleviation of floods from the Tombigbee River by clearing and snagging and excavation of 13 cut-off channels, and other related channel improvements. (See Table 10-B for authorizing legislation.)

Local cooperation. Fully complied with on work done under the 1963 Flood Control Act. Work to be done under authority of the 1941 Flood Control Act requires local interest to provide all lands, easements, and rights-of-way for project construction; hold and save the United States free from damages due to construction of the project; and maintain and operate all the works after completion in accordance with regulations prescribed by the Secretary of the Army.

Operations and results during fiscal year.

Maintenance: Routine maintenance of channels cost \$187,778.

Condition at end of fiscal year. The project for Itawamba County, as authorized in the 1936 Flood Control Act, was completed during fiscal year 1940. No work has been done on the extension of the project authorized in the 1941 Flood Control Act. Total Federal cost of the existing project as of September 30, 2007 is \$134,801 for new work and \$5,228,970 for maintenance, a total of \$5,363,771.

**34. TOMBIGBEE RIVER
TRIBUTARIES, MS AND AL**

Location. The Tombigbee River rises in extreme northeast Mississippi and flows southerly through eastern Mississippi and western Alabama, emptying into the Mobile River about 45 miles above its mouth at Mobile, Alabama. Tributaries to be improved for flood control are all in northeast Mississippi and northwest Alabama. Luxapalila Creek project consists of 32 miles of completed channel modifications. Approved estimate of cost for new work is \$42,108,000; consisting of \$37,743,000 Federal funds, and \$4,365,000 non-Federal funds. (See Table 10-B for authorizing legislation.)

Local cooperation. Local interests must furnish lands and rights-of-way for construction; make all roads, highway bridge, and utility changes, alterations, additions, and relocations necessary for the project; hold the United States free from damages; prevent future encroachments along the improved

channels; maintain all works after completion, with the exception of Twenty Mile Creek from mile 11.7 to mile 22.0.

Operations and results during fiscal year.

New work: None.

Condition at end of fiscal year. Construction commenced in July 1965. Total project is complete. Total Federal cost of existing project as of September 30, 2007 is \$40,020,744 for new work. Contributed funds for new work amounted to \$570,113.

**35. VILLAGE CREEK,
BIRMINGHAM, AL**

Location. The project is located in central Alabama, Jefferson County, in the city of Birmingham, Alabama.

Existing project. None. The project is basically non-structural and includes evacuating 642 structures, in six (6) separate neighborhoods, from the floodplain; enlarging 2 miles of the stream channel in the vicinity of the Municipal Airport which also involves modification of three (3) bridges, demolishing two (2) unused bridges, and relocating two (2) waterlines and other utilities, installing three (3) emergency floodwarning devices; and creating an area of 210 acres which can be utilized for future recreation development. Channel enlargements (2 miles) will reduce annual damages near Municipal Airport by 82 percent and evacuation of 642 structures will reduce annual damages in residential areas by 61 percent. The channel segment is not being constructed at the request of the sponsor.

Local cooperation. The Local Cooperation Agreement with the city of Birmingham, Alabama was executed on December 14, 1988. The local sponsor has also agreed to make all required payments concurrently with the project construction.

Operations and results during fiscal year.

New work: None.

Condition at end of fiscal year. Real Estate acquisition started January 1989. The project is complete with acquisition of 634 tracts. Total Federal cost under existing project as of September 30, 2007 is \$22,887,742 for new work. Contributed funds for new work amounted to \$7,196,238.

**36. FLOOD CONTROL WORK UNDER
SPECIAL AUTHORIZATION**

Flood Control activities pursuant to Section 205, Public Law 858, 80th Congress, as amended (Preauthorization).

Snagging and Clearing for flood control pursuant to Section 208 of Flood Control Act of 1954, as amended.

Emergency streambank and shoreline protection pursuant to Section 14 of the Flood Control Act of 1946, as amended.

(See Table 10-J)

Emergency flood control activities - repair, flood fighting, and rescue work under Public Law 99, 84th Congress, and antecedent legislation, and disaster relief and assistance under Public law 288, 93d Congress. (See Table 10-J)

37. INSPECTION OF COMPLETED FLOOD CONTROL PROJECTS

Local flood protection works for which inspection is performed under this heading consist of levee projects at West Point, Georgia, on the Chattahoochee River; Beaver Creek at Montezuma, Georgia, in the Flint River Basin; Elba and Geneva, Alabama in the Choctawhatchee River Basin; Rome, Georgia, and Little Wills Creek at Collinsville, Alabama, in the Alabama-Coosa River Basin. Channel rectification projects include Little Cove Creek, Glencoe, Alabama and Black Creek, Gadsden, Alabama in the Alabama-Coosa River Basin; Big Brown Creek, Donivan Creek, Twenty Mile Creek and Mantachie Creek, near Fulton, Mississippi, Burketts Creek and Stanifer Creek near Amory, Mississippi, Houlka Creek and Sakatonchee Creek in Chickasaw and Clay Counties, Mississippi, James Creek in Monroe County, Mississippi, and Luxapalila Creek, Lowndes County, Mississippi, all in the Tombigbee River Basin; Sowashee Creek, Meridian, Mississippi in the Pascagoula River Basin; Burnt Corn and Murder Creeks, Brewton, Alabama in the Conecuh River Basin; Autauga Creek, Prattville, Alabama; Poley Bridge, Goose Pond and Walnut Creeks, Clanton, Alabama; Pinchgut Creek, and Cahaba River, Trussville, Alabama; Town Creek, Americus, Georgia; and Lake Douglas in Bainbridge, Georgia. Shore protection and erosion control projects include Harrison County, Mississippi; Chattahoochee River at La Grange, Troup County, Georgia; Pumpkinvine Creek, Emerson, Georgia; and Chickasawbogue Creek, US Highway 43 Bridge, Linden, Alabama. The project at Rome and Montezuma, Georgia and Collinsville, Alabama include pumping stations. Inspections are made annually to determine the extent of compliance with approved regulations for maintenance and operation of the project. Responsible local officials are advised of inadequacies in the maintenance and operation of the local flood protection works under their jurisdiction where appropriate. Followup for compliance of the deficient projects continued during the year. Fiscal year costs were \$70,917. Total cost as of September 30, 2007 is \$928,029 charged to maintenance.

38. OTHER AUTHORIZED FLOOD CONTROL PROJECTS

(See Table 10-E.) Multiple-Purpose Projects Including Power

Multiple Purpose Power Projects

39. ALLATOONA DAM, COOSA RIVER BASIN, GA

Location. The project is on Etowah River in Bartow County, Georgia, about 48 miles upstream from Rome, Georgia, about five miles due east of Cartersville, Georgia, and about 2,000 feet downstream from mouth of Allatoona Creek. The reservoir extends about 28 miles up the Etowah River at maximum power-pool elevation of 840 feet above mean sea level.

Existing project. The authorized project provides for a dam and reservoir for flood control, regulation of streamflow for navigation, and development of hydroelectric power. Height above the river bottom of the concrete, gravity-type dam is about 190 feet, from elevation 690 feet to 880 feet national geodetic datum. The spillway, with crest at elevation 835, is controlled by nine tainter gates, 40 feet wide by twenty-six feet high, and two tainter gates, 20 feet wide by twenty-six feet high; having a combined discharge capacity of 321,000 cubic feet per second with the water surface at elevation 870.3. One 48-inch diameter sluicing conduit with a free discharge valve and four sluices, 5 feet-8 inches wide by 10 feet high, are included in dam. Installed generating capacity consists of two 36,000 kilowatt units and one 2,000 kilowatt unit, or a total of 74,000 kilowatts. The reservoir, covering 19,200 acres at elevation 860, has a storage capacity of 670,000 acre-feet. The initial construction cost was \$31,424,738, excluding the addition of recreation facilities at the completed project. (See Table 10-B for authorizing legislation.)

Local cooperation. None required. (Sec. 2, Flood Control Act of June 28, 1938, applies).

Operations and results during fiscal year.

Maintenance: Operation and maintenance of the dam, reservoir, powerhouse, service and recreational activities, and administration totaled \$6,556,646. Gross power generation amounted to 71,606 megawatt hours during FY 2007. Recreation attendance at Allatoona Lake during FY 2007 totaled 1,092,926 visits.

Condition at end of fiscal year. Construction of the existing project began in March 1944 and was completed in October

1955. Total Federal cost under existing project as of September 30, 2007 is \$35,709,085 for new work and \$180,510,403 for maintenance, a total of \$216,219,488.

**40. BUFORD DAM,
LAKE SIDNEY LANIER, GA**

Location. Buford Dam is on the Chattahoochee River about 348.9 miles above its mouth, 50 miles above Atlanta and five miles northwest of Buford, Georgia. The reservoir, Lake Sidney Lanier, extends about 47 miles upstream along the Chattahoochee River, and about 21 miles up the Chestatee River, which enters the Chattahoochee River 14.5 miles above the dam.

Existing project. The authorized project provides for a rolled-earth dam 1,630 feet long with crest elevation 1,106 feet national geodetic datum, or about 192 feet above streambed elevation; three earth saddle dikes with a total length of 5,406 feet; a chute spillway with crest at elevation 1,085; a powerhouse in a deep cut with steel penstocks in tunnels, and concrete intake structure at the upstream end of the tunnels; and a flood control sluice tunnel paralleling the power tunnels. The Lake Sidney Lanier reservoir has a gross capacity of 2,554,000 acre-feet of which 637,000 acre-feet of storage is reserved for flood control storage. The power installations consist of one generating unit of 6,000 kilowatts and two units of 40,000 kilowatts each, or a total of 86,000 kilowatts. (See Table 10-B for authorizing legislation.)

Local cooperation. None required.

Operations and results during fiscal year.

Maintenance: Operation and maintenance cost \$7,871,891. Gross power generation amounted to 108,338 megawatt hours during FY 2007. Recreational attendance at Lake Sidney Lanier during FY 2007 totaled 7,738,041 visits.

Condition at end of fiscal year. Construction commenced in March 1950 and was completed in June 1960. The reservoir was in useful operation for flood control in February 1956. The first power generating unit was placed on the line June 19, 1957; the second on July 26, 1957; and the third on October 10, 1957. Total Federal cost under existing project as of September 30, 2007 is \$53,030,038 for new work, major rehabilitation cost \$29,515,322 and \$226,223,264 for maintenance, a total of \$308,768,624. (See also Table 10-M.)

**41. CARTERS DAM AND
RESERVOIR, GA**

Location. The damsite is in Murray County, Georgia, on the Coosawattee River 26.8 miles above its junction with Conasauga River, one of the headwater tributaries of the Alabama-Coosa system. It is 60 miles north of Atlanta near the town of Oakman, Georgia. The reservoir is in both Murray and Gilmer Counties.

Existing project. The existing project consists of a 1,950-foot long rockfill dam across the river, three saddle dikes on the left bank, a 258-foot long high-level, gated spillway on the left bank, a powerhouse on the right bank having two conventional units with a generating capacity of 125,000 kilowatts each and two pump-generating units of the same size, and a regulating dam 2,855 feet long with a gated spillway 208 feet long 1.5 miles downstream from the main dam. The lake has an area of 3,220 acres, at maximum pool power elevation 1,072, total capacity of 472,800 acre-feet, of which 134,900 acre-feet is usable for power and 95,700 acre-feet reserved for flood control and 242,200 acre-feet dead storage. For other information see description of Alabama-Coosa project.

Operations and results during fiscal year.

Maintenance: Operation and maintenance of the dam, reservoir, powerhouse, service and recreational activities and administration totaled \$10,306,000. Gross power generation amounted to 514,340 megawatt hours during FY 2007. Recreation attendance during FY 2007 totaled 538,337 visits.

Condition at end of fiscal year. Construction which commenced in April 1962 and completed in September 1980. Total Federal cost of the existing project as of September 30, 2007 is \$269,201,727, including \$111,140,340 for new work and \$158,061,387 for maintenance.

**42. JIM WOODRUFF LOCK AND DAM,
GA AND FL**

Location. The project is located on the Apalachicola River 107.6 miles above its mouth, about 1,000 feet below confluence of the Chattahoochee and Flint Rivers, and 1.5 miles northwest of Chattahoochee, Florida. Reservoir extends about 46.5 miles upstream along the Chattahoochee River to the vicinity of Columbia, Alabama, and about 47 miles upstream along Flint River, or 17 miles above Bainbridge, Georgia. (See Geological Survey maps for southwest Georgia.)

Existing project. The existing project provides for a concrete open-crest spillway 1,634 feet long on the right bank, with a crest at elevation 79 feet national geodetic datum; a single-lift lock with usable chamber dimensions of 82 by 450 constituting a portion of the dam; an earth section 506 feet, a maximum lift of 33 feet, and depth over the sills of 14 feet; a gated spillway 766

feet long with the bridge at elevation 107 feet national geodetic datum, or about 67 feet above the streambed elevation; a powerhouse with an intake section constituting a portion of the dam; an earth section 506 feet long to accommodate the switchyard and substation; and an overflow dike section 2,130 feet long on the left bank, with a crest at elevation 85. The underlying foundation is limestone. At the normal pool elevation of 77, the reservoir has a total capacity of 406,160 acre-feet. The power installation consists of three units of 10,000 kilowatts each, or a total of 30,000 kilowatts. (See Table 10-B for authorizing legislation.)

Local cooperation. Required cooperation is being fulfilled. Easements for rights-of-way and spoil-disposal areas were provided as required along the Apalachicola River. Adequate public terminals were constructed by local interests at Bainbridge, Georgia, on the Flint River, and at Columbia, Alabama, on the Chattahoochee River. Facilities are being planned for other localities on the project.

Terminal facilities. A public wharf with concrete deck for handling general cargo, a bulk storage terminal for petroleum, a grain elevator, and private riverside facilities at Bainbridge, Georgia, on the Flint River, are considered adequate for existing commerce.

Operations and results during fiscal year.

Maintenance: Operation and maintenance cost \$7,865,000. Gross power generation amounted to 163,271 megawatt hours during FY 2007. Recreational attendance at Lake Seminole during FY 2007 totaled 1,253,639 visits.

Condition at end of fiscal year. Construction of the lock was commenced in 1947, and completed in 1957. The pool was opened to navigation in May 1954, and the pool was raised to project level in January 1957. The first power-generating unit was placed on-the-line on February 1, the second on March 1, and the third April 26, 1957. Total Federal cost under existing project as of September 30, 2007 is \$47,978,858 for new work, major rehabilitation cost \$32,058,814 and \$171,878,961 for maintenance, a total of \$251,916,633. (See also Table 10-M.)

43. MILLERS FERRY LOCK AND DAM, AL

Location. The site is in Wilcox County at mile 142.2 on the Alabama River, 10 miles northwest of Camden, Alabama, and 30 miles southwest of Selma.

Existing project. The existing project consists of an earth dike on the right bank, a concrete, gravity-gated spillway in the

river channel, a lock and mound on the left bank, an earth dike extending downstream paralleling the lock, to the powerhouse intake structure; a powerhouse, and an earth dike extending to high ground on the left bank. Normal upper pool is at elevation 80. The powerplant contains two 25,000 kilowatt units and one 30,000 kilowatt unit. The 103-mile long reservoir has an area of 17,200 acres at normal pool level and a total capacity of 331,800 acre-feet. The lock chamber is 84 by 600 feet with a 13-foot depth over the miter sills. For other information see description of Alabama-Coosa project.

Operations and results during fiscal year.

Maintenance: Operation and maintenance of lock, dam, powerhouse, reservoir, and administration cost \$5,359,000. Gross power generation amounted to 259,359 megawatt hours during FY 2007. Recreation attendance at William "Bill" Dannelly Reservoir during FY 2007 totaled 1,474,073 visits.

Condition at end of fiscal year. Construction began in April 1963. The lock was placed in temporary operations in June 1968 and opened to full use in November 1969. The powerhouse units were placed on line during April and May 1970. The project was completed in 1980. Total Federal cost of the project as of September 30, 2007 is \$63,125,300 for new work and \$127,390,408 for maintenance, a total of \$190,515,708.

44. ROBERT F. HENRY LOCK AND DAM, AL

Location. The site is in Lowndes and Autauga Counties at mile 281.2 on the Alabama River, 26 miles west of Montgomery.

Existing project. The existing project provides for a navigation lock, a gated spillway, and a power plant located at mile 281.2. The normal upper pool is at elevation 125.0 and the minimum lower pool due to the Millers Ferry Lock and Dam is at elevation 80.0. The structures consist of earth dikes and a power plant on the right bank, a gated spillway in the river channel, a lock and mound on the left bank, and an earth dike extending upstream parallel to the Western Railway of Alabama. The total length of the structures is about 14,962 feet with maximum height above the foundation at the power plant intake about 101 feet. The power plant contains four 20,500-kw. units. The 88-mile long reservoir has an area of 12,300 acres at normal pool level and a total capacity of 234,200 acre-feet. The lock has a chamber 84 feet wide and 600 feet long and provides a 12-foot depth over the lower miter sill. For other information see description of Alabama-Coosa project.

Operations and results during fiscal year.

Maintenance: Operation and maintenance costs amounted to \$4,657,000. Gross power generation amounted to 201,099

MOBILE, ALABAMA, DISTRICT

megawatt hours during FY 2007. Recreation attendance during FY 2007 totaled 1,396,901 visits.

Condition at end of fiscal year. Construction began in March 1966 and is complete. The first powerhouse unit was placed in operation in June 1975, with the last unit on line in November 1975. Total Federal cost of the project as of September 30, 2007 is \$183,760,276, including \$83,360,800 for new work and \$100,399,476 for maintenance.

45. WALTER F. GEORGE LOCK AND DAM, AL AND GA

Location. The project is on the Chattahoochee River about 75.2 miles above its mouth and about 1.5 miles above Fort Gaines, Georgia. (See Geological Survey maps for southwest Georgia.)

Existing project. The existing project provides for a concrete dam, gated spillway, and single-lift lock, with earth embankments at either side. The non-overflow section of the dam includes a powerhouse and an intake structure. The gated spillway is 708 feet long with a fixed crest at elevation 163 feet national geodetic datum. The two earth embankments, of almost equal lengths, have a total length of 12,128 feet, with a crest elevation at 215, and a maximum height of about 68 feet. The nonoverflow section of the concrete dam is 200 feet long, with the deck of the powerhouse section at elevation 208. The lock, with usable chamber dimensions of 82 feet by 450 feet, has a lift of 88 feet with the normal upper pool elevation at 190. Depths are 13 feet over the lower sill and 18 feet over the upper sill at normal pool elevation. The underlying foundation is limestone. Total reservoir capacity is 934,400 acre-feet, with 244,000 acre-feet reserved for power. The power installation consists of four units of 32,500 kilowatts each, or a total of 130,000 kilowatts. The project provides for maintenance, including operation and care. (See Table 10-B for authorizing legislation.)

Local cooperation. Local interests must maintain and operate all utility and highway facilities which may be relocated or otherwise altered as part of the improvement, provide suitable public terminal facilities, and hold the United States free from damages. Local agencies and other organizations have indicated their willingness and ability to comply.

Terminal facilities. Public wharves at Eufaula and Phenix City, Alabama, and Columbus, Georgia, are considered adequate for existing commerce.

Operations and results during fiscal year.

Maintenance: Operation and maintenance cost for FY 2007 was \$7,452,000. Gross power generation amounted to 242,063

megawatt hours during FY 2007. Recreational attendance during FY 2007 totaled 3,792,794 visits.

Condition at end of fiscal year. Construction was completed in 1963. The lock was opened to navigation in June 1963. The first power generating unit was placed on-the-line in March, the second in May, the third in September, and the fourth in November 1963. Total Federal cost under existing project as of September 30, 2007 is \$88,330,669 for new work, major rehabilitation cost \$44,947,463 and \$205,863,047 for maintenance, a total cost of \$339,141,179. (See also Table 10-M.)

46. WEST POINT LAKE, CHATTAHOOCHEE RIVER BASIN, GA AND AL

Location. The damsite is on the Chattahoochee River 2.8 miles upstream from West Point, Georgia, 201.4 miles above the mouth of the Chattahoochee River, and 309.2 miles above the mouth of the Apalachicola River. At the full power pool elevation of 635 feet above national geodetic datum, the reservoir would lie in Troup and Heard Counties, Georgia, and in Chambers and Randolph Counties, Alabama (See Geological Survey maps of Georgia and Alabama.)

Existing project. The existing project provides for flood control, power, recreation, fish and wildlife development, and streamflow regulation for downstream navigation. The project provides for a gravity-type concrete dam 896 feet long with earth embankments at either end 1,111 feet long on the east end and 5,243 feet long on the west end. The total length of the dam and spillway is 7,250 feet. The main dam consists of a concrete non-overflow section, 185 feet long on the west side and an earth embankment retaining wall on the east side; a gravity concrete spillway 390 feet long, including piers and abutments, with six tainter gates, each 50 feet by 41 feet. A monolith intake-powerhouse section and erection bay 321 feet long is constructed directly west and adjacent to the spillway. At the full power-pool elevation of 635 the reservoir provides a total storage of 605,000 acre-feet of which 307,000 acre-feet is usable. During the critical flood season the reservoir is operated with maximum power pool elevation at 625 feet to provide flood storage between elevations 625 and 635. The initial power installation of 73,375 kilowatts consisting of units 1, 2 and 3 were placed in operation in March and April, 1975. (See Table 10-B for authorizing legislation.)

Local cooperation. None required.

Operations and results during fiscal year.

REPORT OF THE SECRETARY OF THE ARMY ON CIVIL WORKS ACTIVITIES FOR FY 2007

Maintenance: Operation and maintenance of the project totaled \$11,264,000. Gross power generation amounted to 99,556 megawatt hours during FY 2007. Recreational attendance during FY 2007 totaled 3,200,083 visits.

Condition at end of fiscal year. Construction of the project, which was initiated in June 1966, and completed at the end of FY 1984. Total Federal cost under existing project as of September 30, 2007 is \$131,565,760 for new work and \$160,279,399 for maintenance, a total of \$291,845,159 (See also Table 10-M.)

47. SCHEDULING FLOOD CONTROL RESERVOIR OPERATIONS

Mobile District monitors flood control operations of Alabama Power Company's Weiss, H. Neely Henry, and Logan Martin Dams on Coosa River, Alabama, and their Lewis Smith Dam on Sipsey Fork (headwaters of Black Warrior River, Alabama), for compliance with regulation plans prepared in accordance with Public Law 436, 83rd Congress, and Federal Power Commission licenses. Fiscal year cost for these activities on the Weiss, H. Neely Henry, and Logan Martin Dams are included under operation and maintenance costs for the Alabama-Coosa Rivers. Fiscal year cost for the Lewis Smith Dam is included under the overall operation and maintenance costs for the Black Warrior-Tombigbee Rivers System.

48. FLOOD CONTROL AND COASTAL EMERGENCIES (FC & CE)

Disaster Preparedness Program.....	\$3,009,784

GENERAL INVESTIGATIONS

54. SURVEYS

During FY 2007, costs of \$582,142 were incurred as shown below:

Flood Damage Preventive Studies	\$25,463
Navigation Studies	186
Special Studies	288,550
Shoreline Protection Studies	176,341
Miscellaneous Activities	12,654
Coordination with Other Agencies and Non-Federal Interests	78,948
 Total Surveys	 \$582,142

55. COLLECTION AND STUDY OF BASIC DATA

Collection and study of basic data continued during the fiscal year with the initiation of Flood Insurance studies, the cost of which was reimbursable by FEMA. In addition, Flood Plain Management Services were performed at a cost of \$117,058 and \$0 expended for Hydrologic Studies. (See Table 10-P for listings of studies completed during FY 2007.)

56. PRECONSTRUCTION ENGINEERING AND DESIGN

Total FY 2007 expenditures for Preconstruction, Engineering and Design (PED) was \$6,844.

57. RIVERS AND HARBORS CONTRIBUTED FUNDS (GENERAL INVESTIGATION)

Contributed funds expended for authorized Federal studies included:

Brewton and East Brewton, AL	7,916
Hancock County, MS	-14,221
Metro Atlanta Watershed, GA	-0-
Planning Assistance to States	37,151
 Total Contributed Funds	 \$30,846

19. Includes \$594,688 for previous projects.
20. Includes \$126,649 for previous projects.
21. Includes \$1,993,000 transferred to National Park Service; \$210,249 GI funds expended during FY 1957 thru FY 1961. Previous project cost amounted to \$197,651.
22. Includes \$234,331 for previous projects.
23. Includes \$3,692,483 for previous projects.
24. Includes \$2,978,050 for previous projects.
25. Includes \$3,347,489 for recreational facilities.
26. Includes \$1,883,193 Federal funds, \$1,924 contributed funds for previous projects; and \$809,553 for Lazer Creek design and \$301,310 for Rysco Channel.
27. Includes \$2,246,233 for previous projects.
28. Includes \$8,233,325 for recreational facilities.
29. Includes \$84,014 for recreational facilities.
30. Included under maintenance for overall Apalachicola, Chattahoochee and Flint Rivers projects.
31. Includes \$1,515,822 for recreational facilities.
32. Includes \$2,441,029 for recreational facilities.
33. Includes \$35,045 for previous project costs.

REPORT OF THE SECRETARY OF THE ARMY ON CIVIL WORKS ACTIVITIES FOR FY 2007

TABLE 10-B AUTHORIZING LEGISLATION

Acts	Work Authorized	Documents
Mar. 2, 1907	APALACHICOLA BAY, FL (See Section 2 of Text) Channel 18 feet deep through West Pass and Link Channels. Ten feet deep across the inner bar, and 9 feet deep through Bulkhead Shoals.	H. Doc. 422, 59th Cong., 1 st Sess.
Jan. 21, 1927	Modify project to provide for channel 10 feet deep from mouth of inner bar channel to Gulf via Link and West Pass Channels, and 10-foot depth in Bulkhead Shoals Channel.	H. Doc. 106, 69th Cong., 1 st Sess.
Sep. 3, 1954	At Eastpoint, Fl., a channel 6 feet deep, 100 feet wide, and about 6,000 feet long, parallel to shore, with connecting channel 6 feet deep, and 100 feet wide to St. George Sound, and at Apalachicola, Fl., a small-boat basin 200 feet and 9 feet deep, with a connecting channel 9 feet deep and 80 feet wide through Scipio Creek to the Apalachicola River.	H. Doc. 156, 82d Cong., 1 st Sess.
Sep. 3, 1954	Modify project to provide for a channel 10 feet deep and 100 feet wide from the 10-foot depth in Apalachicola Bay across St. George Island to within 300 feet of the Gulf shore, thence increasing uniformly in width to 200 feet at shore and continuing at this width to the 10-foot depth in the Gulf, with two jetties extending from the dune line on St. George Island to the outer end of channel, and for abandonment of West Pass Channel upon completion of channel through St. George Island.	H. Doc. 557, 82d Cong., 2d Sess.
Jul. 3, 1958	Modify improvement of Apalachicola Bay, Fl., authorized by River and Harbor Act of Sept. 3, 1954 to provide that the Secretary of the Army shall reimburse local interests for such approved work as they may have done based upon the reduction in the amount of material which will have to be removed to provide project dimensions at such time as Federal dredging of the channel is undertaken.	
Nov. 21, 1963 ¹	A channel 6 feet deep, 100 feet wide, and about 1 mile long, parallel to shore at Two Mile, Fl., with a 6-by 100-foot connecting channel to water of the same depth in Apalachicola Bay.	DPR (Sec. 107)
Feb. 5, 1975 ¹	A channel 6 feet deep and 100 feet wide extending from the eastern end of the existing Two Mile channel and generally paralleling the shoreline for a distance of about 9,000 feet to intersect with the Gulf Intracoastal Waterway about 1,650 feet south of Gorrie Bridge at Apalachicola, and a breakwater built to elevation 4.0 feet above mean low water along the seaward side of the existing channel parallel to the shore at Two Mile. The total length of the breakwater of about 6,150 feet, includes two 860-foot legs paralleling the existing entrance channel.	DPR (Sec. 107)
Aug. 11, 1983 ¹	Modify Eastpoint project to include breakwaters with a total length of 5,300 feet.	DPR (Sec. 107)
Jul. 3, 1958	AQUATIC PLANT CONTROL (See Section 4 of Text)	
Oct. 23, 1962	Aquatic plant control for N.C., S.C., Ga., Fl., Al., Ms., and La.	H. Doc. 37, 85th Cong., 1 st Sess.
Oct. 27, 1965	Research and planning costs to be borne by U.S.	Public Law 87-874, 87th Cong.
Nov. 17, 1986	Provided for continued research.	H. Doc. 251, 89th Cong., 1 st Sess.
	Increased non-federal cost-sharing from 30% to 50%.	Water Resources Development Act of 1986 (P.L. 99-662)
Mar. 2, 1945	BAYOU CODEN, AL (See Section 5 of Text) Channel 4 by 40 feet.	H. Doc. 824, 77th Cong., 2d Sess.
Jun. 2, 1969 ¹	Channel 8 by 60 feet to connect with Bayou La Batre channel	DPR (Sec. 107)
Oct. 27, 1965	BAYOU LA BATRE, AL (See Section 6 of Text) A 12- by 100-foot channel from that depth in Mississippi Sound to a point about 2,800 feet south of the highway bridge, thence a channel 12 by 75 feet to the bridge, an overall distance of about 33,500 feet.	H. Doc. 327, 88th Cong., 2d Sess.
Nov. 28, 1990	Deepen existing channel to 18 feet to the bridge; to 14 feet above bridge, and into Snake Bayou at a depth of 12 feet.	Water Resources Development Act of 1990 (P.L. 101-640)
Jul. 3, 1930	BILOXI HARBOR, MS (See Section 7 of Text) Channel 10 feet deep and 150 feet wide from Mississippi Sound west and north of Deer Island to deep water in Back Bay of Biloxi.	H. Doc. 754, 69th Cong., 2d Sess.
Jun. 20, 1938	Relocation of channel.	H. Doc. 639, 75th Cong., 3d Sess.
Mar. 2, 1945	Entrance channel 6 feet deep and 50 feet wide into Old Fort Bayou.	H. Doc. 258, 76th Cong., 1 st Sess.
Mar. 2, 1945	Entrance channel 8 feet deep and 100 feet wide through Cranes Neck into Bayou Bernard.	H. Doc. 326, 76th Cong., 1 st Sess.
May 17, 1950	Maintain channel 6 feet deep and 40 feet wide from Biloxi Harbor to Ott Bayou.	H. Doc. 256, 81st Cong., 1 st Sess.
Jul. 14, 1960	Continuous channel 12 feet deep from Mississippi Sound the Air Force terminal on Bayou Bernard via Back Bay and Cranes Neck.	H. Doc. 271, 86th Cong., 2d Sess.
Nov. 7, 1966	A 23-mile-long through channel 12 feet deep and 150 feet wide from the Gulf Intracoastal Waterway through: Mississippi Sound, Biloxi Bay (east of Deer Island), Back Bay, Big Lake, and via land cut to Gulfport Lake, including a 500 by 2,600-foot turning basin in the lake, thence, a channel 12 by 100 feet from the western end of Gulfport lake for about 2 miles to a 300- by 500-foot turning basin; adoption for maintenance of a 12- by 150-foot spur channel from the main channel in Biloxi Bay, westward about 1 mile to a 400- by 600-foot turning basin opposite Ott Bayou, and	H. Doc. 513, 89th Cong., 2d Sess.

MOBILE, ALABAMA, DISTRICT

TABLE 10-B (Continued)

AUTHORIZING LEGISLATION

Acts	Work Authorized	Documents
	abandonment of the existing 6- by 40-foot channel into Ott Bayou; continuation of maintenance of the 12- by 150-foot lateral channel westward about 2.2 miles from the main channel in Biloxi Bay to a point opposite Oak Street; continuation of maintenance of the channel west of Deer Island.	
Mar. 28, 1979 ¹	A channel 10 feet deep; 100 feet wide and 300 feet long extending northward from the Biloxi Lateral Channel and, into a rectangular basin approximately 300 feet by 370 feet.	DPR (Sec. 107)
Aug. 15, 1985	A channel 12-feet deep; 130-feet wide and 2,100-feet long, and a 300 by 300 foot turning basin also to a 12-foot depth.	DPR (Sec. 107)
	BLACK WARRIOR AND TOMBIGBEE RIVERS, AL (See Section 8 of Text)	
Jul. 5, 1884	Original appropriation for improving Black Warrior River. Original project for slack-water improvement authorized by Secretary of War, Apr. 19, 1887	Annual Report, 1887, pt. 2, p. 1302.
Mar. 3, 1899	Construction of the first locks between Tuscaloosa and Demopolis.	
Sep. 19, 1890	(Maintenance of the section of Tombigbee River below lock 1 to its mouth (66 miles) included in the existing project.)	
Sep. 19, 1890	Construction of locks and dams, 1, 2, and 3. Merging of the individual project for the Black Warrior and Warrior Rivers and the Tombigbee River below Demopolis	H. Doc. 178, 56th Cong., 2d Sess., and Annual Report, 1901, pt. 3, p. 1858 H. Doc. 165, 57th Cong., 1 st Sess., and Annual Report, 1902, p. 1293
Mar. 2, 1907	Construction of locks and dams 14, 15, 16, and 17.	
Mar. 3, 1909	Provides for reconstruction of obsolete structures, modified in plan and location, to provide efficient and economical maintenance and operation.	Public Law 317
Aug. 22, 1911	Lift of lock 17 changed to 63 feet, and construction of locks and dams 18 and 19 eliminated from the project. Extension of slack-water improvement on Sanders Ferry on Mulberry Fork and Nichols Shoal on Locust Fork.	H. Doc. 72, 62d Cong., 1 st Sess.
Mar. 2, 1919	Raising of various dams 2 feet and raising the lock walls 2 feet at lock 1 to provide a minimum depth of 8 feet at low water, widening the channel to 150 feet where practicable.	Annual Report, 1918, P. 876
Aug. 30, 1935	For snagging Mobile River from the mouth of Chickasaw Creek to the junction of the Alabama and Tombigbee Rivers.	H. Doc. 728, 71st Cong., 3d Sess.,
Aug. 30, 1935	Increase channel dimensions to 9 by 200 feet; construct crest gates at lock and dam 17; add flashboards at all dams; Sunflower Bend Cutoff.	H. Doc. 56, 73d Cong., 1 st Sess., and Rivers and Harbors and Committee Doc. 45 73d Cong.
Aug. 30, 1935	Construction of a lock and dam below Tuscaloosa to replace original locks and dams 10, 11, and 12.	Rivers and Harbors Committee Doc. 26., 74 th Cong., 1 st Sess.
Jun. 26, 1934	Operation and care of locks and dams provided for with funds from War Department appropriations for rivers harbors.	
Dec. 22, 1944	Recreation facilities.	
Mar. 2, 1945	Construction of a lock and dam near Demopolis to replace existing dams 4, 5, 6, and 7.	H. Doc. 276, 76th Cong., 1 st Sess.
Mar. 2, 1945	Provide increased spillway capacity at dam 1.	H. Doc. 382, 76th Cong., 1 st Sess.
Jul. 14, 1960	Coffeeville Lock and Dam Wildlife Refuge.	S. Doc. 50, 86th Cong., 1 st Sess.
Dec. 21, 1982	Provides for a wider navigation opening at the Franklin Ferry Bridge, Jefferson County, Al.	Public Law 97, 377
Jul. 30, 1983	Authorized to widen, as necessary for safe passage, the navigation opening of Franklin Ferry Bridge, Jefferson County, Al.	Public Law 98-63
Nov. 17, 1986	Conduct a feasibility study of protection from erosion problems on the southern bank from river mile 253 to river mile 255.	Water Resource Development Act of 1986 (P.L. 99-662)
	OLIVER LOCK AND DAM (REPLACEMENT), AL (See Section 8A of Text)	
Aug. 15, 1985	Construction and land acquisition for Oliver Lock Replacement	The Supplemental Appropriations Act, 1985 (P.L. 99-88)
Nov. 17, 1986	Construction of a lock and dam to replace the William Bacon Oliver Lock and Dam.	Water Resources Development Act of 1986 (P.L. 99-662)
	BON SECOUR RIVER, AL (See Section 9 of Text)	
May 16, 1963 ¹	A 10- by 100-foot channel from Gulf Intracoastal Waterway through Bon Secour Bay to mouth of Bon Secour River and extending up river to vicinity of Swift's Landing, thence 6 by 80 feet up river to a point 600 feet above Oak Landing, with two turning and maneuvering areas 150 feet wide and 1,100 and 1,200 feet long opposite Swift's Landing and ice loading dock. Overall length of improvement is about 4.7 miles.	DPR (Sec. 107)

REPORT OF THE SECRETARY OF THE ARMY ON CIVIL WORKS ACTIVITIES FOR FY 2007

TABLE 10-B (Continued)

AUTHORIZING LEGISLATION

Acts	Work Authorized	Documents
Sep. 3, 1954	CARRABELLE HARBOR, FL (See Section 10 of Text) Entrance channel 27- by 200-foot, harbor channel 25- by 150-foot, turning basin 25- by 100-foot.	H. Doc. 451, 83d Cong., 2d Sess.
Mar. 2, 1945	DAUPHIN ISLAND BAY, AL (See Section 11 of Text) A channel 7 feet deep and 150 feet wide from Mobile Bay to an anchorage basin of same depth, about 7 acres in area, in marsh just north of Fort Gaines on Dauphin Island; a channel 4 feet deep and 40 feet wide from anchorage basin	H. Doc. 333, 76th Cong., 1 st Sess.
Sep. 3, 1954	to Dauphin Island Bay; and a jetty and revetment to protect entrance channel; and (b) an anchorage basin 7 feet deep and 500 feet square at Dauphin Island Village, with an entrance channel of like depth, 100 feet wide and about 8,300 feet long, extending to 7-foot hydrographic contour in Mississippi Sound.	H. Doc. 394, 82d Cong., 2d Sess.
Aug. 16, 1991	Deepen existing 4-foot channel to 7-feet and 40-feet wide from anchorage basin to Dauphin Island Bay.	DPR (Sec. 107)
Jun. 23, 1993	Provides 400 feet of stone protection along the shoreline near the pier and erosion protection for shoreline in the immediate vicinity of Fort Gaines.	DPR (Sec. 14)
May 19, 1969 ¹	DOG AND FOWL RIVERS, AL (See Section 12 of Text) To provide small craft navigation on west side of Mobile Bay.	DPR (Sec. 107)
Jul. 3, 1930	EAST PASS CHANNEL FROM GULF OF MEXICO INTO CHOCTAWHATCHEE BAY, FL (See Section 13 of Text) Maintenance of 6-foot channel by 100-foot channel from Choctawhatchee Bay into Gulf.	H. Doc. 209, 70th Cong., 1 st Sess.
Oct. 24, 1951	Maintenance of 12-foot channel from Choctawhatchee Bay into Gulf, and maintenance of 6-foot channel into Old Pass Lagoon.	H. Doc. 470, 81st Cong., 2d Sess.
Oct. 27, 1965	Construction of twin jetties. (Present project dimensions.)	H. Doc. 194, 88th Cong., 2d Sess.
Oct. 1, 1980	Modifications to provide a channel length of approximately 3,800 feet in lieu of 2,000 feet from the East Pass Channel into Old Pass Lagoon, with no changes in width and depth.	Energy and Water Development Appropriation
May 17, 1950	FLY CREEK, FAIRHOPE, AL (See Section 14 of Text) A channel 6 feet deep, 80 feet wide, and about 1,650 feet long from 6-foot depth in Mobile Bay to a turning basin of same depth, 100 feet wide and 350 feet long, in Fly Creek.	H. Doc. 194, 81st Cong., 1 st Sess.
Jun. 25, 1910	GULF INTRACOASTAL WATERWAY BETWEEN APALACHEE BAY, FL, AND MEXICAN BORDER (Mobile District) (See Section 15 of Text) APALACHICOLA RIVER TO ST. ANDREW BAY, FL A channel 5 feet deep at mean low water and 65 feet wide at the bottom. A channel 9 feet deep at mean low water and 100 feet wide at the bottom.	H. Doc. 670, 61st Cong., 2d Sess. Rivers and Harbors Committee Doc. 52.; 72d Cong., 2d Sess.
Aug. 30, 1935	CHOCTAWHATCHEE BAY TO WEST BAY, FL A channel 9 feet deep at mean low water and 100 feet wide at the bottom.	H. Doc. 259, 72d Cong., 1 st Sess.
Jun. 25, 1910	A channel 6 feet deep at mean low water, with no reference to width.	H. Doc. 565, 61st Cong., 2d Sess.
Aug. 30, 1935	CHOCTAWHATCHEE BAY TO PENSACOLA BAY, FL A channel 9 feet deep at mean low water and 100 feet wide at the bottom.	Rivers and Harbors Committee Doc. 42, 73d Cong., 2d Sess.
Jul. 3, 1930	PENSACOLA BAY, FL, TO MOBILE BAY, AL A channel 9 feet deep at mean low water and 100 feet wide at the bottom.	H. Doc. 42, 71st Cong., 1 st Sess.
Jul. 3, 1930	MOBILE BAY, AL, TO NEW ORLEANS, LA A channel 300 feet wide and 10 feet from the 10 foot contour in Mobile Bay to the 10-foot contour in Mississippi Sound,	Rivers and Harbors Committee Doc. 4, 71st Cong., 1st Sess.
Jul. 3, 1930	A channel 100 feet wide and 9 feet deep from Lake Pontchartrain to Mississippi Sound.	H. Doc. 341, 71st Cong., 2d Sess.
Jul. 23, 1942	APALACHEE BAY, FL, TO NEW ORLEANS, LA A channel 12 feet deep and 125 feet wide at mean low water, except in the section between Mobile, Al., and New Orleans, La, where the width is to be 150 feet.	Public Law 675, 77 th Cong., 2d Sess., and H. Doc. 96, 79 th Cong., 1 st Sess.
Jun. 17, 1943	Conditional acquisition of Gulf County Canal, Fl. And enlargement of the canal to 9 feet deep and 100 feet wide.	H. Doc. 257, 76th Cong., 1 st Sess., and P. L. 75, 78th Cong., 1st Sess.
Mar. 2, 1945	Construction of a movable span in the Georgia, Florida and Alabama R.R. bridge crossing the Ochlockonee River.	H. Doc. 442, 76th Cong., 1 st Sess.
May 17, 1950	Abandonment and closure of original channel between Big Lagoon and Pensacola Bay and construction of a new channel to enter the bay north of original entrance.	H. Doc. 325, 81st Cong., 1 st Sess.

MOBILE, ALABAMA, DISTRICT

TABLE 10-B (Continued)

AUTHORIZING LEGISLATION

Acts	Work Authorized	Documents
Nov. 7, 1966	Authorized enlargement of Gulf County Canal to 12 by 125 feet.	P. L. 89-789, 89 th Cong. 2d Sess.
	GULFPORT HARBOR, MS (See Section 16 of Text)	
Mar. 3, 1899	A channel 19 feet deep and 300 feet wide from the anchorage basin at Ship Island to Gulfport, Ms., and an anchorage basin next to the shore end 19 feet deep and not less than 2,640 feet by 1,320 feet in area.	H. Doc. 120, 55th Cong., 3d Sess.
Mar. 2, 1907	Combined Ship Island Pass with Gulfport Harbor project.	
Feb. 27, 1911	Increased depth to 26 feet and width to 300 feet across Ship Island Bar and depth to 19 feet in channel from anchorage basin at Ship Island to anchorage basin at Gulfport.	H. Doc. 2, 60th Cong., 1 st Sess.
Jan. 21, 1927	Authorized relocation of channel across Ship Island Bar.	
Jul. 23, 1930	Increased depth to 27 feet and width to 300 feet across Ship Island Bar, 26 feet deep and 220 feet wide through Ms. Sound and depth of 26 feet in the anchorage basin at Gulfport.	H. Doc. 692, 69th Cong., 2d Sess.
Jun. 30, 1948	Increased depth of 32 feet and width to 30 feet across Ship Island Bar, 30 feet deep and 220 feet wide through Ms. Sound and a depth of 30 feet in the anchorage basin at Gulfport.	H. Doc. 112, 81st Cong., 1 st Sess.
Jul. 3, 1958	Maintenance of the existing commercial small-boat harbor and an approach channel 100 feet wide and 4,300 feet long, from deep water in Ms. Sound to the small-boat basin, all at a depth of 8 feet.	S. Doc. 123, 84th Cong., 2d Sess.
Aug. 15, 1985	Modify the existing Ship Channel to 36 x 300 feet in Mississippi Sound, and 38 x 400 feet across the bar, with changes in the channel alignment and the entrance to the anchorage basin for safe and unrestricted navigation.	The Supplemental Appropriations Act, 1985 (P.L. 99-88)
Nov. 17, 1986	Modification of FY 1985 Supplemental Appropriations Act. Dredged material from project shall be disposed of in open water in the Gulf of Mexico in accordance with all provisions of Federal law.	Water Resources Development Act of 1986 (P.L. 99-662)
Nov. 17, 1988	Modify of WRDA of 1986 and authorize disposal of dredged material in open waters of the Gulf of Mexico; and by Thin-layer disposal in Mississippi Sound under a demonstration program.	Water Resources Development Act of 1988 (P.L. 100-676)
	MOBILE HARBOR, AL (See Section 17 of Text)	
Aug. 26, 1937	For improvement of Threemile Creek by snagging from Mobile River to the Industrial Canal.	Rivers and Harbors Committee Doc. 69, 74th Cong., 1st Sess.
Mar. 2, 1945	Adoption of existing channel through Garrows Bend from Choctaw Point in Arlington pier, 27 feet deep and 150 feet wide, with 2 turning basins. Adoption of the existing channel alongside Arlington pier from the of Garrows Bend Channel, 27 feet deep and 150 feet wide. A channel 25 feet deep and generally 500 feet wide in Mobile River from the highway bridge to the mouth of Chickasaw Creek, then 25 feet deep and 250 feet wide in Chickasaw Creek to a point about 400 feet below Shell Bayou.	H. Doc. 739, 79th Cong., 2d Sess.,
Sep. 3, 1954	Enlarging Mobile Bay Channel to 42 by 600 feet. Enlarging Mobile Bay Channel to 40 by 400 feet. Deepening Mobile River Channel below highway bridge to 40 feet over present widths, including existing turning basin and anchorage areas. Widening river channel opposite Mazagine Point to provide a 40- by 800- by 1,400-foot turning basin. The turning basin was further modified for maintenance by SAD letter of November 27, 1973 under authority contained in ER-1130-2-307 to increase the turning basin's dimensions to 1000' by 1600'.	H. Doc. 74, 83d Congress, 1 st Sess.
Sep. 3, 1954	Closure of Garrows Bend Channel by construction and operation of an earth-filled causeway across said channel (work to be done by local interests).	H. Doc. 74, 83d Cong., 2d Sess.
Jul. 26, 1970 (SR)	To provide a channel 40 feet deep and 400 feet wide from the main ship channel in Mobile Bay and extending northwesterly for about 5.3 miles to the shore of Mobile Bay including an anchorage and turning basin near the shoreline, thence a land-cut 40 feet deep, 300 feet wide and about 1.9 miles long to and including a trapezoidal turning basin 40 feet deep and approximately 42 acres, 40 feet deep; a barge channel 12- by 100-feet extending 6500-feet and terminating in a 300-foot by 300-foot terminal basin.	(Under provision of Section 201 of the 1965 Flood Control)
Dec. 15, 1970 (HR)		
Aug. 15, 1985	Deepen and widen entrance channel over the bar to 57 by 700 feet, a distance of about 7.4 miles, deepen and widen Mobile Bay Channel from mouth of bay to south of Mobile River, 55 by 550 feet, a distance of about 27.0 miles, deepen and widen an additional 4.2 miles of Mobile Bay Channel to 55 by 650 feet, provide 55 foot deep anchorage area and turning basin in vicinity of Little Sand Island, and construct a 1710 acre disposal area adjacent to the Brookley Industrial Complex.	The Supplemental Appropriations Act.
Nov. 17, 1986	Modification of FY 1985 Supplemental Appropriations Act. Dredged material from project shall be disposed of in open water in the Gulf of Mexico in accordance with all provisions of Federal law.	Water Resources Development Act of 1986 (P.L. 99-662)
	PANAMA CITY BEACHES, FL	
Nov. 17, 1986	Shoreline protection to provide a 110-foot wide beach with an artificial dune system and stabilization of vegetation.	Water Resources Development Act of 1986 (P.L. 99-662)
	PANAMA CITY HARBOR, FL (See Section 18 of Text)	
Aug. 30, 1935	Channels 27 and 29 feet deep. Abandonment of project adopted by act of June 25, 1910.	H. Doc. 33, 73d Cong., 1 st Sess.
Mar. 2, 1945	Maintenance of a channel in Watson Bayou 100 feet wide and 10 feet deep	H. Doc. 555, 76th Cong., 3d Sess.

REPORT OF THE SECRETARY OF THE ARMY ON CIVIL WORKS ACTIVITIES FOR FY 2007

Jun. 30, 1948	from that depth in St. Andrew bay to the highway bridge. Channels 32 and 34 feet deep.	H. Doc. 559, 80th Cong., 2d Sess.
Mar. 23, 1967 ¹	A channel 8 by 100 feet in Grand Lagoon from St. Andrew Bay to a point about 2,400 feet east of State Highway 392. Bridge with branches to serve shore facilities which terminate at the bridge.	DPR (Sec. 107)
Jun. 14, 1972	Channels 38, 40, 42 feet deep.	H. Doc. 196, 92d Cong., 2d Sess.
PASCAGOULA HARBOR, MS (See Section 19 of Text)		
Mar. 4, 1913	Provides for through channel from the Gulf to mile 4 on Dog River 25 by 300 feet through Horn Island Pass, thence 22 by 225 feet across Mississippi Sound and up 150 feet in Pascagoula River above bridge, and up Dog River to mile 4, all subject to financial participation by local interests.	H. Doc. 682, 62d Cong.,
Mar. 4, 1915	Waived requirement for financial participation by local interests.	River and Harbor Committee Doc. 12, 63d Cong., 2d Sess.
May 17, 1950	Cutoff channel, 12 by 125 feet, from State Highway 63 bridge to mile 4 on Dog River, via Robertson and Bounds Lakes.	H. Doc. 188, 81st Cong., 1 st Sess.
Sep. 3, 1954	Modification to provide for channel dimensions of 35 by 325 feet through Horn Island Pass, thence 30 by 275 feet across Mississippi Sound and up Pascagoula River to the railroad bridge, and a turning basin just below the bridge.	H. Doc. 98, 96th Cong.,
Jul. 3, 1958	Reimbursement of local interests for work done on Dog River cutoff (\$44,000).	H. Doc. 98, 86th Cong., 1 st Sess.
Jul. 14, 1960	Modification to provide for maintenance of 12- by 125-foot channel to mile 6 on Dog River, and maintenance of 30-by 225-foot side channel from main ship channel in Mississippi Sound to the mouth of Bayou Casotte, thence 30 by 300 feet in Bayou Casotte to a turning basin of the same depth 1 mile above the mouth.	H. Doc. 98, 86th Cong., 1 st Sess.
Jul. 14, 1967	Deepening the Horn Island Pass channel to 38 feet and deepening the main ship channel in Mississippi Sound, the river channel to the railroad bridge, and the turning basin all to 33 feet.	Chief of Engineers Report dated Nov. 3, 1960.
Oct. 23, 1962	Enlarging Horn Island Pass Channel to 40 by 350 feet provision of an impounding area adjacent to and east of channel 40 feet deep, 200 feet wide, and about 1,500 feet long, enlarging main channel in Mississippi Sound and river channel to railroad bridge to 38 by 350 feet, and deepening turning basin in river and Bayou Casotte channels and basin to 38 feet.	H. Doc. 560, 87th Cong., 2d Sess.
Jul. 11, 1983 ¹	Modification to provide for channel dimensions 12 by 80 feet extending about 2,750 feet from deep waters in the Pascagoula River into Krebs Lake to a turning basin, thence, along the south bank of the lake a channel with dimensions of 10 x 60 feet terminating at a second turning basin, a distance of about 2,750 feet. The project was constructed by hydraulic dredging with the disposal placed in an upland diked area.	DPR (Sec. 107)
Nov. 17, 1986	Deepen and widen gulf entrance channel to 44 by 550 feet; widen Horn Island channel to 600 feet, relocating that channel about 500 feet westwardly; deepen Mississippi Sound portion to 42 feet; widen and deepen Bayou Casotte to 42 by 350 feet and construct turning basin. Disposal of all new work material in Gulf of Mexico.	Water Resources Development Act of 1986 (P.L. 99-662)
PENSACOLA HARBOR, FL (See Section 20 of Text)		
Jun. 13, 1902	A channel 30 feet deep at mean low water and 500 feet wide from the Gulf of Mexico to the dock line at the east end of the city of Pensacola, and also provided that \$150,000 may be used in constructing or purchasing a seagoing suction dredge.	H. Doc. 253, 72d Cong., 1 st Sess.
Aug. 30, 1935	Modified the existing project for the present inner channels and the deepening of the entrance channel to 32 feet.	H. Doc. 253, 72d Cong., 1 st Sess.
Aug. 26, 1937	Improvements of Bayou Chico.	Rivers and Harbors Committee Doc. 96, 74th Cong., 2d Sess.
Aug. 27, 1962	Maintenance of the entrance channel from the Gulf of Mexico to lower Pensacola Bay, a distance of about 5 miles to dimensions of 35 feet deep and 500 feet wide; maintenance of a channel along the south side of the aircraft carrier mooring basin, a distance of about 2.5 miles, to dimensions of 33 feet deep and 300 feet wide; a bay channel 33 feet deep, 300 feet wide, and about 2.1 miles long; parallel approach channels to opposite ends of the inner-harbor channel, about 1.3 and 1.4 miles in length, each 33 feet deep, 300 feet wide, and flared at the junctions with the inner-harbor channel; and deepening the existing 500-foot wide inner-harbor channel to a depth of 33 feet and lengthening it to 3,950 feet.	H. Doc. 528, 87th Cong., 2d Sess.
PERDIDO PASS CHANNEL, AL (See Section 21 of Text)		
Oct. 27, 1965	A 12- by 150-foot channel stabilized by twin rubblemount jetties, from the Gulf of Mexico into Perdido Pass, thence 9 by 100 feet into Perdido Bay with a spur channel of the same dimensions into Terry Cove.	H. Doc. 94, 88th Cong., 2d Sess.
TENNESSEE-TOMBIGBEE WATERWAY, AL AND MS (See Section 22 of Text)		
Jul. 24, 1946	A waterway connecting Tennessee and Tombigbee Rivers via East Fork of Tombigbee River, Mackeys and Yellow Creeks. Plan of improvement consists of three sections: river section, 9- by 300-foot channel for 149 miles between Demopolis and Amory, Ms.;	H. Doc. 486, 79th Cong., 2d Sess.

	canal section, 12 by 300 feet for 46 miles from Amory to Bay Springs; divide section, 12 by 300 feet (except in the 27 mile-long divide cut in which bottom width be 280 feet) for 39 miles from Bay Springs through dividing ridge to Tennessee. Total lift of 341 feet to be accomplished by 10 locks. Total length of project is 234 miles.	
Nov. 17, 1986	TENNESSEE-TOMBIGBEE WILDLIFE MITIGATION (See Section 22A of Text) Acquire from willing sellers in a timely manner at fair market value 88,000 acres of land for mitigation of wildlife losses resulting from construction and operation of the project for the Tennessee-Tombigbee Waterway.	Water Resource Development Act of 1986 (P.L. 99-662)
Sep. 5, 2002	CEDAR POINT EXTENSION, BAY ST. LOUIS, MS (See Section 31 of Text) Construction of a 4,500 foot concrete/sheetpile wall in front of existing concrete seawall.	DPR (Sec. 14)
1946 Flood Control Act	MATUBBEE CREEK AT COONTAIL ROAD, MS (See Section 32 of Text) Rebuild and armor left descending (southeast) bank of Matubbee Creek with riprap and filter fabric; remove and backfill failed grout materials along left descending bank; and replace guard rails along the road adjacent to left descending bank.	DPR (Sec. 14)
1946 Flood Control Act	WEAVER CREEK AT HATLEY ROAD, MS (See Section 33 of Text) Remove and backfill failed grout materials at the wingwalls; grade and grass banks and adjacent drainage ditches and replace adjacent guard rails.	DPR (Sec. 14)
Oct. 23, 1962	OKATIBBEE LAKE, MS (See Section 34 of Text) Provides for a dam and reservoir for flood control, water supply, water quality control, and recreation.	H. Doc. 549, 87th Cong., 2d Sess.
Aug. 18, 1941	TOMBIGBEE RIVER (EAST FORK), MS AND AL (See Section 35 of Text) Provides for alleviation of floods from the Tombigbee River by clearing, snagging, and excavation of 13 cut-off channels, and other related channel improvements.	Special Report on Record in Oct. (P.L. 222) 77th Cong., 1st Sess.
Jul. 23, 1958 Jul. 8, 1980	TOMBIGBEE RIVER TRIBUTARIES, MS AND AL (See Section 36 of Text) Provides for improvement of 22 tributaries of Tombigbee River. Extends project limits on Twenty Mile Creek and eliminates local cooperation for this remedial work.	H. Doc. 167, 84th Cong., 1 st Sess. Supplemental Appropriations and Recession Act
Nov. 17, 1986	VILLAGE CREEK, JEFFERSON COUNTY, BIRMINGHAM, AL (See Section 37 of Text) Basically nonstructural and includes evacuating 642 structures in six separate neighborhoods from floodplain; enlarge 2 miles of channel and relocate necessary facilities; Install flood warning devices.	Water Resources Development Act of 1986 (P.L. 99-662)
Nov. 28, 1990	Authorized the Secretary to acquire private vacant lands within the definite project boundaries established in the Real Estate Design Memorandum as a nonstructural element of the project.	Water Resources Development Act of 1990 (P.L. 101-640)
Mar. 2, 1945	MULTIPLE PURPOSE PROJECTS INCLUDING POWER ALABAMA-COOSA RIVERS, AL AND GA (See Section 1 of Text) Provides for full development of Alabama-Coosa Rivers and tributaries for navigation, flood control, power, recreation, and other purposes. Authorized construction of Carters Lake, GA, Claiborne Lock and Dam, AL, Jones Bluff Lock and Dam, AL, and Millers Ferry Lock and Dam, AL.	H. Doc. 414, 77th Cong., 1 st Sess.
Jun. 28, 1954	Suspended comprehensive plan to permit non-Federal interests to develop Coosa River by constructing series of dams.	Public Law 436, 83 rd Cong.
May 25, 1982 Nov. 17, 1986	Designated change of name from Jones Bluff to Robert F. Henry Lock and Dam. Modification to the plan for the Coosa River segment of the waterway between Montgomery and Gadsden, AL to carry out planning, engineering and design in accordance with the Montgomery to Gadsden, Coosa River Channel, AL Design Memorandum No. 1, General Design, dated May 1982.	S.2034 97 th Cong., 2d Sess. Water Resources Development Act of 1986 (P.L. 99-662)
Aug. 18, 1941	ALLATOONA DAM, COOSA RIVER BASIN, GA (See Section 41 of Text) Provides for dam and reservoir for flood control, regulation of stream flow for navigation, development of hydroelectric power and recreation.	Public Law 228, 77 th Cong., 1 st Sess.
Dec. 22, 1944		H. Doc. 674, 76 Cong., 3d Sess.
Mar. 2, 1945	APALACHICOLA, CHATTAHOOCHEE AND FLINT RIVERS, AL, GA AND FL (See Section 3 of Text) Development of Apalachicola, Chattahoochee, and Flint Rivers for navigation, flood control, hydropower, and recreation.	H. Doc. 342, 76th Cong., 1 st Sess.
Jul. 24, 1946	Modified general plan for full development of Apalachicola, Chattahoochee, and Flint River System and authorized construction of Lake Sidney Lanier multipurpose reservoir.	H. Doc. 300, 80th Cong., 1 st Sess.

REPORT OF THE SECRETARY OF THE ARMY ON CIVIL WORKS ACTIVITIES FOR FY 2007

AUTHORIZING LEGISLATION

Acts	Work Authorized	Documents
Dec. 22, 1944	Authorized recreation facilities.	
Jan. 27, 1981 ¹	Modified the existing project to provide for 9- foot deep by 100-foot wide side channel into the Apalachicola River Industrial Park, Blountstown, Fl.	DPR (Sec. 107)
Nov. 17, 1986	<p>APALACHICOLA, CHATTAHOOCHEE, AND FLINT Modified Rivers and Harbors Act of 1945 to restore and maintain access to bendways and interconnecting waterways in the course of routine maintenance dredging; and to acquire lands for and to construct, operate, and maintain water-related public use and access facilities.</p>	Water Resources Development Act of 1986 (P.L. 99-662)
Jul. 24, 1944	<p>BUFORD DAM, LAKE SIDNEY LANIER, GA (See Section 42 of Text) Provision of recreation facilities.</p>	
Jul. 24, 1946	<p>GEORGE W. ANDREWS LOCK AND DAM, AL AND GA (See Section 3A of Text) Construction of high dam at Walter F. George site and low dam at George W. Andrews site.</p>	H. Doc. 300, 80th Cong., 1 st Sess.
Dec. 22, 1944	Provided recreation facilities.	
Dec. 22, 1944	<p>JIM WOODRUFF LOCK AND DAM, GA AND FL (See Section 44 of Text) Provided for recreation facilities.</p>	
May 19, 1953	<p>WALTER F. GEORGE LOCK AND DAM, AL AND GA (See Section 47 of Text) Authorized construction of high dam at Walter F. George site and low dam at Columbia site.</p>	H. Comm. On Public Works
Oct. 23, 1963	<p>WEST POINT LAKE, CHATTAHOOCHEE RIVER BASIN, GA AND AL (See Section 48 of Text) Authorized construction for flood control, power, recreation, fish and wildlife development, and streamflow regulation for downstream navigation.</p>	H. Doc. 570, 87th Cong., 2d Sess.

1. Authorized by Chief of Engineers under Section 107 of 1960 River and Harbor Act, as amended.
2. Authorized by Chief of Engineers under Section 205 of Flood Control Act of 1948, as amended.
3. Authorized by Chief of Engineers under Section 208 of Flood Control Act of 1954, as amended.
4. Authorized by Chief of Engineers under Section 14 of Flood Control Act of 1946, as amended.

NEW ORLEANS, LA, DISTRICT

This district comprises a portion of Louisiana that is embraced in drainage basins that are tributary to the Mississippi River and Gulf of Mexico, except the Mississippi River above mile 325.5 above Head of Passes (AHP), the drainage area of Ouachita-Black River Basin, and small eastern and western portions of Louisiana that are tributary to Pearl River and Sabine River and Lake. The New Orleans District territory encompasses 30,000 square miles.

River to Sabine River, and the Passes of the Mississippi River. It exercises jurisdiction over flood control work on the Mississippi River from mile 325.5 AHP to the Gulf of Mexico; the Atchafalaya River; the Atchafalaya Basin; and maintenance of the project navigation channel of the Mississippi River below mile 325.5 AHP, under supervision of the President, Mississippi River Commission (MRC), and the Division Engineer, Mississippi Valley Division.

It includes sections of the Gulf Intracoastal Waterway from Lake Borgne Light 29 at the mouth of Pearl

1. INNER HARBOR NAVIGATION CANAL LOCK, LA

Location. The project is located within the city of New Orleans, Louisiana. It is a deep and shallow draft canal extending northward from the Mississippi River to Lake Pontchartrain.

Existing project. The existing Inner Harbor Navigation Canal Lock, completed in 1921 by the Port of New Orleans, has dimensions of 31.5 feet deep, 75 feet wide, and 640 feet long (usable length). It passes barge traffic between the Mississippi River and the Gulf Intracoastal Waterway and is a vital link in the nation's Inland Waterway System. Delays to the navigation traffic since 2004 average 12.5 hours. The latest 5-year average (2000-2005) yearly tonnage through the lock is almost 19 million tons. Major commodities include coal, petroleum products, and crude petroleum. Two major vehicular roadway bridges (Claiborne and St. Claude Avenues) and one railroad/roadway bridge (Florida Avenue) cross the canal in the vicinity of the existing lock. The Corps of Engineers bought the lock from the Port of New Orleans in 1985.

Local cooperation. The cost sharing for the replacement lock is specified in the Water Resources Development Act of 1986. The costs of the new lock were apportioned between general cargo navigation and inland navigation. Costs assigned to inland navigation are shared 50 percent from the Inland Waterway Trust Fund and 50 percent from regular Corps of Engineer's appropriations. Those costs assigned to general cargo navigation will be cost shared 65 percent Federal and 35 percent non-Federal with the Port of New Orleans, who signed a non-Federal Project Cooperation Agreement (PCA) in Sep 2001. The Recommended Plan is 40 feet deep by 110 feet wide by 1,200 feet long (usable length) and is estimated to cost \$804,000,000.

Terminal facilities. Two container ship berths and one other ship wharf are located on the canal in the vicinity of the existing lock.

Operations and results during the fiscal year. Replacement lock construction methods were being examined when the U.S. Federal District Court enjoined the project.

Condition as of Sep 30. Work is underway to complete a Supplemental EIS as directed by Federal Court.

2. MISSISSIPPI RIVER-GULF OUTLET, LA

Location. In State of Louisiana and the territorial waters of the United States and extends from existing Inner Harbor Navigation Canal at a point 7,500 feet north of existing IHNC lock and about 11,000 feet from Mississippi River, to a turning basin south of Michoud, LA, and then as a land and water cut from turning basin south of Michoud, LA, southeasterly to and along south shore of Lake Borgne and through marshes to and through Chandeleur Sound to 38-foot contour in Gulf of Mexico. (Refer to NOAA Coast Charts Nos. 11340, 11360, 11363, 11369, 11371, and 11373. Also, see MRC 1989 (57th edition) folio of maps, Mississippi River-Cairo, IL, to Gulf of Mexico, LA.)

Existing project. Provides for a seaway canal, 36 by 500 feet, extending 76 miles as a land and water cut from Michoud southeasterly to and along south shore of Lake Borgne (completed), and across Chandeleur Sound to Chandeleur Island and increasing gradually to 38 by 600 feet in Gulf of Mexico (completed), with protective jetties at entrance (completed), a permanent retention dike through Chandeleur Sound (authorized but not yet constructed), and a wing dike along islands as required (authorized but not yet constructed). It also provides for an inner tidewater harbor consisting of 1,000- by 2,000-foot turning basin 36 feet deep at landward end of seaway canal (completed), and a connecting channel 36 by 500 feet wide extending easterly along Gulf Intracoastal Waterway from turning basin (completed), including construction of a suitable highway bridge with approaches to carry Louisiana State Highway 47 (formerly 61) over channel. Construction was initiated March 1958. The channel unit is 90 percent complete and the shiplock unit is 8 percent complete. The total project is 76 percent complete. The channel was opened to navigation Jul. 25, 1963, and completed Jan. 20, 1968. Paris Road Bridge was completed Nov. 14, 1967. The plan further provides for future construction of a channel and lock in the vicinity of the existing lock to furnish an additional connection between tidewater harbor and Mississippi River (construction started). (See "Inner Harbor Navigation Canal Lock, LA" for more details).

A reevaluation study to determine the economic feasibility of continuing to maintain the 36-foot depth in the channel was initiated in FY99, at Federal expense. Concerns about increased maintenance dredging costs and ecosystem deterioration prompted the study. Hurricane Katrina struck Louisiana prior to completion of the reevaluation effort. Katrina

significantly impacted the economic factors used in developing the economic analysis portion of the reevaluation study. The MRGO is currently being studied for closure due to lack of economic benefits and environmental and storm damage concerns.

Local cooperation. Requirements of local cooperation are fully described on page 11-4 of FY 1986 Annual Report.

Terminal facilities. The terminal facilities located on the MRGO are no longer in operation since Hurricane Katrina.

Operations and results during fiscal year. No dredging contracts were awarded in FY 2007. Funds provided in Public Law 109-62 (commonly referred to as the 2nd Supplemental) were used to award one bank stabilization and two foreshore protection contracts in FY 2006 at a total cost of \$27,854,000 and one foreshore protection contract in FY 2007 in the amount of \$4,765,000. Public Law 109-234 (commonly referred to as the 4th Supplemental) provided \$3,300,000 to develop a comprehensive plan to deauthorize deep draft navigation.

Condition as of Sep. 30. The foreshore protection, south bank, Chalmette Area, Station 367+00 to 1007+00 is complete. The foreshore protection, north bank, Mile 56 to 50.5, is complete.

The MRGO Deep-Draft De-Authorization Interim Report was submitted to Congress on 15 December 2006, as directed in Public Law 109-234. The report indicated that both the deep draft and shallow draft navigation channels are not cost effective and recommended an earthen closure constructed at the Bayou LaLoutre Ridge. The final report is scheduled for submission to the Chief in early calendar year 2008.

Public Law 109-148 (the 3rd Supplemental) as modified by Public Law 109-234 provided \$75,000,000 to be used for the repair, construction or provision of measures or structures necessary to protect, restore or increase wetlands, and prevent saltwater intrusion or storm surge. A plan was developed to utilize this funding to create more than 3,345 acres of wetland fronting protection levees and 9.3 miles of shoreline protection on the thin land bridge between Lake Borgne and MRGO.

3. MISSISSIPPI RIVER SHIP CHANNEL, GULF TO BATON ROUGE, LA

Location. The project is located in the southeastern portion of Louisiana below Baton Rouge, and consists of the Mississippi River and its major outlet to the Gulf of Mexico, Southwest Pass.

Existing project. Provides more efficient deep-draft navigation access to the New Orleans and Baton Rouge reaches of the Mississippi River via Southwest Pass by enlarging the existing channel to a project depth of 55 feet and enlarging the adjacent channel along the left descending bank in New Orleans Harbor to a 40-foot depth, a turning basin at Baton Rouge, and training works in the passes to reduce maintenance.

Estimated cost of existing project (Oct. 1, 2002) is \$196,200,000 Federal and \$492,000,000 non-Federal. In addition, the Coast Guard is to provide navigation aids at an estimated cost of \$1,200,000.

Local cooperation. Requirements are described in full on pages 11-2 and 11-3 of the FY 92 Annual Report.

A third supplement to the LCA addressing the Permanent Saltwater Intrusion Mitigation Plan was executed on May 28, 1993.

A Project Cooperation Agreement (PCA) between the Government and the State of Louisiana was executed on Sep. 3, 1993 which provides for the dredging of a 45-foot channel from Mile 181 AHP to Baton Rouge.

Operations and results during fiscal year. Construction is underway on the permanent mitigation plan. The permanent mitigation plan consists of constructing an underwater sill, when needed, at Mile 64 AHP to prevent the intrusion of saltwater into water supplies of the metropolitan New Orleans area. The plan also provided for upgrading the Plaquemines Parish water distribution system which has been completed, providing fresh water to water treatment plants impacted by increased saltwater intrusion caused by the deeper channel. The underwater sill was constructed during FY 99 due to extremely low flows in the river which allowed salt water to threaten up river water supplies. The sill was successful in preventing impacts to these facilities.

Work has been initiated on the General Design Memorandum for the remaining authorized features of the project. This includes the deepening of the Mississippi River to 55 feet from the Gulf of Mexico to Baton Rouge. The State of Louisiana requested that the Corps not complete the report until clarifying language relative to cost sharing is included in a future Water Resources Development Act.

Condition as of Sep. 30. The 45-foot channel is completed from the Gulf to Baton Rouge. Construction of the permanent mitigation plan is underway. Work on the General Design Memorandum for the remaining authorized features continues.

The project was not funded in FY 2007.

Flood Control

4. COMITE RIVER (DIVERSION), LA

Location. In East Baton Rouge Parish, LA, between the Comite River and the Profit Island Chute of the Mississippi River, north of the town of Baker, LA, and south of the town of Zachary, LA.

Existing project. The project will provide protection for residents of the Comite River Basin by reducing stages in the river below the diversion point for events up to the 100-year flood event, and containing within-banks events up to the 10-year flood event. The authorized project consists of construction of an eight-mile diversion channel from the Comite River to an outfall into Lilly Bayou, and then a four-mile diversion along Lilly and Cooper Bayous to the Profit Island Chute of the Mississippi River. The project also includes a diversion structure in the new channel near the diversion point, and an outfall structure near and at the outfall into Lilly Bayou, and four control structures at the intersections of Whites, Cypress and Baton Rouge Bayous, the fourth near McHugh Road. Disposal areas will be constructed along both banks of the new channel to retain the flood waters from the Comite River along both side of the new channel, and clearing and snagging of White, Cypress and Baton Rouge Bayous north of the diversion channel will also be done. Mitigation for the project includes the planting of trees on cleared land near the diversion point and on portions of the disposal area, the protection and management of existing forested lands

near the diversion point. Upgrading two gauging stations and installing six new gauging stations to assist in flood prediction is also included in the project. The current approved cost of the project is \$174,000,000, including \$122,813,000 Federal cost and \$51,187,000 non-Federal cost. The Water Resources Development Act of 1999 authorized the Secretary to include the costs of highway relocations to be cost shared as project construction features.

Local cooperation. The cost sharing provisions contained in the Water Resources Development Act of 1986 require that local interests shall: (a) Provide to the Federal Government all lands, easements, rights-of-way, and dredged material disposal areas, and perform the necessary relocations required for construction, operation, and maintenance of the project (Current estimate is \$42,115,000); and (b) Provide to the Federal Government a cash contribution equal to 5 percent of the total cost of the project, excluding cultural resources (Current estimate is \$9,072,000). The total cost of items (a) and (b) mentioned above is limited to 50 percent of the total cost of the project.

Operations and results during the fiscal year. In FY 04, the Lilly Bayou Control Structure contract was awarded to a small business contractor in the amount of \$27.6 million for duration of three years. Federal funding restraints slowed construction, however, advancing Non-Federal funds allowed the contract to continue in FY 06. Funds received in FY 2007 allowed for the completion of the Lilly Bayou Control Structure contract.

Condition as of Sep. 30. Construction for the Lilly Bayou Control Structure Phase II continued, as well as continuing right-of-way acquisition.

5. GRAND ISLE AND VICINITY, LA

Location. In south Jefferson Parish, LA, along the Gulf of Mexico, about 50 miles south of New Orleans and 45 miles northwest of Southwest Pass (Mississippi River).

Existing project. The project provides protection from waves driven by hurricanes that have a frequency of recurrence of up to once in every 50 years. The plan consists of a berm and vegetated dune extending the length of Grand Isle's gulf shore and a jetty to stabilize

the western end of the island at Caminada Pass. The dune has a 10-foot-wide crown at an elevation of 11.5 feet National Geodetic Vertical Datum (NGVD), 1 on 5 side slopes, and protective vegetation. The sandfill berm slopes from an elevation of 8.5 feet NGVD at the toe of the dune 180 feet gulfward to an elevation of 3 feet NGVD and, from this point, assumes its natural slope to the offshore bottom. The jetty provided by the plan has a top width of 6 feet at an elevation of 4 feet mean sea level, 1 on 2 side slopes, and extends approximately 3,600 feet along the western end of the island at Caminada Pass. Estimated cost of project (October 1991) is \$20,933,000 Federal and \$12,567,000 non-Federal, including \$7,157,484 contributed funds. The repair and restoration of Grand Isle were accomplished by two separate contracts. The jetty extensions and sand bar removal contract (partial fix), was completed in early 1988. The dune repair and structural reinforcement contract was physically completed Sep. 4, 1991. The project has been turned over to the State of Louisiana for operation and maintenance.

The 1992 Dire Emergency Supplemental Appropriations Act provided funds to repair damage to the wave berm and dune caused by Hurricane Andrew and to add offshore breakwaters to the project as an integral part of the repair. The original plan was to construct 27 breakwater segments; however, only 23 breakwater segments were constructed due to limited federal funds. 19 additional breakwater segments were built in the summer of 1999 by the local sponsor.

Local cooperation. The existing sand and beach dune have been damaged as a result of a series of storms between 1998 and 2002. PL-99 Federal assistance was approved to repair the damages caused by Hurricane Lili and Tropical Storm Isidore. A sponsor's contractor accomplished the renourishment and the Corps will reimburse the 12 percent cost share. Renourishment was completed in March 2005. On August 29, 2005, Hurricane Katrina caused extensive damage to the island. Funding to repair the storm damage to the sand and beach dune, breakwaters, and other island features has been approved.

NORTH SHORE PROJECT

The Water Resources Development Act of 1996 authorized construction of \$17 million of additional improvements to the region subject to approval of a

report justifying the improvements. The District received \$250,000 to initiate the study. The study is considering improvements, building breakwaters along the north side of the island, and the north side of Fifi Island.

The Water Resources Development Act of 1999 authorized the Secretary to consider shore protection benefits that the project provides to the main land coast of Louisiana.

The study was continued in FY 05 with a Congressional add of \$75,000.

Operations and results during fiscal year. Emergency supplemental funding in the amount of \$909,000 was expended on the overall project in FY 07. Storm repair work will continue in FY 08. CG funds in the amount of \$77,000 were expended on the North Shore Project in FY 07.

Condition as of Sep. 30. The North Shore Project is on hold, awaiting further guidance from the local sponsor.

6. LAKE PONTCHARTRAIN AND VICINITY, LA (HURRICANE PROTECTION)

Location. In southeastern Louisiana, vicinity of New Orleans, in St. Charles, Jefferson, Orleans, St. Bernard, and St. Tammany Parishes, comprising lower land and water area between the Mississippi River alluvial ridge and the Pleistocene escarpment to north and west. The dominant topographic feature is Lake Pontchartrain, a shallow tidal basin, about 640 square miles in area and averaging 12 feet deep, connecting with lesser Lake Maurepas to the west and through Lake Borgne and Mississippi Sound to the Gulf to the east. The lake drains about 4,700 square miles of tributary area. (Refer to Geological Survey quadrangles Yscloskey and Malheureaux Point, Drum Bay, Door Point, Lake Eugenie, Oak Mound Bayou, Mitchell Keys, Lake Eloi, and Morgan Harbor; Engineer quadrangles Slidell, Covington, Ponchatoula, Springfield, Denham Springs, Donaldsonville, Mt. Airy, Bonnet Carre', Spanish Fort, Chef Menteur, Rigolets, St. Bernard, New Orleans, and Hahnville; and Coast and Geodetic Survey Charts Nos. 1115 and 1116.

Existing project. The project provides protection to that part of the greater New Orleans area east of the Mississippi River and other communities that border Lake Pontchartrain from the effects of hurricane-generated floods. The project is comprised of two major features: The Chalmette Area Plan and the High Level Plan. The Chalmette Area Plan consists of a levee and floodwall system around the Chalmette area and along the Mississippi River-Gulf Outlet, with connections to the Mississippi River levees. The High Level Plan provides for heightening and strengthening the existing hurricane protection levee systems in Orleans Parish and the east bank of Jefferson Parish, repairing and rehabilitating the Mandeville Seawall in St. Tammany Parish; building a new mainline hurricane levee on the east bank of the St. Charles Parish just north of U.S. Highway 61 (Airline Highway); raising and strengthening the existing levee which extends along the Jefferson-St. Charles Parish boundary between Lake Pontchartrain and Airline Highway; and deferring construction of the proposed navigation structure at Seabrook lock. Areas which will be enclosed by the levee and floodwall construction will be provided protection against tidal surge resulting from the Standard Project Hurricane (SPH). The estimated project cost for work (October 2005) is \$533,000,000 Federal and \$211,000,000 non-Federal.

Local cooperation. Requirements are described in full on page 11-5 of the FY 92 Annual Report.

Operations and results during fiscal year. Hurricane Katrina devastated the project on August 29, 2005. The storm surge resulted in numerous levee and floodwall failures. Investigations are continuing to determine the causes for these failures. Intensive efforts to reinstate the project protection by June 1, 2006 were completed. Additional efforts are underway to restore the project design elevation in undamaged portions of the project. Funding and authority have been provided to construct permanent closures of the outfall canals in Orleans Parish, new structures to close off the Inner Harbor Navigation Canal at Seabrook and on the MRGO, armoring at critical reaches, and increasing design elevations to provide 100-year level of protection, necessary because of wetland loss, subsidence and sea-level rise.

Emergency supplemental funding. Supplemental (P.L. 109-148) funding in the amount of \$390,987,000 was expended in FY 07. Of that amount, \$280,373,000 was expended on repairs; \$64,158,000 was used to rebuild the system to authorized design elevation; and \$27,470,000 was expended on accelerate to complete work. In addition, \$18,986,000 was expended on outfall canal closures and pumping stations, improvements to IHNC, armoring of levees, and reinforcing or replacing floodwalls. Supplemental (P.L. 109-234) CG funds in the amount of \$4,130,000 were also expended in FY 07 on E&D efforts to provide 100-year flood protection.

Condition as of Sep. 30. Major reconstruction of the project is underway. Repairs of damage caused by Hurricane Katrina have been completed. Design is underway to provide 100-year level of protection. During FY 07, 23 contracts were awarded and 13 contracts were completed.

7. LAROSE TO GOLDEN MEADOW, LA (HURRICANE PROTECTION)

Location. In coastal section of Louisiana, along Bayou Lafourche, and includes lands on both banks of the bayou from Larose to 2 miles south of Golden Meadow. (Refer to Geological Survey quadrangles Cutoff, Lake Felicity, Bay Dosgris, Golden Meadow Farms, Bay Tambour, Mink Bayou, Caminada Pass, Leeville, Belle Pass, Pelican Pass, and Calumet Island; Engineer quadrangles New Orleans, Hahnville, Point a la Hache, Baratavia, and Fort Livingston; and Coast and Geodetic Survey Charts Nos. 1115 and 1116.)

Existing project. Provides a loop levee about 40 miles long along both banks of Bayou Lafourche from Larose to South Golden Meadow; enlargement of 3 miles of existing levee at Golden Meadow; floodgates for navigation and hurricane protection in Bayou Lafourche at upper and lower bayou crossings; and about 8 miles of low interior levees to regulate intercepted drainage.

FY 2007 work consisted of design to construct levee lifts and to bring the project features to authorized design grade including pumping stations requested by

NEW ORLEANS, LA, DISTRICT

the non-Federal sponsor, in lieu of gravity drainage structures. The project also includes navigable floodgates.

Local cooperation. Requirements are described in full on page 11-6 of the FY 92 Annual Report.

Operations and results during fiscal year. The Leon Theriot Lock model study and evaluation report was approved by the ASA (CW) and is now an authorized feature of the Larose to Golden Meadow project.

Emergency supplemental funding. Emergency supplemental funding in the amount of \$6,077,000 was expended in FY 07. Of that, \$2,132,000 was used for repairs and \$3,945,000 was used for accelerate to complete work. In addition, \$430,000 of CG carryover funds were expended in FY 07

Condition as of Sep. 30. The South Lafourche Levee District initiated construction to convert the existing Leon Theriot Floodgate into a lock using non-Federal funds. Hurricane Katrina impacted southern Louisiana and Mississippi on August 29, 2005. The Larose to Golden Meadow project sustained damage to one reach of levee berm and to the mitigation levee, but the project remained intact and it prevented flooding within the project area. Overall, in FY 07, two contracts were awarded and one was completed.

8. NEW ORLEANS TO VENICE, LA, (HURRICANE PROTECTION)

Location. Includes land subject to inundation by hurricane tides extending along both banks of the Mississippi River below New Orleans from vicinity of Phoenix to Venice, LA.

Existing project. Provides for improvements along Mississippi River below New Orleans, LA, for prevention of hurricane tidal flood damages by increasing heights of existing back levees and modifying existing drainage facilities where necessary in three separate reaches: Reach A, on the west bank from St. Jude to Tropical Bend, 18 miles, 4,340 acres protected; Reach B, on the west bank from Tropical Bend to Venice, 21 miles, 4,900 acres protected; and Reach C, on the east bank from Phoenix to Bohemia 16 miles, 5,470 acres protected, and raising the river levee on the west bank (MR&T levee) from City Price

to Venice, to a grade high enough to prevent overtopping by tidal surges from the east, generally called the West Bank River Plan. Reach B was later divided into two units, Reach B-1 from Tropical Bend to Fort Jackson and Reach B-2 from Fort Jackson to Venice, LA, as a result of a request made by the local agency.

Local cooperation. Provide all lands, easements, and rights-of-way including borrow areas and spoil disposal areas necessary for the construction of the project; accomplish all necessary alterations and relocations to roads, pipelines, cables, wharves, and other facilities required by the construction of the project; bear 30 percent of the first cost, and cash contribution or equivalent work to be paid either in a lump sum prior to initiation of construction or in installments prior to start of pertinent work items.

The local sponsor has requested that an area extending from the upstream limits of Reach A at City Price to St. Jude, Louisiana be incorporated into the project. This work involves upgrading 3.3 miles of existing non-Federal levees to project standards. The local sponsor has elected to pay all of the costs of this reach of levee. While the sponsor will not receive credit for these costs, the increased protected area is eligible for Federally subsidized flood insurance. Savings to the project achieved by a portion of levee no longer being required at the upstream end of Reach A, is creditable to the local sponsor. A Post Authorization Change report was prepared for this reach and was approved by the Lower Mississippi Valley Division on Mar. 6, 1992. Supplemental assurances for the City Price to St. Jude reach were accepted on Feb. 18, 1993.

Assuring Agency: Plaquemines Parish Government. Assurances for all reaches of the project have been furnished.

Operations and results during fiscal year. Hurricane Katrina devastated the project on August 29, 2005. The storm surge overtopped the protection and resulted in numerous levee and floodwall failures. Intensive efforts to reinstate the project protection are underway funded under Flood Control and Coastal Emergencies Appropriation, PL-109-148, which provided full Federal funding with no local share required.

Emergency supplemental funding. Emergency supplemental funding in the amount of \$78,641,000 was expended in FY 07. Of that, \$70,556,000 funded repairs and approximately \$3,900,000 was used for accelerate to complete the armoring work. The remaining \$4,184,000 was expended on incorporating non-Federal west bank levees in Plaquemines Parish into the New Orleans to Venice project.

Condition as of Sep. 30. All repair work was completed except for closeout work required on several reaches. Restoration and accelerate to complete work will continue, along with incorporating non-Federal levees in Plaquemines Parish. Overall, seven contracts were completed in FY 07.

9. SOUTHEAST LOUISIANA URBAN DRAINAGE PROJECT (FLOOD CONTROL)

Location. The authorized project is located in Orleans, Jefferson, and St. Tammany Parishes. Features in Orleans Parish (city of New Orleans) are located on the east bank of the Mississippi River. Work in Jefferson Parish is located on the east and west banks of the Mississippi River in the vicinity of New Orleans, LA. St. Tammany Parish features are located in the southern portion of the parish, near Lake Pontchartrain, in and around the communities of Slidell, Mandeville, Madisonville, Abita Springs, and Lacomb, LA.

Project features. The work in Orleans Parish consists of enlargement of a major pumping station, construction of 2 new stations, and improvements to 12 drainage canals and underground drainage lines. Jefferson Parish features include improvements to 5 pumping stations, construction of 2 new pump stations, and improvements to approximately 30 drainage canals. Work in St. Tammany includes: channel improvements, retention ponds, levees, and structure raising.

Local cooperation. The project requires that the local sponsor(s) provide all lands, easements, rights-of-way, relocations, and disposal areas (LERRDs) needed for project construction, as well as a minimum five percent cash contribution. The total (value) of the locals share must be a minimum of 25 percent of the project total, but not exceed 50 percent of the project total. Jefferson Parish and the Sewerage and Water Board of New Orleans executed the Project Cost-sharing Agreements (PCAs) in January 1997. No agreement has yet been executed for St. Tammany Parish work.

Operations and results during fiscal year. Federal construction began in March 1997. Since then, 50 construction contracts have been awarded and 40 have been completed.

In March 2005, a PCA amendment was executed with Jefferson Parish incorporating the East Bank Basin project and the East of Harvey Canal project on the basis of studies done under Sec. 533(d) of the WRDA of 1996. The Uptown Sec. 533(d) report was approved in October 2006. Six additional Sec. 533 (d) investigations continue in an attempt to determine whether there are more Federally justified plans for improving drainage. Preparation of PCA amendments continues.

Emergency supplemental funding. Emergency supplemental (P.L. 109-148) funding in the amount of \$37,646,000 was expended for accelerate to complete contracts. Seven contracts were awarded in FY 07.

Condition as of Sep. 30. In FY 07, emergency supplemental funds were used to award seven contracts and complete two contracts.

10. WEST BANK AND VICINITY, NEW ORLEANS, LA (HURRICANE PROTECTION)

Location. The project is located in Jefferson, Orleans and Plaquemines parishes on the West Bank of the Mississippi River in the vicinity of New Orleans, Louisiana.

The project area generally extends from the Jefferson-St. Charles Parish line to the community of Oakville in Plaquemines Parish and is bounded by the Mississippi River on the north and east and Lakes Cataouatche and Salvador and the GIWW on the south and west. The original project was from Westwego to Harvey Canal and was authorized by WRDA 86. WRDA 96 modified the project by adding the Lake Cataouatche area to the project and also authorized the East of Harvey Canal Hurricane Protection Project. WRDA 99 combined the three projects under the current name.

Existing project prior to the emergency funding supplement of 2006. The total project consists of about 57 miles of new and enlarged earthen levee, 9 miles of floodwall, a navigable floodgate in the Harvey Canal below Lapalco Boulevard, a discharge

channel and 1,000 cfs capacity increase at the Cousins Pump Station. The protection was originally designed to protect against tidal floodwaters resulting from the Standard Project Hurricane (SPH) storm used at the time of original authorization.

The elevation of the SPH protection varies from 9 to 12 feet NGVD. The project plan includes mitigation which consists of the construction of a timber pile and tire breakwater on the west bank of Lake Cataouatche adjacent to the Salvador Wildlife Management Area and the acquisition of approximately 1,300 acres of forested wetlands which will be managed to improve habitat quality.

Local cooperation. The project requires that the local sponsor provide all lands, easements, rights-of-way, relocations, and disposal areas (LERRDs) needed for project construction. The total (value) of the sponsors share must be a minimum 35 percent of the total project costs, in cash or creditable work.

Funds provided by non-Federal interests for interim hurricane protection on the Westwego to Harvey Canal area may be considered beneficial expenditures and may be credited as part of the non-Federal contribution of the project pursuant to the WRDA of 1986.

The Louisiana Department of Transportation and Development and West Jefferson Levee District executed amendment number 1 of the local cooperation agreement in April 1999. Amendment 2 to the PCA was executed on March 30, 2007.

Operations and results during fiscal year. Flood Control and Coastal Emergency (PL 109-148) funds were received in FY 06 in the wake of Hurricane Katrina. The funds will be used to accelerate the original project completion and restore original design elevations. Supplemental (P.L. 109-234) CG funds will be used to increase design elevations to provide a minimum of 100-year level of protection required because of wetlands loss, subsidence, and sea level change.

Emergency supplemental funding. Supplemental funding in the amount of \$136,393,000 was expended in FY 07. Of that, \$45,379,000 was expended on

repairs and restoration to authorized design elevations. In addition, \$85,514,000 was expended on accelerate to complete and \$5,500,000 was expended on armoring and floodwall reinforcing or replacement. Supplemental (P.L. 109-234) CG funds in the amount of \$1,355,000 were expended on E&D efforts to provide 100-year flood protection.

Conditions as of September 30. Major design and construction efforts continue to support the advance completion of all features of the project. A total of 15 contracts were awarded in FY 07.

11. AMITE RIVER AND TRIBUTARIES, EAST BATON ROUGE PARISH, LA (FLOOD DAMAGE REDUCTION)

Location. The project lies between the Mississippi River and Amite Rivers and the area is approximately 66 miles of channels in five sub-basins within East Baton Rouge Parish, LA. The five sub-basins are Blackwater Bayou and tributaries; Beaver Bayou; Jones Creek and tributaries; Ward Creek and tributaries; and Bayou Fountain. The project was authorized by PL 101-21, the Water Resources Development Act of 1999, and modified by Public Law 108-116.

Existing project. The project purpose is to reduce flooding by channel modifications within five watersheds, including the Baton Rouge, LA metropolitan area.

Local Cooperation. A 75/25 cost share and the "looking back" Work-in-Kind have been authorized in WRDA 2007. East Baton Rouge Parish is ready to negotiate the PCA. A Post Authorization Change report was prepared as the basis for reauthorization with a revision to the work-in-kind features. Work-in-kind will include design, construction, management, and mitigation of the proposed channel modifications for Bayou Fountain and Beaver Bayou, and perform all necessary clearing and snagging for channel modification on Blackwater Bayou, Weiner Creek, and Dawson Creek. Mitigation is also included for Dawson Creek.

Operations and results during fiscal year. Jones Creek #1 P&S has been completed. P&S for Ward Creek and detailed design report for Jones Creek #2 are set to begin.

Condition as of Sep. 30. A Post Authorization Change Report approved by Assistant Secretary of the Army, Civil Works has been authorized by WRDA 2007. Concurrently, design will continue as mentioned above.

12. INSPECTION OF COMPLETED FLOOD CONTROL PROJECTS

Various hurricane protection projects, as well as small flood control projects, were inspected during FY 07. Also, periodic inspection and continuing evaluation of completed civil works structures was conducted in accordance with ER 1110-2-100, at various times during the year on an as needed basis.

Fiscal year costs for the period were \$504,000. Total costs to Sep. 30, 2007 were \$8, 835,731.

13. FLOOD CONTROL WORK UNDER SPECIAL AUTHORIZATION

Emergency flood control activities—repair, flood fighting, and rescue work. Public Law 109-62, Public Law 109-148 and Public Law 109-234.)

During FY 07 the following funds were provided for Emergency Management at the New Orleans District: \$701,942 for Disaster Preparedness; \$1,801,788 for Response Operations.

In addition, \$718,824,000 was expended in FY 07 Supplemental funding to continue repairs and restoration from major damages sustained from Hurricanes Katrina and Rita to the Greater New Orleans Storm Hurricane Reduction System (Lake Pontchartrain and Vicinity, LA (HPP); Southeast Louisiana, LA: New Orleans to Venice, LA (HPP); Larose to Golden Meadow, LA; Grand Isle and Vicinity, LA). The FY 07 funds were utilized for repairs to pre-Katrina levels for restoration of projects and improvements to the Hurricane Protection System.

Condition as of Sep. 30. Contract awards for repairs began in FY 2005 and were completed in FY 06. Ongoing and future work includes: additional levee lifts and construction of new floodwalls to 100-year level of protection, construction of additional pumping plants, stormproofing of existing pumping plants, armoring of levees, and installation of gated structures.

As of September 2007, 135 construction contracts were awarded for \$1.137 billion. The repairs and restoration include 220 miles of levees and floodwalls that were completed by June 1, 2006.

14. PROTECTION OF NAVIGATION

During FY 07, \$24,794 was expended on operation and maintenance for Project Condition Surveys.

15. CATASTROPHIC DISASTER PREPAREDNESS PROGRAM

During FY07, the following funds were provided for Emergency Management at the New Orleans District in response to Hurricanes Katrina and Rita: \$1,800,000 for Response Operations.

16. COASTAL WETLANDS PLANNING, PROTECTION, AND RESTORATION ACT

Location. The coastal parishes of Louisiana.

Authority. Activities were authorized by the Coastal Wetlands Planning, Protection and Restoration Act (CWPPRA) (Title III of Public Law 101-646, dated Nov. 29, 1990), which established the Louisiana Coastal Wetlands Conservation and Restoration Task Force. The Task Force consists of the Secretary of the Army as chairman, the Administrator of the Environmental Protection Agency, the Governor of the State of Louisiana, the Secretary of the Interior, the Secretary of Agriculture, and the Secretary of Commerce.

Local cooperation. The conditions of local cooperation were established by PL 101-646, as amended.

NEW ORLEANS, LA, DISTRICT

Project features. The Task Force approves projects to be developed for the long-term conservation of Louisiana's coastal wetlands. Projects are added to Priority Project lists (PPLs) on an annual basis. Projects approved on previous PPLs can be found in the 2006 Annual Report (pages 11-9 through 11-11). The Task Force approved the 17th PPL on October 25, 2007. Funds in the amount of \$10,805,478 were made available for construction of the following projects: Bayou Dupont Ridge Creation and Marsh Restoration, Bio-Engineered Oyster Reef Demonstration, Bohemia Mississippi River Reintroduction, Caernarvon Outfall, Sediment Containment System for Marsh Creation Demonstration, and West Pointe a la Hache Marsh Creation.

Operations and Results during fiscal year. See Table 11-I for projects completed, continued, and initiated in FY 07.

17. GENERAL REGULATORY PROGRAM

Acts	Work Authorized	Documents
Water Resources Development Act, 1986	<p>LAKE CHARLES, LA The project for deepening of the project for navigation, Lake Charles, Louisiana, to a depth of 45 feet, at a total cost of \$1,070,000.</p>	Public Law 99-662, Nov. 17, 1986
Mar. 2, 1945	<p>MISSISSIPPI RIVER, BATON ROUGE TO GULF OF MEXICO, LA Combines projects of Mississippi River, Baton Rouge to New Orleans, Mississippi River, South Pass, and Southwest Pass, adding thereto project for Mississippi River from New Orleans to Head of Passes, to provide a single project, "Mississippi River, Baton Rouge to the Gulf of Mexico," with channel dimensions as follows: Baton Rouge to New Orleans, 35 by 500 feet; port limits of New Orleans, 35 by 1,500 feet; New Orleans to Head of Passes, 40 by 1,000 feet; Southwest Pass, 40 by 800 feet; Southwest Pass Bar Channel, 40 by 600 feet; South Pass, 30 by 450 feet; South Pass Bar Channel, 30 by 600 feet.</p>	H. Doc. 215, 76th Cong., 1st sess.
Oct. 23, 1962	<p>Deepen existing channel from 35 to 40 feet by 500 feet wide from one-tenth mile below Louisiana Highway Commission bridge at Baton Rouge to upper limits of Port of New Orleans, and also 40 by 500 feet within presently authorized 35- by 1,500-foot channel in port limits of New Orleans.</p>	S. Doc. 36, 87th Cong., 1st sess.
Mar. 29, 1956	<p>MISSISSIPPI RIVER-GULF OUTLET, LA (See Sec. 2 of Text) Construct a seaway canal 36 feet deep and 500 feet wide from Michoud to 38-foot contour in gulf and an inner tidewater harbor consisting of a 1,000- by 2,000-foot turning basin 36 feet deep and a connecting channel 36 feet deep and 500 feet wide to Inner Harbor Navigation Canal and provides, when economically justified, for construction of a lock to Mississippi River in the vicinity of Meraux, LA.</p>	H. Doc. 245, 82d Cong., 1st sess.
Oct. 22, 1976	<p>Amends above Act making the construction of bridge relocations a Federal responsibility when required by the the construction of the Mississippi River-Gulf Outlet channel.</p>	Sec. 186, Water Resources Development Act of 1976 (PL 94-587) 2d sess.
Water Resources Development Act, 1986	<p>The Mississippi River-Gulf Outlet feature is modified to provide that the replacement and expansion of the existing industrial canal lock and connecting channels or the construction of an additional lock and connecting channels shall be in the area of the existing lock or at the Violet site.</p>	Public Law 99-662, Nov. 17, 1986
Water Resources Development Act, 1996	<p>Amends above Act of 1986 to include a Community Impact Mitigation Plan as an authorized feature of the project to replace the Inner Harbor Navigation Canal Lock.</p>	Public Law 104-303 Oct. 12, 1996

AUTHORIZING LEGISLATION

Acts	Work Authorized	Documents
<p>Approp. Act of 1985, dated Jul. 2, 1986 (PL 99-88)</p>	<p>MISSISSIPPI RIVER SHIP CHANNEL, GULF TO BATON ROUGE, LA (See Sec. 3 of Text) Will provide more efficient deep-draft navigation access to the New Orleans and Baton Rouge reaches of the Mississippi River via Southwest Pass by enlarging the existing channel to a project depth of 55 feet and enlarging the adjacent channel along the left descending bank in New Orleans Harbor to a 40-foot depth, a turning basin at Baton Rouge, and training works in the passes to reduce maintenance.</p>	<p>H. Doc. 2577, 99th Cong., 1st sess.</p>
<p>Nov. 17, 1986 (PL 99-662)</p>	<p>Formalizes the cost sharing provisions of the project, permits the State of Louisiana to enact user fees to defray their portion of the project costs, and implements harbor maintenance fees to help pay for the Federal cost of the project. It also provides an option to the local sponsor to defer their initial payment for one year following initiation of construction. In terms of channel depths up to 45 feet, the cost sharing requirements are 75 percent Federal and 25 percent non-Federal for construction and 100 percent Federal for maintenance. For channels deeper than 45 feet, the cost sharing requirements are 50 percent Federal and 50 percent non-Federal for both construction and maintenance.</p>	<p>Water Resources Development Act of 1986, 99th Cong., 2d sess.</p>
<p>Water Resources Development Act, 1996</p>	<p>PORT FOURCHON, LA Provides a Federal navigation channel with a project depth of 24 feet MLLW in Bayou Lafourche, Belle Pass, and the Gulf of Mexico to improve navigation access to Port Fourchon at a total cost of \$4,440,000, with an estimated Federal cost of \$2,300,000 and an estimated non-Federal cost of \$2,140,000.</p>	<p>Public Law 104-303, 104th Congress (See Section 101) Oct. 12, 1996</p>
<p>Aug. 30, 1985</p>	<p>WATERWAY FROM INTRACOASTAL WATERWAY TO BAYOU DULAC, LA (Bayous Grand Caillou and LeCarpe, LA) Channel 5 by 40 feet from Intracoastal Waterway at Houma through Bayou LeCarpe, Bayou Pelton, and Bayou Grand Caillou to Bayou Dulac, about 16.3 miles.</p>	<p>H. Doc. 206, 72d Cong., 1st sess.</p>
<p>Oct. 23, 1962</p>	<p>Channel 10 by 45 feet in Bayou LeCarpe from Gulf Intracoastal Waterway to Houma navigation canal.</p>	
<p>Water Resources Development Act, 1986</p>	<p>BAYOU RIGOLETTE, LA A project to construct six additional floodgates at Bayou Rigolette, LA, adjacent to the existing drainage structure, at a total cost of \$2,300,000.</p>	<p>Public Law 99-662, Nov. 17, 1986</p>
<p>Water Resources Development Act, 1999 August 17, 1999</p>	<p>AMITE RIVER AND TRIBUTARIES, LOUISIANA, EAST BATON ROUGE PARISH WATERSHED Amite River and Tributaries, Louisiana, East Baton Rouge Parish Watershed. The project for flood damage reduction and recreation, Amite River and tributaries, Louisiana, East Baton Rouge Parish Watershed.</p>	<p>Public Law 106-53 August 17, 1999</p>

TABLE 11-B **AUTHORIZING LEGISLATION**

Acts	Work Authorized	Documents
Water Resources Development Act, 1992	COMITE RIVER, LA (Diversion) (See Sec. 4 of Text) Construct an eight-mile diversion channel from the Comite River to an outfall into Lilly Bayou, and then a four-mile diversion along Lilly and Cooper Bayous to the Profit Island Chute of the Mississippi River. Also included a diversion structure in the new channel near the diversion point, and an outfall structure near and at the outfall into Lilly Bayou, and three control structures at the intersections of Whites, Cypress and Baton Rouge Bayous.	Public Law 102-580 Section 101 (11) Oct. 31, 1992
Water Resources Development Act, 1996		Public Law 104-305 Section 301(b)(5) Oct. 12, 1996
Energy and Water Development Appropriations Act, FY 1999	Provided funding authority in the amount of \$930,000 to initiate construction.	Public Law 105-245 Oct. 7, 1998
Adopted by Committee Resolutions Sep. 23, 1976, and Oct. 1, 1976 ²	GRAND ISLE AND VICINITY, LA (See Sec. 5 of Text) To provide hurricane protection by placement of a berm and vegetated dune extending the length of Grand Isle's gulf shore and a jetty to stabilize the western end of the island at Caminada Pass.	H. Doc. 639, 94th Cong., 2d sess.
Oct. 27, 1965	LAKE PONTCHARTRAIN AND VICINITY, LA (HURRICANE PROTECTION) (See Sec. 6 of Text) Control of hurricane tides by construction of two independent units, the Lake Pontchartrain Barrier plan and the Chalmette Area plan.	H. Doc. 231, 89th Cong., 1st sess.
Section 107, Rivers and Harbors Act of 1960, as amended	NORTH PASS - PASS MANCHAC, LA The Corps of Engineers may construct small river and harbor improvement projects not specifically authorized by Congress when they will result in substantial benefits to navigation.	Public Law 86-645 Jul. 14, 1960
Water Resources Development Act, 1986 Nov. 17, 1988	LAKE PONTCHARTRAIN, NORTH SHORE, LA The project for navigation, Lake Pontchartrain North Shore, LA: Report of the Chief of Engineers, dated February 14, 1979, at a total cost of \$1,310,000, with an estimated first Federal cost of \$655,000 and an estimated first non-Federal cost of \$655,000.	Public Law 99-662, Nov. 17, 1986, 99th Cong., 2d sess.
Water Resources Development Act, 1992	LAKE PONTCHARTRAIN STORMWATER DISCHARGE, LA (See Section 9 of Text) Provides for design and construction of project to address water quality problems associated with stormwater discharges.	Public Law 102-580

**TABLE 11-B
(Continued)**

AUTHORIZING LEGISLATION

Acts	Work Authorized	Documents
Oct. 27, 1965	<p>LAROSE TO GOLDEN MEADOW, LA (HURRICANE PROTECTION) (See Sec. 7 of Text) A loop levee about 40 miles long along both banks of Bayou Lafourche from Golden Meadow to Larose; enlargement of 3 miles of existing levee at Golden Meadow; floodgates for navigation and hurricane protection in Bayou Lafourche at upper and lower bayou crossings; about 8 miles of low interior levees to regulate intercepted drainage; and seven multibarreled culverts controlled by flapgates.</p>	H. Doc. 184, 89th Cong., 1st sess. ¹
Oct. 27, 1965	<p>MORGAN CITY AND VICINITY, LA, HURRICANE PROTECTION Construction of new levees along Lake Palourde and Bayou Ramos, levee to tie-in with Bayou Boeuf lock levee and three gravity drainage structures in Morgan City unit and enlargement of bank levee, construction of new levee, and construction of one floodgate and five gravity drainage structures in Franklin and vicinity unit. The Franklin Area separable element was de-authorized on 1 May 1997.</p>	H. Doc. 167, 89th Cong., 1st sess.
Section 14, Flood Control Act of 1946	<p>MERMENTAU RIVER - GRAND CHENIER, LA Construction of emergency bank-protection works to prevent flood damage to highways, bridge approaches and public works.</p>	Public Law 526, 79th Cong, 2d sess. Jul. 24, 1946
Oct. 23, 1962	<p>NEW ORLEANS TO VENICE, LA, HURRICANE PROTECTION (See Sec. 8 of Text) Improvements along Mississippi River below New Orleans, LA, for prevention of hurricane tidal flood damages by increasing heights of existing back levees and modifying existing drainage facilities where necessary in five separate reaches.</p>	H. Doc. 550, 87th Cong., 2d sess.
Energy and Water Development Appropriations Act, FY 1996	<p>SOUTHEAST LOUISIANA, LA (See Section 9 of text) Provides for drainage canal and pump station improvements in Orleans and Jefferson Parishes, and drainage improvements, flood protection and structure raising in St. Tammany Parish.</p>	Public Law 104-46 (Sec 108)
Water Resources Development Act, 1996	<p>SOUTHEAST LOUISIANA, LA (See Section 9 of text) Provides for drainage canal and pump station improvements in Orleans and Jefferson Parishes, and drainage improvements, flood protection and structure raising in St. Tammany Parish.</p>	Public Law 104-303 (Sec 533)
Water Resources Development Act, 1999	<p>WEST BANK AND VICINITY, NEW ORLEANS, LA HURRICANE PROTECTION Combination of Projects - Section 328(b) of WRDA 99 states: The Secretary shall carry out work authorized as part of the Westwego to Harvey Canal project, the East of Harvey Canal project, and the Lake Cataouatche modifications as a single project, to be known as the "West Bank and Vicinity, New Orleans, Louisiana, Hurricane Protection", with a combined total cost of \$280,300,000.</p>	Public Law 106-53, Aug. 17, 1999

TABLE 11-B **AUTHORIZING LEGISLATION**
(Continued)

Acts	Work Authorized	Documents
Water Resources Development Act, 1986	Westwego to Harvey Canal - Section 401(b) of WRDA 86 states: Structural and nonstructural measures to prevent flood damage to those areas identified in the Feb. 1984 draft Environmental Impact Statement for the West Bank Hurricane Protection Levee, Jefferson Parish, LA at a total cost of \$61,500,000, with an estimated first Federal cost of \$40,000,000 and as estimated first non-Federal Cost of \$21,500,000. Funds provided by non-Federal interest for interim hurricane protection may be considered beneficial expenditures and may be credited as part of the non-Federal contribution of the project pursuant to Section 104 of this Act.	Public Law 99-662, Nov 17, 1986
Water Resources Development Act, 1996	East of Harvey Canal - Section 101(a)(17) of WRDA96 states: The project for hurricane damage reduction, West Bank of the Mississippi River in the vicinity of New Orleans (East of Harvey Canal), Louisiana: Report of the Chief of Engineers, dated May 1, 1995, at a total cost of \$126,000,000, with an estimated Federal cost of 82,200,000 and an estimated non-Federal cost of \$43,800,000.	Public Law 104-303
Water Resources Development Act, 1996	Lake Cataouatche - Section 101(b)(11) of WRDA 96 states: The project for hurricane damage prevention and flood control, West Bank Hurricane Protection (Lake Cataouatche Area), Jefferson Parish, Louisiana, at a total cost of \$14,375,000 with an estimated Federal cost of \$9,344,000 and an estimated non-Federal cost of \$5,031,000.	Public Law 104-303
Coastal Wetlands Planning, Protection and Restoration Act	COASTAL WETLANDS PLANNING, PROTECTION AND RESTORATION ACT (See Section 16 of Text) Directed the Secretary of the Army to convene the Louisiana Coastal Wetlands Conservation and Restoration Task Force to initiate a process to identify and prepare a list of coastal wetlands restoration projects in Louisiana to provide for the the long-term conservation of such wetlands and dependent fish and wildlife populations in order of priority in creating, restoring, protecting, and enhancing coastal wetlands, taking into account the quality of such coastal wetlands, with due allowance for small-scale projects necessary to demonstrate the use of new techniques or materials for coastal wetlands restoration.	Public Law 101-64 Nov. 24, 1990 Section 301-306
Second Emergency Supplemental Appropriations Act To Meet Immediate Needs Arising from the Consequences of Hurricane Katrina, 2005	Emergency Supplemental appropriations to meet immediate needs arising from the consequences of Hurricane Katrina. Provided \$200 million in O&M, General funds for emergency expenses for repair of storm damage to authorized projects; Provided \$200 million in FC&CE funds for emergency expenses for repair of damage to flood control and hurricane shore protection projects.	Public Law 109-62 September 8, 2005

1. Transferred to Department of Transportation. Authorized under Truman-Hobbs Act.
2. Completed. Date will be furnished when available.
3. Includes previous project costs.
4. No commerce reported.
5. Abandonment recommended in H. Doc. 467, 69th Cong., 1st sess.
6. By Public Law 88-404, that portion of Bayou Terrebonne between point where Barrow Street crosses said stream and a line determined by prolonging and extending eastern right-of-way line of New Orleans Boulevard southerly to south bank of said stream was declared nonnavigable.
7. Includes \$66,000 contributed funds.
8. Operation and maintenance of the structure reported under project "Calcasieu River and Pass, LA."
9. Excludes \$50,000 contributed funds.
10. Not completed; incorporated in navigation project "Mermentau River, LA."
11. Not completed; superseded for most of it length by present 12- by 125-foot Gulf Intracoastal Waterway, which coincides with or parallels it.
12. Maintenance project; no future work schedules.
13. Includes \$57,555 (\$29,974 of which was from Public Works funds) for new work on previous project. Includes \$114,519 for maintenance of previous project.
14. Work is under continuing authority.
15. Includes \$1,729,989 for previous project.
16. Does not include expenditures of \$8,000,000 for Dredge Wheeler Ready Reserve for 2007.

VICKSBURG, MS, DISTRICT

This district comprises western and central Mississippi, southern Arkansas, northern Louisiana, and a very small portion of southwestern Tennessee, embraced in drainage basins of eastern tributaries of Mississippi River south of Horn Lake Creek to and including Buffalo River; Pearl River Basin in Mississippi; independent tributaries of the Gulf of Mexico south of the Buffalo River Basin to the Mississippi-Louisiana state line; western tributaries of

Mississippi River between White and Atchafalaya Rivers including Arkansas River Basin below a point 3 miles upstream from Pine Bluff and Arkansas River below mile 36.1 near Pendleton, AR; Ouachita and Black Rivers in Arkansas and Louisiana; and Red River in Louisiana and Arkansas to the Texas-Arkansas state line. The Vicksburg District territory encompasses 68,000 square miles.

Navigation

1. J. BENNETT JOHNSTON WATERWAY, LA (FORMERLY RED RIVER WATERWAY PROJECT)

Location. From east-central to northwest Louisiana along the Red and Old Rivers between the Mississippi River and Shreveport, LA.

Existing project. Provides a navigation route from the Mississippi River at the junction with Old River via Old and Red Rivers to Shreveport, LA, developing a channel approximately 236 miles long, 9 feet deep, and 200 feet wide. The development includes five locks and dams, realignment, and contraction of the river as necessary to develop an efficient navigation channel. Facilities to provide recreation and fish and wildlife development are an integral part of the project.

Local cooperation. For details, see page 11-21, Annual Report, FY 80. The Red River Waterway Commission is the non-Federal sponsor. The Red River Waterway Commission, governing body of the Red River Waterway District, executed an act of assurance for all project features in Louisiana on Feb. 26, 1969, supported by resolution dated Jan. 30, 1969. The assurances were accepted for, and on behalf of, the United States on Apr. 15, 1969. The Commission furnished amended assurances covering the provisions of Public Laws 91-646 and 91-611 on May 23, 1973, for the portion of the project within Louisiana. These were accepted for, and on behalf of, the United States on Nov. 14, 1973. A Local Cooperation Agreement between the Department of the Army and the Red River Waterway Commission for the acquisition of mitigation lands in the vicinity of Loggy Bayou Wildlife Management Area was executed on Jun. 16, 1993, and a Project Cooperation Agreement (PCA) between the same agencies for the acquisition of mitigation lands in the vicinity of Bayou Bodcau was executed on July 17, 1996.

Terminal facilities. Local interests are to provide adequate terminal facilities along the waterway. Construction of the realignment and port fill is complete. Construction of the Alexandria, Shreveport—Bossier, Natchitoches Parish, and Red River Parish Ports is complete.

Operations and results during fiscal year. Construction was initiated in July 1973, and the project opened for navigation in 1995. The project is 94 percent complete and provides navigation for a six-barge tow (two abreast) as far upstream as Shreveport, LA. All five lock and dam facilities are complete and in

operation. During FY 07, one reinforcement and one drainage structure was completed. Initiated one reinforcement and one revetment to refine the reliability and safety in the navigation channel.

Maintenance dredging was performed along the waterway by the contract Dredge *Butcher* and Dredge *Little Rock* during FY 07; 750,482 cubic yards of material were removed from the navigation channel.

2. OUACHITA AND BLACK RIVERS BELOW CAMDEN, AR

Location. Ouachita River rises in Polk County, AR, and flows southeasterly and southerly about 600 miles. Below its confluence with the Tensas and Little Rivers at Jonesville, LA, it is called Black River, which enters Red River 34.5 miles from the Mississippi River.

Previous projects. See page 683 of Annual Report for 1962 for details.

Existing project. See page 684 of Annual Report for 1962 for details of the old 6.5-foot navigation project. Modified project and project for Red River below Fulton, AR, provide for a channel 9 feet deep and 100 feet wide in Red River between Old River and mouth of Black River, and in Black and Ouachita Rivers from mouth of Black River to Camden, AR. Authorized features for the modified project include four new locks and dams, in-river construction dredging to achieve a 9-foot navigation channel depth, and channel realignment. All 4 locks and dams are complete and in operation and initial channel dredging is complete providing 9-foot navigation depth. Remaining work consists of realignment of 25 restricted bendway sites between river miles 195 at Sterlington, LA, and river mile 335 at Camden, AR, on the Ouachita River. With these improvements in place the river system will be navigable by a four-barge tow (two abreast) to Crossett, AR, river mile 237, and a two-barge tow (abreast) to Camden, AR. Mitigation features include the 65,000-acre Felsenthal National Wildlife Refuge in Arkansas, the 18,000-acre D'Arbonne National Wildlife Refuge in Louisiana, a series of recreation facilities along the waterway, and improvements to Catahoula Lake to preserve it for migratory waterfowl.

Local cooperation. Local interests are required to furnish the construction rights-of-way for the realignment work. Seven of the 25 sites are within the Felsenthal National Wildlife Refuge and are already owned by the Federal Government. However, there have been no indications that the land for the remaining 18 sites will be forthcoming because of strong opposition to the

VICKSBURG, MS, DISTRICT

realignment work by local environmental groups. The six remaining recreation facilities are unscheduled at this time due to the lack of required cost sharing agreements.

Terminal facilities. Public loading docks are at Columbia, LA, and Camden and Crossett, AR. Privately owned docks and loading and unloading facilities are at Columbia, Monroe, and Sterlington, LA, and El Dorado, Calion, and Camden, AR. Two grain-handling facilities and a petroleum-loading facility are in the vicinity of Jonesville, LA, a grain-handling facility is in the vicinity of Acme, LA, and a petroleum-loading facility is in the vicinity of Smackover, AR.

Operations and results during fiscal year. The project is 92 percent complete and provides limited navigation as far north as Camden, AR. All four locks and dams associated with the project are complete and in operation. Design and construction of the remaining features are on hold pending a consensus between the States of Arkansas and Louisiana concerning the type of development desired or the additional studies needed to reach a decision. In FY 07, maintenance dredging was performed from Camden, AR, to the mouth of the Black River by the contract Dredge *Butcher*, removing 831,322 cubic yards of material from the navigation channel.

3. RED RIVER EMERGENCY BANK PROTECTION

Location. In northwest Louisiana, southwest Arkansas, and northeast Texas, along the Red and Old Rivers between the Mississippi River and the head of the levee system above Index, AR.

Existing project. Provides for realigning the banks by means of cutoffs and training works and for stabilizing banks by means of revetments, dikes, and other methods as emergency conditions may require in advance of developing the design for the entire Red River Waterway project.

Local cooperation. Fully complied with. For details see pages 11-19 to 11-20, Annual Report FY 80.

Operations and results during fiscal year. Construction was completed on one revetment item.

4. NAVIGATION WORK UNDER SPECIAL AUTHORIZATION

Navigation activities pursuant to Sec. 107, Public Law 87-645, as amended.

In FY 07, \$0 was expended on Section 107 Coordination Accounts; \$815,787 on Yazoo Diversion Canal, MS.

Flood Control

5. OUACHITA RIVER LEVEES, LA

Location. East bank of Ouachita River between Bastrop, LA, and Sandy Bayou. Loop levees on the west bank at West Monroe, Columbia, and Bawcomville.

Existing project. There are 105.8 miles of levee on the east bank and 11.6 miles of levee in the three loops on the west bank. A Summary Report authorized gravel surfacing 117.4 miles of levee, and enlarging 36.6 miles of levee. Estimated Federal cost is \$30,198,000. Estimated non-Federal cost is \$4,945,000.

Local cooperation. Requirements and assurances of local cooperation are fully described on page 12-6 of FY 1980 Annual Report.

The 1991 Water and Energy Appropriations Act gave the Federal government responsibility for the repair and/or replacement of the deteriorated drainage structures. The Assurances Agreement for Local Cooperation was supplemented to reflect this change in responsibility. The supplemental agreement covered work performed since Fiscal Year 1992 with follow on agreements for additional levee work.

Operations and results during fiscal year. Item 2 was awarded on 2 December 2003 and designated complete 3 Oct. 2006. A contract for Phase I gravel surfacing from Monroe to Sandy Bayou was awarded 29 Aug 2006 and designated complete 10 Oct. 2006

6. RED RIVER BELOW DENISON DAM, AR, LA, TX (VICKSBURG DISTRICT)

Location. On Red River and its tributaries below Denison Dam, in Oklahoma, Arkansas, Texas, and Louisiana. (Refer to Geological Survey State maps and folio "Maps of Red River" - 1958 edition.) Along the main stem of the Red River from the head of the levee system immediately above Index, AR, through the southwest corner of Arkansas to the vicinity of Boyce, LA, on the right bank, and Pineville, LA, on the left bank.

Existing project. Raising and strengthening existing and authorized Red River levees to provide protection against flooding and bank protection works at

locations where levee setbacks are impossible or uneconomical. The plan consists of raising and strengthening existing and authorized Red River levees to provide against a flood approximately 20 percent greater than the flood of 1945, the flood of record, as modified by authorized reservoirs. Bank protection works are to be constructed at locations where levee setbacks are impossible or uneconomical.

Local cooperation. Requirements of local cooperation are fully described on page 12-10 of FY 1984 Annual Report.

Operations and results during fiscal year. Construction was initiated in February 1948, and the levee and bank stabilization are complete with the exception of levee rehabilitation within the State of Arkansas and gravel surfacing on the levees in Louisiana. Gravel surfacing on the east bank was completed in the vicinity of Natchitoches, Louisiana.

7. INSPECTION OF COMPLETED FLOOD CONTROL PROJECTS

Inspection of completed work was accomplished at a cost of \$439,852 for the fiscal year. Total cost as of Sep. 30, 2007, is \$7,903,625.

8. FLOOD CONTROL WORK UNDER SPECIAL AUTHORIZATION

Emergency flood control activities—repair, flood fighting, and rescue work. (Public Law 99, 84th Cong., and antecedent legislation.)

FY 07 Federal costs for the period were \$528,126 for disaster preparedness, emergency operations and operational support and \$7,268,000 reimbursable due to Hurricane Katrina response efforts.

Snagging and clearing of navigable streams and tributaries in the interest of flood control (Sec. 208 of 1954 Flood Control Act, Public Law 780, 83rd Cong.)

In FY 07, \$0 was expended on Section 208 coordination account.

Emergency bank protection (Sec. 14 of 1956 Flood Control Act, Public Law 780, 83rd Cong.)

In FY 07, \$9,982 was expended on Section 14 coordination account; \$175,767 on Eubanks Creek, Jackson, MS; \$51 on Dillon's Bridge, Bogue Chitto River, MS; \$345,354 on Bayou Macon, Poverty Point, LA; and \$17,934 on Tallahatchie River, Site 3, Tallahatchie County, MS, \$40,000 on Ouachita River, city of Monroe, LA; and \$9,554 on Hwy 237, Sulphur River, Miller County, AR.

Flood control activities pursuant to Sec. 205, Public Law 858, 80th Cong., as amended (preauthorization).

In FY 07, \$14,926 was expended on Section 205 coordination account; \$96,879 on Red Chute Bayou levee, LA; \$85,486 on McKinney Bayou, Tunica County, MS; and \$23 on Patterson Bayou, Blue Cane, Tallahatchie County, MS.

Environmental

9. MISSISSIPPI ENVIRONMENTAL SECTION 592

Location: The Mississippi (Section 592) project provides environmental infrastructure assistance to communities throughout the State of Mississippi.

Existing project: The Mississippi (Section 592) project provides environmental infrastructure assistance to communities throughout the State of Mississippi. This includes project design and construction assistance for wastewater treatment and related facilities, combined sewer overflows, water supply and storage and related facilities, environmental restoration, and surface water resource protection and development.

Local cooperation. Local sponsors are reimbursed 75 percent of their costs.

Operations and results during fiscal year. Five projects have been completed, one terminated, 15 are ongoing and coordination is ongoing with six additional communities. No new Project Partnership Agreements (PPA) (previously Project Cooperation Agreements) will be executed until sufficient funding is received.

VICKSBURG, MS, DISTRICT

**10. PEARL RIVER WALKIAH BLUFF,
MS AND LA**

Location. The Lower Pearl River Basin lies within the States of Mississippi and Louisiana with the Pearl River forming part of the boundary between the two states. The Basin extends from near Bogalusa, LA, to the mouth--a linear distance of approximately 45 miles. The Pearl and West Pearl Rivers are distinct river systems connected by numerous sloughs, bayous, and distributaries.

Existing project. The project consists of a rock weir in the old bendway of the Pearl River above the inlet of Wilson Slough to provide a 50/50 low-flow distribution between that bendway and the Pearl River and other improvements. The primary purpose of this project was to restore low flows in an 18-mile reach of the Pearl River and Holmes Bayou, thus providing a net gain in the wetland resource value. Prior to this project, essentially all flows in the Pearl River eventually entered the West Pearl River during low-flow periods. This reach extends along the Pearl River from near the head of Wilson Slough, down the Pearl River and Holmes Bayou, to the confluence of Holmes Bayou and the West Pearl River. The project was designed to restore low flows in the Pearl River system to the nearly equal distribution that existed between the Pearl River and Wilson Slough in the late 1970s. The last construction on the project was accomplished in December 1999. In October 2001, approximately 30 percent of the low flows were going down the Pearl River (as opposed to 5 to 10 percent prior to the project).

Operations and results during fiscal year. The rock weir portion of the project was damaged by high flows and was further damaged by Hurricane Katrina to the extent that the percentage of low flows going down the Pearl River dropped to approximately 20 percent. Repairs were needed to ensure the project continues to develop as originally planned. The needed repair work was funded in PL 109-148 (FY 2006 Supplemental

Appropriations). Funds of \$56,059 were expended in FY 07 to complete repairs initiated in FY 06.

**11. ECOSYSTEM RESTORATION WORK
UNDER SPECIAL AUTHORIZATION**

Project modifications for improvement of environment pursuant to Sec. 1135, Public Law 99-662, as amended (preauthorization).

In FY 07, \$4,978 was expended on Section 1135 coordination account; \$56,321 on Sulphur River, LA; \$165,347 on Frazier/Whitehorse Oxbow, LA; \$4,380 on Bayou Macon, LA; \$9,627 on Cannon Brake/Lower Vallier, AR; \$3,801 on Bayou DeSiard, Monroe, LA; \$362 on Bayou Macon, Lake Village, AR; and \$81,703 on Lake St. Joseph, Tensas Parish, LA.

Aquatic Restoration pursuant to Section 206, P.L. 104-303.

In FY 07, \$0 was expended on Section 206 coordination account.

Miscellaneous

**12. CATASTROPHIC DISASTER PREPARED-
NESS PROGRAM**

During FY 07, \$12,534 was expended on continuity of Government, \$0 on EOC Support and Facilities, \$28,838 on Catastrophic Disaster Preparedness, and \$137,355 Anti-Terrorism/Force Protection. Total costs for FY 07 were \$178,727.

13. GENERAL REGULATORY PROGRAM

During FY 07, \$2,446,570 was expended on Permit Evaluation; \$217,051 on Enforcement; \$303,254 on Compliance-Authorized Activities & Mitigation; and \$0 on appeals. A total of \$2,966,875 was expended in FY 07.

AUTHORIZING LEGISLATION

Acts	Work Authorized	Documents
Nov. 17, 1986	Water Resources Development Act of 1986 authorized for construction the project for mitigation of wildlife losses, Red River Waterway, LA, which may include all or such portion of any land adjacent to the Loggy Bayou Wildlife Management Area.	Public Law 99-662, 99th Cong., 2d sess.
Nov. 17, 1988	Water Resources Development Act of 1988 modified the mitigation project to authorize the Secretary to acquire up to 300 acres in the area of Stumpy Lake.	Public Law 100-676 100th Cong., 2d sess.
Sep. 7, 1989	Provide for acquisition of up to 5,000 acres of land in the vicinity of Stumpy Lake/Swan Lake/Loggy Bayou Wildlife Management Area at a cost not to exceed \$2.5 million. Also increased L&A Railroad Bridge ceiling to \$25.8 million.	Public Law 101-101 101st Cong., 2d sess
Nov. 28, 1990	Water Resources Development Act of 1990 modified the mitigation project to authorize the Secretary to acquire an additional 12,000 acres adjacent to or close to the Bayou Bodcau Wildlife Management Area.	Public Law 101-640, 101st Cong., 2d sess.
Dec. 18, 1991	Lock and Dam 1 designated as Lindy Claiborne Boggs Lock and Dam	Public Law 102-240 102nd Cong.
Oct. 31, 1992	Lock and Dam 5 designated as Joe D. Waggoner, Jr. Lock and Dam	Public Law 102-580 102nd Cong
Water Resources Development Act of 1996	WRDA 96 modified the mitigation project to authorize the Secretary to acquire lands adjacent to Loggy Bayou Wildlife Management Area in Caddo and Red River Parishes and increasing the authorized cost to \$10,500,000.	Section 301, Public Law 104-303
Water Resources Development Act of 1996	WRDA 96 modified the project to include dredging of the entrance to the Oxbow Lakes designated for preservation in project documentation and stated that the cost sharing for this dredging should be the same as the general navigation features.	Section 301, Public Law 104-303
Water Resources Development Act of 2000	WRDA 2000 modified the mitigation project to authorize the acquisition of lands in any of the parishes that comprise the Red River Waterway District, consisting of Avoyelles, Bossier, Caddo, Grant, Natchitoches, Rapides, and Red River Parishes.	
Jul. 24, 1946	RED RIVER BELOW DENISON DAM LEVEES AND BANK STABILIZATION (VICKSBURG DIST.) (See Section 10 of Text) Levee and bank stabilization.	H. Doc. 602, 79th Cong., 2d sess.

McKinney Bayou, AR ^{7,8}	--	1,617,781		3
West Agurs, LA	1976	0		2005

1. Authorized under project "Red River Below Denison Dam."
2. In addition, the following was expended from contributed funds:

Amite River and tributaries	\$ 430
Bayou Pierre in vicinity of Shreveport, LA	89,047
Choctaw Bayou and Tributaries, LA	170,799
Harvey Canal, Bayou Barataria Levee, LA	425,209
Maniece Bayou, AR	39,293
Natchitoches Parish, LA	250,000
3. Completion Date Unavailable.
4. Authorized by Chief of Engineers under authority of Sec. 205, Flood Control Act of 1948, as amended.
5. Construction not initiated.
6. Inactive.
7. Completed under provisions of Sec. 7 Flood Control Act of 1928, as amended by Sec. 9, Flood Control Act 1936, and included in 1939 Annual Report of President, Mississippi River Commission, p. 2214.
8. Posten Bayou Project, authorized by Senate and House Resolutions, Dec. 17 and 15, 1970, deleted the plan authorized by the Flood Control Act dated Aug. 3, 1955.
9. Excludes New Orleans District allocation and cost.

MEMPHIS, TN, DISTRICT

This district comprises a portion of southeastern Missouri and southern Illinois, western portions of Kentucky and Tennessee, a small portion of northern Mississippi, and the northeastern portion of Arkansas; includes area embraced in drainage basins of eastern tributaries of the Mississippi River south of Ohio River Basin to Nonconnah and Horn Lake Creeks, inclusive, and those of western tributaries south of Castor River

diversion channel and Commerce, MO, including St. Francis River Basin and White River and tributaries below Peach Orchard Bluff, AR, on the right bank and below Augusta, AR, on the left bank; also includes left bank Mississippi River levee from vicinity of Memphis south to about mile 620, and right bank levees from Cape Girardeau, MO, to about mile 605.

Environmental Infrastructure

1. DESOTO COUNTY, MS

Location. DeSoto County is located in north Mississippi, just south of Memphis, TN. The county's rapid growth demands expansion of existing sewer systems and the development of new systems into one unified county-wide system.

Existing project. Section 219 of WRDA 1992, as amended in Section 502 of WRDA 1999 and Section 108 of the Consolidated Appropriations Act, 2001; and Section 6006 of the Emergency Supplemental Appropriations Act for Defense, the Global War on Terror and Tsunami, 2005 authorized \$55,000,000 for the design and construction of a regional wastewater system in DeSoto County, Mississippi, and Section 123 of the Energy and Water Development Appropriations Act of 2006 amended project authorization so as to allow future work to be carried out primarily by the

Non-Federal sponsor with the 75% Federal share to be in the form of grants or reimbursements.

Local cooperation. DeSoto County Regional Utility Authority (DCRUA) is the local sponsor for the project. On 29 September 2006 a new PCA was executed for future work. Under the new PCA the sponsor assumes primary responsibility for all phases of work and the Corps' role is to provide general oversight. The Federal cost share is being provided to the sponsor on a cost reimbursable basis.

Operations during fiscal year. Contract adjustments were issued on the following projects completed under Corps oversight, and these projects have been transferred to DCRUA for OMR&R: Upper Camp Creek North Interceptor and Upper Camp Creek South Interceptor. Federal cost was \$1,944,804 for DeSoto County Wastewater Treatment, MS.

REPORT OF THE SECRETARY OF THE ARMY ON CIVIL WORKS ACTIVITIES FOR FY 2007

Other Activities

2. EMERGENCY RESPONSE ACTIVITIES

Emergency flood control activities, Public Law 99, 84th Cong.

During this period, Federal cost was \$ \$281,684 for disaster preparedness.

ST. LOUIS, MO, DISTRICT

This district comprises those portions of southwestern Illinois and eastern Missouri which lie in the drainage basin of Mississippi River and its western tributaries, exclusive of the Missouri River, from the mouth of the Ohio River to mile 300, and of its eastern tributaries to Hamburg Bay at mile 261 on the left bank, exclusive of tributary basin of Illinois Waterway upstream of new La Grange Lock and Dam at mile 80.15 above confluence of the Illinois and Mississippi Rivers. The St. Louis District territory encompasses 27,000 square

miles. The District also includes a drainage basin in Missouri tributary to the Little River diversion channel. The Mississippi River between the Missouri River and mile 300 is included in a separate report on the Mississippi River between the Missouri River and Minneapolis, MN. The portion of the Illinois River downstream of new La Grange Lock and Dam is included in the report of the Chicago District on the Illinois Waterway, Illinois and Indiana.

Navigation

1. ILLINOIS WATERWAY, IL (ST. LOUIS DISTRICT)

See report on Illinois Waterway, IL and IN, under Rock Island District.

2. KASKASKIA RIVER, IL

Location. The river rises in Champaign County, IL, about 5 miles northwest of Urbana, in the east-central part of the state. It flows southwesterly about 325 miles and empties into the Mississippi River about 8 miles above Chester, IL, or about 118 miles above the mouth of the Ohio River. (See Cincinnati sheet of maps of United States published by Army Map Service, scale 1:500,00.)

Previous project. For details, see Annual Report for 1986.

Existing project. Improvement for navigation provides a channel 9 feet deep and 225 feet wide from the mouth to Fayetteville, IL. Improvements included channel enlargement and a dam at mile 0.8 with a single lock 84 feet wide and 600 feet long. Federal cost totaled \$147,387,000; non-Federal cost totaled \$7,665,000, which included \$1,118,160 local contributions. Fish and wildlife and habitat restoration added in 1996 and recreation in 2000 as project purposes.

Local cooperation. State of Illinois passed legislation authorizing Illinois Department of Public Works and Buildings to enter into assurances of local cooperation with the United States. These assurances have been furnished and were accepted on behalf of the United States on Sep. 10, 1965; these assurances were supplemented on Aug. 7, 1972, to incorporate the provisions of Public Law 91-646.

Operations and result during fiscal year. Operation and maintenance costs totaled \$1,825,066.

3. MISSISSIPPI RIVER BETWEEN MISSOURI RIVER AND MINNEAPOLIS, MN (ST. LOUIS DISTRICT)

See separate chapter entitled "Mississippi River between Missouri River and Minneapolis, MN," printed in the Annual Report of the Chief of Engineers. This section includes Lock & Dam 24 Major Rehabilitation, Lock & Dam 25 Major Rehabilitation, and Melvin Price Locks & Dam.

4. MISSISSIPPI RIVER BETWEEN OHIO AND MISSOURI RIVERS, MO AND IL

Location. The Mississippi River rises in Lake Itasca, MN, and from that lake flows southerly about 2,340 miles and empties into the Gulf of Mexico. Portion included in this report embraces the 195-mile section known as "Middle Mississippi," between tributary Ohio and Missouri Rivers about 974 to 1,169 miles from the gulf. (See folder by Corps of Engineers Navigation Charts, Middle and Upper Mississippi River, Cairo, IL, to Minneapolis, MN.)

Previous projects. For details, see page 1879 of Annual Report for 1915 and page 1014 of Annual Report for 1938.

Existing project. The existing project provides for obtaining and maintaining a minimum channel depth of not less than 9 feet, a minimum width of not less than 300 feet at low water, with additional widths in bends from mouth of Ohio River (about 974 miles from gulf) to northern boundary of city of St. Louis, mile 191, thence 200 feet wide, with additional width in bends to mouth of Missouri River, mile 195; to be obtained: (1) by regulating works, for closing secondary channels, contracting river by building new banks where river width is excessive and protecting new and old banks from erosion where necessary to secure permanency at an estimated total Federal cost (Oct 2006 price level) of \$268,000,000; (2) by dredging to maintain project channels; (3) by construction of works authorized for Chain of Rocks reach in 1945 River and Harbor Act, which approved a comprehensive plan for development of the river at Chain of Rocks to provide for construction of a lateral canal at a cost of \$59,720,600; and (4) by construction of a fixed-crest rock-fill dam about 900 feet below Chain of Rocks Bridge, authorized by 1958 River and Harbor Act, at a cost of \$4,353,000, excluding \$7,000 costs to Coast Guard for aids to navigation. A small boat harbor opposite Chester, IL, was deauthorized and excluded from foregoing cost estimate. See H. Doc. 669 (76th Cong., 3rd sess.) for report of Chief of Engineers dated Feb. 27, 1940, containing a general plan for improvement of Mississippi River between Coon Rapids Dam and mouth of Ohio River for purposes of navigation, power development, flood control, and needs of irrigation.

Local cooperation. None required.

Terminal facilities. Existing facilities are considered adequate for existing commerce.

Operations and results during fiscal year. Regulating Works: continued tree planting contract for the Thompson Bend riparian corridor, initiated Mosenthein Reach/Ivory Landing Dike and Revetment (Phase 2) contract, initiated Kaskaskia Bend Dike and Revetment (Phase 5) contract, initiated and completed Dike and Revetment River Mile 195-0 contract, engineering and design, and supervision and administration. Construction on existing project began in 1881 and project has been in beneficial use practically from its inception. Projects on Dam 27 and Chain of Rocks are complete. Work on the project is about 80 percent complete. Channel as a whole has been greatly improved by the work completed to date. Dredging is required at low stages to remove temporary shoals and maintain required channel depths. River is generally above 10-foot stage, St. Louis gage, from latter part of February to the latter part of August, during which time project channel depths generally prevail without dredging.

Following the great Mississippi River flood of 1993, it became apparent that the Chain of Rocks, East Canal Levee, was not performing as intended. Sand boils developed along a sizeable reach at flood elevations considerably below design height. Emergency repairs were completed in FY 97. Deficiency corrections (additional berms, relief wells, and a pump station) are estimated at \$46,400,000 (Oct 06 price level). These corrections were initiated in FY 99 and continued in FY 07 with the construction of seepage berms.

Maintenance. Work consists of approximately 2,000 feet of dike repair and 5,000 feet of revetment repair yearly. U.S. plant and hired labor plus contract dredging perform channel dredging removing 5,000,000 to 10,000,000 cubic yards of material (average year) from main channel. Condition and operation studies, recreation planning, engineering and design, and operation and maintenance of Lock and Dam 27 continued. In FY 05, fabricated lift gate machinery for Locks 27, which is in need of major rehabilitation. (Major rehabilitation report was approved in Aug 02.)

5. NAVIGATION WORK UNDER SPECIAL AUTHORIZATION

No activity in FY 07.

Flood Control

6. ALTON TO GALE ORGANIZED LEVEE DISTRICTS, IL & MO

Location. The levee system is located adjacent to the Mississippi River between Alton and Gale, Illinois.

Existing project. The project is authorized by the Flood Control Acts of 1936, 1938 and 1946. Construction of the Alton to Gale levee system was completed in 1977. Some reaches of this levee system have, for many years, been experiencing a significant number of slides associated with design deficiencies increasing the probability of levee failure during flood events. The recommended plan will correct these slides by a lime stabilization procedure. Estimated cost (1997) is \$109,018,000 Federal and \$4,374,000 non-Federal. Resumption of project initiated. New slides were discovered during the 1997 spring levee inspections. The contract to repair the Blue Waters Levee in the Metro East Drainage and Levee District was completed Oct. 1997.

Local cooperation. The cost sharing applicable for the Alton to Gale Levee Slide repairs is in accordance with policies established for the Water Resources Development Act of 1986, PL 99-662. The local sponsor is required to operate and maintain all works after completion. Supplemental assurances have been completed for a portion of the remedial work that was 100% federally funded. In Nov. 2000, ASACW granted an exception to the policy requiring non-Federal cost sharing for deficiency corrections. As a result, 44 levee slides were repaired at 100 percent Federal cost. This portion of work was completed in 2002.

Operations and results during fiscal year. Not applicable; project was last funded in FY 04.

7. BOIS BRULE, MO

Location. The Bois Brule project is located on the right bank of the Mississippi River, and is predominately in Perry County, Missouri, but has a small part in Randolph County, Illinois.

Existing project. The existing project was authorized by the Flood Control Acts of 1936 and 1965. It consists of 33.1 miles of levee, 341 relief wells, and 4 pump stations. The Energy and Water Development Appropriations Act of 2002 provided directive language and funding to undertake design deficiency repairs with cost sharing consistent with the original project authorization. The deficiency correction project consists of 297 relief wells, seepage berms, a seepage cutoff trench, ditching, 3 pump stations, and restoration of 4.2 miles of the back levee to its design grade. The deficiency correction project is approximately 20 percent complete.

Local cooperation. The Bois Brule Levee and Drainage District is the local sponsor and is responsible for land acquisition and relocations. The design and

construction will be 100 percent Federal. The Project Cooperation Agreement (PCA) was executed in April 2004.

Operations and results during fiscal year. Four relief wells were constructed. A contract was awarded for an underseepage cutoff trench and part of a seepage berm.

8. CAPE GIRARDEAU FLOODWALL PROTECTION SYSTEM RECONSTRUCTION PROJECT

Location. Missouri, along the right bank of the Mississippi River floodplain between River Miles 51.6 and 52.8 above the Ohio River.

Existing project. The area protected by the Cape Girardeau flood protection project lies within the corporate limits of the City of Cape Girardeau, Missouri. The overall length of the project is 8,240 feet consisting of 2,175 feet of levee; 6,065 feet of floodwall; 2 pumping stations; 5 closure structures; and other appurtenant structures. The reconstruction includes rock berm to stabilize existing retaining wall; floodwall work (joint repairs, toe drain replacement, soil stabilization and closure gate seal replacement); and pump stations (mechanical, electrical, and miscellaneous structural and culvert work).

Local cooperation. The current project has two levee district sponsors, the Main Street Levee District and the North Main Street Levee District. The city of Cape Girardeau, MO, strongly supports the project and is in the process of assuming project sponsorship from the two existing levee districts. A Project Cooperation Agreement will be executed following approval of the Engineering Documentation Report (EDR).

Operations and results during fiscal year. Addressed comments on the EDR and submitted report for approval. Coordinated power pole issue with power company and the city. Coordinated Project Cooperation Agreement with the city.

9. CHESTERFIELD, MO

Location. The Chesterfield, Missouri project includes the Monarch-Chesterfield Levee, which is located in St. Louis County along the right bank of the Missouri River between river miles 46 and 38.5.

Existing project. The project was authorized by the Water Resources and Development Act of 2000 (P-L 106-541). The project includes a 5-7 foot levee raise, approximately 12 miles long; seepage berms;

relief wells; closure structures; pump stations; and several gravity drains.

Local cooperation. The Monarch-Chesterfield Levee District signed a Design Agreement in August 2001.

Operations and results during fiscal year. Nonstandard Project Partnership Agreement (PPA) (formerly PCA) prepared and submitted to higher Headquarters for approval. Completed design for the first construction contract. The feasibility report, including Environmental Impact Statement, was approved and submitted to Congress.

10. EAST ST. LOUIS, IL

Location. Project is in St. Clair and Madison Counties, IL, on the left bank of the Mississippi River between river miles 175 and 195 above the Ohio River. Project includes all bottom lands between bluffs on the east and Mississippi River and Chain of Rocks Canal on the west, and extends from Cahokia diversion channel on the north to Prairie du Pont Creek on the south. (See Corps of Engineers Navigation Charts, Middle and Upper Mississippi River, Cairo, IL, to Minneapolis, MN.)

Existing project. The 1936 Flood Control Act authorized raising and enlarging existing levee systems by construction or reconstruction of 19.8 miles of levee, including 3.1 miles of floodwall, together with necessary appurtenant works consisting of gravity drainage structures, highway and railroad closure structures, alterations and reconstruction of existing pumping plants, alterations to railroad bridges and approaches at levee crossings, service roads on levee crown, and seepage control measures. The completed 10 miles of levee along Chain of Rocks Canal and Lock 27 provide flood protection on the landward side integral with and to the same degree as the East St. Louis levee. Final cost of work under this authorization is \$22,550,100. The Flood Control Act of 1965 modified existing project to provide for channel improvements, diversion ditches, flood plain detention areas, a reservoir on Little Canteen Creek, and a pumping plant to considerably reduce damages resulting from interior flooding. This act also authorized reconstruction of a channel stabilization dam in Cahokia Creek diversion channel to provide protection to adjacent levees and bridges from scour and eventual loss. Post authorization studies in the early 1980's justified a project that was constructed for the Blue Waters Ditch area, which included channel improvements and a pumping station with a final project cost of \$11,530,000 and \$2,950,000 non-Federal. However,

ST. LOUIS, MO, DISTRICT

flood plain detention areas, the reservoir on Little Canteen Creek and other related flood control measures in the Cahokia-Harding Ditch Area are not economically feasible.

The 1988 Energy and Water Development Appropriations Act authorized repair and rehabilitation of pump stations and appurtenant works, channels and bridge structures. The estimated total cost of this work (Oct 06 price level) is \$39,636,000 Federal and \$16,956,000 Non-Federal.

Local cooperation. For work under the Energy and Water Development Appropriations Act of 1988, PL 100-202, local interests have entered into three Local Cooperation Agreements (LCA) which cover all of the work in the Flood Protection Rehabilitation project. Construction work under the first two LCAs is complete, and construction work under the third LCA is underway. In May 1998, a PED agreement was executed by the local interests to cover costs associated with the reevaluation of the Cahokia-Harding Ditch area.

Operations and results during fiscal year. Completed construction of the Sand Flank Levee, Gatewell 9, Closure Structure C-5, and the Venice Pump Station. Continued construction on the North Pump Station Triple Box Culvert and initiated the Engineering Design Report to identify courses of action for deficiencies in the existing system identified during flooding in 1993 and 1995.

11. EAST ST. LOUIS AND VICINITY, IL (ECOSYSTEM RESTORATION AND FLOOD DAMAGE REDUCTION)

Location. Project is in St. Clair and Madison Counties, IL, on the left bank of the Mississippi River between river miles 175 and 195 above the Ohio River. Project includes all bottom lands between bluffs on the east and Mississippi River and Chain of Rocks Canal on the west, including the tributary watershed, and extends from Cahokia diversion channel on the north to Prairie du Pont Creek on the south. (See Corps of Engineers Navigation Charts, Middle and Upper Mississippi River, Cairo, IL, to Minneapolis, MN.)

Existing project. The 1936 Flood Control Act authorized raising and enlarging existing levee systems by construction or reconstruction of 19.8 miles of levee, including 3.1 miles of floodwall, together with necessary appurtenant works consisting of gravity drainage structures, highway and railroad closure structures, alterations and reconstruction of existing pumping plants, alterations to railroad bridges and

approaches at levee crossings, service roads on levee crown, and seepage control measures. The completed 10 miles of levee along Chain of Rocks Canal and Lock 27 provide flood protection on the landward side integral with and to the same degree as the East St. Louis levee. Final cost of work under this authorization is \$22,550,100. The Flood Control Act of 1965 modified existing project to provide for channel improvements, diversion ditches, flood plain detention areas, a reservoir on Little Canteen Creek, and a pumping plant to considerably reduce damages resulting from interior flooding. This act also authorized reconstruction of a channel stabilization dam in Cahokia Creek diversion channel to provide protection to adjacent levees and bridges from scour and eventual loss. Post authorization studies in the early 1980's justified a project that was constructed for the Blue Waters Ditch area, which included channel improvements and a pumping station with a final project cost of \$11,530,000 and \$2,950,000 non-Federal. However, flood plain detention areas, the reservoir on Little Canteen Creek and other related flood control measures in the Cahokia-Harding Ditch Area are not economically feasible.

Severe flooding, which has resulted in National Disaster Declarations each year from 1993 to 1996, resulted in a new Congressional appropriation in FY 1997 to restart a cost-shared general reevaluation of the interior area. Congress added funds each year since FY 1997 to continue this effort. The project has been reformulated as an ecosystem restoration project that provides incidental flood damage reduction. Chief's Report was signed on December 22, 2004. The General Reevaluation Report was reviewed by the Office of the Assistant Secretary of the Army for Civil Works in 2006 and was returned for revision in September 2006.

Local cooperation. In May 1998, a Preconstruction Engineering & Design agreement was executed by the local interests to cover costs associated with the reevaluation.

Operations and results during fiscal year. Review of the General Reevaluation Report continued in FY 07. Project costs are estimated to be \$210 million.

12. MERAMEC RIVER BASIN (VALLEY PARK), MISSOURI

Location. The project is located in St. Louis County, Missouri, adjacent to the left bank of the Meramec River between miles 20.7 and 22.1 above the confluence with the Mississippi River.

Existing project. The project was authorized for construction by Section 2(h), Public Law 97-128, Dec. 29, 1981, and the Water Resources Development Acts of 1986 and 1999. It protects Valley Park from the 100-year flood on the Meramec River. The project includes 3.2 miles of earthen levee with six gravity drains, three closure structures, interior ponding areas and 41 relief wells required for under-seepage control. Estimated total project cost (2004) \$49,428,000; \$36,905,000 Federal, and \$12,523,000 non-Federal.

Local cooperation. The city of Valley Park, Missouri is the local sponsor. A Local Cooperation Agreement was executed on August 12, 1992.

Operations and results during fiscal year. Contracts were awarded for the final minor flood damage reduction items and the final environmental mitigation work (excavation of a parking lot and the planting of bottom-land hardwood species in this and other areas).

13. NUTWOOD DRAINAGE AND LEVEE DISTRICT, IL

Location. The levee district is in Green and Jersey Counties, IL, on the left bank of the Illinois River between miles 15.2 and 23.7 above the Mississippi River. (See Quincy, IL-MO, sheet of maps of the United States, published by Army Map Service, scale 1:250,000.)

Existing project. Project was authorized by the 1962 Flood Control Act (H. Doc. 472, 87th Cong., 2d sess.). Project provides for raising and enlarging 11.4 miles of levee, construction of 1.0 miles of new levee, altering a pumping station and construction of seepage control measures. This project would provide protection to 10,360 acres of land, 9,365 of which are highly productive agricultural lands. A General Design Memorandum (GDM), completed in 1986, indicated that the plan was not economically justified at the interest rate used at the time. The project was declared inactive on Jun. 3, 1987. As a result of the Great Flood of 1993 and the inundation of Illinois State Highway 16/100 within the project area, the 1995 Energy and Water Development Appropriations Bill included funding to perform a flood damage reduction study.

Local cooperation. Requirements of local cooperation are described on page 14-11 of FY 1980 Annual Report except that cost sharing policies established by the Water Resources Development Act of 1986, PL-99-662, will also apply. The Nutwood Drainage and Levee District is the local sponsor. The cost sharing agreement

for preconstruction engineering and design (PED) was executed in July 1997.

Operations and results during fiscal year. Construction funding was received in FY 2002. Work efforts to acquire necessary permits continued in FY 07. The present total Federal project cost (Oct 03) is \$12,043,000; non-Federal cost is \$4,015,000.

14. RIVER DES PERES, MO

Location. River des Peres drains a 111-square mile area in the city of St. Louis and St. Louis County, Missouri, and empties into the Mississippi River.

Existing project. The project was authorized by the Water Resources and Development Act of 1990 (PL 101-640). The authorized project consists of two subprojects, Deer Creek and University City. The Deer Creek portion consists of 2.5 miles of channel widening and stabilization improvements through the cities of Rock Hill, Webster Groves, Brentwood, and Maplewood. The University City portion consists of channel enlargement and stabilization along about 2.5 miles of the University City branch of upper River des Peres, a 2.53-mile recreation trail, and a small recreation park to be constructed by non-Federal interests on non-project lands.

Local cooperation. The Metropolitan St. Louis Sewer District (MSD) and the mayors of Brentwood, Rock Hill, Webster Groves, and Maplewood signed a Design Agreement on May 17, 2001, to serve as the local sponsors for the Deer Creek portion of the project. The Deer Creek portion is currently deferred as the cities of Rock Hill and Brentwood withdrew their support in FY 03. The city of University City signed a Design Agreement on June 30, 2004.

Operation and results during fiscal year. Continued the General Reevaluation for the University City portion of the project.

15. ST. LOUIS FLOOD PROTECTION, MO

Location. The St. Louis Flood Protection project is located in St. Louis, Missouri, on the right bank of the Mississippi River between miles 176.3 and 187.2 above the mouth of the Ohio River.

Existing project. The project was authorized by Public law 84-256, Aug. 9, 1955, and was completed in 1974. The reevaluation of the project consists of analyzing possible structural deficiencies and geotechnical concerns and the enhancement of recreation features within the project area.

ST. LOUIS, MO, DISTRICT

Local cooperation. The city of St. Louis signed the Design Agreement on Feb. 2, 2000.

Operations and results during fiscal year. Continued plans and specifications for new relief wells; provided draft PPA to city for review.

16. STE. GENEVIEVE, MO

Location. The City of Ste. Genevieve is located in Ste. Genevieve County at the edge of the Mississippi River floodplain about 54 miles south of St. Louis, MO.

Existing project. The project was authorized by the Water Resources Development Act of 1986 (PL 99-662). The authorizing language states "Congress finds that, in view of the historic preservation benefits resulting from the project, the overall benefits of the project exceed the costs of the project." The overall project consists of a major levee and associated features that will protect the town from the Urban Design Flood on the Mississippi River channel improvements on tributary streams that flow through the town and recreation features on flood control lands. Estimated total project cost (2005) is \$49,374,000; \$35,967,000 Federal, and \$13,407,000 is non-Federal.

Local cooperation. The project sponsor for the Urban Design Levee is the Ste. Genevieve Joint Levee Commission. The City of Ste. Genevieve, Ste. Genevieve County Levee District Number 2, and Ste. Genevieve County Levee District Number 3 hold membership on the Commission. In May 2005, a design agreement was executed with the city of Ste. Genevieve for the tributary and recreation features.

Operations and results during fiscal year. Continued general reevaluation of the headwater flooding along North and South Gabouri Creeks; completed Corps review and approval of the sponsor's final lands and relocations costs for the Urban Design Levee.

17. WOOD RIVER DRAINAGE AND LEVEE DISTRICT, IL

Location. The Wood River Drainage and Levee District project is located in the Mississippi River floodplain of Madison County, Illinois, just upstream of the city of St. Louis.

Existing project. The project was authorized by the Flood Control Act of 1938 and modified by the Flood Control Act of 1965. The original project provided for local flood protection works. The modified project provides for a pumping station with collector

ditches and necessary appurtenant facilities for removal of water impounded by the existing levees.

Local cooperation. The Wood River Drainage and Levee District signed a Project Cooperation Agreement on October 28, 2005, with cost sharing being 25 percent non-Federal and 75 percent Federal. The Project Cooperation Agreement was amended on June 29, 2006.

Operations and results during fiscal year. Awarded the contract for construction of the pump station. Construction on the pump station and relief wells began in the 2d quarter of FY 07.

18. WOOD RIVER LEVEE, IL

Location. The Wood River Levee project is located in the Mississippi River floodplain of Madison County, Illinois, just upstream of the city of St. Louis.

Existing project. The project was authorized by the Flood Control Act of 1938 and constructed in the 1950s. The existing project provides urban level protection for the 500-year Mississippi River flood stage. A reconstruction evaluation report to address the aging infrastructure and determine Federal interest was completed. The recommended project includes the rehabilitation of the levee system to bring it into original performance compliance.

Local cooperation. The Wood River Drainage and Levee District signed a Design Agreement on April 6, 2000.

Operations and result during fiscal year. Report recommending implementation of design deficiency measures and Congressional authorization of reconstruction measures for the Wood River levee system were approved by OMB on June 14, 2007.

19. INSPECTION OF COMPLETED FLOOD CONTROL PROJECTS

Inspection of completed work was accomplished at a cost of \$532,810 for FY 07. Total cost as of end of fiscal year is \$14,422,217.

20. FLOOD CONTROL WORK UNDER SPECIAL AUTHORIZATION

Flood control activities pursuant to Sec. 205, Public Law 858, 80th Cong., as amended (preauthorization).

See Table 14-F.

Emergency bank stabilization activities pursuant to Sec. 14, Public Law 526, 79th Cong., as amended.

See Table 14-F.

Emergency flood control activities - repair flood fighting, and rescue work (Public Law 99, 84th Cong., and antecedent legislation).

Federal costs for the fiscal year were \$384,736 for Disaster Preparedness, \$384,658 for Emergency Operations, and \$436,990 for Rehabilitation.

Environmental

21. MADISON AND ST. CLAIR COUNTIES, IL

Location. The environmental infrastructure project is located in Madison and St. Clair Counties, Illinois.

Existing project. The project was authorized by the Water Resources Development Acts of 1992, 1996, and 1999 and the Consolidated Appropriations Act of 2001. The project consists of providing water-related environmental infrastructure and resource protection. Projects include separating out combined sanitary and stormwater sewers and design and construction of sewer systems to improve quality and reduce sewer backups into homes. Some of the systems exceed 100 years of performance. Problems created by this compromised infrastructure impact the health, water quality, and economic development potential of the area. Completed rehabilitation includes a portion of the combined sewer system in the downtown area of East St. Louis, Illinois. Belleville is upgrading its infrastructure in order to remain in compliance with environmental regulations regarding the overflow of combined sewers. Future work is planned for Madison County, including Eagle Park Acres, Glen Carbon, and Maryville.

Local cooperation. Project cooperation agreements have been executed for sewer rehabilitation work in East St. Louis, Belleville, and Eagle Park Acres.

Operation and results during fiscal year. Continued construction of the project in Belleville. Completed the PPA with Madison County for the Eagle Park Acres project. Began development of a PPA with Madison County for the Glen Carbon and Maryville Sewer project.

22. ST. LOUIS, MO (COMBINED SEWER OVERFLOWS)

Location. The project is limited to work within the city of St. Louis, Missouri.

Existing project. The project was authorized by the Water Resources Development Acts of 1992 and 1999. The purpose is to eliminate or control combined sewer overflows in the city of St. Louis.

Local cooperation. Project cooperation agreements have been executed with the Metropolitan St. Louis Sewer District for work on the Old Mill Creek Sewer.

Operation and results during fiscal year. Not applicable – project was not funded in FY 07.

Miscellaneous

23. ECOSYSTEM RESTORATION WORK UNDER SPECIAL AUTHORIZATION

Project Modifications for improvement of environment pursuant to Sec. 1135, Public Law 99-662, as amended (preauthorization).

During FY 07, the following funds were expended: \$3,920 Coordination Account; \$2,798 Rend City Wetlands Restoration; \$578 Spunky Bottoms; and \$7,501 Shelbyville Wildlife Management Area.

Aquatic Ecosystem Restoration Public Law 104-303, Sec. 206.

In FY 07, funds were expended as follows: \$29 Confluence Greenway; \$71 No Chutes Area Restoration, Ted Shanks; \$1,020 Watkins Creek, St. Louis, MO; and \$84,700 Confluence Point State Park.

24. GENERAL REGULATORY FUNCTIONS

Permit Evaluations	\$1,715,657
Enforcement	87,185
Studies	99,838
Environmental Impact Statement	0
Appeals	0
Compliance and Mitigation	78,483
Total Regulatory	\$1,981,163

ST. LOUIS, MO, DISTRICT

25. CATASTROPHIC DISASTER PREPAREDNESS PROGRAM

Local Preparedness	\$ 0
National Preparedness	0
National Emergency Facilities	0
Readiness Training	0
Total	\$0

26. OTHER PROGRAMS AND ACTIVITIES

In FY 07, \$1,485,245 was expended on Native American Grave Protection for operation and maintenance.

27. UPPER MISSISSIPPI RIVER RESTORATION (UMRR) (FORMERLY ENVIRONMENTAL MANAGEMENT PROGRAM)

Location. The portion of the Upper Mississippi River within the boundaries of the St. Louis District extends from the mouth of the Ohio River (river mile 0) to river mile 300, downstream of Lock and Dam 22.

Existing project. The project is composed of five elements: Habitat Rehabilitation and Enhancement Projects, Long-term Resource Monitoring, Recreation Projects, Studies of Recreation Impacts and Navigation Traffic Monitoring. (The St. Louis District's involvement has been limited to Habitat Rehabilitation and Enhancement Projects and Long Term Resource Monitoring.) The overall program, involving five states and three engineer districts, is administered by the Mississippi Valley Division. In the St. Louis District, seven habitat rehabilitation projects have been completed. These are Clarksville Management Area, Dresser Island, Pharrs Island, Stag Island, and Cuivre Island in Missouri and Stump Lake and Swan Lake in Illinois. Through FY 2006, funds allocated to the St. Louis District have amounted to \$44,934,044 for design and construction of Habitat Rehabilitation and Enhancement Projects (HREP), \$2,674,716 for Long Term Resource Monitoring (LTRM), \$2,991,385 for Program Management; and \$967,800 for Habitat Needs Assessment.

During FY 07, expenditures of \$2,815,689 included the following:

Baseline Monitoring	\$ 174,749
Batchtown	1,108,534
Biological Response Monitoring	22,687
Calhoun Point	187,019
Pools 24 Islands	27,313
Pools 25/26	88,747
Program Management	192,863
Project Evaluation LTRM	321,295
Rip Rap Landing	23,813
Swan Lake	223,329
Ted Shanks	278,487
Wilkinson Island	166,853

Local cooperation. The terms of local cooperation, as established by Public Law 99-662, will vary according to the nature of the project, land ownership and pre-existing management responsibilities. The local sponsor for Habitat Rehabilitation and Enhancement projects is usually the U.S. Fish and Wildlife Service in coordination with the state of Missouri or the state of Illinois. A Project Cost Sharing Agreement with the state of Missouri was completed in FY 97 for the Cuivre Island project.

Operations and results during the fiscal year. During FY 07, continued design on Batchtown Phase III, Illinois; Pools 25 and 26 Islands, Missouri; Wildinon Island, Illinois; and Ted Shanks, Missouri. Continued construction on Calhoun Point Phase II. Habitat and biological response monitoring activities continued on numerous projects in Missouri and Illinois.

28. FORMERLY UTILIZED SITES REMEDIAL ACTION PROGRAM (FUSRAP)

On October 13, 1997, Congress transferred the management of the Formerly Utilized Sites Remedial Action Program (FUSRAP) to the Corps of Engineers, via the Energy and Water Development Appropriations Act, 1998. The St. Louis District was chosen to remediate low-level radioactive contamination, which resulted from activities conducted by the Manhattan Engineer District/Atomic Energy Commission, at the five St. Louis area sites. These sites include the Madison Site in Madison, Illinois, Hazelwood Interim Storage Site (HISS)/Latty Avenue Vicinity Properties (VPs), St. Louis Airport Site (SLAPS), St. Louis Airport Site Vicinity Properties (SLAPS VPs), and

REPORT OF THE SECRETARY OF THE ARMY ON CIVIL WORKS ACTIVITIES FOR FY 2007

St. Louis Downtown (SLDS), in St. Louis, Missouri. A sixth site, the Iowa Army Ammunition Plant (IAAAP), was declared eligible for inclusion in FUSRAP in FY 01. Cleanup will follow the provisions of the Comprehensive Environmental Response, Compensation, and Liability Act.

In FY 07, 72,849 cubic yards of material were disposed of from the Missouri sites. The Corps of

Engineers continued its remediation efforts at both SLDS and the North County sites under approved Records of Decision. The Corps completed remedial activity at the St. Louis Airport Site in North County during FY 07 and conducted a closeout ceremony at the site in May 2007. At IAAAP, funds were used to issue a Radiological Investigation Work Plan and conduct remedial sampling and analysis based on the Plan.

ST. LOUIS, MO, DISTRICT

TABLE 14-A COST AND FINANCIAL STATEMENT

See Section in Text	Project	Funding	FY 04	FY 05	FY 06	FY 07	Total Funds to Sep. 30, 2007

1. Excludes previous project cost of \$1,416,620.
2. In addition \$1,139,000 was expended for rehabilitation.
3. Includes \$8,072,326 for work authorized by Flood Control Act of 1965.
4. Includes \$7,921,939 for work authorized by Flood Control Act of 1965.
5. Excludes previous project cost (prior to FY97) of \$15,632,925.

TABLE 14-B AUTHORIZING LEGISLATION

Acts	Work Authorized	Documents
Oct. 23, 1962	KASKASKIA RIVER, IL (See Section 2 of Text) Construct canal, lock, and dam to provide a 9-foot navigation channel from mouth to Fayetteville, IL.	S. Doc. 44, 87th Cong., 1st sess.
Oct. 12, 1996	Modified to add fish and wildlife and habitat restoration as project purpose.	Public Law 104-303
Dec. 11, 2000	Modified to include recreation as a project purpose.	Public Law 106-541, Section 311
MISSISSIPPI RIVER BETWEEN OHIO AND MISSOURI RIVERS (See Section 4 of Text)		
Jun. 3, 1896	Project for regulating works in 1881. (To obtain a minimum depth of 8 feet.) Dredging introduced as part of the project.	Annual Report, 1881, p. 1536.
Jun. 13, 1902 Mar. 2, 1907 ¹ Mar. 3, 1905 ¹	These acts practically abrogated that part of project for middle Mississippi which proposed regulating works.	
Jun. 25, 1910	Regulating works restored to project and appropriations begun with a view to completion of improvement between Ohio and Missouri Rivers within 12 years at an estimated cost of \$21 million, exclusive of amounts previously expended.	
Jan. 21, 1927	For 9 feet deep and 300 feet wide from Ohio River to northern Rivers and Harbors boundary of city of St. Louis.	Committee Doc. 9, 69th Cong., 2d sess.
Jul. 3, 1930	Project between northern boundary of St. Louis and Grafton (mouth of Illinois River) modified to provide a channel 9 feet deep and generally 200 feet wide with additional width around bends.	Rivers and Harbors Committee Doc. 12, 70th Cong., 1st sess.
Mar. 2, 1945	Modified to provide construction of a lateral canal with lock at Chain of Rocks.	H. Doc. 231, 76th Cong., 1st sess.
Sep. 3, 1954 ²	Modified to provide construction of a small-boat harbor opposite Chester, IL.	H. Doc. 230, 83d Cong., 1st sess.
Jul. 3, 1958 ³	Modified to provide construction of a fixed crest rockfill dam 900 feet below Chain of Rocks Bridge.	
MELVIN PRICE LOCKS & DAM (FORMERLY LOCK AND DAM NO. 26 (REPLACEMENT))		
Oct. 21, 1978	Construct new dam and a 1,200-foot lock approximately 2 miles downstream of the existing structure.	Public Law 95-502, 95th Cong.
Dec. 29, 1981	Change name from "Lock and Dam No. 26" to "Melvin Price Lock and Dam" upon termination of service in U.S. Congress.	Public Law 97-118, 97th Cong.
Aug. 15, 1985 and Nov. 17, 1986	Construct a second lock, 600 feet long at the Lock and Dam No. 26. (Replacement) Project.	Public Law 99-88 and Public Law 99-662, 99th Cong.

ST. LOUIS, MO, DISTRICT

TABLE 14-B **AUTHORIZING LEGISLATION**
(Continued)

Acts	Work Authorized	Documents
Nov. 28, 1990	Modified to provide construction of cost-shared recreation facilities within the state of Illinois	Public Law 101-640, 101st Cong.
Oct. 31, 1992	Modified to allow cost-shared recreation with other non-Federal interests and authorized a 24,000 square foot visitor center.	Public Law 102-580, 102nd Cong.
Oct. 12, 1996	Amended project for recreation to include other contiguous nonproject lands, including those referred to as the Alton Commons.	Public Law 104-303
1960 River and Harbor Act as amended. Section 107	SOUTHEAST MISSOURI PORT, MO Construct harbor channel with adjacent landfill.	
Nov. 26, 1986	ST. LOUIS HARBOR, MO & IL As outlined in the Report of the Chief of Engineers, dated Apr. 30, 1984, the Water Resources Development Act of 1986 authorizes navigation improvements.	Public Law 99-662 99th Cong., 2d sess.
Oct. 12, 1996	The Secretary shall complete a limited reevaluation of the authorized St. Louis Harbor Project in the vicinity of the Chain of Rocks Canal, Illinois, consistent with the authorized purposes of that project, to include evacuation of waters collecting on the land side of the Chain of Rocks Canal East Levee	Public Law 104-303
Jun. 22, 1936	ALTON TO GALE ORGANIZED LEVEE DISTRICTS, IL & MO (See Section 6 of Text) Authorized construction of levees to protect area from flooding from the Mississippi River.	Special report on record in OCE Flood Control Committee Doc. 1, 75th Cong., 1st sess.
Jun. 28, 1938 1946		
Nov. 17, 1986	CAPE GIRARDEAU, JACKSON METROPOLITAN AREA, MO As outlined in the Report of the Chief of Engineers dated Dec. 8, 1984, the Water Resources Development Act of 1986 authorizes flood control and related recreational improvements in the Cape La Croix Creek Watershed.	Public Law 99-662, 99th Cong., 2d sess.
Oct. 12, 1996	As outlined in the Report of the Chief of Engineers, dated July 18, 1994, the Water Resources and Development Act of 1996 authorizes construction, including nonstructural measures, at a total cost of \$45,414,000 (\$33,030,000 Federal; \$12,384,000 non-Federal)	Public Law 104-303, 104th Congress
Dec. 11, 2000	CHESTERFIELD, MO (See Section 9 of Text) Authorized for construction, subject to completion of a favorable Chief of Engineers Report by Dec. 31, 2000. (Report was signed Dec. 29, 2000.)	Public Law 106-541 106th Congress

ROCK ISLAND, IL, DISTRICT

This district comprises most of the northern half of Illinois, portions of southern Wisconsin, southern and southwestern Minnesota, eastern and central Iowa, and northeastern Missouri, embraced in drainage basin of Mississippi River and its eastern and western tributaries between mile 300 (above mouth of Ohio River) and 614, and of its eastern tributaries only, between

Hamburg Bay, at mile 261 and 300. This district also includes the Illinois Waterway above mile 80 with its tributaries and drainage basins. The section of the Mississippi River between river miles 300 and 614 is included in the report on Mississippi River between Missouri River and Minneapolis, MN.

Navigation

1. ILLINOIS AND MISSISSIPPI CANAL, IL

Location. This canal extends for 75 miles from the Illinois River near LaSalle, IL, to the Mississippi River at Rock Island, IL. A feeder canal, 29 miles in length, extends from the summit level of the canal to the Rock River at Rock Falls, IL.

Existing project. See pages 1306-1308 of Annual Report for 1962 for details regarding project. The canal was constructed in the period 1892-1918. The canal has not been operated for navigation since June 1951 in accordance with Corps policy to discontinue operation of waterways affording little or no benefit to navigation. The River and Harbor Act of 1958 authorized the appropriation of \$2,000,000 for the purpose of placing the canal in proper condition for public recreational use and to convey and transfer the canal to the State of Illinois as part of the State park system.

The repair and modification program was initiated in 1961, and a number of canal features have been repaired or modified. In connection with this program, fee title of 1,062 acres and recreational flowage easements over 309 acres of land in Rock River at Rock Falls, formerly under navigation flowage easement, have been acquired. The State of Illinois accepted title to the canal as of August 1, 1970. The River and Harbor Act of 1970 authorized the additional appropriation of \$6,528,000 to be expended for the repair, modification, and maintenance of bridges, title transfer, modification or rehabilitation of hydraulic structures, fencing, clearing auxiliary ditches, and for the repair and modification of other canal property appurtenances.

The repair and modification work was underway until a suit was filed by three Illinois counties and their Commissioners of Highway against the Federal Government and the State in 1974 over maintenance of highway bridges crossing the canal. After the lawsuit was filed, further rehabilitation work by the Federal Government on the canal was suspended.

On November 4, 1981, the Corps of Engineers deposited \$3,722,572 with the Clerk of the U.S. District Court in Chicago in full satisfaction of the Court's judgment. These funds were used by the counties to complete rehabilitation work as directed in the court order. Rehabilitation work by the Federal Government in coordination with the state was

resumed in 1984 with the remaining authorization expended in 1987.

The Water Resources Development Act of 1986 authorized an additional appropriation of \$8,472,000 to accomplish the work described in the 1970 River and Harbor Act.

The State of Illinois filed an additional lawsuit against the United States on July 6, 1987 in the U.S. Claims Court in the amount of \$8,472,572. In a preliminary decision on September 22, 1988, the court dismissed the claim for \$3,722,572. A settlement agreement between the State of Illinois and the United States was signed on November 14, 1991. The agreement provided that Illinois release all claims against the United States as stipulated in the claims court and that the United States provide \$4,750,000 to Illinois as reimbursement for previous repair work performed upon the canal bridges by Illinois. On December 16, 1991, the U.S. Claims Court entered a judgment for \$4,750,000 in favor of the State of Illinois. This judgment was paid in FY 92.

Once funds are received, principal work features to restore the canal to acceptable conditions consist of the repair or reconstruction of retaining walls, embankments, portions of the lock and dam structures, culverts, drainage ditches, and other related work features which the United States has maintained or has been obligated to maintain under previous agreements. These features are consistent with a Master Management Plan prepared by the Illinois Department of Conservation. NEPA documentation to assess remaining work items must be completed prior to initiation of construction.

Local cooperation. A revised Supplemental Agreement with all work items remaining was executed between the state of Illinois and the Federal Government in April 1996.

Operations during fiscal year. Operations and maintenance during fiscal year. There were no programmed dollars allotted for this project in FY 07.

2. ILLINOIS WATERWAY, IL AND IN

Location. Illinois River (entirely within State of Illinois), formed by confluence of Kankakee and Des Plaines River, flows southwesterly and enters the Mississippi River at Grafton, IL, about 38 miles above St. Louis. Illinois Waterway comprises Illinois River from its mouth to confluence of Kankakee and

ROCK ISLAND, IL, DISTRICT

Des Plaines Rivers (273 miles), Des Plaines River to Lockport (18.1 miles) and Chicago Sanitary and Ship Canal and South Branch of Chicago River to Lake Street, Chicago (34.5 miles). Also from a point 12.4 miles above Lockport, IL, waterway comprises Calumet-Sag Channel and Little Calumet and Calumet Rivers to turning basin 5, near entrance to Lake Calumet (23.8 miles); and Grand Calumet River from junction to 141st Street, deep (lake) draft navigation (9 miles) and to Clark Street, Gary, IN (4.2 miles).

Previous projects. For details, see page 1945 of Annual Report for 1915 and page 1172 of Annual Report for 1932.

Existing project. See Table 23-K and page 1255 of Annual Report for 1963. Cost of new work was \$124,041,436 and includes \$445,000 for Recreation Facilities under Code 711. Calumet-Sag Modification, Part III, placed in the deferred-for-restudy category in March 1972, cost of \$33,000,000 (July 1971) Federal and \$20,700,000 (July 1971) non Federal; is excluded from present cost estimate. Land acquired for the project consisted 909.407 acres in fee and 701.48 acres in easement. See Table 23-B for authorizing legislation.

(See Table 15-J through 15-N on existing locks and dams; lock and dam construction, foundations, cost; additional features entering into cost of project; existing project and total cost of existing project.)

Local cooperation. Complied with for completed modifications and Part I of Calumet-Sag Modification.

All pools above Alton Pool:

Maintenance: Mechanical dredging was performed in Peoria Pool, Marseilles Pool, Starved Rock Pool, Dresden Pool, Brandon Road Pool, and LaGrange Pool for a total of 69,338 cubic yards of material being removed. Continuing maintenance contract repairs includes Maneuver Boat/Wicket Lifter Barge, Peoria Lock and Dam Hydraulics, and Multi-Site Facility Protection Upgrades.

Operation and Care: Locks and Dams were operated as required and necessary repairs were made to those and appurtenance structure. Other studies, reports and miscellaneous engineering work were also accomplished.

Operation and Maintenance costs were to Rock Island District were \$31,258,923 with credit to the

project of \$10,867; primarily as a result of collections from towboat companies for damages to navigation structures.

Rehabilitation Project: The Lockport Upper Pool, on the Illinois Waterway just Southwest of Chicago, a perched pool (38 feet above surrounding area), with a roughly forty-five (45) foot high embankment, on the right descending bank and concrete guide walls on the left descending bank, is a "Dam Safety" issue. The embankment requires significant repairs and rehabilitation to ensure continued structural integrity, continued retention of navigation pool, stability of the embankments and substructures, safe access to the hydropower plant, continued safe use of the controlling works, and avoids downstream flooding in the event of failure. This project received \$4,200,000 in FY 07 to initiate design for the rehabilitation. These funds were obligated against a cutoff wall base contract for a test section of 300 feet, (\$3.4 million) with options for the remaining three-fourths of a mile. Total rehabilitation costs for FY 07 were \$1,119,894. The expenditures went towards specifications and plans for the \$3,400,000 base contract and \$25,400,000 total, cutoff wall, contract and to complete dam safety interim measures such as tree clearing and monitoring of the 1.5-mile dike.

Costs to the Rock Island District were \$31,258,923 for operation and maintenance.

Alton Pool Operation: Costs for the year were \$37,348 for management of natural resources; \$125,950 for water control management; and \$195,760 for studies and surveys. Total operation costs were \$359,058.

Alton Pool Maintenance: Maintenance costs for the year included \$703,898 for dredging and \$43,994 for dredge surveys. Total maintenance costs were \$823,362.

Total operation and maintenance costs for all pools above Alton Pool were \$31,258,923. Alton Pool operation and maintenance costs were \$1,182,420. Total costs incurred were \$32,441,343.

3. MISSISSIPPI RIVER BETWEEN MISSOURI RIVER AND MINNEAPOLIS, MN

For report on this improvement, see chapter on "Mississippi River between Missouri River and Minneapolis, MN."

4. UPPER MISSISSIPPI RIVER – ILLINOIS WATERWAY SYSTEM NAVIGATION STUDY IL, IA, MN, MO, AND WI

Location. The program area comprises the Upper Mississippi River System, as defined by Congress in the Water Resources Development Act of 1986 (WRDA 1986), which includes the Upper Mississippi River from Minneapolis, Minnesota, to Cairo, Illinois; the Illinois Waterway from Chicago to Grafton, Illinois; and navigable portions of the Minnesota, St. Croix, Black and Kaskaskia Rivers. This multi-use resource supports an extensive navigation system (made up of 1200 miles of 9 foot channel and 37 lock and dam sites), a diverse ecosystem (2.7 million acres of habitat supporting hundreds of fish and wildlife species), floodplain agriculture, recreation and tourism. Based on the recommendation of the recently completed UMR-IWW System Navigation Feasibility Study that examined system needs over the next 50 years, the Navigation and Ecosystem Sustainability Program (NESP) was implemented to achieve the dual purposes of UMRS ecosystem restoration and navigation improvements.

Existing project. The Upper Mississippi River-Illinois Waterway System Navigation Study was completed in Sept 2004 after more than 14 years of intensive study and evaluation of the navigation improvement and ecological restoration needs for the UMR-IWW system for the years 2000-2050. The system is a vital part of our national economy and a valuable ecological resource. The 1200 miles of 9' foot channel created by the 37 lock and dam sites allow waterway traffic to move from one pool to another providing an integral regional, national, and international transportation network. The system is significant for certain key exports and the Nation's balance of trade. For example, in 2000, the Upper Mississippi River System carried approximately 60 percent of the Nation's corn and 45 percent of the Nation's soybean exports. The UMRS ecosystem consists of 2.7 million acres of bottomland forest, islands, backwaters, side channels and wetlands—all of which support more than 300 species of birds, 57 species of mammals, 45 species of amphibians and reptiles, 150 species of fish, and nearly 50 species of mussels. More than 40 percent of North America's migratory waterfowl and shorebirds depend on the food resources and other life requisites (shelter, nesting habitats, etc.) that the system provides. It also provides boating, camping, hunting, trapping and other recreational opportunities. The resulting study final recommendation includes a program of

incremental implementation and comprehensive adaptive management to achieve the dual purposes of ensuring a sustainable natural ecosystem and navigation system.

Local cooperation. None required.

Operations during fiscal year. FY 07 activities were focused on the continuation of the 34 projects that began PED activities in February 2005. These PED project activities were selected and designed to support the broad-based implementation specified in the Final Recommended Plan, including initiating design for small-scale navigation improvements (mooring cells, buoys, and switchboats); initiating design for two new 1,200-foot locks at Lock and Dam 25 and Lock and Dam 22 (minimal start on La Grange); conducting environmental mitigation studies; supporting research into nonstructural improvements and demand forecasting tools; developing plans for ecosystem restoration adaptive management; initiating design of fish passage projects; initiating planning for dam point control at Lock and Dam 25; and initiating design for several habitat restoration and flood plain restoration projects. Large-scale navigation and ecosystem projects are most likely still 2 years away from major construction. Expenditures during FY 07 were \$12,808,928, and obligations were \$13,587,578.

5. OTHER AUTHORIZED NAVIGATION PROJECTS

See Table 15-C.

Ecosystem Restoration

6. ILLINOIS RIVER BASIN RESTORATION

Location: The project area is the Illinois River Basin defined as the Illinois River, Illinois, its backwaters, its side channels, and all tributaries, including their watersheds, draining into the Illinois River.

Existing project: The purpose of the Illinois River Basin Restoration project is to restore and protect the Illinois River Basin through the development of a restoration program, long-term resource monitoring program, computerized inventory and analysis system, and innovative dredging technology and beneficial use of sediments. These efforts are part of the State's Illinois Rivers 2020 initiative, a proposed 20-year, \$2.5 billion, Federal-state effort to restore and enhance the Illinois River Basin. The project involves four districts (Rock Island, St. Louis, Chicago and Detroit).

A major initial focus is work on Critical Restoration Projects. Restoration of the Illinois River Basin requires the identification and implementation of projects, within the watershed and along the course of the river that repair past and ongoing ecological damage so that a more highly functioning, self-regulating ecosystem can be sustained within the existing basin context. Critical Restoration Projects will produce immediate habitat and sediment reduction benefits; will help evaluate the effectiveness of various restoration methods prior to application system wide; and make best use of the current strong local and State interest in ecosystem restoration within the basin. The Corps of Engineers will implement these Critical Restoration Projects in collaboration with the non-Federal sponsor and other Federal and local agencies. Currently sixteen Critical Restoration Projects are in various states of completion. These projects include: Peoria Riverfront Upper Island, Pekin Lake Northern Unit, Pekin Lake Southern Unit, Waubonsie Creek, Blackberry Creek, Kankakee River, Iroquois River, McKee Creek, Starved Rock Pool, Alton Pool, LaGrange Pool, Senachwine Creek, Tenmile Creek, Crow Creek West, Fox River-Batavia Dam, and Yellow River.

Critical Restoration Projects: Projects have been initiated at 16 locations in the river basin.

Operations during fiscal year: The Illinois River Basin Restoration Comprehensive Plan was approved by HQUSACE in May 2007 and culminates a multiagency collaborative planning process that led to a restoration recommendation to be implemented across numerous agencies and authorities. Feasibility work has continued on the 16 critical restoration projects. The Blackberry Creek, Starved Rock Pool, Senachwine Creek, and Alton Pool projects have all made significant progress and are currently evaluating restoration alternatives and developing costs. The Illinois River Basin encompasses four Corps Districts and two Divisions. Critical restoration project work is being conducted by these Districts and in particular, Yellow River, which is in Indiana, represents an opportunity to broaden the sponsorship of the program to another state.

7. UPPER MISSISSIPPI RIVER RESTORATION (UMRR)

Location. The project is authorized for those river reaches having commercial navigation channels on the Upper Mississippi River, Illinois River, Minnesota River, St. Croix River, and Kaskaskia River in the states of Illinois, Iowa, Minnesota, Missouri, and Wisconsin.

Existing project. The purpose of the UMRR as stated in the authorizing legislation is to ensure the coordinated development and enhancement of the Upper Mississippi River system, recognizing its several purposes. The program includes habitat rehabilitation and enhancement projects (HREP) and long-term resource monitoring (LTRMP). HREPs improve habitat through site-specific modifications of the natural landscape, and LTRMP monitors certain natural resource changes and conducts research as a means for more informed management of the UMRS. Also authorized was a study of the economic impacts of completed recreation, completed navigation traffic monitoring, and recreation projects (currently unfunded). The program was initiated in 1986 utilizing funds provided by PL 99-88, FY 1985 Supplemental Appropriation Act. PL 99-662, Water Resources Development Act of 1986, further defined the program and provided for a 10 year implementation period and was extended to 15 years by PL 101-640, Water Resources Development Act of 1990. The Water Resources Development Act of 1999, P.L. 106-53, amended the previous authority by deleting recreation as a project purpose; removing the sunset provision; increasing annual appropriation limits available to the program; authorizing an independent technical advisory committee; and requiring submission of a report to Congress on a 6 year cycle that evaluates programs, accomplishments, assesses systemic habitat needs, and identifies any needed changes to the Program authorization.

Local cooperation: Local cooperation agreements are obtained for habitat projects for such projects not located on lands managed as a national wildlife refuge, within the meaning of Section 906(e) of the 1986 WRDA. WRDA 1999 establishes a cost sharing percentage of 35 percent for such projects.

Operations during fiscal year. Expenditures during the year totaled \$14,466,844. The majority of funds was expended on two primary program elements: habitat projects and long term resource monitoring. FY 07 funds were used for construction on 7 habitat projects and for design activities on 16 additional habitat Projects, as well as applied research and long term resource monitoring. Construction has essentially been completed on a total of 50 projects (with many multiple phases) since the program was initiated. Data collection, analysis of data and production of technical and special reports was continued by contract with the Upper Midwest Environmental Sciences Center in Lake Onalaska, WI. The first report to Congress detailing the

programs activities since the programs inception was completed and was submitted to Congress in January 1998. The second report to Congress is currently under review. A Habitat Needs Assessment was submitted to Congress in Sep. 2000. This assessment addressed the ecosystem needs along the UMRR's reaches of the Upper Mississippi River.

Flood Control

8. CORALVILLE LAKE, IA

Location. Coralville Lake is formed by the Coralville Dam on the Iowa River, several miles upstream from Iowa City, Johnson County, IA, about 83 miles above the confluence of the Iowa River with the Mississippi River.

Existing project. See page 28-4, Annual Report for 1981, for project details. Construction began in July 1949 and the project has been in operation since February 1958. About 25,035.76 acres in fee of land were acquired and 3,673.113 acres in flowage easements. The project was modified to provide for construction of a highway bridge crossing the lake at the Mehaffey site, which was begun in June 1964 and completed in October 1966. See Table 15-B for authorizing legislation.

Operations during fiscal year. Total FY 07 operation and maintenance costs at Coralville Lake were \$3,132,883.

9. DES MOINES RECREATIONAL RIVER AND GREENBELT, IA

Location. The Greenbelt Project area is located along the Des Moines, Boone, and Raccoon Rivers in central Iowa. Fort Dodge, IA, marks the upstream limit of the project area; the downstream terminus of the project area is Harvey, IA, a total distance of 170 river miles. The boundary includes portions of nine counties and many other communities, along with a number of Federal, state, county, and local parks. Two major Corps of Engineers reservoirs, Saylorville Lake and Lake Red Rock, are located within the Greenbelt Project area. The boundary encompasses an area of roughly 410,000 acres.

Existing project. The Des Moines Recreational River and Greenbelt Project was authorized on August 15, 1985, by Public Law 99-88, the 1985 Supplemental Appropriations Act. Legislation pertaining to the Greenbelt project has been contained in numerous other pieces of legislation culminating most recently in the 2005 Energy and Water

Development Appropriations Act, Public Law 108-137.

As authorized by Public Law 99-88, the project will include: (1) the construction, operation, and maintenance of recreational facilities and streambank stabilization structures; (2) maintenance of all structures constructed before the date of authorization of this project; (3) tree plantings, trails, vegetation, and wildlife protection and development for recreational purposes; and (4) the prohibition or limitation by the Secretary of the killing, wounding, or capturing at any time of any wild bird or animal in such areas as may be directed by the Secretary.

The authorization further requires that an Advisory Committee be established for consultation with the Department of the Army consisting of 47 members. The composition of the Advisory Committee is as follows: three Corps of Engineers appointees, one person from each incorporated municipality, two from each of the nine counties, and five from the State of Iowa. See Table 15-B for authorizing legislation. Twelve Federally funded projects were completed under the Greenbelt authority prior to FY 02, and the total number of projects completed to date are 14. Congress has appropriated funds in FY 03 through FY 06 to develop priority Greenbelt projects. The Greenbelt Advisory Committee has recommended development of the following priority projects: Fort Dodge Riverfront and Trails, Des Moines Riverwalk, Des Moines Amphitheater Modification, and the Cordova Center on the Rock and the Red Rock Multipurpose Trail Segment 4B. Both of the two latter projects are located at Lake Red Rock.

Local cooperation. Cost-sharing agreements will be executed for those projects not located at Lake Red Rock or Saylorville. Letters of Assurance have been received for the cost-shared projects recommended for inclusion in the Greenbelt by the 2005 Annual Program Management Report.

Operations during fiscal year. FY 07 funds were used to continue coordination with the Advisory Committee; prepare Engineering Documentation Reports for Des Moines, Fort Dodge, and Cordova Center at Lake Red Rock; prepare plans and specifications for Trail Segment 4b at Lake Red Rock; construct the Simon Estes Amphitheater ADA Modifications; and complete a portion of the 4B trail segment at Lake Red Rock. Costs incurred in FY 07 were \$2,942,830.

10. RED ROCK DAM AND LAKE RED ROCK, IA

Location. The site of this project is on the Des Moines River, chiefly in Marion County, but extending into Jasper, Warren, and Polk Counties. The dam is 142.9 miles above the mouth of the Des Moines River, which empties into the Mississippi River at mile 361.4 above the mouth of the Ohio River. The city of Des Moines lies northwesterly from the site, about 60 miles upstream.

Existing project. See page 28-6, Annual Report for 1981 for description of the project. Construction began in May 1960, and the dam was placed in beneficial use for storage of flood water in January 1969. Land acquired for the project consisted of 50,207.860 acres in fee and 26,353.645 acres in flowage easement. Landowner complaints, that lake operation have flooded their lands more frequently than what they were told to expect when flowage easements were initially acquired, led Congress to modify the project authorization. Language in PL 99-190 authorizes acquisition from willing sellers fee simple title in real property, which is subject to periodic flooding in connection with the operation of the project. Potentially there are approximately 1,000 tracts consisting of about 30,000 acres. Estimated Federal cost is \$43,500,000. See Table 15-B for authorizing legislation.

Local cooperation. None required.

Operations during fiscal year. Contract maintenance repairs to the Tainter Gate Controls and Limit Switches were completed. Total operations and maintenance costs during FY 07 were \$4,044,386.

11. SAYLORVILLE LAKE, IA

Location. The project site is chiefly in Polk County, IA, but portions extend into Dallas and Boone Counties. The dam is about 213.7 miles above the mouth of the Des Moines River and about 5 miles upstream from the city of Des Moines, IA.

Existing project. The dam is an earth embankment 6,750 feet long at crest with a height of 120 feet. Outlet works are a single circular concrete conduit, 22 feet in diameter, located at the toe of the west bluff. Control structure is at upstream end of

conduit and uses three gates. A stilling basin is provided to dissipate energy of discharge from outlet conduit. Spillway is in the west bluff, weir 430 feet long. Water flows over the spillway which discharges into a paved chute and thence into an excavated earth channel to the Des Moines River. Top of spillway is about 31 feet below top of earth embankment section, and flow over weir is uncontrolled when water in reservoir reaches its crest. Watershed area above dam site is 5,823 square miles. With pool at spillway crest elevation, lake area is 16,700 acres and contains about 676,000 acre-feet of water at that height (602,000 for flood control and 74,000 for a conservation pool to maintain minimum flows at downstream points). Lake supplements capacity of downstream Lake Red Rock at river mile 142.9. The two lakes provide a high degree of flood protection to the lower Des Moines River Valley. Reach along the Mississippi River downstream from the mouth of the Des Moines River are also benefited.

A project modification plan to minimize the adverse environmental effects at Ledges State Park, located upstream from the dam, was authorized in 1976. The project modification included relocation of affected park facilities, acquisition of additional park land, and the development of a floodway corridor, with recreational facilities, from the dam downstream to Sixth Avenue in Des Moines. Improvements to Highway 415, the main access road to existing facilities on the east side of the reservoir, were added to the project by Congress in 1984. Segments A and B of Highway 415 have been completed. Segment C of Highway 415 was completed in 1994.

Construction began in June 1965, and the dam was placed in operation for the storage of flood water in April 1977. Remedial work in Big Creek Valley, consisting of diversion dam and channel and a barrier dam, for the protection of the town of Polk City was completed in December 1974. The land acquisition program involved 25,529.397 acres in fee and 1,498.444 acres in flowage easements. The estimated project cost is \$116,470,000 including \$2,820,000 in non-Federal costs from the State of Iowa and the City of Des Moines, for recreational development. See Table 15-B for authorizing legislation.

Local cooperation. Fully complied with.

Operations during fiscal year. Total FY 07 operations and maintenance costs were \$4,120,524. Non-Federal costs for FY 07 were \$50,506.

12. INSPECTION OF COMPLETED FLOOD CONTROL PROJECTS

Federal flood control regulations (part 208 of title 33, Code of Federal Regulations) provide that the structures and facilities constructed by the United States for local flood protection shall be continuously maintained in such a manner and operated at such times and for such periods as may be necessary to obtain the maximum benefits. Costs during the period for inspections of projects turned over to local interests to ascertain compliance with Federal requirements were \$335,045. (See Table 15-H for list of completed flood control projects inspected.)

13. OTHER AUTHORIZED FLOOD CONTROL PROJECTS

See Table 15-E.

14. FLOOD CONTROL WORK UNDER SPECIAL AUTHORIZATION – Continuing Authorities Program

Emergency Bank Protection (Section 14 of the 1946 Flood Control Act, Public Law 526.) See Table 15-1.

Flood Control Activities (Section 205, Public Law 84-685.) See Table 15-I.

Snagging and Clearing of Navigable Streams and Tributaries in Interest of Flood Control (Section 208, Public Law 83-780.) See Table 15-I.

Miscellaneous

15. ECOSYSTEM RESTORATION WORK UNDER SPECIAL AUTHORIZATION

Project Modifications for Improvement of Environment Pursuant to Sec. 1135, Public Law 99-662, as amended (preauthorization). See Table 15-I.

Aquatic Ecosystem Restoration Pursuant to Sec. 206, P.L. 104-303. See Table 15-I.

Wetland/Other Aquatic Habitat Section 204, P.L. 102-560. See Table 15-I.

16. GENERAL REGULATORY FUNCTIONS

Enforcement	\$ 60,013
Permit Evaluations	2,426,981
Compliance	<u>200,775</u>
Total	\$2,687,770

17. OPERATIONS AND MAINTENANCE CATASTROPHIC DISASTER PREPAREDNESS PROGRAM

National Preparedness	<u>\$102,302</u>
Total	\$102,302

18. OTHER PROGRAMS AND ACTIVITIES

No FY 07 expenditures.

19. FLOOD CONTROL AND COASTAL EMERGENCY (FC&CE)

Disaster Preparedness Program	\$ 584,737
Emergency Operations	543,049
Rehabilitation/Inspection	<u>57,644</u>
Total	\$1,185,430

20. ACTIVE INVESTIGATIONS

See Table 15-O.

21. COLLECTION AND STUDY OF BASIC DATA

See Table 15-O.

22. PRECONSTRUCTION ENGINEERING AND DESIGN

There were four PED projects in progress during FY 07 at a cost of \$147,116 for Davenport Flood Control project and \$328,048 for Des Moines and Raccoon, \$12,808,928 for Upper Mississippi River – IL Waterway System Navigation Study, IL, IA, MN, MO, and WI and \$22,387 for Peoria Riverfront Development. Non-Federal cost to Davenport Flood Control \$23,860, Des Moines and Raccoon \$75,591.

TABLE 15-B AUTHORIZING LEGISLATION

See Section in Text	Date Authorizing Act	Project and Work Authorized	Documents
2.	January 21, 1927	ILLINOIS WATERWAY, IL AND IN Channel 9 feet deep and 200 feet wide from mouth of Illinois River to Utica, 231 miles, modification of 2 U.S. locks and dams, removal of 2 State dams. (Act authorized appropriation of not to exceed \$3,500,000 for carrying on work.)	Rivers and Harbors Committee Doc. 69th Cong., 1st sess., and S. Doc. 130, 69th Cong., 1st sess.
	July 3, 1930	Channel 9 feet deep from Utica, IL, to heads of present Federal projects on Chicago and Calumet Rivers 94.6 miles to Lake Street, and 96.3 miles to turning basin 5, respectively, to be secured by means of completed dams, locks, lateral canals, and dredging begun by State of Illinois in general accordance with present plans of State for that work. Act adopting project authorized appropriation of not to exceed \$7,500,000 for carrying on work.	S. Doc. 126, 71st Cong., 2nd sess.
	June 26, 1934 ¹	Operation and care of locks and dams provided for with funds from War Department appropriation for rivers and harbors.	
	August 30, 1935	Construct modern locks and dams at LaGrange and Peoria and a channel 9 feet deep and 300 feet wide below Lockport, exact location and details of design of all structures to be left to discretion of Chief of Engineers, and for time being, that no change be made in water authorized for navigation of Illinois River by act of July 3, 1930.	H. Doc. 184, 73rd Cong., 2nd sess. ²
	August 30, 1935 ³	Also provides for 3 passing places along Sag Channel and authorized channel in Calumet-Sag route to turning basin 5, and dredging at entrance of Lake Calumet.	H. Doc. 180, 73rd Cong., 2nd sess.
	June 14, 1937	Realign portion of Calumet River and abandonment of bypassed section of Calumet River.	Rivers and Harbors Committee Doc. 19, 75th Cong., 1st sess.
	June 20, 1938	Modifies local cooperation requirements in 1935 act.	
	October 23, 1943	Pay damages to levee and drainage districts due to seepage and other factors, not to exceed \$503,500.	H. Doc. 711, 77th Cong., 2nd sess.
	March 2, 1945	Enlarge Calumet-Sag Channel to 160 feet wide and a usable depth of 9 feet. Dredge a barge channel 160 feet wide with a usable depth of 9 feet in Grand Calumet and Little Calumet River Branch of Indiana Harbor Canal to deep (lake) draft through 141st St., East Chicago, IN. Construct in Little Calumet River a lock of suitable dimensions for large navigation. Rebuild or otherwise alter at Federal expense all obstructive railroad bridges across Calumet-Sag Channel, Little Calumet River, Calumet River, Grand Calumet River, and Indiana Harbor Canal, so as to provide suitable clearance, except that no Federal funds shall be expended for removal or alteration of Illinois Central RR bridge at mile 11.20 of Little Calumet River.	H. Doc. 145, 76th Cong., 1st sess.

Emergency Relief Funds	1,858,936	--	--	1,858,936
Total	\$126,706,419	\$611,432,670	\$156,685,126	\$773,937,467

1. Includes \$1,735,890 expended between 1927 and 1936 on the operation and care of the works of improvement under the provisions of the permanent indefinite appropriation for such purposes.

ST. PAUL, MN, DISTRICT

District comprises western Wisconsin, major portion of Minnesota, northern and eastern North Dakota, and small portions of northeastern South Dakota and northern and northeastern Iowa embracing drainage basins of Mississippi River and tributaries from its source to mile 614 above mouth of Ohio River;

Red River of the North and tributaries; those streams north of Missouri River Basin in North Dakota; and U.S. waters of Lake of the Woods and its tributaries. That section of Mississippi River above mile 614 is included in report on Mississippi River between Missouri River and Minneapolis, Minnesota.

Navigation

1. MISSISSIPPI RIVER BETWEEN MISSOURI RIVER AND MINNEAPOLIS, MN

For report on this improvement see chapter on Mississippi River between Missouri River and Minneapolis, Minnesota.

2. RESERVOIRS AT HEADWATERS OF MISSISSIPPI RIVER, MN

Location. Reservoirs are on the Mississippi River and several of its tributaries in Itasca, Beltrami, Hubbard, Aitkin, Cass and Crow Wing Counties, MN. (See Table 16-H on reservoirs.)

Previous projects. For details see page 1888 of Annual Report for 1915, and page 1098 of Annual Report for 1938.

Existing project. Provides for reconstruction from timber to concrete at Winnibigoshish, Leech Lake, Pokegama, Sandy Lake and Pine River Dams, and construction of a concrete dam at Gull Lake. Pokegama was built on bedrock and the others on pile foundations. A portion of Leech Lake Dam from piers 26 to 39 was replaced with an earth fill. Constructed three dikes at Winnibigoshish, four at Pokegama, two at Sandy Lake, and 16 at Pine River. Sandy Lake Dam includes a lock 160 feet long, 30 feet wide, with a maximum lift of 9.5 feet and a depth of 2.5 feet on lower sill at low water which was converted to use as a spillway. (See Table 16-B for authorizing legislation.) The Pine River Dam main embankment consists of a timber diaphragm core and earth fill. The Pine River Dam control structure is made of reinforced concrete with a steel sheet pile cutoff and is supported on a timber substructure. Pine River Dam was modified during the period 1999-2002 to pass 70% of the Probable Maximum Flood. During this period, the 13 gate openings were enlarged and outfitted with new gates; the wing walls were modified; the existing dam and embankment was raised via addition of a parapet wall and a concrete-capped sheet pile wall, to provide 5 ft. of freeboard over the design flood; the foundation was grouted to stop seepage and fill voids; and the perimeter dikes were improved. Total Federal cost to the United States for new Dam Safety Assurance work at the Pine River Dam is \$11,058,967.

Local cooperation. Fully complied with.

Terminal facilities. None.

Operation and results during fiscal year. Reservoirs were operated as required, recreation facilities and equipment maintained, and surveys, repairs, reports and data collection cost \$2,934,547 Federal and \$0 non-Federal.

Condition at end of fiscal year. Existing project was completed in 1937. Flowage rights were acquired on all lands affected by construction, maintenance, and operation of reservoirs. A total of 1,672.26 acres in fee are owned by the United States. The United States has easements, flowage rights, and other rights of use on another 296,334.44 acres. Structures are in fair condition. Recreation facilities for public use are being constructed intermittently at all reservoir areas. (See Table 16-H for capacities and costs by reservoir.) The Corps operated control structures at Lake Winnibigoshish, Leech Lake, and Pokegama are classified as significant hazard dams under the national Dam Safety Program and require substantial investments to reduce the associated risks. Construction of dam safety modifications is substantially complete at Lake Winnibigoshish Dam. Work on the remaining two sites is unscheduled due to funding constraints.

3. UPPER MISSISSIPPI RIVER RESTORATION (UMRR) (FORMERLY EMP)

Location. The program is authorized for the commercially navigable portions of the Upper Mississippi River System. In the St. Paul District, this includes the Mississippi, Minnesota, Black, and St. Croix Rivers in the states of Minnesota, Wisconsin and Iowa.

Existing project. The purpose of the UMRR as stated in the authorizing legislation is to ensure the coordinated development and enhancement of the Upper Mississippi River System, recognizing its several purposes. It is intended to protect and/or enhance the river resources and guide future river management. The primary emphasis of the program is on habitat rehabilitation and enhancement projects. The other primary component, long-term resource monitoring, provides the means for more informed management of the UMRR. Also authorized, was a study of the economic impacts of recreation (completed), navigation traffic monitoring (completed under other authority), and recreation projects (unfunded). The program was initiated by WRDA in 1986 and the 1999 WRDA extended the UMRR on a continuing basis. The execution of the program is closely coordinated with the Upper Mississippi River Basin Association, the U.S. Fish and Wildlife Service, the U.S. Geological Survey, and the three

affected states (MN, WI, and IA) in the St. Paul District. See Rock Island District Tables 15-A and 15-B for total program costs and authorizing legislation.

Local cooperation. Local cooperation agreements are obtained for habitat project features not located on lands managed as a national wildlife refuge, as specified in Section 906(e) of the 1986 WRDA.

Operations and results during fiscal year. In the St. Paul District, costs during the year totaled \$1,774,774 Federal and \$27,397 non-Federal. The majority of funds were expended on the planning, design, construction and monitoring of habitat projects. Construction was substantially completed at Pool Slough, IA, and Long Meadow Lake, MN, and initiated at Pool 8 Islands Phase III Stage 2, WI. Planning and design of four projects continue.

Condition at end of fiscal year. In the St. Paul District, construction of 24 habitat projects has been completed. These are the Guttenberg Waterfowl Ponds (IA), Island 42 (MN), Lake Onalaska (WI), Blackhawk Park (WI), Pool 8 Islands Phases I and II (WI), Indian Slough (WI), Finger Lakes (MN), Lansing Big Lake (IA), Cold Springs (WI), Pool 9 Island (WI), Spring Lake Peninsula (WI), Bussey Lake (IA), Peterson Lake (MN), Polander Lake (MN), East Channel (WI/MN), Rice Lake (MN), Small Scale Drawdown (WI), Trempealeau (WI), Bank Stabilization (IA, WI, MN), Long Lake (WI), Ambrough Slough (WI), Spring Lake Islands (WI), Long Meadow Lake (MN), and Pool Slough (IA). Most of the projects are operated and maintained by the U.S. Fish and Wildlife Service. However, projects not located on lands managed as a national wildlife refuge are maintained by the applicable state department of natural resources. Through FY 07, funds expended by the St. Paul District have amounted to \$48,020,000 for planning, design, construction, and monitoring of habitat rehabilitation and enhancement projects; \$970,000 for long-term resource monitoring; \$768,000 for economic impacts of recreation study; and \$3,623,000 for program management. The annual authorized funding level for the overall program is approximately \$33 million.

4. NAVIGATION WORK UNDER SPECIAL AUTHORIZATION

Navigation activities pursuant to Sec. 107, Public Law 87-645, as amended.

In FY 07, \$0 was expended on Section 107.

Flood Control

5. BRECKENRIDGE, MN

Location. Breckenridge, Minnesota, is located in Wilkin County in western Minnesota, approximately 200 miles north and west of the Minneapolis-St. Paul metropolitan area. The city is bounded on the west by the Red River of the North and the Bois de Sioux River. The Ottertail River flows from the east, bisecting the city. The city of Wahpeton, ND, lies across the Red River from Breckenridge.

Existing project. A feasibility study recommended implementation of a flood damage reduction project consisting of a high-flow diversion channel located to the north of the Ottertail River and entering into the Red River and two separable permanent levee reaches that would protect all of Breckenridge. The project was authorized by WRDA 2000.

Local cooperation. A Feasibility Cost-Sharing Agreement was executed between the Federal Government and the city of Breckenridge on June 29, 1999. This agreement required the city to provide 50 percent of the costs of performing the feasibility study. A Project Cooperation Agreement, negotiated between the Federal Government and the city was signed on 15 August 2002.

Operations and results during fiscal year. Completed design and advertised a construction contract for the first phase of in-town levees in August. Total FY 07 Federal costs were \$1,160,189, and non-Federal were \$42,355.

Condition at end of fiscal year. The project is divided into three stages: Stage 1 – the diversion channel and Stages 2a and b – the levee work in the city. The Stage 1 construction contract was awarded in May 2003 and completed in June 2005; the diversion channel is operational and was used for the first time in the summer of 2005. During the 2006 flood, the diversion channel prevented \$26 million in damages. Stage 2 plans and specifications have been delayed by a lack of Federal funds. Stage 2b plans and specifications are underway.

6. CHIPPEWA RIVER AT MONTEVIDEO, MN

Location. Montevideo, MN, is located in western Minnesota in Chippewa County. The city is located at the confluence of the Chippewa and Minnesota Rivers.

Existing project. Overland flooding from the main stem Minnesota River and Chippewa River cause frequent flood-related problems for the city. A feasibility study evaluated structural and nonstructural alternatives for resolving the flood-related problems. The recommended plan includes construction of a new levee along Highway 7/29, an upgrade of an existing levee along the western edge of the city, a closure structure, and a new levee/road raise at Highway 212 along the southern edge of the city. The project is authorized by Section 205 of the 1948 Flood Control Act, as amended.

Local cooperation. A Project Cooperation Agreement (PCA) was executed between the Federal Government and the city of Montevideo on August 17, 2007. Local interests are required to provide a cash contribution of at least 5 percent of total project costs and any additional funds needed to make its total contribution, including the value of all required local responsibilities, equal to 35 percent of the total project costs; provide without cost to the United States all lands, easements, and rights-of-way, including suitable borrow and dredged material disposal areas; perform all relocations of public utilities, highways, bridges, and other facilities, structures, and improvements determined by the Government to be necessary for construction of the project; pay all costs in excess of the Federal statutory limit of \$7 million; hold and save the United States free from all damages arising from construction, operation, and maintenance of the completed project, except for damages due to the fault or negligence of the Government or its contractors; comply with the provisions of the Uniform Relocation Assistance and Real Property Acquisition Policies Act of 1970, Public Law 91-646, as amended, in acquiring lands, easements, and rights-of-way for construction and subsequent operation and maintenance of the project and inform all affected persons of applicable benefits, policies, and procedures in connection with said Act; operate, maintain, repair, replace, and rehabilitate the completed project in accordance with regulations or directions prescribed by the Government; give the Government a right to enter, at reasonable times and in a reasonable manner, upon land which it owns or controls for access to the project for the purpose of inspection and, if necessary, for the purpose of completing, operating, maintaining, repairing, replacing, or rehabilitating the project; and comply with all applicable Federal and State laws and regulations, including Section 601 of Title VI for the Civil Rights

Act of 1964 (Public Law 88-352) and Department of Defense Directive 5500.11 issued pursuant thereto and published in Part 300 of Title 32, Code of Federal Regulations, as well as Army Regulations 600-7, entitled, "Nondiscrimination on the Basis of Handicap in Programs and Activities Assisted or Conducted by the Department of the Army." In addition, the city was responsible for betterments constructed in conjunction with, but not an integral part of, the project.

Operations and results during the fiscal year.
New Work: Stage 1 design work cost - \$75,500.

Condition at end of fiscal year. Stage 1 design work was completed.

7. GRAND FORKS, NORTH DAKOTA AND EAST GRAND FORKS, MINNESOTA

Location. Grand Forks, North Dakota, is located in Grand Forks County in eastern North Dakota about 70 miles south of the Canadian border. East Grand Forks, Minnesota, is located at the outlet of the Red Lake River to the Red River of the North, immediately across the river from Grand Forks. (For General Location see Geological Survey map of either North Dakota or Minnesota.)

Existing project. Project was authorized by P.L. 105-277, Omnibus Appropriation Bill FY 99. Estimated cost (2007) of the entire flood damage reduction project is \$409,300,000. Total cost to the United States is estimated at \$223,900,000, and total cost to the non-Federal sponsors (cities of Grand Forks and East Grand Forks) is estimated at \$185,400,000. The flood damage reduction project consists of 30 miles of levees, floodwalls, and road raises in and around both communities, providing protection against a flood equivalent to the peak discharge that occurred during the devastating flood of 1997 (136,900 cubic feet per second). A secondary purpose of recreation is also included in the authorized project.

Local cooperation. A PCA was signed with both communities in January 2000.

Operations and results during fiscal year. Completed remainder of construction except for Point area of East Grand Forks. All other contracts are substantially complete. Total Federal construction costs were \$14,746,359, and non-Federal costs were \$2,881,635.

Condition at end of fiscal year. The project was certified to the 100-year level of protection in January 2007 (Grand Forks) and June 2007 (East Grand Forks). The final lift of the East Grand Forks bank stabilization is scheduled for the spring of 2008, which will complete the entire project to the 250-year level of protection.

8. LAKE TRAVERSE AND BOIS DE SIOUX RIVER, MN, ND, AND SD

Location. Works covered by this project lie along Lake Traverse and Bois de Sioux River between the upper end of Lake Traverse at Browns Valley, MN, and the mouth of Bois de Sioux River at Breckenridge, MN. The project terminates six miles south of Breckenridge (six miles upstream of the Bois de Sioux River mouth). Lake drains through river to Red River of the North, and two waters form a portion of the boundary between State of Minnesota and States of North and South Dakota. (For general location, see Geological Survey map of Minnesota).

Existing project. See annual Report for 1962. Existing project was authorized by Flood Control Act of June 22, 1936. White Rock Dam, a part of the project, is 14,000 feet long with an average height of 16 feet. A Dam Safety Assurance Program Evaluation Report was prepared in accordance with ER 1110-2-1155, and was approved in December 2004. Dam Safety funding was provided in mid-year to initiate work on the Design Documentation Report (DDR). The dam safety modifications recommended to meet the base safety condition include armoring the downstream slope of the earthen embankment, and stability improvements for the control structure.

Local cooperation. Based on the Lake Traverse Project being 100 percent federally funded, the proposed dam safety modifications are also federally funded, therefore, no cooperation agreements are necessary.

Operation and results during fiscal year. Maintenance: Project and related facilities were operated and maintained at a cost of \$515,477 for FY 07. Dam Safety: District continued work on the Design Documentation Report (DDR) with carryover funds. This assessment resulted in White Rock Dam being ranked as a medium-high risk. Total FY 07 costs were \$7,076 for dam safety.

Condition at end of fiscal year. Existing project was completed in June 1948. White Rock Dam and

Reservation control structures are in operation. The DDR for recommended dam safety improvement is on hold due to lack of Federal funding.

9. SARTELL, MN

Location. The project is located in Sartell, MN, approximately 100 miles west of Minneapolis, MN.

Existing project. The emergency streambank protection project involves protection of a sanitary sewer line that runs parallel to the Mississippi River just downstream of Veterans Memorial Park. The project is authorized by Section 14 of the 1946 Flood Control Act, as amended.

Local cooperation. The PCA was approved by the CEMVD Commander for execution on September 26, 2007. The Agreement requires the city to provide, during the period of construction, a cash contribution of at least 5 percent of total project costs and any additional funds needed to make its total contribution, including the value of all required local responsibilities, equal to 35 percent of the total project costs; provide without cost to the United States all lands, easements, and rights-of-way, including suitable borrow and dredged material disposal areas necessary for construction, operation, and maintenance of the project; perform all relocations and alterations of building utilities (other than those portions which pass under or through the project structures), highways, railroads, bridges (other than railroad bridges and approaches thereto), sewers and related and special facilities determined by the Government to be necessary for construction of the project; pay all costs in excess of the Federal statutory limitation of \$1 million; hold and save the United States free from all damages arising from construction, operation, and maintenance of the completed project, except for damages due to the fault or negligence of the Government or its contractors; comply with the provisions of the Uniform Relocation Assistance and Real Property Acquisition Policies Act of 1970, Public Law 91-646, approved January 2, 1971, in acquiring lands, easements, and rights-of-way for construction and subsequent operation and maintenance of the project and inform all affected persons of applicable benefits, policies, and procedures in connection with said Act; operate, maintain, replace, and rehabilitate the project upon completion in accordance with regulations or directions prescribed by the Government; give the Government a right to enter, at reasonable times and in a reasonable manner, upon land which it owns or controls for access to the project for the purpose of completing, operating, maintaining, repairing, rehabilitating, or replacing the project; and

comply with all applicable Federal and state laws and regulations, including Section 601 of Title VI of the Civil rights Act of 1964 (Public Law 88-352) and Department of Defense Directive 5500.11 issued pursuant thereto and published in Part 300 of Title 32, Code of Federal Regulations, as well as Army Regulation 600-7, entitled "Nondiscrimination on the Basis of Handicap in Programs and Activities Assisted or Conducted by the Department of the Army."

Operations and results during the fiscal year.

Total Federal costs were \$69,105 for preparing the planning design analysis documentation.

Condition at end of fiscal year. Completion of the feasibility planning phase.

10. SHEYENNE RIVER, ND

Location. The Sheyenne River Basin is included in 16 counties in the southeastern portion of North Dakota and drains an area of 7,140 square miles into the Red River of the North near Fargo, North Dakota. The principal area of flood damages in the basin is located at the lower end within Cass County and the city of West Fargo. (For general location, see Geological Survey map of North Dakota.)

Existing project. The project as authorized by the 1986 Water Resources Development Act consists of three major components for Federal implementation: 1) 11.9 miles of levee and a 6.7 mile flood diversion channel at West Fargo; 2) 7.5 miles of flood diversion channel from Horace to West Fargo; and 3) a five-foot raise of the Baldhill Dam flood control pool. The Water Resources Development Act of 1986 stipulated that the project shall also include a dam and reservoir of approximately 35,000 acre-feet of storage for the purpose of flood protection on the Maple River. This component was deauthorized April 16, 2002. There are several items of local cooperation required to implement the plan, and several components identified for non-Federal implementation which would supplement the recommended plan. Estimated cost (2000) to the United States for new work is \$31,130,000 and \$12,470,000 is to be contributed by local interests.

Local cooperation. See Annual Report for 1988 for requirements. Project consists of three separable components each requiring a local cooperation agreement. The Southeast Cass Water Resource District is the local sponsor for the West Fargo Unit and the Horace to West Fargo Unit. The local cooperation agreement for the West Fargo Unit was executed on

July 25, 1988 (amended on June 4, 2001), and for the Horace to West Fargo unit on Mar. 6, 1990. The Sheyenne River Joint Water Resource District is the local Sponsor for the Baldhill Pool Raise Unit. The local cooperation agreement for the Baldhill Pool Raise Unit was executed on May 31, 2000. The Maple River Reservoir Unit was deleted from the project.

Operations and results during fiscal year.

Preparation of draft Flood Insurance Rate Maps was completed. Work continued on acquisition of lands. Total Federal costs were \$445,882, and non-Federal costs were \$10,001.

Condition at end of fiscal year. Construction of the West Fargo Unit is essentially complete, except for installation of emergency generators for the two pump stations; and construction is complete on the Horace to West Fargo Unit. Both of these units were operated during the spring and summer floods of 1993 and the spring floods in 1994, 1995, 1996, and 1997 and performed very well although some erosion damage was sustained on both projects. Plans and specifications were completed to repair 6,000 feet of the failed slope sections of the Horace to West Fargo diversion channel. Construction of the Baldhill Pool Raise Unit is essentially complete, except for final surveying and monumentation.

11. ST. CROIX RIVER, STILLWATER, MN

Location. In Washington County in eastern Minnesota along the St. Croix River about 18 miles northeast of St. Paul, (For general location, see Geological Survey map of Minnesota).

Existing project. The project provided for Stage 1 repair and reconstruction of the existing 1,000-foot retaining wall system; Stage 2 for construction of a 1,000-foot extension to the wall and expansion of the wall system to include a new secondary landward floodwall to aid in erosion protection for the downtown area; and Stage 3 for expansion of the floodwall system by constructing a low floodwall/levee along the western side of Lowell Park. Estimated Federal cost for new work is \$9,750,000, and \$3,250,000 is to be contributed by local interests. Project was authorized by the Water Resources Development Act (WRDA) of 1992 (Public Law 102-580), as amended by the WRDA of 1996 (Public Law 104-303). The Consolidated Appropriations Act of 2004 directed the Corps to proceed with design and initiate construction for Stage 3 of the Stillwater project using previously appropriated funds.

Local cooperation. See Annual Report for 1996 for requirements. A PCA was executed between the Federal Government and the city of Stillwater, MN, on April 22, 1996, which covered Stage 1 of the project. An amendment to the PCA to encompass Stage 2 was executed on September 29, 1998. An amendment to the PCA to encompass Stage 3 will be required.

Operations and results during fiscal year. Continued Stage 3 Engineering Documentation Report (EDR). Total Federal costs were \$29,837.

Condition at end of fiscal year. Construction of Stages 1 and 2 are complete. Work continued on the EDR for the third stage of construction.

12. WAHPETON, ND

Location. Wahpeton, ND, is located in Richland County in eastern North Dakota, approximately 55 miles south of Fargo, ND. The Red River of the north and the Bois de Sioux River bound the city on the north and the Bois de Sioux River bound the city on the east. The confluence of the Ottetail River with the Red River of the north is located at Wahpeton. The city of Breckenridge, MN, lies across the Red River of the north from Wahpeton.

Existing project. A feasibility study recommended implementation of a flood reduction project that consists of a permanent levee system protecting most of the city and a flood easement to keep the breakout floodflows from being blocked in the future. The project is authorized by Section 205 of the 1948 Flood Control Act, as amended.

Local cooperation. See Annual Report for 2001 for requirements. The PCA was executed between the Federal Government and the city of Wahpeton on June 18, 2002.

Operations and results during fiscal year. Continued design for Stage 2, the first phase of levee construction. Total Federal costs were \$0 and non-Federal costs were \$199,091.

Condition at end of fiscal year. Project construction began in the summer of 2003 with award of the Stage 1 construction contract for interior flood control features; this construction stage is complete. Plans and specifications for Stage 2, which consist of a portion of the in-town levees, are underway. Plans and specifications for Stage 3, the remainder of the in-town levees, have been initiated.

Environmental

13. MILLE LACS REGIONAL WASTEWATER, MN

Location. Project is located in the city of Garrison and the townships of Kathio and West Mille Lacs (GKWML). Existing development along the western shoreline of Mille Lacs Lake, one of the largest and most popular trophy fishing lakes in Minnesota, consists of a mixture of residential, commercial, and Mille Lacs Band of Ojibwe housing and casino structures. Most of the structures' wastewater is treated by individual unreliable septic systems.

Existing project. Section 108 (d) (61) of the Consolidated Appropriations Act of 2001 (P.L. 106-554) provided authorization for the Corps of Engineers to assist with a wastewater infrastructure project for the city of Garrison and Kathio Township, MN, as a part of the WRDA 1992, Section 219, Environmental Infrastructure program. The GKWML Sanitary District and the Mille Lacs Band entered into an agreement to design, construct, and operate a regional wastewater treatment project. The Band constructed a lift station at the northern edge of its reservation boundary. The Band has also completed construction of the Regional Sewage Treatment Plant. The GKWML Sanitary District is constructing a sanitary sewer line to collect and transfer wastewater within its jurisdiction to the Band's lift station for further transport to the Regional Treatment Plant.

Local cooperation. The estimated total cost of the GKWML portion of the project is \$16,500,000. Section 219 funds will be used to assist the Sanitary District in the construction of a \$3,517,000 "functional" portion of the GKWML project. A Design Section 219 PCA was signed in April 2005, and the design of the project has been completed. A Construction PCA was signed on December 16, 2006, for construction of the project.

Operations and results during the fiscal year. The Corps awarded a construction contract in June 2007 for \$1.4 million for the base portion of the contract. Federal costs were \$506,082, and non-Federal costs were \$41,539.

Condition at end of fiscal year. Construction of the Linden Street base contract is underway.

14. NORTHEASTERN MINNESOTA

Location. Northeastern Minnesota is defined as the Counties of Aitkin, Benton, Carlton, Cass, Chisago, Cook, Crow Wing, Isanti, Itasca, Kanabec, Koochiching, Lake, Mille Lacs, Morrison, Pine, St. Louis, and Sherburne, Minnesota. Areas within the 17 counties essentially comprise Minnesota Congressional District 8.

Existing project. Section 569 of WRDA 1999 provided the Corps authority to assist northeastern Minnesota communities with their environmental infrastructure projects. Over 41 projects have been selected in 30 communities. Funds available in FY 06 were used to support 10 new projects that continued into FY 07.

Local cooperation. The PCAs for the above-listed projects require the local sponsor to provide lands, easements, and rights-of-way, as well as the required 25 percent local sponsor cost share funding. The program is operated on a reimbursable basis. The Government and local sponsor agree on project cost and work. The sponsor retains a contractor to perform the work. Upon receipt of proper invoice and Government construction inspector verification that the work was performed, the Government reimburses the sponsor for 75 percent of the invoice billing.

Operations and results during fiscal year. Two new PCAs were signed with all payback funds received from FY 06 and previous years. Construction inspection activities and reimbursements were made to the non-Federal project sponsors as appropriate. Federal costs were \$1,121,384.

Condition at end of fiscal year. Construction is completed at Emily, Ely, and Tower. Design is completed at Cass Lake.

15. NORTHERN WISCONSIN

Location. Northern Wisconsin is defined as the Counties of Douglas, Bayfield, Ashland, and Iron, WI. These four counties are located within Wisconsin Congressional District 7.

Existing project. Section 154 of the Consolidated Appropriations Act of 2001 (Public Law 106-554) provided authorization for the Corps of Engineers to assist northern Wisconsin communities with their environmental infrastructure and water resource projects. Seven projects were selected in FY 06 for implementation that were continued into FY 07.

Local cooperation. The PCAs require the local sponsor to provide lands, easements, and rights-of-way, as well as the required 25 percent local sponsor cost-share funding. The program is operated on a reimbursable basis. The Government and local sponsor agree on project cost and work. The sponsor retains a contractor to perform the work. Upon receipt of proper invoice and Government construction inspector verification that the work was performed, the Government reimburses the sponsor 75 percent of the invoice billing.

Operation and results during fiscal year. No new PCAs were signed. Construction, inspection, and reimbursement activities continued as necessary. Federal costs were \$709,384.

Condition at end of fiscal year. Many previously selected projects are nearing completion including Butternut, Lake Namekagon, and Glidden.

16. ST. CROIX FALLS, SEWAGE TREATMENT PLANT, WI

Location. The project is located in the city of St. Croix Falls, Polk County, WI, in the Wisconsin Congressional District 7.

Existing project. Project was authorized by Section 120 of the Consolidated Appropriations Act (CAA) of 2005. Section 120 of the CAA, 2005, amended Section 219 of WRDA 1992 to include St. Croix Falls (\$5 million for wastewater infrastructure). The project was initially funded in the amount of \$350,000 in the Emergency Appropriations Act of 2005. The city is in the process of replacing its aging wastewater treatment plant. The city's existing wastewater treatment plant (WWTP) is 50 years old. It currently discharges 350,000 gallons of treated wastewater to the St. Croix River daily. While technically the WWTP meets current discharge requirements, aging equipment and changing water quality standards will seriously compromise its ability to perform. The city spent \$700,000 in local funds in 2000 to make major repairs on the WWTP and keep it running until it can be reconstructed.

Local cooperation. A Design Agreement was signed between the Federal Government and the city of St. Croix Falls on July 19, 2005. The estimated total cost of the St. Croix Falls wastewater project is \$8 million. Congress has authorized \$5 million of Federal funds for the project. The PCA for the

ST. PAUL, MN, DISTRICT

Section 219 program requires 25 percent local sponsor cost-share funding. The Federal share under the Agreement is not more than 75 percent.

Operations and results during the fiscal year. Work continued on a design contract. Federal costs were \$6,980, and non-Federal costs were \$14,500.

Condition at end of fiscal year. The city of St. Croix Falls hired an outside engineering firm to pursue reconditioning of the existing WWTP. Replacement of the WWTP is currently on hold.

Miscellaneous

17. LOWER ST. ANTHONY FALLS (LSAF) RAPIDS RESTORATION, MN

Location. The project is located on the Mississippi River within the city of Minneapolis, MN. The LSAF restoration would include development of a formal whitewater rapids channel and trail/park on the east bank of the Mississippi River, adjacent to the U.S. Army Corps of Engineers LSAF Lock and Dam.

Existing project. The project was authorized by Section 527 of WRDA 2000. The facility would include a recreational whitewater course for kayaking, canoeing, and rafting, as well as improved public access to the river and formal shore fishing opportunities. The facility would utilize the vertical drop created by the LSAF dam and include a new river channel approximately 2,000 feet long and 40 feet wide, with a vertical drop of 25 feet. The channel would flow parallel to the Mississippi River main stem in a park setting.

Local cooperation. A design agreement was executed between the Federal Government and the State of Minnesota Department of Natural Resources (MnDNR) on February 28, 2002. For much of FY 07, the project was on hold pending MnDNR resolution of key project design issues. Upon approval of the EDR and NEPA documentation, the PCA will be prepared for execution with the MnDNR.

Operation and results during fiscal year. Continued work with local sponsor on the EDR and validation of MnDNR report, including project definition, environmental compliance, and budget support. Federal costs were \$21,887, and non-Federal costs had a credit of \$-19,244.

Condition at end of fiscal year. Finalizing EDR.

18. INSPECTION OF COMPLETED FLOOD CONTROL PROJECTS

Flood control projects turned over to local interests were inspected to determine that project channels are kept clean and unobstructed, dikes and revetments are in good condition, and structures are in good repair and operable. Deficiencies, if any, were minor, unless noted. (See Table 16-J on inspection of completed flood control projects.)

Cost for the period was \$235,424. Total cost to September 30, 2007, is \$3,407,238.

19. PROTECTION OF NAVIGATION

During FY 07, operation and maintenance costs were \$4,761 for Project Condition Surveys and \$121,322 for Surveillance of Northern Boundary Waters.

20. OTHER WORK UNDER SPECIAL AUTHORITY

In the Sign Standards Programs (as described in Chapter 6, ER 1130-2-500), there were costs of \$175,522.

21. FLOOD CONTROL AND COASTAL EMERGENCIES (FC&CE)

Disaster Preparedness	\$ 342,662
Emergency Operations	213,015
Rehabilitation and Inspection Program	111,836
Advanced Measures	<u>89,785</u>
Total FC&CE	\$757,298

22. CATASTROPHIC DISASTER PREPAREDNESS PROGRAM (CDPP)

Continuity of Operations	\$ 578
Continuity Disaster Response Planning	57,227
Emergency Operations Center Support	<u>1,000</u>
Total CDPP	\$58,805

23. REGULATORY FUNCTIONS PROGRAM

Permit Evaluation	\$5,776,720
Enforcement	440,297
Environmental Impact Statements	107,025
Compliance	151,523
Administrative Appeals	<u>0</u>
Total Regulatory	\$6,475,565

General Investigations

24. SURVEYS

Fiscal year cost was \$960,127, which included seven feasibility studies, miscellaneous activities, and coordination with both Federal and non-Federal agencies. Table 16-N provides a specific list and respective fiscal year expenditures.

25. COLLECTION AND STUDY OF BASIC DATA

Fiscal year cost was \$163,611, which included the items concerning international water studies, flood plain management services, and hydrologic studies.

Table 16-N provides a specific list and respective fiscal year expenditures.

26. ADVANCE ENGINEERING AND DESIGN

Fiscal year cost was \$436,204, which included two local protection projects. Table 16-N provides a specific list and respective fiscal year expenditures.

1. Includes \$681,805 for new work for previous project.
2. Includes \$100,857 for maintenance for previous projects and MO of Dams funds of \$126,391.
3. Excludes \$1,150,000 sunk costs for deauthorized Kindred Lake unit (see Table 16-G). Excludes \$475,000 for costs associated with inactive Maple River unit.

TABLE 16-B AUTHORIZING LEGISLATION

See Sec. in Text	Date of Authorizing Act	Project and Work Authorized	Documents
2.		RESERVOIRS AT HEADWATERS OF MISSISSIPPI RIVER, MN	
	March 3, 1899	Reconstruct 4 of the 5 original dams and surveys to determine extent of lands overflowed by reservoirs.	
	March 2, 1907	Reconstruct Sandy Lake Dam and construct Gull Lake Reservoir.	
	June 25, 1910	Construct an equalizing canal between Winnibigoshish and Leech Lake Reservoirs (no work was done and this part of the project abandoned in Act of Mar. 4, 1915).	H. Doc. 363, 61st Cong., 2d session.
	July 27, 1916	Abandonment of ditches connecting Long Lake, Round Lake, and Gull Lake.	H. Doc. 413, 64th Cong., 1st session. ¹
	June 26, 1934 ²	Operation and maintenance provided for with funds from War Department appropriations for rivers and harbors.	
5.	June 30, 1948	BRECKENRIDGE, MN	Section 205 1948 Flood Control Act, as amended (Public Law 80-858)
	Dec. 11, 2000		WRDA 2000 – Public Law 106-541
6.	June 30, 1948	CHIPPEWA RIVER AT MONTEVIDEO, MN	Section 205, 1948 Flood Control Act, as amended (Public Law 80-858)
7.	October 21, 1998	GRAND FORKS, ND, AND EAST GRAND FORKS, MN	Public Law 105-277, OMNIBUS Appropriation Bill, FY 99
8.	June 22, 1936	LAKE TRAVERSE AND BOIS DE SIOUX RIVER, SD, ND, AND MN	1936 Flood Control Act
	December 2004		ER 1110-2-1155, Dam Safety Assurance Program Evaluation Report
9.	July 24, 1946	SARTELL, MN	Section 14, 1946 Flood Control Act, as amended (Public Law 79-526)
10.	November 17, 1986	SHEYENNE RIVER, ND Project shall include a dam and reservoir of approximately 35,000 acre-feet of storage for the purpose of flood protection Maple River.	WRDA 1986 – Public Law 99-662
11.	October 12, 1996	ST. CROIX RIVER, STILLWATER, MN	Section 301, WRDA 1996 (Public Law 104-303)
	October 31, 1992		Section 363, WRDA 1992 (Public Law 102-580)
	January 31, 2004	Secretary of the Army, acting through the Chief of Engineers, is directed to use previously appropriated funds to proceed with design and initiate construction to complete the Stillwater, Minnesota, levee and flood control project.	Section 124, Consolidated Appropriations Act of 2004 (Public Law 108-199)
12.	June 30, 1948	WAHPETON, ND	Section 205 1948 Flood Control Act, as amended (Public Law 80-858)
13.	October 31, 1992	MILLE LACS REGIONAL WASTEWATER, MN	WRDA 1992, as amended by Sec 108(d) of the Consolidated Approp. Act of 2001 (Public Law 106-554)

TABLE 16-B AUTHORIZING LEGISLATION (Continued)

7. Excludes \$18,362 contributed funds.
8. Excludes \$42,766 contributed funds.
9. In addition, \$87,878 was expended from Public Law 99 funds in the spring of 1969 for emergency protection and incorporation into the permanent project.
10. Excludes \$201,544 contributed funds.
11. Excludes \$150,191 contributed funds.
12. Excludes \$12,749 contributed funds.
13. Excludes \$27,583 contributed funds.
14. Excludes \$77,290 contributed funds.
15. Excludes \$20,441 contributed funds.
16. Advance engineering and design costs only. Project deferred with authorization of Souris River Basin Project (see Section 25 and Table 16-A for costs for active project).
17. Excludes \$74,225 contributed funds.
18. Excludes \$46,034 for the Ruffy Brook unit for which authorization expired in April 1966 (see Table 16-G). Excludes \$246,911 contributed funds.
19. Excludes \$35,000 contributed funds.
20. Excludes \$79,749 contributed funds.
21. Excludes \$91,218 contributed funds.
22. Excludes \$59,855 contributed funds.
23. Excludes \$68,421 contributed funds.
24. Excludes \$307,239 contributed funds.
25. Excludes \$130,300 contributed funds.
26. Excludes \$4,167 contributed funds.
27. Excludes \$20,920 contributed funds.

**TABLE 16-E
(Continued)**

**OTHER AUTHORIZED FLOOD
CONTROL PROJECTS**

-
- 28. Excludes \$92,402 contributed funds.
 - 29. Excludes \$30,020 contributed funds.
 - 30. Excludes \$33,000 contributed funds.
 - 31. Excludes \$35,430 contributed funds.
 - 32. Excludes \$26,055 contributed funds.
 - 33. Includes cost of the Wahpeton-Breckenridge unit \$11,239, which is classed as "deferred" and the units on which authorization has expired: Maple River, \$1,241; Moorehead, \$27,700; which Sheyenne, \$37,956. In addition, \$203,874 special deposit funds and \$146,160 in other contributed funds have been expended for work under Government contract paid for by local interests. Includes \$184,352 expended on Orwell Lake between FY 91 - FY 96 under Section 1135, Public Law 99-662 authority. Excludes \$64,775 contributed funds under Section 1135, Public Law 99-662 authority.
 - 34. Excludes \$61,895 contributed funds.
 - 35. Excludes \$67,014 contributed funds.
 - 36. Excludes \$65,902 contributed funds.
 - 37. Excludes \$175,357 contributed funds.
 - 38. Excludes \$62,620 contributed funds.
 - 39. Excludes \$100,000 contributed funds.
 - 40. Excludes \$5,253 contributed funds.
 - 41. Excludes \$225,000 sunk costs for inactive Ebner Coulee unit (see Table 16-E) and \$4,206,836 contributed funds.
 - 42. Excludes \$39,815 contributed funds.
 - 43. Excludes \$31,064 contributed funds.
 - 44. Excludes \$545,637 contributed funds for new work and \$38,000 expended by South St. Paul for work in lieu of required cash contribution. Excludes an additional \$206,629 expended for work done at request of local interests.
 - 45. Excludes \$73,619 contributed funds.
 - 46. Excludes \$37,631 contributed funds.
 - 47. Excludes \$184,709 contributed funds.
 - 48. Excludes \$97,800 contributed funds.
 - 49. Excludes \$589,316 contributed funds. In addition, \$717,809 in other contributed funds have been expended for work under Government contract paid for by local interests.
 - 50. Excludes \$11,066 contributed funds.
 - 51. Excludes \$38,173 contributed funds.
 - 52. Excludes \$20,000 contributed funds.
 - 53. Excludes \$777,070 contributed funds.
 - 54. Excludes \$7,628,650 contributed funds.
 - 55. Excludes \$177,500 contributed funds.
 - 56. Excludes \$114,000 contributed funds.
 - 57. Excludes \$2,083,373 contributed funds.
 - 58. Excludes \$460,800 contributed funds.
 - 59. Excludes \$674,000 contributed funds.
 - 60. Excludes \$670,000 contributed funds.
 - 61. Excludes \$53,233 contributed funds.
 - 62. Excludes \$3,418,460 contributed funds.
 - 63. Excludes \$106,800 contributed funds.
 - 64. Excludes \$8,180,000 contributed funds.
 - 65. Excludes \$3,968,267 contributed funds.
 - 66. Excludes \$1,719,613 contributed funds.
 - 67. Excludes \$1,858,000 contributed funds.
 - 68. Excludes \$351,000 contributed funds.
 - 69. Excludes \$81,000 contributed funds for Dam Safety Assurance Program.
 - 70. Excludes \$2,373,000 contributed funds.

1. Portion of project for removal of obstructions at various points outside the dredged area to clear channel to full project width (see Table 16-C for costs for completed portion of the project).
2. Advance engineering and design costs only. The Senate Report 97-256 states that the Corps is to take no further action to construct Burlington Dam until directed to do so by Congress.
3. Grafton, ND, was reauthorized by Section 364 of WRDA in 1999.
4. Part of the St. Croix River, Minnesota and Wisconsin project.
5. Previously part of Sheyenne River, ND project (see Section 23 and Table 16-A for costs for active project).
6. Authorized for further study by a House Committee on Public Works Resolution dated March 15, 1988.
7. Advance engineering and design costs only. (See Section 25 and Table 16-A for costs for active project).
8. Part of Red River of the North Drainage Basin (see Section 20 in text and Table 16-I for costs for active units of project).
9. Portion of dredging of entrance channel and turning basin to complete project width and depth (see Table 16-C for costs for completed portion of project).

**TABLE 16-I RED RIVER OF THE NORTH DRAINAGE BASIN:
ACTIVE UNITS IN COMPREHENSIVE BASIN PLAN**

	State	Type	Cost to Sep. 30, 2007	Total Estimated Federal Cost
Orwell River (Otter Tail River)	Minnesota	Reservoir	\$1,916,753	\$1,916,700 ¹
Wild Rice and Marsh Rivers	Minnesota	Channel improvement	405,056	405,100
Rush River	North Dakota	Channel improvement	287,686	287,700
Sand Hill River	Minnesota	Channel improvement	548,778	548,800
Mustinka River	Minnesota	Channel improvement	440,788	440,800
Otter Tail River	Minnesota	Channel improvement	174,768	174,800
Red River at Grand Forks	North Dakota	Levees and floodwall	948,895	948,900
Red River at East Grand Forks	Minnesota	Levees, floodwall, pumping plants	1,698,200 ²	1,698,200 ³
Red River at Fargo	North Dakota	Channel improvement	1,639,924	1,639,900 ⁴
Total Cost to Date			\$8,060,848 ⁵	
Total Estimate Cost				\$8,060,900 ⁶

1. Includes \$181,713 for lands and \$25,045 for recreation facilities.
2. Excludes cost for current planning, engineering and design work.
3. The East Grand Forks unit was reclassified from active to inactive on August 19, 1988; the project was reactivated in June 1997. The cost of this unit was last revised in 1987. A new flood control plan for a combined Grand Forks-East Grand Forks project was authorized in 1999. See Section 7 and Table 16-A for project description and costs.
4. Includes \$67,900 for lands.
5. Costs of \$11,239 for the Wahpeton-Breckenridge deauthorized unit not included. Authorization of the Sheyenne River, Moorhead, and Maple River units has expired. Cost of these units also not included total \$66,897.
6. The Wahpeton-Breckenridge unit of the project is classed as deauthorized and is excluded from the estimate. The cost of this unit, last revised in 1955, was estimated to be \$666,000. The Flood Control Act approved December 31, 1970 (H. Doc. 330-91-2), provided for deletion of the Sheyenne River unit, and authorization of the Maple River and Moorhead units expired at the end of the 5-year period within which local interests were required to furnish assurances of local cooperation. Authorization of these units, not included, expired on the dates indicated in Table 16-G. In FY 89, the Wahpeton-Breckenridge unit was included as part of the General Investigation program under Restudy of Deferred projects.

MISSISSIPPI RIVER BETWEEN THE MISSOURI RIVER AND MINNEAPOLIS, MN

Section of river covered in this report is divided into three reaches, under supervision and direction of District Engineers at St. Louis, Rock Island, and St. Paul. Section in St. Louis District extends 105 miles from Mouth of Missouri River to Upper Mississippi River mile 300 above Ohio River; Rock Island District extends about 314 miles from mile 300 to 614; and St. Paul District extends about 244 miles from mile 614 to Soo Line Railroad bridge, Minneapolis (mile 857.6).

Location. Mississippi River rises in northern Minnesota, flows about 2,360 miles southerly and empties into Gulf of Mexico. Portion included in this report extends about 663 miles from mouth of Missouri River to Soo Line Railroad bridge, Minneapolis. The latest map and profile showing this section of river are in House Document 669, 76th Congress, 3d session. A map showing Lake Pepin is in House Document 511, 79th Congress, 2d session. A map of section Minneapolis to Dubuque is in House Document 515, 79th Congress, 2d session. A map showing location of drainage districts (Bellevue, Iowa, to Missouri River) is in River and Harbors Committee Document 34, 75th Congress, 1st session.

Previous projects. See page 1199 of Annual Report for 1963.

Existing project. Provides a channel of 9-foot depth and adequate width between mouth of Missouri River (1,179 miles from the gulf) and Soo Line Railroad at Minneapolis, by construction of a system of locks and dams, supplemented by dredging. Project also provides for further improvements at St. Paul to provide a 2.7 mile basin extending downstream from Robert Street Bridge, and at Minneapolis to provide adequate terminal facilities, and for other harbor improvements and miscellaneous work. Pertinent data on locks and dams, harbor improvements, additional features entering into cost of project, and authorizing legislation are given in Tables 17-C, 17-D, 17-E, and 17-G. All dams are concrete. Three dams (Upper St. Anthony Falls, 1 and 19) are fixed, remainder are movable. See House Document 669, 76th Congress, 3d session, for a report of Chief of Engineers dated February 27, 1940, containing a general plan for improvement of Mississippi River between Coon Rapids Dam and mouth of Ohio River for purposes of navigation, power development, flood control, and irrigation needs.

Local cooperation. Small-boat harbors authorized in the River and Harbor Act of 1962 are subject to conditions that local interests make a cash contribution toward cost of construction (except in case of Quincy Harbor which involves maintenance only of an existing harbor); furnish lands and rights-of-way for construction and future maintenance; hold the United States free from damages; provide and maintain mooring facilities and utilities; reserve accommodations for transient small boats; accomplish all necessary relocations and alterations; and establish public bodies empowered to regulate use, growth and development of the harbors.

Rectification of seepage damages to privately owned lands in the Sny Island Levee Drainage District, IL, was contingent upon the conditions that local interests acquire all lands, easements, and rights-of-way necessary for construction and maintenance of the project; comply with applicable provisions of the Uniform Relocation Assistance and Real Property Acquisition Policies Act of 1970; accept, operate, and maintain the project upon its completion; and hold and save the United States free from damages arising from the construction and operation of the completed project; provided further that the local public entity shall be reimbursed by the Government in the amounts actually expended by it in the acquisition of real estate and for payments required under Public Law 91-646 if said amounts have been previously submitted to and approved by the Government.

Local cooperation requirements have been complied with for improvement of commercial harbor at Dubuque, IA; for improvement of Beaver Slough at Clinton, IA, for navigation; and for general navigation facilities at small-boat harbors at Rock Island, IL; Hannibal, MO; Fort Madison, IA; Davenport (Lindsay Park), IA; Muscatine, IA (including freight terminal approach channel); Andalusia, IL; Warsaw, IL; Moline, IL; Clinton, IA; and Savanna, IL.

Licenses. Federal Energy Regulatory Commission collects from non-Federal licensees annually to recompensate the United States for use of government dams for generation of hydroelectric power. Amounts collected are returned to U.S. Treasury. (See Table 17-F for license fees collected for the fiscal year.)

St. Paul District:

New Work: None.

Maintenance: During fiscal year 2007, the Government pipeline Dredge *WILLIAM L. GOETZ* removed 349,561 cubic yards of material at 12 sites. Government Derrick Barge *HAUSER/WADE* removed 6,107 cubic yards of material at one site. Mechanical dredging contractor removed 162,234 cubic yards of material from the main channel at 10 sites. Major maintenance projects included central control building and electrical controls at Locks 10 and stop log slots at Lock 9.

Operations and Care: Locks and Dams were operated as required and necessary repairs were made to those and appurtenant structures. Other studies, reports, and miscellaneous engineering work were also accomplished.

Rehabilitation: The rehabilitation of the district's central control buildings continued. During FY 2007 the building and site work continued at Lock 10.

The related navigation safety and embankments problems at Lock and Dam 3 were examined in separate reports in 1995 with recommended structural fixes for these problems. The proposed projects were approved by Corps Headquarters, but have not been implemented for a number of reasons including the presence of a diverse mussel bed with state-listed endangered species in the tailwater area. Construction of the first stage of the embankment project was completed in the summer of 1999. The St. Paul District decided to re-evaluate these related problems in an effort to find more optimal solutions. A Notice of Intent to Prepare an Environmental Impact Statement for the Lock and Dam 3 navigation safety and embankments re-evaluation was published in the Federal Register in August 2000. Stakeholders helped the District set objectives, identify alternative measures and formulate alternative plans. Alternative plans have been evaluated and compared using a risk and benefit cost assessment. An effective and environmentally acceptable combination plan to improve navigation safety and to strengthen the Wisconsin embankments was identified. A Record of Decision was signed in April 2007 that identified a recommended plan that includes an extended landward guidewall with channel modifications to improve navigation safety and to strengthen the Wisconsin embankments through phased construction.

Costs to St. Paul District were \$51,517,300 for operation and maintenance and \$812,127 for rehabilitation; for a total cost of \$52,329,427.

St. Paul District. Work completed: Locks and Dams at St. Anthony Falls and 1 to 10, inclusive, except for relatively minor appurtenant work; major improvements of channels and harbors at St. Paul and Minneapolis; small boat harbors and commercial harbors at Lake City, Red Wing, and Winona, MN; and Prairie du Chien, WI; small-boat harbors at St. Paul, Hastings, Red Wing, Wabasha, Lake City and Winona, MN; Lansing, IA; and Bay City, Alma, Pepin, and Prairie du Chien, WI; a remedial drainage ditch at Cochrane, WI; miscellaneous channel dredging and realignment; channel markers; pool clearing; and construction of various facilities for recreation use.

Status of land and flowage acquisition: Approximately 50,723.747 acres of land in fee, including 47,305 acres used by the Department of the Interior in accordance with a Cooperative Agreement that establishes the Upper Mississippi River Fish and Wildlife Refuge.

Easements for various access rights and flowage inundation are held over 15,571.321 acres. Additionally, the district holds perpetual easements over 244.43 acres of land for small boat harbors. All land interests lie between Upper St. Anthony Falls Lock and Dam located in Minneapolis, Minnesota, and Lock and Dam 10 in Guttenberg, Iowa. The Department of the Army also holds special rights to over 62,954.74 acres of land owned by Department of the Interior in pools 3 to 10, inclusive.

Work remaining to complete portion of project in St. Paul District: Dredged material site acquisitions anticipated for FY 2008 are seven permits and two easements sites. Lock and Dam 3 embankments project requires acquisition of 313 acres for mitigation and 70.6 acres for easement on the embankment and access road.

Rock Island District:

New Work: None.

Maintenance: Channel dredging by Government cutterhead pipeline Dredge *WILLIAM L. GOETZ* was performed at various locations in pools 18 and 22, for a total of 175,240 cubic yards of material removed. Mechanical dredging was performed in pools 11, 15,

MISSISSIPPI RIVER BETWEEN THE MISSOURI RIVER AND MINNEAPOLIS, MN

16 and 24 for a total of 57,687 cubic yards of material being removed. Continuing maintenance contract repairs includes; Lock and Dam 11 Major Maintenance, Lock 19 Major Maintenance, and Multi-Site Facility Protection Upgrades.

Operations and Care: Locks and Dams were operated as required and necessary repairs were made to those and appurtenant structures. Other studies, reports and miscellaneous engineering work were also accomplished.

Operations and Maintenance: Costs to Rock Island District were \$33,911,104 with credits to the project of \$197,004; primarily as a result of collections from towboat companies for damages to navigation structures.

Rehabilitation: Rehabilitation was continued at Locks and Dams 11 and 19 for costs of \$3,581,873 and \$1,548,977, respectively. Inland Waterway Trust Fund costs were \$3,639,000 and \$1,677,309. Total rehabilitation and Inland Waterway Trust Fund (IWTF) costs were \$10,447,929.

Costs to the Rock Island District were \$33,911,104 for operations and maintenance and \$10,447,929 for major rehabilitation (including IWTF) for a total cost of \$44,359,033.

Rock Island District. Work completed: Major construction items including all locks and dams, are completed and in operation. The following related work has also been completed: construction of small-boat harbors at Rock Island, IL; Moline, IL; Andalusia, IL; Warsaw, IL; Fort Madison, IA; Davenport (Lindsay Park), IA; Muscatine, IA; Clinton, IA; and Hannibal, MO; improvement of Beaver Slough at Clinton, IA, for navigation; improvement of commercial harbor at Dubuque, IA; rehabilitation of old auxiliary lock at Lock and Dam 14; permanent closure of old Lock 19 and dry dock; rock and conglomerate excavation in Pools 15 and 16; rectification of seepage damage in the Sny Island Levee Drainage District, IL; recreational facilities; and construction of visitor center at Lock and Dam 15.

Status of land and easement acquisition: Acquisition of land in Pools 11 to 22, inclusive consisting of 93,658.174 acres in fee and 11,694.94 acres in easement, has been completed.

Work remaining to complete portion of project in Rock Island District: None.

St. Louis District:

New Work: Costs incurred for Melvin Price Locks and Dam, formerly Lock and Dam 26 replacement, were \$27,688 for locks; \$292,443 for recreation; \$69,996 for buildings, grounds, and utilities; \$2,818,917 for engineering; \$0 for supervision and administration. Cost for Melvin Price totaled \$3,209,405. Costs incurred for the second lock totaled \$0. Total cost for new work was \$3,209,045.

Rehabilitation: Major rehabilitation is complete at Lock and Dam 25, except for project closeout. FY 2007 costs totaled \$0. Major rehabilitation continued at Lock and Dam 24 at a cost of \$179,199 for the dam; \$2,650,908 for the lock; \$245,432 for engineering; and \$170,069 for supervision and administration. Costs for Lock and Dam 24 totaled \$3,245,608. Total rehabilitation cost \$3,245,608.

Operations and care: The locks and dams were operated as required and necessary repairs were made thereto. Other work accomplished was management of natural resources, operations of recreation areas, condition and operating studies, water control management, and other studies and reports for a total cost of \$8,442,932.

Maintenance: Total maintenance cost \$11,052,657.

Costs to the St. Louis District were \$3,209,045 for new work on the Melvin Price Locks and Dam; \$3,245,608 for major rehabilitation; \$19,495,589 for operation and maintenance for a total cost of \$25,950,242.

St. Louis District. Work completed: Major construction items, including all locks and dams, are completed and in operation, with the exception of the remaining work at Melvin Price.

Status of land and flowage acquisition: Acquisitions of land in Pools 24, 25, and 26, involving 4,448 acres of land in fee and flowage easements over 6,600 acres, is complete. A total of 4,201 acres has been acquired for the Melvin Price Locks and Dam project.

REPORT OF THE SECRETARY OF THE ARMY ON CIVIL WORKS ACTIVITIES FOR FY 2007

Work remaining to complete portion of project in St. Louis District: Work remaining at the Melvin Price Locks and Dam project includes punch list items and the implementation of remaining required fish and wildlife mitigation measures for the second lock.

Total Project:

Total Federal costs of existing project to the end of the fiscal year for the three Districts were \$3,209,045 for new work; \$104,923,993 regular funds for operation

and maintenance; and \$8,796,918 regular funds for rehabilitation; \$7,335,521 for IWTF. Total costs for FY 2007 were \$124,260,992.

Condition of channel at end of fiscal year: The controlling depth of nine feet at low water and minimum depths for long-haul common carrier service were maintained in all pools.

MISSISSIPPI RIVER BETWEEN THE MISSOURI RIVER AND MINNEAPOLIS, MN

TABLE 17-A COST AND FINANCIAL STATEMENT

Project	Funding	FY 04	FY 05	FY 06	FY 07	Total Cost to Sep 30, 2007
Mississippi River between Missouri River and Minneapolis, Minnesota (Federal Funds)	New Work: ¹

Total, Locks and dams													\$1,196,556,000

1. Elevation of Pools 1 to 22 and at St. Anthony Falls are mean sea level 1912 adjustment; Pools 24, 26 are mean sea level 1929 adjustment.
2. Includes existing dam, owned by Northern States Power Co.
3. Includes dredging above upper lock. (Federal cost only.)
4. Based on pool elevation 723.1 in Pool 1 which is crest of dam. Pool is normally maintained at elevation 725.1 by flashboards.
5. Includes lower approach dredging and dredging between upper and lower rock. (Federal cost only.)
6. In addition \$1,948,000 expended from previous projects and \$1,349,600 from O & M appropriation for first of twin locks. Excludes lock and dam rehabilitation program.
7. Old upper guard sill.
8. Landward lock.
9. In addition, \$1,965,300 expended from previous projects.
10. Existing Le Claire Canal lock is used as auxiliary to lock 14; previous project cost \$540,000.
11. Depth over upper poiree sill. Depth over upper miter sill is 27 feet, at lock 15.
12. \$640,868 for first lock was reported by Mississippi River Power Company, transferred to Government free in lieu of improvements destroyed. (Annual Report, 1928, pp. 1118-1119.) Present estimate includes \$13,132,600 for main lock and appurtenant work.
13. Includes cash contribution of \$4,900,000.
14. Complete except for guidewall extensions.
15. Lock and Dam 26 has been replaced by the Melvin Price Locks and Dam at which full pool was raised 1 February 1990. Lock and Dam 26 has been removed.
16. Melvin Price Locks and Dam (2nd Lock) is complete except for the mitigation plan which is required to finalize environmental documentation. Actual cost to date is \$211,446,000. Present estimate includes \$104,000 for mitigation plan.

PITTSBURGH, PA DISTRICT

This District comprises part of eastern Ohio, western Pennsylvania, southwestern New York, northern West Virginia, and northwestern Maryland embraced in

drainage basin of Ohio River and Tributaries above mile 127 (below Pittsburgh, PA), immediately upstream from New Martinsville, WV.

Navigation

1. ALLEGHENY RIVER, PA

Location. The Allegheny River is 321 miles long. It rises in northern Pennsylvania, flows northwestward into New York, thence generally southwestward to Pittsburgh, PA, where it joins with Monongahela River to form the Ohio. (See Geological Survey Charts for western Pennsylvania and southwestern New York.)

Existing Project. The project consists of eight locks and dams to afford slack-water navigation for a length of 72 miles from Pittsburgh, PA to above East Brady, PA. Controlling depth through canalized portion is 9' at normal pool level. Channel width varies from a minimum of 200' to full width of river at mouth. Existing project is complete, the last lock, No. 9, was placed in service in 1938. Navigation channel has been widened at certain points and, in general, maintained to project depth, thus affording adequate depth for passage of commercial tows.

Local Cooperation. Fully complied with.

Terminal Facilities. City of Pittsburgh constructed a modern wharf for river freight. There are numerous privately maintained terminals and docks, consisting of tipples, various types of hoists, chutes, and pipelines for use in loading and unloading coal, stone, sand, gravel, petroleum products, steel products and other commodities. Transshipment of freight between river and railroads is handled at privately owned river-to-rail terminals. Existing private terminals are adequate for shipments and receipt in Pittsburgh District of type of commerce now in existence.

Licenses. The Federal Energy Regulatory Commission granted license for construction on non-federal hydropower facilities on the abutment side of the dam at the following locations: Lock 5, Allegheny - FERC license 3671, generating capacity 9.3 megawatt, start of operation October 1988; Lock 6, Allegheny - FERC license 3494, generating capacity 8.6 megawatt, start of operation December 1988; Lock 8, Allegheny - FERC license 3021, generating capacity 13.6 megawatts, start of operation November 1990; Lock 9, Allegheny - FERC license 3021, generating capacity 18.0 megawatts, start of operation November 1990.

Operations & Maintenance, General. In FY 2007, land wall filling valve and hydraulic line repairs at CW Bill Young Lock and Dam were completed for \$877,000 and hydraulic cross over lines were replaced at Lock & Dam 9 for \$291,000. Generator Surge Protection and Transfer Switch at CW Bill Young for \$4,000.

2. CONSTRUCTION OF LOCKS & DAMS, OHIO RIVER

See this heading under Ohio River portion.

3. MONONGAHELA RIVER, PA & WV

Location. Formed by junction of Tygart and West Fork Rivers about one mile south of Fairmont, WV, and flows northerly for 128.7 miles to its junction with

Allegheny River, forming Ohio River at Pittsburgh, PA. (See Geological Survey Charts for southwestern Pennsylvania and northern West Virginia.)

Previous Project. For details see Annual Report for 1963, page 1070.

Existing Project. Provides for improvement of river by nine locks and dams to afford slack-water navigation for its entire length from Pittsburgh to above Fairmont, WV. Original Locks and Dams 7, 8 and 9 were replaced by new Locks and Dams 7 and 8 in 1925. Increased traffic necessitated enlargement and improvement of Locks and Dams 1 to 6 between Pittsburgh and Rices Landing, PA, by building two parallel chambers and fixed concrete dams during 1905 and 1932. Locks and Dam 1 were eliminated in 1938 by raising Emsworth Dam, Ohio River. Reconstruction of Lock 2 was completed in 1953 to provide two modern navigation chambers. The existing Locks and Dam 2 were originally completed in 1907; major modifications were made in 1923 and 1924, and in 1926 the upper guard and guide walls were extended. Construction of Maxwell Locks and Dam and the reconstruction of Dam 4 have allowed for removal of obsolete Locks and Dams 5 and 6. Small and antiquated original Locks and Dams 10 to 15, inclusive, have been replaced by three modern structures. Morgantown Lock and Dam, initial step in replacement program, was completed in 1950 replacing Locks and Dams 10 and 11. Hildebrand Lock and Dam, next upstream, was completed in 1959 replacing Locks and Dams 12 and 13. Raising crest of Dam 8 was also completed in 1959 as part of upper river improvement and eliminates restricted depth in upper reach of pool. Opekiska Lock and Dam were completed in 1967 replacing Locks and Dams 14 and 15. Completion of this link in upper river replacement program provides for entire river length of minimum channel depth of 9', varying in width from a minimum of 250' to practically full width at mouth.

Locks and Dam 3 showed advanced stages of deterioration and, because of its strategic location and its importance to industry throughout the greater Pittsburgh area and the nation, emergency remedial work had to be done in 1977. Major rehabilitation of Locks and Dam 3 was completed on October 27, 1980.

The Water Resources Development Act of 1986 authorized the replacement of Lock and Dam 7 with Grays Landing Lock and Dam and the construction of a new lock landward of the existing lock at Lock and Dam 8 (renamed Point Marion Lock and Dam). In accordance with the provisions of this act, 50% of the total cost of construction for the Grays Landing and Point Marion projects was derived from the Inland Waterways Trust Fund. Construction of a new lock at Point Marion was completed and put into service in December 1993. Construction of a new lock at Grays Landing was completed and put into service in May 1993. Construction of the dam at Grays Landing was completed in December 1995.

Supplemental Appropriations Act of 1985 for Engineering and Design and Land Acquisition and Water Resources Development Act of 1986; PL 99-662, Sec.301 (a) Water Resources Development Act of

PITTSBURGH, PA DISTRICT

1992; PL 102-580, Sec. 10 Authorized the Navigation improvements to replace the fixed crest dam at Locks and Dam 2 with a gated dam; raises the existing pool 2 by 5', construct twin 84'x720' locks at Locks and Dam 4, and eliminates Locks and Dam 3; lowering the existing pool 3 by 3.2'. Authorized cost of \$750,000,000. Cost of construction is to be paid equally from the general fund of the Treasury and the Inland Waterways Trust Fund.

Local Cooperation. None required.

Terminal Facilities. City of Pittsburgh constructed a modern wharf for freight. Boat landings are maintained by some municipalities along the river. A large number of tipples at mines and various types of hoists at manufacturing plants and sand and gravel supply companies are maintained for private use in loading and unloading coal, coke, billets, steel products, sand, gravel, and other commodities. These terminals and docks are not available for general commerce. A number of docks and pipelines are also privately maintained for petroleum and acid products. Marine ways are maintained by some of the larger industries. These are also several terminals for rail-to-river and river-to-rail transfer. Facilities are considered adequate for existing commerce.

Operations during Fiscal Year. Work continues on cultural resources and finalizing real estate actions for the remainder of the Grays Landing and Point Marion projects. The present projects consist of 84 acres of fee land and 403.3 acres of easement. The Water Resources Development Act of 1992 authorized the District to proceed with navigation improvements on the Lower Monongahela River. Locks and Dams (L/D) 2, 3 and 4 are located within 50 miles of the "Point" in Pittsburgh. The authorized Lower Mon Project is a two-for-three improvement that will replace the 100-year old fixed-crest dam at L/D 2 with a gated dam (Braddock Dam) and replace the 70-year old, undersized Locks 4 with new twin 84' x 720' locks. The 100-year old L/D 3 will be removed and a new navigation pool will be established that will be 5' higher between Braddock and Elizabeth and 3.2' lower between Elizabeth and Charleroi. The project will adjust all municipally owned facilities adversely affected by these river level changes and dredge existing Pool 3. In addition, the Port Perry Railroad Bridge crossing at river mile 11.7 will be adjusted to accommodate the higher pool level under a cost sharing contract with Norfolk Southern Railroad. The new Braddock Dam is fully operational, dedicated on 27 May 2004, with contract completion in July 2004. Focus is now shifting to construction of the new locks at the Charleroi L/D. Approximately \$381 million of project construction contract work has been undertaken through FY 2007, including the new Braddock Dam; approach dikes for the new Charleroi Locks; initial Pool 3 dredging; relocations for West Elizabeth, McKeesport, Elizabeth, Dravosburg, Glassport, Charleroi and Mon Valley sewage; site development for the new Charleroi Locks; demolition of the existing river chamber at the Charleroi Locks; and construction of the Charleroi River Wall. Continuing are the construction of the Charleroi Locks River Wall, design

for other project features, and construction of Pool 2 relocations. Awarded contracts for miscellaneous Government furnished items for Charleroi Locks including: Miter Gates, Filling Valves, Floating Mooring Bits, Mooring Cells, Maintenance Bulkheads, and Sheet Piling.

Operations & Maintenance, General. In FY 2007, Charleroi upstream Lock Gates were replaced and the middle wall emptying valve was renovated for \$1,146,000. The lower approach to Braddock was dredged for \$387,000. Braddock repair upper 110' chamber gates for \$1,013,000. Lock 3 Mon River renovated downstream lock gates for \$602,000.

4. OPEN-CHANNEL WORK, OHIO RIVER

See this heading under Ohio River portion.

5. TYGART LAKE, WV

Location. Tygart Lake is located on the Tygart River in Taylor and Barbour Counties, north central WV. The lake is approximately 26 road miles due east of Clarksburg, WV and 30 road miles south of Morgantown. The dam is situated 22.7 river miles above the mouth of the Tygart River at Fairmont, or 2.25 miles upstream from Grafton, WV, and about 78 miles south of Pittsburgh, PA. (See Geological Survey Charts for Fairmont, Thornton, and Belington, WV.)

Existing Project. A reservoir for low water regulation and flood control. Dam is concrete gravity type with an uncontrolled center spillway flanked by abutment sections joining valley sides. Project was authorized by Public Works Administration January 11, 1934, and adopted by 1935 River and Harbor Act. For further project description see Annual Report for 1962. Authorized project is complete. Reservoir is in operation for low water control in Monongahela River and for purpose of flood protection in Monongahela and Ohio Valleys. Construction of dam was started in 1935 and placed in operation in 1938. Present project lands consist of 2,662.9 acres in fee, flowage easements over 1,216.9 acres and 1,731.9 acres of other easements. The project includes a Class C Visitor Center at the dam site and a day use picnic area outside the office, although no significant recreation exists on Corps managed land.

Tygart Dam was selected as a Dam Safety Assurance Project in March 1996. The Evaluation Report was initiated in March 1994 to address spillway capacity and structural stability in relation to the probable maximum flood event. Findings of the report concluded that under present conditions, the probable maximum flood would overtop the dam and cause failure. The report recommends protecting the dam from failure to include downstream erosion protection and stilling basin modifications. The Design Memorandum was completed in September 1998 and Plans and Specifications were completed in July 1999. The construction contract was advertised in August 1999 and awarded to Joseph B. Fay Co. on September 28, 1999 for \$5,628,929. The Notice to Proceed was

REPORT OF THE SECRETARY OF THE ARMY ON CIVIL WORKS ACTIVITIES FOR FY 2007

issued in October 1999 and work was completed in November 2002. The project features included construction of a new road to provide access to the left bank abutment of the dam, new concrete channels consisting of a concrete wall (end sill) and concrete slope paving on the downstream side of the dam, new concrete lagging retaining walls on the left and right banks of the dam, modification of the existing parapet wall, and minor repairs to the roadway decking. The project is now in compliance with current Dam Safety Guidelines.

Local Cooperation. The State of West Virginia has assumed responsibility for the development and operation of hunting and fishing areas as well as the Tygart Lake State Park. Controlled releases for downstream navigation and recreation are also coordinated with others to the extent feasible. No local cooperation is required at completed project; however, future recreational developments are subject to certain conditions of non-federal cost-sharing under Federal Water Project Recreation Act of 1965. A cost-sharing agreement was executed with the West Virginia Department of Recreation in May 1981.

Licenses. The Federal Energy Regulatory Commission granted a license to the City of Grafton for construction of a non-federal hydropower facility at this project (FERC license 11851). The deadline for the start of project construction originally expired in 1995. The developer was granted an extension which expired in 2004. The City of Grafton then submitted an application for a preliminary permit on 26 March 2004, which was denied on 07 February 2007, by FERC, and is currently being appealed by the City. However, a permit has currently been issued to "Tygart LLC".

Operations during Fiscal Year. Operations & Maintenance, General: Reservoir was operated for benefit of flood control and low water regulation, as required, and project structures were operated and maintained in a serviceable condition throughout the year. In FY 2002007, plans and specs were initiated for replacing the 7 dam service gates for \$52,000. Estimated flood control benefits achieved by this project for FY 2007 were \$1,163,000 and, revised to reflect damages prevented in downstream districts as well as Pittsburgh District, were \$1,153,618,000. Activities under reservoir management program comprising sanitation measures, conservation, land management, and operation and maintenance of public use facilities continued. This work was limited in scope as the State of West Virginia has jurisdiction over most of the recreation in the reservoir area.

6. OTHER AUTHORIZED NAVIGATION PROJECTS

See Table 18-C on other authorized navigation projects.

Flood Control - Local Protection

7. ELKINS, WV

Location. On Tygart River in north central

Randolph County, WV, about 155 miles south of Pittsburgh, PA. It is at downstream end of a long, broad reach of upper Tygart Valley, about 75 miles above mouth of river. (See Geological Survey Chart for Elkins, WV.)

Existing Project. Provides flood protection by diverting flood discharges from upstream arm of loop of natural river channel into an artificial cutoff channel, thereby bypassing City of Elkins. Improvement is designed to accommodate discharges equivalent to maximum flood of reasonable expectancy. Project construction was started in May 1946 and completed in May 1949. Completed work, except that portion of channel maintained by federal government, has been operated and maintained by City of Elkins since March 31, 1949. Present project lands consist of 32.04 acres in fee and 526.01 acres in easements. Project was authorized by 1938 Flood Control Act. For further project description see Annual Report for 1962, page 1222. Federal cost of completed project was \$1,772,627; estimated non-federal cost for lands, easements, and rights-of-way was \$40,000.

Local Cooperation. Fully complied with.

Operations during Fiscal Year. Operation & Maintenance, General: routine investigations routine investigations and inspections were made. Project was inspected in 2007. Total benefits through September 2006, revised to reflect damages prevented in downstream districts as well as Pittsburgh District, were \$23,936,000.

8. JOHNSTOWN, PA

Location. Project is located in southwestern Cambria County, PA, about 58 miles east of Pittsburgh, PA. It is in a deep and comparatively narrow valley at junction of Stoney Creek and Little Conemaugh River, which unite to form Conemaugh River. (See Geological Survey Chart for Johnstown, PA.)

Existing Project. Provides for increased channel capacity by enlarging and realigning channels and protecting banks with concrete pavement. Improvement designed to accommodate discharges equivalent to those of March 1936 flood, maximum natural flow of record, and minimum of over-bank flow and to practically eliminate damages there from. Project construction began in August 1938 and was completed in November 1943. Footer protection for Unit 4 was completed in November 1949. Present project lands consist of easements over 199 acres. Project was authorized by Flood Control Acts of 1936 and 1937. For further project description see Annual Report for 1962, page 1215.

The Project Design Memorandum was approved in June 1995. The major rehabilitation work is to be accomplished under the Construction, General (CG) appropriation at an estimate cost of \$32,500,000. Contract plans and specifications were initiated in July 1995. The CG project was physically complete in September 2004 at a cost of \$30,000,000.

The Construction, General work consisted of the repair of 54 existing wall sections, slope paving and replacement of balustrade (safety) wall. Also included

PITTSBURGH, PA DISTRICT

in the major rehabilitation is all the necessary Operation and Maintenance (O&M) funded work. The O&M work estimated to cost \$7,500,000 consists of concrete spall repairs, slope paving joint repairs, sediment removal and miscellaneous repairs. \$2,535,047 of O&M funded work was completed in FY 2005 and about \$3,000,000 of O&M funded work remains to be complete subject to availability of funds.

The FY 1991 Energy and Water Resources Development Appropriations Act authorized and directed the Corps to undertake a major rehabilitation of the existing project.

Local Cooperation. The rules of local cooperation for the rehabilitation of the existing project are governed by the FY 1991 Energy and Water Resources Appropriations Act. Pursuant to this act, the City of Johnstown will have a limited role in securing the needed rights of access to non-federal structures included in the line of protection and will hold and save the United States from damages due to construction or operation and maintenance of the work on the non-federal structures, except for damages due to the fault or negligence of the United States or its contractors.

Operations during Fiscal Year. Operations & Maintenance, General: In FY 2007, routine inspections and investigations were made. Plans and specifications were initiated for a flood wall replacement and channel maintenance. Total flood damages prevented by the project through September 30, 2007 were estimated to be \$805,349,000.

9. PUNXSUTAWNEY, PA

Location. Borough of Punxsutawney is on Mahoning Creek in Jefferson County, PA, about 85 miles northeast of Pittsburgh, PA. It is on a comparatively wide, alluvial flood plain about 52 miles above mouth of stream and 30 miles above Mahoning Creek flood control dam. (See Geological Survey Charts for Punxsutawney and Smicksburg, PA.)

Existing Project. Provides flood protection by channel enlargement, dikes, and walls. Improvement is designed to accommodate discharges 20% greater than that of maximum flood of record. Construction was accomplished by construction of four units. Construction started in May 1946 and was completed in June 1950. Present project lands consist of perpetual easements over 72.6 acres. Completed works, except that portion of channel maintained by the Federal government, have been operated and maintained by Borough of Punxsutawney since July 31, 1950. Project was authorized by 1938 Flood Control Act. For further project description see Annual Report for 1962, page 1209.

Local Cooperation. Fully complied with.

Operations during Fiscal Year. In FY 2007 operation activities continued and routine investigations and inspections were made. Project was inspected in 2007. The estimated flood control benefits in 2006 were \$472,000; total flood control benefits through September 2006 were \$98,684,000.

10. SAW MILL RUN, PITTSBURGH, PA

Location: The project is located within the City of Pittsburgh, Allegheny County, at Ohio River mile 0.7 and traverses upstream from the mouth of Saw Mill Run approximately 4,700 L.F.

Existing Project: The proposed project was authorized in the 1986 WRDA in accordance with the Chief of Engineers report dated January 30, 1978. The 1996 WRDA increased the project estimate to \$12,780,000 and increased to \$22,000,000 in the FY04 Appropriations Act. This project was included in the FY97 appropriations as a new construction start.

In October 1997, a Project Cooperation Agreement was executed with the City of Pittsburgh. In June 1998, the District executed a Memorandum of Agreement (MOA) for the purpose of allowing the District to acquire the real estate and complete relocation work on behalf of the city. With the MOA executed and the funds for this effort transferred to the District in July 1998, real estate acquisition was initiated, and was completed in November 2000. Plans and specifications for the project were completed in March 2000 and the construction contract was advertised in November 2000. The contract was awarded in April 2001 for \$12,881,875. The current construction contract was completed in May 2004 and turned over to the City of Pittsburgh for operation and maintenance responsibilities in June 2004.

Local Cooperation: The City of Pittsburgh is the local sponsor for this project and is responsible for real estate acquisition and relocation design and construction. The project will be cost shared 75% federal and 25% non-federal in accordance with the requirements of the 1986 WRDA.

Operations during Fiscal Year: Due to contract overruns and unforeseen conditions certain project features were deleted from the existing construction contract in order to maintain project cost within funding constraints. The project was completed to a 5-year level of protection in 2006. The plans and specifications were completed in 2007 and included a base contract with two options. Construction to complete the project to the authorized 20 year level of protection is scheduled to start in 2008.

11. WEST VIRGINIA & PENNSYLVANIA FLOOD CONTROL

Location. Projects under this program in the Pittsburgh District are located in the Tygart River Basin in West Virginia and the lower Allegheny River in Pennsylvania. The priority (named in the legislation) communities located in West Virginia are Phillipi, Belington, Parsons and Rowlesburg. The priority communities in Pennsylvania are New Bethlehem, Clymer, Benson, Hooversville, Meyersdale, Connellsville and Dubois. Section 581 of the Water Resources Development Act of 1996 authorizes the Secretary of the Army to design and construct flood control measures for these priority communities at a level of protection sufficient to prevent future losses from flooding equivalent to that which occurred in

REPORT OF THE SECRETARY OF THE ARMY ON CIVIL WORKS ACTIVITIES FOR FY 2007

January 1996, but at least no less than a 100 year level of protection. Project development will consist of developing a least cost plan including structural and/or non-structural elements, to provide the authorized level of protection without guard to a benefit/cost ratio.

Local Cooperation. The reconnaissance phase is 100% federally funded. The Detailed Project Report (DPR), Plans and Specifications and Construction phases are cost shared at 65% federal funds and 35% non-federal funds. A Design Agreement is required to design efforts and a Project Cooperation Agreement is required prior to the project construction. In September 1998, Director of Civil Works, HQUSACE, approved the District's request for a waiver of the up-front cost sharing for the design portion of the West Virginia projects. The basis for the approval of the waiver was that the priority communities in West Virginia qualified for a reduced cost share (5%) based on the ability to pay provisions of Section 103(m) of the Water Resources Development Act of 1986.

In Pennsylvania, the General Management Plans for the seven communities were completed in January 1999. Project Study Plans (PSP) for the seven communities was completed in July 2000. Design Agreements are being prepared and current plans call for the execution of these agreements pending the local sponsors' ability to obtain the non-federal cost share. Design Agreements were executed for the Meyersdale and Hooversville projects in FY 2001.

In West Virginia, the PSPs for the two communities were completed in September 1998 and approved in November 1998. Since no Design Agreement is required for these communities, work on the Detailed Project Reviews started in December 1998. Least cost plans and locally preferred plans for both communities have been developed. A decision to implement a Flood Warning System for the two communities as the first phase of the projects was made in September 1999. An interim DPR for the Flood Warning System was submitted in November 2001. Installation of the Flood Warning System was completed. The Philippi DPR was completed in FY 2004 and approved in FY 2005.

Operation during Fiscal Year. In Pennsylvania, a Detailed Project Report was executed for the Clymer Project.

In West Virginia, Design Phase continued for Philippi. Design the Philippi project.

Flood Control – Reservoirs

12. BERLIN LAKE, OH

Location. Dam is on Mahoning River about 73 miles above its confluence with Shenango River. It is about 10 miles above existing Milton Reservoir Dam and 35 miles upstream from Warren, Ohio. Reservoir is in Portage, Mahoning and Stark Counties, OH. (See Geological Survey charts for Warren, Ravenna, and Alliance, OH.)

Existing Project. A reservoir for flood control and water supply. Dam consists of a partially controlled, concrete gravity, center spillway flanked by rolled-earth

fill abutment sections joining valley sides. Authorized project is complete and in operation for flood control and low water regulation purposes in industrialized Mahoning Valley below. Construction of dam was started in January 1942 and completed in June 1943. Present project lands consist of 6,885.3 acres in fee and 1,098.7 acres in easements. For further project description, see Annual Report for 1962, page 1233.

Local Cooperation. None required at completed project; however, future recreational developments are subject to certain conditions of non-Federal cost-sharing under Federal Water Project Recreation Act of 1965.

Operations during Fiscal Year. Operations & Maintenance, General: Reservoir was operated as required and necessary repairs were made to structures and appurtenances in FY 2007. Estimated flood control benefits achieved by this reservoir for FY 2007 were \$91,640,000; total flood control benefits through September 2007 were \$1,092,618,000.

13. CONEMAUGH RIVER LAKE, PA

Location. Dam is on Conemaugh River in Indiana and Westmoreland Counties, PA, 7.5 miles above junction of Conemaugh River and Loyalhanna Creek, which form the head of the Kiskiminetas River. It is about 2 miles northeast of Tunnelton, PA, and about 42 miles east of Pittsburgh, PA. Reservoir is in Westmoreland and Indiana Counties, PA. (See Geological Survey Charts for Latrobe, New Florence and Elders Ridge, PA.)

Existing Project. A flood control reservoir dam of concrete gravity type with a gate-controlled center spillway flanked by abutment sections joining valley sides and an earth embankment ending in right abutment. Authorized project is complete. Reservoir system is designed for protection of Pittsburgh and reduction of flood heights in upper Ohio Valley, generally. Present project lands consist of 7608.7 acres in fee and 522.8 acres in easements. Project authorized by Flood Control Acts of 1936 and 1938. For further project description see Annual Report for 1962, page 1217.

Local Cooperation. None required by law.

Licenses. A non-federal hydropower project utilizing Conemaugh Lake was constructed downstream of the dam under FERC Licenses 3207. The 15-megawatt project began commercial operation on February 6, 1989. It is owned by National Renewable Resources, Inc.

Operations during Fiscal Year. Operation & Maintenance, General: In FY 2007, flood capacity reduction sediment survey was initiated \$6,000. Reservoir was operated for benefit of flood control as required, and necessary repairs were made to structures and appurtenances. Estimated flood control benefits achieved by this reservoir for FY 2007 were \$15,527,000; total flood control benefits through September 2007, revised to reflect damages prevented in downstream districts as well as Pittsburgh District, were \$2,144,930,000. Activities under reservoir management program comprising sanitation measures,

PITTSBURGH, PA DISTRICT

conservation, land management and operation and maintenance of public use facilities were continued.

14. CROOKED CREEK LAKE, PA

Location. Dam is on Crooked Creek 6.7 miles above junction of creek with Allegheny River near Ford City, PA, and about 32 miles northeast of Pittsburgh, PA. (See Geological Survey Charts for Freeport and Elders Ridge, PA.)

Existing Project. A flood control reservoir dam of earth-fill type with separate uncontrolled saddle spillway and tunnel outlet works. Authorized project is complete. Reservoir is in operation as a unit of a coordinated reservoir system designed for protection of Pittsburgh and reduction of flood heights in upper Ohio Valley, generally. Construction of dam was started in March 1938 and completed in October 1940. Present project lands consist of 2,561.7 acres in fee and 100.22 acres in easements. Project was authorized by Flood Control Acts of 1936 and 1938. For further project description see Annual Report for 1962, page 1213.

Local Cooperation. None required by law

Operations during Fiscal Year. Operations & Maintenance, General: Reservoir was operated for benefit of flood control, as required and necessary repairs were made to structures and appurtenances. The lease with Manor Township for the Armstrong Horse Park remained in effect. Congress has mandated the transfer of 97.48 acres of fee land to Manor Township for operation of the Armstrong Horse Park. Estimated flood control benefits achieved by this reservoir for FY 2007 were \$2,344,000; total benefits achieved through September 30, 2007, revised to reflect damages prevented in down stream districts as well as Pittsburgh District, were estimated at \$537,348,000. Activities under reservoir management program comprising sanitation measures, conservation, land management, and operation and maintenance of public-use facilities continued.

15. EAST BRANCH, CLARION RIVER LAKE, PA

Location. Dam is in Elk County, PA on East Branch of Clarion River above Middle Fork, 7.3 miles above junction of East and West branches of Clarion River at Johnsonburg, PA, and about 105 miles northeast of Pittsburgh, PA. Reservoir is in Elk County, PA. (See Geological Survey Chart for Mount Jewett, PA.)

Existing Project. A reservoir for flood control and low-water regulation. Dam is rolled-earth fill type with gate-controlled concrete tunnel under right abutment and a paved uncontrolled spillway on left abutment slope. Authorized project is complete. Reservoir is in operation for low-water regulation purposes in Clarion River Valley below and for flood control as a unit of a coordinated reservoir system for protection of Pittsburgh and upper Ohio Valley, generally. Construction of dam was started in June 1947 and completed in July 1952. Present project lands consist of 287.2 acres in fee and 1,296.7 acres in easements.

Project was selected for construction under general authorization for Ohio River Basin in Flood Control Acts of 1938 and 1944. For further project description. See Annual Report for 1962, page 1206.

Local Cooperation. None required by law.

Operations during Fiscal Year. Operations & Maintenance, General: reservoir was operated for flood control and low-water regulation, as required; and necessary repairs were made to structures and appurtenances. Volunteers continued to apply limestone sand to tributary streams in an effort to neutralize acid mine drainage into the lake. For the past 7 years, the East Branch Habitat Group (formerly the Elk County Fishermen and Watershed Group) has installed fish habitat structures in the lake under the guidance of the Pennsylvania Fish and Boat Commission's Adopt-A-Lake Program. Thirty of thirty one camp sites have been redesigned and/or enlarged with sixteen of the sites having 20/30/50 amp electrical service installed. Nine "walk-in" tent sites are planned when funding becomes available which will bring the total campsites available to the authorized forty-one campsites.. Some reservoir management activity was performed throughout the year comprising sanitation measures, conservation, land management and operation of public-use facilities. Estimated flood control benefits achieved by this reservoir for FY 2007 were \$2,393,000; Total flood control benefits for this reservoir through September 30, 2007 were \$83,963,000.

16. KINZUA DAM & ALLEGHENY RESERVOIR, PA & NY

Location. Dam site is on Allegheny River 7 miles above Warren, PA, and 198 miles above mouth of river at Pittsburgh, PA. Reservoir is in Warren and McKean Counties, PA, and Cattaraugus County, NY. (See Geological Survey Charts for Warren and Kinzua, PA-NY, and Randolph and Salamanca, NY.)

Existing Project. Reservoir provides flood control, low water regulation and recreation. Dam consists of a combination concrete gravity structure and rolled earth embankment with gate-controlled spillway and discharge conduits controlled by slide-gates in gravity section. Construction of project, initiated in February 1960, is complete. Construction of dam was started in September 1960 and completed in December 1965. Development of recreation area at Onoville under a cost-sharing agreement with Cattaraugus County was completed in June 1978. Present project lands consist of 2,646 acres in fee and easements over 22,420.0 acres. For further details see Annual Report for 1962, page 1202. Project was authorized by Flood Control Acts of 1936, 1938 and 1941.

Local Cooperation. None required by law.

Licenses. The Federal Power Commission granted a license to Pennsylvania Electric Company and Cleveland Electric Illuminating Company on December 28, 1965, for the joint construction, operation and maintenance of a 435-megawatt pumped-storage installation (FPC Project No. 2280). The project is

REPORT OF THE SECRETARY OF THE ARMY ON CIVIL WORKS ACTIVITIES FOR FY 2007

complete. Present ownership is with First Energy Corporation.

Operations during Fiscal Year. Operations and Maintenance, General: In FY 2007, the dam sump pumps were replaced for \$147,000. Reservoir was operated for benefit of flood control, hydropower, fish and wildlife, recreation and low water regulation, as required and necessary repairs were made to structures and appurtenances. Estimated flood control benefits achieved by this reservoir for FY07 were \$49,798,000. Total flood control benefits for this reservoir through September 30, 2007 were \$1,181,770,000.

17. LOYALHANNA LAKE, PA

Location. Dam is on Loyalhanna Creek, 4.5 miles above junction of creek with Conemaugh River at Saltsburg, PA, and about 29 miles east of Pittsburgh, PA. Reservoir is in Westmoreland County PA. (See Geological Survey Chart for Latrobe, PA).

Existing Project. A flood control reservoir dam of concrete gravity type with a gate-controlled center spillway flanked by abutment sections joining valley sides, and an earth embankment section ending in left abutment. Authorized project is complete. Reservoir is in operation as a unit of a coordinated reservoir system designed for protection of Pittsburgh and reduction of flood heights in upper Ohio Valley, generally. Construction of dam was started in October 1939 and completed in June 1942. Present project lands consist of 3,330.8 acres in fee and easements over 86.7 acres. Project was authorized by Flood Control Acts of 1936 and 1938. For further project description see Annual Report for 1962, page 1219.

Local Cooperation. None required by law.

Operations during Fiscal Year. Operations & Maintenance, General: In FY 2007, the reservoir was operated for benefit of flood control, as required and necessary repairs were made to structures and appurtenances. Estimated flood control benefits achieved by this project for FY 2007 were \$2,721,000. Total benefits for this reservoir through September 30, 2007 were \$517,135,000. Activities under reservoir management program comprising sanitation measures, conservation, land management and operation and maintenance of public use facilities continued.

18. MAHONING CREEK LAKE, PA

Location. Dam is on Mahoning Creek in Armstrong County, PA, 22.9 miles above junction of creek with Allegheny River. It is about 6.50 miles southeast of New Bethlehem, PA, and about 51 miles northeast of Pittsburgh, PA. Reservoir is in Armstrong, Indiana and Jefferson Counties, PA. (See Geological Survey Charts for Rural Valley and Smicksburg, PA).

Existing Project. A flood control reservoir dam of concrete gravity type with a gate-controlled center spillway flanked by abutment sections joining valley sides. Authorized project is complete. Reservoir is in operation as a unit of a coordinated reservoir system designed for protection of Pittsburgh and reduction of flood heights in upper Ohio Valley, generally.

Construction of dam started in February 1939 and was completed in June 1941. Present project lands consist of 2,519.36 acres in fee and easements over 83.5 acres. Project was authorized by Flood Control Acts of 1936 and 1938. For further project description see Annual Report for 1962, page 1210.

Operations during Fiscal Year. Operations & Maintenance, general: Reservoir was operated for benefit of flood control, as required and necessary repairs were made to structures and appurtenances. In FY 2007, estimated flood damages prevented by this project were \$4,382,000; total benefits through September 30, 2007, revised to reflect damages prevented in downstream districts as well as Pittsburgh District, were \$666,916,000. Activities under reservoir management program comprising sanitation measures, conservation, land management and operation and maintenance for public-use facilities continued.

19. MICHAEL J. KIRWAN DAM & RESERVOIR, OH

Location. Dam site is on West Branch of Mahoning River which joins Mahoning River at Newton Falls, OH. It is 11 miles above mouth of branch and about 15 miles upstream from Warren, OH. Reservoir is in Portage County, OH. (See Geological Survey Charts for Ravenna, Garrettsville, Chagrin Falls, and Kent, OH.)

Existing Project. Reservoir provides flood control, low-water regulation and recreation. Dam consists of a rolled-earth embankment structure with gate-controlled outlet works and an uncontrolled side-hill spillway through left abutment. Authorized project is completed and in operation for flood control and low water regulation purposes. Present project lands consist of 6,298.9 acres fee and easements over 27.9 acres. For further description see Annual Report for 1962, page 1231 (West Branch Reservoir, Mahoning River, Ohio). Project was authorized by 1958 Flood Control Act (H. Doc. 191, 85th Cong. 1st sess.), with local contribution requirements modified by Flood Control Act of 1960. Federal costs of completed project are \$17,370,000. Local interests contributed \$3,230,000 during period of construction bringing initial project cost to \$20,600,000. The State of Ohio has a lease from the Secretary of the Army for development and operation of recreation facilities in the reservoir area.

Local Cooperation. Local interests must contribute \$5,200,000 for water pollution abatement and for municipal and industrial water supply purposes, of which \$3,230,000 was paid in cash during construction. Unpaid balance at time project is placed in operation, \$1,970,000, will be paid in cash at that time or on an annual basis. Of the unpaid balance of contributed funds due and payable, payment in full of Trumbull County's share in the amount of \$663,040 has been received. Mahoning County elected to pay their share (\$1,306,960) in 50 annual installments of \$50,323.32, including interest.

Operations during Fiscal Year. Operations & Maintenance, General: Reservoir was operated for benefit of flood control and low-flow augmentation, as required and necessary repairs were made to structures

PITTSBURGH, PA DISTRICT

and appurtenances. Estimated flood control benefits achieved by this project for FY 2007 were \$32,430,000. Total benefits for this reservoir through September 30, 2007 were \$521,261,000. Activities under reservoir management program comprising sanitation measures, conservation, land management, and operation and maintenance of public-use facilities continued. This work was limited in scope as state of Ohio has jurisdiction over most of the recreation in reservoir area.

20. MOSQUITO CREEK LAKE, OH

Location. Dam is on Mosquito Creek, 12.6 miles above junction of creek with Mahoning River at Niles, OH, and about 18 miles northwest of Youngstown, OH. (See Geological Survey Charts for Bristolville and Kinsman, OH, and PA.)

Existing Project. A reservoir for flood control, low-water regulation and water supply storage. Dam is rolled-earth fill type with outlet facilities through dam, and an uncontrolled natural wasteway to discharge overflow from reservoir. Authorized project is complete and in operation for flood control and low-water regulation purposes in industrialized Mahoning and Beaver Valleys below. Construction of dam was started in July 1943 and was ready for beneficial use in January 1944. Present project lands consist of 11,180.4 acres in fees and easements over 276.0 acres. State of Ohio has a license from Secretary of the Army for development and operation of recreation facilities in reservoir area. Project was selected for construction under general authorization for Ohio River Basin in 1938 Flood Control Act. For further project description see Annual Report for 1962, page 1228.

Local Cooperation. There is a water supply agreement with the City of Warren for municipal and industrial water storage in an amount equal to 11.1% of total reservoir storage. The City makes annual payments for this storage. No other local cooperation is required at completed project; however, future recreational developments are subject to certain conditions of non-Federal cost-sharing under Federal Water Project Recreation Act of 1965.

Operations during Fiscal Year. Operation & Maintenance, General: Reservoir was operated for benefit of flood control and low-flow regulation as required and necessary repairs were made to structures and appurtenances. Plans and specs were initiated for automating the gate controls and electrical rehab in the control tower for \$78,000. Estimated flood control benefits achieved by this reservoir for 2007 were \$19,955,000. Total flood control benefits for this reservoir through September 30, 2007 were \$218,268,000. Activities under reservoir management program comprising sanitation measures, conservation, land management and operation and maintenance of certain public-use facilities continued. This work was limited in scope as State of Ohio has jurisdiction over most of the recreation in reservoir area.

21. OHIO RIVER BASIN (PITTSBURGH DISTRICT)

Location. A series of dikes, floodwalls, channel improvements, and reservoirs/lakes in Ohio River Basin within Pittsburgh District.

Existing Project. Individual projects considered in comprehensive plan within Pittsburgh District. (See Tables 18-B, 18-E and 18-K on Acts authorizing existing projects, local protection projects and reservoirs.)

Operations during Fiscal Year. New Work: none by the United States except as stated in individual projects. Completed local protection projects operated and maintained by local interests, including those projects for which individual reports have been included.

22. SHENANGO RIVER LAKE, PA & OH

Location. Dam is on Shenango River about 0.8 mile above Sharpsville, PA, and about 33 miles above junction of river with Mahoning River, which unite near New Castle, PA, to form Beaver River. Reservoir is in Mercer County, PA and Trumbull County, OH. (See Geological Survey Chart for Kinsman, OH, and Shenango, PA.)

Existing Project. A reservoir for flood control, low-flow augmentation and recreation. Dam consists of a concrete gravity structure with gate-controlled outlet works and an uncontrolled center spillway section. Authorized project is complete. Reservoir is in operation for low-water regulation purposes in Shenango River valley below and for flood control as a unit of a coordinated reservoir system for protection of Shenango River valley and the Beaver and upper Ohio River Valley, generally. Construction of dam was started in March 1963 and completed in May 1965. Present project lands consists of 14,485.94 acres in fee and easements over 198 acres. Approximately 65.94 acres in abandoned railroad right-of-way were acquired for project use. Future work consists of completion of project lands of any additional recreation facilities as required to serve the public needs. For further project description, see Annual Report for 1962, page 1230. Project was authorized by 1938 Flood Control Act.

Local Cooperation. None required by law.

Operations during Fiscal Year. Operations and Maintenance, General: Reservoir was operated for benefit of flood control and low-flow augmentation, as required and necessary repairs were made to structures and appurtenances. In FY 2007, a new tertiary filter for the Shenango Recreation Area sewage treatment plant was purchased for \$136,000. Estimated flood control benefits achieved by this reservoir for FY 2007 were \$6,190,000; Total flood control benefits for this reservoir through September 30, 2007 were \$146,923,000. Continuing activities under the reservoir management program are comprised of sanitation measures, conservation, land management and operation and maintenance.

23. STONEWALL JACKSON LAKE, WV

Location. In Lewis County, North Central West Virginia, on the West Fork River, which joins the Tygart River at Fairmont, WV to form the Monongahela River. Dam site is located on Route 30 at Brownsville, WV, about 4 miles south of Weston and 72 miles above mouth of West Fork River at Fairmont, WV. (See Geological Survey Charts for Weston and Crawford, WV.)

Existing Project. Provides for construction of a reservoir for flood control, water supply, water quality control, area redevelopment and recreation. Dam is concrete gravity type, 95' high and 620' long. Outlet works consist of two multi-level sluices and three fixed-level sluices, spillway is uncontrolled. Storage capacity is 74,650 acre-feet controlling an area of 102 square miles. A station hydropower plant completed in 1995 supplies power to the dam, with excess power being sold to an electric utility company. Project was authorized by 1966 Flood Control Act. Estimated initial federal cost for new work (1991) is \$231,000,000 (includes an estimated \$24,900,000 reimbursement by non-federal interests.) Present project lands consist of 20,451 acres in fee and easements over 398 acres.

The Corps worked with the State of West Virginia to revise the Master Plan to incorporate higher revenue producing recreation facilities, including a lodge, golf course, cabins and camping. The revised Master Plan was approved by the Corps in 1992. The FY92 Energy and Water Development Appropriations Act allow the state cost-sharing credits for all of these facilities except the golf course. In March 1994, the State and the Assistant Secretary of the Army for Civil Works executed an amendment to the 1977 Stonewall Jackson Lake Recreation Cost-Sharing Contract to reflect these credits.

The state must design and build the approved remaining recreation facilities by March 2006, in accordance with the schedule and conditions set forth in the amended contract. The state broke ground in July 2001 for the \$50,000,000 Stonewall Resort, which includes a 200-room lodge, conference center, spa, cabins and more camping areas, in addition to a championship 18-hole golf course that is not eligible for cost share credit. By the end of FY 2002, the state had essentially completed and opened to the public all facilities except miscellaneous recreation facilities. The District is currently completing miscellaneous real estate actions related to the original construction with the project

Local Cooperation. The reservoir contains 2,200 acre feet of storage designated for the purpose of municipal and industrial water storage. The storage is not under contract and there are no prospects of near-term water supply agreements. In accordance with the Federal Water Project Recreation Act local interests are required to administer project land and water areas for recreation and fish and wildlife enhancement to make arrangements for repayment, under the provisions of the Water Supply Act of 1958, as amended, of that part of the construction cost and annual operation, maintenance and replacement costs allocated to municipal and industrial water supply, an amount presently estimated

at \$4,350,000 for construction; and \$15,000 annually for operations, maintenance and replacements. Also, in accordance with Federal Water Project Recreation Act, local interests are required to administer project land and water areas for recreation and fish and wildlife enhancement, pay, contribute in kind or repay (which may be through user fees) with interest, one-half of the separable first costs of the reservoir project allocated to recreation and fish and wildlife enhancement, an amount presently estimated at \$24,810,000, bear all costs of operation, maintenance and replacement of recreation and fish and wildlife land and facilities, the amount involved being currently estimated on an average annual basis to be \$457,000, exercise to the full extent of their legal capability, control against removal of stream flow made available for water quality control; and contribute to the control of pollution of streams subject to low-flow augmentation by adequate treatment or other methods of controlling wastes at their source. The requirements of Section 221 were amended in 1971 to exempt assurances for future demands for water supply pursuant to the Water Supply Act of 1958 from the contractual requirements of the Act. Accordingly, the city of Weston, WV has provided assurances that it will enter into a water supply contract with the Department of the Army within a period of time which will permit paying out the costs allocated to the water supply storage within the life of the project. A recreation cost-sharing contract, in accordance with the requirements of the Federal Water Project Recreation Act, PL 89-72, was executed by the State of West Virginia on March 27, 1977. Local cooperation assurances for recreation cost-sharing were executed by the Governor and Attorney General of West Virginia on May 29, 1973. In this connection, Section 8 of PL 92-222 deleted the requirement that the State of West Virginia "hold and save the United States free from damages resulting from water rights claims due to construction and operation of the project." Legislation relieving Stonewall Jackson Lake, WV, project of the requirements of Section 221, PL 96-611 was contained in Water Resources Development Act of 1974 signed by the President on March 7, 1974.

Operations during Fiscal Year. Operations and Maintenance, General: Reservoir was operated for benefit of flood control and low-flow augmentation, as required and necessary repairs were made to structures and appurtenances. Estimated flood control benefits achieved for this project for FY 2007 were \$8,153,000; total flood control benefits through September 30, 2007, were \$163,130,000. Activities under reservoir management program comprising sanitation measures, conservation, land management, and operation and maintenance of public-use facilities continued. This work was limited in scope as State of West Virginia has jurisdiction over most of the recreation in reservoir area.

24. TIONESTA LAKE, PA

Location. Dam is on Tionesta Creek, 1.25 miles above junction of creek with Allegheny River at Tionesta, PA, and about 78 miles northeast of Pittsburgh, PA. Reservoir is entirely in Forest County,

PITTSBURGH, PA DISTRICT

PA. (See Geological Survey Charts for Tionesta, Tidioute and Sheffield, PA.)

Existing Project. A flood control reservoir dam of earth fill type with separate uncontrolled saddle spillway and tunnel outlet works. Authorized project is complete. Reservoir is in operation as a unit of a coordinated reservoir system designed for protection of Pittsburgh and reduction of flood heights in upper Ohio Valley, generally. Construction of dam was started in May 1938 and completed in January 1941. Present project lands consists of 2,794.77 acres in fee and easement over 13.1 acres. Approximately 2.53 acres of fee were disposed at the project. Future work consists of provision on project lands of additional recreational facilities as required to serve public needs. Project was authorized by Flood Control Acts of 1936 and 1938. For further project description see Annual Report for 1962, page 1203.

Local Cooperation. None required by law.

Operations during Fiscal Year. Operation & Maintenance, General: reservoir was operated for benefit of flood control, as required and necessary repairs were made to structures and appurtenances. Estimated flood control benefits achieved for this project for FY 2007 were \$13,694,000; total flood control benefits through September 30, 2007, were \$536,630,000. Activities under reservoir management program comprising sanitation measures, conservation, land management and operation and maintenance of public-use facilities continued.

25. UNION CITY DAM, PA

Location. In Erie County, northwestern PA, on French Creek, a tributary of Allegheny River. Dam site is 24 miles upstream from Cambridge Springs, PA, and 41 miles upstream from Meadville, PA. (See Geological Survey Chart for Union City, PA - NY.)

Existing Project. A flood control reservoir dam of earth embankment non-gated type with uncontrolled side-channel spillway. Outlet works consist of a lower outlet located in valley floor constructed of reinforced concrete conduit 8' by 4.5' and an upper outlet consisting of an uncontrolled slot 9.5' wide through the north end of the ogee weir in the spillway. Dam is 1,420' long at top rising 88' above streambed and provides gross capacity of 47,640 acre-feet from a drainage area of 222 square miles. Project authorization was modified to provide for a conservation pool and addition of recreation facilities. On November 5, 1974, a referendum proposal was defeated by the constituents of Erie County in regard to the cost-sharing for construction of recreation facilities. In view of the foregoing, all action toward implementation of the authorized project modification was discontinued. Reservoir is operated as one of a two-reservoir system for reduction of flood stages in French Creek Basin between dam site and mouth, Allegheny River from Franklin, PA, to Pittsburgh, PA, inclusive, and upper Ohio River Valley. Initial highway relocations were completed in October 1968 and remaining highway relocations were completed in May 1972. Construction of the dam was started in July 1968 and completed in

September 1971. Present project lands consist of 161.4 acres in fee and easements over 2,410.29 acres. Existing project was authorized by 1962 Flood Control Act.

Local Cooperation. Local interests are required to inform affected interests in French Creek Basin at least annually, that the system of reservoirs of which Union City Dam is a part, will not provide protection against maximum floods. On November 10, 1964 the Department of Forests and Waters of the Commonwealth of Pennsylvania furnished formal assurances of local cooperation in respect to notifying local interests at least annually that the system of reservoirs will not provide protection against maximum floods. A referendum on the ballot during the November 1974 election regarding the approval to cost-share the maintenance of a summer pool was defeated by the local voters.

Operations during Fiscal Year. Operation & Maintenance, General: maintenance of the structure and appurtenances was performed as required. This dam acted as an uncontrolled detention type dam during the fiscal year. Estimated flood control benefits achieved for this project for FY 2007 were \$7,232,000; Total flood control benefits for this reservoir through September 30, 2007, revised to include downstream districts, were \$67,347,000.

26. WOODCOCK CREEK LAKE, PA

Location. In Crawford County, northwestern PA, on Woodcock Creek, a tributary of French Creek. Dam site is about 4.1 miles above mouth of Woodcock Creek and about 5 miles northeast of Meadville, PA. (See Geological Survey Chart for Meadville, PA.)

Existing Project. A flood-control reservoir dam of rolled-earth embankment type, gate-controlled outlet works with a 6 foot-wide by 7.75 foot-high conduit and uncontrolled saddle spillway on the left abutment. Dam is 4,650' long at top rising 90' above streambed and provides for gross capacity of 20,000 acre-feet from a drainage area of 46 square miles. Reservoir is operated as one of a two-reservoir system for reduction of flood stages in French Creek Basin between dam site and mouth. Allegheny River from Franklin, PA, to Pittsburgh, PA, inclusive, and upper Ohio River Valley. Authorized project is complete. Construction of dam was started in July 1970 and completed in July 1973. Land acquired for project consists of 1,731.5 acres in fee and easements over .56 acres. Project was authorized for flood control and recreation by 1962 Flood Control Act. Storage for water quality control was added to the project during the preconstruction planning stage.

Local Cooperation. Local interests must inform affected interests in French Creek Basin at least annually, in a manner satisfactory to District Engineer, that a system of reservoirs of which Woodcock Creek is a part, will not provide protection against maximum floods. Pennsylvania Department of Forests and Waters assumed responsibility of local cooperation for project.

Operations during Fiscal Year. Operation & Maintenance, General: maintenance of the structure

REPORT OF THE SECRETARY OF THE ARMY ON CIVIL WORKS ACTIVITIES FOR FY 2007

and appurtenances was performed as required.. Estimated flood control benefits achieved by this project for FY 2007 were \$1,439,000; Total flood control benefits achieved by this project through September 30, 2007, revised to include downstream districts were \$31,249,000. Activities under reservoir management program comprising sanitation measures, conservation, land management and operation and maintenance of public use facilities continued.

27. YOUGHIOGHENY RIVER LAKE, PA & MD

Location. Dam is on Youghiogheny River about 74.2 miles above its junction with Monongahela River at McKeesport, PA. It is 1.2 miles upstream from Confluence, PA, and about 57 miles southeast of Pittsburgh, PA. Reservoir is in Fayette and Somerset Counties, PA, and Garrett County, MD. (See Geological Survey Charts for Confluence, PA, Accident, MD, West Virginia and Pennsylvania.)

Existing Project. Reservoir for flood control, low-flow augmentation, pollution abatement, and recreation purposes. Dam is rolled-earth fill type with separate uncontrolled side channel spillway and tunnel outlet works. Authorized project is complete. For flood control, reservoir is operated as a unit of a coordinated reservoir system designed for protection of Pittsburgh and reduction of flood heights in upper Ohio Valley, generally. Construction of dam was started in June 1940 and completed in May 1944. Present project lands consist of 3,914.9 acres in fee and easements over 0.62 acres.

Project was selected for construction under general authorization for Ohio River Basin in 1938 Flood Control Act. For further project description see Annual Report for 1962, page 1223.

Local Cooperation. None required.

Licenses. A non-federal hydropower project utilizing releases from Youghiogheny River Lake was constructed in accordance with FERC License 3623. D/R Hydro Company is the authorized representative of the Licensee, Youghiogheny Hydroelectric Authority, and is responsible for operation of the plant. It has a 10-megawatt capacity. The plant began commercial operation on December 7, 1989.

Operations during Fiscal Year. Operations & Maintenance, General: Reservoir was operated for benefit of flood control and low flow augmentation, as required and necessary repairs were made to structures and appurtenances. In FY 2007, renovations to one of the service gates were completed for \$145,000. Total flood control benefits achieved by this project through September 30, 2007 were \$3,227,000; revised to include damages prevented in downstream districts, were \$526,645,000. Activities under reservoir management program comprising sanitation measures, conservation, land management and operation and maintenance of public use facilities continued.

28. INSPECTION OF COMPLETED FLOOD CONTROL PROJECTS

Flood Control Act of June 22, 1936, and subsequent

acts require local interests to furnish assurances that they will maintain and operate certain local protection projects after completion in accordance with regulations prescribed by Secretary of the Army. District Engineers are responsible for administration of these regulations within boundaries of their respective districts. Inspections were made of completed units transferred to local interests for maintenance and operation and local interests were advised, as necessary, of measures required to maintain these projects in accordance with standards prescribed by regulations. (See Table 18-L for dates of inspections.)

Costs for FY 2007 were \$112,728; total cost to September 30, 2006 was \$2,959,479.

29. OTHER AUTHORIZED FLOOD CONTROL PROJECTS

See Table 18-E on other authorized flood control projects.

30. FLOOD CONTROL WORK UNDER SPECIAL AUTHORIZATIONS

For emergency bank protection pursuant to Section 14, 1946 Flood Control Act, PL 79-526, as amended

See Table 18-M.

For flood control activities pursuant to Section 205, 1948 Flood Control Act, PL 80-858, as amended

See Table 18-M.

For aquatic ecosystem restoration pursuant to Section 206, 1996 WRDA, PL 104-303, as amended

See Table 18-M.

For modification for improvement of the environment pursuant to Section 1135, 1986 WRDA, PL 99-662, as amended

See Table 18-M.

For flood control and coastal emergencies pursuant to 1955 Emergency Flood Control Funds Act, PL 84-99 and antecedent legislation

See Table 18-M.

Environmental

31. CONEMAUGH RIVER BASIN, NANTY GLO, PA ENVIRONMENTAL RESTORATION

Location. Conemaugh River Basin is an area of 1,372 square miles located in southwestern Pennsylvania in Cambria and Indiana Counties. The Nanty Glo project is located in the headwaters of South Branch Blacklick Creek in the Borough of Nanty Glo, Cambria County.

Existing Projects. Authorized by WRDA 1992 (PL 102-580), Section 331, the Conemaugh River Basin Reconnaissance Report completed in February 1994 identified seven sites as candidates for ecosystem restoration studies. Remediation of a site at Nanty Glo, PA was identified as highest priority. The project

PITTSBURGH, PA DISTRICT

involves restoration of environmental damage caused by the abandoned Webster Coal Mine. Its discharge accounts for much of the acid load in the creek and approximately 5% of the acid load downstream at the Corps' Conemaugh River Lake. Water from the mine is discharged into Pergrin Run, approximately 1,300' upstream from its confluence with South Branch Blacklick Creek. The project will involve a passive treatment system consisting of dual vertical flow ponds and a wetland. The project will treat the Webster Mine discharge, design flow of 450 gallons per minute with a PH of 3.0. The vertical flow ponds provide 3.9 acres of surface treatment area and the wetland provides 2.3 acres of surface treatment area. A pipe will carry water from Webster Mine to the vertical flow ponds. The PH of the treated design flow discharged from the wetland to Pergrin Run will be 6.5. Project implementation will restore the lower seven miles of the creek and promote return of a viable fishery to the waters.

Notice to proceed issued September 20, 2002. Amount of contract was \$4,200,000. Contractor was Charles J. Merlo Construction Incorporated. Contract was completed in October 2004.

Local Cooperation. The non-federal cost-sharing sponsor is the Cambria County Conservation and Recreation Authority (CCCRA). CCCRA has been the cost-sharing partner on this project since inception in 1994. The CCCRA will cost share 25% of total project costs.

Operations during Fiscal Year. None. Closeout scheduled in FY 2007

32. SOUTH CENTRAL, PA ENVIRONMENTAL IMPROVEMENT WORK

Location. Projects under this program in the Pittsburgh District are located in the South Central, PA counties of Allegheny, Armstrong, Cambria, Fayette, Greene, Indiana, Somerset, Washington and Westmoreland.

Existing Projects. Section 313 authorizes the Secretary of the Army to establish a program to provide design and construction assistance to non-federal interests in south central Pennsylvania including projects for waste water treatment and related facilities, water supply, storage, treatment, and distribution facilities, and surface water resource protection and development. A total of 44 projects are physically complete. The largest project was a regional wastewater treatment plant and interceptor system for the Forest Hills Municipal Authority located in the suburbs of Johnstown, PA.

Local Cooperation. Legislation requires the project to be cost shared at no more than 75% federal funds and a minimum of 25% non-federal funds. Project Cooperation Agreements are executed between the Corps of Engineers and the non-federal sponsors. Operation and maintenance of the projects will be at 100% non-federal costs.

Operations during Fiscal Year. During FY07 completed work at Northmoreland County Parks, National Pike, Morgan Township, Franklin Township,

(Greene County), Fayette City, Sutersville-Sewickley and the Central Mainline Sanitary Sewer. Continued construction for the Menallen Sanitary Sewer and Lower Ten Mile Projects. Continued design of projects at Mt Pleasant, Parks Township, Washington Township and Elrama.

33. THREE RIVERS WET WEATHER DEMONSTRATION PROJECT

Location. The Three Rivers Wet Weather Demonstration Program administers grants to Allegheny County communities for innovative, cost-effective, watershed-based methods of wet weather sewer overflow elimination and management.

Existing Project. The District is working with the Three Rivers Wet Weather Demonstration Program under Section 219 of the 1992 WRDA, as amended. Under this program, the District is authorized to provide assistance to non-federal interests for carrying out water-related environmental infrastructure and resource protection and development project in Allegheny County. These projects include wastewater treatment and related facilities and water supply, storage, treatment and distribution facilities. Projects worked on during FY07 were Sheraden Park and Homestead Run.

Local Cooperation Allegheny County Sanitary Authority (ALCOSAN) is the cost sharing partner for the Sheraden Park project. The project is cost shared 75% federal and 25% non-federal. Munhall Borough is the cost sharing partner for the Homestead Run project.

Operations during Fiscal Year. In FY 2007, a total of \$55K was expended on the Three Rivers Wet Weather Demonstration Project. District executed a Project Cooperation Agreement and completed plans and specifications for the Sheraden Park project. The Sheraden Park project will reconfigure the combined sewer to remove the stream inflow from the sewer and reduce combined sewer discharges. This includes storm sewer re-routing. The Homestead Run cost sharing partner, Munhall Borough, is negotiating with other affected communities regarding funding of the project. Once the funding commitments have been obtained, the letter report will be finalized. A design agreement to prepare plans and specifications will follow.

Other projects will be identified as funds become available.

34. FORMERLY USED SITES REMEDIAL ACTION PROGRAM (FUSRAP)

Location. Shallow Land Disposal Area (SLDA) is a 44-acre site in Armstrong County, Pennsylvania, about 23 miles east-northeast of Pittsburgh.

Existing Project. The site includes ten trenches containing estimated 23,500-36,000 cubic yards of potentially contaminated waste and soil. The total trench surface-area is 1.2 acres. The trenches are separated into two general areas; one area containing trenches 1 through 9 and a second area containing trench 10. Uranium and thorium contaminated wastes

REPORT OF THE SECRETARY OF THE ARMY ON CIVIL WORKS ACTIVITIES FOR FY 2007

consisting of process wastes; equipment, scrap and trash from the nearby Apollo nuclear fuel fabrication facility were disposed of in the SLDA between 1961 and 1970. The uranium in the trenches is present at various levels of enrichment from highly depleted to highly enrich. Americium and plutonium, whose presence is attributed to storage of equipment used in the Parks Facility, have been detected in surface soils in trench 10 area. Nuclear Materials and Equipment Corporation (predecessor of current owner BWX Technologies) conducted the disposals according to the Atomic Energy Commission regulations. The NRC license requires BWXT to properly maintain the site to ensure the protection of workers and the public.

PL 107-117, Section 8143 directs the Corps of Engineers to clean up radioactive waste at the SLDA site, consistent with the Memorandum of Understanding between the United States Nuclear Regulatory Commission and United States Army Corps of Engineers dated July 5, 2001 for the coordination of cleanup and decommissioning of FUSRAP sites with NRC-licensed facilities and in accordance with Section 611 of PL 106-60. The SLDA site will be remediated following the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA) process.

Local Cooperation. The project is currently conducted with congressionally authorized FUSRAP funds.

Operations during Fiscal Year. In FY 2007, significant accomplishments for Parks Township, PA Shallow Land Disposal Area included the completion of the Proposed Plan and the Record of Decision (ROD) and the initiation of the remedial design for \$1,000,000. The ROD recommends excavation and disposal of radioactively contaminated material out of state at a licensed facility. The remedial design is scheduled to be completed in FY08.

¹ Includes \$2,453,737 from emergency relief funds and \$1,250,049 from public works funds.

² Includes \$64,365 public works acceleration, executive funds (1963) and \$191,400 provided from the Productive Employment Appropriations Act (PL 98-8) 1983 funds. Also includes \$995,000 appropriated and expended for major maintenance at L&D 2, 3 & 4.

³ Includes amounts appropriated to date for: Point Marion, L&D 8, PA - \$113,013,400 for CG and IWTF, \$3,322,057 for raising crest of dam in 1958-9, \$2,086,438 for original reconstruction years 1923-26 and \$618,758 for AE&D. Grays Landing, L&D 7, PA - \$172,793,200 for CG and IWTF, and \$803,000 for AE&D. L&D 2, 3 & 4 - \$237,481,700 for CG and IWTF.

⁴ Includes amounts expended to date on: Point Marion, L&D 9, PA - \$112,667,403 for CG and IWTF, \$3,322,057 for raising crest of dam in 1958-9, \$2,086,438 for original reconstruction years 1923-6 and \$618,758 for AE&D. Grays Landing, L&D 7, PA - \$172,751,744 for CG and IWTF, and \$803,000 for AE&D. L&D 2, 3 & 4 - \$237,123,612 for CG and IWTF.

⁵ Includes \$22,549 public works acceleration, executive funds (1963), \$742 for maintenance for previous project and \$582,000 provided from the Productive Employment Appropriations Act (PL 98-8) 1983 funds.

⁶ Includes \$22,549 public works acceleration, executive funds (1963), \$742 for maintenance for previous project and \$464,508 provided from the Productive Employment Appropriations Act (PL 98-8) 1983 funds.

⁷ Includes \$1,999,995 emergency relief funds, \$10,000,000 public work funds, \$234,000 Code 711 funds and \$412,088 Code 713 funds, \$462,000 appropriated to and \$218,374 expended on the Dam Safety Assurance Program - CG; excludes \$409,622 contributed by local interest.

⁸ Includes \$89,000 provided from the Productive Employment Appropriations, Act (PL 98-8) 1983 funds. Also includes \$425,000 appropriated to and \$424,493 expended on the Dam Safety Assurance Program O&M.

⁹ Includes \$33,423 from emergency relief funds.

¹⁰ Excludes \$180,485 for new work expended from contributed funds.

¹¹ Includes \$283,988 provided from the Productive Employment Appropriations Act (PL 98-8) 1983 funds.

¹² Includes \$1,542,500 Code 711 funds, \$809,700 Code 712 funds and \$99,111 Code 713 funds; excludes \$100,000 contributed by local interest.

¹³ Includes \$40,000 provided from the Productive Employment Appropriations Act (PL 98-8) 1983 funds. Includes \$7,679 appropriated to and expended from M&O of dams in FY97 and \$703,407 expended to date on M&O of dams.

¹⁴ Includes \$5,351 from emergency relief funds and \$328,000 Code 711 funds.

¹⁵ Includes \$63,788 from emergency relief funds. Also includes \$278,044 Code 711 funds.

¹⁶ Includes \$45,000 provided from the Productive Employment Appropriations Act (PL 98-8) 1983 funds. Includes \$1,918 appropriated to and expended from M&O of dams in FY97 and \$697,646 expended to date on M&O of dams.

¹⁷ Includes \$156,812 Code 711 funds.

¹⁸ Includes \$322,000 provided from the Protective Employment Appropriations Act (PL 98-8) 1983 funds. Also includes \$12,674 appropriated to and \$12,674 expended to date on M&O of dams.

¹⁹ Includes \$2,791 emergency relief funds, \$14,622 Code 711 funds, \$568,265 Code 713 funds; excludes \$389,370 contributed by local interest.

²⁰ Includes \$7,339 from emergency relief funds and \$274,669 Code 711 funds.

²¹ Includes \$256,000 provided from the Protective Employment Appropriations Act (PL 98-8) 1983 funds. Also includes \$104,866 appropriated to and \$104,864 expended to date on M&O of dams.

²² Includes \$25,671 emergency relief funds, \$162,381 Code 711 funds, \$561,247 Code 713 funds; excludes \$500,086 contributed by local interests.

²³ Includes \$25,671 emergency relief funds, \$162,381 Code 711 funds, \$561,247 Code 713 funds; excludes \$456,611 contributed by local interests.

²⁴ Includes \$74,900 Code 711 funds; excludes \$4,585,627.29 for new work contributed by local interest.

²⁵ Includes \$315,500 provided from the Protective Employment Appropriations Act (PL 98-8) 1983 funds. Also includes \$3,174 appropriated to

PITTSBURGH, PA DISTRICT

and \$3,713 expended to date on M&O of dams.

²⁶ Includes \$122,729 Code 711 funds and \$94,900 Code 713 funds.

²⁷ Includes \$8,914 from emergency relief funds.

²⁸ Includes \$1,730,100 Code 711 funds and \$1,618,300 Code 713 funds.

²⁹ Includes \$152,000 provided from the Protective Employment Appropriations Act (PL 98-8) 1983 funds. Also includes \$11,896 appropriated to and \$11,891 expended to date on M&O of dams.

³⁰ Includes \$2,303,076 Code 711 funds (\$256,760 provided from the Productive Employment Appropriations Act PL 98-8, 1983 funds), \$275,900 Code 712 funds, and \$24,201 emergency relief funds.

³¹ Includes \$2,303,077 Code 711 funds, (\$256,531 provided from the Productive Employment Appropriations Act PL 98-8, 1983 funds), \$275,900 Code 712 funds, and \$24,201 emergency relief funds.

³² Includes \$203,000 provided from the Protective Employment Appropriations Act (PL 98-8) 1983 funds. Also includes \$9,362 appropriated to and \$9,360 expended to date on M&O of dams.

³³ Includes \$1,671,366 Code 711 funds.

³⁴ Includes \$1,671,366 Code 711 funds.

³⁵ Includes \$85,000 provided from the Productive Employment Appropriations Act (PL 98-8) 1983 funds).

³⁶ Includes \$2,846,263 Code 711 funds (\$293,000 provided from the Productive Employment Appropriations Act. (PL 98-8) 1983 funds).

³⁷ Includes \$591,000 provided from the Protective Employment Appropriations Act (PL 98-8) 1983 funds. Also includes \$22,240 appropriated to and \$22,236 expended to date on M&O of Dams.

³⁸ Includes \$1,840,000 (non-federal) original construction cost and an additional \$4,205,000 (non-federal) contributed and \$4,159,759 (non-federal) expended to date.

³⁹ Includes \$701,504 appropriated to and \$701,504 expended to date on M&O of dams.

⁴⁰ Includes \$104,684 appropriated to and \$104,683 expended to date on M&O of dams.

⁴¹ Includes \$4,225,188 (non-federal) contributed and expended to date.

⁴² Includes \$285,000 (non-federal) contributed funds and \$282,914 (non-federal) expended to date.

⁴³ Includes \$4,894,000 appropriated to date for Rehab O&M and \$2,925,000 appropriated to date for Rehab Construction, General. Also includes \$222,000 (non-federal) contributed funds to date.

⁴⁴ Includes \$4,880,202 expended to date for Rehab O&M and \$2,824,695 expended to date for Rehab Construction, General. Also includes \$205,323

(Non-federal) expended to date.

⁴⁵ Includes \$701,504 appropriated to and \$701,504 expended to date on M&O of dams.

⁴⁶ Includes \$3,244,435 (non-federal) contributed funds and \$2,565,808 (non-federal) expended to date.

⁴⁷ Includes \$131,618 (non-federal) contributed funds and \$102,016 (non-federal) expended to date.

⁴⁸ Includes \$480,560 (non-federal) contributed funds and \$440,103 (non-federal) expended to date.

⁴⁹ Includes \$867,703 (non-federal) contributed funds and \$852,806 (non-federal) expended to date.

⁵⁰ Includes \$125,000 (non-federal) contributed funds and \$99,511 (non-federal) expended to date.

REPORT OF THE SECRETARY OF THE ARMY ON CIVIL WORKS ACTIVITIES FOR FY 2007

TABLE 18-B

AUTHORIZATION LEGISLATION

Section in Text	Authorizing Act Date	Project and Work Authorized	Documents
1.	Aug 5, 1886	Allegheny River, PA For lock and dam 1. (Fixed dam contemplated. Sep 29, 1891 Secretary of War authorized change to a moveable dam.)	Annual Report, 1886, p. 1545 Annual Report, 1891, p. 2366
	Jun 3, 1896	For locks and dams 2 and 3.	H. Doc. 204, 54 th Cong., 1 st Sess. Annual Report 1896, p. 2212
	Jul 25, 1912	For locks and dam 4 to 8 inclusive.	H. Doc. 540, 62 nd Cong., 2 nd Sess.
	Jul 3, 1930	For a depth of 9' in the lower 61 miles.	H. Doc. 356, 71 st Cong., 2 nd Sess.
	Aug 30, 1935 ¹	Replace lock and dam 1 by a dredged channel, 9' deep and 200' wide up to lock 2, and construct new locks and Dams 2 and 3, to replace existing locks and dams 2 and 3.	Rivers and Harbors Committee, Doc. 16, 72 nd Cong., 1 st Sess.
	Aug 30, 1935 ¹	Construct locks and dam 9, raising crest of dam 8, and Dredging a navigable channel to head of pool 8.	H. Doc. 721, 71 st Cong., 3 rd Sess. Rivers and Harbors Committee, Doc. 27, 73 rd Cong., 2 nd Sess.
	Jun 26, 1934 ²	Operation and care of locks and dams provided for with funds from War Department appropriation for rivers and harbors.	
3.	Mar 3, 1899	Monongahela River, PA & WV Enlarge and improve lock and dam 6, additional work at lock 3; new repair steamer and new dredge boat with equipment; all at an estimated cost of \$185,556.	Annual Report, 1897, p. 2423
	Jun 13, 1902	Rebuild lock and dam 2 at estimated cost of \$655,961. (Estimate increased in 1910 to \$698,961.)	Annual Report, 1909, p. 1756
	Mar 3, 1905	Acquisition of land and additional improvements at 5 and 6 At a cost of \$7,850.	Annual Report, 1904, p. 460
	Mar 3, 1905	Rebuild lock and dam 3 at estimated cost of \$589,196.	H. Doc. 209, 58 th Cong., 2 nd Sess.
	Mar 2, 1907	Reconstruct lock and dam 5 at estimated cost of \$756,042.	H. Doc. 209, 58 th Cong., 2 nd Sess.
	Mar 4, 1913	Reconstruct lock and dam 6 at estimated cost of \$356,400. (Estimate increased in 1916 to \$418,860.)	H. Doc. 1217, 62 nd Cong., 3 rd Sess.
	Sep 22, 1922	Additional improvements at estimated cost as follow: Guide walls and guard walls, 1 to 6, \$1,255,130; lengthen land chamber of lock 3 to 720', \$787,722; new chamber (360' \$1,161, 24 long), lock 4, \$699,786; lock and dam 7, Lock and dam 8, \$1,165,758; lock and dam 7 second chamber, \$419,126; Lock and dam 8 second chamber, \$504,465; reconstruction dam 4, \$397,211; marine ways, repair plant, office and warehouse, \$250,000 for a total of \$6,640,439.	H. Doc. 288, 67 th Cong., 2 nd Sess.
	Jul 3, 1930	Construct new locks and dam 2.5 miles below existing structure, at estimated cost of \$2,175,000 in lieu of work authorized at old lock and dam 4.	Rivers and Harbors Committee, Doc. 22, 70 th Cong., 2 nd Sess.
	Jan 31, 1931 ³	Chief of Engineers authorized to locate new locks and dam 4 above existing structure and on such site as they may deem most desirable.	
	Jun 26, 1934 ²	Operation and care of locks and dams provided for with funds from War Department appropriations for rivers and harbors.	
	May 17, 1950	Modification of existing project as follows: Provide 2 new locks and dams similar to Morgantown lock and dam to replace existing locks and dams 12 to 15 inclusive. Provide a movable crest on existing dam 8 to raise existing pool full elevation 4'. Provide a navigation channel of 300' minimum bottom width and a 9' project depth above lock and dam 8. Provide an extension of navigable channel of upper Monongahela River, into lower Tygart River for 2.1 miles at a maximum bottom width of 200' and a 9' project depth.	S. Doc. 100, 81 st Cong., 1 st Sess.

PITTSBURGH, PA DISTRICT

TABLE 18-B

AUTHORIZATION LEGISLATION

Section in Text	Authorizing Act Date	Project and Work Authorized	Documents
	Nov 17, 1986	Construct new lock and dam 7 (Grays Landing Lock and Dam) as follows: The Grays Landing Lock and Dam will be located 3.0 miles downriver from existing Lock and Dam 7. It will consist of a single lock chamber, 84' wide by 720' long, with a fixed crest dam 576' in length. The existing Maxwell Pool at elevation 763.0 will be shortened 3 miles and the existing Pool 7 at elevation 778.0 will be extended downriver to the new dam. There will be no change in pool elevation above existing Dam 7. Upon completion of the new replacement lock and dam, existing Lock and Dam 7 will be removed. Total authorized cost is \$181,000,000.	Supplemental Appropriations Act of 1985 for Engineering and Design and Land Acquisition and Water Resources Development Act of 1986; PL 99-662, Sec. 301(a)
	Nov 17, 1986	Replace existing 56' by 360' lock chamber at Point Marion Lock and Dam (Lock and Dam 8) with new 84' x 720' chamber. Existing movable crest dam to remain; no change in pool elevations. Total authorized cost is \$53,600,000.	Supplemental Appropriations Act of 1985 for Engineering and Design and Land Acquisition and Water Resources Development Act of 1986; PL 99-662, Sec. 301 (a)
	Oct 31, 1992	Navigation improvements as follows: The project replaces the fixed crest dam at Locks and Dam 2 with a gated dam; raises the existing pool 2 by 5', constructs twin 84' x 720' locks at Locks and Dam 4, and eliminates Locks and Dam 3; lowering the existing pool 3 by 3.2'. Authorized cost is \$750,000,000. Cost of construction is to be paid equally from the general fund of the Treasury and the Inland Waterways Trust Fund.	Water Resources Development Act of 1992; PL 102-580, Sec. 101
5.		Tygart Lake, WV	
	Jan 11, 1934	Construction of a dam and reservoir for low water regulation and flood control.	H. Doc. 1792, 64 th Cong., 2 nd Sess.
	Aug 30, 1935		H. Doc 106, 76 th Cong., 1 st Sess.
7.		Elkins, WV	
	Jun 28, 1938	For construction of local flood protection projects.	H. Doc 306, 74 th Cong., 1 st Sess. FCC Doc. 1, 75 th Cong., 1 st Sess.
8.		Johnstown, PA	
	Jun 28, 1938	For construction of local flood protection projects.	H. Doc. 306, 74 th Cong., 1 st Sess. FCC Doc. 1, 75 th Cong., 1 st Sess.
9.		Punxsutawney, PA	
	Jun 28, 1938	For construction of local flood protection projects.	H. Doc. 306, 74 th Cong., 1 st Sess. FCC Doc. 1, 75 th Cong., 1 st Sess.
10.		Saw Mill Run, Pittsburgh, PA	
	Nov 17, 1986	For construction of local flood protection projects.	Water Resources Development Act of 1986
	Oct 12, 1996		Water Resources Development Act of 1996
11.		West Virginia & Pennsylvania Flood Control	
	Oct 12, 1996	For construction of local flood protection projects.	Water Resources Development Act of 1996, PL 102-580, Sec 313
12.		Berlin Lake, OH	
	Jun 28, 1938	Construction of a dam and reservoir for flood control and low water regulation.	H. Doc. 306, 74 th Cong., 1 st Sess.
	Dec 22, 1944 as amended	Construction, operation and maintenance of recreation facilities.	Sec. 4, Flood Control Act of 1944
13.		Conemaugh River Lake, PA	
	Jun 22, 1936 amended by Jun 28, 1938	Construction of a dam and reservoir for flood control.	H. Doc, 306, 74 th Cong., 1 st Sess. FCC Doc. 1, 75 th Cong., 1 st Sess.
	Dec 22, 1944 as amended	Construction, operation and maintenance of recreation facilities.	Sec. 4, Flood Control Act of 1944

	Dec 22, 1944	Additional \$70 million for further prosecution of comprehensive plan for Ohio River Basin, including additional projects in tributary basins.	H. Doc. 762, 77 th Cong., 2 nd Sess.
	Jul 24, 1946	Additional \$125 million for further prosecution of comprehensive plan including additional projects in tributary basins.	H. Doc. 506, 78 th Cong., 1 st Sess.
	May 17, 1950	Additional \$100 million for prosecution of comprehensive plan for Ohio River Basin	S. Doc. 20, 81 st Cong., 1 st Sess.
	Dec 30, 1963	Additional \$150 million for further prosecution of comprehensive plan for flood control and other purposes in Ohio River Basin.	PL 88-253, 88 th Cong., 1 st Sess.
	Jun 18, 1965	Additional \$89 million for further prosecution of comprehensive plan for Ohio River Basin.	H. Doc. 6755, 89 th Cong., 1 st Sess.
	May 12, 1967	Additional \$38 million for further prosecution of comprehensive plan for Ohio River Basin.	PL 90-17, 90 th Cong., 1 st Sess.
	Aug 13, 1968	Additional \$35 million for further prosecution of comprehensive plan for Ohio River Basin.	PL 90-483, 90 th Cong., 2 nd Sess.
	Jun 19, 1970	Additional \$69 million for further prosecution of comprehensive plan for Ohio River Basin.	H. Doc. 15166, 91 st Cong., 2 nd Sess.
	Mar 7, 1974	Additional \$120 million for further prosecution of comprehensive plan for Ohio River Basin.	H. Doc. 10203, 93 rd Cong. River Basin Monetary Authorization Act of 1974
	Oct 22, 1976	Authorized Phase I design memorandum stage of advanced engineering and design of the project for abatement of acid mine drainage in the Clarion River Basin, PA.	Water Resources Development Act of 1976; PL 94-587, Sec. 101 (a)
23.		Shenango River Lake, PA & OH	
	Jun 28, 1938	Construction of a dam and reservoir for flood control and low water regulation and recreation.	H. Doc. 306, 74 th Cong., 1 st Sess. FCC Doc. 1, 75 th Cong., 1 st Sess.
	Dec 22, 1944 as amended	Construction, operation and maintenance of recreation facilities.	Sec. 4, Flood Control Act of 1944
24.		Stonewall Jackson Lake, WV	
	Nov 7, 1966	Construction of a dam and reservoir for flood control, water supply, water quality control, area redevelopment and recreation.	S. Doc. 109, 89 th Cong., 2 nd Sess.
25.		Tionesta Lake, PA	
	Jun 22, 1936 amended by Jun 28, 1938	Construction of a dam and reservoir for flood control and low water regulation.	H. Doc. 306, 74 th Cong., 1 st Sess. FCC Doc. 1, 75 th Cong., 1 st Sess.
	Dec 22, 1944 as amended	Construction, operation and maintenance of recreation facilities.	Sec. 4, Flood Control Act of 1944
26.		Union City Dam, PA	
	Oct 23, 1962	Construction of a dam and reservoir for flood control.	S. Doc. 95, 87 th Cong., 2 nd Sess.
27.		Woodcock Creek Lake, PA	
	Oct 23, 1962	Construction of a dam and reservoir for flood control, recreation and storage for water quality control.	S. Doc. 95, 87 th Cong., 2 nd Sess.
28.		Youghiogeny River Lake, PA & MD	
	Jun 28, 1938	Construction of a dam and reservoir for flood control, low-flow Augmentation and pollution abatement purposes.	H. Doc. 306, 74 th Cong., 1 st Sess. FCC Doc. 1, 75 th Cong., 1 st Sess.
	Dec 22, 1944 as amended	Construction, operation and maintenance of recreation facilities.	Sec. 4, Flood Control Act of 1944
33.		South Central, PA Environmental Improvement Program	
	Oct 31, 1992	Construction of local flood protection projects.	Water Resources Development Act of 1992; PL 102-580, Sec 313
34.		Three Rivers Wet Weather Demonstration Project	
	Oct 31, 1992	Environmental infrastructure	Water Resources Development Act Of 1992, PL 102-850, Sec 219
35.		Formerly Used Sites Remedial Action Program (FUSRAP)	
	Jul 5, 2001	Coordination on cleanup and decommissioning of the FUSRAP sites.	PL 107-117, Sec 8143

¹ Included in the Emergency Relief Program, April 8, 1935.

² Permanent Appropriations Repeal Act.

³ Public Res. 117, 71st Cong., 3rd Sess.
