

CHAPTER 12

INSTALLATION SUPPORT NEWSLETTER

INTRODUCTION

In late spring 1992, the HQUSACE Installation Support Branch, in conjunction with the Planning Branch from the Engineering and Housing Support Center, Facilities Management and Planning Division, began publishing an Installation Support Newsletter.

The objectives of the newsletter are to keep individuals informed about important issues and to share good (and maybe not-so-good) news and ideas.

Initially a new edition will be published every other month. And, since everyone already has enough to read and keep them busy, every attempt will be made to keep the newsletter brief, as well as interesting and useful.

Since the newsletter will contain items applicable to, and which may impact the Installation Support Program, this chapter has been included in the handbook as a place to maintain and file each edition of the newsletter.

Please call, fax or write to one of the following offices about problems, ideas, concerns or successes - on all aspects of the USACE Installation Support Program. Without input and feedback from field elements, we are at a tremendous disadvantage in coming up with newsy and valuable material.
