Critical Infrastructure Summary

Key Messages for Tropical Storm Ian

Advisory 10: 11:00 AM EDT Sun Sep 25, 2022

1. Ian is expected to produce heavy rainfall, flash flooding, and possible mudslides in areas of higher terrain, particularly over Jamaica and Cuba. Flash and urban flooding is possible across the Florida Keys and Florida peninsula through mid week. Additional flooding on rivers across northern Florida and parts of the southeast U.S. cannot be ruled out later this week.

2. Life-threatening storm surge and hurricane-force winds are expected in portions of western Cuba beginning late Monday, where a hurricane warning is now in effect. Efforts to protect life and property should be rushed to completion.

3. Ian is expected to be a major hurricane in the eastern Gulf of Mexico during the middle of the week, but uncertainty in the long-term track and intensity forecasts is higher than usual. Regardless of Ian's exact track and intensity, there is a risk of dangerous storm surge, hurricane-force winds, and heavy rainfall along the west coast of Florida and the Florida Panhandle by the middle of the week, and residents in Florida should ensure they have their hurricane plan in place, follow any advice given by local officials, and closely monitor updates to the forecast.
