

DOD AREA COST FACTORS (ACF)
PAX Newsletter No 3.2.1, dated 25 Mar 2015
TABLE – 4-1, UFC 3-701-01, Change 7, March 2015

1. The attached Area Cost Factors (ACF) supersedes the ACF values published by the PAX Newsletter No 3.2.1, dated 20 Mar 2014, and Table 4-1, Area Cost Factors of the 2014 DoD Facilities Pricing Guide, UFC 3-701-01, Change-4, dated Mar 2013. The updated ACF shall be used, along with Primary Facilities Unit Costs from the latest issue of the Army PAX Newsletter No 3.2.2, in preparation and review of FY **2017-18** Military Construction, Army (MCA) and Army Family Housing (AFH) projects' DD Forms 1391 and ENG Form 3086 (budget cost estimates). These factors are **NOT** intended for use to develop and/or modify individual facilities **Sustainment Costs, detailed Quantity-Take-offs, Unit Price Book (UPB) line items**, Commercial cost data, or **User Generated** unit costs. These other cost estimating systems and databases have their own methodology and factors for adjusting costs to different locations. This Newsletter is published and maintained on the web at:

<http://www.usace.army.mil/CostEngineering/ProgrammingAdministrationandExecutionSystemNe.aspx>

2. The ACF calculation methodology/algorithms were re-evaluated and revised in 2013 by the Tri-Service Cost Engineering Steering Committee to better reflect current market conditions. The revisions to the algorithms which generate the ACF index have caused some fluctuations in area cost factor values, however the relative relationship of construction costs for a location to the National Cost average of ACF=1 has remained unchanged.

3. There is no easy correlation between the current ACF and the previous ACF for a specific location. No common benchmark exists because both the Base City average and the relationships between cities may change from year to year. It is possible, however, to compare differences between several locations in this database with differences between the same locations in previous databases.

4. The ACF values are based on a 2014 CONUS construction market survey of 96 Base Cities (two cities per State in **Bold font**) average construction costs. In addition, 90 CONUS and 110 OCONUS locations were surveyed, too. In general, the ACF index is developed based on the local construction costs for a market basket of 8 Labor Crafts, 18 Construction Materials (updated list), 4 Equipment items, and seven (7) other Matrix Factors that reflect local conditions affecting construction costs, such as weather, climatic (frost zone, wind load), seismic, contractor overhead and profit, life support and mobilization, labor availability and labor productivity. The selected labor, materials, and equipment (LME) items are representative of the types of products and services used to construct most military facilities. ACF for some locations has been updated from the previous list utilizing the latest data input from the Services' and field offices (Districts).

5. The overall ACF value of the State should be used when the project location has no specific ACF listed in the attached Table. The ACF for the closest location should be used only when market conditions (e.g. material prices, labor rates, labor availability, bidding climate) are similar.

6. Point of contacts for this Newsletter at Headquarters, US Army Corps of Engineers are: Mr. Ami Ghosh, e-mail amitava.ghosh@usace.army.mil, and Mr. Raymond Lynn, e-mail Raymond.L.Lynn@usace.army.mil
