

## Part I and II (Building and Support Facilities)

This Newsletter Supersedes the Army Facilities Pricing Guide, PAX Newsletter No. 3.2.2, revision dated 20 March 2020, and updates Primary & Support Facilities Unit Cost Tables, Tri-Service Military Construction Program (MCP) Index, and Table-1, Size Adjustment Factors. These costs will be used as a guide for preparation and/or review of Budget Submission of the FY23 Army Military Construction (MCA) and Army Family Housing (AFH) projects' parametric cost estimates and ENG3086s unless otherwise noted. These facility unit costs may not be directly applicable for those facilities that consist of unique requirements. This Newsletter is published and maintained on the web page at:

<http://www.usace.army.mil/CostEngineering/ProgrammingAdministrationandExecutionSystemNe.aspx>

**NOTE/Caution:** Due to the diminishing number of MILCON projects in the recent years, some guidance unit costs (UC) listed in the 2021 PAX Newsletter are published with less than 3 projects during the recent years due to the significance of those category codes (CatCode) in the upcoming MCA program. UC for those facility types are annotated in the "Remark" column with the number of projects such costs were based on. PAX UC users must be aware of this shortcoming if using these UC as guidance unit cost. If accepted by the ENG3086 reviewers and G-9, unit costs developed from similar and awarded projects at another installation may be used as a basis.

### A. PART-I – PRIMARY FACILITIES UNIT COSTS, dated 21 May 21

A.1. The Unit Costs in Part-1 Table represent the dollar per square foot cost as of 1 October 2023 for various CONUS Army facility types (to include projects from Alaska and Hawaii) that were awarded between FY 2018-20 and at least 3 projects per building type were entered into the Historic Analysis Generator (HII) database by 1 Oct 2020. When less than three (3) recent projects were awarded and entered into the HII database between 2018-2019 for a specific facility type (CatCode), then the last four (4) years (2017-2020) projects' data were considered. Only new construction projects located within the Continental United States (CONUS), to include projects in Hawaii and Alaska, were utilized to develop facility specific unit costs, except for Army Family Housing and DoD Schools where OCONUS projects were also considered. Addition-alteration projects, less than 25% of the Standard Reference Size for that facility type, were not included in the database.

A.2. Methodology and Escalation Factor: Facility-specific bid data were normalized to the average number of bidders for that specific facility type, Area Cost Factor of 1.0, Average size for that facility type, and 1 Oct 2020 price level using the actual construction inflation index as obtained from the DoD Selling Price Index. Unit Costs in the PAX Newsletter Table are escalated to 1 Oct 2023, the assumed mid-point of construction for a typical FY 2023 MILCON project using Appendix-C, Military Construction Program (MCP) Index. Appendix-C, MCP Index should be used for determining Cost Escalation Factor when a project's mid-point of construction is different than 1 Oct 2023, as shown in the following example for a project with a mid-point of 1 April 2024:

Anticipated Midpoint of Construction for a given project = 1 April 2024

MCP Indexes for 1 Oct 2023 and 1 Apr 2024 from Appendix-C, are 3219 and 3251 respectively

Cost Escalation Factor = 1 Apr 2024 MCP Index / 1 Oct 2023 MCP Index = 3251/3219 = 1.0099

A.3. Facilities with PAX Newsletter guidance unit costs are assumed to include the costs of the following features/requirements. Therefore NO Separate Line Item(s) shall be added for the following features:

- a. Minimum antiterrorism design features inside the building when minimum set back/stand-off distance is achieved.
- b. Progressive Collapse premiums for specific facility types that are normally designed with 3 or more stories, such as Inpatient Hospitals/Medical Centers, Primary Care Clinic (attached), Major Command Headquarters, Barracks/Trainee Barracks, etc.
- c. Building Information Systems (e.g. conduits, racks, trays, telecommunication rooms) for facilities without any Special Communications Requirements.
- d. Energy Management Control System (EMCS) Connections.
- e. Intrusion Detection System (IDS) infrastructure, to include conduits, racks and trays.
- f. Sustainable Design and Development features for criteria in effect from September 2007 thru September 2012 (e.g. LEED Silver Rating, Energy Policy Act of 2005).
- g. Built-in Equipment and furnishings normally funded by MILCON funds,
- h. Standard uncomplicated foundation systems (e.g. Strip/Spread-footings, thickened edge slab for slab on grade). Any Special Foundations, such as Pile Foundations and Structural Fill cost should be listed separately.
- i. Contractor's mark-ups for overhead, and profit.
- j. An average sales tax on building materials.

A.4. PAX Guidance Unit costs do NOT generally include the following feature/requirement costs. Therefore, these costs are to be added as a Separate Line Item(s) in the budget estimate:

- a. Inside the building AT-FP features when minimum stand-off distance cannot be achieved or when enhanced AT-FP features are required due to the height of the building, such as for 3 or more storied buildings when the past designs did not require Progressive Collapse measures. Progressive Collapse premium for 3 or higher storied Standard Designs that have been previously built (e.g., barracks/dormitories) are assumed to be built-into the award data.
- b. Specialized/Secured Building Information System costs.
- c. Sustainable Design and Development features for criteria mandated since September 2013.
- d. Inside the building or Built-in Renewable and alternative Energy features (e.g. ground source heat pumps, roof mounted Solar Panels).
- e. Special Foundation cost (e.g. cost of pre-stressed concrete pile foundation or caissons).
- f. Special Architectural features to comply with the Historic Preservation Guidelines.
- g. Equipment acquired with non-MILCON fund sources (e.g., intrusion detection systems, pre-wired workstations).
- h. Construction Contingency and Supervision, Inspection, and Overhead (SIOH) allowances.
- i. Design-Build Contract Design Cost.
- j. State imposed Gross Receipt Taxes (also referred to as General Exercise Tax).
- k. Construction Cost Growth resulting from Unforeseen Site Conditions, Change Orders, Contract document Errors and/or omissions, or Unusual Market Conditions, such as extreme material or labor shortages at the project location.

A.5. **User Generated Unit Costs (UGUC):** User Generated Unit costs may be used when PAX UC is not available or when it is not completely applicable for the project. UGUC requires an explanation of how the unit cost was derived. When UGUC is used, NO adjustments for ACF, size adjustment, or escalation shall be made for all line items in the cost estimate that are based on UGUC. The ACF and Size Adjustment Factor shall be set as 1 in PC-Cost/ENG3086 software.

A.6. Average facility size shown in Part-I, Table may or may not be identical to the size/sizes listed in the Center of Standardization (COS) websites. Table-1, Size Adjustment Factor, which shows correlation between project size and construction cost, should be used to determine the appropriate project cost.

B. PART-II – SUPPORT FACILITIES UNIT COSTS, dated 21 May 2021

B.1. Support Facilities unit costs are based upon National Average Davis Bacon wages and material pricing. The Area Cost Factor (ACF) for this database is 1.0. Support Facility unit costs should be adjusted for the project location only when guidance unit costs are used; when local cost data (user generated cost data) is used, no ACF adjustments should be made.

B.2. All pricing includes the installing contractor's Overhead and Profit (O&P). General Contractor's mark-up is not included. The installing contractor's O&P includes the following factors:

- a. Employees wage rate and fringe benefits
- b. Workmen's compensation insurance
- c. Social Security and Federal and State Unemployment taxes
- d. Contractor's Overhead (11%) and Profit (10%)
- e. Data incorporates an average 6% Sales Tax.

Show "Families (FA)" as the UOM in the in the Primary Line item by category code. Use SF per Family as the UOM in Subline item. Don't need to size adjust the UC per SF					
(using the Size Adj Table-, Part-I) as the adjusted unit cost per FA by catcode, grade, and number of bedroom/per dwelling is already provided in the UC column below.					
Use Size Adj Table-1, Part - II only for project size adj. Normally 2-car garage (400 SF) cost is provided with each dwelling. GSF of garage is not included in the dwelling GSF, but cost of					
garage is considered included in the AFH unit cost as a norm. (i) Add up to 300 SF/FA for harsh climates, defined as having more than 7,500 Heating Degree Days (HDD) annually,					
or 5,500 Cooling Degree Days (CHD), annually. (ii) Gross SF may be increased by 10% FA for housing units for an officer holding a special command position, for the commanding officer					
of a military installation, and for the senior non-commissioned officer of a military installation.

Facility Unit Costs (UC) are average unit costs based on the most Recent 4-Year (2017-20) project awards per building type.  
 All UC's are the average unit costs for new construction, escalated to 1 Oct 2023, using the Inflation Guidance for  
 FY 2022 President's Budget, **08 April 2021** and Normalized to an Area Cost Factor of 1. Please refer to the "Notes" in the Remarks Column of Table.

**NOTES:**

1. Use **2.0%** per fiscal year for projection beyond **FY 2026**
2. Tri - Service MCP Index (1,000) = 1 October 1979 ENR Historical Building Cost Index
3. The MCP indexes after 1 Oct 2018 were derived using the Price Escalation Indices (Annual Rates in Percentages) for Budget Authority published in the 11 January 2021 Inflation Guidance - Fiscal Year (FY) 2022 President's Budget.
4. This revised index table supersedes the MCP index table published as Appendix-C to PAX Newsletter 3.2.2, dated **30 March 2020**
5. The MCP index table above should only be used to inflate project cost from 1 October 2020 to mid point of construction. Escalating older cost data should utilize the DoD SPI, as published in the UFC 3-701-01, Table 4-2, to escalate to 1 October 2020. Then use the MCP index to inflate cost from 1 October 2020 to mid point of construction.
