No. 1110-2-544

31 July 1995

**Engineering and Design
GEOTECHNICAL ANALYSIS BY THE FINITE
ELEMENT METHOD**

Table of Contents

Subject	Paragraph	Page	Subject	Paragraph	Page
Appendix A			Case History: Sheet-pile Wall		
Geotechnical Analysis by the Finite Element Method			Analysis	2-9	A-10
 Chapter 1			 Chapter 3		
Introduction			Embankment Construction Problems		
Background	1-1	A-1	Results and Use of Embankment		
Types of Problems	1-2	A-1	Construction Analysis	3-1	A-15
What Can be Learned from Finite			Important Features of Embankment		
Element Analyses	1-3	A-1	Construction Analysis	3-2	A-15
Information Required for Finite			Case History: Birch Dam	3-3	A-17
Element Analyses	1-4	A-2	Case History: New Melones Dam	3-4	A-18
Skills Required for Geotechnical					
Finite Element Analyses	1-5	A-3	 Chapter 4		
Required Effort and Cost	1-6	A-3	Seepage Problems		
Finite Element Codes Used on			Results and Uses of Seepage		
Corps' Projects	1-7	A-3	Analyses	4-1	A-26
			Types of Seepage Analyses	4-2	A-26
			Constitutive Law and Material		
			Properties	4-3	A-26
			Case History: S. A. Murray		
			Hydroelectric Plant	4-4	A-27
			Case History: Cerrillos Dam	4-5	A-28
 Chapter 2			 Chapter 5		
Static Soil Structure Interaction Problems			Sources for Further Information		
Results and Use of SSI Analysis	2-1	A-4	Finite Element Codes Used in		
Important Features of SSI Analysis	2-2	A-4	the Analysis of Past Corps of		
Material Behavior Models	2-3	A-4	Engineers Geotechnical Projects	5-1	A-35
Stress-Strain Material Property			References	5-2	A-35
Values	2-4	A-5			
Finite Element Mesh	2-5	A-5			
Construction Sequence	2-6	A-6			
Calibration of the Entire Model	2-7	A-6			
Case History: Retaining Wall					
at Bonneville Navigation					
Locks	2-8	A-6
