

CECW-EH-Y

**DEPARTMENT OF THE ARMY
U.S. Army Corps of Engineers
Washington, DC 20314-1000**

EM 1110-2-1419

Manual
No. 1110-2-1419

31 January 1995

**Engineering and Design
HYDROLOGIC ENGINEERING REQUIREMENTS
FOR FLOOD DAMAGE REDUCTION STUDIES**

Table of Contents

Subject	Paragraph	Page	Subject	Paragraph	Page
Chapter 1 Introduction					
Purpose	1-1	1-1	Performance Considerations	4-5	4-3
Applicability	1-2	1-1	Dam Safety Evaluation	4-6	4-5
References	1-3	1-1	Environmental Impacts	4-7	4-5
Flood Damage Reduction					
Planning Problem	1-4	1-1	Chapter 5 Diversions		
Corps Procedure for Finding a Solution to the Planning Problem	1-5	1-2	Overview	5-1	5-1
Role of Hydrologic Engineering	1-6	1-3	Applicability	5-2	5-1
Hydrologic Engineering Study Design ..	1-7	1-3	Diversion Operation Overview ..	5-3	5-2
Chapter 2 Common Hydrologic Engineering Requirements					
Summary	2-1	2-1	Discharge-Reduction Assessment	5-4	5-2
Study Setup and Layout	2-2	2-1	Technical Considerations	5-5	5-3
Requirements for Evaluating the NED Contribution	2-3	2-2	Chapter 6 Channel Modifications		
Requirements for Satisfying Performance Standard	2-4	2-6	Overview	6-1	6-1
Requirements for Satisfying Environmental-Protection Standard ..	2-5	2-7	Applicability	6-2	6-1
Chapter 3 Without-Project Conditions					
Overview	3-1	3-1	Channel Overview	6-3	6-2
Layout	3-2	3-1	Stage-Reduction Assessment ..	6-4	6-3
Technical Analyses	3-3	3-1	Incidental Impact of Channel Modifications	6-5	6-3
Chapter 4 Reservoirs					
Overview	4-1	4-1	Technical Considerations	6-6	6-4
Applicability	4-2	4-1	Capacity-Exceedance Analysis ..	6-7	6-4
Reservoir Operation Overview	4-3	4-2	Environmental Impact	6-8	6-5
Discharge-Reduction Assessment	4-4	4-2	Chapter 7 Levees and Floodwalls		
			Overview	7-1	7-1
			Applicability	7-2	7-1
			Levee and Floodwall Overview ..	7-3	7-2
			Flood Damage Reduction Assessment	7-4	7-2
			Interior-Area Protection	7-5	7-3
			Design Exceedance	7-6	7-5
			Other Technical Considerations ..	7-7	7-5

Subject	Paragraph	Page	Subject	Paragraph	Page
Chapter 8					
Other Measures That Reduce Existing-Condition Damage Susceptibility					
Overview	8-1	8-1			
Requirements for Floodproofing	8-2	8-1			
Requirements for Relocation	8-3	8-4			
Requirements for Flood Warning-Preparedness Plans	8-4	8-5			
Chapter 9					
Measures That Reduce Future-Condition Damage Susceptibility					
Overview	9-1	9-1			
Requirements for Construction and Land-Use Regulation	9-2	9-1			
Requirements for Acquisition	9-3	9-2			
Chapter 10					
System Analysis					
Plan Evaluation	10-1	10-1			
Economic-Objective					
Evaluation for System	10-2	10-1			
Appendix A					
References					
Appendix B					
Commonly Used Computer Models for Corps Flood Damage Reduction Studies					

List of Tables

Table	Page	Table	Page
1-1 Flood Damage Reduction Measures	1-2	8-2 Actions Required to Raise a Structure In-Place	8-2
1-2 Plan Formulation/Evaluation for Feasibility-Phase Studies	1-3	8-3 Performance Requirements for Floodproofing	8-3
2-1 Summary of Common Requirements	2-1	8-4 Examples of Relocation	8-4
2-2 Procedures for Estimating Annual Maximum-Discharge-Frequency Function Without Discharge Sample	2-4	8-5 Components of a FW/P System	8-5
2-3 Technical Components of EIS	2-8	9-1 Typical Requirements for New Construction to Reduce Damage Susceptibility	9-2
3-1 Checklist for Without-Project Conditions . . .	3-1	10-1 Impacts of Flood-Damage- Reduction Measures	10-2
4-1 Checklist for Reservoirs	4-1	B-1 Critical Processes to Model for Flood Damage Reduction Planning	B-2
4-2 Steps in Evaluating Proposed Storage Alternatives	4-4	B-2 Mathematical Models Included in HEC-1	B-3
4-3 Impact of Reservoir on Stream-System Morphology	4-5	B-3 HEC-1 Input	B-4
4-4 Design Standards for Dam Safety	4-6	B-4 Utility Programs for and Specialized Versions of HEC-1 . . .	B-5
4-5 Hydrologic Engineering Information Required to Assess Environmental Impacts	4-6	B-5 Special Capabilities of HEC-2 . . .	B-5
5-1 Checklist for Diversion	5-1	B-6 Input Required for HEC-2	B-6
6-1 Checklist for Channel Modification	6-1	B-7 Input Requirements for UNET	B-7
7-1 Checklist for Levees and Floodwalls	7-1	B-8 Special Capabilities of HVEL2D . . .	B-8
7-2 Checklist for Interior Areas	7-2	B-9 Input Requirements for HVEL2D . . .	B-8
7-3 Interior-Area Analysis Alternative	7-5	B-10 Special Capabilities of SAM	B-10
7-4 Methods of Protecting Levee Riverside Slopes	7-6	B-11 HEC-FFA Features	B-11
8-1 Checklist for Measures that Reduce Existing-Condition Damage Susceptibility	8-1	B-12 Input Required for HEC-FFA Program	B-11
		B-13 Input Required for EAD Program . .	B-12
		B-14 HEC-5 Flood-Control Operation Rules	B-13
		B-15 HEC-IFH Input	B-14

List of Figures

Figure	Page	Figure	Page
2-1 Derivation of damage-frequency function from hydrologic, hydraulic, and economic information	2-2	8-1 Floodproofing with closures	8-2
2-2 Risk-based analysis procedure	2-3	8-2 Floodproofing by raising an existing structure in-place	8-2
2-3 Probability of capacity exceedance during project life	2-6	8-3 Stage-damage function modification due to floodproofing with closure, wall	8-3
4-1 Multipurpose flood control reservoir	4-2	8-4 Stage-damage function modification due to floodproofing by raising in-place	8-3
4-2 Simple detention storage facility	4-2		
4-3 Impact of storage	4-2		
4-4 Discharge-frequency function modifications due to reservoir	4-4		
5-1 Major components of diversion	5-2	9-1 Illustration of construction per regulations to reduce damage susceptibility	9-1
5-2 Plan view of diversion with downstream confluence	5-2	9-2 Illustration of regulation impact on future-condition EAD	9-3
5-3 Discharge-frequency function modifications due to diversion	5-3		
6-1 Illustration of channel geometry modification	6-2	10-1 Example of flood damage reduction system	10-1
6-2 Channel re-alignment for damage reduction	6-3	10-2 Decision tree for system of Figure 10-1	10-1
6-3 Stage-discharge function modifications due to channel improvement	6-3		
7-1 Cross section of simple levee	7-2	B-1 Steps in selecting the appropriate model	B-1
7-2 Floodwall types	7-3	B-2 HEC-1 representation of runoff process	B-3
7-3 Stage-damage function modification due to levee/floodwall	7-3	B-3 Illustration of complex catchment modeling by subdivision	B-4
7-4 Plan view of levee with interior area	7-4	B-4 Components of TABS-2	B-9
7-5 Components of interior-area protection system	7-4
