

CHAPTER 7

TRAINING AND SERVICES

7-1. Training. Training should be provided for project designers, inspectors, and operation and maintenance personnel who are responsible for CPSs in use at projects. Corrosion protection coordinators should arrange with District Training Coordinators for this training. The training should include both cathodic protection in general terms and report preparation. A PROSPECT course on corrosion control is offered annually for district personnel. The course provides the required CPS training on design and testing.

7-2. Services. Services are available on a cost-reimbursable basis from the Corrosion Control and Cathodic Protection Systems DX at Mobile District, or the Engineer Research and Development Center – Construction Engineering Research Laboratory at Champaign, IL, to assist districts in matters related to corrosion control and cathodic protection. Services are also available for design, restoration, construction, operation and maintenance, and optimization adjustments of CPSs. Services inquiries may be referred to CECW-E at HQUSACE.
