**• Complete Table 1 - Required**

NOTE: If the navigable water is not subject to the ebb and flow of the tide or included on the District's list of Section 10 navigable waters list, DO NOT USE THIS FORM TO MAKE THE DETERMINATION. The District must continue to follow the procedure outlined in 33 CFR part 329.14 to make a Section 10 RHA navigability determination.

**• Complete Table 1 - Required**

This AJD includes a case-specific (a)(1) TNW (Section 404 navigable-in-fact) determination on a water that has not previously been designated as such. Documentation required for this case-specific (a)(1) TNW determination is attached.

S-1	Ephemeral	Goose Creek	No	According to the USGS map, this ephemeral stream with an Ordinary High Water Mark (OHWM), bed and banks, flows directly into Goose Creek (TNW), which flows into the Potomac River. The stream flow does not break prior to reaching Goose Creek.
S-3	Perennial	Goose Creek	Yes	According to the USGS map, this perennial stream with an OHWM, bed and banks, flows directly into Goose Creek (TNW), which flows into the Potomac River. The stream flow breaks when it reaches culverts.
S-4	Ephemeral	Goose Creek	Yes	According to the USGS map, this ephemeral stream with an OHWM, bed and banks, flows into S-3, then into Goose Creek (TNW), which flows into the Potomac River. This stream flow breaks when it reaches culverts.
S-5	Intermittent	Goose Creek	No	According to the UGS map, this intermittent stream with an OHWM, bed and banks, flows into S-3, then into Goose Creek (TNW), which flows into the Potomac River. This stream flow breaks when it reaches culverts.

<b>Paragraph (b) Excluded Feature/Water Name</b>	<b>Rationale for Paragraph (b) Excluded Feature/Water and Additional Discussion.</b>
EXCLDB6 (E-1)	The ephemeral ditch was excavated in an upland for the purpose of conveying stormwater. This feature does not connect two waters of the U.S.
EXCLDB4II (E-2)	The two impoundments were created in uplands for the purposes of a settling basin and retaining stormwater. These features were not created on-line with streams. Wetlands are not directly present upslope or downslope from these impoundments.
EXCLDB4VI (E-3)	This erosional feature originates and terminates in uplands, lacks an ordinary high water mark, and does not contain the three parameters defining wetlands.
