EM 1110-1-502

Manual
No. 1110-1-502

30 April 1994

Engineering and Design
TECHNICAL GUIDELINES FOR HAZARDOUS AND TOXIC WASTE TREATMENT
AND CLEANUP ACTIVITIES

Table of Contents

<u>Subject</u>	<u>Paragraph</u>	<u>Page</u>
CHAPTER 1. INTRODUCTION		
Purpose	1-1	1-1
Applicability	1-2	1-1
References	1-3	1-1
Explanation of Abbreviations and Terms . .	1-4	1-1
USAGE Responsibilities	1-5	1-1
Safety	1-6	1-3
CHAPTER 2. IDENTIFICATION AND SELECTION OF REMEDIAL ACTION/CORRECTIVE MEASURE ALTERNATIVES		
Section I. Introduction		
Three-Step Approach	2-1	2-1
Guidance	2-2	2-5
RI/FS Procedure	2-3	2-5
Section II. Determining the Nature and Extent of Contamination		
Existing Site Conditions	2-4	2-10
Scoping	2-5	2-10
Site Characterization	2-6	2-12
Health and Safety Considerations	2-7	2-13
Data Base Requirements	2-8	2-16
Data Base Development	2-9	2-21
Community Relations During Site Characterization	2-10	2-24
Extent of Hazard	2-11	2-26
Section III. Establishment of Cleanup Criteria		
Limits of Allowable Contamination Onsite and Offsite	2-12	2-26
Cleanup Standards	2-13	2-27
Applicable or Relevant and Appropriate Requirements	2-14	2-27

	<u>Subject</u>	<u>Paragraph</u>	<u>Page</u>
	Risk Assessment	2-15	2-28
	Technological Limitations on Cleanup . . .	2-16	2-34
Section IV.	Alternative Development and Screening		
	Developing Options	2-17	2-34
	Alternative Development Process	2-18	2-35
	Alternative Screening Evaluation	2-19	2-64
	Alternative Screening	2-20	2-68
	Treatability Investigations	2-21	2-69
Section V.	Detailed Analysis of Alternatives		
	Background	2-22	2-71
	Overview of Evaluation Criteria	2-23	2-72
	Discussion of Evaluation Factors	2-24	2-74
	Presentation of Individual Analyses	2-25	2-85
	Comparative Analysis of Alternatives	2-26	2-86
	Presentation of Comparative Analysis	2-27	2-87
	Post-RI/FS Selection of the Preferred Alternative	2-28	2-87
	Community Relations During Detailed Analysis	2-29	2-87
	Removal Activities	2-30	2-88
	Time-Critical Removal Actions	2-31	2-88
	Non-Time-Critical Removal Actions	2-32	2-91
	Removal Action Process	2-33	2-91
CHAPTER 3.	CONTROL AND CONTAINMENT TECHNOLOGIES		
	Definition	3-1	3-1
	Applicability	3-2	3-1
	Techniques	3-3	3-1
Section I.	Waste Collection and Removal		
	Drum Handling	3-4	3-1
	Storage	3-5	3-6
	Tank Cleaning and Demolition	3-6	3-15
	Lagoon Management	3-7	3-16
	Excavation of Landfills and Contaminated Soils	3-8	3-17
	Removal of Contaminated Sediments	3-9	3-19
	Decontamination of Structures	3-10	3-32
	Decontamination of Miscellaneous Media	3-11	3-37
Section II.	Contaminated Ground-Water Plume Management		
	Ground-Water Pumping Systems	3-12	3-38
	Wellpoint Systems	3-13	3-38

Subject	Paragraph	Page
Extraction/Injection Well Systems	3-14	3-43
Subsurface Barriers	3-15	3-47
Slurry-trench Cutoff Walls	3-16	3-47
Grout Curtains	3-17	3-51
Sheet Pile Cutoff Walls	3-18	3-56
Membranes and Synthetic Sheet Curtains . . .	3-19	3-58
Combination Barrier/Pump Systems	3-20	3-59
Subsurface Drains and Drainage Ditches . . .	3-21	3-59
Section III. Surface Water Controls		
Surface Water Diversion	3-22	3-66
Surface Grading	3-23	3-83
Surface Sealing	3-24	3-85
Revegetation	3-25	3-94
Section IV. Gas Control		
Gas Generation and Migration	3-26	3-97
Passive Gas Control Systems	3-27	3-100
Active Control Systems	3-28	3-103
CHAPTER 4. TREATMENT TECHNOLOGIES		
Applicability	4-1	4-1
Techniques	4-2	4-1
Section I. Treatment of Liquid Waste Streams		
Definitions	4-3	4-1
Air Stripping	4-4	4-1
Biological Treatment	4-5	4-6
Carbon Adsorption	4-6	4-26
Chemical Oxidation	4-7	4-34
Resin Adsorption	4-8	4-42
Chemical Reduction	4-9	4-48
Precipitation	4-10	4-50
Flocculation and Sedimentation	4-11	4-54
Neutralization	4-12	4-59
Oil-Water Separation	4-13	4-61
Dissolved Air Flotation	4-14	4-63
Reverse Osmosis	4-15	4-66
Solidification/Stabilization	4-16	4-70
Ultrafiltration	4-17	4-70
Section II. Treatment of Sludges and Soils		
Biological Treatment	4-18	4-74
Encapsulation	4-19	4-82
Low Temperature Thermal Desorption	4-20	4-85

Subject	<u>Paragraph</u>	<u>Page</u>
Solidification/Stabilization	4-21	4-88
Thermal Destruction	4-22	4-93
Volume Reduction	4-23	4-98
Wet Oxidation	4-24	4-99
Evaporation	4-25	4-103
Section III. In Situ Treatment Technologies		
Biological Treatment	4-26	4-107
Chemical Oxidation	4-27	4-108
Permeable Treatment Beds	4-28	4-109
Soil Flushing	4-29	4-112
Vapor Extraction	4-30	4-112
CHAPTER V. DISPOSAL TECHNOLOGIES		
Definition	5-1	5-1
Applicability	5-2	5-1
Techniques	5-3	5-1
Regulatory Constraints	5-4	5-1
Section I. Onsite Disposal		
General	5-5	5-2
Landfills	5-6	5-2
Deep Well Injection	5-7	5-9
Section II. Offsite Disposal		
General	5-8	5-13
Landfills	5-9	5-13
Deep Well Injection	5-10	5-16
APPENDIX A. REFERENCES		
APPENDIX B. MODEL STATEMENT OF WORK FOR CONDUCTING A RI/FS		
APPENDIX C. GLOSSARY		

	<u>Title</u>	<u>Page</u>
Figure 2-1.	Comparison of RCRA/CERCLA Action Processes	2-2
2-2.	Remedial Action Evaluation Process	2-3
2-3.	Overview of the RI/FS Process	2-4
2-4.	Scoping the RI/FS Process	2-6
2-5.	Overview of Site Characterization Process	2-7
2-6.	Overview of the Development and Screening Alternatives Process	2-8
2-7.	Overview of the Detailed Analysis of Alternatives Process	2-10
2-8.	Dispersal Pathways for Contaminants	2-17
2-9.	Topic Areas for the Hazardous Substance Site Assessment	2-18
2-10.	Overview of the Risk Assessment Process	2-30
2-11.	Identification of Exposure Pathways	2-32
2-12.	Alternative Development and Screening	2-40
2-13.	Relationship Between Screening Criteria and Detailed Evaluation	2-66
2-14.	Detailed Analysis of Alternatives	2-75
2-15.	Typical Flow Chart For Time-Critical/Non-Time-Critical Removals	2-89
2-16.	General Elements of a Typical Time-Critical Removal Action	2-90
2-17.	General Elements of a Typical Non-Time-Critical Removal Action	2-91
3-1.	Organization of the Waste Site Cleanup Area	3-2
3-2.	Base Liner Details for Waste Piles	3-10
3-3.	Base Liner Details for Surface Impoundments	3-14
3-4.	Standard Cutter Assembly, Spiral Basket Cutter	3-21
3-5.	Standard Cutterhead Dredge Operation	3-22
3-6.	Standard Cutterhead Dredge Vessel	3-22
3-7.	Views of the Mud Cat MC-915 Dredge	3-23
3-8.	The Japanese Suction Dredge "Clean Up"	3-24
3-9.	Portable Centrifugal Pump System for Lagoon Dredging	3-25
3-10.	Streamflow Diversion for Sediment Excavation Using Two Cofferdams and Diversion Channel	3-27
3-11.	Streamflow Diversion for Sediment Excavation Using Single Cofferdam	3-28
3-12.	Construction of a Typical Center Tension Silt Curtain Section	3-29
3-13.	Typical Silt Curtain Deployment Configurations	3-30
3-14.	Flow Diagram for Developing a Structural Decontamination Strategy	3-36

Title	Page
3-15. Schematic of a Wellpoint Dewatering System	3-39
3-16. Hydraulic Conductivities of Soil and Rock	3-40
3-17. Use of Extraction/Injection Wells for Plume Containment	3-44
3-18. Effect of an Injection Well on the Cone of Depression	3-46
3-19. Design Drawing for Lipari Landfill Slurry-Trench Cutoff Wall	3-50
3-20. Grout Pipe Layout for Grout Curtain	3-54
3-21. Semicircular Grout Curtain Around Waste Site	3-54
3-22. Subsurface Leachate Collection	3-61
3-23. Typical Design Plan for Leachate Collection Systems	3-62
3-24. Leachate Collection System for Love Canal, Transverse View	3-64
3-25. Effect of Drainage Ditch on Velocity	3-70
3-26. General Design Features of Diversions	3-71
3-27. Typical Drainage Bench	3-74
3-28. Typical Levee at Base of Disposal Site	3-78
3-29. Some Typical Floodwall Sections	3-79
3-30. Seepage Basin: Large Volume, Deep Depth to Ground Water	3-81
3-31. Seepage Basin: Shallow Depth to Ground Water	3-81
3-32. Seepage Ditch	3-81
3-33. Typical Design of a Sediment Basin Embankment	3-83
3-34. Landfill Gas Composition Transition	3-98
3-35. Design Configuration of Pipe Vents	3-100
3-36. Design Configuration of Trench Vents	3-102
3-37. Forced-Ventilation System for Landfill Gas Control	3-105
4-1. Ammonia Stripping Lagoon	4-2
4-2. Ammonia Stripping Tower	4-3
4-3. Ammonia Stripper and Recovery System	4-6
4-4. Typical Activated Sludge System	4-11
4-5. Trickling Filter Recirculation	4-17
4-6. Rotating Biological Disk Treatment Schematic	4-21
4-7. Aerated Lagoon (Polymeric-Lined Earth Construction)	4-23
4-8. Most Common Configuration of Activated Carbon Adsorber Systems	4-33
4-9. Process Flow Diagram with Upflow Carbon Contactors and Regeneration	4-33
4-10. Phenol Recovery System Using Acetone Regenerant	4-43

<u>Title</u>	<u>Page</u>
4-11. Chlorinated Hydrocarbon Recovery System Using Steam Regenerant	4-44
4-12. Solubility of Metal Hydroxides and Sulfides . .	4-52
4-13. Representative Configuration Employing Precipitation, Flocculation, and Sedimentation	4-58
4-14. Typical Solids Contact Chemical Treatment System	4-58
4-15. Flow Diagram for API Separator	4-61
4-16. Flow Diagram for Dissolved Air Flotation System	4-64
4-17. Reverse Osmosis Plant Flow Sheet	4-68
4-18. Effect of Concentration Polarization Upon Membrane Flux in Ultrafiltration	4-71
4-19. Typical Bioslurry Treatment System	4-75
4-20. Typical Composting Systems	4-79
4-21. Encapsulation Process Concept	4-84
4-22. Schematic Diagram of a Low Temperature Thermal Treatment System	4-86
4-23. Steps in Stabilization/Solidification of Hazardous Wastes	4-89
4-24. EPA Mobile Incineration System	4-96
4-25. Flow Sheet of Wet Air Oxidation	4-100
4-26. Oxidation Curves for Five Aqueous Fuels . .	4-101
4-27. Three-Effect Evaporator	4-105
4-28. Cross Section of Landfill Treated by Chemical Injection	4-109
4-29. Installation of a Permeable Treatment Bed . .	4-110
4-30. Soil Vapor Extraction System	4-113
5-1. Cross Section of Chemical Waste Landfill with Leachate Collection	5-4
5-2. Deep Injection Well	5-11

	Title	Page
Table 2-1.	CERCLA/RCRA Terminology Crosswalk	2-3
2-2.	Checklist of Major Features Included in Site Description	2-14
2-3.	Critical Areas in Evaluation of Site Data from Preliminary Assessment	2-16
2-4.	Typical Number of Samples to be Collected for Different Informational Requirements	2-19
2-5.	Sources of Data for Site Assessment	2-22
2-6.	Example of Data Quality Variation in a Selected Number of Parameters Used in Hydrologic Simulational Models	2-23
2-7.	Examples of Typical Data Required to Assess Vapor Movement through a Soil Cover	2-23
2-8.	Outline of Suggested File Structure for Superfund Sites	2-25
2-9.	Important Site Characteristics and Considerations Affecting Selection of Remedial Measures	2-37
2-10.	Example of Remedial Action Objectives, General Response Actions, Technology Types, and Example Process Options for the Development and Screening of Technologies	2-41
2-11.	Summary of Available Remedial Action Techniques for Contaminated Surface Flows	2-52
2-12.	Summary of Available Remedial Action Techniques for Contaminated Ground Water	2-54
2-13.	Summary of Available Remedial Action Techniques for Contaminated Air/Soil Pore Spaces	2-57
2-14.	Summary of Available Remedial Action Techniques for Contaminated Soil and Sediments	2-58
2-15.	Summary of Available Remedial Action Techniques for Hazardous Wastes	2-60
2-16.	Summary of Available Remedial Action Techniques for Contaminated Water and Sewer Lines	2-62
2-17.	Bench and Pilot Study Parameters	2-70
2-18.	Long-Term Effectiveness and Permanence	2-77
2-19.	Reduction of Toxicity, Mobility, or Volume through Treatment	2-78
2-20.	Short-Term Effectiveness	2-80
2-21.	Implementability	2-81
2-22.	Key Steps in the EE/CA Process	2-93
2-23.	Outline and Contents of the EE/CA	2-94
3-1.	Measures for Minimizing Contaminant Releases during Drum Handling	3-4
3-2.	Summary of Liner Types	3-8
3-3.	Examples of Potentially Incompatible Wastes	3-12
3-4.	Liquid Waste Removal Methods for Surface Impoundments	3-15

Title	<u>Page</u>
3-5. Significant Characteristics of Types of Grout	3-52
3-6. Permissible Design Velocities for Stabilized Diversions and Waterways	3-71
3-7. Summary of Chemical Stabilizers for Cover Soil	3-89
4-1. Summary of Biological Treatment Processes . .	4-7
4-2. Summary of Operating Parameters for Air- Activated Sludge and Pure-Oxygen-Activated Sludge	4-14
4-3. Design Criteria for Trickling Filters . . .	4-19
4-4. Design Criteria for Waste Stabilization Ponds	4-25
4-5. Effects of Molecular Structures and Other Factors on Adsorption by Activated Carbon	4-28
4-6. Potential for Removal of Inorganic Material by Activated Carbon	4-29
4-7. Summary of Activated Carbon Contacting Methods	4-32
4-8. Operating Parameters for Carbon Adsorption .	4-34
4-9. Resistance of Selected Species to Ozone Oxidation	4-36
4-10. COD Reduction by Ozone	4-37
4-11. Products of Ozonation of Various Compounds .	4-38
4-12. Waste Treatment Applications for Selected Oxidants	4-40
4-13. Properties of Some Commercially Available Resin Absorbents	4-45
4-14. Conventional Chrome Reduction Reactions . .	4-49
4-15. Chemical Treatment of Industrial Waste Water by Coagulation	4-56
4-16. Commercial Applications of Ultrafiltration .	4-72
4-17. Development Applications of Ultrafiltration	4-73
4-18. Natural Sorbents and Their Capacity for Removal of Specific Contaminants from Liquid Phases of Natural, Basic, and Acidic Wastes	4-90
4-19. Approximate Reagent Requirements for Various Waste Types Using a Portland Cement/Fly Ash Solidification	4-91
4-20. Key Features of Major Types of Incinerators	4-94
4-21. Design Criteria for Fluidized Bed Furnace .	4-97
4-22. Design Criteria for Multiple Hearth Furnace	4-98
4-23. Examples of One-Hour Oxidation of Selected Compounds	4-102
4-24. Temperature/Pressure Relationship of Saturated Steam	4-103
