AIR FORCE MANUAL
AFM 88-6, CHAPTER 6

HEADQUARTERS
DEPARTMENTS OF THE ARMY
AND THE AIR FORCE
WASHINGTON, D.C., 26 August 1988

STANDARD PRACTICE FOR PAVEMENT RECYCLING

		Paragraph	Page
CHAPTER	1. INTRODUCTION		
	Purpose and Scope	1-1	1-1
	References	1-2	1-1
	Recycling Pavement development	1-3	1-1
	Bituminous pavement recycling	1-4	1-1
	Portland cement concrete recycling	1-5	1-1
2.	SURFACE RECYCLING OF PAVEMENTS		
	General	2-1	2-1
	Equipment	2-2	2-2
	Rejuvenating	2-3	2-2
	Heater-planing-scarifying	2-4	2-3
	Cold milling	2-5	2-5
3.	RECYCLING COLD-MIX ASPHALT CONCRETE		
	General	3-1	3-1
	Equipment	3-2	3-2
	Pavement design	3-3	3-2
	Mix design	3-4	3-2
	Removal of in-place material	3-5	3-2
	Construction	3-6	3-4
	Field density measurements	3-7	3-4
4.	RECYCLED HOT-MIX ASPHALT CONCRETE		
	General	4-1	4-1
	Equipment	4-2	4-2
	Recycling hot-mix procedures	4-3	4-2
	Removal and sizing	4-4	4-2
	Virgin aggregates	4-5	4-2
	Mix design	4-6	4-3
	Recycling hot-mix quality control	4-7	4-3
	Laydown of recycled hot mix	4-8	4-6
	Excess reclaimed asphalt pavement	4-9	4-6
5.	RECYCLING OF PORTLAND CEMENT CONCRETE		
	General	5-1	5-1
	Recycling portland cement concrete procedure	5-2	5-1
	Sources for recycled aggregates	5-3	5-1
	Excess recycled aggregates	5-4	5-1
	Equipment	5-5	5-2
	Crushing process	5-6	5-3
	Evaluation and testing	5-7	5-3
	D-crack concrete pavement recycling	5-8	5-3
	Fine aggregates	5-9	5-3
	Utilization of recycled aggregates	5-10	5-3
APPENDIX	A. REFERENCES		A-1
	B. EXAMPLES OF COLD-MIX AND HOT-MIX RECYCLING PROBLEMS		B-1

List of Figures

- Figure 1-1. Method of repair guide for bituminous pavement rehabilitation.
 1-2. Method of repair guide for portland cement concrete rehabilitation.
 2-1. Surface recycling flow chart.
 2-2. Asphalt distributor applying a rejuvenator.
 2-3. Self-contained heater-planer.
 2-4. Heater with scarifying teeth followed by grader.
 2-5. Pavement cold-milling machine in operation.
 3-1. Cold-mix recycling flow process.
 3-2. Pavement ripper attached to bulldozer.
 3-3. Old asphalt concrete pavement after crushing.
 4-1. Hot recycling flow process.
 4-2. Recycling hot-mix production in a drum mixer.
 4-3. Recycling hot-mix production in a batch plant.
 5-1. Recycling portland cement concrete flow process.
 5-2. Diesel pile-driving hammer puncturing the old pavement.
 5-3. Rhino-horn-tooth-ripper-equipped hydraulic excavator.
B-1. Recycled cold-mix design using asphalt emulsion.
B-2. Determination of optimum moisture for cold-mix design.
B-3. Recycled asphalt concrete mix design for recycled hot mix; AC-2.5 asphalt binder and
 0.5 percent recycling agent.
B-4. Recycled asphalt concrete mix design for recycled hot mix; AC-2.5 asphalt binder with
 no recycling agent.

List of Tables

- Table 1-1. Advantages and disadvantages of bituminous and portland cement concrete pavement recycling.
 B-1. Aggregate gradations.
 B-2. Gradation of recycled mixture.
 B-3. Asphalt mixture properties at optimum asphalt content.
 B-4. Mixture properties at optimum asphalt and optimum recycling agent content.
