

APPROVED FOR PUBLIC RELEASE; DISTRIBUTION IS UNLIMITED

Utility Systems Design Requirements for C4ISR Facilities

		<i>Paragraph</i>	<i>Page</i>
CHAPTER 1.	INTRODUCTION		
	Purpose	1-1	1-1
	Scope	1-2	1-1
	References	1-3	1-1
	Objectives	1-4	1-1
CHAPTER 2.	SYSTEMS ENGINEERING AND SYSTEMS SAFETY		
	General systems considerations	2-1	2-1
	Program elements	2-2	2-1
	Systems engineering database	2-3	2-2
	Reliability and availability (R/A)	2-4	2-3
	Life-cycle cost analysis	2-5	2-3
	Operational control concept	2-6	2-3
CHAPTER 3.	DESIGN CONSIDERATIONS FOR OPERATIONS AND MAINTENANCE		
	General design considerations	3-1	3-1
	Historical records	3-2	3-1
	Maintenance concept	3-3	3-1
	Evaluations	3-4	3-1
	Operations and maintenance documentation	3-5	3-2
	Verification	3-6	3-3
CHAPTER 4.	CIVIL AND SITE ENGINEERING AND WASTEWATER AND STORM WATER MANAGEMENT		
	General civil, site, and waste management design	4-1	4-1
	Site development	4-2	4-1
	Sanitary wastewater collection systems	4-3	4-3
	Storm water management systems	4-4	4-5
CHAPTER 5.	STRUCTURAL AND ARCHITECTURAL DESIGN		
	General structural and architectural design	5-1	5-1
	Foundation design	5-2	5-1
	Functional layout	5-3	5-1
	Exterior walls and roofs	5-4	5-2
	Floors and floor finishes	5-5	5-2
	Acoustical treatment	5-6	5-2

	<i>Paragraph</i>	<i>Page</i>
Life-safety	5-7	5-2
Eye washes and showers	5-8	5-2
CHAPTER 6.	FIRE PROTECTION SYSTEMS	
	General fire protection system design	6-1
	Authority having jurisdiction (AHJ)	6-2
	Services and qualifications of fire protection engineer	6-3
	Specifications	6-4
	General design requirements	6-5
	Special protection systems	6-6
	Water supply pressure requirements	6-7
	Quantities of water required	6-8
	Sources of water supply	6-9
	Water distribution and storage	6-10
	Fire pumps	6-11
	Mission areas	6-12
	Mission administration	6-13
	Generator set area	6-14
	Switchgear and uninterruptible power supply areas	6-15
	Battery room	6-16
	Control room (CR)	6-17
	Data and power cabling areas	6-18
	Fuel storage area	6-19
	Loading/unloading areas	6-20
	Entry control points	6-21
	Transmit/receive stations	6-22
	Transformer vault room	6-23
	Generator sump	6-24
	Cooling towers	6-25
CHAPTER 7.	HEATING, VENTILATING, AND AIR-CONDITIONING SYSTEMS	
	General heating, ventilating, and air-conditioning (HVAC) design	7-1
	Heating, ventilating, and air-conditioning (HVAC) equipment reliability and survivability	7-2
	Mission critical areas and control room (CR)	7-3
	Chillers	7-4
	Chilled water distribution	7-5
	Direct-cooled electronic equipment	7-6
	15-minute back-up cooling capacity	7-7
	Leak detection	7-8
	Electromagnetic pulse (EMP) protection	7-9
	Chemical, biological, and radiological (CBR) protection	7-10
	Administration areas	7-11
	Generator room/building heating, ventilating, and air-conditioning and combustion air	7-12
	Generator exhaust system	7-13
	Uninterruptible power supply (UPS) room	7-14
	Uninterruptible power supply battery room ventilation	7-15
	Fuel storage area ventilation	7-16

	<i>Paragraph</i>	<i>Page</i>
Heating systems	7-17	7-14
Boilers	7-18	7-15
Water treatment	7-19	7-16
Fire protection	7-20	7-16
Mechanical and electrical equipment rooms	7-21	7-16
Toilets, lockers, and utility closets	7-22	7-17
Vestibules	7-23	7-17
Economic and life cycle cost (LCC) considerations	7-24	7-17
Filters	7-25	7-17
Coils and piping	7-26	7-17
Refrigerants	7-27	7-18
Fans	7-28	7-18
Duct systems	7-29	7-18
Maintenance and testing	7-30	7-18
Controls	7-31	7-19
Noise and vibration control	7-32	7-19
CHAPTER 8. PIPING SYSTEMS		
General piping systems design	8-1	8-1
Piping systems reliability and survivability	8-2	8-1
Specifications	8-3	8-2
Cooling water systems	8-4	8-3
Fuel systems	8-5	8-5
Air start systems	8-6	8-8
Instrument air systems	8-7	8-10
Lube oil systems	8-8	8-10
Water treatment	8-9	8-11
Corrosion protection	8-10	8-11
Protection	8-11	8-11
Water distribution system	8-12	8-12
Potable (domestic) water supply	8-13	8-14
Eye washes and safety showers	8-14	8-14
Process water supply	8-15	8-15
Plumbing and sanitary sewer systems	8-16	8-15
Storm and process drains	8-17	8-16
Condensate drains	8-18	8-16
Cooling tower blow down and drains	8-19	8-16
Seepage and sump collection	8-20	8-16
Insulation	8-21	8-16
Water storage tank	8-22	8-17
Pressure vessel	8-23	8-17
Valving	8-24	8-17
Piping systems maintenance	8-25	8-17
Piping above computer and electronic equipment areas	8-26	8-18
CHAPTER 9. EMERGENCY GENERATOR SYSTEMS		
General mechanical systems design	9-1	9-1
Generator room or building	9-2	9-1
Diesel engine cooling systems	9-3	9-2
Engine coolant heaters	9-4	9-3

	<i>Paragraph</i>	<i>Page</i>
Lubrication system	9-5	9-3
Engine protection	9-6	9-4
 CHAPTER 10.		
ELECTRICAL SYSTEMS		
General electrical design	10-1	10-1
Electrical systems maintenance	10-2	10-5
Power quality	10-3	10-5
Off-site electrical power	10-4	10-7
On-site power generation equipment	10-5	10-9
Load shedding and restoration	10-6	10-13
Exterior distribution system	10-7	10-14
Facility electrical distribution system	10-8	10-14
Unit substations	10-9	10-15
Motor control centers and distribution panels	10-10	10-18
Automatic transfer switches	10-11	10-18
Interior distribution systems	10-12	10-18
Lighting and receptacle systems	10-13	10-18
Direct current systems	10-14	10-19
Uninterruptible power supply (UPS) systems	10-15	10-20
Grounding system	10-16	10-24
Lightning protection	10-17	10-27
Communications and alarms	10-18	10-27
Electromagnetic interference/radio frequency interference	10-19	10-30
Personnel and electrical system protection	10-20	10-30
Cathodic protection	10-21	10-30
 CHAPTER 11.		
INSTRUMENTATION AND CONTROL SYSTEMS		
General instrumentation and control design	11-1	11-1
Supervisory control and data acquisition system	11-2	11-1
Power loss and restoration	11-3	11-1
Automatic control functions	11-4	11-1
Control room instrumentation	11-5	11-2
Instruments and controls for power generation equipment	11-6	11-3
Local instrumentation	11-7	11-3
Transient protection, grounding, bonding, and shielding	11-8	11-3
 APPENDIX A.		
REFERENCES		
 GLOSSARY		

LIST OF FIGURES

<i>Figure</i>	<i>Title</i>	<i>Page</i>
Figure 7-1	Dedicated C4ISR building	7-4
Figure 7-2	Interior C4ISR room piping	7-6
Figure 7-3	Perimeter C4ISR room piping	7-7
Figure 7-4	System for 15-minute backup cooling capacity	7-8
Figure 8-1	Piping and instrumentation diagram legend	8-2
Figure 8-2	Typical cooling water flow & instrumentation diagram	8-4
Figure 8-3	Typical diesel fuel flow & instrumentation diagram	8-6
Figure 8-4	Typical starting air flow & instrumentation diagram	8-9
Figure 8-5	Typical instrument air flow diagram	8-10
Figure 9-1	Typical diesel engine liquid cooling system with radiator	9-2
Figure 9-2	Typical diesel engine lubrication system	9-4
Figure 10-1	Small capacity power system	10-2
Figure 10-2	Medium capacity power system	10-3
Figure 10-3	Large capacity power system	10-4
Figure 10-4	Hierarchy of electrical loads	10-5
Figure 10-5	C4ISR site primary substation	10-8
Figure 10-6	Generator protection system	10-12
Figure 10-7	DC power distribution	10-16
Figure 10-8	Double ended substation	10-17
Figure 10-9	Typical design goals of power-conscious computer manufacturers	10-22

LIST OF TABLES

<i>Table</i>	<i>Title</i>	<i>Page</i>
10-1	System grounding sub-application	10-25
10-2	Ground electrode impedance applications	10-26
11-1	Automatic control functions	11-2
11-2	Minimum CR control panel instrumentation for prime movers	11-4
11-3	Monitoring and control functions of engine control panel	11-4
11-4	Functions to be controlled locally	11-5
