**DEPARTMENT OF THE ARMY
U.S. Army Corps of Engineers
Washington, DC 20314-1000**

EM 1110-2-1601
Change 1

Engineer Manual
No. 1110-2-1601

30 June 1994

**Engineering and Design
HYDRAULIC DESIGN OF FLOOD CONTROL CHANNELS**

Table of Contents

Subject	Paragraph	Page	Subject	Paragraph	Page
Chapter 1 Introduction					
Purpose	1-1		<i>Section III</i>		
Scope	1-2		<i>Design Guidance for Stone Size</i>		
References	1-3		General	3-5	3-4
Explanation of Terms	1-4		* Design Conditions	3-6	3-5*
Channel Classification	1-5		Stone Size	3-7	3-5
Preliminary Investigations for Selection of Type of Improvement	1-6		* Revetment Top and End Protection	3-8	3-8*
Chapter 2 Open Channel Hydraulic Theory					
Physical Hydraulic			<i>Section IV</i>		
Elements	2-1		<i>Revetment Toe Scour Estimation and Protection</i>		
Hydraulic Design			* General	3-9	3-9*
Aspects	2-2		* Revetment Toe Protection Methods	3-10	3-10*
Flow Through Bridges	2-3		* Revetment Toe Protection Design	3-11	3-10*
Transitions	2-4		* Delivery and Placement	3-12	3-11*
Flow in Curved Channels	2-5		<i>Section V</i>		
Special Considerations	2-6		<i>Ice, Debris, and Vegetation</i>		
Stable Channels	2-7		* Ice and Debris	3-13	3-11*
Chapter 3 Riprap Protection					
<i>Section I</i>			* Vegetation	3-14	3-12*
Introduction			<i>Section VI</i>		
General	3-1		<i>Quality Control</i>		
Riprap Characteristics	3-2		* Quality Control	3-15	3-12*
Section II					
<i>Channel Characteristics</i>			Chapter 4 Special Features and Considerations		
Side Slope Inclination	3-3		Sediment Control Structures	4-1	4-1
Channel Roughness, Shape, Alignment, and Gradient	3-4		Air Entrainment	4-2	4-3
			Hydraulic Jump in Open Channels	4-3	4-3
			Open Channel Junctions	4-4	4-5
			Hydraulic Model Studies	4-5	4-8

Subject	Paragraph	Page	Subject	Paragraph	Page
* Chapter 5			Appendix D		
Methods for Predicting n Values for the Manning Equation			Computer Program for Designing Banked Curves for Supercritical Flow in Rectangular Channels		
Introduction	5-1				
Approach	5-2				
Hydraulic Roughness by Handbook Methods	5-3	5-1	Appendix E		
Base n Values (n_b) for Channels	5-4	5-1	Theory of Combining Flow at Open Channel Junctions (Confluences)		
Hydraulic Roughness by Analytical Methods	5-5	5-2			
Composite n Values and Hydraulic Radius	5-6	5-12	Appendix F		
Expansion and Contraction in a 1-D Model	5-7	5-14	Report on Standardization of Riprap Gradations		
Unforeseen Factors	5-8	5-14 *			
Appendix A			Appendix G		
References			Velocity Estimation Based on Field Observations		
Appendix B					
Plates			Appendix H		
			Examples of Stone Size Calculations		
Appendix C					
Notes on Derivation and Use of Hydraulic Properties by the Alpha Method			Appendix I		
			Notation
